On page 68 he estimates the cost of the railroads to the Government in 1910 at \$16,000,000,000 and the rate of interest at $3\frac{1}{2}$ per cent. This would make the annual interest charge \$560,000,000 per year, or \$100,000,000 higher than I figure it. This difference arises because Mr. Dunn takes the extreme view of private ownership; but his unfairness appears at the next step. When he comes to compute the saving he considers only the net interest and dividends paid by the railway companies, which total only \$680,000,000. Subtracting the above interest charge would leave a saving of only \$120,000,000. Mr. Dunn took his figures from page 60, Statistics of Railways, Interstate Commerce Commission, 1910. He only found two items of interest and one of dividends to consider, but on the same page is another item of \$222,000,000 which he omitted. The table plainly shows that this was a part of the net revenue available for adjustments and improvements. A note shows that all of this would have been saved to the Government except about \$91,000,000—\$86,000,000 dividends from surplus and \$5,000,000 deficit weak lines—and this would add \$131,000,000 to Mr. Dunn's \$120,000,000 and make the total saving \$251,000,000 on his own basis. If we add to this a proper assignment of general surplus and consider the increased maintenance charges of over \$109,000,000 for this year—this was the 1910 year—all of the discrepancies between my own conclusions and those of Mr. Dunn's book are explained.

Mr. Dunn also says, page 63, that capitalization of switching and terminal companies is excluded from his consideration, because no figures are given by the Interstate Commerce Commission. On page 52, Statistics of Railways, Interstate Commerce Commission, 1910. in the very table from which he took his figures, I find included an item of \$136,634,040 for "Securities of switching and terminal companies not represented in figures first above stated." These great mistakes, all on the side of private ownership, show the unfairness with which the most eminent authority may sustain his cause.

In reference to this subject of credit, gentlemen, I now desire to depart from my written brief to say that I believe that before I am through you will find me the strongest defender of the credit of the railroads of any that has appeared before you. Perhaps it would be to my interest and to the furtherance of my argument to admit that they have failed, that their credit is broken down, and that it is now a corpse, dead, and that resurrection would be the only remedy, because the only institution that could bring about a resurrection would surely be the Government; but I am standing upon the facts in this matter, and I want to present the question of credit to you as I see it in this connection.

Mr. Thom, for the railroads, has asked a return of 6 per cent and 3 per cent for surplus, saying that it would take something of this kind to restore the credit of the railroads. I first met this credit argument in the 1910 advance rate case; that was when the big calamity howl began. The western railroad attorneys and railroad presidents appeared before the commission and sang that song with great force

and vehemence at that time. Gentlemen, here is a remarkable fact, and I want to tell you why: As Mr. Thom has said, the rate cases have all been decided in the more prosperous years, and here is the reason why: The railroads themselves have selected the years in which they would ask for an advance. They selected 1910 as the first year, and the expense accounts seem to have been properly and scientifically and efficiently arranged, because they increased \$109,000,000 over the preceding year. That seemed to have been taken care of first rate, but the prophets could not see six months into the future, and before the case was over the reports for 1910 came in, showing the greatest earnings the railroads had ever had in all their history, and they lost that case; the calamity howl did not win that year. Then they stepped back and waited a couple of years or so, and in 1913 they made a new start in the eastern advance rate case, and again they got into identically the same trouble. The prophets of calamity failed, and 1913 came up as another big year, next to 1910 the greatest, and before the case was over they had to face that fact.

That case ran along over into 1914. The expenses increased for 1913, \$120,000,000 over the preceding year, and they never go back, gentlemen; when they make one of those horizontal rises, it stays there. Then for 1914 the increase was \$20,000,000 more over 1913, and the case was decided just before the war began in 1914, and they lost that case, as you will remember, on the first decision. The eastern railroad presidents were forced to admit, on cross-examination, that the 35 roads in the case had earned and were earning at that time a net of 8.07 per cent upon all their stock—water and all—and that defeated their claim for an advance. Then the war broke out and then this calamity howl reached its apex; I think it was the loudest and noisiest and most persistent at that time. The war hit some other lines of business and other people lost because of its beginning, but the railroads seemed to think they should come in and take care of their losses as well as their own; so they began, and they did alarm the country about the future of the railroads. They even called on the President of the United States, and succeeded in alarming him and he gave out a statement practically indorsing an increase of the rates at that time, and the case was reopened and speedily tried and, upon the hearing, about one-half of the 5 per cent advance was granted in the East, or perhaps about 45 per cent of the tonnage. This encouraged the western roads, and then the third advance rate case was begun immediately; but before it could be reached for trial in March of 1915, the war tide had changed things, and instead of the apprehension because of the war, instead of all that great talk of calamity, the first witness, President Schaff, appearing on the stand said they were not asking this increase because of a war calamity. The very reason why the roads in the East had secured their advance was now abandoned, because these prophets of dire calamity for railroad credit had again failed and the earnings of the railroads were mounting upward as they never had before, even beating the years of 1910 and 1913. They also lost this case.

In the course and during all of these calamity talks in these different hearings before the commission, each time a new set of representatives appeared, and this is the first time I have had the honor of meeting Judge Thom, who now comes with the same old story that I heard over and over again, telling it to this congressional committee.

Every time they want higher returns they ask higher rates; that is the thing that will restore their credit. It was asked here what they were going to do with that 3 per cent surplus, and I have to say that after listening attentively and reading the record, it leaves me in the fog. I can not tell what is going to happen to this 3 per cent surplus. I heard Mr. Bryan's statement and I understood distinctly what he meant by "surplus." He proposed that they should have a surplus of 25 per cent of their capital stock; to let them pile up a surplus that high and then stop it, and that they should use that 25 per cent for the purpose of making up the shortages on the lean years. Now, that is clear and distinct and plain and anybody can understand what is going to happen to that, and I will say to you, gentlemen, that I do not think that is an unreasonable surplus, if it means 25 per cent of the capital stock, and I want to call your attention to this fact, that in 1913 they had a billion one hundred and fifteen million dollars of surplus already piled up, which would be about 20 per cent on all the capital stock outstanding at that time, so on an average they are almost up to the limit on the surplus right now; perhaps they are.

What do the railroads propose to do with this 3 per cent? Is that to go on perpetually and eternally, forever? If a lean year comes along and takes 1 per cent out, is the other 2 per cent to be added in? Is that all they are to lose out of it? If that is the meaning, gentlemen, they are asking for a straight 9 per cent return; that is all it means. If they are going to allow this to accumulate until it amounts to 25 per cent of the capital stock, and then stop it, and use the whole amount simply to make up for lean years, there would be some reason to that; but they do not propose that and have not made that clear. In fact, they have said that after the surplus is earned, it belongs to the stockholders. That means that out of this surplus they want to use it in the future as they have done in the past—to build additions and betterments—and they want to ask the public to build up their roads and improve them, and after we have paid the money, they own the road; and then they ask us to pay dividends—rates high enough to yield them dividends upon the very donations which we have made into surplus. That is what it means; and in the valuation which is going on by the commission now that point is of very great importance, and I understand that the commission is not able to or has not separated the building of additions and betterments out of surplus from those built out of new capital, and that is a thing that the Congress of the United States should have its attention focused upon and should consider very seriously, because it means a great burden on our people forever afterwards.

Mr. Thom said that their credit was impaired because of the new arrangement of capitalization. The margin of safety, as he said, has been reduced. It is true that the proportion of bond issues to stock issues has greatly increased, but I desire to show you a situation here that in spite of that—in spite of all this calamity howl during all these years, in spite of all these irregularities of financing that Mr. Thelen has shown you in detail, and every statement of which is true—in spite of all those things, this credit of the railroads of the United States is so great that for 14 years it was steadier than the credit of the Government of the United States.

I do not mean by that they could borrow money cheaper than the Government of the United States, not at all, but I mean that

the fluctuations over a period of 14 years of actually incorporated lines showed a little less fluctuation of the railroad credit than of the United States combined with the Governments of England, of Germany, of France, and of the 20 largest cities of the United States.

In the western advance rate case we made an exhaustive investigation of this credit question. Mr. Norton, who is now an editor on the Wall Street Journal, was the expert whom we employed to do that. He drew a picture of the results of his investigation—a chart. The lower line on this chart represents the credit of the four great Governments I have named and of the 20 largest cities in the United States. The average credit, beginning in 1900 and going up to the end of 1914, to January 1, 1915. Here is the per cent that the average of those governments and cities had to pay during that period, and all the fluctuations are shown. This per cent will be a little higher than the Government would have to pay, because the cities—I do not mean the utilities; I mean city bonds themselves; that is what I am talking about now—they pay a little higher rate than the Government.

The next line up here is the group of northwestern railways, and I will read the names of them. They are: The Chicago, Burlington & Quincy; the Chicago, Milwaukee & St. Paul; the Chicago & North Western; the Chicago, St. Paul, Minneapolis & Omaha; the Great Northern; the Minneapolis & St. Louis; the Northern Pacific; and the Union Pacific. Those were the ones that were averaged in this next line, and that shows what their funded debt cost them during those same years as examined and figured out by the actual market quotations during all those times.

The third line at the top is the southwestern group of railroads, and I will read those. They are: The Atchison, Topeka & Santa Fe; the Chicago, Rock Island & Pacific; the Colorado & Southern; the Kansas City & Southern; the Missouri, Kansas & Texas; the Missouri Pacific; the Southern Pacific; the St. Louis & San Francisco; and the St. Louis & South Western.

There are the two groups. I regret for the purpose of my presentation that this does not show the Government credit alone as compared with the railroad credit. This shows it almost 1 per cent higher than the Government credit would be alone, but nevertheless it helps to illustrate the general parallel I am making that Government credit is always lower than the corporation credit, and there are those three lines. I am going, Mr. Chairman, to pass this chart to the committee and you can pass it along. It is easy to see how the parallel runs. Here is where the Government's credit started and there is where it ended. Here is where the northwestern railroads started and there is where they ended.

The rising interest rate was not quite as much for that group of railroads as for this combination of governments and cities, and individually it is true of the governments, and the same is true generally of the southwestern group of railroads which had so many of these bad financing propositions.

Mr. ESCH. You might have it printed as a part of the record.

Mr. BROOKHART. If it could be put in the record, I would desire to have it appear.

(The paper referred to is here printed in full as follows:)

CHART Y.

CHART Z.

Now, gentlemen, I will say further that was the exhibit that was put in the rate cases, and the Interstate Commerce Commission found the facts as stated there to be true in its findings and it was not seriously controverted in any way.

As to the stocks. That was the other feature of capitalization. We will see what happened to them at the same time. I have another chart, prepared on the same line by the same expert, and the 100 per cent and the 200 per cent, and so on, was given, and this was compared with industrials. What happened to the railroad stocks of these groups of railroads compared to some of the best industrials in the United States? You will see the heavy black line, the railroad stocks, started lowest; they passed industrials, got away up above there. There were more fluctuations in them, but they earned considerably above the industrials. So that both the bonds and stocks of railroads during that period of 14 years—the bonds stayed steadier than our Government securities and the best municipalities, and stocks steadier than our best industrials.

Mr. Thom gave you some figures upon the credit of the earnings of the railroads as one reason why this credit was impaired, and he claimed—he took the net earnings from the year 1906 to the year 1910, inclusive, then the earnings from 1911 to 1915, inclusive, and he found them to be 5.25 per cent for the first years and 4.56 per cent for the next five years, ending June 30, 1915. That showed a decline of about three-fourths of 1 per cent in the earnings in five years. That tends to illustrate the claim that earnings were declining, do you not see?

Gentlemen, I will tell you what I did. I just moved the thing down one year. I took the years from 1905 to 1909. He had the years 1906 to 1910. I just moved it back one year and the average was 5.04 per cent. Then I took the years 1910 to 1914, the next five years, and the average was 5.64 per cent, so by just sliding it forward one year you get an advance of sixty one-hundredths of 1 per cent.

The experts who select these years are very expert gentlemen, and it is one of the difficulties in the rate cases, in which we had to watch them, to watch the selections they made. If a combination was in favor of the roads, they were so expert that they never failed to find it.

I tried to bring that up to 1916, to see what the result would be. I went to the commission to get the figures, but the capitalization, etc., is not up to date, but taking the great earnings of that year you will find there was no decline when you bring up that five years.

Here is another thing. I found in the latest figures from the commission that the total net earnings of the railroads earning \$1,000,000 or more for the two months of July and August—that is, the first two months of the fiscal year—were \$204,482,000. In 1915 they were only \$161,522,000. There is an increase of about \$43,000,000 for two months, and that increase is on top of another increase over the preceding year of perhaps \$25,000,000 more. In that two months the increase in the revenues of these railroads was enough to pay as much as they have estimated the entire expense of the Adamson law would be in putting the eight-hour day into effect.

Here is another proposition: These figures of earnings that were given you by Mr. Thom were upon the whole capitalization of the

railroads. You are not particularly concerned about the return on the whole capitalization. The return upon the bonded or funded part of this capitalization is fixed by contract. The people of the country are not going to be asked to pay a commission to the railroads for getting that first-mortgage loan on a public utility of this kind. The cost of that was the interest paid for that part of the capitalization. The important part, and the place where they are to get the return, is upon the stock capitalization; so why not in these comparisons, use the net earnings upon the stock values?

For instance, I took 1913, which was the only record I had before me, and in the figures given by Mr. Thom the earnings on the whole capitalization were only 5.94 per cent, but the earnings on all the capital stock, water and all, after paying all the interest on all the bonds, was 8.31 per cent.

Gentlemen, you can see by that why net earnings may be increasing on the capital stock and declining on the whole capitalization, so we must watch out for the comparisons of figures. They have deadfalls in them.

The next subject I desire to consider is the proposition of the unearned increment of real estate. The railroads are constantly capitalizing unearned increment and claiming a return upon it. This claim has been resisted, but the Supreme Court of the United States has finally decided that the railroads ought to be satisfied to receive a return upon the increase in the value of the real estate. (Minnesota Rate case, *Simpson v. Shepard*, 230 U. S., 377.) This theory constantly adds the unearned increment to the value of railroad property. Under private ownership this added value belongs to the stockholders. Under Government ownership it would be a saving to the Government. It is impossible to tell the exact amount of this saving. The record of the past will not be known until the valuation of the railroads is completed. I can only give a concrete example and estimate the total. In the Minnesota Rate case, above cited, the master determined the cost and the present value of the real estate for terminals of the Northern Pacific in the cities of St. Paul, Minneapolis, and Duluth.

Up to 1908 he found the original cost to be \$4,527,228.76. He found the present value at that time to be \$17,315,869.45. This finding was not approved by the opinion of the Supreme Court, but it did announce a theory that allows about thirteen and one-third millions, or nearly 200 per cent, advance. If the Government had owned the Northern Pacific, every dollar of this would have been saved. Under private ownership the stockholders not only get a reasonable return upon their original investment, but in this instance they got a present of over eight and three-quarter million dollars, and are allowed to collect a return upon it from the public forever. The same thing has happened with every railroad in every city of the United States. In the Western Advance Rate case, 1910 (20 I. C. C. Rep., 243), it was found that the increase alone of the land values of the Burlington Railroad amounted to three-fifths of the total original investment of the entire Burlington system.

The CHAIRMAN. State that again, please.

Mr. BROOKHART. I will repeat that. I am glad to have that noticed, because it means much in this proposition.

It was found that the increase alone of the land values of the Burlington Railroad amounted to three-fifths of the total original investment of the entire Burlington system. The figures will come later.

On page 340 Commissioner Lane, now a member of the President's Cabinet, in writing the unanimous opinion of the commission in referring to the claims of the Burlington Railroad that it should be permitted to continuously increase its rates because of (first) betterments out of income, and (second) increase in land values, stated:

If the position of the Burlington is sound and is a precise expression of what our courts will hold to be the law, then, as we are told, there is certainly the danger that we may never expect railroad rates to be lower than they are at present. On the contrary, there is the unwelcome promise made in this case that they will continuously advance. In the face of such an economic philosophy if stable and equitable rates are to be maintained, the suggestion has been made that it would be wise for the Government to protect its people by taking to itself these properties at present value rather than await the day, perhaps 30 or 50 years hence, when they will have multiplied in value ten or twenty fold.

The same thing has happened as to all of the right of way of all of the railroads. The amount of unearned increment already capitalized is a fabulous sum. It will be more in the future than in the past. The growth and development of our country is only begun. Eminent authority has estimated the future unearned increment of our railroad real estate at an average of at least \$300,000,000 per year. The increase in land values for one railroad has been estimated by the Interstate Commerce Commission. This railroad was accepted as typical of the western territory, it being the Burlington. The increase alone amounted to \$150,000,000, that company having a capitalization at that time of \$320,000,000. Of course, the capitalization was higher than the original investment, but \$150,000,000 was three-fifths of the original investment.

It will be impossible to find any accurate statement of the total land values in the United States, but considering the fact that the enormous terminals are in the East rather than in the West, that the proportion of terminals to the railroad right of way is very much greater in the East than in the West, and when you consider not only the increase in land values but also the original cost, it would seem safe to estimate that the total land values in the United States, including the enormous terminals, is \$6,000,000,000, exclusive of improvements. It is probably safe to estimate that land values have increased 100 per cent in the last 15 years. If they increase 100 per cent in the next 20 years, the annual increase by reason of this unearned increment will amount to \$300,000,000. I also desire to call your attention to the fact that the writers of books against Government ownership of railroads do not discuss this item. Although this item is so important that it alone might be sufficient to decide this great question, still it is not mentioned by the advocates of private ownership. It deserves a thorough investigation by this committee.

I think, gentlemen, that the unearned-increment proposition, even if you do not go to Government ownership but decide to go ahead with Government regulation, is one that deserves serious consideration at your hands. I believe it should be ended. If we give

them and honest valuation and give them enough returns to collect 6 per cent in all years, that is sufficient, as they are not entitled to get a speculative value out of property of this kind. They are nothing more than public trustees—trustees for the public—for performing this service. We have surrendered this into their hands, and it is no more right that they should profit out of that trust than that a guardian or administrator of an estate should profit out of the advance of real estate which he controls.

The third great economic loss of private ownership of our railroads is the waste of competition. The details of this subject are myriad. I shall not attempt to present them. Those who favor uniting our railroads in a single giant private corporation rely upon the facts showing the great waste in the present system through duplication in everything. With these facts I agree. Nor is there a vast difference in the remedy I propose. I, too, believe in a single giant system, but I want all of the people of the United States for stockholders and the Interstate Commerce Commission for the board of directors. The Government of the United States is the only agency which our people will trust with so great power. But as to the waste of competition, I shall only give the conclusions of the most eminent authority, Mr. C. P. Huntington, president of the Southern Pacific Railway, who said that the local waste in New York City alone amounted to \$100,000,000 annually. (U. S. Ind. Com. IX, 985.) In reference to the waste of competition under the English system, Clement Edwards, page 28 Railway Nationalization, says:

What do the wastes of the present system, with its manifold ownership and divided management, amount to? Only an approximate figure can, of course, be given, in the present defective state of railway statistics. The secretary of the London & Northwestern Railway Co.—and he would not be likely to err on the side of exaggeration—estimated the loss as 20 per cent of working expense. A similar estimate has been made by Sir Edwin Chadwick, C. B., the eminent engineer. Another railway authority, Capt. Laws, manager of the Lancashire & Yorkshire, has placed the estimate at 24 per cent.

Mr. Edward Dudley Kenna, former vice president and general counsel of the Santa Fe, in his book on Railway Misrule, page 111, says:

English experts estimate that the wastes from competition are equal to 20 per cent of operating expenses. They are scarcely less in the United States. As the operating expenses of the railways for 1912 were \$1,958,963,000, the reasonable inference is that \$400,000,000 of this was waste, all of which the people were called upon to supply. This sum exceeds the total of all dividends disbursed during the year given by railway companies and is also greater than the annual disbursements for military, naval, and post-office expenditures by the Government.

Of course, Mr. Kenna's book was written a few years ago, before the great increase in military expenditures.

This is high authority, and it seems reliable. Government ownership would remove this waste and in this third great item would save to the people \$400,000,000 per year. Summarized, we have:

Annual saving because of superior Government credit.....	\$500, 000, 000
Annual saving of unearned increment of real estate.....	300, 000, 000
Annual saving of waste of competition.....	400, 000, 000

Total annual saving of Government ownership..... 1, 200, 000, 000

This is more than one-third of the gross revenues of all the railroads. Until recently it is more than the entire appropriations of the

Congress of the United States. And this does not include all of the waste and extravagance of private ownership. There are many smaller items, like legal expenses, advertising, and soliciting, which I will not attempt to estimate; however, there are two others so large that they ought not be omitted from consideration. The first is the waste through the alliances with subsidiary supply companies. This waste is nearly all concealed. I will only quote you what a distinguished United States Senator has said: "Enough is known to make it reasonably certain that hundreds of millions of railroad expenditures annually reported as necessarily paid out to maintain the railroad and meet its operating expenses are not honestly expenditures for such purposes, but represent instead wrongful payments to 'insiders' who work a legalized form of graft, taking a rake-off on everything that enters into railroad construction, from the money to finance it to the oil that lubricates the engines. The directors of the United States Steel Co. own and control more than one-half of the railroad mileage of the United States. They sell steel rails to themselves at 'most satisfactory figures.'"

I can illustrate this by a personal experience. Some years ago, in connection with the promotion of a little interurban railroad, I got the B. J. Arnold Co. to estimate on the price of furnishing steel rail, and the only price they quoted was \$28 per ton f. o. b. factory. The same year I had some business in Canada with the Canadian Pacific Railway Co., which was building an extension through some land that was owned by a company which I represented, and I went up there, and during the course of our business I made inquiries of the parties in charge of this extension about their steel prices, and they said they were quoted to them at \$20. That is the way the Steel Trust is doing business to-day.

In this connection, gentlemen, I have another exhibit which I desire to present to you, and I want to show you something about the power of this item in the history of the United States. In this same rate case, when we were examining their prices, etc., we made an investigation of the subject of steel rails as compared to the several items of steel. The exhibit which I have here, the top line running highest through that variation [exhibiting] is wire nails. There is a line in there—and I have marked it with pencil so you can find it easily—which indicates the steel rails.

Now, there are several other items of steel on that page, and they are going up and down, year after year, from 1898 to 1914, in compliance with the law of supply and demand, and perhaps there were manipulations, but you see the variations that happened all the way through on all the other steel products. The comparison of the percentages will show that if steel rails brought \$28 per ton, that wire nails brought about \$31 per ton, which is a remarkable thing, considering the difference in manufacture. Now, what happened to steel rails in 1901? In 1901 starts this black line [exhibiting] representing steel rails, and from 1901 it has proceeded as straight as the point of the compass. It never varied up or down until the end of 1914, and that is as far as this exhibit shows. Since the war began I understand it has varied up, but it is proceeding along in the same deadly parallel. Who was it that repealed the law of supply and demand? It has never been done before in the history of this big round world. Here is a private corporation or an association of private corpora-

tions that have exerted a power greater than the Roman Emperors or the Czar of all the Russias. The Congress of the United States can not draw another black line like that by law. You never can do it unless you take over these railroads and own both the railroads and control the manufacture of steel rails at the other end, as these men did. Owning a majority of these roads and selling these rails at the prices they desired, they were able to repeal the law of supply and demand and draw the blackest line—the only black line of its kind—in all human history.

By the way, I want you to see this exhibit, gentlemen. That was figured out by the same expert in the western advance rate case, and it was not controverted, and there is no doubt about its very great accuracy.

(The exhibit referred to is published in full; see p. 598.)

Then we have the alliances with subsidiary transportation companies. Our American railroads have failed to perform the very functions for which they were created. They have admitted their inefficiency and incompetence by farming out the express business, the telegraph business, the sleeping-car business, the tank-car business, and even a large part of the refrigerator and other freight business. These companies are all profitable. The receiver's court has no terrors for them. Even a Government parcels post has but slightly affected the express business. Under Government ownership nearly all of the net profits of these parasite companies would be saved to the people. The extravagance of Governments is proverbial, but the extravagance of private ownership of railroads has never yet been told.

Having pointed out the economics of Government ownership, it is pertinent to inquire if there is anything on the other side of the account to offset them. It will be conceded that some things do so operate. According to Mr. Dunn, Government ownership of railways has been adopted in whole or in part in 53 different countries, and since his book was written the United States has started in Alaska. This gives a wide field for observation. A review of the change from private to public ownership in all of these countries will show that labor has received better treatment and better pay under Government ownership. This costs something, and would absorb a part of the savings I have indicated. Upon this subject Mr. Dunn says, on page 338:

As to the intensity of the labor required from and done by employees, it is likely to be greater under private than under public management. As has been shown elsewhere, when railroads have been transferred from private to public ownership, there is almost invariably an increase in the number of employees, and under similar conditions State railways ordinarily employ more men than private railways. This must mean that on the average the individual employee on the latter is required to do more work than on the former. Indeed, it is one of the common complaints against capitalistic employers that they work their employees harder than Governments.

Again, on page 441 he says:

However, it is significant that where there are State and private railways in the same country, it is found that the State railways pay a somewhat higher scale of wages, and seldom or never is it found that the opposite is the case.

These conclusions may be treated as the admissions of the best-informed opponents of Government ownership. They are true except as to the high-salaried general officers. In Germany the minis-

Fluctuations in the Prices of Crude and Finished Iron and Steel from January 1, 1898, to January 1, 1915—Gross Tons

ter of public works has charge of more railroads than any other one man on earth, and he manages them better, but his salary is only \$9,000 per year and house rent. Suppose, therefore, we admit that \$300,000,000 of the saving we have pointed out would go to increase the number of employees and to increase their pay. This would mean better labor conditions, greater safety, and better service for the public.

Who is there would regret if the \$20,000,000 now paid to general officers, largely as financial experts, legal experts, or political experts, were transferred to the section hands who do not draw a decent wage? Three hundred million dollars would be more than railroad labor has ever asked. This would leave \$900,000,000 still to be used in lowering rates, improving the service, or extending the facilities. We could have 1-cent passenger fare if we wanted it, or we could save an immense capital for new development. This is the other side of the account, and the balance remains large in favor of public ownership.

But now you ask for a concrete example. You say this is all theory, and you want to see the record of the country that has done these things. For this purpose I will make comparison to Germany. There are several reasons for this. The German roads are well managed. I do not favor Government ownership in this country unless the management is something like German efficiency. This does not mean an autocratic management. Contrary to popular belief, the German roads are under a very democratic management. The attached note is from Prof. Frank Parsons, and gives the workings in detail. A similar system is the most suitable for this country.

Now, gentlemen, I want to read to you a note about how the Prussian railroads are managed. They are really State roads in Germany. Prussia is the greatest State. Over and above the Prussian management there is a sort of supervising office that brushes down any distrust among the States. It does not exercise anything like the authority of our Interstate Commerce Commission as to private ownership. The real management, after all, is in the hands of the States over there, and this note that I read you now gives the management of the Prussian railways, and I think you will find it is both cooperative and democratic, exceedingly so, and as compared with the system which these railroads are proposing here now of abolishing practically all the State commissions and giving all the authority of all the management into the hands of the commission appointed by the President and Senate alone, the autocracy of the plan proposed here in the United States would be beyond expression, when you compare it with the so-called autocratic management in Germany. Now, let us see:

Railways are managed by the minister of public works at the top (with a national advisory council), 21 railway directories, 6 classes of local officers (operating, machine, traffic, shop, telegraph, and building). One of the principal duties of the local traffic office is to maintain a "living union" between the railway administration and the public. The chiefs of these offices are required to get into intimate relations with the people of their localities. Each local traffic chief "by numerous personal interviews and observations must inform himself concerning the needs of the service in his district, investigate and remedy complaints and evils without delay, and take such measures as will secure the most efficient service." It is also one of his duties to inform the public concerning the organization and administration of the railways. The management has nothing to hide from the public, but, on the contrary, desires the public to know exactly what is being done and why.

The local advisory councils are composed of representatives from chambers of commerce, labor organizations, farmers' unions, dairy associations, merchants' clubs, etc.; all sorts of industrial and social combinations are represented in these advisory councils, and the law requires the directories to consult these advisory bodies. The people organized according to their interests into various forms of industrial union (chambers of commerce, labor unions, farmers' associations, etc.) elect the members of the local advisory councils, and these councils in turn elect 30 out of the 40 members of the national advisory board, the other 10 members being appointed, 3 by the minister of agriculture and forests, 3 by the minister of trade and industry, 2 by the minister of finance, and 2 by the minister of public works, State officials being ineligible. These advisory bodies do actually discuss with the greatest force, clearness, and effectiveness all sorts of questions about rates and classification and the conduct of the railroads; they make their recommendations and suggestions, and they are almost always adopted—always, in fact, except in those rare cases where conditions beyond the control of the railway management prevent adoption from being reasonably possible. So that in Germany to-day the railway system is practically in the hands of the people to manage and direct. The roads are actually operated in the interests of the people on one of the most democratic and cooperative plans it would be possible to imagine.

Each railway directory must consult the circuit council on all important matters concerning the railways in its circuit. This applies especially to timetables and rate schedules. On the other hand, the council makes recommendations to the directory. In case of emergency the directory may act according to its own judgment independently of the council, but it is required to report all such cases to the standing committee of the council and to the council itself. This provision supplies the elastic element which enables the railway management to combine full efficiency and executive force with the council system. Each council has a standing committee which receives petitions, gathers and sifts evidence, and reports to the council.

If, for any reason, the circuit council and the local directory can not agree, or the question in hand is too large for local settlement, the matter goes up to the national council and the minister. The national council meets at least twice annually and deliberates on such matters as the proposed budget, normal freight and passenger rates, classification of freight, special and differential rates, proposed changes in regulation governing the operations of railways, and allied questions. The law requires it to submit its opinion on any question brought before it by the minister of public works, and it has the right to make any recommendations it sees fit in regard to any matter relating to the railways. Its proceedings are regularly submitted to the Landtag, where they are considered in connection with the budget, thus establishing "an organic connection" between the national council and the Parliament. In this way the proceedings are made accessible to everyone and an opportunity is given to approve or disapprove what the council does through parliamentary representatives. The system is one of reciprocal questioning and answering on the part of the minister of public works, the national council, and the Parliament.

For the purpose of this comparison, I will take my figures from Mr. Dunn's book. When they are unfair they are also unfavorable to Government ownership, so I use as my basis the concessions of the opposition. The mileage of the Prussian Hessian State Railways in 1910 was 23,325 and the cost per mile was \$114,000. (Dunn, p. 180.) The net earnings were \$170,000,000 (Dunn, 311), but from this should be deducted \$21,000,000 for taxes not collected. (Dunn, 313.) This would leave \$149,000,000 of profit to the Prussian Government in 1910, after paying all expenses and taxes as great as ours, and this vast sum was earned on 23,335 miles of line. The mileage for the United States was 238,609, or more than 10 times as great. At this ratio the American roads would have earned more than one and a half billion dollars, and deducting from this the entire interest charge would have left over 1,135 millions net. This is a wide margin over a billion dollars, and it shows that Germany actually did what I claim the United States ought to do.

What is the answer to this fatal achievement? In the main we hear two. First, it is loudly proclaimed that wages in the United States are double what they are in Germany, and, second, the American freight rates are the lowest in the world. The first is more than offset by the greater cost of railroads in Germany, and the second I challenge and will seek to disprove. In order to make the comparison I submit the following table. The German figures are from Mr. Dunn's book and the American from Statistics of Railways, I. C. C., 1910, which is the same year used by Mr. Dunn:

	Prussian Hessian State.	United States, private.
Mileage operated.....	23,335	239,609
Capitalization or cost of construction per mile of road.....	\$114,000	\$62,657
Passenger density, passengers carried 1 mile per mile of line.....	693,921	138,169
Average journey, miles.....	14.45	33
Average rate per passenger mile, cents.....	.88	1.938
Freight density (tons hauled 1 mile per mile of line).....	1,150,490	1,071,086
Average haul, miles.....		249.68
Total compensation American railway employees, 1910.....		\$1,143,725,308

Average wage (Dunn, 177), Prussian about one-half of American. If the German wages are only one-half the American wages and all other conditions were equal, then it is certain American earnings would be less. A glance at the foregoing table shows other conditions are not equal. The first great discrepancy is in the cost of the road. We find that the German roads cost over \$51,000 per mile more than the capitalization of the American roads. If, therefore, the American roads cost as much there would be an additional \$12,000,000,000 upon which to earn a dividend. If we took half of the American wages shown in the table for that purpose they would yield about \$572,000,000, or about 4.77 per cent. But on page 311 Mr. Dunn shows the German roads earned 6.48 per cent upon their entire cost of \$114,000 per mile. Therefore the one item of greater cost of road more than offsets the difference in wages. In addition to this the German employees are so well protected by State insurance against injury and loss of employment with pensions that the real difference in wages is much less than the nominal difference.

No claim is more persistently made than that the American freight rates are the lowest in the world. You see it in newspapers, in magazines, in pamphlets, and in books. Mr. Dunn excepts Japan alone (p. 296). This claim has even reached Congress, and near the close of the last session Senator Works said: "The truth is that our freight rates are materially less than are the freight rates of any country in the world, and that passenger fares, with the exception of third and fourth class fares in European countries, are as low as are the rates in other parts of the world." Mr. Dunn has used seven pages of his book, 296-302, to demonstrate that our passenger rates are almost as low as the German and our freight rates much lower. I desire to join issue with those conclusions and assert that not only are American passenger rates highest in the world, but American freight rates for the same service are highest also. The issue is sharp and is also important. Now for the facts.

When we seek to compare freight rates in two different countries we first look for the average cost of hauling 1 ton of freight 1 mile. In the table given this average cost in Germany is 1.248 cents and

in the United States 0.753. If this were all to consider, the American rate is much lower than the German. But this is only the starting point. Every rate is made up of two things—one the terminal expense, the other the haulage expense. All freight must be loaded and unloaded, and facilities must be provided therefor. That is terminal expense. It must be moved. That is haulage. The terminal expense is about the same for a short haul as for a long one. Therefore the length of haul becomes the next great item in a freight rate. The above table gives the average German haul as 68 miles. That is Mr. Dunn's figures. Other eminent authority gives it as 60 miles: but again I use the conceded figures. In my table the American haul is given as 248.88 miles. In Mr. Dunn's book, on page 176, the "average haul miles," "railways of the United States," is given as only 138 miles. Now, we are coming to the issue. On page 296 he says the length of the American haul is double the German, and this statement is repeated on page 299. He makes no explanation of these figures, and states them as a positive fact and without qualification. Where did he get those figures? Look on page 59 of the statistics of railways.

I. C. C., 1910, and you will find them under the heading, "Typical haul of the average railway," Does that mean the average haul of the railways of the United States? It does not. It means the average haul of one; that is, the average railway. In the next column on the same page we find "The typical haul of all the railways regarded as a system," and that is 249.68 miles instead of 138. And there you find the two figures side by side, in the same book, and yet Mr. Dunn uses the typical haul of the average railway and never says a word about it, as the average American haul. In order to maintain that claim that American rates are lower at all, it is necessary to split that haul and reduce it down to 138 instead of 260 miles as it is to-day. It was 250 miles, in round numbers, at the time I made the comparison.

In our country there are many thousand hauls over two or three or even more roads. You can start a trainload of freight at New York over the New York Central, take it over the Lake Shore and over the Big Four, down to St. Louis without that train being broken up, every car going at the same time, under the same motive power, under the same crews. You can do all of that, and yet in Mr. Dunn's figures the typical haul of the American railway—that through haul is broken up and reported as three hauls, and there would be three terminal expenses. The unfairness of that proposition has enabled them to publish continually and put in statements and pamphlets and books and everything the fact that American freight rates are the lowest in the world. The cars are loaded at the beginning, switched from one road to another and not unloaded until the journey end. So far as terminal expenses is concerned this is one haul. Under the figures used by Mr. Dunn, if a car passed over three different roads that trip is broken up into three hauls, and he figures it as loaded three times and unloaded three times, when, in fact, it is only loaded once and unloaded once. He is not only wrong, but is grossly unfair in using these figures without explanation or comment.

If the Government owned the railroads, his figures would disappear from the table. There would be nothing from which to make them up. If private ownership is charging a terminal expense

which includes its share for loading and unloading every time it switches a car from one road to another, it is taking an extortionate toll that will be wiped out by Government ownership.

Why is this so important? When we find out the amount of terminal expense we shall see. I have made a careful investigation of this question and have had it figured out by an expert. Under the McGraham system established many years ago the railroads actually charge 6 cents per 100 pounds for terminal expense on sixth class, and they charge the same for the short haul as for the long one. Sixth class, the rate from New York to Chicago is 25 cents, and if you will read Prof. Ripley's book, which is favorable to the railroads, he describes how that rate was established 30 or more years ago and brought down to date—paying it to-day. It is divided 6 cents for terminal and 19 cents for haulage. Now, of course, for higher classes, both the haulage and the terminal are increased. For some of the commodities they are the same. The same division, also, is made on any commodity where the rate is 25 cents per hundred. On the commodities that are lower, both the haulage and the terminal is reduced in the charge.

Now, gentlemen, in order to make this terminal average for the United States safe, I have taken all of that reduction off the terminal and have not allowed any on the haulage at all. For the higher class rates they charge more and for the commodities less. The average terminal charge for all freight in the United States figures to be at least 4.25 cents per hundred pounds. That is what it figures out, allowing all this reduction, if there is any, on the terminal alone, taking nothing off of the haulage, leaving it as high as it is on the sixth class. On some local short hauls they charge less. In the Minnesota rate case the State commission fixed the charge for first class at 11.02 cents, and, as above stated, the average terminal charge for all freight in the United States figures out to be at least 4.25 cents per hundred pounds. This is the average terminal charge in the rates we now pay the railroads, and it is not modified by the fact that shippers load and unload carload lots. Therefore the average terminal charge alone on each ton of freight in our country is 85 cents. Now, gentlemen, I would like to have you remember those figures. The average terminal charge which we are now paying the railroads in the United States is 85 cents for each ton. In Germany, for terminal movement and all, it costs 1.248 cents to move each ton 1 mile. Therefore, to move a ton the average haul of 68 miles would cost only 84.9 cents.

In other words, the terminal expense alone in the United States is more than the whole German rate. If the length of haul is 68 miles in Germany and 250 in the United States, then the American is $3\frac{1}{2}$ times the German instead of double, as claimed by Mr. Dunn. This means we must add $2\frac{1}{2}$ terminal expenses to the American rate to make the comparison. When this is done the American rate becomes 1.886 as against 1.248 for the German. Instead of being the lowest in the world, our freight rates are more than 50 per cent higher than the German and there are no other facts to change this conclusion. We have already seen that our highest wages are more than offset by the greater cost of roads in Germany. The table shows the freight density to be about the same in the two countries. This

is a surprise to many, but some years it is even greater in our country. There are many other facts which tend to increase the American rates in the comparison. German rates include express, which is high and increases the average. Express is not included in the American rate. The American rate is cut down by large amounts of freight carried for the companies themselves, but the German rate includes only freight actually paid for. The proportion of bulky low-rate freight, like coal, iron, and timber, is very much greater in this country. Much of this goes by water in Germany. About one-third of our tonnage is coal, and that reduces the average rate. In Germany the proportion of manufactured goods is very much greater and they always go at a higher rate and increase the average. These considerations are fatal to the claim that the American rates are lower. About 1905 the German commissioners, Hoff and Schwabach, visited this country for the purpose of comparing freight rates. They reported that for the same service the American rate would be 1.44 cents per ton-mile as compared to the German rate of 0.95 of 1 cent. They also found the American rate to be almost 50 per cent higher. I have searched in vain for higher freight rates than the Americans' upon a fair comparison. England is the nearest approach, and England enjoyed the blessings of private control until the war wiped it out.

In Germany the average passenger fare is 0.88 of 1 cent per mile. About 3 per cent must be added to this for baggage charges and a little more for tickets through gates to parties seeing friends off on trains. After all is considered, the German rate is less than half the American rate of 1.938 cents per mile. The American accommodations are better than the German lower classes and the German density is more than five times the American. However, density does not count so much on passenger as on freight rates. In our country the passenger rate in the East is higher than in the less dense Middle West.

In the recent advances allowed by the commission they allowed $2\frac{1}{2}$ cents for the eastern district here, but in the western district they only allowed 2.4 cents for interstate traffic, so the greater density is paying the higher rate here in the United States, and the railroads themselves figured it out in the same way prior to that.

The average journey in Germany is less than half the American, but neither is length of journey so important as length of haul in freight. When all is considered it is found that for the same service the American passenger rate is almost double the German and the freight rate more than 52 per cent higher, but still upon those low rates Government ownership in Germany had a net earning of \$170,000,000 in 1910 and the mails and parcel post were handled free.

A proper and fair analysis will reach the same conclusions in all the world. The United States is the best natural railroad proposition on earth. I used to feel we could not make a comparison. You might make a success in a little country like Switzerland, but you might fail in a big country like the United States, but the investigation of this subject proves conclusively that the larger the country the more sure you are to make a success. The railroad consolidations prove that. The attempt they are making now to get them united

under a single management proves the same thing. It is easier to make a success of Government ownership in the United States than in any country in this world. Germany is next. Superior management has put the German first. In other countries the results are not so great, because the propositions are not so good. The management in Switzerland under the most democratic form of government is in all respects as good as the German. The results are as great in proportion to the opportunities. In Australia the same is true, except the ownership has been by States instead of national. The same is true of Belgium, New Zealand, Japan, and South Africa.

Until very recently they have had a poor State management in Australia. Some States had narrow-gauge roads that went up against broad-gauge roads in other States. They have had an economic loss on them, but recently they have had national management, which will unite them all together, with the result that they will be as good as in any other country.

Even in Italy, where the proposition is so bad it is a failure under every management, still it is better under Government ownership. This is the only country that ever relapsed from Government ownership, but it soon came back. In all other countries the question is settled where the Government owns the railroads, and I believe there is no other settlement for it in our country.

Is Government ownership compatible with our system of government? The committee has asked that question, and I would reply to this by saying that private ownership has certainly proven incompatible to our system of government. If we go into the history of the manipulation, the looting, and the wrecking of American railroads, we find it without parallel in the history of the world. Legislatures, courts, and even Congress have been unable to stop these evils. They have continued right down to date in the New Haven and the Rock Island. Their participation in government has been evil, sinister, and universal. Count up the thousand newspapers on the pay roll of the New Haven, and who can ascribe to it any other motive than the corruption of public sentiment and the subversion of free government? Its schemes would have failed if government had not been chloroformed.

How much better is the recent campaign for higher rates through newspaper advertising. In Iowa more than 500 papers published this advertising, which was so false and unreliable that the attorney for the railroads was forced to repudiate it in the trial of the advance rate case. And all of this scheme of deceiving themselves was paid by the people in railroad fares. Why, at this moment, do the railroads have 350 political attorneys retained in the State of Iowa and other thousands throughout the United States? Why have the railroads offered my newspaper and every newspaper throughout the country free plate accounts of the hearings before this committee? It is because private ownership is not compatible with free government. The railroads will never get out of politics until the Government owns them. Then nobody will conduct a political campaign for higher rates. Nobody will corrupt a legislature for a charter to water the stocks. The political attorneys will all be discharged. The United States attorneys will protect the Government's interests. Congress can investigate every subject of transportation and no free plate matter will be sent out to edit or distort the facts.

On June 30, 1915, the United States Government was running more than 28,000 miles of railroad—more than the Prussian Empire. I think the number at the present time—I have seen it stated, at least, to be 42,000. The first was reported by the Interstate Commerce Commission at that time.

These great properties in control of our courts do not threaten our Government. They would be better still in the hands of the Interstate Commerce Commission, which knows so much more about them, but the courts run them better than these private owners who have wrecked them.

As to whether Government ownership will suit local needs, we only need to look at the Post Office Department. Its establishment of the rural free delivery is an answer full and complete. Every system of Government ownership does more to suit local needs than private ownership. It is one of the charges against Government ownership that it does too much and goes to extravagance.

I should favor the acquiring of the properties by the Government either by purchase or condemnation. The old stock issue should be retired and speculation forever cease in our public highways.

In conclusion, I will point out in my opinion why regulation is doomed to failure. A very large percentage—over two-thirds—of our railroads can live and prosper on a given set of rates. They are doing it now. It is unjust to the public to raise the whole rate structure in order to give the other one-third more revenue. It might be done in one giant corporation plan, but that looks too much like a private monarchy. The American people will not tolerate it very long. The other and only alternative is Government ownership.

I have here compiled a list of railway companies that earned more than 7 per cent on their common stock during the year 1913. This earning is net above all interest, all operating expenses and all taxes. I have accepted their capital stock as they themselves report it, water and all. These roads handled 70.09 per cent or more than two-thirds of all the traffic handled by the railroads for which the Interstate Commerce Commission publishes ton-mile figures. The commission did not publish traffic statistics for Class III railroads. However, these roads earn less than \$100,000 each annually and comprise less than 4 per cent of the mileage of the United States.

Gentlemen, here are the roads and what they earn, and I believe that nothing can be better than for us to read these figures over here and see what is happening to these individual roads. It shows to you that regulation can not regulate this competitive system. It is impossible for you gentlemen to figure out a plan to give all of the railroads of the United States 6 per cent and just enough surplus to make that absolutely sure each year. You can not do it under this private ownership because of this great discrepancy and the great differences in the organization, the localities, and the numerous systems.

The Baltimore & Ohio earned 7.33 on all its common stock. The Bessemer & Lake Erie Railroad Co. earned on all its stock, preferred and all—I did not get some of these separated; I had to take it all—it earned 18.14 per cent. The Buffalo, Rochester & Pittsburgh Railway Co., on all its stock, earned 12.89 per cent. The Central New England Railway Co. earned 8.45 per cent on 259,497,608 ton-miles.

The Central Railroad Co. of New Jersey earned 24.93 per cent on 2,484,070,485. The Delaware & Hudson Railroad System earned 14.19 per cent on 3,060,971,982. The Delaware, Lackawanna & Western Railroad Co. earned 22.93 per cent on 4,277,030,439. The Kana-wha & Michigan Railway Co. earned 11.17 per cent on 712,246,180. The Lehigh & Hudson River Railway Co. earned 20.01 per cent on 231,727,702. The Lehigh Valley Railroad Co. earned 14.10 per cent on 5,812,384,917. The New York Central lines earned 11.08 per cent on 34,424,312,942. The Norfolk & Western Railway Co. earned 9.02 on 8,856,070,381. The Pennsylvania System earned 9.64 on 42,874,515,240, whole line. The Reading System earned 13.10 per cent on 6,134,611,747.

On all the stock of the Baltimore & Ohio it would be more if the dividends were paid on the preferred than all applied to the common stock.

The CHAIRMAN. What year were those figures for?

Mr. BROOKHART. This was 1913. I took them from the Advance Rate case because we have worked them out in that case. The figures for 1916 would be considerably more. In 1914 and 1915 they would be less. This probably would be about an average of the four years. The earnings are on common stock on these.

The Detroit & Mackinac earned 9.71 per cent on 96,239,146 ton-miles. The Detroit & Toledo Shore Line earned 19.20 per cent on 4,346,397. The Elgin, Joliet & Eastern Railway Co. earned 25.03 per cent on 1,755,724,208. The Lehigh & New England earned 8.64 per cent on 157,791,718. The Alabama & Vicksburg Railway Co. earned 17.50 per cent on 127,280,286. The Cincinnati, New Orleans & Texas Pacific Railway Co. earned 71.23 on 1,072,034,160.

You will notice they had over a billion ton-miles.

The Atlantic Coast Line Railroad Co. earned 11.50 per cent on 2,036,643,060 ton-miles. The Atlantic & West Point Railroad Co. earned 10.14 per cent on 44,118,559 ton-miles. The Louisville & Nashville Railroad Co. earned 11.99 per cent on 5,513,273,784 ton-miles.

I take it that is the one which bought up the road you sought to have built through your county. Mr. Sims. It earns almost 12 per cent, and it bought up that road in some manner, dumped it in the wastebasket to control the situation better and earn more perhaps.

Name of road.	Per cent earned on common stock.	Ton-miles.
Nashville, Chattanooga & St. Louis Ry.....	15.53	933,652,813
Richmond, Fredericksburgh & Potomac R. R.....	24.34	167,521,317
Western Ry. of Alabama.....	9.85	61,098,853
Charleston & Western Carolina Ry. Co.....	14.82	131,375,050
Alabama Great Southern.....	11.90	538,501,736
Mobile & Ohio.....	10.68	1,555,296,849

The CHAIRMAN. Have you on that list all the large railway systems?

Mr. BROOKHART. Yes; they are all in here except the few I will mention later, Senator. There are some of the roads badly financed I will mention later by themselves.

Mr. HAMILTON. You have not given the average of all the roads, have you?

Mr. BROOKHART. No, sir; it is a big job. You can get the capitalization of all of them and add them up, and add these per cent, and in that way figure them out, but it is a bigger job than I had time, just as a common, ordinary citizen, to do.

I will not read the balance of them.

The CHAIRMAN. They will be included in the record.

Mr. BROOKHART. I have read a good deal because I wanted you to feel that most of the railroads of the United States are earning more than they ought to earn now. The rates are too high. I call your special attention to the Brimstone Railroad & Canal Co., which earns 209.80 per cent. The Brimstone route is earning the most of any railroad in the United States.

The Hocking Valley, which omitted earlier, is one of these large roads; it earned 17.43 per cent on its total stock.

These roads were taken out of 96 per cent of the roads that are reported, and they carry over 70 per cent of all the traffic in the United States. The authority for it all is the Interstate Commerce Commission. I will read that. It is in the record here.

The balance of the list is as follows:

Name of road.	Per cent earned on common stock.	Ton-miles.
Potato Creek R. R. Co.....	48.32	3,777,341
Raritan River R. R. Co.....	13.34	4,231,869
St. Louis & O'Fallon Ry. Co.....	88.97	11,677,412
Fionesta Valley Ry. Co.....	12.51	3,741,787
Durham & Southern Ry. Co.....	11.98	6,885,804
East Tennessee & Western North Carolina.....	18.74	6,268,074

Hocking Valley.....	17.43	1,453,682,875
Total ton-miles.....		211,261,777,994

Total ton-miles of Class I and II railroads—or those whose annual operating revenue exceeds \$100,000—in the United States for year ending June 30, 1913, 301,398,753.108.

Per cent of traffic handled of those roads that earned 7 per cent on their common stock, 70.09.

Authorities: Railroad exhibits showing figures for systems in Five Per Cent Case were used in order to eliminate the intercorporate relationship of capital stock; reports to stockholders for Atchison, Topeka & Santa Fe, Union Pacific, and Southern Pacific, giving system figures, were used; and the balance of Class I and II roads as reported by the Interstate Commerce Commission in their Reports of Statistics of Railways in the United States for the year 1913.

96.43 per cent of the total mileage of railway companies reporting to the Interstate Commerce Commission is embraced in Class I and II roads.

Return is on capital stock. Figures taken from railroad exhibits in Five Per Cent Case did not show the common and preferred stock separately, however, the return on common stock would be much greater in instances where there is more than one kind of stock.

Take out of the remaining 30 per cent the Chicago & Alton, the Frisco, and the Rock Island, about which Commissioner Daniels spoke as having been wrecked by financial manipulation, in his opinion, in the Western Advance Rate Case, also the Erie (whose financial history is notorious, and if its capital stock averaged the same per mile of line as the average of the eastern district, it would have earned 7.56 on such capital, and if its funded debt had averaged the same as the average of the eastern district per mile, it would have earned 14.60 per cent); also take out the Chesapeake &

Ohio, the West Side Belt, the Illinois Central, and the St. Louis Iron Mountain & Southern, which earned over 5 per cent, and the remaining roads of the United States only handled 18 per cent of the traffic.

This analysis shows the railroads handling 82 per cent of our traffic are earning enough on an average. If you will take the foregoing "wildcat" roads and reform their capitalization to even the general railroad standard and also take the 5 per cent roads which I have mentioned and put them in with those I have specifically shown to have earned over 7 per cent, you will probably find that the whole 82 per cent earned an average of over 9 per cent on all their common stock, water and all.

The representative of the railroads has stated in this hearing that 6 per cent for dividends and 3 per cent for surplus is an adequate return to insure good credit and command the capital necessary for future needs and developments. Let us concede that the roads handling the other 18 per cent of traffic should have high rates, and then let us reduce the rates on the Central of New Jersey, the New York Central Lines, the Pennsylvania System, the Atlantic Coast Line, the Louisville & Nashville, the Great Northern, the Burlington, the Northwestern, the Union Pacific, the Southern Pacific and on the other roads that earn more than 9 per cent, and what will private ownership say? It will throw up its hands in horror and tell you the whole rate structure must be raised in order to relieve the situation. In other words, the already excessive and even extortionate rates of many strong lines must be further increased, in order that a few weak lines may live and the whole credit fabric become dependable. A more unjust and unreasonable proposition was never presented to the American Congress. It is impossible for regulation to equalize the rates and earnings of our railroads under their unscientific and competitive system of private ownership.

Regulation must also fail because of the constant conflict between the interests of private ownership and the regulating authority. The claim that the railroads have ceased to resist regulation in the courts or anywhere else is a myth. In 1907 they fought the enactment by Congress of the law giving the Interstate Commerce Commission power to regulate rates. They fought the 2-cent fare laws and all the other regulating measures before most of the State legislatures. Failing, they took them into the courts and never stopped the fight until they won or lost in the courts of last resort.

The ink of the President's signature had not dried on the Adamson bill when President Ripley, of the Santa Fe, announced that he would not submit to the law until commanded by the Supreme Court of the United States; and the other railroad executives have joined him since. And the railroads are now before this committee fighting every State commission in the whole Republic. They are demanding that you abolish these commissions by taking away all their authority over the railroads. They are inviting a lawsuit upon every act of every State commission in regulation of the railroads, regardless of the constitutional rights of the States. If the Adamson law is held void, and if the railroad men strike, they have brought us to the threshold of revolution. This conflict must cease. The answer is Government ownership. Former Gov. Larrabee, of Iowa, now deceased, was a pioneer in the field of railroad regulation. In his

private library, in a book entitled "Transportation in Europe," by Logan G. McPherson, on the margin of page 207, in his own handwriting, Gov. Larrabee wrote:

Private management strives for the most money for the least service, while Government management strives for the best service for the least money possible. The Government will eventually take over the railroads. People will not tolerate private management.

In conclusion, I believe that if the Supreme Court should hold, as the lower court has held, as to the constitutionality of the Adamson bill this session of Congress will take over the railroads.

Mr. ADAMSON. You are mistaken about the lower court holding that. He just said according to what he had heard them say about it.

Mr. BROOKHART. I accept your correction, Mr. Adamson.

Mr. ADAMSON. That was a consent order, by agreement, in order that they could correct it.

Mr. BROOKHART. He put it in the record.

Mr. ADAMSON. If the Supreme Court should hold the Adamson law unconstitutional, it would have to repeal the commerce clause, and I am willing to do that in order to get rid of the commerce clause.

Mr. BROOKHART. I agree with you on your eight-hour law. I believe it is right and just; but if it should go the other way, what will you do? I believe if that should happen the question of taking over the railroads, and taking them over immediately, will be all that we can reasonably consider. That is the only way you can save us from the greatest trouble and revolution since the Civil War. But supposing that does not happen, and supposing things go smoothly and that you are going to give these railroads another chance. They are before you confessing and claiming that they are inefficient as to credit, and that they have failed. I am not agreeing with them on that; I am giving them a better credit than they give themselves. They are telling you that the system of regulation which you have provided is a failure, and they are asking you to invade the States and take away the regulative powers of the States and to give them another chance. After 80 years of experiments they want one more opportunity for experiment.

If you decide to do that, let me ask you to consider the proposition of a referendum to the people of the United States on this question. Let us take the voice of the people; let us give them the facts and see what they say. Up to date, gentlemen, we have not been able to get the people to consider these facts. Books are sent to me like this one all the time, because I happen to publish a little newspaper out in my home town. They are articles by college professors, and they all have the railroad bias, which Mr. Bryan has so aptly described; they leave out the things that would clarify the people's understanding of the situation; but they persistently claim that American freight rates are so much lower and American wages are so much higher that the railroads are at a disadvantage.

They never tell the people that a right of way abroad costs more than the whole road equipped in the United States, and that that difference more than offsets the difference in wages. They never figure out that the terminal expenses in the United States are more than the whole freight rate of any other country in the world, and by that sort of campaign they mislead the people, and they have

made those arguments in hearings before the Interstate Commerce Commission; every paper in Iowa that came to my exchange table published their paid advertisements before the trial of the rate case—this last advance rate case—and when we went into the trial and brought out the facts, where they claimed that they did not have money sufficient for maintenance, although the maintenance had been increased once \$120,000,000 a year, and again \$109,000,000 in a year, and that level always maintained forever afterwards, and although the fact is that they are building up their roads both as to equipment and as to roadbed out of surplus and out of earnings all the time, and they are using it out of earnings and charging it to earnings, and the people are paying it, and they are getting it—although all of those facts and those things were happening, this campaign went on all over our State and all over the West to create a public sentiment in deciding a question of fact which was a judicial question, to surround the commission with that sort of influence. and when we brought them to book, their attorney, Mr. Wright, of the North Western Railway, was forced to repudiate the claims of the advertisers and to concede that the maintenance of the western roads had been as good as they themselves thought it should be. Under those conditions and in the light of those facts there is a great opportunity for economy to be effected by Government credit, because every man must admit that there will be the saving of the unearned increment on real estate, which is now enormous, and every well-informed man will admit that the saving of the waste in competition will be enormous, those items amounting to more than a billion dollars a year, and those are the economic savings with which you can start to better your facilities, to better labor's condition, and to reduce rates, to better serve the American people; and if the Government of the United States is so inefficient and so incompetent that with an economic basis like that it can not start and do for the people of the United States by managing the people's public highways better than private ownership is doing now, this Government ought to cease to exist. I thank you, gentlemen.

The CHAIRMAN. The committee will now adjourn.

(Thereupon, at 6 o'clock and 5 minutes p. m., the joint committee adjourned subject to the call of the chairman.)

STATEMENT OF A. P. RAMSTEDT, OF THE IDAHO PUBLIC UTILITIES COMMISSION.

GENTLEMEN: I had hoped to be able to appear in person before your committee to express my views on the subject of railway regulation and control, but it now seems that I will be unable to go to Washington, and for that reason I take the opportunity offered by the committee to briefly express my views on the subject in this written communication.

In discussing the question of regulating common carriers, I have in mind the provisions of the Federal Constitution, vesting in Congress the power to regulate commerce among the several States, and the spirit and intent of the Constitution that no preference shall be given one State over any other State by any regulation of commerce. I believe that it was to secure the freedom of interstate commerce

from State control whenever the general welfare should demand it that the grant in the Constitution was made under which Congress may provide effective regulation and exclusive Federal control.

Referring to the power of Congress to regulate interstate commerce, Mr. Justice Hughes in the Minnesota rate cases said "the conviction of its necessity sprang from the disastrous experiences under the Confederation when the States vied in discriminatory measures against each other."

We are to-day confronted with the possibility of one State, in the absence of any interference on the part of the Federal Government, to so regulate purely State rates as to build up shipping centers within its borders at the expense of shipping centers in other States. State regulation is always subject to the influence of State jealousy, resulting in discrimination against the people of other States. This discrimination, as I view it, is contrary to the very spirit of the Federal Constitution.

After making these general statements, I shall as far as practicable classify my remarks according to the suggestions of your committee.

Referring to the first subject to which our attention is called, would say that the jurisdiction of the Commerce Commission should, I believe, be extended rather than restricted. I believe that the commission's jurisdiction should be extended to also include restriction of competition wherever competition is not clearly in the interest of the public. I am convinced from my experience in the regulation of other public utilities under a plan favoring regulated monopoly that such regulation would be in the interest of all the people. Under such plan the commission should have authority to prescribe fixed rates—not maximum rates, as at present. The commission should also have power to prescribe the joint use of facilities whenever economy or the public convenience and necessity so require.

The commission should also exercise authority to permit the consolidation of short-line roads into long through systems, assuring the patrons of the carriers quick and regular deliveries and opening up to producers free competition throughout the whole country in the interest of the consumers—the whole thing supporting the concentration for cheap production and the elimination of waste in an extended competitive field.

I believe that it is now generally admitted that competition, in so far as public utilities are concerned, is undesirable when the State has, as to the rates charged and the service rendered, undertaken to control and regulate such utilities. At least the people of my State admit the soundness of that idea and are committed to that general principle.

This country, especially that part of the country wherein I live, needs more railroad facilities. These facilities can not be had without added investment to railroad enterprises, and as far as I can see the investment will not be made unless there is some assurance that a reasonable return will be allowed on the investment and that the money invested will be honestly expended. It follows therefore that the commission should also exercise jurisdiction over the issue of securities and perhaps the incorporation of railroads. I will defer

discussing the questions of Federal incorporation and supervision over the issue of securities until later in order to maintain the sequence outlined by your committee.

Referring now to the next two subheads having to do with the organization of the commission, I will say that I have no detailed plan to offer. Viewing the matter in the interest of the country as a whole, the organization should be such as will tend toward uniform and general transportation, regulation, and development, because oftentimes the interests and ideas of the several States, as well as different sections of the country, are conflicting on account of purely local conditions. I am therefore in favor of a larger and stronger Federal commission, acting as a central body in Washington and through several subcommissions exercising administrative jurisdiction over areas determined by traffic conditions. The supervision should not only be centralized and of the highest class possible, but should be capable of being brought close to the public, affording a means of taking care of troubles that are more or less local in character.

The next subhead refers to railroad credit, the supervision of securities issues, and the effect of concurrent jurisdiction of the Nation and the States to control such issues; also the field of operations for State commissions under exclusive Federal control.

In earlier years when a larger portion of the country was undeveloped and transportation lines comparatively few, the people were liberal and granted the transportation lines a latitude under which the lines were extended into undeveloped territory, resulting in a remarkable development in railroad transportation. In later years the old-time liberality of the people disappeared to a degree which is probably justified by the development of railroad transportation, and we have now reached a stage where the absolute rights of the carriers and the public should be determined according to fixed economic principles.

A number of States assert a right to control stock and bond issues of railroads within their respective territories. Such control on the part of the several States through which a transcontinental line runs would, of course, impair railroad credit.

Some States have insisted that part of the proceeds of contemplated new financing be expended within their respective boundaries as a condition to obtaining their consent. I believe that the imposition of such conditions by one State creates a discrimination against the rights and commerce of other States.

I believe that improvements of existing railroads and construction of new lines has under the present system been seriously retarded. In order to secure the capital necessary to bring about needed improvements and new construction it appears that a market must be found for railroad securities, and the public must be assured that the capital invested will be used for legitimate purposes and not for speculation.

In order that railroad securities may find a market in the world's exchanges and the people may know that the capitalization is honest there should be some supervision over the issue of railroad securities and possibly incorporation, in addition to such supervision over rates as will give reasonable assurance that the earnings will be sufficient

to meet interest accounts as well as operating expenses. This supervision should, on account of its very nature, be Federal and, as stated before, centralized and of the highest class. To allow a State to supervise or regulate the securities of an interstate carrier appears to me to be unreasonable. The Federal Government alone should exercise such authority.

Under the protection of the Federal Constitution, as I understand it, railroads are allowed to charge rates that will produce a reasonable return upon the capital invested. The determination of a reasonable return, as well as the capital to be invested, must, if successfully determined, be determined by one authority. It seems to me that in justice to all concerned you can not leave the determination of these questions to several authorities, each acting separately and without coordination.

If exclusive Federal control is adopted there still remains a large field of operations for the several State commissions. The regulation of public utilities other than railroads will keep them all occupied.

The next subhead refers to the effect of dual rate regulations—State and Nation—and with reference to that matter would say that the attempt of the several States, each acting independently, to regulate our railroads has, in my judgment, resulted in waste, confusion, and discrimination, which can be eliminated only by the institution of a single rate-regulating authority. If we are ever to fully enjoy the blessings that flow from efficient railroad regulation, the very nature of the thing to be regulated requires that the regulation be vested exclusively in the Federal Government.

I have referred to the possibility, under multiple control, of one State building up shipping centers at the expense of shipping centers in other States. Centers built up by regulation only can not hope to enjoy prosperity permanently. Sooner or later the fictitious values created at the expense of other centers naturally more favorably situated will fall, and we then realize the extent of the economic waste that has been going on in attempting to create an abnormal situation by rate regulation.

An intrastate rate of an interstate carrier will have its influence upon interstate traffic which is by far the greater part—probably three-fourths or more of all traffic—and the efficient regulation of interstate traffic by Federal authority in the interest of the majority of the people will require the regulation of intrastate traffic by the same authority.

Interstate carriers are engaged in intrastate as well as interstate commerce. The assurance that a reasonable return be allowed on the investment can not be had without proper and exclusive Federal control. The return can not be determined without regard to revenue and expenses. The revenue is made up of the earnings from all sources—intrastate as well as interstate—and the expenses are incurred in the transactions of intrastate as well as interstate business. It is almost impossible to segregate the revenue and expenses of carriers between intrastate and interstate traffic. Even though such segregation could be made, control of State rates must be had under any scientific plan of regulation in order to justly distribute the expense of operation in fixing rates. Furthermore, under multiple

regulation we are confronted with the conflict between States as regards demurrage penalties, Sunday and holiday restrictions, and other matters.

I believe it can be stated conclusively that rates are essentially interstate in their operation (Shreveport and other cases) and that the transportation question is a national problem.

It has been said that Federal regulation at present means higher rates. This statement is undoubtedly based on the fact that the Commerce Commission has consistently supported the higher interstate rate as compared with State made rates. The tendency of State regulation is to reduce rates on account of the opportunity afforded to take advantage as between States. As a result there is a tendency to reduce certain interstate rates on account of the influence of the intrastate rate on the interstate rates. The failure or rather inability of the Commerce Commission to prescribe minimum rates permits certain interstate rates to become unreasonably low, and as a result other interstate rates are increased in attempting to overcome loss resulting from the low rates. I believe that if the Commerce Commission could in all cases fix the rate, i. e., increase as well as decrease the rate, a great many interstate rates could be reduced as a result of increasing other rates which are now too low. This adjustment of rates could not be made without central control of all rates on account of the influence of the intrastate rate upon interstate rates.

Referring now to the next subhead, I would say that some provision should be had for the adjustment of disputes between carriers and their employees in order to maintain uninterrupted commerce between States. We can now all realize how a disruption of all railroad service, and the infliction of loss and suffering upon the entire country, might result from a mere disagreement between carriers and their employees.

The employee and the employer engaged in interstate commerce have certain duties of a public nature to perform and each should be held responsible in the performance of such duties.

The next and last subhead refers to national incorporation and uniform rules of taxation.

As stated before, I am in favor of the consolidation of railroads into through systems and the regulation of transportation systems as natural monopolies. Any scheme favoring such consolidation and regulation should include Federal incorporation. As it is now, many of the individual companies that go to make up a great railway system have special charter rights or restrictions which do not permit of or encourage the development of the territory served by the entire system to the extent of the development that might be had under a scheme permitting consolidation under a Federal charter.

With reference to the taxation of railroad properties will say that I am convinced that it would be for the good of all if a uniform system of taxing railroads could be established, and I am therefore in favor of the National Government prescribing a rule under which the total amount of taxes paid may as far as possible be fairly distributed among the several States entitled to share in the distribution of such taxes. It may be that, under all circumstances, the nearest

approach to an equable distribution of such taxes among States might be had under a rule similar to that prescribed for taxing National banks.

BRIEF FILED BY S. H. COWAN, OF FORT WORTH, TEX.

To the JOINT COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE.

Mr. CHAIRMAN AND GENTLEMEN:

I. PRELIMINARY.

At the convening of this committee in Washington on November 20, 1916, at which time those who expected to make statements or present arguments to this committee touching the matters under investigation, as shown by Senate joint resolution No. 60, approved July 20, 1916, pertaining to all matters of transportation, etc., were called upon to enter their appearance and state the subjects upon which they expected to be heard, the time at which they desired to be heard, the parties who desired to be heard, and what interests they would represent, we appeared, as shown by the printed report of the proceedings, representing the National Live Stock Shippers' Protective League, the American National Live Stock Association, and constituent members of these associations, which comprised practically all of the organizations of live-stock shippers and those engaged in the business of raising, feeding, fattening, buying, slaughtering, and selling of live stock throughout the West and Central West, ranches, farms, and in the business of the great markets of the country.

It was then stated that these organizations desired to appear, probably through the various parties whose names were then given, together with other representation that might suit the convenience of the committee, mainly in opposition to the proposal which they understood to be before the committee to adopt a system of Federal control of rates and transportation, and matters pertaining thereto, with the view to taking away from State commissions the exercise of their functions in that behalf; also that we desired to appear to present some matters regarding affirmative legislation to facilitate and hasten cases before the Interstate Commerce Commission. It was stated that some of these parties would be able to appear from about the 4th to the 8th of December should it suit the convenience of the committee, and at such later dates as might be found desirable, it being desired first to hear the proposition submitted by the proponents of this revolutionary legislation to change the regulation of rates and transportation.

We understand that it was arranged that the representatives of the railroads should present their views; also representatives of certain other organizations, certain publicists and economists and others, and that thereafter the shippers would be heard from.

Since it has now been determined that the committee will adjourn until after the short session of Congress, those represented, and who present this brief, desire to submit a general outline and some specific matters to this committee for its consideration in the meantime, and to reply to some of the propositions which have been heretofore submitted to this committee for its consideration by the representatives

of the carriers. Accordingly the request was made that we be permitted to file this brief of argument, as it may be termed, to go in and be printed as a part of the proceedings of this committee, and arrangements to that effect were made with the chairman and vice chairman of this committee.

As we understand it, leave has been granted to that effect and we therefore submit the following for your consideration:

We are opposed to Federal control of State rates, directly or indirectly, or the taking away of the control of intrastate rates and regulations by the States, and in favor of State right of control of State commerce. We are also opposed to Federal incorporation of railroads for the purpose of Federal control of State rates, regulations, and control of railroads as to State business; and we are further opposed to the interference with the constitutional right of the States to regulate railroads, and to Government ownership until and unless it shall finally appear to be absolutely necessary in the public interest. The question as to whether Government ownership is absolutely in the public interest has not been considered by our organizations.

Mainly, we devote ourselves to the subject of Federal control of State rates, and to some amendments of the act to enable the Interstate Commerce Commission to efficiently perform its duty and for relief of the public.

II. SHIPPERS' RESOLUTIONS.

We submit herewith a resolution adopted by the executive committee of the American National Live Stock Association, at Denver, on September 16, 1916, as follows:

STATE REGULATION OF RAILROAD RATES AND CHARGES—SHREVEPORT DECISION.

[A resolution adopted by the executive committee of the American National Live Stock Association, at Denver, Colo., Sept. 16, 1916.]

Whereas a serious conflict of jurisdiction has arisen between the Interstate Commerce Commission and the railroad commissions of the different States, by reason of certain decisions of the Interstate Commerce Commission affecting the rates, rules, and regulations governing intrastate traffic; and

Whereas in a recent decision in the Shreveport case the Interstate Commerce Commission, on the ground of discrimination and prejudice against Shreveport, prescribed a scale of rates on live stock between Texas points and Shreveport on a different and higher basis than fixed by the railroad commission of Texas and by its order, effective November 1, 1916, requires the railroads to cease and desist from charging and collecting a lower rate for the transportation of live stock wholly within the State of Texas than the said scale to be applied to Shreveport; and, as said decision is construed by Texas railroads, the jurisdiction of the Railroad Commission of Texas over State rates is thus superseded by the Interstate Commerce Commission; and

Whereas this is the first instance in which the Interstate Commerce Commission has proposed to regulate intrastate rates on live stock, and its decision in this case is based upon what we believe to be a misapprehension of the extent and character of the alleged discrimination and prejudice against Shreveport; for we contend that the small volume of traffic involved, and the consequent negligible amount of difference in the rates, makes it extremely improbable that any interests at Shreveport could be unduly and unreasonably prejudiced by the existence of a lower scale of rates for intrastate live-stock traffic within the State of Texas; and

Whereas, the present rates on live stock prescribed by the railroad commission of Texas are, with minor exceptions, the same as the rates originally fixed by the railroads, both as to beef and stock cattle, and have been in effect for approximately 25 years and have applied regardless of whether the cattle

move to markets within the State or between pastures or to feed lots; and said rates have been carefully investigated at divers times by the railroad commission of Texas and declared to be reasonable and just; and

Whereas we believe the conditions of raising, shipping, and maturing cattle within the State of Texas, and the necessities of the business, are best known to the people of Texas, and the transportation requirements can be more judiciously regulated through the constituted State authority, as in the past; and

Whereas the jurisdiction of the Interstate Commerce Commission to regulate such live-stock rates within the State of Texas is dependent wholly upon an alleged unjust discrimination and undue prejudice against Shreveport, and it is our firm conviction that, while an apparent discrimination may seemingly exist by reason of a difference in the present rates, it is not such a real discrimination or undue prejudice, as required by the law, as to warrant the Interstate Commerce Commission to assume jurisdiction over the intrastate rates in Texas, and thus completely change conditions that have existed for 25 years, and contrary to our rights, as we believe, and to the public interest; and

Whereas our laws do not define the conditions under which such extraordinary and far-reaching changes in the regulation of carriers should be permitted, or what conditions precedent should exist to justify such a departure from previous methods of regulation of intrastate traffic: Now, therefore, be it

Resolved by the executive committee of the American National Live Stock Association, representing the live-stock industry of the United States, at its meeting held in Denver, Colo., September 16, 1916. 1. That we deprecate any conflict of jurisdiction between the State and Federal authorities engaged in the regulation of railways, and we urge that every reasonable effort be made to avert it, for we believe that the necessities of the transportation problem require that strictly local State rates be regulated by the States, as at present, and that any question of discrimination or preference between State and interstate rates should be handled by coordinate action of State and Federal authorities.

2. That we appeal to the Interstate Commerce Commission to suspend its order in the Shreveport case with respect to the rates on live stock until a more complete investigation may be had of all the factors surrounding the transportation of live stock between Texas and Shreveport, and in order that a careful review may be conducted by State and Federal officials as to the almost irreparable injury that the decision will inflict upon the vast interests of Texas, far removed from any possible connection or relation to the issues in said Shreveport case; and we urge that this request be granted so that the Interstate Commerce Commission may not indirectly assume jurisdiction over State rates and thus absolve the railroads from obedience to the regulations of the different States, without an earnest endeavor being made to harmonize any alleged inequalities in rates.

3. We appeal to Congress to provide by law that where a conflict arises as to rates, rules, or regulations made by State and Federal authorities, before the Interstate Commerce Commission shall have jurisdiction over any State-made rates, rules, or regulations, and before the railroads shall be authorized to disregard same in order to perform their duty under the act to regulate commerce, said State-made rates, rules, or regulations must first have been held by a court of competent jurisdiction to be unreasonable and to constitute a direct burden upon interstate commerce.

4. That before such jurisdiction shall be exercised by any court or by the Interstate Commerce Commission the State-regulating authority should be made party to such proceedings, and all interested shippers should have the right to be heard.

5. We appeal to the State authorities having control of railroad regulation and to the executive and legislative departments of the different States to provide ways and means whereby the public rights in the premises may be secured and defended.

6. We express full confidence in the administration of the act to regulate commerce by the Interstate Commerce Commission, and this appeal is made without any feeling or spirit of criticism, but for the purpose of evoking the most mature and deliberate consideration of so grave and important a question and to determine the extent to which the Interstate Commerce Commission may appropriately interfere with State regulations, if at all, and the limitations of that power.

Resolved further, That a copy of this resolution be forwarded to the Interstate Commerce Commission, to each Member of Congress, and to the various State railroad officials and executives of the different States.

We also submit herewith a resolution passed by the executive committee of the National Live Stock Shippers' Protective League at its meeting in Chicago on November 14, 1916, as follows:

CHICAGO, November 17, 1916.

Seeking "State rights" in the matter of railroad rate regulations and other conditions dealing with intrastate railroad affairs, the National Live Stock Shippers' Protective League is calling upon Congress to desist from passing legislation which will give the Interstate Commerce Commission power to prescribe rates on intrastate shipments. The executive committee of the shippers' league, at its meeting held in Chicago, November 14, 1916, passed the following resolution:

"The National Live Stock Shippers' Protective League, an organization of live-stock shippers of the United States and the shippers of fresh meats and packing-house products, composed of organizations of stock raisers of various States, the national live-stock associations engaged in the live-stock business, live-stock exchanges of live-stock commission men at the various markets, and the meat packers and slaughterers of live stock, and representatives of railroad commissions of Iowa, Kansas, South Dakota, and Missouri, submit to the committees of Congress having consideration of legislation pertaining to transportation rates, regulations, and practices of railroads engaged in such transportation the following resolution as voicing the sentiments and desire of this organization and live-stock shippers and other shippers generally:

"Be it resolved by the executive committee of the National Live Stock Shippers' Protective League at its meeting at Chicago on November 14, 1916, First, that we oppose any law or laws which shall take away from the State railroad commissions, corporation commissions, or other rate-making bodies of the several States the right and power to regulate the rates and transportation of intrastate traffic or otherwise to deprive the States of control over the same; and

"Second. That we urge upon Congress the passage of an act so amending the act to regulate commerce as to define and limit the powers of the Interstate Commerce Commission so as not to interfere with the rates on intrastate commerce as prescribed by railroad commissions or other authorized authority of the several States to prescribe and regulate rates and transportation of intrastate traffic within such States; and that the Interstate Commerce Commission shall not interfere with such rates, regulations, and practices of such State unless the same shall have first been found to be unjust and unreasonable and to place an undue burden upon interstate commerce by a court of competent jurisdiction provided for by law, and then only to the extent that may be necessary to remove a discrimination specifically alleged and clearly proven to be unjust and unreasonable."

NATIONAL LIVE STOCK SHIPPERS' PROTECTIVE LEAGUE
EDWARD F. KEEFER, *Secretary*.

These resolutions we submit as voicing the sentiment and desires of the entire live-stock industry of the country with respect to the subject of Federal control of State rates, regulations, etc., and, as we believe, expressive of the sentiment of the people generally who take the pains to inform themselves upon the subject, where they are not under some sort of misapprehension, or who may be unduly, though in many cases unconsciously, influenced by the great and powerful influence of the railroads, permeating, as that influence does, many great industries and financial institutions with which they are closely allied or those who have been influenced by a campaign of publicity favoring the centralization of the control of all rates and regulations of railroads by the Federal Government, and eliminating thereby the State control.

We may be permitted to express the view that in the complex situation and the manifold difficulties arising out of the regulation, or the

attempt to regulate the charges and operations of railroads in their daily transactions in millions of instances with every industry, time and opportunity do not afford the ordinary man much chance of analyzing the functions of government the necessities of trade, and of the public interest to enable him sufficiently to master the subject as the basis of correct opinion. Newspaper writers are oftentimes little less informed, and consciously or unconsciously, or by reason of their surroundings and environment, are led into the advocacy of propositions unsound and untenable in the face of the correct analysis of the subject of the regulation of transportation in the interests of the public, and at the same time in fairness to the carriers. This in turn as often mislead the public.

It will be understood, of course, that the agitation, if it should be called such, of the proposition for Federal control of these matters of transportation and the abolitionment of State control is comparatively of recent origin, because doubtless the rights of the States seem fully preserved under the Constitution and the provisions of the act to regulate commerce, which by the first section of the act provides:

That the provisions of this act shall not apply to the transportation of passengers or property, or to the receiving, delivering, storage, or handling of property wholly within one State and not shipped to or from a foreign country from or to any State or Territory as aforesaid, nor shall they apply to the transmission of messages by telephone, telegraph, or cable wholly within one State and not transmitted to or from a foreign country from or to any State or Territory as aforesaid.

Not until the decision of the Supreme Court of the United States in the Shreveport case (234 U. S., 342) was it generally supposed either that Congress could confer such power upon the Interstate Commerce Commission or had done so. In its essence that decision is that while the Interstate Commerce Commission can not prescribe the rates on intrastate traffic it may find a discrimination to exist by reason of the difference between the rates within a State prescribed by the State authority and the rates between such State and a point outside of the State and order the carriers to remove the same, whereupon the carriers may disregard such rates within a State prescribed by State authority in order to comply with the order of the Interstate Commerce Commission to remove the discrimination. A careful consideration of that case in connection with the Minnesota rate case just preceding it will inevitably lead to the logical conclusion that as to such intrastate rates the carriers are left free from any regulation either by the State or the Federal Government.

The fundamental right of the public, both as to interstate and intrastate rates, is that they shall not be charged more than is reasonable and of the carriers that they are entitled to charge as much as is reasonable. The further fundamental proposition is that not every rate or every service is required by law or practice to yield an equivalent profit compared to all rates or to some other rate, but the underlying principle is that a system of rates, which system, upon the whole, is to be reasonable, is to be the standard rather than the attempt to make a standard of a particular rate. This is fully illustrated by the decisions of the Supreme Court of the United States in *St. Louis & San Francisco Railway Co. v. Gill* (156 U. S., 649), *Minneapolis & St. Louis Railroad Co. v. Minnesota* (186 U. S., 257), and the *Minnesota rate case* (230 U. S., 352).

The question naturally arises as to whether by section 3 of the act, condemning unjust discriminations and undue preferences, it was intended by Congress that the Interstate Commerce Commission, by an order to remove a discrimination or preference, could thereby set aside an intrastate rate made by authority of the State or license the carriers to disregard the same. Is it reasonable to suppose that Congress intended such a result, and thus leave the carrier free to make such rates as he pleases, regardless of the rates prescribed by the States, and that such rates should thereafter be subject to the control of the Interstate Commerce Commission without specific provisions in the law to that effect? The whole course of judicial decisions shows that when a State rate is set aside as being confiscatory the regulation of it is not transferred to Federal control in the way of prescribing the rate; and the further question naturally arises: Could Congress under the Constitution directly authorize the Interstate Commerce Commission to prescribe the State rates on traffic originating and moving wholly within a State and not a part of interstate transportation?

What we have here said upon this subject is to bring into bold relief the question as to whether there is anything for this committee to investigate and recommend as a means of transferring the making of rates and the regulation of transportation on intrastate traffic, unless it recommends an amendment to the commerce clause of the Constitution. Surely the mere right to correct an ascertained discrimination under the method employed in the Shreveport case would be to produce the most complex situation imaginable. We do not suppose that the carriers or others holding their views in desiring the transfer to the Federal control of the intrastate rates and regulations, desire to accomplish that end short of a comprehensive system which, of course, could not be based upon the mere incidental power held to exist by the decision of the Supreme Court in the Shreveport case, which might or might not exist according to the will of the carriers themselves in given instances.

We say, therefore, that touching this subject of the transfer of control of rates and regulations as to intrastate traffic by the Federal Government, the two questions presented are:

First. Has Congress the power to do it under the existing Constitution?

Second. Shall the Constitution be amended so as to give to Congress that power and take it away from the States?

The latter is so improbable of accomplishment that it may be dismissed from consideration as a practical question before the public. It would then resolve itself down to the first question, which ought to be determined by this committee before proceeding with extensive investigations in order to determine whether it would be desirable, even if Congress has the power to exercise it. It is our opinion that Congress has not the power, and that if it has the power it should not in the public interests be exercised.

III. POSITION OF THE RAILROADS AS WE UNDERSTAND IT.

Without attempting to state all of the various positions taken by the carriers, by their counsel, and otherwise as presented to this committee in its hearings, we refer to some of the statements as indicative of the ultimate conclusion and results which are sought,

namely, to secure greater returns upon railroad investments and securities in order to give them credit and to provide the railroads and transportation facilities needed by the public, and to that end to invite the investment of new capital and make the business attractive to investors. In other words, the means to the end of throwing off such limitations upon the rates charged as is possible, and in the aggregate to have a greater measure of return from the charges made for the services rendered; in other words, to be permitted to increase rates. And while it is said to be in the public interests, it has its origin and design in the desire to secure an increase of rates which the public must pay.

Mr. Thom, at page 55 of the printed report of these proceedings of November 23, referring to liberal charters and the granting of subsidies, lands, etc., to encourage the establishment of railroad facilities, said:

There was no limitation in most cases put upon the powers of these chartered agencies in respect to what they might do in regard to their charges, but if a limitation was put it was put so high that it did not amount to a limitation or a practical matter.

Now, the result of that was to create the impression, I may say, to create the conviction on the part of the man who invested his means in a railroad that he was investing it as he would in any other private enterprise. No other conception was in the public mind, because the need for it had not then appeared; no other conception was in the mind of the investor; he had no reason to have any other conception, as he was not only welcomed but urged by the public to enter upon this field of human industry. Now, what was the effect of that? Examining human motives, watching the operation of human interests and human forces, what was necessarily the effect of that, in the first instance, upon the conception of the investors in these properties as to their rights? Inevitably it produced the impression that they had engaged in a private business and that they owned it and could use it for their private ends. Now, time went on.

These conceptions of the rights of the railroads to increase rates are exactly the same as they were. The difference lies in the method of accomplishing this end.

Again referring to the victory of the public over the opposition to public regulation, he states at page 56:

But it was a victory won in anger; it was a victory which was the outcome of fierce conflict, and the terms that were imposed were the terms of the victor upon the vanquished, and reflected merely the purpose to apply in the principles of the system of regulation the forces of correction and punishment.

Thus the same spirit is now manifested before you. The question is, What terms were imposed? Broadly speaking, and as reflected by the act to regulate commerce and the various enactments of the different States, the terms imposed were that rates should be just and reasonable and alike to all without unjust discrimination or undue preference, coupled with the provisions of the law for its administration in justness and fairness to the public and to the carriers by the tribunals provided—not by the shippers or the carriers but by the public. If the original conception as mentioned were wrong, as seems to be admitted, the present conception is equally so.

It is further stated by Mr. Thom, at page 57, that:

The things that I say and the things that are proposed must be measured by the standard of the public interests and must be determined by the standard of the public interests, and I shall make no other argument.

Now, what is the public interest in respect to transportation? Let us pause for a moment and get that in our minds. As I read the needs of the public

they are to be assured of sufficiency of railroad and transportation facilities now and in all the future, and, of course, to be assured of them on reasonable terms; but if it becomes a question between high charges and the existence of these facilities, I suppose there will be no dissent from the fact that the public interest is, after all, in having the facilities.

Thus the reasoning leads quickly to the demand for higher charges. Naturally we should suppose that the legislation which seems to be the object of the carriers to secure must be expected to accomplish that end, otherwise it were a useless task to ask for it. Neither can we dissemble the fact that it is their main purpose, and equally that they are not satisfied to leave it to existing methods of regulation.

At page 58 Mr. Thom further states:

We have no controversy any longer about a lack of power to deal with rates that are too high. Some think that there are none too high, others disagree with that view, but all appreciate that the existing governmental systems are adequate to deal with the question of the level of rates, to the extent of preventing them from being exorbitant. So that we must come back to this question of whether or not I am right in insisting that the fundamental and essential interest of the public is now in the great question of whether or not existing systems guarantee to the public an adequate supply of transportation facilities not only for the present but for the future.

If, therefore, it becomes a question, as stated on page 57, between high charges and these facilities which can only be had according to the argument through the means of higher charges, it might as well have been stated at the outset that the object of the propositions advanced was to obtain higher charges.

Again it is stated by Mr. Thom, at page 58, that:

Those who propose a change in existing methods must make their appeal to the judgment of the people upon the proposition that existing methods do not assure to the public the supply of transportation facilities that the public needs, and those who oppose any change must make their appeal to the public judgment on the proposition that existing conditions, if honestly administered, do assure to the public an adequate supply of transportation facilities. Now, is not that a fair statement of the issue which we should debate?

Mr. Thom thus states the proposition which he proposes to adopt. He then states the crux of his argument in the expression, at pages 58-59, which follows:

No theoretical view of the proper distribution of governmental powers can have any weight with you or with the judgment of the people of this country, unless under the proposed distribution of governmental powers adequacy of the transportation facilities of the country is assured. No private interests, no cherished theories of government, can be permitted to enter here unless they come with a guaranty in their hands that what they propose will protect the public in the matter of transportation facilities.

Therefore, gentlemen, I shall debate this question on the theory that I must sustain the propositions which I shall advance by showing not only that the public interests are promoted by them but that they tend to give greater assurance to the public of the continuing efficiency of transportation facilities in this country.

Thus the matter is made perfectly plain that all other considerations respecting constitutional rights and the division of the powers of the Government as we have known them since its establishment must give way to the one controlling proposition that adequate transportation facilities must be supplied, which, as previously stated, must depend upon the adequacy of revenues to provide such transportation facilities, or the rates must be high enough to yield a return under all circumstances that will induce private capital to

invest in supplying such facilities, which condition shall be thereafter kept up by continued rates high enough to carry out the scheme.

This amazing proposition is disclosed in the nature of a demand for legislation to compel the people to provide the transportation facilities for the railroads to own. If it has ever been presented heretofore before any of the committees of Congress throughout the lengthy hearings, we should like to be informed of that fact. It is the first time that this bold proposition has been seriously made, so far as we are aware. It has been sometimes asserted by the representatives of the carriers before these committees and elsewhere, that the regulation of rates should carry with it the guaranty of an adequate return upon the property engaged in the public service. No such proposition has ever received serious consideration by Congress or the Interstate Commerce Commission or any other regulative body, or by the Supreme Court. The public does not guarantee tonnage or insure against bad management, bad judgment, or misadventure.

We shall therefore, so far as our argument may be considered, demur to the conditions thus placed upon it and decline to accept those conditions.

The very fact that the carriers have failed to furnish sufficient transportation facilities or so managed their business as not to be able to utilize the same efficiently under this theory carries with it exemption from liability to furnish those facilities and places upon the public the burden of rates sufficiently high to enable the railroads to purchase them and own them. It necessarily assumes the acme of perfection in the management of these properties when, as a matter of fact, there is probably more inefficiency in railroad operations than in any other important line of business in this country.

This is fully illuminated by the situation which presents itself whenever any rate or charge is called in question as being unreasonable, actually or relatively, when the question of the cost of the performance of the service and the resulting profit from the rates paid is uniformly announced by the railroads to be not ascertainable and not known to them. Of this subject we shall speak at more length hereafter.

It has repeatedly been the case that in order to induce the return of cars by connecting lines and other foreign lines the per diem for the use of cars and the demurrage charges against shippers have been increased 100 and up to 200 per cent above the normal. That is the condition at the present time. Inquiries by the Interstate Commerce Commission and the result of its investigations concerning car supply has drawn forth the oft-repeated excuse, be it valid or otherwise, that the railroads which furnish themselves with cars, if they could keep them in their possession or an equal number in the interchange of loaded and empty cars, could fully supply the demand for cars on their lines, but because other railroads which had not a sufficient supply had taken and appropriated the use of the cars of the line having a sufficient supply and wrongfully refused to return them, they were unable to supply the demand. This was notably the case as developed by the investigations of the Interstate Commerce Commission growing out of the car shortage of 1907, to which attention was called by Mr. Thom, at page 59 of his statement. The report of the commission was filed with the Committee on Interstate Commerce

of the Senate. The same condition has just been developed in the investigation now being conducted by the commission. Must it be assumed as a postulate that whatever the carriers do is right and that the public must be taxed to supply the facilities which the law requires them to have, and that the public must answer in money for the failure of efficient management by the railroad companies?

THE PARADOX THAT HIGH RATES WILL DEVELOP THE COUNTRY AND REDUCE THE HIGH COST OF LIVING.

The undeveloped agricultural lands, the insufficiency of or unequal distribution of railroad facilities, the reference to untouched forests, and particularly the conditions in Wyoming and Idaho, seem to be given prominence to prove the necessity of higher rates in order to secure more railroads. If this committee desires to know why Wyoming and Idaho have not been developed along the lines of existing railroads, inquire of Senators and Representatives from those States. The answer will be that the railroads have pursued the policy of rates so high that the reclamation projects in those States remain, to a large extent, unused because their products can not pay the existing rates and meet the competition in the great centers of consumption, and generally development has been thus retarded. The intermountain rates in this undeveloped country have been the subject of controversy before the Interstate Commerce Commission long before the enactment of the Hepburn bill, and they have stoutly insisted, and it may be said with marked success, in retaining the very peak of high rates in the very territory referred to, which accounts for the failure in the development of the natural resources of this country and its settlement, and the utilization as well of the wonderful reclamation projects established by the Government. If existing railroads in that territory, which are the advocates of the marvelous propositions now urged before this committee, can not see their way clear to develop the resources contiguous to their lines, how can it be expected that rates can be increased there to make up for the want of facilities by additional construction and still higher rates? It is truly stated by Mr. Thom, at page 61, that the people "will produce no more than they can get to market, and when you limit your transportation capacity you limit the capacity of your people for productiveness and for usefulness in human endeavor." Exactly the same thing follows where the rates are so high that the products of the locality can not be sold in competition with those elsewhere produced.

Much has been said, at pages 62 and several following pages, to establish the proposition that needed facilities can not be provided out of earnings; that it requires new money, and that to get that credit must be established; to have the credit that there shall be a guaranteed means by which the provisions of the facilities may be insured, and that must be sufficient in the way of reliable earnings to provide a return of 6 per cent, with a surplus of 3 per cent to the investor; and that at last the decline in railroad credit, which it is stated will be called to the attention of this committee during the hearings, is due to the governmental policy, and that the amount of the revenues of the carriers is not within the control of the owners of the property. It is admitted that there should not be freedom

from regulation or the absence of regulation. It is contended that the character of regulation should be such as to increase the public confidence. However much it may be covered up with apt and skillful language, the whole object of the argument is to secure higher rates for the purposes named, which, it is asserted, are in the public interest.

We may with deference, therefore, be permitted to say that the argument should have begun with the demand for higher rates.

As we understand it, the idea advanced is that under the dual system, so called, of State and interstate control of rates and the regulation of railroads by the States and by the Government, the earnings are kept down to the point that not every locality or community which might desire to have it can obtain a railroad, and that existing railroads can not, out of their earnings, supply the needed facilities for the transportation service. So that whatever may be said to establish the proposition that is offered in support of the proposition to put under the control of the Federal Government the making of all rates and regulations pertaining to railroads, the advocates of that proposition seek that sort and character of regulation which will accomplish the end of securing a great deal more money, by measuring the standard of rates and charges by what they assert to be necessary in the public interest to secure the facilities so much adverted to. The standard of reasonableness or, put in another form, the method of ascertaining what is reasonable, is made to depend upon and limited only by the amount of money which would be required to carry into effect this Utopian theory of forcing the public to supply the facilities, the charges for which they could not in practical effect regulate.

Reduced to its last analysis we are here facing the demand said to be made in the public interest by the existing railroads of the country, that rates be made high enough to insure the construction of railroads and the supplying of facilities in competition with the proponents of this idea, dividing the tonnage and business and then increasing rates to make up for it. It proceeds upon the mere fanciful theory that increasing revenue follows the increase of rates. It may not matter that it is not stated in so many words, that is necessarily the logical sequence flowing from what they do say and might as well have been stated in so many words.

It entirely ignores the important fact, always present in all railroad operations and in the operation of all industrial institutions where the money is made by a multitude of transactions, that the volume of business is increased by the cheapness and attractiveness of it and that the profitable earnings are made from the great volume of the business rather than from the higher rates charged for it. So it is that every railroad operating economist, so far as we have ever observed, or as is disclosed in any writing or teachings, and certainly as the result of experience, seek tonnage and a volume of business and make the rates so as to induce it.

That is to say, the amount of rates charged or that can be charged in the profitable business of the railroads are necessarily limited by the business necessity of the country, and if the railroads are turned loose to make the rates as they please they can not increase their earnings just as their own will. Surely this could not be done if the

rates charged are so high, which these gentlemen seem to desire, as to insure the construction of all the railroads that any community might need, because of the universally known fact that when a business becomes so profitable as to induce a great many others to go into it, it then becomes so divided that the profits themselves cease to operate as an inducement for the further extension of such business.

Whatever may be said of it, therefore, Congress could not if it saw fit abandon all regulations, and if the States saw fit to abandon all regulations, bring about such a condition as it is argued here would be desirable in the public interest.

A few examples will illustrate this:

Suppose that some capitalists should take it into their heads to build two other trunk lines from the Mississippi River and Lake commercial centers to the large Atlantic ports, that would divide up the traffic. Could they by increasing rates increase the traffic? Take grain, for example, rather than pay the higher rates from the grain-producing territory, it would move in some other direction, by way of the Gulf ports or by way of the Lakes through Canada and Canadian ports, and thus reduce the amount of tonnage that they already have.

Suppose that were not done, but on the contrary two additional trunk lines were built from Missouri River territory to the Gulf, that would divide up the traffic, and it could not be made up for by increasing the rates, because if that were done then all the grain would move through the Atlantic ports. A thousand similar illustrations could be given to place it beyond peradventure, that the proposition that is laid down before this committee that the railroads should be permitted to charge rates high enough to provide all the facilities that anybody might desire, is a mere creature of the imagination and impossible of accomplishment. It can not be done by the abandonment of regulation, and it can not be done by concentrating it in the Government and taking it away from the States.

If it could be done, it involves within it the making of slaves for the benefit of the master, with too many masters to profit by their labor.

The difficulty that may confront the country in particular instances, and perhaps generally, is the inefficiency of railroad operation and the inefficiency of regulation. Of this we shall say more hereafter.

Rate making is not a science, as to which we submit the following pungent remarks as the result of a half century or more of experience in that undertaking, both by the railroads and the regulating authorities of the States and the Nation:

1. Rate making is not a science; it is always an experiment.
2. The only rule of universal application is expediency.
3. Carriers' object is to get the most revenue.
4. "Jones, he pays the freight"; wants it as low as he can get it.
5. Each individual, or industry, wants to prevent the other fellow getting the best of it.
6. The rule of the law is reasonableness and relative reasonableness.
7. The right of the public is that no higher rate shall be charged; the right of the carrier is that at least that much may be charged.

The exercise of judicious power over rates by the rate-making tribunals and the controversies between contending parties and the protection of these rights involve due consideration of the foregoing in practically every case.

8. The resultant rate is the arbitrary judgment of such rate-making tribunal; it is essentially a practical matter measured by no rule.

9. The law expects that judgment to be the result of the best information after due consideration of all matters of fact affecting the interests of the carrier, the shipper, the producer, the consumer, and the public.

10. Among those considerations are the cost of service, the value of the service, the profits of the transaction, the return upon the investment, the value of the property, and other factors, none of which are controlling.

11. The cost of the service must be approximated to find the probable returns and profits.

12. No equivalent of profit is required by law or possible to obtain.

13. A difference in rates according to weight carried or distance of the haul is not an unjust discrimination or undue preference.

14. Conditions of trade and competition, the location of producing and consuming markets, the facilities of trade and commerce are involved in the question of unjust discrimination or undue preference.

Rate making is therefore not a science, but the exercise of well-informed judgment.

IV. REASONABLENESS OF RATES, CHARGES, AND REGULATIONS THE PARAMOUNT STANDARD.

Under the common law, before the days of railroads or steamboats, the relation of the carriers to the public and the rights of each under the common law were measured by this standard. It would seem useless to go into a discussion and history of this subject, about which there can be no dispute. The growth of the carrying business and its development into necessary and indeed, if properly regulated, beneficial monopoly is well known to every student of the subject. The principle is universally conceded and arises out of the necessity of the situation. The matter which is ever present and which will always be the source of controversy will be the method of ascertaining what is reasonable.

At first statutes were enacted declaring maximum rates, defining the rights and duties of carriers and limiting the amount of charges. With the growth, particularly of railroads, of the transportation business and its monopolization this was found wholly inadequate to meet the situation so as to do justice. The complexity of the commercial and carrying trade, the great multitude of circumstances, and the innumerable services and shipments under these varying circumstances rapidly increasing with the growth and development of commerce and industries and the various character of service performed were such that it was impossible to lay down a rule of universal application or even of local application which would do justice to all.

Therefore, the more flexible method of establishing by law tribunals to hear and determine complaints and to adjust and equalize all of the matters pertaining to transportation and the rates and charges, and to prescribe the rule of conduct which in its judgment was proper in a given case, or applicable to a large number of cases, came into existence in various States for the public protection. In every instance the standard was one of reasonableness, which had been the universal rule from the earliest times recognized by law as proper. These State commissions grew by experience, and confronted by new necessities, into more complete regulating bodies, along with the growth and development of railroads, so that one State and another

following the example of its neighbors adopted this form of regulation. Not until long after the beginning of State regulation was there any attempt made by Congress to provide for the regulation of interstate transportation. In that effort Congress adopted the same standard which from time immemorial had been adopted by the common law, and reenacted in the form of statutes in the various States, and declared the standard, in the first section of the act, in the following language, which was subsequently amended to include telegraph, telephone, and pipe lines, etc.:

All charges made for any service rendered or to be rendered in the transportation of passengers or property * * * shall be just and reasonable; and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful.

Up to the time of the enactment of the Hepburn bill, as is of common knowledge, no adequate provisions were made to carry out this declaration, because it could not be done unless the regulating body prescribed the rates and the services where necessary. The Hepburn bill gave that power, so that the Federal Government has only really entered upon the administration of the law in declaring the fundamental principles of reasonableness as a standard within the past 10 years. It is yet in its infancy, for one main reason at least, that the commission was not given authority to make any other than a maximum rate, which the railroads might or might not observe so long as no undue discrimination or undue preference was proven to exist which would interfere with their action in the premises; and furthermore, the commission was not given any power to prescribe a schedule of rates, but it is limited to the correction of rates to make them apply to the standard of reasonableness according to the opinion of the commission in a given case. The railroads at all times have the initiative, provided they observe the orders of the commission, so long as the same remain effective, which can not extend for over a period of over two years. So, as a matter of fact, we have no system whereby the Government makes rates on interstate traffic, but only the regulating power conferred upon the commission over the rates made by the railroads. That is entirely different in at least some of the States where the regulating body itself prescribes the entire system of rates, which must remain effective until the State commission sees fit to set it aside, or until it may be set aside because on some account it may be unlawful or violate a constitutional property right.

The beginning, therefore, of regulation, and the most effective regulation to-day, comes from the States. Of course, whatever is interstate commerce is not subject to their control or regulation, and the right under the Constitution to regulate all commerce other than interstate commerce committed to the Federal Government by the commerce clause of the Constitution, remains with the States, where it ought to and will remain.

The attempt here by this new discovery is to brush it aside as of no consequence or as an evil, but it must be understood that that attempt is made primarily by those who have always been opposed to the establishment of these bodies and the interference by them with the rates and regulations which the railroads themselves have desired to make without let or hindrance.

The arguments here presented are based wholly upon a utilitarian standpoint, as measured by the desires and wishes of those who seek and have always sought to escape all regulation that would interfere with money getting, and of such others as they may find who look with favor upon their scheme. It is idle, therefore, to talk about not being permitted to come before this committee to present any theoretical view of the proper distribution of governmental powers and to urge that it should have no weight with the committee, unless under such proposed distribution of governmental powers, adequacy of the transportation facilities of the country is assured.

A theory of government is necessary upon which to establish the fabric which protects and insures the rights of the people. Whether the theory of this Government was or was not right it has found practical application, with which we are confronted in the establishment of our laws and systems in accordance with that theory. To destroy the theory is to destroy the Constitution.

In the course of events it has come about that we have created artificial bodies, dependent for their powers and existence upon legislative enactment, and now we are confronted by them with the demand to abolish the constitutional provisions with respect to our governmental policies to suit their desires and convenience.

So there is no use to dissemble the fact that we are confronted with the proposition that the railroads will control the Government or the Government will control the railroads.

Among other things the Government and the States have established a method of determining all controversies between the carriers and the shippers, and a means of carrying into effect and practical application the standard of reasonableness as affecting rates, charges, and services, which are accessible to all. This controversy before this committee seems to arise out of the fact that the railroads are dissatisfied with the standard and system. Being dissatisfied, they wish to bring about an entirely new system to operate under entirely different standards, and when the argument is all boiled down to its last essence and the dross is skimmed off and the adulteration is eliminated, it is simply the means to the end of getting more money than is possible for them to secure under the present system; and that is practically admitted. That is what we oppose. In doing so we say that it were far better to perfect the present system of regulation, to bring up the standard of its efficiency, utilizing what has gone before and the material we have at present, to the end of bringing into practical application, to the best advantage of the entire public, the standard declared by the act to regulate commerce, as above quoted.

We can but be impressed with the strange hallucination which has produced the argument, repeated at great length, to establish a conclusion or belief in your minds that your supreme duty to the public is so as to legislate respecting rates and regulations of the railroads of this country and permit the making of charges so high and the return so certain as to give currency to railroad securities other than bonds, so that the ordinary man will invest in them, and thereby that the new money will be acquired or be obtainable for all this vast

scheme of railroad facilities. We could scarcely expect, of course, that any considerable amount of new mileage would be constructed by new and independent companies, so it must be assumed that you will enter upon the experiment of legislating into the minds of the public (by taking their money beyond what could confessedly be obtained through the present instrumentalities of freight regulation and control) confidence in such schemes, for instance, as the reorganization of the St. Louis & San Francisco Railroad Co. Have you read the confirmation of the sale back to the stockholders of that property and the payment of some of its debts by the issuance of new stock? Have you read about certain New York bankers first taking out of this property—or, to use another expression, to skim off the cream—\$5,500,000 in money by the reorganization committee, and the purchasing committee, and the loan syndicate, which latter alone got \$750,000 for its name—just for being in a state of preparedness? They counted units of money in that transaction by the million. If you want to investigate something which will throw light upon the subject of the want of confidence of the public in railroad stocks, just have a look in on that proposition. If they sold these bonds which they were permitted to issue by the Railroad Commission of the State of Missouri for par, on the representation that the property was worth the amount of the bonds issued, you make some inquiry to see whether or not the bond purchasers needed protection. If you will inquire as to the amount of expenditures by the old company to purchase little pieces of railroad which were constructed in Oklahoma, Texas, and Louisiana, compared to what they cost for the real construction, you will likewise be interested. I think you will find that that part of the road built in piecemeal and by sections, which is supposed to extend from southeastern Texas to New Orleans, was capitalized far beyond its worth. All of Mr. Thom's solicitude about the inability of railroads to construct lines into new forests will certainly disappear in the presence of this performance.

He seems to feel, judging from his statements and arguments, great fear lest the undeveloped agricultural lands of the country will not be reached by railroad facilities, the reaching of which he feels would enable the people to secure the products of the soil to live upon. We should like to invite the attention of the committee to the example of the St. Louis, Brownsville & Mexico Railroad, which extends from Houston, Tex., to Brownsville (another Frisco enterprise). Some of you are doubtless somewhat acquainted with the conditions which existed in that country before the construction of that railroad and the conditions which exist now. Five hundred miles of that road were built through a wholly undeveloped and unsettled country. It was occupied by cattle, some Mexicans and burros, coyotes, lobos, and other predatory animals, to say nothing of jack rabbits, prairie dogs, and prairie rats. Underneath the surface of that country in many places on these great ranches, among the largest and best cattle-breeding grounds in the world, were vast sheets of artesian water, which were pierced by thousands of drills, and like magic, lands which were worthless except for grass in a country subject to the severest droughts this side of the Nile became the most productive vegetable and fruit garden of things that are good to eat ever developed in this country in so short a time. Towns and

homes sprung up; people went there from every part of the United States, and it caught the eye of Mr. Bryan, who became at last a farmer. Had it not been for one difficulty, which seemed to be beyond the power of the people to control, there can be no reason to suspect that it would not have become the most prosperous country in the United States, not excepting Southern California. Let your inquiries extend to what that difficulty was, then ask yourselves the question as to whether these great pioneers of development so ably represented by Mr. Thom can be trusted with the public interests, which they are so anxious to have you turn over to them. You will find that the reason lay at the door of these carriers.

At the western rate advance hearing before the Interstate Commerce Commission in Chicago a couple of years ago these western lines were demanding an increase in rates; and among other bad conditions that required it, emphasis was placed upon the condition of the Brownsville road. There was no traffic outbound except the products of the soil, principally cabbage, onions, lettuce, melons, potatoes, and smaller amounts of other vegetables, together with live stock, some cotton, and a little corn, and on all this traffic, except cotton, the railroads were seeking an advance in rates. They did not get it on live stock, cotton, or corn, but they did on the vegetables, etc. There came before that committee a witness who had been one of the sub-officials in charge of operations, who held his office and worked on that line, and who at the time he testified had charge of some short lines winding around among the canals and irrigated farms in the Brownsville district, who in a most graphic way detailed the settlement of various districts and localities throughout, and up and down that railroad, to show that the people went there with money enough to buy their little places with 40 acres or more, which yielded to their energies most bounteous crops. Thousands of carloads of cabbage and these other various vegetables mentioned were shipped to the centers of population, finding their market mainly at St. Louis and beyond, but the conditions of trade were such that although the cabbage was ready for market long before it could be shipped and sold, it had to be held until the northern supply of cabbage was nearly consumed before a market was developed for it in that country. It being a warm country most all of the year, it was necessary to handle it with dispatch and care, in order to get it to market in a salable condition. It is true that the freight rates were comparatively low, otherwise it could not have moved at all. But it turned out that, with the cost of icing, the failure to furnish cars, the delay upon the Brownsville road, the poor condition of the old engines which had been sold to it, on paper at least, by the Frisco road (the Brownsville road being a Frisco property in some way or another), hundreds and hundreds of carloads of cabbage rotted in the fields, were spoiled in transit, or oftentimes could not be sold when it reached the market for enough to pay for the freight and icing charges. The consequence was that these people who were induced by the flaming advertisements of the Frisco Railroad, and many individuals interested in land schemes and town-site schemes, came to penury and want—they were in rage—all because of a situation which could have been remedied alone by that spirit of enterprise under which James J. Hill developed the great States of Minnesota and North Dakota. Now, Mr. Thom

seems to think it the fault of the people for not furnishing proper facilities.

If you would like some interesting reading of facts after you are through with the consideration of these platitudes, which so much adorn the reports of these hearings, get hold of the testimony on the fruit and vegetable part of the hearing of the western rate case and read that evidence. The witness above referred to stated that he went to the traffic men of the railroads and pointed out to them the great mistake they were making in endeavoring to advance these rates upon the impoverished people, and begged them not to do it. After you have read the evidence with respect to the Brownsville Railroad and that district, then turn into the chapter with respect to the onion-raising business south of San Antonio, in the vicinity of Laredo, on the I. & G. N. road and branch lines and small connecting lines that were built in that part of the country, and you will find evidence to show that on one occasion it was estimated by the general agent of the selling department of these vegetable growers that a thousand cars of onions rotted in the fields on the I. & G. N. Railroad and vicinity because the rates were such that, and the onion market such that, they could not reach the market with profit. That is another territory where the artesian water was discovered and had brought forth its abundance. That was followed by the construction of all the branch lines of railroads that were needed, and notwithstanding this situation they raised those rates 5 cents per hundred pounds. If you should have the time and opportunity to read this testimony, you will find that people were induced to go down into that country and buy these lands and enter upon their development upon advertised cheap rates for their products and a market which would be supplied by the railroads. As soon as these people were rooted to the soil and could not get away, their means being expended, these railroads, through the Southwestern Tariff Committee which holds its sessions at St. Louis, in spite of and in violation of the antitrust laws—we might say in open defiance of such laws—voted to increase these rates, so that whether the Brownsville road and the I. & G. N. road believed they should be increased or not, under the practice of this committee they would have been compelled to increase them; otherwise connecting lines would not have participated in the rates. The I. & G. N. Railroad has been in the hands of a receiver off and on for several years, and it might at least have helped these people to live whom it had helped to go there, without any ultimate harm to the persons who were the owners of its stocks and bonds. Even if it took the money out of the pockets of the bondholders, it would have been a righteous act, which human sympathy would have induced had the railroad belonged to any single individual.

Now, coming to the further development of an undeveloped country, take a look in on the construction of railroads by the Santa Fe system in Texas and that which is going on to-day, and you will find all of the Panhandle country of Texas plastered over with a spider web of railroad lines, built by the Santa Fe, and a country rapidly developing. During all these periods of the last 10 or 12 years, in which Texas has been maligned from one end of the country to the other on account of its railroad regulation and policy, there has been more construction of railroads than in any other part of the country.

Then get the printed annual report of the president to the stockholders of the Santa Fe company and take a look in on the return which that system of road, a marvel of good management and efficiency, extending, as it does, from the Lakes to the Gulf and to the Pacific, and observe the favorable results of its operation. Of course, it may happen that in the operation of a great system of roads some parts of it will not be profitable, but they are part of a system, and the system must be treated as a whole. You will find precisely the same thing with respect to the western lines other than the Santa Fe.

Two of the very extensive railroad projects constructed by the Gould systems, or so-called systems, namely, the Western Maryland and the Western Pacific, present examples of enormous expenditures, without consulting the public as to whether or not they should be made. Of course, they have some traffic, or an opportunity to get it, but when you are called upon so to legislate as to produce out of the earnings enough money to make these railroads profitable, to do which you would have to increase the rates on the parallel and competing lines, or somebody would have to do it, and it would be little less than robbery; in fact, it would be worse than robbery to make the public pay for these facilities in the way of freight rates.

There is another shining example of misadventure and bad judgment in the construction of the Trinity & Brazos Valley Railroad by the amalgamated Frisco and Rock Island interests, intended to serve these lines as an outlet to the Gulf from the termini at Dallas and Fort Worth, and also the traffic of the Fort Worth & Denver City Railway, a part of the Colorado & Southern system, which seemed to be under control, by stock ownership or some other sort of manipulation, of the Rock Island and Frisco combination. That road (Trinity & Brazos Valley) has never paid anything, and the receiver of it testified before the Railroad Commission of Texas that if rates were advanced 300 per cent it would not make it a profitable property but that what it needed was tonnage. Of course, the Rock Island and Frisco system combination went to pieces, and exhibited as a moving picture to the world the helplessness of an investor in the stock of such a concern. Yet, notwithstanding all of this, it is insisted that you shall so arrange legislation that rates can be made high enough to give the public confidence to purchase such stock and thus get new money.

You may take for another example the Colorado Midland Railroad across the Rocky Mountains to Grand Junction, a most difficult and expensive road to construct, as well as to operate, practically parallel with the Denver & Rio Grande. The rates of these two lines of roads are justifiably higher than the roads east of the Rocky Mountains in Colorado, and the divisions which are allowed on traffic originating on these lines and delivered to their connections at Pueblo, Colorado Springs, and Denver are likewise high, because these properties are most difficult and expensive to operate. Should the public be put to the expense of still higher rates to construct other lines across the Rocky Mountains and thus divide the traffic? Take the Missouri Pacific and the Santa Fe eastward from Pueblo, on opposite sides of the Arkansas River. Can it be expected other lines should be constructed in that vicinity and rates advanced to

give confidence in the public mind to purchase the securities? It may be depended upon that if other lines are needed in that vicinity the Santa Fe is able to build them, and will do so, as it did build the branch line southwest from Dodge City. Likewise the Milwaukee & St. Paul system and the Chicago & North Western have been able to build all of the needed lines that the country can by any possibility be expected to support west of the Missouri River. As to Idaho, it is quite certain that the Union Pacific does not need the establishment of public confidence in order to get the money to build such lines as may be needed, or as appears to it to be desirable, for the development of that country. So it is of the Northern Pacific and the Great Northern. Common sense teaches us that there must necessarily be a limit to the construction of railroad facilities.

Another embargo to railroad construction between great centers of commerce is the enormous expense of obtaining usable terminals. The investment in real estate would be so great, and undoubtedly is so great to-day, as to be prohibitive in the way of such railroad construction.

We therefore appeal to this committee to examine into the actual detailed facts surrounding existing lines and their traffic to show that no such theory as has been advanced and insisted upon of making rates high enough to accomplish all of these ends which you are told should be accomplished is possible. It would bankrupt the public, it would destroy its commerce, and it would be impossible for such increased rates to obtain the tonnage in most instances which would in the end amount to increased revenue. If one-half of the energy, intelligence, and expenditure of money which has been used during the past 10 years to circumvent and prevent adequate regulation and to increase rates had been used in the economies of operation and efficiency, we may express the belief at least that their condition would have been immensely improved in every way compared to what it is at present.

It can not be expected that we are to abandon all of the principles and standards which have been established through the long course of experience and put into the form of law by the various statutes of the States, as well as of the act to regulate commerce, and the decisions of the courts construing these statutes, the power and duty of commissions established for the purpose of administering the regulatory laws. We deem it not out of place to quote from some decisions of the Supreme Court of the United States applying these general principles and rules to the facts of given cases respecting some of the various tests and standards with respect to the subject of reasonableness and the proper adjustment of rates.

In *Atlantic Coast Line Railroad Co. v. North Carolina* (206 U. S., 20) it is said:

In a case involving the validity of an order enforcing a scheme of maximum rates, of course the finding that the enforcement of such scheme will not produce an adequate return for the operation of the railroad in and of itself demonstrates the unreasonableness of the order. Such, however, is not the case when the question is as to the validity of an order to do a particular act the doing of which does not involve the question of the profitableness of the operation of the railroad as an entirety. The difference between the two cases is illustrated in *St. Louis & San Francisco Railroad Co. v. Gill* (156 U. S., 649; 39 L. ed., 567; 15 Sup. Ct. Rep., 484) and *Minneapolis & St. Louis Railroad Co. v. Minnesota* (186 U. S., 257; 46 L. ed., 1151; 22 Sup. Ct. Rep., 900).

In the case of *Minneapolis & St. Louis Railroad Co. v. Minnesota* (186 U. S.) it is said:

True, it may be hard to segregate hard coal in carload lots from all other species of freight and determine the exact cost to the company; upon the other hand, the commission, in considering a proper reduction upon a certain class of freight, ought not to be embarrassed by any difficulties the companies may experience in proving that the rates are unreasonably low. The charges for the carriage of freight of different kinds are fixed at different rates according to their classification, and this difference, presumably at least, is gauged to some extent by a difference in the cost of transportation, as well as the form, size, and value of the packages and the cost of handling them. Notwithstanding the evidence of the defendant that if the rates upon all merchandise were fixed at the amount imposed by the commission upon coal in carload lots the road would not pay its operating expenses, it may well be that the existing rates upon other merchandise, which are not disturbed by the commission, may be sufficient to earn a large profit to the company, though it may earn little or nothing upon coal in carload lots. In *Smyth v. Ames* (169 U. S., 466; 42 L. ed., 819; 18 Sup. Ct. Rep., 418) we expressed the opinion (p. 541, L. ed., 847; Sup. Ct. Rep., 432) that the reasonableness or unreasonableness of rates prescribed by a State for the transportation of persons or property wholly within its limits must be determined without reference to the interstate business done by the carrier, or the profits derived from it, but it by no means follows that the companies are entitled to earn the same percentage of profits upon all classes of freight carried. It often happens that to meet competition from other roads at particular points the companies themselves fix a disproportionately low rate upon certain classes of freight consigned to these points. The right to permit this to be done is expressly reserved to the Interstate Commerce Commission by section 4 of that act, notwithstanding the general provisions of the long-and-short-haul clause, and has repeatedly been sanctioned by decisions of this court. While we never have decided that the commission may compel such reductions, we do not think it beyond the power of the State commission to reduce the freight upon a particular article, provided the companies are able to earn a fair profit upon their entire business, and that the burden is upon them to impeach the action of the commission in this particular.

As aptly illustrating these principles, see the *Minnesota* case as decided by the supreme court of that State (83 N. W., 60). That court itself is given jurisdiction to supervise the rates of the State commission.

As a further analysis of the exercise of a rate-making power, the Supreme Court of Texas, which also has jurisdiction over the rates prescribed by the commission, in the case of the *Railroad Commission v. Weld and Neville* (96 Tex., 408), says:

The performance of these duties requires that classification be made so as to secure equality as near as may be in the carriage of similar articles, and each shipper is entitled to have his property carried for a reasonable compensation for the service rendered to him. In making the classification and rates of charges, the railroad companies must also be protected in their right to have a fair return for their business; but in determining this question the railroad commission must have in view the entire business operations of the railroads. A marked difference between the right of the shipper and the carrier in determining the reasonableness of rates consists in this: When considered from the shipper's standpoint, it must be reasonable as to the particular property carried; that is, the charge must not be more than a fair compensation for the services rendered to the shipper in the carriage of the particular property. When, however, the commission considers the reasonableness of rates from the standpoint of the railroads, it is not confined to the particular article, but must look to the whole business of the railroads, which are required to carry many articles at a loss, as a single transaction, which must be made up by levying higher rates upon such articles as can bear it within the limit of reasonable compensation. The rate and classification must be so arranged as to give a result of just and reasonable compensation on the entire business of the railroad company, but the rate on each article need not be reasonable if considered alone; but the aggregate must, however, produce a reasonable return. The

work of the commission, as prescribed by the article last copied, involves a comprehensive knowledge by the commission of the business transactions of railroads and of the various business interests of the people, so that by a just exercise of their ample powers the citizens may be guarded against extortions and unjust discrimination and the railroads be allowed a fair return for the service rendered to the public.

We also quote from the decision of the Supreme Court of the United States in the leading case of *Smyth v. Ames* (169 U. S.) :

It can not be doubted that the making of rates for transportation by railroad corporations along public highways, between points wholly within the limits of a State, is a subject primarily within the control of that State. And it ought not to be supposed that Congress intended that, so long as it forebore to establish rates on the Union Pacific Railroad, the corporation itself could fix such rates for transportation as it saw proper, independently of the right of the States through which the road was constructed to prescribe regulations for transportation beginning and ending within their respective limits. On the contrary, the better interpretation of the act of July 1, 1862, is that the question of rates for wholly local business was left under the control of the respective States through which the Union Pacific Railroad might pass, with power reserved to Congress to intervene under certain circumstances and fix the rates that the corporation could reasonably charge and collect. Congress not having exerted this power, we do not think that the national character of the corporation constructing the Union Pacific Railroad stands in the way of a State prescribing rates for transporting property on that road wholly between points within its territory. Until Congress, in the exercise either of the power specifically reserved by the eighteenth section of the act of 1862 or its power under the general reservation made of authority to add to, alter, amend, or repeal that act, prescribes rates to be charged by the railroad company, it remains with the States through which the road passes to fix rates for transportation beginning and ending within their respective limits.

We are now to inquire whether the Nebraska statute is repugnant to the Constitution of the United States.

By the fourteenth amendment it is provided that no State shall deprive any person of property without due process of law nor deny to any person within its jurisdiction the equal protection of the laws. That corporations are persons within the meaning of this amendment is now settled. *Santa Clara County v. Southern Pacific Railroad Co.* (118 U. S., 394, 396; 30, 118); *Charlotte, Columbia & Augusta Railroad v. Gibbes* (142 U. S., 386, 391; 35, 1051, 1054); *Gulf, Colorado & Santa Fe Railway Co. v. Ellis* (165 U. S., 150, 154; 41, 666, 668). What amounts to deprivation of property without due process of law, or what is a denial of the equal protection of the laws, is often difficult to determine, especially where the question relates to the property of a quasi-public corporation and the extent to which it may be subjected to public control. But this court, speaking by Chief Justice Waite, has said that, while a State has power to fix the charges by railroad companies for the transportation of persons and property within its own jurisdiction, unless restrained by valid contract or unless what is done amounts to a regulation of foreign or interstate commerce, such power is not without limit, and that "under pretense of regulating fares and freights the State can not require a railroad corporation to carry persons or property without reward; neither can it do that which in law amounts to a taking of private property for public use without just compensation or without due process of law. Railroad commission cases, *Stone v. Farmers' Loan & Trust Co.* (116 U. S., 307, 325, 331; 29, 636, 642, 644). This principle was recognized in *Dow v. Beidelman* (125 U. S., 680, 689; 31, 841, 844; 2 Inters. Com. Rept., 56), and has been reaffirmed in other cases. In *Georgia Railroad & Banking Co. v. Smith* (128 U. S., 174, 179; 32, 377, 380) it was said that the power of the State to prescribe the charges of a railroad company for the carriage of persons and merchandise within its limits—in the absence of any provision in the charter of the company constituting a contract vesting it with authority over those matters—was "subject to the limitation that the carriage is not required without reward, or upon conditions amounting to the taking of property for public use without just compensation, and that what is done does not amount to a regulation of foreign or interstate commerce." In *Chicago, Milwaukee & St. Paul Railway Co. v. Minnesota—Chicago, Milwaukee & St. Paul Railroad Co. v. Minnesota Railroad & W. Commission* (134 U. S., 418, 458; 33, 970, 982; 3 Inters. Com. Rept., 209) it was said.

"If the company is deprived of the power of charging reasonable rates for the use of its property and such deprivation takes place in the absence of an investigation by judicial machinery, it is deprived of the lawful use of its property and thus, in substance and effect, of the property itself, without due process of law and in violation of the Constitution of the United States, and in so far as it is thus deprived while other persons are permitted to receive reasonable profits upon their invested capital, the company is deprived of the equal protection of the laws." In *Chicago & G. T. Railway Co. v. Wellman* (143 U. S., 339, 344; 36, 176, 179) the court, in answer to the suggestion that the legislature had no authority to prescribe maximum rates for railroad transportation, said that "the legislature has power to fix rates, and the extent of judicial interference is protection against unreasonable rates." In *Budd v. New York* (143 U. S., 517; 36, 247; 4 Inters. Com. Rep., 45) the court, while sustaining the power of New York by statute to regulate charges to be exacted at grain elevators and warehouses in that State, took care to state, as a result of former decisions, that such power was not one "to destroy or a power to compel the doing of the services without reward or to take private property for public use without just compensation or without due process of law."

In *Reagan v. Farmers Loan & Trust Co., No. 1* (154 U. S., 362, 399; 38, 1014, 1024; 4 Inters. Com. Rep., 560), which involved the validity of certain rates for freights and passengers prescribed by a railroad commission established by an act of the Legislature of Texas, this court, after referring to the above cases, said: "These cases all support the proposition that, while it is not the province of the courts to enter upon the merely administrative duty of framing a tariff of rates for carriage, it is within the scope of judicial power and a part of judicial duty to restrain anything which, in the form of a regulation of rates, operates to deny to the owners of property invested in the business of transportation that equal protection which is the constitutional right of all owners of other property. There is nothing new or strange in this. It has always been a part of the judicial function to determine whether the act of one party (whether that party be a single individual, an organized body, or the public as a whole) operates to divest the other party of any rights of person or property. In every constitution is the guaranty against the taking of private property for public purposes without just compensation. The equal protection of the laws which, by the fourteenth amendment, no State can deny to the individual, forbids legislation, in whatever form it may be enacted, by which the property of one individual is, without compensation, wrested from him for the benefit of another or of the public. This, as has been often observed, is a government of law and not a government of men, and it must never be forgotten that under such a government, with its constitutional limitations and guaranties, the forms of law and the machinery of government, with all their reach and power, must, in their actual workings, stop on the hither side of the unnecessary and uncompensated taking or destruction of any private property, legally acquired and legally held. It was, therefore, within the competency of the Circuit Court of the United States for the Western District of Texas, at the instance of the plaintiff, a citizen of another State, to enter upon an inquiry as to the reasonableness and justice of the rates prescribed by the railroad commission. Indeed, it was in so doing only exercising a power expressly named in the act creating the commission."

So in *St. Louis & San Francisco Railway Co. v. Gill* (156 U. S., 649, 657; 39, 567, 570) it was said that "there is a remedy in the courts for relief against legislation establishing a tariff of rates which is so unreasonable as to practically destroy the value of property of companies engaged in the carrying business, and that especially may the courts of the United States treat such a question as a judicial one, and hold such acts of legislation to be in conflict with the Constitution of the United States as depriving the companies of their property without due process of law, and as depriving them of the equal protection of the laws." In *Covington & Lexington Turnpike Road Co. v. Sanford* (164 U. S., 578, 584, 594, 595, 597; 41, 560, 562, 566, 567), which involved the validity of a State enactment prescribing rates of toll on a turnpike road, the court said: "A statute which, by its necessary operation, compels a turnpike company, when charging only such tolls as are just to the public, to submit to such further reduction of rates as will prevent it from keeping its road in proper repair and from earning any dividends whatever for stockholders, is as obnoxious to the Constitution of the United States as would be a similar statute relating to the business of a railroad corporation having authority under its charter to collect and receive tolls for passengers and freight." And in *Chicago, Burlington & Quincy Railroad Co.*

v. Chicago (166 U. S., 226, 241; 41, 979, 986) it was held that "a judgment of a State court, even if it be authorized by statute, whereby private property is taken by the State or under its direction for public use, without compensation made or secured to the owner, is upon principle and authority wanting in the due process of law required by the fourteenth amendment of the Constitution of the United States, and the affirmance of such judgment by the highest court of the State is a denial by that State of a right secured to the owner by that instrument."

In view of the adjudications these principles must be regarded as settled:

1. A railroad corporation is a person within the meaning of the fourteenth amendment declaring that no State shall deprive any person of property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

2. A State enactment, or regulations made under the authority of a State enactment, establishing rates for the transportation of persons or property by railroad that will not admit of the carrier earning such compensation as under all the circumstances is just to it and to the public, would deprive such carrier of its property without due process of law, and deny to it the equal protection of the laws, and would therefore be repugnant to the fourteenth amendment of the Constitution of the United States.

3. While rates for the transportation of persons and property within the limits of a State are primarily for its determination, the question whether they are so unreasonably low as to deprive the carrier of its property without such compensation as the Constitution secures, and therefore without due process of law, can not be so conclusively determined by the legislature of the State, or by regulations adopted under its authority, that the matter may not become the subject of judicial inquiry.

The cases before us directly present the important question last stated.

Before entering upon its examination, it may be observed that the grant to the legislature in the constitution of Nebraska of the power to establish maximum rates for the transportation of passengers and freight on railroads in that State has reference to "reasonable" maximum rates. These words strongly imply **that it was not intended to give a power to fix maximum rates without regard to their reasonableness.** Be this as it may, it can not be admitted that the power granted may be exerted in derogation of rights secured by the Constitution of the United States, or that the judiciary may not, when its jurisdiction is properly invoked, protect those rights.

What are the considerations to which weight must be given when we seek to ascertain the compensation that a railroad company is entitled to receive, and a prohibition upon the receiving of which may be fairly deemed a deprivation by legislative decree of property without due process of law? Undoubtedly that question could be more easily determined by a commission composed of persons whose special skill, observation, and experience qualify them to so handle great problems of transportation as to do justice both to the public and to those whose money has been used to construct and maintain highways for the convenience and benefit of the people. But, despite the difficulties that confessedly attend the proper solution of such questions, the court can not shrink from the duty to determine whether it be true, as alleged, that the Nebraska statute invades or destroys rights secured by the supreme law of the land. No one, we take it, will contend that a State enactment is in harmony with that law simply because the legislature of the State has declared such to be the case; for that would make the State legislature the final judge of the validity of its enactment, although the Constitution of the United States and the laws made in pursuance thereof are the supreme law of the land, anything in the Constitution or laws of any State to the contrary notwithstanding. Article 6. The idea that any legislature, State or Federal, can conclusively determine for the people and for the courts that what it enacts in the form of law, or what it authorizes its agents to do, is consistent with the fundamental law, is in opposition to the theory of our institutions. The duty rests upon all courts, Federal and State, when their jurisdiction is properly invoked, to see to it that no right secured by the supreme law of the land is impaired or destroyed by legislation. This function and duty of the judiciary distinguishes the American system from all other systems of government. The perpetuity of our institutions and the liberty which is enjoyed under them depend, in no small degree, upon the power given the judiciary to declare null and void all legislation that is clearly repugnant to the supreme law of the land.

* * * * *

In the discussion of this question the plaintiffs contended that a railroad company is entitled to exact such charges for transportation as will enable it, at all times, not only to pay operating expenses, but also to meet the interest regularly accruing upon all its outstanding obligations and justify a dividend upon all its stock; and that to prohibit it from maintaining rates or charges for transportation adequate to all those ends will deprive it of its property without due process of law, and deny to it the equal protection of the laws. This contention was the subject of elaborate discussion; and, as it bears upon each case in its important aspects, it should not be passed without examination.

In our opinion, the broad proposition advanced by counsel involves some misconception of the relations between the public and a railroad corporation. It is unsound in that it practically excludes from consideration the fair value of the property used, omits altogether any consideration of the right of the public to be exempt from unreasonable exactions, and makes the interests of the corporation maintaining a public highway the sole test in determining whether the rates established by or for it are such as may be rightfully prescribed as between it and the public. A railroad is a public highway, and none the less so because constructed and maintained through the agency of a corporation deriving its existence and powers from the State. Such a corporation was created for public purposes. It performs a function of the State. Its authority to exercise the right of eminent domain and to charge tolls was given primarily for the benefit of the public. It is under governmental control, though such control must be exercised with due regard to the guaranties for the protection of its property. *Olcott v. Fond du Lac County Supervisors* (83 U. S., 16 Wall., 678, 694; 21, 382, 388); Sinking-fund cases, *Union P. R. Co. v. United States* (99 U. S., 700, 719; 25, 496, 501); *Cherokee Nation v. Southern Kansas Railway Co.* (135 U. S., 641, 657; 34, 295, 302). It can not, therefore, be admitted that a railroad corporation maintaining a highway under the authority of the State may fix its rates with a view solely to its own interests and ignore the rights of the public. But the rights of the public would be ignored if rates for the transportation of persons or property on a railroad are exacted without reference to the fair value of the property used for the public or the fair value of the services rendered, but in order simply that the corporation may meet operating expenses, pay the interest on its obligations, and declare a dividend to stockholders.

If a railroad corporation has bonded its property for an amount that exceeds its fair value or if its capitalization is largely fictitious, it may not impose upon the public the burden of such increased rates as may be required for the purpose of realizing profits upon such excessive valuation or fictitious capitalization; and the value of the property and franchises used by the corporation, as represented by its stocks, bonds, and obligations, is not alone to be considered when determining the rates that may be reasonably charged. What was said in *Covington & L. Turnpike Co. v. Standford* (164 U. S., 578, 596, 597; 41, 560, 566, 567) is pertinent to the question under consideration. It was there observed: "It can not be said that a corporation is entitled as of right, and without reference to the interests of the public, to realize a given per cent upon its capital stock. When the question arises whether the legislature has exceeded its constitutional power in prescribing rates to be charged by a corporation controlling a public highway, stockholders are not the only persons whose rights or interests are to be considered. The rights of the public are not to be ignored. It is alleged here that the rates prescribed are unreasonable and unjust to the company and its stockholders, but that involves an inquiry as to what is reasonable and just for the public. * * * The public can not properly be subjected to unreasonable rates in order simply that stockholders may earn dividends. The legislature has the authority, in every case where its power has not been restrained by contract, to proceed upon the ground that the public may not rightfully be required to submit to unreasonable exactions for the use of a public highway established and maintained under legislative authority. If a corporation can not maintain such a highway and earn dividends for stockholders, it is a misfortune for it and them which the Constitution does not require to be remedied by imposing unjust burdens upon the public. So that the right of the public to use the defendant's turnpike upon payment of such tolls as in view of the nature and value of the service rendered by the company are reasonable is an element in the general inquiry whether the rates established by law are unjust and unreasonable.

A corporation maintaining a public highway, although it owns the property it employs for accomplishing public objects, must be held to have accepted its

rights, privileges, and franchises subject to the condition that the government creating it, or the government within whose limits it conducts its business, may by legislation protect the people against unreasonable charges for the services rendered by it. It can not be assumed that any railroad corporation accepting franchises, rights, and privileges at the hands of the public, ever supposed that it acquired or that it was intended to grant to it the power to construct and maintain a public highway simply for its benefit, without regard to the rights of the public. But it is equally true that the corporation performing such public services, and the people financially interested in its business and affairs, have rights that may not be invaded by legislative enactment in disregard of the fundamental guarantees for the protection of property. The corporation may not be required to use its property for the benefit of the public without receiving just compensation for its services. How such compensation may be ascertained and what are the necessary elements in such an inquiry, will always be an embarrassing question. As said in the case last cited: "Each case must depend upon its special facts; and when a court, without assuming itself to prescribe rates, is required to determine whether the rates prescribed by the legislature for a corporation controlling a public highway are, as an entirety, so unjust as to destroy the value of its property for all the purposes for which it was acquired, its duty is to take into consideration the interests both of the public and of the owner of the property, together with all other circumstances that are fairly to be considered in determining whether the legislature has, under the guise of regulating rates, exceeded its constitutional authority and practically deprived the owner of property without due process of law. * * * The utmost that any corporation operating a public highway can rightfully demand at the hands of the legislature when exerting its general powers is that it received what, under all circumstances, is such compensation for the use of its property as will be just both to it and to the public."

We hold, however, that the basis of all calculations as to the reasonableness of rates to be charged by a corporation maintaining a highway under legislative sanction must be the fair value of the property being used by it for the convenience of the public. And in order to ascertain that value, the original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates described by statute, and the sum required to meet operating expenses, are all matters for consideration, and are to be given such weight as may be just and right in each case. We do not say that there may not be other matters to be regarded in estimating the value of the property. What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it for the use of a public highway than the services rendered by it are reasonably worth.

We also quote from the case of *Reagan v. Farmers' Loan & Trust Co.* (154 U. S., 362), as follows:

It is unnecessary to decide, and we do not wish to be understood as laying down as an absolute rule that in every case a failure to produce some profit to those who have invested their money in the building of a road is conclusive that the tariff is unjust and unreasonable. And yet justice demands that everyone should receive some compensation for the use of his money or property, if it be possible without prejudice to the rights of others. There may be circumstances which would justify such a tariff; there may have been extravagance and a needless expenditure of money; there may be waste in the management of the road; enormous salaries, unjust discrimination as between individual shippers, resulting in general loss. The construction may have been at a time when material and labor were at the highest price, so that the actual cost far exceeds the present value; the road may have been unwisely built, in localities where there is not sufficient business to sustain a road. Doubtless, too, there are many other matters affecting the rights of the community in which the road is built as well as the rights of those who have built the road.

The foregoing quotations have reference more particularly to the question of the standard of reasonableness and the relative rights of the roads and the public in respect thereto.

As bearing upon the same general principle, however, and having reference more particularly to the question of undue preference, or put in another form, unjust discrimination, we quote from the decision of the Supreme Court of the United States in the case of *Texas & Pacific Railway Co. v. Interstate Commerce Commission* (162 U. S.), as follows:

"Subject to the two leading prohibitions that their charges shall not be unjust or unreasonable, and that they shall not unjustly discriminate, so as to give undue preference or advantage, or subject to undue prejudice or disadvantage persons or traffic similarly circumstanced, the act to regulate commerce leaves common carriers as they were at common law, free to make special contracts looking to the increase of their business, to classify their traffic, to adjust and apportion their rates so as to meet the necessities of commerce, and generally to manage their important interests, and upon the same principles which are regarded as sound and adopted in other trades and pursuits. Conceding the same terms of contract to all persons equally, may not the carrier adopt both wholesale and retail rates for its transportation services?"

Again:

"The English cases * * * establish the rule that in passing upon the question of undue or unreasonable preference or disadvantage, it is not only legitimate but proper to take into consideration, besides the mere difference in charges, various elements, such as the convenience of the public, the fair interests of the carrier, the relative quantities or volume of the traffic involved, the relative costs of the services and profit to the company, and the situation and circumstances of the respective customers with reference to each other as competitive or otherwise."

* * * * *

The conclusions that we draw from the history and language of the act, and from the decisions of our own and the English courts, are mainly these: That the purpose of the act is to promote and facilitate commerce by the adoption of regulations to make charges for transportation just and reasonable and to forbid undue and unreasonable preferences or discriminations. That, in passing upon questions arising under the act, the tribunal appointed to enforce its provisions, whether the commission or the courts, is empowered to fully consider all the circumstances and conditions that reasonably apply to the situation, and that, in the exercise of its jurisdiction, the tribunal may and should consider the legitimate interests as well of the carrying companies as of the traders and shippers, and in considering whether any particular locality is subjected to an undue preference or disadvantage the welfare of the communities occupying the localities where the goods are delivered is to be considered as well as that of the communities which are in the locality of the place of shipment.

The considerations which the court has held in these cases and many others as guides in some degree at least, with no particular factor as controlling, must be alike applicable to a correct decision of the State commission or the Interstate Commerce Commission. Wherein lies the difference?

In every case the force to be given to the findings and actions of either commission is because of their superior knowledge and opportunity to know and determine the facts upon which they base their decisions, and it is assumed in every such case that the commission which rendered such a decision is possessed of such superior knowledge.

It would seem entirely unnecessary to mention these fundamental principles, and we should not do so were it not for the very boldness of the proposition, as we understand it, presented to you by the railroads to do that which amounts to an abolition or wiping out entirely of everything that has been done heretofore.

We must not lose sight of the fact that in the history of government there has been a constant development of the principle that the weak must be protected against the strong. The distribution of the powers of government as widely diffused as possible is but an insurance against the control of the administration of laws by the strong for their own purposes against the interest and in destruction of the rights of the weak. It is a matter of too common knowledge to even require a reference to it that the individual dealing with a great transportation company is perfectly helpless. He must depend upon the strong arm of the law. The great and powerful may depend upon their influence. It is immaterial to a great railroad corporation whether it handles an individual's ordinary business or not. But that is not the case with the great industries of the country whose business is so important that they may bring into play competitive forces which will always enable them to reap the best of the bargain, no matter what the laws are or how ably and impartially they are administered. If it is a correct principle that the Government should be a government for the people and by the people, as of general application, that is true in a superlative sense with respect to the matters of transportation. And as we approach the small business of shorter distance by the law regulating supply and demand, the necessity for local control becomes greater, and so the right of the local community to select and provide its own means of regulation, subject of course to appropriate limitations, must be the better form. That local control by communities can not be less, of course, than the exercise by a sovereign power of the functions of government, and hence it must be the States which regulate it as to matters over which the States have jurisdiction, but in almost all instances the States have surrendered that right with respect to public utilities of cities. The States reserved that right in the organization and establishment of this Government.

The principles of the law of regulation must be conformed to both by the administrative bodies of the States as well as the Nation. Nothing in experience or observation so far can be found which would justify the taking away of this right.

V. THE BENEFIT OF THE STATE COMMISSIONS TO THE PUBLIC.

We lay it down as a proposition that can not be gainsaid that the nearer the government is to the people and the closer men are to the subject matter under their jurisdiction in the administration of law, with the accumulation of knowledge arising from immediate association and daily observation of conditions pertaining thereto, the more apt they are to avoid mistakes and to perform the functions of their offices beneficially. There is nothing so intimately associated with the daily life and business of men as commerce, and transportation is truly the lifeblood of it. It extends from the grass roots to the banks, to every possible avenue of production, sale, and consumption of that which goes to make up the sum total of the business of every community. No words of description can adequately portray how every individual and every business in daily life is to be affected by it, and the less knowledge that a public official has of the entire situation with respect to the business of a community by daily and constant

•

contact with it, the less capable is he to efficiently and properly regulate and administer laws and to regulate in justness and fairness to all concerning such business, and particularly is this true respecting the service of transportation. Throughout the history of the world local self-government, honestly administered, has always been the best government and has been so regarded by the people themselves. Particularly is that axiomatic, so to speak, in this country.

The power of the regulation of commerce and the transportation companies and the charges made and services rendered is the most far-reaching prerogative of government. Ordinarily the rules of conduct should be prescribed definitely by law. In this particular matter, however, experience has shown that it is wholly impracticable to do that; hence the law defines the general rights, duties, and powers for guidance, and leaves the details in the hands of a board of commissioners to work out and prescribe, supposedly to fit the circumstances as they may exist in varied form and by changes of time and conditions. The presumption of law is that the object to secure men capable and honest to administer the law will be accomplished. Like all human institutions there will be instances where that may not be accomplished for one reason or another for all of the time, but at last the people must be depended upon to govern themselves, and in the end it must be expected that it will be honestly done. To say that a great State with its millions of people, law-abiding citizens, in an intelligent country like this, can not secure, will not secure, or do not secure as capable men as the Government can secure to perform the functions of office is contrary to experience. In some instances they may not; in most instances they will, and that is manifest from the fact that the General Government must at last secure its talent from the various States. Perfection is not to be expected; the best we can do in the administration of law is an approximation to any standard which we may prescribe.

The State commissions being acquainted with conditions in their respective States, in daily contact with its people, and understanding its business and necessities, have opportunities to know and inform themselves on the details with respect to those things which they ought to know, ought at least to be able to determine what is right in the administration of the laws which it is made their duty to enforce. This is not said in disparagement or by way of criticism, or with any thought of that, respecting the Interstate Commerce Commission and its various employees whom they call to their aid of necessity, in order to perform the duties imposed upon the commission under the act to regulate commerce. The idea is that there is at least as little danger of mistake and as great an opportunity for efficiency in the administration of the State laws respecting transportation locally within the State under the system which exists as there would be under any other method which could be provided whereby men must be depended upon to exercise these governmental functions. The people of a State are no more prejudiced than the people of the Nation composed of such States, and the contention that the people of the States are prejudiced against their railroads to the extent of dealing unfairly with them would seem to call for investigation to ascertain whether they were justified, if, indeed they have such prejudice. We hazard the suggestion that the charge, where made, of a State being prejudiced against its railroads has for

its underlying motive the desire to escape the State regulation. It would seem improbable that the people of a State should be prejudiced against such great and important institutions without a justifiable cause. If, therefore, by reason of existing prejudice the railroads of a State can not or do not obtain justice in the matter of the regulation of the business in such State, let them search for the cause of such prejudice and remove it. It furnishes no ground for the destruction of the State commissions by such revolutionary change as to transfer their functions to the Federal Government.

No one will expect, of course, that these State rates and transportation services will go unregulated, and so the question naturally arises whether any proposition is offered that will be certain to result in a better system than we have now. There is no use of guessing at that, nor need we expect guesses as the basis of making any change, and much less should we accept the proffered solicitude for the public by the carriers, who have constantly attempted to escape all regulation. We insist that the regulation of the rates and the service of transportation locally within a State is even more important to people less able to protect themselves because of the small units of business than is applicable to the great mass of traffic moving interstate. The people of the States are not objecting to the Government regulating those things which are within its constitutional rights, on utilitarian grounds or otherwise, but they do object, of course, to surrendering the control of their local affairs of this important sort, because they do not see anything to gain by it. Not only is it not proposed that they shall gain anything by it, but the proposal involved of necessity is a loss to them for the purposes at least of an equivalent or greater gain to the railroads.

The history of governing bodies or individuals of nations, from king to bailiff, is the history of a thirst for power. The concentration of that power affords the opportunity for its domination. The distribution of that power among the people makes it impossible to dominate it. It is often said that it is the tendency of the times to have a centralized government, and this committee is now called upon to recommend that the most important function of government be taken from the States and concentrated at Washington—an object that is perfectly impossible of accomplishment.

It was emphasized before you that we should take stock and a survey of what we have done and are doing in the matters of the regulation of our railroads, supposedly for the purpose of ascertaining such evils as may exist in order that we may correct them. That was a laudable purpose. But if by taking stock and a survey of the situation we are at the same time to enter upon the experiment of abolishing the State commissions and placing the power in the hands of the Government to regulate our local affairs, the next inventory will be by and on behalf of the people to see how far their rights have been taken away and the control of their local affairs concentrated in Washington. The result can not be doubted.

CAN THE INTERSTATE COMMERCE COMMISSION BETTER ADMINISTER THE REGULATION OF STATE RATES THAN THE STATE COMMISSIONS?

Space forbids quotations and references to numerous decisions of the Interstate Commerce Commission, which has placed itself on

record on this subject by the repeated announcement that the State commissions, being better acquainted with the local situation and local affairs, are better able to determine these matters coming under their jurisdiction than is the Interstate Commerce Commission itself. The mere fact that the railroads desire that the Interstate Commerce Commission shall regulate and control the local rates in a State should not be given greater consideration than what the commission itself thinks. Those of us who desire to retain the State control and regulation of State rates by State commissions do not base that desire upon the question of the ability of the Interstate Commerce Commission to perform the same service if the requisite opportunity afforded the means of doing it to the best advantage. We must all recognize that the Interstate Commerce Commission has been absolutely swamped with the demands made upon it in the administration of the laws respecting interstate commerce, and it is now urgently insisted that the members of the commission be increased and powers given to divide up the subject so that they can speedily and satisfactorily discharge their duties respecting interstate commerce.

That body has found it advantageous to make use of the rates and regulations of State commissions in arriving at a conclusion with respect to the interstate rates. Since there is no possibility of uniformity in the sense that there are any rules that can be laid down for making rates, they must of necessity be based upon the circumstances of a given case. It seems to us perfectly patent that the action of the State commissions, as well as that of the railroads themselves, respecting similar rates and services to that which may be under investigation by the Interstate Commerce Commission in a given case, is a great advantage to the latter in reaching a correct conclusion. Not that the Interstate Commerce Commission is bound to accept what the State commissions or the railroads may have done, but it is certainly a great advantage to know what they have done, and give it that weight to which the commission thinks it is entitled. If we should adopt any system of regional commissions, so-called, in certain districts or States, so that they will have the advantage of the knowledge to be gathered from familiarity with the matters with which they deal, would the Interstate Commerce Commission be any better off or any better able to decide what ought to be done because of the recommendation of such regional commissions than they are with access to the action of the State commissions and the railroads, which throw light upon the subject in the given case which the Interstate Commerce Commission may have under consideration? The proposal to establish regional commissions for the purposes which have been pointed out, and mainly to avoid the charge of destroying the local control and the benefits of the service of those who are best acquainted or who would become best acquainted with the situation in a given locality, is but a mere inducement held out to meet the objection that by abolishing the State commissions the local control is taken away. It has not been shown, and can not be shown, that such regional commissions could better regulate the local rates and matters of transportation than do the State commissions when they properly perform the functions of their office. The right should remain with the State and it should be expected that the agencies which they employ in the premises will

be capable and efficient in the performance of their duties. The rates on a given railroad or any given locality upon one or more commodities for movement wholly within a State would not be any less local, and the proper adjustment thereof subject to the local situation, if regulated by the Interstate Commerce Commission than by a State commission. Every rate and regulation must depend upon the circumstances of the case, and be adjusted according to the situation as presented.

The most that can be said, it seems to us, in behalf of turning over to the Interstate Commerce Commission the regulation of local rates within a State, is that it may lead to uniformity and a regulatory system better suited to the public needs than the existing method. It is intensely a practical question, and if due consideration be given to the subject matter to which these local rates and regulations apply it will at once be seen that no system of uniformity could possibly be adopted which would be based upon any intelligent theory. We heretofore pointed out that rates are the creatures of circumstances and must be regulated according to the circumstances. Unless the Interstate Commerce Commission could change these circumstances, it is a mere fanciful supposition that they could make the rates any better to suit the public needs than an efficient and well-qualified commission can make them. What is the advantage, therefore, of undertaking such a radical change upon the mere guess that benefits will flow therefrom?

STATE COMMISSION REGULATION AS A BALANCE WHEEL AGAINST THE DANGER OF RAILROADS DOMINATING THE FEDERAL CONTROL.

At page 130 Mr. Thom makes the significant statement, as follows:

Our third suggestion would be—but before arriving at that third suggestion I wish to state that I do not for a moment contend that this railroad problem will have its panacea by the mere concentration of authority in the hands of the National Government. It will be helped; it will be simplified; it will be robbed of a great many of its dangers; but there still remains an unsolved problem. It will be necessary, in addition to that, to perfect, to strengthen, and to reorganize the principles of Federal regulation. The object of getting it into the hands of one body is to have it where its processes can be readily controlled and readily perfected, so as to work up to a real solution of the problem; and I want just here to digress to say that if all we propose is done there will not be, by virtue of that act alone, a single cent of additional revenue brought to us.

We are not asking this committee, or asking Congress, to pass upon the sufficiency of our revenues; we are not asking them by act, or by any act that you shall recommend, or that Congress shall pass, to increase our revenues. We are simply asking that you shall perfect machinery that can readily and adequately respond to a condition which in the public interest will require an addition to our revenues.

Particular attention is directed to the expression that “the object of getting it into the hands of one body is to have it where its processes can be readily controlled and readily perfected, * * * there will not be, by virtue of that act alone, a single cent of additional revenue brought to us.” Then follows the further singular contradictory statement: “We are simply asking that you shall perfect machinery that can readily and adequately respond to a condition which in the public interest will require an addition to our revenues.”

We must confess that we can not understand the meaning of this language.

The State control of railroad rates and transportation of intrastate traffic is extraordinarily important, from a practical standpoint, as a protection against any wholesale harm which might follow placing the control so far away from the people and their power of selection of the men who are to administer the law as to deprive them of the practical opportunity to secure their rights. We are not saying that the railroads would get control of the Interstate Commerce Commission or of the regional commission proposed were they established; although we have no doubt, neither can any intelligent person doubt, that they would do it if they could. But we are speaking more directly to the point that the greater the concentration of the powers of Government at Washington and the further the individuals who administer the law are removed from the people and the subject matters which they control the greater will be the difficulty in the individual obtaining any practical and prompt relief against abuses and oppressions likely to be placed upon them by these great carrying companies. So long as the States can control it themselves, as to their local rates and transportation service, the more likely it is that remedial rights of the individual may be enforced.

A few examples to illustrate the point we seek to make in favor of the continued control and the perfection of it may be useful in reaching a correct conclusion.

The State of Illinois is—or at least has been—the greatest corn-producing State, and Chicago is the great central corn market. Reasonable rates for the movement of corn to Chicago from points in Illinois are prescribed by the commission of that State. Of course, Chicago may and does draw its supply as well from other States, but the very fact of the existence of a certain set of rates in that State to Chicago causes the railroads in serving the corn belt in Illinois or serving the corn belt in the Missouri Valley to seek the traffic and tonnage over their lines to Chicago, in order to do which they must make rates comparable to those in the State of Illinois. The same thing may be said of coal that is extensively produced there, as well as of live stock and many other products. The people of the State are entitled to reasonable rates and should not be obliged to pay more in order that the general level of rates should be raised so that railroads reaching Chicago from elsewhere might profit by the transaction. It is easy to be seen that if such a rule should be adopted the rates in every State would be made up to the very highest notch that would enable any railroad supplying such a central market to make money out of its business. It would eliminate entirely the matter of competition and the advantage of locality. There are 20 or more packing plants in the State of Iowa where hogs are extensively slaughtered and put into form for shipment everywhere, in competition with the output of the great markets of the Missouri River and at Chicago. The hog raisers of the State of Iowa are entitled to reasonable rates to reach these points where they sell their hogs, and it would be manifestly unfair to force the people of Iowa to pay a higher rate on hogs than is reasonable to points in that State, in order that some other railroad reaching St. Paul from Iowa might charge rates high enough on hogs to make the business profitable, if it were necessary to accomplish that end. The rates, therefore, in the State of Iowa on hogs would naturally have a material bearing on rates to Austin, Minn., or to St. Paul, for the reason that the

railroads reaching from the State of Iowa to those centers would desire to participate in the traffic originating on their lines or the lines of their connections.

Omaha and Kansas City are large grain and large stock markets located on the State line, which, as to Kansas City, is a more imaginary one, running right through the exchange building in the stockyards, cutting off part of the facilities in the State of Kansas and part in the State of Missouri. The rates to Omaha from Nebraska on corn and live stock is, of course, a State rate, and the people there are entitled to have the traffic move at a reasonable rate. Assuming such reasonable rate to be established, if that is materially lower than the interstate rate from Iowa to Omaha, the industries at Omaha would draw their supply as largely as possible from the State of Nebraska rather than from the State of Iowa. But the self-interest of the railroads themselves operating in the State of Iowa up to the Missouri River would induce them to adopt rates comparable with those of the State of Nebraska, in order to get the benefit of the traffic.

At Kansas City the movement into market of live stock from the State of Kansas is either State or interstate, according to the line of railroad over which it moves and the route it takes in reaching the stockyards. Manifestly the rates must be the same both State and interstate, and since the State of Kansas prescribes the rates on the State traffic, it follows that the rates on the interstate traffic must conform to that standard. That is equally the case with shipments from the State of Missouri into the stockyards at Kansas City. The same applies to a large extent with respect to grain.

Innumerable instances can be picked out to illustrate the same situation around the Great Lakes.

Now, take the shipments to the Gulf ports, notably Galveston. The great State of Texas receives a large part of its supply of manufactured articles, goods, wares, and merchandise originating in Atlantic seaboard territory, either at the factories located at the ports or at the interior points from which the shipments are made through the ports, and thence carried to Galveston by water. If it is through movement or through shipment it is, of course, interstate traffic and the State rates can not affect it, but that does not and can not eliminate the State rates from being a great factor and equalizer against unreasonable exactions that may be made by all railroad routes from centers of manufacture of the same articles in the north and east, because anyone may establish his place of business and warehouse at Galveston, and receive and unload the shipments into his store or warehouse and thereafter sell and ship the same to any point in Texas upon the State rate. The result of the transaction is that the merchant at the interior point receives his goods which have paid the two transportation charges, namely, the cost to reach Galveston, plus the outbound cost to the interior. The same thing precisely will apply with respect to all Gulf ports and with respect to the Pacific coast.

So long as this power exists in the State to regulate the amounts of rates and character of service within the State which its people will patronize if more advantageous than the interstate rates, just so long will it be beyond the power of the railroads or any regional commission, or the Interstate Commerce Commission, to do what

might be accomplished, as anyone can readily see, with the power of the States revoked.

The machinery, therefore, which Mr. Thom states should be perfected by this committee to readily and adequately respond to a condition which, as he states, in the public interest will require an addition to "our revenues," involves the destruction of the safety appliance of the State rates to prevent the increase in revenues which are sought, unless it shall be just and reasonable in the eyes of the law, having due regard for the interests of the carriers, shippers, and the public.

VI. THE PERFECTION OF THE MACHINERY OF REGULATION WHICH IS NEEDED.

During the past 50 years of railroad regulation, beginning with the States and coming down to the more recent regulation by the Government, has not resulted in the accumulation of facts by which it can be determined with any degree of certainty or reasonable approximation what it costs to perform a given service, or the units of service, or the resultant profits which, of course, are ascertainable only by deducting from the earnings the cost of the service. We seem to have proceeded not much further than to take the aggregate business of the railroads and deduct from that all the aggregate of its operating expenses. In that the shipper is not so much concerned as he is to know what profit his particular business is yielding to the railroad for the service. We have undertaken the task of ascertaining the value of the property of the railroads, but it is perfectly impossible to undertake to fix specific rates upon the value of the property, although the ascertainment of that value is important in order to determine the rate of return which the net earnings, as a whole, produce. But one engaged in the business of producing the traffic from which the earnings are obtained, who pays for each service the amount prescribed by the tariff without knowing what profit it is to the carrier, and with singular confession the carriers themselves declare that the ascertainment of the amount of profit is impossible, is anxious to know what his business pays the railroad for the service which it renders. If the amount of profits are not ascertainable, as has often been testified to before the Interstate Commerce Commission, it is difficult to see what basis can be established for the advance of a given rate, we will say, on cattle from the western plains to the central markets.

Time and space prevent us from going into an analysis to show that by requiring the proper accounts to be kept by the railroads for a period of time sufficient to reflect an average condition the approximate cost for the units of service upon the units of traffic is ascertainable.

As a notable example of the only extensive effort to ascertain this cost, and to give application to it in the shipment of cattle, we refer to the decision of the special master in chancery, Hon. James A. Seddon, appointed by the United States circuit court of St. Louis to hear and report the evidence in the case of the Missouri, Kansas & Texas Railroad et al. v. The Interstate Commerce Commission and to make his findings and conclusions with respect thereto. The suit was brought by the railroads to set aside an order of the Interstate Commerce Commission in the cattle raisers' case, No. 732, —, reported

in 11 I. C. C., —, and in 13 I. C. C., —, wherein the Interstate Commerce Commission held that certain advances made in the rates on cattle from the Southwestern States to the central markets were unjust and unreasonable and prescribed the rates to be charged, the contention of the railroads being that the rates prescribed by the commission were not compensatory and were therefore in violation of their constitutional rights. A long period of time was consumed in the trial and hearing of the case before the master, and his report was made to the court and confirmed, three judges sitting, namely, Van Devanter, Sanborn, and Adams.

The master found the specific profits on defined and certain shipments of cattle from points in Oklahoma and Texas to points in Kansas City and Chicago, covering a period of three years, for each of the years. This involved great labor, most of which would have been unnecessary had the accounts been kept by the railroads to show in a systematic and tabulated form the facts which were deduced from their various records, not systematized or summarized for the purpose.

It happens that the Santa Fe Railroad has a system of dividing between freight and passenger expenses upon the railroad as a whole and upon each and every division, both main and branch lines, separately and in the aggregate, and then of proportioning to each division of the road that part of the expense attributable to the freight traffic by each of the items of expense required to be kept by the Interstate Commerce Commission; and also a systematized table showing the costs of the performance of the service, not, of course, the cost on each particular commodity, but the cost per ton per mile of each element of the service, in simple but extensive detail. They also keep a classified commodity statement which shows the tons, the ton-miles, the net tons, and the gross tons hauled and the average distance of the haul, and the unit earnings per ton and per ton-mile, separately for each of the principal commodities comprising their traffic in carloads and the aggregate of all less than carload traffic.

Those compilations were extensively used, and as the conditions were admitted to have been substantially the same on several of the principal lines operating in the same territory the use of these data was made for the purpose of approximating the cost of the performance of the units of service. If knowledge of this character were developed and open to observation and use, it would be of great value. It would be far beyond the value of the principal statistics now kept, which are mainly financial.

Should the committee desire it, the detail of the method that was employed to ascertain the profits per carload of transportation of cattle, as shown by the decision of this case, can be laid before it in order that it should serve as a basis, if it deem it proper to do so, to investigate whether the ascertainment of such facts would not be of vast interest and benefit in solving the problems that must necessarily arise respecting the amount of the rates as related to the service.

Another thing is that a great deal of the expenditures of the railroads are in the nature of overhead expenditures, which do not constantly fluctuate to a considerable extent with the volume of the traffic.

Again, it is of very great importance that consideration should be given to the question as to whether given commodities should pay ratably in proportion to the weight or proportionment of the value of the commodity as well as to the value of the service. Any system of rates which proposes to charge to the local shipment of a half hundred pounds of freight, say for 25 miles, as correct a proportion of the expense of maintaining the large terminals and depots at great centers as would be paid by a shipper whose traffic moves 500 miles from the same depot and terminal facilities is wrong in principle and deprives the local shipper of the opportunity to use the railroad at all in many cases, because he can haul his freight cheaper by wagon or automobile truck. If this committee will investigate it, it will find that a vast amount of traffic, on account of the high rates charged, is being hauled by automobile trucks. The shipper has the right to employ the facilities of the railroad company, which is a common carrier, and the value of that service to the shipper must be an important item. Of course, the railroad company can not long charge more than the value of the service in such cases on short-distance movement of a great many articles and commodities of daily use if the rates are higher than the shipper is required to pay to haul it by automobile truck or by wagon.

All of these matters are mentioned, in part at least, to show that the local regulation and control of such transportation by the States through their commissions, which are daily associated and constantly in contact with these conditions, is the better plan.

VII. PROPOSAL TO CREATE POSITION OF SPECIAL EXAMINERS AND FIX SALARIES AND REQUIRE REPORTS IN WRITING IN CASES HEARD BY THEM.

The commission is compelled to have the testimony taken before the examiners which they employ for that purpose principally. Naturally it is very important that the commission have the services of these examiners to report the case to it, which oftentimes requires a vast amount of testimony. It is conceded that it is impossible for the commission to read it. The examiners, therefore, necessarily must be called upon to report their conclusions from the facts in some form, and we think that the examiners ought to owe a responsibility direct to the public as well as to the commission, and that salaries sufficiently large to attract the very best talent selected from the various localities, on account of their qualifications and experience, so far as possible, should be provided for. We also think that when such an examiner, acting in the nature of a master in chancery, hears the testimony and makes his report upon the case, such report should be printed and furnished to the opposing parties in the case and to the commission, in order that objections may be made by any party to the case to any finding of fact or conclusion of the examiner, and present it to him; and in that way to eliminate as far as possible all controverted points. Then let the case go to the commission upon the report of the examiner and the record submitted. With a sufficient number of examiners to give careful consideration to these important cases which they hear, and the making of a report with respect to the same, cases will be disposed of much more speedily and the commission will be greatly relieved from the detail work now imposed upon it. This proposition applies equally whether the commission is in-

creased to nine members and divided into sections. This proposition, we believe, will meet the approval of the commission, and the consensus of opinion among the most capable examiners which the commission has. Likewise, it will develop the extent of the capability of men appointed to that service by what is reflected in their reports.

This matter is here called to the attention of this committee because it has been extensively discussed among those who professionally and otherwise have cases before the commission. Doubtless the commission would hesitate, without congressional action, to enter upon the employment of a sufficient number of men and pay salaries high enough to compensate for such class of service, but will probably be glad to do it if Congress so directs.

VII. CONCLUSION.

We have to thank the committee for the opportunity of presenting at this time what has been here submitted. The interests represented in presenting these views represent the actual shipment of perhaps one and one-half million or two million carloads annually of live stock and feed products incident to carrying on their business, scattered throughout the principal live-stock producing sections of the United States. And whether or not they may be right with respect to these views, their business and situation are entitled to the greatest consideration of this committee. We believe it can not be gainsaid that the industries represented, as well as the agricultural interests of the country ought to be most benefited by the retention of the right on the part of the State to regulate the local State business.

It is true, of course, as hereinbefore expressed, that rates must vary according to circumstances and that they will be different in different States and that uniformity is impossible, but we insist that no system of rates which adjust themselves to the local circumstances and conditions can possibly be uniform, either with respect to the amount of rates or the profitableness of the transaction. We insist that upon proper analysis of the entire commercial producing business of the country it will not appear to the public interest to enter upon any such plan as that which has been proposed by the railroads and seconded by certain organizations and individuals, none of whom have a monopoly of wisdom, even if they are disinterested.

The bulwark of safety in regulation and the protection of the small shipper rests with the State commissions. The standard to which all others are secondary is one of reasonableness.

The duty of the Government and of the States is to perfect the regulating machinery which has been established or which may be established to insure as nearly as practicable the rights of the shippers and the railroads under this standard, always bearing in mind, of course, the public interest in the progressive development of the country along with the facilities of transportation. Let us rest with the machinery we have and perfect it and add to it as conditions may require.

Respectfully submitted.

NATIONAL LIVE STOCK SHIPPERS' PROTECTIVE LEAGUE,
AMERICAN NATIONAL LIVE STOCK ASSOCIATION,
S. H. COWAN, *Attorney*.

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

MONDAY, MARCH 19, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.40 o'clock a. m., pursuant to call of the chairman, Senator Francis G. Newlands presiding; also Vice Chairman William C. Adamson.

The CHAIRMAN. The committee will come to order. Mr. Thom, are you ready to proceed?

Mr. THOM. Yes, Mr. Chairman; I am here ready to subject myself to any further cross-examination that may be desired.

Mr. ADAMSON. I move that the cross-examination of Mr. Thom be deferred until the absent Senators return, and that we proceed with another witness at this time.

Mr. THOM. I was going to say I will be here at all times, subject to the order of the committee. Some of the railroad executives have arranged to come, and they may have placed upon them very emergent obligations on account of this national crisis, and I should like for them to be free to perform those duties at the earliest possible time, whereas I shall have no duties imposed on me in that connection and will be here at all times subject to the order of the committee.

The CHAIRMAN. If there is no objection by any members of the committee, that will be the order. Mr. Thom, who of the railway executives are ready to appear?

Mr. THOM. Judge Lovett will appear now. He is in the room. Mr. Kruttschnitt will be here to-morrow and will appear at that time.

The CHAIRMAN. Judge Lovett, we will hear you now.

Mr. SIMS. Is Judge Lovett going to cover all portions of the resolution, so far as affects railways?

Mr. THOM. You had better ask Judge Lovett that question. I do not know whether he will, unless you ask the questions. I want to express this wish, that the committee be very liberal in asking these railway executives questions, because I think that will bring out a great many aspects of the case impossible to reach otherwise.

Mr. ADAMSON. You do not think it wise to vary our rule of procedure as formerly adopted, do you?

Mr. THOM. No; I think they ought to complete their statements and then proceed to answer inquiries of members of the committee on cross-examination.

The CHAIRMAN. Judge Lovett, you may proceed.

STATEMENT OF R. S. LOVETT, CHAIRMAN EXECUTIVE COMMITTEE, UNION PACIFIC, NEW YORK CITY.

Mr. LOVETT. I was requested, Mr. Chairman, and I understood, at the suggestion of the chairman, to submit in connection with my statement a map showing the lines of the railroad with which I am connected. I got that word only yesterday, so I had no map except one that is taken from the annual report of the Union Pacific system. I submit that, if it will be of any interest.

The CHAIRMAN. Could you have an outline map presented that could be published in the hearings in connection with your remarks?

Mr. LOVETT. Yes. It would take a few days, of course.

The CHAIRMAN. Certainly; you may take your time for that.

(Note: This map is printed on page 826.)

Mr. ADAMSON. I would suggest to Judge Lovett that, either now or when he submits that abbreviated map, he also make a statement, so we shall be able to understand the map in connection with it.

Mr. LOVETT. Yes; I will attach to it an explanatory statement.

Mr. HAMILTON. Can that map [referring to a large wall map] be put somewhere so we can see it?

Mr. ESCH. Would the lines in red, Chicago west to the coast, indicate in a general way the system that you represent?

Mr. LOVETT. Yes. I can describe it now generally.

Mr. HAMILTON. That would be sufficient then.

Mr. LOVETT. The eastern termini of the Union Pacific are Omaha and Kansas City; it extends westward from those two points—the main line through Cheyenne, Wyo., to Ogden, Utah. The Kansas City line extends westerly from Kansas City to Denver, Colo., thence to Cheyenne, where it joins the main line. It has various branches in Nebraska, Kansas, Colorado, and some in Wyoming. The Union Pacific owns all the stock of the Oregon Short Line, which extends north from Salt Lake City by way of Ogden to Butte, Mont., and northwesterly from Granger, a point not shown on that map, but about 125 miles east of Ogden northwesterly, crossing the Salt Lake City and Butte Line at Pocatello, Idaho, and thence continuing northwesterly to the Oregon-Idaho boundary at Huntington; thence across Oregon to Portland, and from Portland to Tacoma and Seattle, Wash., with lines extending from a connection with the line just described to Spokane, Wash., and with a great many branches in Oregon and Washington.

The lines in Oregon and Washington are owned by the Oregon-Washington Railroad & Navigation Co., all the stock of which is owned by the Oregon Short Line, and all of the stock of the Oregon Short Line is, in turn, owned by the Union Pacific Railroad Co. So there are three separate corporations owning the railroads constituting the Union Pacific system, but the ownership is all practically the same through the stock ownership which I have just described. Each of the three companies, however, operates its own railroads, all, however, under one common control and management.

The Union Pacific also owns exactly 50 per cent of the stock of the Los Angeles & Salt Lake Railroad Co., which owns a line connecting with the Oregon Short Line at Salt Lake City, thence southwesterly to Los Angeles, Cal., and to San Pedro Port at Los Angeles. Ex-Senator W. A. Clark owns the other half of that road. That is not

under the same management and control as the other lines, but is a joint management by common consent, unanimous consent of the stockholding interests, Senator Clark, and the Union Pacific interests. That is, in a general way, a description of the main lines.

The red line shown there from Ogden to San Francisco is owned by the Central Pacific Railway Co., all of the stock of which is owned by the Southern Pacific Co., and the line is operated by the Southern Pacific Co. under lease. Ogden is the western terminus of the Union Pacific.

The CHAIRMAN. I wish to state to the committee that the outline map on the wall is a map that was drawn up under my direction many years ago for the purpose of showing railway systems approximating 80,000 miles of line, arranged in accordance with economic conditions to form four coast-to-coast systems under a national incorporation act, and the first large corporation embraced the New York Central lines, the Chicago Great Western Railway, and the Northern Pacific Railway, 19,000 miles. The second great transcontinental system embraced the Pennsylvania system, the Chicago & Northwestern Railway, the Union Pacific system, the Central Pacific system, the Oregon Short Line, the Oregon Railroad & Navigation Co., and the San Pedro, Los Angeles & Salt Lake Railroad, 28,700 miles. The third great system embraced the Baltimore & Ohio system and the Santa Fe system, 13,000 miles, and the fourth system embraced the Southern Railway system and the Southern Pacific system, 16,000 miles.

I wish to state that that embraced simply my empirical view at the time as to what would be a feasible transcontinental system, but I have since changed my view regarding the Central Pacific and the Salt Lake & Los Angeles Railroad. I doubt whether they shall be incorporated in a system with the Pennsylvania system. It is merely an illustration of what could be done under a national incorporation act, and the bill under which that suggestion was made was a bill introduced by me about 10 or 12 years ago.

I have also here a map showing the waterway systems of the United States, showing in red the parts that are navigable and in blue the parts that are unnavigable of the various rivers of the United States. I shall have occasion, in examination of witnesses in reference to the importance of coordinating rail and water transportation, to draw out from the witnesses their views regarding the perfecting of our rivers as instrumentalities of transportation.

Mr. ADAMSON. In connection with your statement it may be consoling to reflect that if the chairman's empirical views never prevailed, the map may yet be useful as showing the democratic system of operating railroads, and I do hope we will make the unnavigable part of those rivers navigable by the time your empirical views prevail.

The CHAIRMAN. I will add to that statement by saying that it is a question in my mind as to whether the incorporation should embrace great transcontinental systems; but as a matter of economical development of the railroad system of the country we find that these great systems are confined to sections and do not reach from ocean to ocean or from the Lakes to the Gulf, and that practically the consolidations that have been effected have been sectional in character rather than continental in character.

Mr. ADAMSON. I do not think the chairman ought to encounter any trouble about that. If you are going to consolidate, go ahead and consolidate, and have no variety or local interests at all.

Mr. ESCH. Let us proceed, Mr. Chairman.

Mr. SIMS. Is this to be a part of Judge Lovett's hearing?

Mr. LOVETT. The morning papers, Mr. Chairman and gentlemen, show that we have just emerged from a situation that emphasizes more than I can the necessity for some form of nationalizing or controlling by a national interest the railroads of this country, and I shall comment upon that situation and offer some suggestions as to methods of dealing with it before I conclude; but it is very evident, to my mind at least, that from the recent events some measures must be taken if this country is to develop and is to escape very great dangers.

I should like to state at the outset that I am not here to plead the case of the Union Pacific. As a matter of fact, that company's credit has been so high that it has had no difficulty in raising the money it needed during the last 10 years, and its present resources are such that I do not apprehend difficulty in providing the funds it may require for several years to come. Furthermore, it has been less harassed by conflicting State laws and commission regulations than many other companies. The State of Utah, by which it was incorporated, has had no railroad commission at all, nor has it created any tribunal to supervise the issue of railroad securities. It created a commission only this month, but without any power over securities. The Union Pacific system operates in 11 States, but only 3 of these—Missouri, Nebraska, and Kansas—have commissions charged with the regulation of railroad securities, and this power is comparatively recent, having been conferred upon the Missouri commission in 1913 and in Kansas and Nebraska only in 1909; and we have not sold any securities of our own issue during the last five years.

But addressing myself to the railroad situation of the country generally, as I have observed it, I believe that the problems are:

First. The multiplicity of regulations by the several States with respect to the issue of securities, involving delays, and conflicting State policies, generally dangerous and possibly disastrous.

Second. The State regulation of rates in such manner as to unduly reduce revenues, to discriminate in favor of localities and shippers within its own borders as against localities and shippers in other States, and to disturb and disarrange the structure of interstate rates.

Third. The inability of the Interstate Commerce Commission, whoever the commissioners may be, to perform the vast duties devolving upon the commission under existing law, resulting in delay—which should never occur in commercial matters—and compelling the commissioners to accept the conclusions of their employees as final in deciding matters of great importance to the commercial and railroad interests of the country.

Fourth. The practical legality that has been accorded conspiracies to tie up and suspend the operation of the railroads of the country by strikes and violence and the absence of any law to compel the settlement of such disputes by arbitration, or other judicial means, like all other issues between citizens in civilized States are to be settled.

Fifth. The phenomenal increase in the taxation of railroads in recent years.

Sixth. The cumulative effect of these conditions upon the investing public, to which railroad companies must look for the capital necessary to continue developments.

Before discussing these in detail perhaps I should refer to the amount of new capital necessary to continue the ordinary development of railroad facilities. Of course, no one knows the amount of money that will be required for proper railroad development in the future. Various opinions have been expressed from time to time, but the basis therefor was not given. The expenditures during the past 10 years may be of some value in estimating what should be spent during the next 10 years. My conviction is that the amount should not be less; and I believe it ought to be a great deal more. The amount expended for betterments, additions, and construction as far back as 10 years is not obtainable from the published reports of the Interstate Commerce Commission. It is shown for the years since 1912, but not as far back as 10 years.

The best approximation obtainable for previous years is from the "Property investment account," as shown in annual reports of the railroads to the Interstate Commerce Commission; but in the early days of railroad accounting this account in some instances included the amount of securities issued at par value, regardless of cash actually expended. In recent years, however—particularly since July 1, 1909—the additions to the property investment account each year represent not less than the money actually expended for additions, betterments (including equipment), and construction, except in the comparatively few cases of receivership and reorganization occurring during that period, as to which there is some uncertainty. Taking, therefore, the property investment account as compiled from carriers' reports to the Interstate Commerce Commission for the last 10 years, representing the percentage of mileage indicated, the following appears:

Year ended June 30—	Total	Increase.	Per cent of mileage.
1906.....	\$12,420,287,938	\$ 38,980	92.85
1907.....	13,030,344,328	56,300	91.67
1908.....	13,532,744,773	00,445	91.65
1909.....	13,930,420,742	75,969	93.63
1910.....	14,560,543,744	23,002	94.13
1911.....	15,793,477,337	33,593	95.44
1912.....	16,489,654,661	77,324	96.60
1913.....	17,070,028,581	73,920	96.73
1914.....	17,648,816,951	88,370	97.03
1915.....	17,862,416,560	99,590	96.76

Total increase in 10 years.....	\$5,911,067,601
Average per year.....	591,106,760

Please note the drop in capital expenditures in 1915, due undoubtedly to the panicky conditions of the first year of the European war. Please note, also, the comparatively small amount expended during the fiscal year ended June 30, 1909, due probably to the panic of 1907, the effect of which upon expenditures for new improvements would naturally extend over a year or two. New im-

provements had been resumed and were well under way during 1910 and 1911, when prosperity had returned, as shown by the very large expenditures during the fiscal year ended June 30, 1911.

As already said, the above figures shown in the column headed "Increase" can not be accepted as showing exactly the amount expended in each year for additions, betterments (including equipment), and construction. But I do believe that, considering the large amounts involved, it is as reliable as any data available without going back and analyzing separately for 10 years the accounts of each railroad company of the United States, which would be an almost endless task. At all events, it seems clear that such expenditures in the 10 years mentioned averaged about \$600,000,000 per annum.

Now, I feel entirely safe in saying that more new capital should be spent on the railroads of this country during the next 10 years than was spent during the last 10 years. A railroad is never finished. It is not only being constantly rebuilt, but every time any element is renewed, it is renewed in a larger and stronger and better form. The most important improvements, however, are in the nature of additions—additional tracks, more sidings, more and larger yards, improved terminals, more engine terminals and shops to care for the increased number of engines and cars, and more main tracks.

A few years ago double tracks were unusual. Now they are quite common. Four-track and six-track railroads are numerous. If we provide adequate transportation for the rapidly growing products and commerce of this country, almost every main line will have to be double tracked in the next 10 or 15 years; and four tracks and six tracks will be as common as double tracks were 10 years ago. Is it not, in the circumstances, conservative to say that, as we spent an average of \$600,000,000 per annum during the last 10 years, we shall require a great deal more than that during the next? This takes no account of the outstanding bonds which are beginning to mature and will have to be paid off through refunding. I have no figures giving the exact amount of these maturing bonds, but those who have made some investigation estimate the amount at upward of \$200,000,000 per annum, which in forecasting the future will have to be added to the amount required for betterments, additions (including equipment), and construction.

In support of my opinion that the railroads ought to spend more new capital than was spent during the last 10 years, I beg leave to cite particularly the case of the Union Pacific, with which I am most intimately connected. When, in August, 1906, a little over 10 years ago, that company began the payment of dividends at the rate of 10 per cent per annum, it was very generally regarded as a thoroughly rehabilitated and completed property. For several years attention had been attracted to it by the enormous sums of new capital that had been poured into it under Mr. Harriman's administration. Mr. Harriman died in September, 1909, but his active administration of the property ceased on account of ill-health several months before his death. Now, notwithstanding the notable constructive work planned by Mr. Harriman's genius and carried on under his administration, and notwithstanding the very general impression throughout the country that he had completely rehabilitated the Union Pacific, the fact is that more money has been spent by the Union Pacific

system for additions and betterments (including equipment) and construction, in the 7 years since Mr. Harriman's death than during the entire 12 years of his administration. This is shown by the following table taken from the annual reports to the stockholders and from reports of the constituent companies to the Interstate Commerce Commission, viz:

UNDER MR. HARRIMAN'S ADMINISTRATION

Year ended June 30—	Additions and betterments (including equipment).	Double track.	New lines.	Total.
1899.....	\$1,123		81 11	\$4,027,734
1900.....	1,335	883,770	1 09	10,690,314
1901.....	1,325	264,506	83	12,715,813
1902.....	1,411		1 06	6,437,337
1903.....	1,388	358,750	36	6,453,924
1904.....	1,704	716,407	34	3,542,045
1905.....	1,861	321,104	1 95	4,103,660
1906.....	1,818	1,432,321	1 04	10,891,443
1907.....	1,900	2,768,126	1 89	20,716,714
1908.....	1,923	1,800,645	1 89	22,351,067
1909.....	1,900	1,932,938	11 82	17,022,420
Total.....	63,764,267	9,678,566	45,709,638	119,152,471

SINCE MR. HARRIMAN'S DEATH.

1910.....	\$7,963,467	\$4,965,228	\$18,361,161	\$31,309,856
1911.....	16,504,377	3,693,266	17,154,948	37,352,581

I may add that the budget for 1917, prepared by our operating officers, and recently approved by me, calls for larger expenditures upon the railroads in 1917 than (excluding new lines) we have made in any one of the past 10 years. It appropriates about \$35,000,000.

What is true of the Union Pacific with respect to the need of expenditures is largely true of every enterprising railroad system in the country—particularly in the newer sections; and the question is how and from whom is the money to be gotten? That question under Government regulation is quite as much for the Government as for the railroad officers.

At the moment the railroads are prosperous. The year 1916 was the most prosperous as respects gross revenue in the history of the railroads in this country; and 1917 is beginning well. But we all know this was due to the abnormal conditions now existing in the world and that in time—whether one, two, or three years—the railroads will get back to where they were in 1914; and, unless a wise system of national regulation is adopted, their position will become much worse than then. Even at the present time they are feeling severely the "high cost of living" falling upon everyone. For example, the Union Pacific bought Mikado engines in 1913 for \$23,600; in 1916 the same engines cost \$35,800; and in February, 1917, the same engines cost \$44,000. Passenger engines bought in 1913 cost \$23,000,

while the same engines bought in February of this year cost \$41,000. Switch engines that cost \$14,000 in 1913 cost \$26,000 in 1917. These prices are, of course, abnormal, and we have bought only what we were compelled to buy; but they are no more abnormal than our large earnings during the same period.

I mention these circumstances only to show that the railroad problem is no wise solved by the present apparent prosperity, but that, on the contrary, it is time to consider and devise a sound solution of the difficulties which otherwise will soon confront us in even more acute form.

Taking up now the first of the difficulties I mentioned, namely, the multiplicity of regulations by the several States, I wish to direct your attention to the fact that this country is only beginning to feel the effect of the multiplicity of regulations by the several States with respect to the issue of railroad securities. State railroad commissions with power to regulate the issue of securities and control the financing of railroad companies became numerous only within recent years. Ten years ago only two commissions had that power—Massachusetts and Texas. Nineteen States now have it. In Illinois, Maine, Missouri, and Pennsylvania it was conferred only in 1913; in Arizona, in 1912; in California, New Hampshire, New Jersey, and Ohio, in 1911; in Maryland, in 1910; in Kansas, Michigan, and Nebraska, in 1909; in Vermont, in 1908; and in Georgia, New York, and Wisconsin in 1907. So this power is new. The great trunk lines in the East—Baltimore & Ohio, Erie, New York Central, Pennsylvania, and others in that territory—were not subject to it at all 10 years ago, but to-day they must get the consent of not less than six State railroad commissions before they can issue any stock or sell any bonds to raise money; and such consent is given in most, if not all of them, only after application, notice, hearing, and deliberation by the commission that sometimes makes ordinary court procedure seem like speeding. In Union Pacific territory only three States—Missouri, Kansas, and Nebraska—have had the power. It was conferred upon the Colorado Commission in 1913, but was annulled by a referendum election in 1914. The commissions in the other States—Wyoming, Idaho, Oregon, and Washington—have not yet been given the power. Utah has had no railroad commission until this month, and it has no power to regulate securities. In the South, Georgia and Texas are apparently the only States exercising the power. Since the fashion has started, it is not at all improbable that all the States will soon follow it.

I direct your attention to the rapid and radical growth of State regulation in the section lying north of the Potomac and Ohio Rivers and bounded on the west by the State of Illinois and on the east by New York, constituting the heart of the manufacturing, commercial, and financial interests of the country. Ten years ago there were no restrictions upon railroad financing. Then, in 1907, New York commenced; then Michigan in 1909; Maryland in 1910; New Jersey and Ohio in 1911; and Pennsylvania and Illinois not until 1913. And now all the great trunk lines of railroad in that territory must apply to four or five, and, if they enter all the States in that section, as some of them do, to as many as seven different State railroad commissions, by formal petition, produce witnesses, have a hearing, and satisfy the varying views of the many commissioners, influenced perhaps in many

cases by purely local, rather than national, considerations, before they can issue bonds or borrow money. Aside from the inevitable delay incident to such a number of different proceedings, and time necessary to enable the various commissioners to make up their minds, and perhaps write opinions, the whole plan can be defeated by any one State commission refusing to give its consent. It is really not surprising that the sudden shackling in this manner of these great trunk lines, whose securities are in the hands of almost every investor, great and small, should have made a profound impression upon the railroad-investing world. The increasing activity of these commissions, as they feel more and more their power, and the conferring of the power upon commissions in other States will add to the difficulties, unless Congress exercises its right to exclusively regulate the capitalization and financial operations of these interstate railroads.

In this connection I should like to emphasize the importance of time in transactions involving the sale of corporate securities. Bankers are almost indispensable in floating large issues; but bankers never buy such securities to keep—only to sell. Their function is precisely that of the ordinary merchant, except that they count on making quicker sales, and therefore work on a smaller margin of profit, than the ordinary merchant makes of his merchandise. When bankers make an offer for an issue of bonds or stock they base their price upon current financial conditions and quotations, expecting to make a quick turnover. If they are required to wait for the delivery of the securities, they reduce the price to cover the risks of financial changes in the meantime, and the seller gets less for his securities. If the period of waiting is long or indefinite and the transaction is a large one, bankers sometimes will not buy at all—particularly if the financial world has any menacing features. But in any case, the longer the delay the lower the price, because of the greater risk. Jacob H. Schiff once said to me, "Peace never breaks out overnight, but war sometimes does." I afterwards saw that remark verified in 1914. Financial disturbances usually come suddenly; improvement always gradually. Bankers, therefore, are afraid to commit themselves for the purchase of a large amount of securities for delivery weeks or an indefinite time later, and any syndicate formed to take and carry them in the meantime must be paid well for the risk.

I remember that in 1907 the Union Pacific made an issue of about \$75,000,000 of its convertible bonds, but because they were convertible it had to offer them first to its stockholders. I believed that the bonds were so attractive that the stockholders would take all of them, and being a member of the executive committee and of the board, as well as counsel for the company, I told Mr. Harriman I did not think we should have the issue underwritten, since the bankers wanted 2½ per cent for the underwriting. Mr. Harriman said that he himself thought the stockholders would take the bonds, but since the company needed the money, and, indeed, must have it, he felt that it was wise to pay the underwriting price as a premium to insure the money. It was necessary to have a special stockholders' meeting to authorize the increase in the capital required to provide for conversion of the bonds. This took several weeks. In the meantime the panic of 1907 developed, and the stockholders took less than \$5,000,000 of the bonds, and the underwriting syndicate had to take the balance of about \$70,000,000, and at a time when call money in New York

was dancing between 10 per cent and 500 per cent per annum. But through Mr. Harriman's wise foresight the Union Pacific got the money. I had not seen as much of large financial operations then as I have since. That experience and my observations since have convinced me that if bankers are an evil they are, like lawyers, a very necessary one.

I relate this incident to illustrate the importance of prompt dealing in large financial transactions. If a railroad company is compelled to go to half a dozen or more State railroad commissions for permission to make an issue of stock or bonds, and encounter delays running from weeks to months on account of numerous hearings before different commissions, and meet their conflicting policies and views, before it can deliver the securities, it will be impossible to have the issue underwritten, or if underwritten at all the cost will be enormous. But worse still, the chances are that differences between the commissions will arise, or that the inexperience and perhaps the financial theories of some of the many commissioners may require changes that will offset the plan entirely.

In the meantime, with public knowledge of the fact that the issue is to be brought out, and with no bankers or syndicate to protect it against raids, ample opportunity will be afforded for depressing the securities on the market by the time they are issued.

It is true, of course, that some delay and publicity will attend any commission regulation of the issue of securities. But it is obvious that if supervision of only one commission is required the delay will be far less, and that commission, with the greater experience it will have in dealing with such subjects, will acquire an expertness and familiarity with all conditions involved that will not only greatly expedite the proceedings but enormously increase the efficiency and wisdom of the supervision.

The difficulties are not merely potential, they are actual; and with the increasing number and power of State commissions the difficulties of financing railroad improvements will become insuperable. Mr. Thom told you of the predicament of the new management of the New Haven Road because of the conflicting laws of Massachusetts, Rhode Island, and Connecticut; and of the New York Central having to pay the State of Illinois a fee of \$600,000 for an issue of securities on its line from New York to Chicago, although but a few miles of the railroad lies in the State of Illinois. The Union Pacific, for the privilege of issuing some bonds under a mortgage covering its lines extending from the Missouri River to Ogden, with only a few hundred feet of track in Missouri, at Kansas City, had to pay recently to the State of Missouri for the approval of such issue by the Missouri commission a fee of \$10,962, when only \$124,930 of the money represented by the bonds had been expended upon its property in that State.

Indeed, some States, in effect, deny railroad companies the right to borrow money for improvement at all. As attorney, and afterwards as president of the Southern Pacific lines in Texas, I had to do and was quite familiar with the working of the Texas law regulating railroad stocks and bonds, from the time of its enactment in 1893 until the termination of my connection with the Southern Pacific in 1913. Without reference to branches and other subordinate lines, the Southern Pacific Sunset Route, made up of steamers from New

York to New Orleans and Galveston, thence by rail to Los Angeles, San Francisco, and Portland, runs through the State of Texas for 936 miles from the Texas-Louisiana boundary to the Rio Grande River at El Paso, with a line diverging from this at Houston and extending to Galveston. Yet under the stock and bond law of 1893, as administered by the Texas Railroad Commission, not a dollar of bonds or a share of stock has been issued against or on account of this line for the necessary betterments and additions of this great trans-continental line of railroad in Texas since the Texas statute was enacted in 1893 to this day. Even if they could have been sold for 100 cents on the dollar gold, or more, their issuance would not have been allowed.

The Gulf line of the Santa Fe, extending from a connection with the main system in Oklahoma, thence through Texas to the Gulf, is in the same situation. Not a bond or share of stock has been issued in over 20 years for the improvement of that great outlet for interstate and foreign commerce from the Northwest.

During the life of Mr. Harriman, he planned to build a low-grade line connecting with the Union Pacific at Kansas City, thence to the boundary of Texas at Denison, there connecting with the Houston & Texas line, controlled by the Southern Pacific, and practically to rebuild that line from Denison to Houston and Galveston, in order to establish a low-grade line from Kansas City to the Gulf, particularly for the transportation of wheat for export, and lumber from east Texas and Louisiana to Oklahoma, Kansas, Nebraska, etc. As counsel, I was obliged to advise him that under the Texas law and the ruling of its railroad commission, not a dollar in bonds could be issued for the money required in the reconstruction of the Houston & Texas Central; and even if stock could be issued at 100 cents on the dollar for the money thus expended, as a practical matter it could not be sold, since stock ownership was the only way by which the Houston & Texas Central could continue as a part of the Southern Pacific system, a lease or sale of the railroad itself to the Southern Pacific Co. or any foreign corporation being forbidden by the laws of Texas. The result was that a great project for improving the facilities for interstate and international commerce had to be abandoned, and the choppy grades of the Houston & Texas Central continue as they always have been, and probably always will be as long as the Texas law remains unchanged.

Senator TOWNSEND. What do you mean by low-grade railroads?

Mr. LOVETT. About five-eighths. What I mean is practically a level road.

Senator TOWNSEND. Yes; I did not quite understand what you meant.

Mr. LOVETT. Yes; it is practically a level track. The Houston & Texas Central, like most of the roads constructed in the early days, was built without much regard to grades and on the surface of the ground.

Mr. THOM. The lower the grade of the ground the higher the grade of the railroad.

Senator TOWNSEND. I did not know whether you meant that or whether you meant a cheap railroad.

Mr. LOVETT. The money needed for the improvement of the Texas lines of the Southern Pacific and Santa Fe systems, when forthcom-

ing at all, has been furnished by the parent systems by direct loan without security from their treasuries outside of the State and by foregoing dividends of the Texas companies from time to time to which they were fairly entitled. Much of the lines mentioned—more than half of the Southern Pacific from the Louisiana boundary and the Gulf to the New Mexico boundary—is unproductive and would not pay operating expenses except for the through business. No argument should be needed to show that the transcontinental lines of railroad extending from New Orleans on the Mississippi River and Galveston on the Gulf to the Pacific Ocean, and the lines from the grain fields of Oklahoma, Kansas, Missouri, Nebraska, Iowa, etc., to the Gulf—particularly those under the same stock ownership and operated as a single line—ought to be regulated, in their financial operations at least, by the Government that regulates interstate and foreign commerce.

What is true of the Southern Pacific and Santa Fe lines in Texas is true, more or less, of all the other lines in that State. Railroad construction in Texas since the enactment of the law in 1893 has been limited to building by large railroad systems operating outside the State in order to reach the Gulf or as feeders to the main system. Every case of any independent railroad construction in Texas since 1893, without a single exception which I can recall, has proven disastrous and ended in a receivership. Almost all the mileage in the State, outside of that owned by the Southern Pacific and Santa Fe, is to-day in the hands of receivers, and even the Southern Pacific and Santa Fe lines would have greatly deteriorated physically or gone into receiverships if it had not been for their strong backing.

The question naturally arises why Texas will not allow the railroads to issue securities at par for money necessary to improve their railroad facilities. The explanation is that the law of 1893 required the railroad commission to appraise the value of all existing Texas railroads and to file such appraisal, which should thereafter be the basis for issuing securities against such properties, but giving the commission full power to change such appraisal practically at its discretion. The commission proceeded in 1894, 1895, and 1896 to determine what it claimed would be the cost of reproducing the Texas railroads as they then existed, which they determined should be the basis of value. It was during a period of great business depression, as you will recall, throughout the whole country, when materials and labor were lower than they ever have been within my memory. They proceed substantially as the Interstate Commerce Commission is now proceeding, or, to state it another way, the Interstate Commerce Commission valuation department has apparently adopted the Texas commission method of valuing the railroads of the United States. The method assumes an ideal condition and the perfection of human wisdom and performance, and naturally it achieves marvelous results. For example, the Texas commission determined that the railroads of the Galveston, Harrisburg & San Antonio Railway Co., the subsidiary owning the main line of the Southern Pacific from Houston to the Rio Grande River at El Paso, was worth \$16,700 per mile, whereas afterwards, in a suit to enjoin as confiscatory rates based upon that theory, by testimony of engineers engaged in the original construction and other evidence with respect to conditions, prices, and difficulties attending the construction at the time, it was shown that

with subsequent betterments and additions the railroad had probably cost upward of \$50,000 per mile. Other instances of differences between the theory and the fact quite as striking could be cited.

Now, the commission having determined the value of the then existing Texas railroads in the depression of 1894, 1895, and 1896, found that the outstanding capitalization, of course, very greatly exceeded the value thus ascertained. Wherefore the commission decided that so long as that condition existed no more bonds could be issued, no matter how high the price received for them. True, the commission has been liberal in allowing bonds and stock to be issued for the construction of new lines, particularly if designed to compete with existing lines. And to show that such commission regulation does not prevent the imposition of worthless securities upon the public, my information is that every railroad bond issued by order of the railroad commission of Texas sooner or later went into default, except those issued by companies owned by the Southern Pacific, Santa Fe, and the El Paso & Southwestern—Phelps Dodge lines. Yet the great argument for the enactment of the law, in the expressive phrase of its author, was to take the "wind and water out of railroad bonds and stocks."

No other State, so far as I am aware, has undertaken an appraisal of the railroads as it was done in Texas. Only Congress has taken that action, and we supposed, and shall contend, that it required the Interstate Commerce Commission to take into account all elements of value, rather than the theoretical cost of reproduction, which the Texas commission took as its only guide. The conditions in Texas which I have just described do not therefore exist in any other State, so far as I am aware. The other States regulating the issue of railroad securities mostly have concerned themselves thus far only with ascertainment of the purpose for which the issue is to be made and the price to be obtained, though some of them have claimed the right to review the business judgment and wisdom of the directors in undertaking the particular improvements for which the issued is desired.

Again, the right to extend an existing system of railroads by building a new line or buying or leasing an existing line comes only from the States. Congress makes no provision therefor, although the object may be exclusively the extension and promotion of interstate and foreign commerce. Each one of the large railroad systems of the country derives its existence from some State, and that State can paralyze the development of the system in other States by imposing restrictions upon the capitalization, or otherwise, if it should choose to do so; and where the line traverses several States any one of the States can at least prevent development through raising money on mortgage bonds, if not through the issue of stock, by refusing to permit the mortgage on that portion of the system within such State. It will not do to say that the States are not likely to exercise this power. As a matter of fact, they do. I have already cited the case of Texas. That State goes further and does not allow a corporation of any other State to own or lease or operate a mile of railroad within its territory. And there are others. Several of the States will not permit the sale or lease of any part of a railroad without the approval of the State commission. Following the decision of the Supreme Court in *United States v. Union Pacific Railroad Co.* (226 U. S. Rep., 61), holding illegal the control of the Southern Pacific by the Union

Pacific, the Attorney General insisted, as a part of the dissolution procedure to be worked out in the court below, that the Southern Pacific should sell and that the Union Pacific should buy the Central Pacific Railroad extending from a connection with the Union Pacific at Ogden to San Francisco, San Jose, and Fresno, Cal., and from Roseville Junction to the Oregon boundary, which the Pacific Railroad acts of Congress aiding its construction required should, in connection with the Union Pacific, be operated, so far as the public and Government were concerned, as "one continuous line of railroad from the Missouri River to the Pacific Ocean." Under pressure from the Attorney General the Union Pacific and Southern Pacific arrived at and executed an agreement for such sale. But an essential feature of the agreement was the joint use by the two systems of certain terminals at Sacramento, Oakland, and San Francisco and the joint use of certain tracks of the Southern Pacific between Sacramento and Oakland and a lease of the Central Pacific between Tehama and the Oregon boundary to the Southern Pacific. The railroad commission act of California, however, provided that every contract for trackage or joint use of terminals or other railroad properties and for the lease or sale of railroad property was unlawful unless approved by the California commission. Application was made and, after hearing, the California commission would approve the contract only on condition, in substance, that other lines should be admitted to the joint use of such properties on such terms as the commission itself might fix, and that the rentals for the joint use of the properties should be fixed by the commission—conditions which, of course, no solvent railroad company could afford to accept. Consequently the agreement failed.

Mr. ADAMSON. Judge Lovett, not for the purpose of cross-examination at this time, which is not allowable under our ruling, but simply in order to understand you, are not those government-aided railroads chartered by the Federal Government?

Mr. LOVETT. No.

Mr. ADAMSON. None of them?

Mr. LOVETT. No. The Central Pacific was chartered by the State of California, but certain rights were conferred upon it by Congress, including Government aid, and the Supreme Court held that it was endowed by the Federal Government with certain powers.

Mr. ADAMSON. My idea was that if it was chartered by the Federal Government it would not be necessary to get this permission from the State commissions.

Mr. LOVETT. No; it was chartered by the State of California. The original Union Pacific was a Federal corporation, but was foreclosed.

Now, I do not wish to be understood as criticizing the California commission for its action in the matter just stated, or to express any opinion as to the wisdom of its action from any standpoint.

I mention it only as an instance where as able and enlightened a commission as that of the State of California prevented an otherwise lawful contract for the establishment under one management of a great national highway, and prevented the carrying out of a definite plan of two successive national administrations, as reflected by action of the Attorney General in each. Whether the result was beneficial or otherwise to the public is, of course, not for me to say. The whole

point I make is it was a matter that should be for the determination of the national authority and not for a single State.

Access to our Pacific Ocean coast from the Mexican boundary on the south to Oregon on the north, a distance of almost 1,000 miles, is through the State of California. Indeed the only accessible ports between Mexico and the mouth of the Columbia River, a stretch of 1,280 miles, are within California. Access to the Gulf of Mexico between the Mexican boundary and Louisiana is through the State of Texas, and the only practicable access to the Gulf between the mouth of the Mississippi River and Mexico, a stretch of some 670 miles, is through the Texas ports. With the California commission controlling access to most of our Pacific Ocean coast and local rates to and from the ports, and with the Texas commission controlling access to most of the Gulf coast ports and the local rates to and from those ports, it is to be expected that the commissioners of those States will be indisposed to relinquish their power over the "hinterland," and will oppose every move for the exercise by Congress of its full constitutional power over interstate and foreign commerce.

Mr. ADAMSON. Mr. Chairman, Judge Lovett has been speaking, without interruption, for almost two hours, and not being a Senator, and accustomed to long——

Mr. LOVETT. And tiresome.

The CHAIRMAN. Our custom has been to hold sessions until half past 1 and adjourn for the day.

Mr. ADAMSON. What I was going to say is, would it not be better to let him have a rest and come back at half past 1? It has been intimated that Judge Lovett might be called away, inasmuch as we are in this perilous time.

Mr. LOVETT. I am entirely at the service of the committee.

Mr. SIMS. I suggest that we continue until 1.30 to-day and then adjourn, and make up our plans for the future.

Mr. LOVETT. Shall I proceed, Mr. Chairman?

Mr. ADAMSON. I withdraw the motion, Judge Lovett.

The CHAIRMAN. Yes, proceed, Judge Lovett.

Mr. LOVETT. I believe very strongly that it is absolutely necessary for the adequate development of the railroad transportation of this country for Congress to exercise the powers vested in it by the Constitution, rather than the States, to the extent, at least, of controlling exclusively the issue and sale of securities by railroad companies, and the establishment and extension of interstate railroad systems by construction, purchase, lease, consolidation, or otherwise. The credit of such systems depends upon the cohesion of the constituent factors and the legality of the combination. Undoubtedly there should be a veto power upon the construction of unnecessary lines and upon sales, leases, and consolidations, but I submit that the power should be vested in Congress, or a congressional agency such as the Interstate Commerce Commission, and not in the States. The power which a single State now has, and sometimes exercises, to upset and defeat the extension and building up of a great railroad system serving the commerce of many States or the whole country should be abolished.

Coming now to the second difficulty I mentioned, namely, State regulation of rates in such manner as to unduly reduce revenues, to discriminate in favor of localities and shippers within the State, and disturb and disarrange the structure of interstate rates, but little need be said, since the facts are familiar. Most of you know that many of the States by legislative action or commission order have reduced passenger fares to 2 cents per mile, while interstate rates are higher, and that interstate passengers in such circumstances are able, and many of them do, by buying tickets to intermediate points, etc., travel at a lower rate than that prescribed by interstate tariffs filed with the commission. Similar discriminations are commonly practiced with respect to freight. My understanding is that at about the time the Interstate Commerce Commission granted the eastern roads an increase of rates in the early stages of the European war, as a necessary measure of relief from serious financial distress, the Pennsylvania commission ordered a reduction in coal rates involving a loss of revenue to the roads affected almost equal to the gain to result from the increased rates allowed by the Interstate Commerce Commission. But the officers of the railroads from that State can give you more explicit information as to this. Certainly it has not been unusual for States and State commissions to reduce rates while the Interstate Commerce Commission was increasing or considering applications to increase rates.

Some of the State commissions in effect control interstate rates through their power over intrastate rates and their willingness or threat to use such power to punish railroads who disregard their wishes with respect to interstate rates. The Texas Railroad Commission has for years practically controlled interstate and foreign rates to and from that vast territory. Its control over the local rates to the Gulf ports from a great interior territory enables it to force an adjustment of interstate rates throughout a very large section of the Southwest. In addition to this, that commission has long coerced the Texas railroads into adopting whatever interstate rates or whatever adjustments or differentials in interstate rates it desired, though this control received a shock in the so-called "Shreveport case." It has threatened the Texas railroads with punishment by reduction of local rates, and has made the threats good by inflicting punishment in many instances when its wishes with respect to interstate rates were disregarded. I could give you many instance in proof of this, but will not take the time, since I believe my statement will not be questioned. Indeed, the Shreveport case is a good example. In a word, it was a case where the Texas commission required the Texas railroads to maintain interstate rates sufficient to practically prevent the city of Shreveport from competing with Dallas and Houston in Texas localities much nearer Shreveport than either of the Texas cities. (*H. E. & W. T. R. Co. v. U. S.*, 234 U. S., 342.)

It may interest you in this connection to observe how small the intrastate traffic is compared with the interstate traffic. Statistics for the Union Pacific system for the fiscal year ended June 30, 1916, show the following:

UNION PACIFIC SYSTEM.

Freight revenue fiscal year ended June 30, 1916.

Class of revenue.	Amount.	Per cent of total.	Class of revenue.	Amount.	Per cent of total.
Intrastate for State of—			Intrastate for State of—Continued.		
Missouri.....			Idaho.....	\$1,065,877.23	1.4
Iowa.....			Montana.....	102,169.66	.1
Nebraska.....	\$2,130,434.04	2.8	Oregon.....	1,493,195.16	2.0
Kansas.....	1,546,196.68	2.1	Washington.....	729,036.58	1.0
Colorado.....	929,116.15	1.2	Interstate.....	65,997,249.75	87.9
Wyoming.....	405,305.34	.6			
Utah.....	680,174.70	.9	Grand total.....	75,078,755.24	100.0

Passenger revenue fiscal year ended June 30, 1916.

Class of revenue.	Amount.	Per cent of total.	Class of revenue.	Amount.	Per cent of total.
Intrastate for State of—			Intrastate for State of—Continued.		
Missouri.....			Idaho.....	\$1,079,535.11	5.5
Iowa.....			Montana.....	122,409.10	.6
Nebraska.....	\$1,488,054.94	7.6	Oregon.....	1,061,744.83	5.4
Kansas.....	1,061,811.94	5.4	Washington.....	539,971.62	2.8
Colorado.....	444,586.33	2.3	Interstate.....	13,343,409.99	68.0
Wyoming.....	258,625.27	1.3			
Utah.....	217,080.67	1.1	Grand total.....	19,617,229.80	100.0

Our total freight revenue that year was \$75,078,755——

Mr. SIMS That is, the Union Pacific?

Mr. LOVETT. Yes, sir.

Mr. SIMS. For the whole country?

Mr. LOVETT. That is the total freight revenue of the Union Pacific system for the year ended June 30, 1916. Our interstate and foreign freight revenue was 87.9 per cent.

The CHAIRMAN. What is that last? Interstate and foreign?

Mr. LOVETT. Our total freight revenue. Of our total freight revenue 87.9 was interstate and foreign—that is to say, subject to the Interstate Commerce Commission regulation—whereas the largest intrastate revenue furnished by any one State was 2.8 per cent, while the lowest was one-tenth of 1 per cent. The percentage of intrastate passenger revenue was somewhat larger, ranging from six-tenths of 1 per cent to 7.6 per cent, while interstate passenger traffic was 68 per cent. Yet any one of the States could block the financial plans for a considerable part of this railroad system, if not for the whole, if it so willed. Happily the States traversed by our lines have been considerate and cooperative in helping us in our work of upbuilding and development.

Mr. ADAMSON. Your comparison between local and interstate rates, I presume, you mean in this way: That on an average each point, in doing business with other points, would maintain that pro rata per cent; that the business that it does with intrastate points would be only that small percentage, compared with the business it does with outside interstate points, on an average?

Mr. LOVETT. All of the business, Judge Adamson, of course, moves over the same lines.

Mr. ADAMSON. I understand.

Mr. LOVETT. And it all comes from our own stations and connections.

Mr. ADAMSON. I understand, but the general meaning of that statement would be that Philadelphia, for instance, in doing business with Pennsylvania points, would maintain on an average a small percentage as against the large percentage it would do with interstate points—points beyond the State?

Mr. LOVETT. Yes. Of course, all these stations do State as well as interstate business, but the interstate business is not subject to State regulation.

Mr. ADAMSON. I understand, but I am talking about your comparative figures—the amounts.

Mr. LOVETT. Yes, if I understand your question. We have taken here the business that has both origin and destination in the same State.

Mr. SIMS. Exclusively intrastate business?

Mr. LOVETT. Yes.

Mr. SIMS. And not where part of the haul is through one State to a point in another State?

Mr. LOVETT. No. That comes under interstate traffic.

Mr. ADAMSON. Not all in one State—intrastate?

Mr. LOVETT. Yes. These figures include every dollar that we earn—freight and passenger—and that which is not intrastate is interstate. Each station on the line probably had interstate business as well as intrastate business, and certainly some of them, if not all of them, had more interstate business than State business. But the purpose of this statement is to separate that which is subject to the jurisdiction of some particular State from that which is subject to national jurisdiction.

Mr. ADAMSON. Of course, all stations do not maintain the same proportion.

Mr. LOVETT. Oh, certainly not.

Mr. ADAMSON. Or ratio.

Mr. LOVETT. No. The point is that while 87 per cent of our freight business is interstate, and while the largest percentage of any one State under the Constitution is only 2.8 per cent of the freight business, yet any one of those States can defeat the financial operations—an issue of bonds or an issue of stock or any other important financial operation—of a considerable part of the Union Pacific system by withdrawing its consent.

Mr. SIMS. A large State, like Texas, of course has a vast interest in interstate business and a smaller one in intrastate business, on account of the smaller amount of intrastate business.

Mr. LOVETT. Yes.

Mr. SIMS. Now, from an economic standpoint, why have not the people of Texas the right to try to control that interstate rate, in which they have a larger interest and a greater burden?

Mr. LOVETT. Because of this reason—

Mr. SIMS (interposing). I am not talking about a legal right, but a moral right.

Mr. LOVETT. Certainly as far as a legal right is concerned they have no control over interstate traffic.

Mr. SIMS. I understand.

Mr. LOVETT. The Constitution gives that power to the Congress. So far as moral rights may be concerned, I think there is none, because Texas, once a republic, thought that she would gain sufficient advantages from becoming one of the States of the Union, to give up that right.

Mr. SIMS. She might have supposed that she would have been annexed anyway.

Mr. LOVETT. She considered that the cheapest way to get in. But, at all events, from a moral standpoint, she gave up her right to independent regulation of these matters for other considerations.

If Congress is going to perform its duties, under the Constitution to regulate interstate commerce, is it right to leave the law so that either one of these States—even one that contributes one-tenth of 1 per cent—can say whether or not an issue of a hundred million dollars of bonds or a hundred million dollars of stock, or any other amount, for the development of this important interstate highway, shall be made or not? Each State has that right to-day.

The third difficulty which I specified is the inability of the Interstate Commerce Commission, no matter who the commissioners may be, to perform the duties devolving upon the commission, under existing laws, resulting in delay—which should never occur in commercial matters—and compelling the commissioners to accept the conclusions of their employees as final in deciding matters of great importance to the commercial and railroad interests of the country. If the duties of the commission should be enlarged, if only to the extent of supervising and regulating the issue of railroad securities, the conditions will, of course, become worse, and the delay intolerable; and some provision for the relief of the commission will become absolutely necessary.

Mr. ADAMSON. I thought you were going to talk about the regulation of stocks and bonds. Before you leave that topic, I have a suggestion to make to you, and that is that right there, in that part of your statement, you examine the Rayburn bill which was passed by the House, and say what you can or desire to say about it; because the House agrees with you up to this point, and passed that Rayburn bill two years ago, and sent it to the Senate, and a committee of the House reported it again to the House, but I think mainly on account of this investigation, refrained from passing it again, and there are Members of the House who believe that that Rayburn bill, either in its present form or as it may be amended, if necessary, would remedy all the defects you have talked about up to this point; and I would be glad to have your views on it. Of course, I may be wrong; I do not know.

Mr. LOVETT. The Rayburn bill, as it originally passed the House, did not meet this, because it simply added another regulating body. It reserved the rights of the States to regulate the issuance of securities. It was amended by the Senate committee in a way that, in my judgment, made the congressional regulation exclusive.

Mr. ADAMSON. Do you not think that would have been true of the Rayburn bill, that the regulation would have become exclusive?

Mr. LOVETT. I am afraid not, Judge Adamson, because the Rayburn bill expressly provided that it should not supersede regulation by the State, according to my recollection of the terms of the original Ray-

burn bill. I propose to discuss this question of regulation and means of regulation later on.

Mr. ADAMSON. I just wanted your views about that particular bill.

Mr. LOVETT. It is my purpose to discuss the question of whether it must be done by a Federal corporation or whether Congress can regulate the performance or exercise of those functions by State corporations; and I will come to that point later, with your permission.

Mr. ADAMSON. Yes; I only wanted to direct your attention to it, in the event you had not contemplated it or reference to it.

Mr. LOVETT. The commission's statistical reports show that on June 30, 1914—the latest complete statistics available—there were 899 operating railroads in the United States, divided as follows: Of class 1, whose operating income exceeds \$1,000,000, there were 183; of class 2, whose operating income is between \$1,000,000 and \$100,000, there were 285; and of class 3, whose operating income is less than \$100,000, there were 431. This excludes switching and terminal companies, aggregating about 200; and in addition to this, there were 478 railroad corporations reporting to the commission but whose property was operated under leases by some other company included in classes 1, 2, and 3. Consider how many boards of directors, executive committees, presidents, vice presidents, general managers, and other railroad officers are engaged constantly in supervising the operations of all these railroads throughout the country. Yet the Interstate Commerce Commission is charged with the task of regulating and supervising more or less the operations of all of them. We believe that the Interstate Commerce Commission is now, and ever since its creation has been, composed of hard-working men, and that they are doing quite as much as men in such positions can do. But their task is too great. The commissioners are charged with the duty of hearing and deciding issues more important to the commerce and business of this country than are many of the cases decided by the Supreme Court of the United States. But they are dependent upon subordinates unknown to the people whose interests are involved for the hearing and recording of the testimony, which is so voluminous that it is not humanly possible for all the commissioners to read it after it is taken. Hence it must be summarized by the persons who took it or by some other clerk. Upon a record thus made and upon arguments and briefs often, I dare say, conflicting in statement, the commissioners must decide these matters of far-reaching importance to the public as well as to the railroads and perform all their other duties of supervision, detection, and correction, embracing accounting, statistics, rates, discriminations, boiler inspections, and safety appliances, with an odd job added now and then by resolution of Congress for the investigation of some transaction.

Suggestions for the relief of the commission I will defer until I shall come to a discussion of the remedies proposed by the railroad executives.

Mr. ADAMSON. Mr. Chairman, Judge Lovett has reached a good place to stop, and as we ought to go into executive session, I would suggest that we do so now.

(Whereupon, at 1.05 o'clock p. m., after informal discussion with respect to the time for meeting, the committee went into executive session, announcing that it would meet to-morrow, March 20, 1917, at 10.30 o'clock, a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

TUESDAY, MARCH 20, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The committee met at 10.35 o'clock a. m., pursuant to adjournment, Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. The committee will come to order. Judge Lovett, are you ready to proceed?

Mr. LOVETT. Yes.

STATEMENT OF MR. R. S. LOVETT—Continued.

Mr. LOVETT. I had reached yesterday, Mr. Chairman and gentlemen, the conclusion of the third of the principal difficulties that confront the railroads, according to my judgment of the situation; and I now will take up the fourth difficulty I mentioned at the outset, which is the practical legality that has been accorded conspiracies to tie up and suspend the operations of all the railroads of the country by strikes and violence and the absence of any law to compel the settlement of such disputes by arbitration or other judicial means. We have just had a striking—indeed, almost tragic—demonstration of the power of such conspiracies and of the willingness of the conspirators to use it, with utter disregard of the safety and welfare of the Nation. Upon the verge of the most serious foreign war that has ever confronted this country, the four men who head the trainmen's organizations held up the Nation by threat on short notice to paralyze not only the commerce but the defensive power of the country unless their demands were without question or inquiry or consideration conceded. They held up Congress last September, and since the Supreme Court did not "step lively" enough to suit them, they held up the country in the presence of a foreign foe. How soon they will hold it up again I do not know.

With laws which permit this, with no tribunal or agency established for inquiring and determining the justice of such demands and compelling obedience to the decision, with the railroads exposed helplessly to such exactions, is it surprising that prudent investors should hesitate to put their money into railroad properties except in those which are so strong financially that they can withstand for a time even these exactions?

However men may differ about the Sherman Act as applied to wage disputes and the abrogation by the Clayton Act of the ancient right of protection by injunction, it does not seem to me that there should be serious difference of opinion upon the proposition that no body of men should be allowed to form a conspiracy, and openly carry it out, to stop the operation of all the railroads of the United States—thus suspending all interstate and other commerce and paralyzing the very life of the Nation, no matter what their object may be. Why is a strike of trainmen called? Why do they act in concert and all quit simultaneously? Is it not for the deliberate and sole purpose of stopping the running of the railroad and suspending its traffic? If a strike is succeeding, it means that the trains are not running; and if it is failing, it means that the trains are running. The success or failure of the effort depends upon the extent to which interstate and all other commerce is suspended. It seems inconceivable that a Nation as dependent as ours is upon railroad transportation should permit this to occur. The fact that it may occur not only impairs the credit of all railroad securities, but it causes apprehension to the manufacturer, the merchant, the producer, and consumer dependent upon railroad transportation, as they all are. It seems to me that one of the plainest duties of the National Government, not merely to the railroads, but to the whole people, is to provide a means for settling disputes between the railroads and the trainmen likely to lead to such strikes. Men can not be compelled to work against their will, and no one suggests this. But men can be forbidden to enter into and carry out a conspiracy to interfere with and suspend interstate commerce. Any trainman may quit when he wishes, but if he conspires with a body of trainmen to interrupt and suspend commerce and the public business, he is in a very different position. What one man may do alone is quite different, under the ancient law of conspiracy, from what he may agree and conspire with another to do. All civilized States provide courts or other tribunals for settling disputes between citizens. The savage rule of might and force and violence and murder for the settlement of property and personal disputes between citizens is forbidden by the laws of all civilized States, and most, if not all of them, provide agencies; and we in our own country provide agencies for the peaceable settlement of all such disputes except labor disputes. Why should we stop there? Especially why do we stop with disputes between trainmen and their employers which involve more injury and disaster to the people at large, if fought out privately, than any other catastrophe that could befall us short of foreign invasion? Why should we allow such an issue to be fought out in our midst, involving the suspension of commerce, incalculable loss to innocent citizens, and suffering, if not starvation, to millions of the poor and most helpless inhabitants of cities and crowded communities? It can not be true, as some of the labor leaders claim, that this one controversy out of all that arises between men is not susceptible of peaceable adjudication, and can be settled only by violence and injury, not only to the participants in the controversy, but to all the people of the country. It would be easy to frame a law that would protect the rights and welfare of the men, as well as of the companies, while providing means for the peaceable settlement of such controversies.

I do not advocate compulsory arbitration of every labor controversy that arises in the country. In purely private employments, where only the interest of employers and employees are concerned and the public is not injured, perhaps arbitration ought to be voluntary. Even in certain branches of the railroad service I do not advocate it, although I am not at all opposed to it. The main difficulty with the compulsory-arbitration laws of New Zealand and Australia, from the examination I have been able to make of their operation, arises from the fact that they compel the arbitration of every dispute—"the butcher's, the baker's, and the candlestick maker's." Even with this apparent defect I observe no tendency in those countries to abandon the system, but rather to strengthen it; and remember that those States are pure democracies. I believe it would be wise to limit compulsory arbitration to those employments that are vital to the public at large, and, with respect to railroads, I should limit it to disputes with men in the train service. Surely the public are entitled to have the operation of trains continue and to call upon trainmen and the railroad officers alike to invoke and submit their disputes to the judgment of some high-class tribunal created by law to hear and decide such controversies, just as we are all required to submit to the judgment of public tribunals—the courts—controversies involving our property, our liberty, and our lives.

If the right of trainmen to strike is taken away, it is, of course, incumbent upon the Government to provide an impartial tribunal to promptly hear and decide their complaints. To my mind the chief objection to the Sherman antitrust law, as applied to labor disputes, was that it tended to prevent strikes without providing any other method to force a settlement of disputes. The laboring man's rights must be fully protected. We must substitute justice for both oppression and violence.

Mr. ADAMSON. Judge, has Congress any direct jurisdiction over any except those operating in interstate commerce?

Mr. LOVETT. No; I suppose not; but I am speaking generally of the principle of compulsory arbitration. I have observed this, that the employer, particularly the railroad, is subject to the control of public opinion, but the employees are not. We have had a demonstration that certain employees have absolutely no regard for public opinion, no regard for the opinion of Congress, no consideration for the Supreme Court of the United States—nothing but their own will. Now, the employer, particularly the railroad, is within reach of all of these influences, and they have got to yield to them. But if you provide for the arbitration of all railroad wage disputes, if you please, I have no objection to that so far as I am concerned; but make the finding compulsory only in disputes with the trainmen.

Mr. ESCH. By trainmen you mean men engaged in train operation?

Mr. LOVETT. Yes; I do not mean merely the actual trainmen, but I should include telegraph operators and men whose service is so essential that a concerted cessation of work would interfere with the public.

The CHAIRMAN. Would you include yardmen and switchmen?

Mr. LOVETT. I think I should.

Mr. ADAMSON. Are not switchmen engaged in operating trains?

Mr. LOVETT. Yes; I think I should include switchmen. I would include all those whose work is essential to the operation of the railroad. That is what the public is interested in. I would include everybody in train service and make it compulsory as to those. We have got to come to this sooner or later.

Mr. ADAMSON. Is it not historically true, Judge, that the brotherhoods did advocate arbitration until they became so strong that they thought they could get along without it?

Mr. LOVETT. I think it is true, Judge Adamson, that for a long time the employees, the brotherhoods, advocated arbitration in certain cases, and railroad managers generally opposed it. There were exceptions. I do not pretend to speak accurately on that subject, but that is my recollection of the history of the matter. But railroad men learn, strange as it may seem, like others; and it is not surprising that so long as they thought they had the advantage—that they could get better results by opposing arbitration than by submitting to it—that they opposed. Every man, of course, thinks he is going to be just, and each manager thinks he is going to be absolutely fair to the men who work for him, and he would rather decide than have somebody else decide it. But the situation has developed. Many of the railroad managers believe they can whip these strikers. My own judgment is that if the public were not interested, if it were between the railroads and the employees, the railroads would whip. But there would be a disorganization of the service; there would be a suspension of business that might be for a few days or might be for a few weeks, and in the meantime the commerce of the country would be entirely dislocated and upset, and there would be a great deal of suffering and hardship; and being subject, as the railroads are, to the force of public opinion, they would rather submit to a great deal than meet this issue. But whatever may be the present view of the railroad men, and whatever may have been their view in the past, the obvious fact is to-day that from the standpoint of the public these questions must be determined peaceably and without reference to the wishes of the labor leaders or the railroad men.

Mr. SIMS. Judge, then you do not include in this what the railroad or trainmen regard as a nonarbitrable question and one of personal relations? You do not except anything of that kind?

Mr. LOVETT. The only thing I except, Judge Sims, if I understand your question, is the power to compel a man to work if he does not want to.

Mr. SIMS. To continue a personal relation which is distasteful to him?

Mr. LOVETT. No, sir; he is not required to do that. It could not be done under the Constitution if you wanted to, because that would be involuntary servitude.

Mr. ADAMSON. But personal liberty does not authorize missionary work, you think?

Mr. LOVETT. Yes, sir; that expresses it exactly.

Mr. SIMS. Right there, Judge, do you think that a constitutional right, in its exercise, should be limited to individual exercise and not by agreement with others—all of them exercising an absolute constitutional right?

Mr. LOVETT. They are not exercising an absolute constitutional right, Judge Sims. If a dozen of us are doing work for some man, any one of us has the right to quit. Suppose we put our heads together and say that we all quit at the same time, at a certain hour. We will ruin this man's business, and he knows it. That is a conspiracy to injure a man, not a conspiracy to exercise our individual rights, because we have no individual right to injury anybody. So when the trainmen want to quit individually, without concert, they have a right to do it. But when together they agree and say, "We will quit at a certain hour and under certain circumstances for the purpose of stopping the business of the railroad"—stopping the running of the trains. and injuring the railroad and forcing it into concessions—they form a conspiracy to injure that railroad; it is not the exercise of an individual right, but a conspiracy to invade the individual right of another. That is the whole difference, as I see it.

Mr. SIMS. In other words, you do not think individuals have a constitutional right to organize to do that which they may do as individuals?

Mr. LOVETT. That does not state the case, Judge Sims, as I understand it.

Mr. ADAMSON. A man can quit without organization, can he not?

Mr. LOVETT. Yes, sir.

Mr. SIMS. But suppose he does quit as the result of organization; has he done any more than exercise his constitutional right?

Mr. LOVETT. It is the purpose that controls.

Mr. SIMS. But can any man's motive be questioned, as to whether or not he shall exercise a constitutional, guaranteed right?

Mr. LOVETT. No, sir. But the point is that when he conspires with other men, not to exercise his own right but to injure another man, the whole aspect of the case is changed. You know that is the foundation of the law of conspiracy.

Mr. SIMS. For the purpose of injury only; but their purpose is a benefit which they think they are entitled to have.

Mr. LOVETT. Yes, sir; but take the highwayman. When he puts his pistol at the breast of a man and demands that he deliver, what he wants is money. He does not want to kill the man; he does not want to injure, but he wants money, and that is the way he gets it. It is the method that he resorts to.

Mr. SIMS. But he does not have any constitutional right to rob anybody; only the means of carrying it out in general.

Mr. LOVETT. Neither does any trainman have any constitutional right to combine with other men to coerce a railroad company or an employer into giving him what he can not otherwise get.

Mr. THOM. Is not that conspiracy in the antitrust laws?

Mr. LOVETT. I think it is.

Mr. THOM. I have a right, as a business man, to do a certain thing, but I can not combine with another one in restraint of trade.

Mr. LOVETT. This rests upon the principle of conspiracy as the offense of conspiracy has always existed. What one man may do alone may be perfectly lawful, yet when he conspires with a group of men to do it, it may be unlawful in the law of conspiracy.

Mr. SIMS. The right of self-defense certainly would not be destroyed by more than one man being engaged in a common effort of self-defense?

Mr. LOVETT. No, sir.

Mr. SIMS. They often claim that with these wages they can not live and can not educate their families as they are entitled to, and they conspire together to bring about that which they first regard as absolutely necessary for their own existence.

Mr. LOVETT. They make a certain claim and they decide it themselves—the merits of it—very much as if I should say that certain property that you have is mine; I am entitled to it, and I can not live without it, and I go and take it. Now, there are tribunals to decide that question between us.

Mr. SIMS. But you indicate that an individual might do that which a number of individuals could not do?

Mr. LOVETT. Yes, sir; that is true; but we know, Judge Sims, that intent as well as method enters into an offense. And when an individual is not satisfied with working conditions he has the right to quit. He has no right to say to his employer, "I am not being paid enough," and walk into his office with a gun and say, "I will shoot you"——

Mr. SIMS. Absolutely not; but I suppose——

Mr. HAMILTON. Mr. Chairman, are we going to observe our rules?

Mr. SIMS. I think perhaps I ought to desist, but the judge was on a matter so vital that I am so interested in that I thought I should like to ask him a few questions.

Mr. HAMILTON. They called me down a while ago for doing the same thing, and I wanted to reciprocate.

Mr. SIMS. I am glad you did.

Mr. ADAMSON. I am afraid of Judge Sims. I am much obliged to you, Mr. Hamilton.

Mr. SIMS. That is the first time I have ever heard of your being afraid of anything.

Mr. LOVETT. The next difficulty of the railroads I mentioned is the phenomenal increase in taxation. Unfortunately I have no remedy to suggest for this, and therefore I shall say but little about it. I feel, however, that no statement to this committee of the problems confronting the railroads of this country would be candid and true that failed to mention the great increase in taxation. The Union Pacific is, I suppose, fairly representative of other railroads in this particular. For the 10-year period ended June 30, 1916, the Union Pacific's systems mileage increased 40 per cent; its operating revenue increased 38 per cent; its operating expenses increased 44 per cent; its taxes increased 157 per cent; and its operating income increased only 22 per cent. And its taxes are still rising, for the increased income tax, the capital-stock tax, and the excess-profits tax imposed by recent acts of Congress, call for additional taxes from this company running into hundreds of thousands of dollars yearly. It is so easy to tax railroads; their property is open and visible; their accounts are all kept under the eyes of the Interstate Commerce Commission; and there is a public record of all they make and all they spend; and, knowing they can not escape, they always keep on hand the money to pay any tax. But it is to be regretted that, while exempting corporations of comparatively small income and capital, Con-

gress proceeds on the assumption, apparently, that the large corporations are owned by people of large wealth, whereas there are many stockholders in the largest corporations who have less than those exempted.

I always hesitate to interject into a discussion of this sort the question of widows and orphans, but I ought to state to this committee that the last list of stockholders, which we took from the books of the Union Pacific, which was for the January 1 dividend, showed that the stock of the Union Pacific is owned by 29,870 people, and 12,465 of these are women.

Mr. ADAMSON. You ought not to apologize for that, because pure undefiled religion is to visit the fatherless and widows in their affliction.

Mr. LOVETT. I trust you will always remember that.

Mr. SIMS. How many stockholders did you say you have?

Mr. LOVETT. We have 29,870 stockholders, of which 12,465 are women.

Mr. SIMS. Are these women all widows?

Mr. LOVETT. I could not answer as to that.

Mr. SIMS. You are speaking of widows and orphans.

Mr. LOVETT. Probably some of them are maidens and some probably have worthy husbands dependent on them.

The next point, and the last before the remedies we have to suggest, is the cumulative effect of these various conditions that I have been discussing upon the investor.

Mr. ADAMSON. Is it your purpose, when you reach the question of remedies, to recur to this taxation subject?

Mr. LOVETT. No; I have no remedy to suggest for that.

The cumulative effect of the various conditions I have described, upon the investing public, to which the railroad companies must look for the capital necessary to continue the development of transportation facilities, has been discouraging. For several years, certainly for the last five years, banks throughout the country have been overflowing with money—with uninvested capital. Call money rates have seldom been above 2 or 2½ per cent, and often lower. Time loans for two, three, and four months have generally been around 3 and 4 per cent in the money centers and places where money for railroad investment usually is to be found. Even the unprecedented industrial and commercial activity of the last year and a half or two years, which ordinarily would require so much money as to run up the rates, has not been sufficient to absorb the idle money or materially increase interest rates. Yet all this time high-grade railroad stocks, regularly paying good dividends for many years, were purchasable at prices yielding from 5½ to 7 per cent.

Of course, I do not wish to convey the impression that the strongest railroad companies have not been able to obtain capital for improvements. The strongest could obtain it, and probably will always be able to obtain it. But the average roads—the lines whose position is not yet so firmly established, or who have not such a large margin of financial safety—and certainly the weaker properties—are finding it increasingly difficult to obtain capital. Even the stronger lines, confronted with rapidly increasing expenses and fixed or diminished rates, and considerable uncertainty as to how they may be allowed to do their financing, have developed pronounced conservatism in all

their plans. The Commercial and Financial Chronicle, in its Financial Review-Annual 1916, gives a table from which I quote to show how rapidly the amount of railroad bonds on which no interest at all was paid has increased, and how the percentage of such noninterest paying debt has increased.

Year ended June 30—	Funded debt receiving nothing.	Per cent of total.
1910.....	\$790,499,252	7.94
1911.....	816,610,147	7.55
1912.....	1,015,367,522	9.12
1913.....	1,150,128,161	10.28
1914.....	1,306,764,285	11.30

Chairman Thelen, of the California commission, declared that “the real causes of the impaired railroad credit, in so far as such credit has been impaired, are to be found in unwise railroad construction; in unwise railroad administration, not to say criminal railroad administration; and, furthermore, in excessive issues of securities.” He cited the Chicago & Alton as his first case of unwise, or worse, railroad administration and of excessive security issues. He also cited the Frisco case, the New Haven case, the Rock Island case, and the St. Paul & Puget Sound, although the latter appeared to be only a case of bookkeeping. While I am now connected with the Chicago & Alton, I had no connection with it until long after the transactions criticized, and nothing to do with any of such transactions; nor had I any connection with any of the other companies or transactions mentioned. I happen to know, however, that very much could justly be said on the other side of the Alton case, but it would be a misuse of the time of this committee for me to do so.

Grant, for the purposes of this hearing, that in some cases there has been “unwise railroad administration, not to say criminal railroad administration,” as Mr. Thelen puts it. If it were not true, the railroad business would be the only business of any great magnitude in which there had not been “unwise” administration and even “criminal administration.” Please note, however, that out of nearly a thousand railroad corporations in this country Mr. Thelen cited only four examples of financial management which he found occasion to denounce, and of these the Chicago & Alton and Rock Island cases occurred some 17 years ago. There will be dishonesty and mismanagement in all lines of business and in all walks of life. But we can not for that reason suspend business. We do not cease depositing our money in banks because there are now and then dishonest banks and bank failures. We must provide reasonable regulations to prevent, as far as we can, and punish dishonesty and mismanagement.

It would be folly to shape the railroad regulation of this country with reference to the Chicago & Alton case, the Frisco case, the Rock Island case, and the New Haven case. That is the trouble with most of the legislation we now have. It was designed to meet particular cases and to prevent certain conspicuous evils, and not for the regulation and building up of the most necessary transportation system in the world, and only as an incident guarding against and punishing

the evils therein. As Mr. Trumbull once expressed it, we should not "burn up the barn to catch a few rats." Surely we should not cripple and hamper the honest management of nearly all the railroad companies—99 per cent of them, at least—merely because there has been, or again may be, here and there a dishonest management.

Mr. Thelen cited the cases mentioned only as proof of the cause of impaired railroad credit in opposition to our claim of too much conflicting State regulation, and it is that aspect of his contention, particularly, that I challenge. Investors know a great deal more about the merits of railroad securities than Mr. Thelen supposes. If you will refer to the quotation as published in the papers any day you will observe a wide range in prices of different railroad stocks, showing that each is being very carefully gauged by buyers and sellers. In the days before complete publicity of all railroad affairs was fortunately required it was possible for dishonest manipulators in charge of a railroad property to deceive investors. Even then the bad character of the management was generally known and the stock more or less shunned by the larger investors. It was the poor who generally suffered.

Most railroad investors unacquainted with a security, generally consult some banker before buying. I am not speaking of speculators who buy and sell stocks, irrespective of their intrinsic value, merely for the rise or decline. I am speaking of those who, in these days, really furnish the money railroad companies get for their stock and bonds. These, to a very great extent, either consult bankers, or buy through bankers, or because the securities are brought out by certain bankers. The affairs of all railroad companies, certainly since 1906, have been as an open book. Their accounting methods, in the most minute detail, have been prescribed by the Interstate Commerce Commission. That commission has a great force of inspectors constantly going through railroad offices to see that the accounts are kept according to the rules. Frequent and regular reports upon forms prescribed by the commission are returned under oath to, and published by, the commission. Every banker and brokerage house has these reports and knows exactly the financial condition of each company. If any of these companies desire to make an issue of securities, its condition is easily ascertained. Any investor can find out all about it immediately.

There may be investors, but I should say generally very few, who would be deterred by the Chicago & Alton, the Rock Island, the New Haven, or Frisco financing, and avoid railroad investments. But there are thousands of investors who could and would easily satisfy themselves that the securities were properly issued and free from the vices of those cases, and take all such securities, if that were the only danger. But those investors can not satisfy themselves from the records of the commission, or otherwise, that the rates of the railroad company are not going to be reduced by some of the States, or held rigid by the Interstate Commerce Commission; nor that the company is not going to be hampered by some State commission in utilizing its resources to meet some great emergency; nor that the increasing expenses will not continue to soar from the coercion of unrestricted labor combinations; nor that the real operation and management of the property are not going to be dictated or controlled by the several State commissions, each perhaps with

a different and rival policy; nor that there will not be practical confiscation under the system of so-called valuation, which is being carried out by the Interstate Commerce Commission with a theory of depreciation which makes it impossible for any railroad ever to be worth as much as it was the day when built; nor that, with the ease with which it is being demonstrated, a railroad can be subjected to all forms of taxation, emergency and otherwise, it will not be taxed to death. It is the inability of the investor to get any assurance against such dangers as these, which, in recent years, have become so imminent, that really turns him away from railroad investment. He is not troubled about the Chicago & Alton, the Rock Island, the New Haven, and the Frisco cases, any more than depositors are deterred from putting their money in honest banks because there have been dishonest bankers, and bank failures caused by dishonesty.

I urge, therefore, that you do not accept the possibly comforting suggestion that the financial difficulties of the railroads are due to the financial mistakes or wrongs of the railroads themselves. The railroads have made mistakes and there have been wrongs in some of their financial operations, just as there have been mistakes and wrongs in every other business and occupation. But it would be a great delusion to assume that the few cases of mistakes and wrongs in this generation are to any appreciable extent responsible for the timidity of investors.

But let us assume all that Commissioner Thelen's argument implies. Grant that all railroads are mismanaged financially, and consider the cases he cites merely as examples of many others. What are you going to do about it? Will you leave the regulation of these evils to the States, where the evils have occurred? Or will Congress take hold of the subject in thorough fashion and enact a system of regulation, uniform throughout the country, that will effectually prevent fraudulent exploitation, and at the same time provide a simple and workable system under the direction of the Interstate Commerce Commission, without the conflict and confusion in the several State commissions that now exist? It was State charters and State laws and State functions that were exercised in the Alton case, the Rock Island case, the Frisco case, and the New Haven case. The action criticized in those cases was taken by virtue of no act of Congress, but under State laws alone. Instead of being brought up here in argument against full congressional legislation they afford rather overwhelming reasons why Congress should exercise its power. If it be true, as Commissioner Thelen contends, that these cases have injured railroad credit, then all the more reason why Congress should make them impossible in future. At all events, it is clear that the necessary transportation facilities for this country are not going to be provided by rehashing these old cases or by leaving the various States to regulate the subject by independent, uncoordinated, and often conflicting laws, which, at best, will only block progress.

Probably a billion dollars of new capital per year for an indefinite period will be necessary to keep the railroads of this country up to the needs of our people and pay maturing bonds. Where are we to get the money? All conditions attending railroad investments have totally changed in recent years; that is to say, under Government regulation. We must recognize essential differences between condi-

tions under which capital was attracted for building the railroads of this country and under which we must get it for further development. In the former conditions there were no restrictions, or practically none, upon the inducements offered for the money. The possibility of great profits and tempting bonuses in the form of stock were offered, whereas the growing legal restrictions upon the issue of securities have eliminated the speculative element and confined the transaction to an investment with the usual risks of loss and without any hope of speculative profit or anything more than a moderate return, if any at all. The railroads can no longer appeal to the speculative instinct, which is a very strong one. The money required for the continued development of our railroad facilities must, therefore, be raised from investors pure and simple, and investors are ordinarily very conservative and must be assured that the investment is good and the payment of interest or dividends as certain as anything human can be before they part with their money. The very large class of people who desire something more than a mere investment—a profit, a speculative return or the possibility of a speculative return on their investments—the class who really built the railroads of this country, find, in an increasing degree, the field of railroad investments closed to them by regulation; and they will more and more turn to industrial and mining securities, which practically are unregulated by the Government and which offer unlimited possibilities for speculative profits as well as losses. We must, I say, take these changed conditions into account in any policy or system having to do with the future financial requirements of the railroads.

Whatever we may think of “watered stock,” I do not believe there is fair room for doubt that the magnificent system of railroads of this country would not have been built without it. It was the speculative feature—the stock bonus thrown in with the bond bought—that attracted men and money to the support of the railroad enterprises. Who would have built a railroad, in the days when ours were built, if given only bonds paying 5, 6, or 7 per cent for his money? The “watered stock,” that represented nothing but a gamble upon the settlement and growth of territory to be served, appealed to the gambling instinct so strong in human nature and encouraged men to risk their fortunes in enterprises that would not have attracted or interested them merely as an investment. I am not defending “watered stock” and I am not condemning it. I am merely stating what I understand to be the facts for the light they throw upon our problems of to-day. The regulation of the issue of railroad securities has come and it has come to stay, and “watered stock” is practically impossible under such regulation. Our appeal in the future, therefore, must be to the investor whose conservatism demands safety and a certain and regular return upon his money. It is to these investors that we must look for the hundreds of millions of dollars that will be required every year to keep the transportation facilities abreast of the growth of the products and commerce of the country.

Commissioner Thelen, in his statement before this committee (hearings, p. 553), cited the finding of the Interstate Commerce Commission that one cause of the insolvency of the Frisco was disproportionate capitalization, and declared his belief that this was one of the

most potent causes of the financial difficulties of the railroads, and he argued to show that railroads raise money on bonds rather than stock. He did not tell you, however, how Frisco stockholders, or any other body of stockholders, could be induced or compelled to take additional stock at 100 cents on the dollar if selling in the market at perhaps 50 cents or 25 cents. All the railroads of the country have stock outstanding and probably the most of it is selling much below par. The laws of most, if not all, the States prohibit them from issuing and selling more stock for less than par. It is worse than idle to say that these companies shall raise capital by calling upon their stockholders to put up more money for more stock at par when they can buy it in the market for very much less. The situation is a practical one, and such theories and suggestions take us nowhere.

There is, however, a feasible method by which the disproportionate capitalization may be diminished and stockholders enabled to put up more money in the future, and that is by abolishing the par value of stocks, so that additional stock of a company may be issued for what it is really worth. Take, for illustration, the stock of a corporation actually worth only 50 cents on the dollar. Of course, it is absurd to suppose that a stockholder will take more of it and pay 100 cents on the dollar. But he probably would be willing to take more of it at \$50 a share, or at \$40 a share, or at whatever the stockholders themselves might agree upon. It would be a matter wholly between the stockholders so long as they got a certificate only for what was actually paid into the treasury of the company, and not a certificate for \$100 when paying only \$40 or \$50. A stockholder who took 1 or 10 or 100 shares at \$50 a share would pay into the company fifty, five hundred, or five thousand dollars in cash and the company's capital would be increased by that amount. Its books would show that amount of increased capital, and nothing would be said about the value of the stock, par or otherwise. Stock watering would in such case be actually impossible. The stockholders would be enabled to come to the relief of their company, which it is impossible for them to do under existing State laws, requiring stock to have a par value, regardless of its real value, and forbidding the issue of stock for less than par. The first evil pointed out by the Interstate Commerce Commission in the Frisco case and the "most potent" difficulty, which Commissioner Thelen hopelessly leaves with you, would largely disappear. Of course, there will be companies whose assets are less than their indebtedness or whose situation is such that they can not expect to earn a return on the stock. In such cases the stockholders naturally would not take more worthless stock at a substantial price. But there are many cases in which stockholders would assist the company by taking additional stock where they can not do so now.

Senator TOWNSEND. Do you wish to discuss in connection with this question as to the relation between rates and stock issues—that is, based on the assumption that the railroads should have a rate that will yield a reasonable return on the investment in the property used in public service, and that that should determine the stock issue?

Mr. LOVETT. I had not intended to discuss that, Senator, but I will refer to it briefly. I have been connected with railroads practically all my business life, and largely with rate questions and controversies, and I have never known a rate to be made or changed with

reference to any question of stock or bonds. Whatever other theories there may be, my judgment is that the issuance of stock and bonds and the amount of stock and bonds are matters that have no more to do with railroad transportation rates in this country than the man in the moon, if there be one there.

Senator TOWNSEND. When one of your rates is attacked, do you defend by showing the value of your stocks and bonds?

Mr. LOVETT. In no rate litigation I have been connected with—and I have been connected with many—did we rely upon the stock and bonds. We introduced them because the Supreme Court, in the case of *Smyth v. Ames*, said that no hard and fast rule could be established as to what was a reasonable rate; that all circumstances bearing upon the value of the property should be taken into account, including the stock and bonds, the market price of the stock and bonds, and a great many other circumstances that I do not recall; and, after enumerating all the circumstances the court could foresee, it then said, “and all other circumstances having a bearing upon the question.” In every rate litigation I have been connected with, beginning with the early rate litigation with the Texas Railroad Commission, we went further and proved what we considered to be the value of the property, putting the stock and bonds in simply as one circumstance, along with a great many others.

We must not overlook the far-reaching effect which the prevailing World War is likely to have on our financial situation. Prior to the war billions of European money was invested here. We had practically none invested abroad. Money required by Central and South American and other foreign countries was furnished by Europe, not by us. All that is changed. The European money has been largely withdrawn, and, fortunately, we have been able to absorb the securities in which it was invested. It probably will be a long time before Europe has any money to reinvest here or to supply Central and South America or other nations. There will be a great call upon us for money from Europe itself, and the nations formerly supplied by Europe will also come to us. When the war ends and our people can decide with reasonable certainty which of the nations are insolvent and which will be able and willing to pay their debts, we probably shall begin to invest very extensively in bonds of those we know to be good. The Governments of foreign countries as well as many foreign enterprises will be competing with the railroads of this country for the hundreds of millions per annum that the railroads will need.

Now, gentlemen, I come to the remedies which we have to suggest. Mr. Thom has presented so clearly and so fully the opinion of railroad executives—in which I concur—respecting the remedies which should be adopted, that I will not take the time of this committee to restate them at length, or do more than supplement, without repeating, the reasons he gave, and answer some of the objections which have been suggested: First, we believe that the unification of regulation is essential, and that, with the rapid increase of State commissions in recent years, Congress will in time be compelled to exercise its power in the premises. To unify regulation, there should be a complete, consistent, harmonious, and related system of regulation. We believe the best, if not the only practicable, method is the Federal incorporation of railroads by general law, which will make

incorporation thereunder compulsory, thus imposing on all railroad companies throughout the United States the same corporate powers and restrictions with respect to their financial operations and the same duties and obligations to the public and the Government with respect to their duties and obligations as common carriers, so that every investor will know precisely what every railroad corporation may and may not lawfully do in issuing and selling securities, and every shipper and traveler may know the duty and obligation of every railroad company to him, whether in Maine or California, in Michigan or Texas.

Right here let me pause to call attention to a harmful statement—though not intended to be such—by Commissioner Thelen to this committee. He said that, so far as he knew, the railroads might be advocating Federal incorporation by special act of Congress, thus leading to a swarm of railroad representatives about the Capitol, constantly seeking from Congress special favors and special consideration. Now, I have attended a great many conferences of the railroad executives, who have been considering and trying to help with suggestions for a constructive system of legislation, and I never heard a single railroad man or a railroad lawyer throughout this whole time in all these conferences suggest Federal incorporation by special act of Congress. We do not want that any more than Commissioner Thelen does; and certainly the first time that I ever heard of it was when I read it in Mr. Thelen's statement before this committee that that might be something that we are seeking. We want a unified regulation, a regulation that will put all corporations upon the same basis, and give notice to everybody, to every investor, what railroad corporations may do and what they may not do, so that in issuing securities there will be but one law to examine and not the laws, general and special and otherwise, of half a dozen or a dozen different States; so that every corporation shall have exactly the same rights and the same obligations with respect to its financial matters; so I want to say that we do not, as Mr. Thelen supposes, ask for any special legislation.

We believe that Congress has power to provide by general law for the incorporation of all railroad companies engaging in interstate commerce, and to require all existing companies to reincorporate under such law. I myself have no doubt of it. I will cite, without taking your time to analyze, the decisions of the Supreme Court, which, in my opinion, make this clear: *McCulloch v. Maryland* (4 Wheat., 316); *Houston East & West Texas Railway v. United States* (234 U. S., 342); *Reagan v. Mercantile Trust Co.* (154 U. S., 413, 414, 416); *Smyth v. Ames* (169 U. S., 466, 519); *Minnesota Rate Case* (230 U. S., 352, 425); *Thompson v. Union Pacific Railroad Co.* (9 Wall., 579); *California v. Central Pacific Railroad* (127 U. S., 1); *Interstate Commerce Commission v. Goodrich Transit Co.* (224 U. S., 194); and *Southern Railway v. United States* (222 U. S., 20).

In *Reagan v. Mercantile Trust Co.*, dealing with the Federal charter of the Texas Pacific Railway Co., and in *Smyth v. Ames*, considering the Federal charter of the then Union Pacific Railroad Co., it was taken as a matter of course that in creating a Federal railroad corporation Congress had the power to withdraw it from State regulation with respect to even its intrastate rates, and the only inference from the *Minnesota Rate Case* is that in regulating interstate rates

Congress, as incidental to such regulation, could regulate intrastate rates, and in the Shreveport case (234 U. S., 342) the court directly so decided.

Congress is vested by the Constitution with power to regulate interstate and foreign commerce, to establish post roads, and to make war and provide for the national defense. In exercising these and other express powers, Congress is authorized by the last clause of section 8, Article I, of the Constitution, "To make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof," and the Constitution and the laws and treaties made in pursuance thereof are the "supreme law of the land." It is easily demonstrable that the wise and effective regulation of interstate railroad rates requires the like regulation of intrastate railroad rates. It is familiar constitutional law that any power which it is necessary for Congress to exercise in carrying out and executing the powers expressly conferred upon it is to be implied from the last clause of section 8, Article I, and thus follows the power to regulate intrastate rates whenever it is necessary to the effective regulation of interstate rates. But I will not pursue the legal argument, for the question seems settled by the cases cited.

Congress may go as far as it likes in the regulation of the corporations created by it and of the railroads owned by them. It may withdraw them entirely from regulation by the States or it may permit regulation to such extent as it may prescribe. It is, of course, for Congress to say how far it will go.

I have seen a suggestion from some of the opponents of Federal incorporation that it was a scheme of the railroads to try to escape taxation by the States. Possibly, if the regulation was being enacted by Germany for us just at this time, it might be so provided; but the legislation is to be enacted by the Congress of the United States, which does not represent the railroads merely, but represents the whole people of the United States, and the suggestion that the Congress of the United States would withdraw that source of revenue from the States and would exempt the railroads from taxation by the States is not at all credible.

My own opinion is that it is entirely practicable for Congress to provide for the taxation of these railroads by the States in a manner that will provide for a fair and equitable distribution of the taxes between the different States, rather than to allow each State or one State to pile on three or four times as much as it should and another not as much as it should. Congress could require the railroads running through several States to be taxed as a whole, and to be apportioned by the different States on mileage, or any other basis that it wanted to. We are not advocating anything of the sort, and possibly it would be unwise in the original legislation to undertake it. It is something that ought to be studied. We are not asking it and not advocating it, but speaking from my own individual views I believe it would be a good thing for the States and for the whole country if that were done. I am sure it would not decrease the taxes of the railroads; it might increase them; but there would be a more equitable distribution among the different States. But I wish to be understood as not advocating that at all.

We believe that exclusive congressional regulation of the issue and sale of stock, bonds, and other securities, of the rates to be charged for the transportation of passengers and property, and of all matters of transportation is absolutely necessary in order to provide an adequate system of transportation for the country and to check the growing fear that rapidly increasing State regulation will lead to conditions seriously impairing the service as well as the credit of the railroads.

Let me refer again, and emphasize if I can, to the recent development of this State regulation, within the last five years largely, and that we do not yet realize or appreciate the full effect of it.

The most urgent feature, in my judgment, is the exclusive regulation by Congress of the issue of securities, with provision for the proper establishment, maintenance, and financing of all interstate railroad systems, without reference to the conflicting and peculiar, if not selfish, requirements of some one or more of the States traversed.

The consensus of opinion of the railroad executives who have been considering this matter was that the regulation of all matters essentially local and incidental, not impairing the service, and all matters of taxation should remain with the States, as at present. The corporation should not be entitled to remove suits to the Federal courts by reason of being a Federal corporation.

Experience, I am quite sure, will demonstrate the wisdom of every step which Congress may take extending its regulation of interstate railroads, in lieu of conflicting State regulation.

You may well ask whether it is necessary to federalize all railroad companies by requiring them to reincorporate under an act of Congress, in order to enable Congress to regulate their securities, their transportation charges, and their service. My own opinion is that it is not. That is to say, I believe it would be practicable, with proper care, to draft a law by which Congress could regulate State corporations engaged in interstate railroad transportation in the particulars mentioned. But it is not clear that this could be done. I am sure, however, that the object could be accomplished more effectively, with less friction and confusion, and with better results to the public and everybody, by requiring Federal incorporation. I will illustrate briefly some important differences in the two systems.

It is elemental law that a corporation derives its corporate powers from the government that creates it and can exercise none not conferred—especially none prohibited—by that government. Now, let us take for illustration some well-known railroad—one near us—say, the Baltimore & Ohio. That company, I believe, is a corporation of the State of Maryland. It can exercise only such powers as the State of Maryland confers upon it. It can exercise even these in some other State only by consent of such State. But it can not exercise in any other State any more than in Maryland powers denied to it by Maryland, the State of its creation. Ordinarily a State specifies the maximum amount of capital stock a corporation may issue and prescribes how it shall be issued and disposed of and regulates in detail its corporate functions, particularly in the matter of capitalization. Let us suppose that Congress, in regulating the finances of the railroads of the United States, prescribes corporate procedure entirely different from and in direct conflict with that prescribed for the

Baltimore & Ohio by the State of Maryland. Suppose the laws of the State of Maryland expressly deny its creature, the Baltimore & Ohio, the necessary power to do the financing provided for by the laws of Congress. May the Baltimore & Ohio proceed to do things prohibited by the laws of the State that created it and exercise powers denied by that State? My own opinion is that, within the act of Congress, it may. But the question is doubtful and able lawyers disagree. Without taking the time to argue the question, my reasons, briefly, are that we live under a dual government; that the National Government operates directly on the citizen, the corporation, all property, and everything within its territory, precisely as the State laws do; that the laws of Congress are paramount; that Congress has plenary power to regulate interstate commerce and all the instrumentalities thereof; and that, if Congress declares by a proper enactment, that a railroad company, or other instrumentality of interstate commerce, shall possess and may exercise certain powers, that declaration is the supreme law, and any State law inconsistent with it must yield.

But I am much troubled by this consideration: Many States have reserved the power to repeal railroad and other charters granted under their laws. Suppose the State repeals the charter of the railroad company. It might be within its rights; it might not be responsible to Congress. If the reservation of the right was clear it might not even be necessary for the State to give a reason for its exercise. The corporation would be at an end. There would be no congressional act for incorporation to which the railroad could turn. How would you meet such a situation in attempting to carry out a national policy by utilizing the existing State corporations? This, to my mind, is the most serious and, indeed, insurmountable obstacle to any plan for utilizing the State corporations in a system of national regulation.

Mr. ADAMSON. Has that ever happened, Judge, where a State left the property homeless and houseless by repealing the charter and there was nobody else ready to take it up and renew it?

Mr. LOVETT. It is about to happen in Texas, Judge Adamson. My information is that a bill was introduced in the Texas Legislature to repeal the charter of any corporation of that State that obeys the Interstate Commerce Commission instead of the State commission. That is what it amounts to, because of a controversy that has grown out of the decision in the Shreveport case; and I should not be at all surprised if Congress passes a law authorizing and permitting a State railroad corporation to issue bonds when the policy of that State is not to allow it to issue them, that some State would take measures to forfeit the charter of the corporation that obeyed the Federal law rather than the State law.

You could not, in an act of this sort, compel the corporation to issue the bonds. The most you could do would be to give it the right to issue them; and the State might say, just as they sometimes say to the corporations about their interstate rates, "Yes; you have the power to do that; you have the power under the act of Congress to issue these securities, but if you do it, we will exercise our power. the power which we have, to take away your charter."

Mr. ADAMSON. Would you compel the directors of a Federal corporation to issue bonds and stocks if they did not want to?

Mr. LOVETT. I would not; but I would put the directors of a Federal corporation where they could exercise this right provided for in the national interest, without coercion from any State.

So long as the States would content themselves with a mere refusal to grant, or even a prohibition of the power to issue securities and take other action contemplated by an act of Congress, the difficulty would not be impossible, because, for the reasons stated, the law of Congress would prevail. But the States which have reserved in their constitutions, or by other valid law, the right of alteration, amendment, and repeal of corporation charters, as most of them have, could, in my judgment, effectively coerce all railroad corporations created by them in submitting to all the restraints and restrictions imposed by them upon such corporations, however ample might be the right and power conferred by an act of Congress.

I come back, therefore, to the proposition that a general law providing for the incorporation of all new and the reincorporation of all existing railroad companies engaged in interstate commerce, with such limitations and restrictions upon corporate powers as Congress may prescribe, is the only effective means for regulating the financial operations of railroad companies, and providing a method by which they can reestablish their credit and get the money that will be absolutely necessary for the continued growth and development of the transportation facilities of this country.

I do not bother myself with any legal theories as to whether the reincorporation under an act of Congress of an existing State railroad company works a dissolution of the corporation. That is merely dealing with legal fictions. Nor do I care much about the theories as to the rights of stockholders to object to fundamental changes. It is enough that every railroad was built and engaged in interstate commerce, and every stockholder has enjoyed the benefits with full knowledge of the power of Congress to regulate that commerce and every instrumentality of it. Congress has regulated it already in various ways, including its bookkeeping with respect to strictly intrastate as well as interstate transactions (*Interstate Commerce Commission v. Goodrich Transit Co.*, 224 U. S., 194); the character and equipment of its cars even not engaged in interstate commerce (*Southern Railway v. United States*, 222 U. S., 20); and the manner in which it shall treat, in its accounts, abandoned property, even though this deprives certain preferred stockholders of dividends which they might otherwise get (*Kansas City Southern Railway Co. v. United States*, 231 U. S., 423). No stockholder of a railroad engaged in interstate and foreign commerce ever had any right to withdraw such instrumentality of interstate commerce from business whenever the method of regulation did not suit him. If Congress chooses to make the corporation owning a railroad a Federal, instead of a State corporation, it is merely exercising its right to determine the means and agencies for the better regulation of such commerce: and I can not see that a stockholder has any more right to object than when Congress chooses cars of certain designs and equipped with certain appliances, instead of those selected by the owners of the railroad.

With respect to existing corporations, Congress should require them to reincorporate by filing with the designated agency of the Government articles of reincorporation, which should contain the

statements and declarations Congress may prescribe; and thereupon they should become Federal corporations, instead of State corporations, and possess the powers which Congress, by the act for reincorporation declares such corporations shall possess.

Mr. ADAMSON. Judge, would it answer your purpose to apply the compulsion to the new corporations, and only permit the old corporations to reincorporate whenever they saw proper?

Mr. LOVETT. No, sir; it would not. It would serve my purpose, but I do not think it would serve the purposes of the public.

Mr. ADAMSON. I mean the purpose you have in view.

Mr. LOVETT. No, sir. It would not, for the reason that to make it merely optional with the railroad company whether or not it should incorporate under the act of Congress would be giving that corporation the power to supersede the laws of a State at its pleasure. If it were optional, the Union Pacific could run along in obedience to the State laws until it made up its mind to change, and then it would supersede absolutely the State laws relating to its corporate affairs. I do not believe that option ought to be given to any corporation. I do not think it could be, because I do not believe an act of Congress that left it optional would be constitutional. In order to supersede the State laws it requires the paramount power of Congress. So I do not believe it would be constitutional nor do I believe it would be right. In some States, where the State laws are not as oppressive as others, the corporations would probably stay in.

Mr. ADAMSON. You are an older and better looking lawyer than I am, but I believe I would follow your constitutional law in the reverse direction. I think your compulsion would be more of a constitutional difficulty than your voluntary scheme.

Mr. LOVETT. I hate to be shaken in my own opinion, Judge Adamson, but——

Mr. ADAMSON. I can not shake you, but I am trying to learn about this thing.

Mr. LOVETT. I have thought a great deal about this subject. It has been considered by a great many very able lawyers, and I believe they are all agreed on that point, many of them very much against their will. When the railroad executives first took up the discussion of this I believe a large majority were in favor of having it optional, but they were all forced to the other view because they were convinced that it would not only not be constitutional, but that the reason for the law would very largely disappear, to leave it optional to a railroad to change its government or not, at its pleasure.

The obligations to creditors and all other private rights and relations should continue as before, and the stock and the certificates representing it should remain as before until transfers are made in the usual manner; and, of course, the certificates would, in form as well as in fact, represent stock of the reincorporated company. Someone has discovered in this suggestion a scheme for validating invalid stock. Such would not, and certainly need not, be the effect, for it could be provided in the act that such reincorporation should not, as between the corporation and its stockholders and creditors, create any new rights or obligation or validate anything already invalid. In short, on a given day to be specified in the act of Congress, all railroad corporations of the United States would cease to be State corporations and would become Federal corporations with the

powers set forth in the act of Congress; and would thereafter be bound, with respect to all corporate powers and action, by the terms of such act, rather than by the various State statutes and special charters.

Mr. ADAMSON. Then the act of Congress would be the charter of each corporation?

Mr. LOVETT. In effect; yes, sir.

Federal incorporation, or complete Federal regulation in any form, will, of course, add enormously to the work of commission supervision, and I have already pointed out that the Interstate Commerce Commission is even now hopelessly overburdened.

How is this problem of supervision to be solved? Railroad executives have thought of it a great deal. All realize that supervision has come to stay, and none would abolish it if he could. But how can it be made workable? There have been proposals that the membership of the commission be enlarged, and, indeed, that it be enlarged to such an extent that it may subdivide itself into several commissions sitting separately. We see no objection to the enlargement of the commission to such an extent as Congress may deem advisable, but we believe it would be extremely unwise to attempt to solve the problem by having the commission divide itself into several sections. Suppose that, instead of creating circuit courts of appeal and other tribunals, the Supreme Court of the United States had been enlarged and divided into sections for the final decision of cases? It is not certain that there would have been confusion and uncertainty and a great loss of character for the court, and that it would not have attained that confidence, respect, and esteem of the people which is now so universal?

Moreover, the Interstate Commerce Commission under existing law is clothed with different functions which are so inconsistent as to greatly impair its use to the country. It is charged with the duty of detection and punishment, and at the same time of hearing and deciding. In reorganizing the commission we believe it would be wise to separate these inconsistent functions, which violate one of our fundamental principles of government, and that such separation will also lead to a better organization.

We believe that several commissions are necessary. The present Interstate Commerce Commission should be vested with the higher powers and duties arising under the interstate-commerce act and other laws of Congress regulating commerce, such as the power of hearing and deciding complaints, and over the rates and the regulations of the carriers and the issue of securities; and that the remaining duties, such as inspection, detection, prosecution, and correction, safety-appliance requirements, statistics, etc., should be conferred upon a new commission with some other name—for instance, "Federal railroad commission." But in order to coordinate and harmonize the system of regulation the Interstate Commerce Commission should have the right, but should not be required, to review any action of the additional commission.

We also believe that regional commissions should be established to assist the Interstate Commerce Commission in exercising its jurisdiction, and to that end should make all such investigations and hear and determine all such complaints and perform such other duties as the higher commission shall direct. The orders of the regional commis-

sion should not become effective until approved by the Interstate Commerce Commission, but should stand approved as, of course—unless excepted to at a time to be limited—somewhat analogous to the practice with respect to masters in chancery. The regions ought to be created with reference to traffic territories rather than geographically; and there should be a sufficient number of them to afford an opportunity to promptly hear and determine the complaints of every locality, and as near the complaining locality as practicable. We believe that all the commissioners should be appointed by the President, with the consent of the Senate, for long terms, and should receive good salaries. It is necessary not only to get good men but to prevent them from becoming mere clerks of the principal commission, which is an evil feature of the present system of hearing and deciding cases.

The reorganization of the commission along such lines would, in our judgment, provide a sufficient number of intelligent and able agencies for the prompt decision of all questions and quick performance of all the duties devolving upon the commission under the law, and avoid those long delays that are so hurtful in the decision of commercial matters. Questions of rates and commerce can not endure delay. That is one of the most important questions in Government regulation of railroad rates. Changes in trade and trade relations are frequent and rapid, and rates must be adjusted to them. Any system of regulation which does not provide for a prompt decision of such questions will bear heavily upon commerce and business. The plan suggested for a commission to deal with and enforce the purely administrative and punitive provisions of the law and for a sufficient number of regional commissions to assist the Interstate Commerce Commission admits of such expansion as the growth of the work and the extension of the law may require. The utter inadequacy of the present organization to do the work imposed upon it can be better understood when it is realized that but two additional members have been added to the Interstate Commerce Commission since it was created 30 years ago, although the duties of the commission have been multiplied many fold by the amendments and additions to the interstate commerce act since it was originally passed and by the enormous growth of the railroads and the commerce handled by them.

Finally, gentlemen, I wish to say that the responsibility for the railroad development of this country, for providing the necessary transportation facilities for the rapidly growing population and commerce of this country, no longer rests with the railroad officers and railroad managers entirely. We have our share, but it rests primarily on Congress. Whenever the Government regulates the rates and regulates the financial administration of railroads, and regulates the borrowing of money and the issuance of securities, it relieves the railroad officers of the responsibility of providing and developing transportation systems except within the limits of the revenue that can be realized from such rates and under such restrictions.

Now, we do not complain of this regulation. I am distinctly in favor of Government regulation. I think the greatest blessing that ever befell the railroads of this country since my connection with them was the act of 1906, which gave the commission the power to send its inspectors to the offices of the railroads and effectively detect and punish rebates.

That put an end to the greatest and most blighting evil in the railroad business. There are many other advantages from Government regulation to the public as well as to the railroads, and that leave no doubt, at least in my mind, that Government regulation has been a great blessing to the railroads, and we, of course, all know that no back track is going to be taken on it.

But the overwhelming necessity is to have a unified system of regulation. Instead of a multitude of governments each establishing its own regulation, its own system, most of it prompted by some particular evil, most of it designed to punish and restrain and restrict the exercise of corporate powers; never any conference or cooperation or coordination of these systems of regulation—it is impossible to provide this country with the railroad transportation facilities necessary under such conflicting laws. Let me say, again, at the risk of being tedious, because it is vastly important, we do not realize and do not appreciate the extent of this State regulation, because it is so new. Think, for a moment, that 10 years ago the great trunk lines were unrestricted in their financial operations. This great territory lying between the Potomac and Ohio Rivers on the south and Canada on the north, and including New York on the east and Illinois on the west, within only the last 10 years has been subjected to this conflicting regulation, and much of it within the last three or four years. We have not yet realized the full extent of this regulation, and the commissions have not yet gotten into full action. We ought to have a complete system of regulation, a uniform system, applying throughout the country, with all the administrative agencies to effectively enforce it, and to hear and determine every complaint. Let the existing State commissions, if they choose—and most of them are already authorized—be alert to look out for the interests of their own people, and when there is anything in the situation which they think is wrong, submit it to the Interstate Commerce Commission.

Mr. ADAMSON. Will you enumerate some of the things you think might be left, that these State commissions might do, if your plan were adopted?

Mr. LOVETT. I shall be glad to do so.

Mr. ADAMSON. If you do not leave much for them to do, we might turn them off and save their salaries.

Mr. LOVETT. You might employ them as regional commissioners. Will you indulge me a moment?

Chairman Thelen, of the California commission, in his statement before this committee, at page 536 of the record, stated that during the year ended June 30, 1916, the following utilities of various classes filed reports with the commission:

Steam railroads, operative	48
Steam railroads, lessor	13
Steam railroads, under construction	4
Electric railroads, operative	35
Electric railroads, lessor	2
Express companies	3
Car companies	2
Water carriers	18
Electric companies	91
Gas companies	35
Gas and electric companies	17
Telephone companies	114

(There seems to be some activity in the telephone business.)

Mr. ADAMSON. That commission evidently had some duties other than those which related to railroads.

Mr. LOVETT. (Continuing reading:)

Telephone companies.....	114
Telegraph companies.....	3
Telephone and telegraph companies.....	7
Water companies.....	329
Warehousemen.....	183
Wharfingers.....	13
Total.....	917

Of which total, only 48 were operating steam railroads; that is, railroads which would come under the supervision of the Interstate Commerce Commission.

Mr. ADAMSON. What I suggested was, would there be any duties left for them to perform in connection with these highways of traffic?

Mr. LOVETT. There would be, Judge Adamson. The Texas Railroad Commission is expressly required by the act creating it, to keep posted about all the affairs of the railroad companies, and to regulate those that are within its jurisdiction; that is, within the State.

Mr. ADAMSON. Would not a Federal incorporation take it out of that jurisdiction?

Mr. LOVETT (continuing). And to file complaints with the Interstate Commerce Commission with respect to any matters within the jurisdiction of the Interstate Commerce Commission they should deem proper.

Now, these commissions, aside from their other duties, could be alert for the interests of their States, and could take proceedings before the Interstate Commerce Commission, whenever a matter that affected interstate rates, affected the interests of their States, arose. There would be no doubt that many matters, like grade crossings, and a multitude of things affecting interstate railroads, purely of a local character that should be left under their jurisdiction. That would depend, of course, on how far Congress wished to go.

Mr. THOM. Taxation would be another thing.

Mr. LOVETT. Yes; taxation.

Mr. ADAMSON. Judge, if you did not, in the original act, put in there all those things, the question would be always open and there would be agitation to get rid of them after you once incorporated under the Federal law.

Mr. LOVETT. It would rest entirely with Congress how far they would go.

I have but few words more, Mr. Chairman and gentlemen. It seems hardly necessary to emphasize the importance of the railroads to this country. The European countries existed and grew up before there were any railroads. The towns and cities and business and population were all practically set or placed before there were any railroads. They have more or less water transportation, whereas in this country we have almost none; the country was built on, and to a considerable extent by, the railroads.

The population is adjusted to the railroads; the agriculture is dependent upon the railroads; manufacturing and everything is dependent upon the railroads and railroad transportation. There is scarcely a village in the United States, and I am sure there is no

town of over 10,000 population that is not dependent upon some railroad, almost, for its life. There is no country in the world which is more dependent upon proper railroad transportation than the United States; and it does, I submit, reflect somewhat on our capacity for self-government to allow transportation facilities as vital as ours is to the life of this Nation to be torn and discouraged and demoralized by such a medley of regulation as we have, and as we have rapidly developed in recent years instead of establishing one complete system for the regulation of all the railroads in the interests of all the people of all the States.

Sooner or later Congress must take hold of this. It may not be done now, in this term or at this session, or the next year or the year after; but the time is coming when Congress will have to take control of the railroads of the United States and regulate them in the interest of all the people of this country, and the sooner it is done the better.

I regret to have taken so much of your time, and I am very grateful for the patient courtesy you have shown me. Of course, I am ready now to answer any questions.

Mr. ADAMSON. Mr. Chairman, do you wish now to go on with the cross-examination? It is near adjournment time, and possibly the judge would prefer to rest.

The CHAIRMAN. I would prefer to go on now for half an hour.

Mr. LOVETT. It is perfectly satisfactory to me.

The CHAIRMAN. You stated, Judge Lovett, that the Union Pacific was a Federal corporation and its property was sold out under foreclosure, and that in reorganizing, inasmuch as there was no Federal incorporation act, you were obliged to go to a State for your charter. Do you know why the Union Pacific Co. went to the State of Utah for its charter?

Mr. LOVETT. I was not connected with the property at that time. Mr. Chairman, but my information is that they wanted power to acquire everything that the Federal corporation owned, including the stocks of certain coal mines and various other properties, and that power was not obtainable under the laws of any other States in which the line was situated. That, however, is hearsay. The law of Utah authorized it to purchase whatever was sold at the foreclosure sale of the Union Pacific properties.

The CHAIRMAN. Was there a special act of incorporation passed in Utah, or did you incorporate under the general law?

Mr. LOVETT. Under the general law.

The CHAIRMAN. Did that general law contain the powers which you desired?

Mr. LOVETT. Yes, sir.

The CHAIRMAN. In how many States did the Union Pacific operate before this new corporation was formed, and how many after, and what States?

Mr. LOVETT. Iowa, Missouri, Nebraska, Kansas, Colorado, Wyoming, and Utah. I speak only of the Union Pacific proper and not of its subsidiary companies.

The CHAIRMAN. That is seven States.

Mr. LOVETT. Yes, sir.

The CHAIRMAN. And in how many corporations did it hold such a controlling interest in the stock as to enable it to control their operations—and I am speaking now of railroad corporations—and in what States?

Mr. LOVETT. Are you speaking now——

The CHAIRMAN. Prior to the Utah incorporation.

Mr. LOVETT. The Union Pacific Railway Co., the original Federal corporation, the Kansas Pacific Railroad Co., a Federal corporation, or possibly a Kansas corporation——

The CHAIRMAN. I do not ask you to recapitulate the corporations, but I would like to ask you to state how many States, outside of these seven, you operated in through the ownership or control of other corporations.

Mr. LOVETT. It controlled companies that are now embraced in the Oregon Short Line Railroad Co.——

The CHAIRMAN. Yes.

Mr. LOVETT. That operated in the States of Utah and Nevada and Idaho, Montana, and extending a short way into Oregon. I am not sure it controlled, prior to the receivership, the lines of the Oregon Railroad & Navigation Co. in Oregon and Washington. I was not connected with the company at that time, and am therefore not as familiar with those old historical facts as I might have been.

The CHAIRMAN. It now controls the lines to which you have last referred?

Mr. LOVETT. Yes.

The CHAIRMAN. Now, since the Utah incorporation, has the area of its operations been contracted or enlarged?

Mr. LOVETT. Been enlarged.

The CHAIRMAN. In what States?

Mr. LOVETT. In all the States in which it operates, except in Missouri and Iowa, where it has merely terminals, it has been enlarged by the construction of new lines, by the purchase of a few independent lines, and by the construction of various extensions under separate corporations, which were afterwards merged into the main company.

The CHAIRMAN. In how many States does it operate now, outside of the seven to which you just referred?

Mr. LOVETT. Including the seven, it operates in 11 States, and in addition to that, it owns—no, it does not operate in Nevada. It operates now in 11 States, including all of those previously named, except Nevada. It also owns half the stock and half the bonds of the Los Angeles & Salt Lake Railroad Co., which operates in Nevada and California, as well as in Utah.

The CHAIRMAN. That is the road that stretches from Salt Lake City to Los Angeles?

Mr. LOVETT. Yes.

The CHAIRMAN. Have you dropped the operation of any systems or roads during this period?

Mr. LOVETT. No; I should add that before this insolvency of the Union Pacific, through some form of stock ownership with which I am not familiar, because I have never had occasion to investigate it, it controlled the Union Pacific, Denver & Gulf Railroad, and other companies, including the St. Joseph & Grand Island Railroad, which, however, recently it has since reacquired.

The CHAIRMAN. Did it at any time control the Southern Pacific?

Mr. LOVETT. Yes.

The CHAIRMAN. After the organization under the laws of Utah or before?

Mr. LOVETT. Afterwards.

The CHAIRMAN. And the control of the Southern Pacific meant the control also of the Central Pacific, did it not?

Mr. LOVETT. Yes.

The CHAIRMAN. You lost that control through a court decision, did you not?

Mr. LOVETT. Yes. The Supreme Court of the United States held it was a violation of the Sherman Act, and that control terminated on the 1st of February, 1913.

The CHAIRMAN. It is contended now, is it not, that the Southern Pacific is holding the Central Pacific in violation of the Sherman Act?

Mr. LOVETT. It is so contended by the Attorney General.

The CHAIRMAN. And that, I believe, has been decided against the Government in the circuit court?

Mr. LOVETT. So I understand.

The CHAIRMAN. How many shares of ordinary stock, common stock, and how many shares of preferred stock, and what amount of bonds are outstanding?

Mr. LOVETT. May I use dollars instead of shares, Mr. Chairman?

The CHAIRMAN. Yes.

Mr. LOVETT. The total common stock of the Union Pacific Railroad Co. outstanding, by which I mean is owned by the public, is \$222,291,600 par value; of preferred stock, \$99,543,500. The bonds held by the public and issued by the Union Pacific Railroad Co. and its various constituent companies aggregate \$334,629,850.

The CHAIRMAN. What rate of interest, as a rule, do your bonds pay?

Mr. LOVETT. Mostly 4 per cent.

The CHAIRMAN. What rate of interest is paid upon your preferred stock?

Mr. LOVETT. Four per cent.

The CHAIRMAN. And what on the common stock?

Mr. LOVETT. From October, 1906, to 1914 it paid 10 per cent. From 1914 to January, 1916, the regular dividend was 8 per cent. There was an extra dividend during that time, payable in stock of other corporations held by the Union Pacific—a certain number of shares, without stating, I believe, their value. In December, 1916, there was declared, in addition to the 2 per cent quarterly on the common stock, an extra dividend of 2 per cent; and another extra dividend of one-half of 1 per cent, payable April 1, has been declared.

The CHAIRMAN. I observe that your preferred stock bears the same rate of interest as your bonds. What price is your preferred stock quoted in the market?

Mr. LOVETT. It has been quoted for a long time at about 82 per cent of its par value.

The CHAIRMAN. Then, 4 per cent will not hold that at par?

Mr. LOVETT. Oh, no.

The CHAIRMAN. Under present conditions?

Mr. LOVETT. No.

The CHAIRMAN. Does 4 per cent hold your bonds at par?

Mr. LOVETT. No; they are a little under par. They have been for some time. Formerly they were above par—our first-mortgage bonds—because they were savings-bank investments in many of the States and many of our bonds are available as savings-bank investments, and that naturally adds to their price.

The CHAIRMAN. Was your preferred stock issued at par, do you know?

Mr. LOVETT. It was issued in the reorganization following the receivership, and I am not able to say just what it was issued for. It was issued to the reorganization committee along with some common stock and all of the bonds under a plan of reorganization.

The CHAIRMAN. Your bonds were negotiated at a very favorable time in the money market, were they not?

Mr. LOVETT. I so understand. I was not then connected with the company.

The CHAIRMAN. If those bonds were to become due to-day could you dispose of them at the 4 per cent rate at par?

Mr. LOVETT. We could not.

The CHAIRMAN. What rate of interest would they require?

Mr. LOVETT. At this time, in order to realize par for them, we should probably have to increase the interest rate to around 5 per cent.

The CHAIRMAN. Now suppose you should issue preferred stock to-day for par, in order to command par what rate of interest would you have to pay on that?

Mr. LOVETT. I should say—it depends, of course, on the amount. To issue the same amount and with the same rights as the present preferred stock we would have to pay considerably above 5 per cent in order to realize par.

The CHAIRMAN. And if you were to issue a lot of common stock, what rate of interest would be required in the shape of dividends to sustain that stock at par under present conditions?

Mr. LOVETT. Our present common stock is selling from \$135 to \$140. While I am not making any predictions, of course, as to our dividend policy, many holders of the stock expect that extra dividend to continue for a long time, which with the regular dividend makes 10 per cent on the stock. Notwithstanding the 10 per cent dividend, the stock is selling at \$135 to \$140, which, I should say roughly, is yielding about 7 per cent.

The CHAIRMAN. Then, under present conditions, in order to maintain bonds, preferred stock, and common stock at par, there would have to be assurance as to the bonds that they would pay 5 per cent, as to the preferred stock that it would pay 6 per cent, and as to the common stock, that it would pay 7 per cent. Would that be about the relative interest that the market would expect in order to sustain the securities at par with a good road that had an established business and valuable assets?

Mr. LOVETT. I would not say the preferred stock would have to pay as much as 6 per cent. It would have to pay more than 5 per cent. With that modification and with conditions as they exist at this time, I should say your statement was about right.

Mr. ADAMSON. In order that I may understand this, pardon me if I ask you or Judge Lovett. I understand the common stock is sold, and it depends for its dividends on earnings?

The CHAIRMAN. Yes.

Mr. ADAMSON. Now the preferred stock, is the dividend on that like bonds, limited to the rate of interest specified, or does it participate in dividends?

Mr. LOVETT. It is limited to 4 per cent.

Mr. ADAMSON. It is just like a bond.

Mr. LOVETT. Yes; and is not cumulative. In other words, the bonds must have their interest whether it is earned or not. The preferred stock can not get more than 4 per cent.

Mr. ADAMSON. And will not get that unless it is earned?

Mr. LOVETT. Exactly.

The CHAIRMAN. Preferred stock is generally cumulative, is it not?

Mr. LOVETT. Well, there are all kinds of preferred stock, Senator.

The CHAIRMAN. Not so in yours?

Mr. LOVETT. I should say the majority of railroad stock is not cumulative, but that is a guess. I do not know.

Mr. ADAMSON. The reason I interrupted, the chairman mentioned 7 per cent on common stock and I did not think common stock ever had a specified rate of profit.

The CHAIRMAN. No; but I mean to say in order to maintain it at par there would have to be a reasonable expectation that it would earn 7 per cent.

Now, Mr. Lovett, in considering the question of national incorporation, what is your expectation as to the form that mergers accomplished under a Federal act would take? Would these corporations be likely to be merged within a given region corresponding to the traffic areas that you have evolved in railway management, or would they be likely to be continental in character from coast to coast and from the Lakes to the Gulf? What has been the tendency thus far in the merger and consolidation thus far accomplished in the railway systems of the country?

Mr. LOVETT. The consensus of opinion of railroad executives who have been considering this matter, according to my understanding of it, is that the rule with respect to consolidation of competing lines would continue with only slight modification; that whenever a case was presented where the public interest would be better subserved by the merging of two lines which were slightly competitive than by their continued separate operation and the Interstate Commerce Commission, or whatever commission Congress authorized to pass upon the matter, would find that fact and approve consolidation in the public interest, that it would be authorized.

I have never heard any suggestions that there will be any wholesale consolidation; that certainly there never would be any consolidation of large systems, but we all believe that there never will be any more separate railroad construction in this country. I say, we all. I am sure the majority of the railroad executives believe, and I have never discussed it with one who did not believe, that the new railroads have got to be provided by the existing systems. That may be either from the building by the systems themselves or by absorbing some of the roads that had been built independently. Some-

times the only way men can be convinced that the railroad business is not always velvet is to let them try it, and men do make an effort and they always will, and you will find enterprising men who will undertake to build a new railroad. But we who have been dealing with the problem believe that generally those efforts will fail financially—sometimes they do not—and they will then drop into some of the large systems.

So I have expressed the opinion that the real new construction, the substantial construction of new lines, will probably have to be by the existing systems or their successors, and in the expansion of those systems will be consolidations.

Personally I am a strong believer in the competitive principle in railroad business, not in rates. I do not believe in competition in rates; it is not possible. You can not have competition in rates without rebates and discriminations. But you can have competition in service and facilities, and personally I believe in that because I believe it will promote railroad development and that the abolition of all competition in facilities and service would tend more or less to stagnation than development.

The CHAIRMAN. Do you find as a matter of experience that that competition in facilities and service, not in rates, has been secured under the consolidations that have thus far taken place?

Mr. LOVETT. Certainly it has.

The CHAIRMAN. I observe that the consolidations that have thus far taken place have been mainly regional; that is to say, the great New York Central system, the Pennsylvania system, the Baltimore & Ohio system, and the Chesapeake & Ohio system, are mainly confined to the region north of the Ohio River and east of the Mississippi and of the Great Lakes and of Chicago. And that the consolidations that have taken place toward the South have been south of the Ohio River and south of Washington, and that the other consolidations that have taken place are west of Chicago and of the Mississippi River. Is that the fact? How many regions do the railroad men consider there are now, or traffic areas?

Mr. LOVETT. Five, are there not?

The CHAIRMAN. I mean in the large. There is one traffic area, I believe, that includes two or three subordinate ones. Would you give the five or their boundaries?

Mr. LOVETT. I could not, Senator. I know, in a general way, of those regions, but I do not carry the boundaries in my mind.

The CHAIRMAN. Have you observed, as a matter of fact, whether the consolidations thus far effected have been within the boundaries of these particular traffic areas, and have not expanded to any material degree beyond them?

Mr. LOVETT. I can not say whether it is true, but if it is true I think it is a coincidence rather than the effect of traffic regions. Each system that extends through absorbing another line is actuated by the extension of its traffic influence, and that is done without any regard to the traffic territories. That is a system that is worked out by the commercial interests of the country and by the traffic men. I am not very familiar with it.

I should like to add to that, Senator, that I am not familiar with the railroads and the railroad relations in the southeastern territory and in the New England and northeastern territory as I am

with the conditions in the West and Middle West and in the trunk-line territory; as I have had no connection, or very little connection, with the railroads in the southeastern States, and none with the railroads in the New England States, outside of the New York Central, of which I am a director.

The CHAIRMAN. The Union Pacific Railroad not only owns railroads, but also holds the stock of subsidiary corporations, does it not?

Mr. LOVETT. Yes; and also the stock of corporations which are not subsidiary, but which it holds practically as an investment.

The CHAIRMAN. The laws of Utah permit corporations chartered under those laws to hold the stock of other corporations?

Mr. LOVETT. Yes. For the Union Pacific is a financial organization as well as a railroad company.

The CHAIRMAN. Yes. Taking the question of national incorporation, and considering the natural inclination and disposition of the States to maintain the present form of State incorporation of railways, would it not serve the purpose you have in view, in perfecting the organization of our railway system, if we should have a national incorporation act, which would provide only for holding shares of State corporations owning the railways?

Mr. LOVETT. It would not only fail to accomplish the object that we have in view, Senator, but I can not see that there would be any value in such a corporation. The Union Pacific, under its charter, arising under the Utah law, has that power; and the Southern Pacific, for instance, has the power to own the stock of Texas railroad companies; but the State that creates the corporation and the State in which the railroad is situated, absolutely controls all of the corporate functions of the company that owns and operates the railroad. It does not remedy the difficulties that I have been discussing at all.

The CHAIRMAN. But from the standpoint of the public interest do you not think that the corporation which is organized for the purpose of unifying individual railroads organized under State laws would better serve the public interest if that corporation should be organized under a Federal charter and controlled by the National Government, which has an interest in all the States, rather than by a single State, which has no interest to serve beyond its own boundaries and no public interest to protect beyond its own boundaries?

Mr. LOVETT. For a corporation merely to act as a holding company, to acquire and hold the stock of other companies, I am wholly unable to see where the public or anybody else would be benefited by a Federal corporation. Possibly it might benefit the corporation to the extent that such a corporation could not be taxed without the consent of Congress, and the securities held by it might escape taxation to which they are now subject in the State which creates the corporation that constitutes the present holding company; but I can not see where a corporation created by Congress would meet any of the difficulties of the present situation confronting the railroads or be of any value to the public or anybody else, except possibly on the question of making a little clearer the matter of taxation.

The CHAIRMAN. Do you not think it would be the natural inclination of the managers and controllers of a number of railroads which might deem it desirable to consolidate to go to the State that had the

least restrictions upon the corporate powers of corporations organized under its laws, and is not that to the public disadvantage?

Mr. LOVETT. I do not see that the public cares anything about that, so long as the State that creates the railroad corporation has power over that corporation and can regulate its railroad and all of its corporate functions.

Mr. ADAMSON.—In the one minute remaining before 1.30 I move that we adjourn until 10 o'clock to-morrow morning.

The CHAIRMAN. If there is no objection, we will adjourn until that hour—10 o'clock to-morrow.

(Whereupon, at 1.30 o'clock p. m., the joint subcommittee adjourned until to-morrow, Wednesday, March 21, 1917, at 10 o'clock a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

WEDNESDAY, MARCH 21, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10 o'clock a. m., Senator Francis G. Newlands (chairman) presiding; also Vice Chairman William C. Adamson.

Mr. ADAMSON. Mr. Chairman, before the witness proceeds I would like to raise one point. I do not know that it need be made of record. It is evident that we can not always have all the members present, and sometimes we do not have a quorum present. I should just like to have an understanding with the committee. If there are members of the committee present, whether it is three or four or five or one or two, shall we go on with the hearing always?

The CHAIRMAN. If there is no objection, that order will be made.

Mr. ADAMSON. And whatever members of the committee are here when the times comes, at any time, they need not wait for a quorum, but go ahead with the examination?

The CHAIRMAN. Yes.

I will state that I am called to San Francisco on a very important matter, and I shall be obliged to leave this evening, to be away for about two weeks, and during my absence Judge Adamson will preside.

Mr. ADAMSON. The suggestion I made, Mr. Chairman, was in view of the transaction of business, because it is impossible for all of us to be here always, and I see no reason why we should have to have a quorum in order to take evidence.

The CHAIRMAN. Judge Lovett, are you ready to proceed?

Mr. LOVETT. I am ready, Mr. Chairman.

STATEMENT OF R. S. LOVETT—Resumed.

The CHAIRMAN. Judge Lovett, I refer you to part 5 of the hearings, page 288, and the part I particularly refer you to is the quotations from a bill for the national incorporation of railroads, introduced by me in 1905, and covering the questions of capitalization, taxation, State police and State rates, acquisition of State railroads, accident and insurance fund, board of conciliation, dividends, jurisdiction of suits by and against railway companies, etc., being the

leading provisions of the act referred to. Have you the hearing before you?

Mr. LOVETT. I have a copy before me, Senator.

The CHAIRMAN. First, with reference to the capitalization, in section 3 of the bill referred to, provision is made for the issue of bonds and stocks, the latter presumably with the usual par value. Your suggestion is that instead of having shares at par value, the shares should simply represent a certain interest in the assets of the corporation after the debts are paid?

Mr. LOVETT. Yes; I deem that very important, Senator.

The CHAIRMAN. The advantage of that, I imagine, would be that it would do away with the necessity of the valuation of the property of a railroad owned by a State corporation in transferring it to a national corporation; would it not?

Mr. LOVETT. I had not thought of that as one of the advantages, Senator. I stated in my main testimony the principal advantages which I considered resulted from the issue of capital stock without par value.

The CHAIRMAN. Would that be an advantage—that it would facilitate the transfer of property from a State corporation to a national corporation?

Mr. LOVETT. I do not believe that would be. I think the conversion of State corporations into national corporations would result in the same way, and the same proceeding would be taken, whether the stock had par value or not. My idea of the most convenient and practicable method of transferring a State corporation to a Federal corporation would be to leave the amount of capital stock, the debts, everything, between the corporation and its shareholders and the corporation and its creditors, and all questions of liability, and all questions as to the validity of any of the securities wholly unaffected. The corporation would file with the Interstate Commerce Commission or such other department of the Federal Government as Congress should designate a certificate of incorporation or reincorporation, somewhat in the form of the ordinary certificate of incorporation, specifying the amount of its capital, the number of shares into which it is divided (I would not state any par value), the railroads that the corporation was at the time operating, the number of its directors, location of the principal office or domicile of the company, and other matters that are usual in certificates of incorporation. Upon the filing of this certificate, or upon a given day, the corporation would cease to be a State corporation and would become a Federal corporation, with the powers specified in the act of Congress providing for the incorporation. And that act, I assume, would provide that the amount of capital stock, the indebtedness, and all other corporate relations should remain as they were, and all questions as to the validity or invalidity of any obligation or any security should remain unaffected by the change.

Now, if any change in the corporate enterprise is found to be necessary, if any increase of the capital stock, a reduction of the capital stock, or an extension of the lines owned at the time, or any other change is considered advisable, or any consolidation contemplated, let all that come afterwards by an amendment of the articles of incorporation, as may be provided for by Congress. Every consolidation or change afterwards should be passed upon by the Inter-

state Commerce Commission or some other Federal commission. If you attempt to change any of the relations, the intercorporate relations or internal relations of a corporation, in effecting the transfer from State to Federal authority, there will be endless complications and room for litigation and controversies; whereas my idea is that every railroad corporation in the United States on a given date should cease to be a State corporation and should become a Federal corporation, with precisely the same powers as every other Federal corporation.

The CHAIRMAN. Take the Union Pacific, whose ownership consists partly of the physical properties of railroads and partly of the shares and bonds of State railway corporations. What action would you take with reference to the latter—the shares and the bonds?

Mr. LOVETT. Each constituent company of the Union Pacific system would take precisely the same proceeding. The Union Pacific Railroad Co. would become a Federal corporation; the Oregon Short Line Railroad Co. would become a Federal corporation; the Oregon Railroad & Navigation Co. would become a Federal corporation, all at the same time. The stocks would be undisturbed; they would stand as they are.

The CHAIRMAN. I see. Then the Federal corporation would be both an owning and a holding corporation, just as the Utah corporation is at present?

Mr. LOVETT. Precisely; and if it was deemed advisable at any time to eliminate some of these corporate organizations and merge them the act should provide for consolidating corporations under the approval of the Federal commission, and that thereafter the three companies, or any number of them, might be consolidated, just as they might to-day, to the extent authorized by the Federal act.

The CHAIRMAN. And in that event would it be your expectation that in the end the Union Pacific Railroad, instead of being both an owning and a holding corporation, would be simply an owning corporation, the properties of the subsidiary corporations being transferred to it and stock issued for it?

Mr. LOVETT. I think the Union Pacific, under the plan I have in mind, would have no more and no less corporate powers than every other railroad company in the United States. Such powers as it may have under the State corporation that would not be covered in the Federal act of incorporation would cease to exist.

I think the effect of Federal incorporation would be to largely eliminate holding companies.

The CHAIRMAN. But it would be done by a gradual process?

Mr. LOVETT. Yes. It would be impossible to do it as part of the process of converting a State corporation into a Federal corporation, because, in the first place, I fancy the Federal Government would want to scrutinize some of these organizations to see whether or not they embraced consolidations or embraced control that might be against the policy of Congress as indicated by the trust laws; and Congress, I take it, would not want to provide for practically an automatic consolidation without knowing what was in the bag.

The CHAIRMAN. Yes.

Mr. LOVETT. And so, after requiring all existing State corporations to become Federal corporations, provision should then be made under such restrictions as Congress may specify in the act for such con-

solidations as were to the public interest, and which should be approved by the Federal commission.

I am quite sure that a great many holding companies have been created for the purpose of establishing systems that could not be established by direct ownership. For example, the Texas situation—that seems to afford a precedent for almost everything in the way of railroad regulation—the Southern Pacific's continuous line from New York via New Orleans and Galveston to the Pacific coast, can not exist except by reason of the fact that the Southern Pacific is a holding company and can take the stock of the Texas companies, because the laws of Texas prohibit any foreign corporation from owning or operating a railroad within its territory.

The CHAIRMAN. The Union Pacific is operating in 11 States?

Mr. LOVETT. Yes.

The CHAIRMAN. In how many of those States does it hold the physical properties—or own them, rather?

Mr. LOVETT. Iowa, Missouri, Nebraska, Kansas, Colorado, Wyoming, and Utah—seven.

The CHAIRMAN. Seven?

Mr. LOVETT. Yes.

The CHAIRMAN. Now, as a matter of practical administration, would you prefer to own the physical properties of the corporations of which you now hold the stock or would you prefer the present system?

Mr. LOVETT. As a matter of operation, I should prefer the ownership of the physical properties, but there is no reason why we could not do that under the existing State laws. Those States permit the consolidation of these three constituent companies. There have been certain sentimental reasons, however, that have delayed consolidation in the case of the Union Pacific. I need not go into it very far, but I do not want the Union Pacific to appear more a Northwestern line than a California line, and for that reason we have held the Union Pacific Railroad proper as being a main line from the Missouri River to Ogden, Utah, and the lines in the Northwest as subsidiary companies. That is largely sentimental, however, and there is not much importance to it, and the probabilities are that we will merge those three companies, because now we have to pay a double income tax. The Oregon Railway & Navigation Co's stock is owned by the Oregon Short Line, and the Oregon Short Line's stock is owned by the Union Pacific. If the Oregon Railroad & Navigation Co. makes a dividend it pays it to the Oregon Short Line, and the income tax on it, and then the Oregon Short Line pays its dividends to the Union Pacific, with an income tax on that, and then the Union Pacific pays an income tax also.

The CHAIRMAN. That makes three taxes?

Mr. LOVETT. Yes; and it is very burdensome. We will be forced to consolidate those lines if that tax continues.

The CHAIRMAN. Referring to the tentative incorporation act which I introduced in 1905, section 17, you will observe, provides:

National corporations duly organized under this act are hereby declared to be military and post roads and instrumentalities for the regulation of interstate commerce. The franchise, stocks, bonds, fixed evidences of indebtedness, operations, and traffic, and the corporation itself, shall be exempt from all taxation by any State or Territory, other than as provided in this act, but the property of such corporation, including its right of way, track, real estate,

stations, office buildings, and equipment, shall be subject to assessment and at such average percentage of their actual value as shall be customary with reference to other property in such State or Territory. In lieu of such tax any State or Territory may impose a tax not exceeding four per centum on such proportion of the gross receipts of such corporations as the number of miles of track in such State or Territory bear to the total miles of track operated by such corporation. In estimating the miles of track, each mile of second track shall be regarded as equal to one-half mile of track and each mile of third or fourth track or siding shall be estimated as equal to one-third of each mile of main track. For the purpose of computation by each State the Interstate Commerce Commission shall certify to taxing authorities of each State or Territory the gross receipts for the preceding year of the total mileage, as aforesaid, and the proportion of such total mileage operated in each State or Territory.

Now, I wish to ask you, with reference to that, whether you would regard that as a fair scheme of taxation?

Mr. LOVETT. It is probably fair, Senator, but I think it would be unwise.

The CHAIRMAN. In what respect?

Mr. LOVETT. I believe the power of the States with respect to the taxation of railroads would better be left in the hands of the States. A perfectly just and fair system would be to have every railroad treated as a unit and to have its value apportioned between the different States according to mileage, and perhaps have some commission or some tribunal determine the value of the unit and apportion it on the basis of track mileage. I would not treat a double track or additional track as half a mile of track. I would apportion it on track mileage—yard tracks, terminals, and every track—and let the State fix its own rates of taxation rather than fix a tax based upon the gross earnings, because rates of taxation are higher in some States than others and there is a greater need of taxes in some States than in others. So, while I believe it would be a just system to have a national valuation of a single railroad as a unit and let the commission certify that valuation, yet leave it entirely to each State to determine its own form and rate of taxation. That, however, I regard more as an ideal than as a present practical object. I think that if you federalize these corporations and establish a just system of regulating their securities, their financial operations, their rates, and their consolidations, and operations of that character, it will be enough to undertake in one piece of legislation. I believe it would be wise to let the question of taxation rest as it is now—in the hands of the States—at least until we smooth out some of the difficulties that may be encountered in the other changes.

The CHAIRMAN. You would expect, then, a better system of taxation to come by a process of evolution?

Mr. LOVETT. And study and development.

The CHAIRMAN. Yes. You realize, do you not, now, the complicated and multiform methods under which taxation is now imposed on railroad properties and shares and bonds?

Mr. LOVETT. I do, and it is very serious.

The CHAIRMAN. You would regard it as a step in the direction of recommending railway securities at lower rates of interest, to secure some definite and scientific method of taxation, would you not?

Mr. LOVETT. Yes; it is desirable. It is one of our problems, and it is a serious one; but we have so many others that are more urgent

that this does not seem to us, relatively, as important as, perhaps, it really is.

The CHAIRMAN. As it is now, the shares of subsidiary corporations in the hands of holding companies are subject to taxation in many of the States, are they not?

Mr. LOVETT. Yes.

The CHAIRMAN. As intangibles?

Mr. LOVETT. Yes; or as tangibles representing the property.

The CHAIRMAN. Are they classed as intangibles or tangibles, as a rule?

Mr. LOVETT. I do not think there is any rule for taxation in this country, Senator. Some effort is made to tax stock held by a holding company in some places, as they would tax it in the hands of an individual—property owned by him—and the situs of which is the domicile of the owner. In other States it is called “intangible.” That is a very liberal term, and it is frequently employed when some more exact term is not available. It is dealt with in various ways in different States and localities.

The CHAIRMAN. Have you found, in your experience in the State of Utah, that there has been any effort to tax the shares and the bonds held by your company?

Mr. LOVETT. No.

The CHAIRMAN. In subsidiary corporations?

Mr. LOVETT. No.

The CHAIRMAN. Do you know of any great holding company in which an attempt has been made to do that?

Mr. LOVETT. When I was connected with the Southern Pacific Co. some years ago—the Southern Pacific Co. is a Kentucky corporation—there was some litigation over that in the State of Kentucky. An effort was made to tax the shares of the subsidiary companies of the Southern Pacific Co. in Kentucky, although none of them was in Kentucky.

The CHAIRMAN. Was that successful?

Mr. LOVETT. I forget the disposition there. There was litigation over it. For instance, in one case I know they attempted to tax in Kentucky the steamships operated by the Southern Pacific between New York and Galveston and New Orleans, and there was litigation over that, and I think it went to the Supreme Court, but I do not remember just what the result of it was.

The CHAIRMAN. Now, assuming that all the physical property of a subsidiary corporation is assessed and taxed in the various States in which that property lies, and then assume that the shares in those subsidiary corporations, held by a holding company, are also assessed and taxed by the State under the laws of which the holding corporation is organized; that would be double taxation, would it not?

Mr. LOVETT. It goes even further than that, Senator. In some States they proceed to tax the shares of the holding company held by the stockholders, which makes a tax three times upon the same property.

The CHAIRMAN. Yes.

Mr. LOVETT. That happens.

The CHAIRMAN. Yes. Now, in some of the States, these so-called intangible shares and bonds are taxed at the usual rate imposed upon all property, are they not?

Mr. LOVETT. I think so, though usually the States in which the holding companies are created do not have such taxation. I fancy that is the reason why some of the States are preferred.

The CHAIRMAN. Yes.

Mr. LOVETT. I think those States which have the fairest tax laws do not tax the stock of such corporations.

The CHAIRMAN. And naturally railroad organizations seeking a home for a holding company would look up the State that had the fairest tax laws, would they not?

Mr. LOVETT. I should think so.

The CHAIRMAN. And with a view to escaping these double and triple burdens?

Mr. LOVETT. Yes.

The CHAIRMAN. That might be imposed?

Mr. LOVETT. Yes. Of course the fair system of taxation is to tax the property represented by the stock to its full value where it is located.

The CHAIRMAN. Yes.

Mr. LOVETT. And then the stock and bonds ought not to be taxed.

The CHAIRMAN. Yes.

Mr. LOVETT. But that is an ideal that I do not expect to see accomplished.

The CHAIRMAN. That is what I had hoped to accomplish by this act, if it is ever enacted, my idea being that if that were done the public itself would get the benefit of a reduced rate of taxation upon railway securities.

Mr. LOVETT. Yes; it is a very desirable system, and it would be a just system, but I do not have much hope of seeing that succeed. I think probably, in time, the people who make the tax laws will realize that any State that indulges in double taxation will probably keep as nonresidents people who own very much corporate stock and shares and who have their money invested in corporate securities returning 4 or 5 per cent. They will not seek residence in those States. Possibly he is an undersirable citizen, but he will not seek residence in a State or in a town where they will tax his securities at full value, and thus take one-half of his income or even more. That is the effect of the present system. Those States that consider that the property itself has been taxed enough and do not tax the securities or stock, will be preferred by those who have their means invested in corporate securities.

The CHAIRMAN. Now, section 18 of the bill referred to has to do with the police powers and State rates. It reads:

Nothing herein contained shall be construed as interfering with the police laws of any State regarding railroads incorporated under this act and operating in such States, nor shall anything herein contained be construed as affecting the right and power of each State to regulate purely State commerce on railroads organized under this act. But the Interstate Commerce Commission may hold conferences from time to time with the regulating power of any State with a view to such harmonious adjustment and regulation of State commerce and interstate commerce as will protect the public against abuses or extortion, and the railroads against inadequate returns upon their investment, and promote the efficiency of such corporations as common carriers.

Now, with reference to that, I observe your contention seems to be that these national corporations should be relieved, either wholly or

in part, from the exercise of the State police powers, and particularly from the power of fixing the rates upon purely State traffic.

Mr. LOVETT. I did not mean to be understood as going so far as to say that the Federal corporations should be relieved from the State police power in purely local matters. It is impossible to define police power. We believe that in purely local matters the corporation should remain, as it is now, subject to State laws, but I do not regard the making of intrastate rates as a local matter. We consider that the rate situation and rate problem should be dealt with as a whole, and in order to make effective interstate rates and avoid discriminations, the rate-making power ought to be unified, and that the Federal Commission should make the intrastate as well as the interstate rates. As a matter of fact, in most of the States the people of each State are vastly more interested in interstate rates than in State rates; most of their business is handled on interstate rates, which is already vested in the Federal Commission. So it is not going very much further to give that same commission the power to regulate intrastate rates, the minor part of the business the people are interested in, provided, of course, in the form of regional commissions or otherwise there are tribunals sufficient in number to readily hear and determine all complaints the people have in respect to rates.

Now, all other local matters, or, rather, all local matters—because I contend that intrastate rates are not local matters—we think the regulating power should be left with the States, as now.

The next feature of this provision, Senator—if I may say a word about it—which you have just read, requiring the cooperation of the State and interstate commissions: I do not understand there is any constitutional warrant or even theory in our form of government for cooperation between the States and the Federal Government. Either one or the other is exclusive. On national matters the Federal authority is exclusive. I believe it would be a very great mistake to divide the responsibility with respect to rate regulation between the Federal commission and the State commissions. Delay is one of the greatest evils in any system of governmental regulation of rates, because prompt action in rate regulation is essential to the public. To try to bring about a system or form of cooperation between a Federal commission and a State commission would greatly multiply the evils resulting from delay and besides being, according to my view of it, a departure in our system of government, which, according to my conception of it with respect to legislative matters, is exclusive either in the States or in the Federal Government.

The CHAIRMAN. Are you aware that now under the existing system it has been the practice of the Interstate Commerce Commission to bring together the State commissions at an annual conference in Washington, in which a committee from the Interstate Commerce Commission has participated, so far as possible as debate is concerned, but without vote? Do you not think that those conferences have been beneficial in bringing about some harmony of view and of action between these sovereigns, the national sovereign on the one hand and the State sovereignties on the other?

Mr. LOVETT. They have been successful socially, I think, Senator.

The CHAIRMAN. But not in any practical way?

Mr. LOVETT. I am not prepared to say that they have accomplished anything in furtherance of wise regulation.

The CHAIRMAN. Well, you realize, of course, that, so far as the Constitution is concerned, it reserves in the States the regulation of purely State commerce, just as it grants to the National Government the regulation of interstate commerce?

Mr. ADAMSON. We are glad to have that indorsement of the Constitution from the chairman.

The CHAIRMAN. Yes; I have never questioned that at all. Now, my main idea has been that here has been granted to two sets of sovereignties control over parts of the whole, and that as the jurisdiction of the national sovereignty over interstate commerce was undoubted and the jurisdiction of the States over State commerce was undoubted, and both had to be conducted by the same corporate instrumentality, that it would be wise for them to get together by some system of comity rather than to force control by the absolute absorption of the jurisdiction of the one sovereign by the national sovereign.

Mr. LOVETT. I do not understand, Senator, that there is more than one sovereign. I take it that the Federal Government is the sovereign with respect to all interstate matters.

The CHAIRMAN. Undoubtedly.

Mr. LOVETT. And I take it that the State is the sovereign with respect to the purely State matters, subject to certain limitations as to personal rights. But the question arises as to what is purely a State matter. Now, I understand that wherever Congress has jurisdiction of the subject it has all the power necessary to make that jurisdiction effective, and if any State right is inconsistent with the proper exercise of that power of Congress the State power yields, because the Federal power is paramount. So I do not understand there is any conflict of authority. I do not agree at all that there are differences between the State and Federal Governments to be reconciled by negotiation or treaty or otherwise. Either one or the other has the authority, and it is not a matter for negotiation. That is why I say I do not understand there is any theory in our form of government that admits of a case where it is necessary for the State and Federal Governments to come to an agreement. The Constitution settles that.

The CHAIRMAN. And I presume your contention is that the United States courts have practically settled the question in the manner you suggest?

Mr. LOVETT. That is my view of it.

The CHAIRMAN. That was not so apparent in 1905, when this bill was framed. I believe those decisions have been subsequent to that time, have they not, in the main?

Mr. LOVETT. I think they are very old, Senator. I do not remember when they started, but probably it has been amplified, been made clearer since 1905 through new cases that have arisen. But I think that always has been the theory recognized by the Supreme Court.

The CHAIRMAN. But I mean to say it has only been practically applied by the Supreme Court to these railroad cases within the last 10 years, has it not?

Mr. LOVETT. I do not know just when it was first applied to railroad cases. It is a very old principle.

The CHAIRMAN. Oh, yes; we admit that.

Mr. LOVETT. But there have been new applications in recent years.

Mr. ADAMSON. It is the same old constitution we have had all the time.

The CHAIRMAN. Now, you say that the interstate traffic is on the average about 85 per cent?

Mr. LOVETT. That varies greatly, Senator, in different States.

The CHAIRMAN. But throughout the United States would it not be safe to say the interstate traffic is about 85 per cent and the State traffic about 15 per cent?

Mr. LOVETT. No; I would not say that, because——

The CHAIRMAN. What would be the relative percentage?

Mr. LOVETT. I know what it is on the Union Pacific; the interstate freight traffic, as I stated here is in effect 88 per cent of the total freight revenue, and of the revenue from passenger traffic 68 per cent is derived from interstate traffic. In other States, particularly States on the ocean, say like Texas, for example, it is less. Texas, because of its vast area and because much of the commerce goes to the Texas ports for export, has a very much larger percentage of intrastate traffic than most States. In the Union Pacific territory, however, much of the traffic that originates on the line goes entirely off the system, seeking markets in the East or in the West, and much of the traffic that has destination on our lines originates in the East off the line. In our territory perhaps the percentage of interstate traffic is larger than in most territories, though the condition of the Union Pacific may be fairly representative of the Middle West. But along the Gulf coast, particularly in large States, the percentage of intrastate traffic is perhaps larger; I know it is in Texas, and probably it is in California.

Mr. SIMS. Can you state approximately what it is in Texas?

Mr. LOVETT. I had occasion to deal with that subject a number of years ago in a litigation with the Texas commission, Judge Sims, and I can speak only from memory. My recollection is it was approximately 40 per cent on the line I dealt with, which is a north and south line, the Houston & Texas Central, running from the northern boundary of the State to the Gulf. Something like 40 per cent of the traffic, freight and passenger, of that line was intrastate. That would not be true, however, of some of the other lines, like the Texas & Pacific, for example, which carries its business to New Orleans rather than to the Gulf at Galveston. It would not be true of a number of other lines, but I should say that the intrastate traffic of most Texas lines would be probably around 25 per cent. But bear this in mind in considering Texas: She allows no foreign corporations to operate in that State. She does not allow corporations to consolidate with corporations of other States. They are all local except the Texas & Pacific, and I am dealing only with the Texas division or section of the property.

The CHAIRMAN. Now, Judge Lovett, the percentage of State traffic being so small as compared with the interstate traffic, why is it desirable to interfere with the regulation of that traffic by local commissions when the power exists in the United States courts of annulling the action of the local commissions if it unduly burdens or impedes interstate traffic?

Mr. LOVETT. First, as to the relative importance of the intrastate traffic, I do not know anything, Senator, that is more far-reaching in its disturbance than a small rate cut. A rebate will throw the traffic situation of a vast territory out of line, something apparently of small importance. Suppose a certain product is produced in a certain State and the State cuts that rate to a port on the border of that State, that product is competing with a like product in many other States and on other lines. The shippers of that product, suffering from this discrimination in favor of the State rate, will appeal to the traffic officers serving their territory and say, "You must put me on an equality; you have got to remove this discrimination," and they will cut the rate and put him on an equality. We have seen that many times in Texas. Not so much of recent years, but in the early days of the Texas commission they would make a reduction in the rates on grain, for example, that would apply to the grain-growing districts of northern Texas. Lines from Kansas, Oklahoma, and Nebraska would say, "We have got to protect our shippers and meet that rate." Take a jobber's rate from a place like Dallas or Fort Worth. Jobbers of those cities are in competition with jobbers of St. Louis, Chicago, and Kansas City. If the Texas commission reduces the rate on certain goods, that discriminates against and puts the St. Louis, the Kansas City, and the Chicago jobbers in an unfair position, or what they consider to be an unfair position, and they demand of the lines extending to Texas to put them on an equality. and they generally do it. And we have seen in the Shreveport rate case what a disturbance a State commission can create. The Texas commission wanted the jobbers of Dallas and Houston to do the business rather than Shreveport jobbers. In other words, they wanted to shut the Shreveport jobbers out of Texas. They made a system of rates to do it, and demanded of the railroads that they maintain their interstate rates from Shreveport to Texas points at a certain figure. The commission then cut the State rate so as to practically exclude the Shreveport jobbers from doing business in Texas much nearer to Shreveport than Dallas or Houston. That is not an unusual performance for the Texas commission.

Then we frequently see, in the matter of interstate rates, where a State will cut a passenger rate. A man can buy a ticket from Chicago to East St. Louis for something like \$1.50 less than he can buy a ticket from Chicago to the city of St. Louis, just across the river. That matter, I believe, has been before the commission or is in litigation.

But by making these rates—rates within the State—interstate rates can be dislocated and disarranged. Discriminations will be built up. We have a case of our own. The Nebraska commission established a system of local rates that enabled the Omaha jobbers to practically shut out the jobbing interests of Council Bluffs, across the river, and to shut out St. Joseph, Mo. I could give almost any number of illustrations; but I do not think it will be denied that the State commissions are doing that right along. We have in Kansas, in Nebraska, and in many other States, a 2 cents a mile passenger rate for State business, whereas the Interstate Commerce Commission has made higher rates—2½, 2½ cents, or something like that.

When the Interstate Commerce Commission in the early days of the European war gave these eastern lines an increase in rates be-

cause of their financial distress—I understood at the time—the Pennsylvania commission, immediately following the increase made by the Interstate Commerce Commission, made a cut in the coal rates to tidewater points in Pennsylvania practically sufficient, or about sufficient, to absorb all the increase granted by the Interstate Commerce Commission to Pennsylvania lines—I do not mean the Pennsylvania Railroad.

So it is the experience with the activity of the State commissions purely from the local point of view that satisfies railroad men that it is impossible to maintain any rate adjustment that will prevent discriminations unless the rate-making power is unified in a single control.

Mr. ADAMSON. If the chairman will pardon me, you referred to that Pennsylvania coal matter. Was that case not similar to the trouble in Texas, where you had so much trouble about the Shreveport case?

Mr. LOVETT. I am not sure of the circumstances. I only know, Judge Adamson, in a general way, that they did make a reduction. What the motive was I do not know.

Mr. ADAMSON. The coal mines all being in the State of Pennsylvania?

Mr. LOVETT. I do not know, but it may have been to preserve a differential, or it may have been simply to reduce——

Mr. ADAMSON. I do not speak of the motives; I speak of the case presented for consideration by the Commerce Commission to the court.

Mr. LOVETT. I am not familiar with the circumstances. The point that struck me was that the Interstate Commerce Commission, having allowed an increase to relieve financial distress, the State commission had made a reduction, as I was told, about sufficient to absorb the increase allowed by the Interstate Commerce Commission.

The CHAIRMAN. And your contention is that we should positively legislate upon that subject?

Mr. LOVETT. Yes.

The CHAIRMAN. And indicate by our action that the State commissions are not to make State rates at all?

Mr. LOVETT. Yes; my idea is that the rate-making powers should be vested exclusively in the Interstate Commerce Commission which now controls the rates for the great bulk of the commerce of the country.

The CHAIRMAN. Don't you think it would work as well to leave it as it is now? The Supreme Court has practically determined that although the Constitution vests in the National Government jurisdiction only over interstate commerce and reserves to the States jurisdiction over the State commerce, that the National Government is practically the lord paramount and they are not equal sovereignties, and that wherever the action of the State is contradictory to that of the Nation, or involves a burden upon or an impediment to interstate commerce, that the State action falls. Now, why is it not better to leave that situation as it is now, under the decision of the courts?

Mr. LOVETT. Because, Senator, Congress can not escape the responsibility. The power to regulate interstate commerce is vested

in Congress, and, if the State authority to make rates is to be superseded, it is only because Congress will determine that in order to make its interstate regulation effective it must take exclusive jurisdiction of the subject. I understand the Supreme Court has held, in the Minnesota Rate case, that the State rates there were not void, because Congress had not acted; that Congress had not determined to take control of the whole subject—had not occupied the field, to use one of the Supreme Court's expressions—of regulation. If Congress had acted, had conferred upon the Interstate Commerce Commission the authority to fix these rates, and the commission had fixed them, then the State rates would have been invalid; but that had not occurred.

Now, in the Shreveport case the court determined that Congress had conferred upon the commission power to prevent discrimination, and that if the commission acted, then that would be an exercise of the power of Congress that would be exclusive.

Mr. ADAMSON. Is not this about the situation the courts have left the matter in: That Congress' action draws the line and the States can not help themselves?

Mr. LOVETT. That is as I understand it.

Senator CUMMINS. Mr. Chairman, may I ask a question there?

The CHAIRMAN. Certainly.

Senator CUMMINS. Mr. Lovett, do you believe it is legally possible for a State rate, which is reasonable for the service rendered, to be a discriminating rate?

Mr. LOVETT. Yes, Senator.

Senator CUMMINS. That is, a rate from Dallas to some point in the interior of Texas, applied to State traffic, in fact, and not simply in name, although it is a reasonable charge for the service rendered by the railroad company, can locally be a discriminating rate, as compared with an interstate rate, from some point outside of the State of Texas into Texas?

Mr. LOVETT. I have no doubt of that, Senator.

Senator CUMMINS. The effect of it would be, then, that the State rate must be either more or less than reasonable in order to avoid discrimination.

Mr. LOVETT. It depends entirely, Senator, on the question of reasonableness. I do not understand that there is any rule for determining the reasonableness of a rate. A rate——

Senator CUMMINS. It is the value of the service.

Mr. LOVETT. Well, that is——

Senator CUMMINS. I understand that is the general rule.

Mr. LOVETT. I understand that there is no rule. The situation, for instance, is this, to illustrate my answer to you: A given rate for a given service, we will say, of 10 cents a hundred, might be confiscatory, and that would be an unreasonable rate, and would be contrary to the Constitution. A rate for the same service, that is 20 cents, might cover the cost of service and might allow, we will say, 1 or 2 per cent—a small return to the carrier. A rate of 25 cents, we will say, for the same service, might afford a return of 4 or 5 or 6 per cent. Now, there is a wide margin, after you get above a confiscatory rate—there is a wide margin between a confiscatory rate and a rate that everybody will say is unreasonably high. That might range anywhere, we will say, from 10 cents a hundred to 50 cents a hun-

dred. Everybody might agree that 10 cents a hundred will be too low, and everybody might agree that 50 cents a hundred will be too high, but within that range, between 10 cents a hundred and 50 cents a hundred, any rate would be reasonable. It is a question of policy, and as to who determines the reasonableness of the rate. In the case which you state, we will say, that the Texas commission placed the rate at 20 cents a hundred, which is a reasonable rate. The Interstate Commerce Commission might place it at 40 cents a hundred, which also would be a reasonable rate, neither confiscatory, and neither so high as to prevent the business from moving, or to be extortionate. But reasonableness within those limits depends upon the rate-making power. Now, if the Texas commission made a rate of 20 cents—a reasonable rate—and the Interstate Commerce Commission made a rate of 40 cents, the Texas rate would be illegal, in my view of the situation. It would work a discrimination against the outside man, because of the paramount authority of the Federal Government to fix the rates and prevent discrimination.

I am sorry to have taken so much time in answering your question.

Senator CUMMINS. I was not giving so much attention to the latitude between confiscatory rates and a highly compensatory rate, but I was assuming that the State rate was one which paid the cost of the service and returned a reasonable reward on the value of the property, which rendered the service, and that being the kind of reasonable rate I had in my mind, when I propounded the question, you are of the opinion that such a rate, established by State authority, and not challenged, as a reasonable rate, in and of itself, may, nevertheless, be increased by the Federal Government, in order to allow a costlier service from the outside, into the State?

Mr. LOVETT. Yes, sir; or reduced, simply because no rate can be tested by, in, and of itself. Every rate has relation to some other rate, and it may be that this reasonable rate, in and of itself, in its relation to an interstate rate, may work a discrimination or may violate the Interstate Commerce Commission's conception of what the railroad company ought to earn from its entire traffic.

Senator CUMMINS. But your view of it is that the rate must be adjusted in the State so that traffic outside of the State can come in under competition. I ask this purely for information. The reasonableness of the rate, as such, in the Texas case, was not investigated at all, was it?

Mr. LOVETT. My recollection is that it was not.

The CHAIRMAN. Judge Lovett—

Senator CUMMINS. I beg your pardon, Mr. Chairman, I did not intend to take up so much time.

The CHAIRMAN. That is all right, Senator.

Judge Lovett, if you take away the power of the State commissions over purely State rates, what usefulness would you leave them? In the public interests, what powers are there that they could exercise beneficially?

Mr. LOVETT. That depends, Senator, on the local conditions. I am not sure whether there is or not a State commission is a matter of great concern or ought to be of great concern. There is a question whether or not they are necessary in the public's interest. If they are not, let them dissolve.

I called attention yesterday—and I believe you were present—to the duties of the California commission as enumerated by the chairman of that commission. Apparently they have some other things to do, and I think most State commissions, with the possible exception of the Texas commission, have. I believe its activities so far have been confined to railroads, but most of the State commissions have duties to perform with respect to all public utilities. They could be occupied in that way. With respect to the railroads I think they would probably be on the lookout for the welfare of their own State's interests in these rate adjustments and could represent their own States.

The CHAIRMAN. You think there would be a field of activity for them in presenting their cases before the Interstate Commerce Commission or before these regional commissions?

Mr. LOVETT. Yes, sir; I believe that could be handled as well by the commercial bodies of the different States, but perhaps the States would rather have their own commissions act in that matter.

Mr. SIMS. Is it not a matter for the States to determine for themselves?

Mr. LOVETT. Yes; I think so.

The CHAIRMAN. With reference to California, my observation is—and I may be mistaken—that since the creation of the new commission there its activities have led to a better understanding between the community and the railroads.

Mr. LOVETT. I have no doubt of that, Senator. I think the California commission—I will not say it is the best—but I believe it is one of the ablest State commissions in the country. . As far as I have been able to observe, it is wide awake, progressive, and it has not been hostile. It has been strict, and it has been exacting, but I believe it has very greatly improved the relations between the railroads and the public, because the public understands that there is a commission there looking out for their interests. How long that kind of a commission will last I do not know. I hope it will last always, but it is not so much what the commission actually does, but what it may do. In the case of some commissions it is what they do.

The CHAIRMAN. With reference to grades and grade crossings, etc., would you expect that the police powers of the State would be operative or that those matters should come under the direction and control of the National Government?

Mr. LOVETT. Well, I think the railroad executives all contemplate that should be left to the State commissions, but the time may come when the National Government would have to take hold of that question. In that connection I should like to state that I was impressed by a notice posted in the station at Locust Valley, Long Island, where I live, by the Pennsylvania Railroad, appealing to the public to be patient in the matter of grade crossings and stating the number of grade crossings on the Pennsylvania system at that time and the average cost of separating a grade crossing. It was stated that if the Pennsylvania Railroad crossings were required to be eliminated—all grade crossings on its systems—it would cost it six hundred and fifty-odd millions of dollars, and in view of this large expenditure this was an appeal made to the public to be patient; that they were eliminating grade crossings and expected that to be their policy in the future; that it was impossible to eliminate all grade

crossings at once, and people must remember that there were other grade crossings than the one they were interested in.

This question of grade crossings is a very expensive proposition. I think, generally, the State commissions have been reasonable about it, and I should hope that they should continue to be so, but it might be necessary in time to come to give the Interstate Commerce Commission some supervisory power with respect to that, although I do not think that is necessary now.

The CHAIRMAN. With reference to clearances, there has been a great deal of agitation of that subject by the railroad brotherhoods of late. Changes in that respect, in order to secure greater safety of trains and for the operatives on the trains, are likely to cost a very large capital expenditure, are they not?

Mr. LOVETT. Yes.

The CHAIRMAN. Would you expect those matters to be under the jurisdiction of the State commissions as a matter of police regulation or under the jurisdiction of the national commission?

Mr. LOVETT. I rather think they ought to be under the Interstate Commerce Commission, because they are tied up very closely with the question of the employer's liability act and the safety of operatives on the trains.

The CHAIRMAN. You consider those questions—the question of clearances and the question of grade crossings—your view is that ultimately that power and that control will have to rest in the national commission. Now, what is there left for the State commissions?

Mr. LOVETT. I think grade crossings should be left much longer with the State commissions, because the safety only of the local people of the community, the citizens of the community, is involved in grade crossings, whereas in the matter of clearances the safety of the train operatives on interstate railroads is involved.

The CHAIRMAN. What other subjects would come under the police powers of the States?

Mr. LOVETT. I suppose the matter of stations and station accommodations.

The CHAIRMAN. You mean the size and the character of the stations?

Mr. LOVETT. Yes.

The CHAIRMAN. Construction?

Mr. LOVETT. Yes.

The CHAIRMAN. Location?

Mr. LOVETT. Yes.

The CHAIRMAN. Is not that a pretty big power?

Mr. LOVETT. It is.

The CHAIRMAN. You would leave that in the hands of the States?

Mr. LOVETT. Yes; I would try it. It is in the hands of the States now, and sometimes they are pretty exacting; but we have managed to live under it; and, of course, if the time should ever come when there would be a competition between the different States in building at the expense of the national service ornate stations beyond reason, and so as to impair the revenues of the roads, it might become necessary. I believe, however, that is very remote, and probably there would be relief in the courts against orders of that sort. But I think that should be left to the States.

The CHAIRMAN. What other things can you suggest?

Mr. LOVETT. Well, shipping facilities, perhaps, in the way of sidings and things of that sort. I am not prepared to call out offhand what the Supreme Court of the United States has never been able to define; that is, the police power of the States. It is rather a big undertaking. I might observe, however, that even if there should be nothing left for the State commission to do, that would not be a good reason for Congress to refrain from exercising its power of regulation.

The CHAIRMAN. I admit that.

Mr. ADAMSON. I think I can give you a definition of the police power of the States—whatever authority Congress leaves for them to exercise.

The CHAIRMAN. You have spoken with reference to these State commissions. I want to ask you a few questions regarding the regional commissions that you have spoken of. How many regions would you think it advisable to have?

Mr. LOVETT. I should start with not less than five. I might find out that 20 or 25 were necessary.

The CHAIRMAN. Would those regions be adjusted practically to the traffic areas that now exist?

Mr. LOVETT. Yes. I would ignore geographical lines.

The CHAIRMAN. You would ignore geographical lines, and would you ignore State lines?

Mr. LOVETT. Absolutely; and adjust the territories with reference to transportation territories and transportation systems.

The CHAIRMAN. And at first you would follow practically the traffic areas that now exist?

Mr. LOVETT. Yes. I am not so sure but that it would be a good idea to convert the various State commissions into regional commissions, in such a way as to let them exercise Federal power rather than State power.

The CHAIRMAN. Then that would make a region of each State, would it not?

Mr. LOVETT. No; I would not extend its territory. Well, confine it to the State, if that would be a way of solving it. I do not care so much, Senator, how many regional commissions there are or what the territorial limits of their jurisdiction are, provided they are all a part of one unified, systematic system of regulation, exercising authority under the same law and exercising the same power; that is, from the same source. It is the unification of the system of regulation.

The CHAIRMAN. Is there any method that you could suggest of merging the State commissions into regional commissions?

Mr. LOVETT. I do not know of any way except by appointment from the President and confirmation by the Senate, as members of the regional commission.

Mr. SIMS. And Congress could hardly provide for a process of that sort.

Mr. LOVETT. It could not. The selection would be with the President and the Senate.

Mr. ADAMSON. Why not just combine three or four States and State commissions and make a central federation?

Mr. LOVETT. Is that addressed to me, Judge Adamson?

Mr. ADAMSON. To the Chairman.

The CHAIRMAN. I will postpone my answer until the report comes in.

Mr. LOVETT. As to the agencies for carrying this out, Senator. I consider that a detail. Of course, it would have to be provided for, but they would have to be Federal agents, under my conception of it.

The CHAIRMAN. You will observe that section 19 of the bill to which I have referred provides for the acquisition of State railways. It reads:

Such corporation may, with the consent of any State, upon the approval of the Interstate Commerce Commission, acquire the railroad of any corporation now organized under the laws of such State—

And so forth. And later on—

With the consent of the State under which any railroad corporation is or may be organized, merger between such corporation and a corporation organized under this act may be accomplished under this act—

And so forth. Your proposal is that this national incorporation shall be accomplished without the consent of the State. You realize, do you not, the great difficulty that we will have, even those who believe in national incorporation, in passing such a bill?

Mr. LOVETT. Of course, my conception of it is that the States have already given their consent; that they gave that when they formed the Constitution, and that whether or not Congress will exercise the power conferred upon it by the Constitution Congress must determine. But I think it would be a mistake for Congress to attempt to devise a plan dependent upon the consent of the States. I do not think it would solve the problem.

Mr. ADAMSON. I think the judge misapprehended the question, Mr. Chairman. I understood you to refer to the difficulty of passing the measure through Congress?

The CHAIRMAN. Yes.

Mr. ADAMSON. As long as the Members are elected by the people I think that is a very wise suggestion that you made to the judge.

Mr. LOVETT. I beg your pardon; I did not understand that. I rather think the committee is better able to judge of that than I am. All I can do is to give my views as to what I believe is necessary to effectually regulate these railroads and to devise a system that will be workable. There may be some other method than that which I have been advocating and discussing. Whether it can be enacted or not I do not know.

The CHAIRMAN. When I framed this bill I recognized that difficulty and felt that it was better to resort to persuasion rather than force in order to accomplish national incorporation, and my assumption was that inasmuch as the States had thus far assented to the incorporation of State railways in great national systems, through holding companies organized in other States, they would see the some instances given their consent to such merger with corporations act and would gradually give their consent, though in the first instance there might be great opposition. I also observed that in some of the Southern States, where they are peculiarly tenacious of State rights and functions, they had by legislation given consent to the merger of railroads incorporated under their laws in a larger cor-

poration organized under the laws of another State, and they had in some instances given their consent to such merger with corporations organized under the laws of the United States. That was true certainly in one instance, and I think in several, from my examination of the matter at that time, with reference to the Southern Railway system. The question therefore occurs to me as to whether, assuming that national incorporation is desirable and should be accomplished as quickly as possible, it is wise to attempt to force it, which possibly would arouse opposition in Congress to the passage of the act, or whether it would not be wiser simply to frame a permissive act, in the wisdom of which the States would gradually acquiesce. What is your view about that?

Mr. LOVETT. I do not believe any State will voluntarily give up any power it has, any more than any tribunal, whether it is a court or a commission or any other tribunal, will give up power. I have never heard yet of any tribunal or any public body voluntarily surrendering any power. Now, I do not believe a bill such as you suggest here, making such a system dependent upon the consent of the States, would get anywhere. I think the State commissions, most of them, would oppose it.

The CHAIRMAN. And you think they would be influential with their respective States?

Mr. LOVETT. I rather think they would.

The CHAIRMAN. If they are influential with their respective States in such a way as to defeat the operation of a permissive act, is not that opposition likely to be equally effective in preventing the original passage of a compelling act by Congress?

Mr. LOVETT. That may be, Senator. I say, I can not tell whether that proposition would appeal to Congress or not. I am compelled to assume, and do assume, that Congress is here to legislate for the Nation and not for the States, or any particular State, and that in dealing with a national subject whatever the national interests require will be done.

I should like to say one thing in answer to your suggestion, if I may, about the attitude of the Southern States with reference to this matter. I believe I know something about the sentiment of the Southern States, and I do not believe they are any more contentious for State rights than any other States in the Union.

The CHAIRMAN. I supposed they were, and that that fact arose from the peculiar status bearing on the race question.

Mr. ADAMSON. No, sir; it arises over any commercial consideration or any other, and whenever the shoe pinches every State in the Union will kick. Sometimes it takes financial interest at home to make them do it.

The CHAIRMAN. Now, Judge Lovett, you will observe that section 20 of the bill referred to provides for an accident and insurance fund. It reads:

It shall be a condition of the grant and continuance of any franchise to do business under this act that the corporation holding such franchise shall set aside annually 1 per cent of the gross receipts of said corporation, to be held as a fund in the Treasury of the United States for the payment of pensions to the employees of such corporation who shall have been disqualified for active service, either by injury in the service or by age. The amount and time of payment, the investment of the fund, the disbursing of the same, and the entire management thereof shall be under rules and regulations to be made and from time to time altered by the Interstate Commerce Commission.

One per cent of the gross revenue of the railroads at present would amount to between three millions and three millions and a half annually. In case we legislate upon this subject and frame an incorporation act, what would you say about the wisdom of incorporating such a provision in it, and what would be your view as to its provisions?

Mr. LOVETT. I have no objection, I should say, to some scheme of benefits for disabled, injured, and ill employees to be incorporated in the act. I think it could be dealt with better as a separate proposition. I think progress is being made in those matters now. A number of companies are making much more liberal provisions than are contemplated here. I believe the development is going to be rapid.

The CHAIRMAN. And they are doing that voluntarily?

Mr. LOVETT. Yes. I do not like to speak so much of our own company, but we put into effect on the 1st of January a system of life, accident, and health insurance that costs a good deal of money. Other companies are doing the same.

The CHAIRMAN. Do you think it will cost 1 per cent of the gross receipts?

Mr. HAMILTON. In that connection will you mention the other companies? Can you do so easily?

Mr. LOVETT. I can not give a complete list from memory, but I can have a list prepared.

Mr. HAMILTON. If you will, just incorporate that in your remarks when you revise them.

Mr. LOVETT. Yes. I know that a number of companies are considering measures of that sort.

Mr. ADAMSON. Mr. Chairman, may I make a suggestion to the witness in your time?

The CHAIRMAN. Certainly.

Mr. ADAMSON. I have understood heretofore that the court has held that insurance, pure and simple, was not a matter of interstate commerce. Now, if carriers begin to carry on insurance in connection with their business as carriers, will not that change the situation of that insurance and make it a part of interstate commerce?

Mr. LOVETT. I am not able to answer that, Judge Adamson. I mention our system as a concrete case. We adopted, on the 1st of January, a system by which we procured life insurance for each employee receiving a salary of not over \$4,000 equal to one year's wages, with a minimum of \$500 and a maximum of \$2,500; also accident insurance to the amount of not exceeding \$2,500, and with disability benefits running as far as two years, and insurance against illness.

Mr. ADAMSON. Health policies?

Mr. LOVETT (continuing). To the extent of half pay, with a minimum of \$5 a week, and a maximum, I think, of \$2,500. We do not carry the insurance ourselves. We got a life insurance company to provide the life insurance, and an accident insurance company to provide the health and accident insurance.

Mr. ADAMSON. And you pay the premium?

Mr. LOVETT. We pay all the premiums. We are going to experiment with it. All settlements are made through us, and if we find after a year or more that we can do it cheaper ourselves, we will do it ourselves. We know, of course, just what it will cost, because

we know what the premiums amount to, and we will know from the payments to employees made through us how much it is costing the insurance companies; so we have a close check.

Mr. ADAMSON. Various propositions have been made to us in the last 20 years to legislate about insurance. We have refrained on the idea that it was not interstate commerce, and it was suggested to me that if the carriers themselves were going to take up the matter of insuring employees, it might alter the situation, but if you merely patronize the old companies and pay the premiums I do not know that that would change the situation.

Mr. LOVETT. I should say, as an offhand opinion, that it is not insurance; it is a matter of employment.

Mr. ADAMSON. A part of your contract?

Mr. LOVETT. A part of our contract. This benefit accrues to every man who has been one year, or who shall have been one year in the service, and in addition to this we have the pension system; that is also supplied by the company.

Mr. ADAMSON. All that is figured as compensation?

Mr. LOVETT. All that we figure as part of our expenses, and we are charging these payments as part of our operating expenses.

Mr. HAMILTON. If that is considered as part of the contract of hiring, under the decision of the Supreme Court of yesterday on the Adamson law, it might possibly become a matter relating to interstate commerce.

Mr. LOVETT. Well, we reserved the right to abolish this system any time we wanted to, and the benefit is forfeited when a man leaves the service. We can not and would not undertake to abolish it as to any particular individual; we would abolish it as a whole. We have also, as most roads have, a hospital system that is supported by the employees to the extent of monthly contributions. and we supply any deficit that arises. With the large companies employing a great many men, the hospital systems are usually self-supporting. Small companies sometimes have a deficit. Sometimes there is a deficit with us, but when business is heavy there is no deficit.

Mr. ADAMSON. Then, if in a general strike all the men quit, all these benefits would cease?

Mr. LOVETT. Yes. There are a good many motives entering into it. We want to make the service attractive to the men.

Mr. ADAMSON. Mr. Chairman, I am much obliged to you.

Mr. SIMS. All of which is paid for by the public who patronize the road?

Mr. LOVETT. Yes. We want to make the service attractive to the men, and we also want the men to feel that some provision is made for them. We think the families of the men are about the most important part of the men, and we want them to feel that some provision is made not only for death, but for illness and accidents.

Mr. SIMS. But without a sufficient freight rate you could not keep this up? I mean revenues?

Mr. LOVETT. Oh, it is going to run to a large sum of money each year, but compared with our total disbursements it is not large.

Mr. HAMILTON. Of course that would all run back to the old proposition that the consumer pays the tax?

Mr. LOVETT. Yes, sir. We can not get away from that. Mr. Hamilton. Whatever is done the shipper has got to pay for.

The CHAIRMAN. The purpose of this provision was mainly to provide for the employees who were subject to the great risks, and to frankly impose the cost of it as an operating charge upon the public?

Mr. LOVETT. I believe the situation of the railroad operatives in every way has been very rapidly improving, and I think railroad companies have been doing a great deal in recent years to improve the situation of their men. I know we have, in club houses and otherwise, and we think it is money not only for the company but that it has done a very great deal of good which can not be measured in dollars and cents.

The CHAIRMAN. In the case of your company, does the estimate you have made of the cost of this equal 1 per cent of your gross receipts?

Mr. LOVETT. What is 1 per cent of \$104,000,000? That was our gross receipt for last fiscal year.

The CHAIRMAN. One per cent would be approximately a million dollars.

Mr. LOVETT. Approximately a million dollars a year. Our gross earnings in the fiscal year ending June 30 were unusually large. The estimated cost of this insurance plan would be a little less than that, but it would be more than 1 per cent on our gross earnings for some years. I would rather not give the exact estimated cost of this at this time, because I do not know.

The CHAIRMAN. The next section, section 21, provides for a board of conciliation. It reads:

The Interstate Commerce Commission is hereby empowered and directed to act as a board of conciliation between corporations organized under this act and their employees as to any dispute arising between said corporation and its employees in the matter of compensation, hours and conditions of labor, the protection of life and limb of said employees; and such power shall be exercised by such commission in accordance with rules and regulations to be made and from time to time altered by said commission.

What is your view as to the wisdom of intrusting the power of settling disputes between railroads and their employees?

Mr. LOVETT. I do not care much for a board of conciliation; but I am very strongly in favor, as I stated yesterday, of some tribunal that will decide questions between railroads and their train employees and of a law that will make that decision effective. Whether that is done by the Interstate Commerce Commission or by some other commission I do not care, provided it is by a commission of high character appointed by the President.

The CHAIRMAN. What do you think about the wisdom of intrusting this power of settling these disputes—not simply by a board of conciliation, but of settling these disputes?

Mr. LOVETT. To the Interstate Commerce Commission?

The CHAIRMAN. Yes.

Mr. LOVETT. I should favor it. Of course the Interstate Commerce Commission under the existing law could not give much time to questions of that sort and perform its other duties.

The CHAIRMAN. It would have to be enlarged and divided into divisions?

Mr. LOVETT. It would have to be enlarged, or through some subsidiary commission—

Mr. ADAMSON. Mr. Chairman, the commission might do that just as it does some of its other duties—appoint some one else to do it.

The CHAIRMAN. Yes.

Mr. LOVETT. But I am distinctly in favor of giving some commission—the Interstate Commerce Commission, if it is given sufficient time—that power. I say the Interstate Commerce Commission because we know who the commissioners are, and regard them as fair men, and they would probably settle the dispute fairly. I would also favor some other high-class commission to decide such questions. I am distinctly in favor of it.

Senator CUMMINS. I did not quite understand your answer. Do you mean that you favor giving to a commission—the Interstate Commerce Commission or some other—the power to fix all compensation to be paid by the railway companies originally, or do you mean to give it power to adjust disputes when they arise?

Mr. LOVETT. To adjust disputes. Where the parties agree I do not see any occasion for taking the matter to the commission. It perhaps ought to have a veto power, as it has with reference to rates of transportation.

Senator CUMMINS. You are familiar with what is known here as the Underwood proposal or amendment—

Mr. LOVETT. Yes.

Senator CUMMINS (continuing). Which gives the Interstate Commerce Commission power—makes it its duty to fix all wages and salaries, as well as hours of labor and conditions of labor, from the highest officer of the corporation to the lowest employee.' Do you mean that you favor some such proposition as that?

Mr. LOVETT. I should have no objection to that, Senator; but I believe that is putting more work on the commission than is necessary. For the same reason I believe that it would be a mistake to make it the duty of the commission to fix all rates.

Senator CUMMINS. Yes. The idea in your mind was to confine the authority to the adjustment or settlement of disputes when they arise, with regard to compensation?

Mr. LOVETT. Yes.

Mr. HAMILTON. Do you understand that to be the gist of the decision of the Supreme Court of yesterday?

Mr. LOVETT. I do not understand that decision, Mr. Hamilton. I have not read it. I have only seen the newspaper reports, which are not very clear. But my view as to the right of Congress to do this is wholly independent of that decision.

Mr. HAMILTON. Exactly.

Mr. ADAMSON. In other words, you knew it before the Supreme Court said it?

Mr. LOVETT. No; of course I did not know what the Supreme Court would decide, but I understood the controversy in that case was as to the power of Congress to fix wages, not to require arbitration.

Mr. ADAMSON. Oh, I thought he was talking about arbitration. I beg your pardon.

Mr. LOVETT. Yes. Now, what I meant by my statement that I favored some tribunal to decide controversies—

Mr. ADAMSON. I thought that was what he was talking about. I beg Mr. Hamilton's pardon.

Mr. HAMILTON. The distinction was drawn between the fixing of wages originally and the fixing of wages in case of disagreement, and

I asked Judge Lovett—I meant to ask him—whether he understood the recent decision of the Supreme Court to give the power to Congress to fix wages in case of disputes.

Senator CUMMINGS. Do you recognize any difference between the power that Congress has to fix wages and the power it has to delegate to a commission the same authority?

Mr. LOVETT. I do not, since Monday, when the Supreme Court decided that; because apparently Congress has the power to fix wages and to delegate it to the commission.

Senator CUMMINS. I understand the Supreme Court has decided that. I do not think there ever ought to have been any question about it.

Mr. LOVETT. The distinction, in my mind, Senator, without taking the time of the committee to make any argument on the subject, was this: Undoubtedly Congress has power to fix or to authorize a commission to fix rates, because the rates of common carriers have from time immemorial been subject to be fixed by law. The right to fix wages never has been regarded, as I understand, as a proper legislative power. That difference is responsible for the controversy that was decided by the Supreme Court.

Senator CUMMINS. Yes.

Mr. LOVETT. And the Supreme Court has, in effect, held that Congress has the same power to fix wages as to fix rates.

Mr. HAMILTON. The power to fix rates was established by common law even before it became incorporated in our Constitution.

Mr. LOVETT. Yes.

Now, applying this to the question asked by Senator Cummins, I have felt all along that whatever might be the power of Congress to fix wages, Congress would have power to establish a tribunal to settle a wage controversy, just as a court settles a controversy between two individuals with respect to a piece of land—

Senator CUMMINS. I have no doubt about that.

Mr. LOVETT (continuing). And say that this land belongs to A and not to B; that Congress would have the right to create a tribunal to settle a dispute—not necessarily a court, but it would be due process of law to create a tribunal appropriate to that particular matter, to decide disputes between interstate carriers and their employees over wages, and to make that binding as a decree of court is binding, except, of course, it could not compel a man to work who did not want to work.

Senator CUMMINS. The point I had in mind was this: When we give a commission authority to do a thing, we must give it a rule which it may apply to the facts, and all the rule that we could give it would in this instance be that it must fix wages which are reasonable. Now, is that a sufficiently definite rule to enable Congress to work through a commission?

Mr. LOVETT. You are dealing now with a commission fixing wages in the absence of a dispute?

Senator CUMMINS. Entirely.

Mr. LOVETT. I should not like to venture any opinion on that subject, Senator, until I have seen the opinion of the Supreme Court, because it is a new doctrine to me.

The CHAIRMAN. As I understand, the decision of the Supreme Court is based upon the public character of the employment?

Mr. LOVETT. I have not seen it; I do not know.

Mr. ADAMSON. Mr. Chairman, when the judge was expressing the idea that he had never until lately understood that Congress had jurisdiction over wages, I interrupted him and he had not finished his sentence. I want to call attention to the fact that in section 20 of the act to regulate commerce there is a long enumeration of things which the commission shall study to keep itself informed upon, and among those is the specific mention of wages, the number of people employed, who they are, and what they are paid. I presume that that enumeration is to aid the commission in discharging its duty in adjusting rates. Now, is not that, itself of long standing, a recognition that Congress did have some jurisdiction over wages?

Mr. LOVETT. Well, Judge Adamson, that was rather a live question among the group of railroad men of which I was a member here last summer.

We recognize that the commission, upon an application, for instance, to increase rates, would have a right to say whether or not the increase should be granted and to inquire into everything we spend and as to whether we spend too much; and when we were urged to voluntarily agree to the miscalled eight-hour proposition we were afraid that if we agreed we would be charged with extravagance on an application for an increase in the rates. The fact is that a great many of us were swamped with telegrams giving us fair warning that if we acceded to this demand we need not expect a rate increase to reimburse us, because they contended it was an unreasonable demand. Under the provision you mention, of course, the commission keeps itself informed as to wages and everything the railroads do in connection with these applications for rate increases, but I do not understand it was intended thereby to allow the commission to fix wages.

Mr. ADAMSON. I understand the commission, while it will consider wages, they will not make an allowance, in fixing rates, for wages which they find were improperly allowed. That might have been a miscalled eight-hour proposition when the President had the matter up with you gentlemen; but, to dispose of a whole lot of statements and confusion about it, I will say that, before our committee, where the law originated, it was an eight-hour law, and it was reported on the statements of the brotherhoods that 80 per cent of your divisions were 100 miles long, approximately, and if you let them run $12\frac{1}{2}$ miles an hour they could run them in eight hours as well as 10 and there would be no increase in expenses for you except that you would have, probably, to run lighter trains.

Mr. HAMILTON. But the Supreme Court has heretofore said that what is said in the law governs and not what is said about the law.

Mr. ADAMSON. When you see the full text of the Supreme Court's decision, you will find that they do not combat the idea of our committee. The basic idea was an eight-hour law, and the brotherhoods will find, if the matter ever arises, that we did not intend, by collusion or otherwise, to let them work eight hours on one day and then work eight hours in the same day and get paid for it. The proposition was purely and simply an eight-hour day.

Mr. LOVETT. If you had passed a straight eight-hour law, I am afraid you would have had a strike.

Mr. ADAMSON. Well, they must mean what they say. They stated they wanted eight hours' work a day.

The CHAIRMAN. Let us go on.

Mr. ADAMSON. Have we not been going on?

The CHAIRMAN. Section 22 refers to penalties, etc.

Mr. ADAMSON. Can not we facilitate going on by adopting the full bill in gross?

The CHAIRMAN. I think so, but I think it would require a great deal of persuasion, and I should want to amend it myself.

Mr. ADAMSON. I do not think you would want to vote for it.

The CHAIRMAN. Section 23 provides for dividends. I will read it:

No such corporation shall pay or distribute to its stockholders in any form during any one year a dividend or dividends exceeding in total amount 5 per cent upon the entire capital stock. If, after the payment by such corporation of its operating expenses, maintenance, improvements, and betterments, its taxes, its interest on bonded or other indebtedness, and its contribution to the accident and insurance fund, there shall be a surplus over and above the amount necessary to pay such dividend of 5 per cent per annum, the surplus shall be apportioned as follows: One-half thereof shall be paid into a guaranty fund in the Treasury of the United States for future dividends in case of a slackening of business, such fund to be controlled and invested by the Interstate Commerce Commission, and one-half thereof shall be paid into the accident and insurance fund provided for by this act.

No reduction of rates as to any given railroad shall be made or ordered by the Interstate Commerce Commission, or by any other governmental agency, which shall make it reasonably probable that such 5 per cent dividends can not be earned upon the total capital stock of the corporation.

I will say, with reference to that, I have modified my views. I would increase that to 7 per cent.

Of course, the interest rates have increased since the time this bill was drawn, and my view would be to increase that from 5 per cent to 6 or 7 per cent.

What is your view regarding the effect of limiting dividends, with reference to the public interest? Does it, in your judgment, have the effect of, or will it have the effect of, encouraging the betterment of the road if the profits exceed the rate of dividend, and increase wages, effect a diminution in hours, and general providence for the employees of the railroads?

Mr. LOVETT. Senator, that is a very large subject, and I believe I could point out many objections to it, but I will not undertake to cover the whole field. I think it would be a very great mistake to attempt anything of the sort, because I am absolutely certain that it can not be successful. I think I stated yesterday that from all of my connection with railroads and with rate making, I have never yet known a particular rate to be made with reference to dividend requirements of the companies. I do not refer to the general level of rates. I will not undertake to enumerate all of the objections, but you see at once that some railroads with a given system of rates would earn a great deal and others would become bankrupt. The conditions on the roads vary so that it is impossible to fix rates with reference to dividends of a company. You have to fix the rates with reference to the traffic and the needs of the public and not with reference alone to the needs of the railroad company.

Rates, I believe, are commercial matters. I believe the development of the country in the past and, I feel confident, the development of the future, will require that rates continue to be what they have always been, a commercial proposition. The rates have got to be made with reference to the needs of commerce.

We are not starting out with a new system where the rates will be made all over again, but the rates are already made. They have grown with the railroad business. The relations have been adjusted with reference to the development of the railroads and the commerce. You can not disturb that by launching upon an entirely new system. It is entirely a matter of expert adjustment. The matter of rates is largely dictated by the commercial necessities and by the needs of the traffic and the needs of the different communities, by competition of ports and manufacturers and markets. There is an endless multitude of circumstances that enter into the making of rates, and the probabilities are that nobody could give half the reasons that actually entered into the making of any given rate to-day—certainly not any made several years ago. Any attempt to base rates on the value of the railroads or only on the needs of the railroads for revenue would be disastrous. So, one witness here, I believe, suggested a system of rates that would pay 6 per cent on the value of the roads or the investment in the roads, and that the rates be put up or down as the necessity for keeping up the 6 per cent developed. Of course, I can not imagine anything that would be more distressing to the business of the country than such system of rates.

Your question suggesting that a fund be created to continue dividends in lean years—that would mean, I suppose, all the railroads of the United States would be pooled, because you would have to take care of the weak roads as well as the strong. I suppose it contemplates that all the railroads of the United States be put into one ownership.

The CHAIRMAN. I did not have that in contemplation at all.

Mr. LOVETT. I do not see how you can work it unless——

Mr. ADAMSON. Some railroads are lean all the time.

Mr. LOVETT. Yes; some railroads are lean all the time. I believe more people are served by the lean roads than by the fat. You can not ignore the lean roads in this matter. I should say that rates must be left to the commercial interests of the country, to the railroads, and to supervision by the proper Government agencies. It is simply one of those things that can not be settled. The Government and society are in a constant state of ferment and progress, and so it is with rates. It would be very convenient to have a rule by which to measure rates—to have a commission sit down and say this is reasonable and this is not, etc., but it can not be done. We have tribunals for deciding—not always justly—but deciding these matters. There is absolutely no rule—and I say it with all the confidence any man can feel after a great deal of experience with rate controversies—that there is absolutely no rule for deciding rates. We know what a confiscatory rate is, and we know what a rate is that will not permit the traffic to move. It is necessary to leave the matter to be worked out under commissions as they have been working it.

I think the plan you have suggested is utterly impracticable, unless you are preparing to pool all of the railroads all over the United States and let the strong railroads carry the weak railroads, and that I do not believe anybody favors.

The CHAIRMAN. I understood you to say that in making the rates the needs of the roads are not considered, and yet was not that the basis for the application for an increase of 5 per cent?

Mr. LOVETT. Yes; but the rates had already been made—the adjustments had already been made—and they put a certain increase on certain commodities. I referred particularly to original rates and not to a general advance or decrease to a new level as for an emergency.

The CHAIRMAN. In doing that they considered the needs of the roads. So, as a matter of fact, they do consider the needs of the roads?

Mr. LOVETT. Yes; when an appeal is made to the rate-making power for an increase in rates they do base it upon the needs of the roads.

The CHAIRMAN. Now, the thought I had in this section is this: That by a limitation of the dividends fixed at a rate that would attract capital into the roads, that you would thereby automatically have one of three things—if there was any surplus above those dividends—namely, the betterment of the roads, reduction in rates, or improvement in the wages and conditions of the men, or in perhaps all of them. All of those are beneficial purposes. Then I had in view the history of the New York & New Haven road, whose charter limited their dividends to 10 per cent—a charter granted a long time ago. So long as they operated under that charter and avoided the scheme of expansion subsequently developed the limitation of dividends resulted in an enormous betterment of the road, so much so that the New York & New Haven road, I believe, was regarded as the best railroad in the country. It resulted in the improvement of the terminal facilities, the multiplication of tracks and sidetracks, and it was the most perfect machine in the country for transportation.

Now, they broke loose from that charter restriction. I do not know how or whether it was sanctioned by law or not, but they landed in difficulty later on. You will observe that this provision does not compel rates which will yield 6 per cent dividends—yield these dividends. It simply provides that no reduction in rates shall be made which shall make it reasonably probable that the dividends can not be maintained, leaving it harder for the road itself, I imagine, to meet such conditions as might necessitate a reduction of rates in order to maintain any business or get any business. I agree with you that you can not by a mere legislative enactment give a road business. It has got to meet the market in some way; but the purpose of this was to prevent the regulative power being used in such a way as to diminish its dividends and to limit the dividends in some way as to make the surplus available either for dividends in the lean years or for improvement of the roads or the reduction in rates or the betterment of the wages and conditions of the men.

Now, don't you think that such a provision as that would, over a series of years, work out automatically a reduction in rates, betterment of the roads, increases in wages, and improvement in conditions of the workingmen?

Mr. LOVETT. On the very rich roads—the strong roads—it would make them better roads and improve or, perhaps, increase wages and, perhaps, reduce rates. It would make it still harder for the weak roads to live and to meet their competition. I should say, if you are to limit dividends, you had better pool the interests of all the railroads. If the rich roads can get only so much, you had better help the weak roads; otherwise, if you are going to treat each road separately, you will make the good roads better and the poor roads poorer.

The CHAIRMAN. You think it would necessarily have that effect on the weaker roads?

Mr. LOVETT. I should think it would.

The CHAIRMAN. Provided they have the same traffic area; yes.

Mr. LOVETT. The more money spent extravagantly on a railroad in improving it, the more attractive it will be to the public, and that much more business it will take away from the poorer competitor.

Mr. HAMILTON. Would that naturally lead, in the course of time, to the absorption of the poor competitor?

Mr. LOVETT. If it is a competitor, then, under the existing law, of course, it could not be absorbed; but I do not know what would become of it.

Mr. HAMILTON. There seems to be means for what you call indirect absorption—selling out, perhaps, to those who want to buy.

Mr. LOVETT. I have not discovered any in recent years, Mr. Hamilton. I think one of the benefits of the Sherman law is to diminish the nuisance value of a good many roads.

Senator TOWNSEND. Do I understand, Mr. Chairman, that Senators and Representatives can enter into your questions here? There are a lot of things that I should like to ask at this time, but I hesitated to interrupt you.

Mr. ADAMSON. The rule adopted was that the witness should make his statement, his opening statement, without interruption, but that on cross-examination we can mix it with you.

Mr. HAMILTON. I do not understand it as Judge Adamson states, although I believe it would be an excellent innovation.

Mr. ADAMSON. The prohibition was only with reference to the direct statement.

Mr. HAMILTON. By way of apology, I wish to state that I had an illustrious example.

Mr. ADAMSON. And your illustrious example was proceeding by authority.

The CHAIRMAN. I will only say that I understood the rule to be that it applied both to the direct statement and to cross-examination.

Mr. ADAMSON. This rule, I think, would apply to the cross-examination—that we should ask the chairman's permission to interrupt him. That I have done in each instance.

Mr. SIMS. The rule was that each conduct his own examination, and should be permitted to finish before interruption.

Mr. ADAMSON. That is not the rule at all; but politeness would require that we ask the chairman for permission to interrupt the examination.

The CHAIRMAN. We will settle that in executive session. As I have yielded to others, Senator, I should be glad to yield to you.

Senator TOWNSEND. I do not want to violate the rule, but if we all take as much time as you have we would never have time to talk about anything. I simply have a few questions which I should like to put at this time to develop certain features of this matter. Of course we are never going to get through with the examination if we each take as long as the chairman has and proceed in this way.

Senator CUMMINS. Our rule is in writing.

Mr. HAMILTON. We have not all got bills.

The CHAIRMAN. I will proceed. I will close in a few minutes.

Mr. ADAMSON. The rule we adopted was for the convenience of the witness as well as for the acceleration of business. The rule was that he should make his direct statement without interruption, and when the examination begins it was only necessary to ask permission to interrupt, as both Senator Cummins and I have done.

Mr. HAMILTON. I did not have that interpretation of the rule.

Mr. SIMS. Judge Lovett will stay with us until the next strike anyway.

Mr. LOVETT. I am in no hurry.

Mr. CHAIRMAN. I will close my examination in a few moments.

Judge Lovett, we have already spoken of the police powers of a State. I realize, of course, the embarrassment for a great system of railroads to be under the direction and control of 10 or 11 sovereignties, one the national sovereignty and the other the State sovereignties. In the exercise of these police powers by the various States do you find they exercise them with reference to crews and other conditions of service in such a way as to embarrass interstate operations?

Judge LOVETT. Speaking for the Union Pacific, Senator, I should say no, except that one State on our line has passed what is commonly known as the "full-crew law," which has subjected us to an absolutely useless expense. Beyond that we have no trouble with the police powers as exercised by the various States. We are quite as anxious as they are for reasonable measures of safety. They require some things of us sometimes that we do not agree with—building some depots which we think are not necessary—but generally they are not large items. I stated at the outset that very few States in our territory have laws regulating the issue of securities—only three—and with those States we have had absolutely no trouble. They have assented to what we sought to do. The only real grievance in our territory is on account of some 2-cent-fare laws. But so far as the police powers are concerned we have had no difficulty and have no complaint.

The CHAIRMAN. In your experience, when the State commissions act do they have hearings in the immediate communities that are affected, or do they hold hearings at some central place?

Mr. LOVETT. Generally at the capital.

The CHAIRMAN. Have you observed both systems?

Mr. LOVETT. Do you mean where they are held in the immediate locality?

The CHAIRMAN. Yes.

Mr. LOVETT. Yes.

The CHAIRMAN. How does it work?

Mr. LOVETT. I think it was satisfactory to everybody—to the public and to the roads.

The CHAIRMAN. Such hearings are likely to become common meetings?

Mr. LOVETT. Yes; they are.

The CHAIRMAN. Public sentiment is both expressed and becomes formed?

Mr. LOVETT. Yes; generally they are like town meetings, and they are generally held at the capital; sometimes in some other locality.

The CHAIRMAN. Do not those meetings serve the purpose of bringing about a better understanding between the railroads and the communities?

Mr. LOVETT. Yes. I think they are very good. I am not objecting at all. Any system of regulation that is devised ought to be brought close to the people. That is why I suggest these regional commissions—call them regional or call them anything you like.

The CHAIRMAN. But if we should have a region comprised of 10 or 12 States, it would be rather difficult, would it not, to get into immediate relations with the different communities, as the State commissions do?

Mr. LOVETT. No; I think not. I see no reason why these regional commissions should not go wherever there is any matter to hear. It would be very much better than now. People are brought from all over the country to Washington or other great centers to appear before the Interstate Commerce Commission.

The CHAIRMAN. It would be an improvement, of course, upon the present system?

Mr. LOVETT. Yes; a very great improvement.

The CHAIRMAN. But could you bring a regional commission into direct touch with the various communities, as the State commissions are brought?

Mr. LOVETT. Not to the same extent. They would not be candidates for office, for instance. Candidates travel over States sometimes for campaigns.

The CHAIRMAN. I mean in the discharge of their duties.

Mr. LOVETT. It depends on how many regional commissions there are.

The CHAIRMAN. That is what I wanted to know. I want your own view on that subject as to whether five is enough.

Mr. LOVETT. There ought not to be less than five, and if I were framing the law I should provide that there should be not less than 5 nor more than 20, and leave the Interstate Commerce Commission to define the territories they should be appointed in, and I should provide some method by which more could be created.

The CHAIRMAN. Could you suggest in the law itself any field of activity for the State commissions?

Mr. LOVETT. As State commissions?

The CHAIRMAN. As State commissions, I mean, in presenting the interests of their States before the commission.

Mr. LOVETT. In my conception of the relations of the States and the Federal Government I would not mix the State officers and Federal officers dealing with the same subject.

The CHAIRMAN. Yes; but if you had one acting as the counsel and the other as the judge, there would be no conflict, would there?

Mr. LOVETT. I think you must leave to the State commissions the functions they will exercise. That is a matter for the State law.

The CHAIRMAN. We could in a law facilitate that and perhaps provide for part of the expense.

Mr. LOVETT. I see no objection to that.

The CHAIRMAN. Another thing. The law, I believe, at present requires that the decisions shall be in writing, does it not?

Mr. LOVETT. I think so.

The CHAIRMAN. Do you think it would facilitate the determination of these questions, speed the business, if that requirement of the law were left out?

Mr. LOVETT. I am inclined to believe it would. I know it would.

The CHAIRMAN. Would it work as satisfactorily, do you think?

Mr. LOVETT. I think it would.

The CHAIRMAN. Both to the public and to the carriers?

Mr. LOVETT. Yes; I believe so. Unlike most lawyers—perhaps because I am not so active as a lawyer now—I am very much in favor of abolishing most of this opinion writing in the courts, as well as by commissions and officers.

The CHAIRMAN. Judge Lovett, would it be possible for you to give, in a tabulated statement of some kind, an idea of how national incorporation would work with reference to your company, so that it would be condensed and concise, with, perhaps, a diagram showing how the organization would be accomplished?

Mr. LOVETT. I am not sure that I could put it in tabulated form, Mr. Chairman, but I could put it in a few words.

The CHAIRMAN. If you could prepare carefully some such statement, I think it would be of service to the committee.

Mr. LOVETT. I endeavored to do that generally in respect to corporations in my statement on yesterday.

The CHAIRMAN. Judge Adamson, do you wish to examine the witness?

Mr. ADAMSON. In the outset of your statement, Judge, I understood you to indicate that on your system of roads you would have had very little difficulty.

Mr. LOVETT. Yes.

Mr. ADAMSON. You worked smoothly with the State governments and the State regulations?

Mr. LOVETT. Generally; yes.

Mr. ADAMSON. The only specific difficulty I remember you mentioned was where one State had passed a full-crew law possibly some other had adopted a 2-cent rate. The Federal regulation up to date—you register no specific objection to it, do you? It is the State regulation you desire to exempt yourselves from?

Mr. LOVETT. My objection to the Federal regulation up to date is principally, I should say, because of the delay due to the inability of the commission to promptly dispose of cases—

Mr. ADAMSON. I understand that.

Mr. LOVETT. And in the resultant suspension of proposed increases in rates.

Mr. ADAMSON. I understand that you think the business is clogged; and I agree with you; and twice our committee has passed a bill and

sent it to the Senate to relieve that necessity by increasing that commission, but the Senate has not seen proper to agree with us as to the necessity. But, aside from that piece of machinery, what I mean is the acts of Congress up to this date to regulate interstate commerce, you make no particular objection to them?

Mr. LOVETT. I object further to the combination in one body of these various inconsistent functions.

Mr. ADAMSON. That is, in the same piece of machinery. I understand your objection to that. You think the body that passes on the rates and practices ought not to perform the duties purely administrative and the duties of prosecuting for violations?

Mr. LOVETT. Yes.

Mr. ADAMSON. Aside from that, the acts of Congress that have been made from time to time you think are generally wise, do you not?

Mr. LOVETT. Yes.

Mr. ADAMSON. You mentioned only one, I believe, and that was the prohibition of rebates. Of course, that was the most crying evil at that time and hurt the railroads as much as it hurt anybody else.

Mr. LOVETT. Yes; as between the acts of Congress as they exist to-day and the unrestricted rule of the railroad men, I should a thousand times prefer the acts of Congress.

Mr. ADAMSON. You stated that the difficulties about which you were testifying were applicable to other roads and not to your own system?

Mr. LOVETT. Not to the Union Pacific so much, because, as I explained, the State that incorporated the Union Pacific and which confers its corporate powers has never had a railroad commission until this month. Utah created one this month, but has not given it any supervision over securities. Several of the States in our territory have no commissions, and those that have commissions have always been fair and cooperative. Therefore we have no complaint against the commissions in those States, except, as I said, some 2-cent rate laws and "full-crew" laws and some minor regulations. Some had required us to run trains we do not think we should run.

Mr. ADAMSON. I take it that the fact the States have not deemed it necessary to enact any further regulatory legislation is that the administration of your system is giving local satisfaction.

Mr. LOVETT. Well, that is claiming a good deal more than my modesty will permit.

Mr. ADAMSON. Is it not your observation that——

Mr. LOVETT. There are other railroads in our territory, and I should have to also claim it for them.

Mr. ADAMSON. That may be true of them. But you are talking about yours. Now, it is your observation, is it not, that this local legislation, which you find objectionable, usually results from some local complaint as to the conduct and administration of the road?

Mr. LOVETT. No, sir; that is not my observation. My observation of State regulation of railroads in many instances is not influenced by any mismanagement or misconduct of the roads in that territory, as far as I can observe it.

Mr. ADAMSON. Do they not think so, and is that not the reason they legislate?

Mr. LOVETT. I could not answer as to their ideas.

Mr. ADAMSON. You do not think they would just willfully proceed to legislate against you because you were easy marks when they were not dissatisfied and saw no reason for legislation?

Mr. LOVETT. I think most of the oppressive legislation against railroads is due to lack of information upon the part of the public, due also to misconduct of some railroads—some of it very ancient, however—and some conspicuous cases perhaps of unjust practices——

Mr. ADAMSON. I have no doubt you find it true that an injury, real or imagined, rankles for a long time in the public mind, and also that one injustice is oftentimes remembered and visited on innocent railroads. I have no doubt of those two facts.

Mr. LOVETT. I am quite sure that some very harmful State legislation existing to-day—I will not specify—is due entirely to a case of dishonesty and oppressive acts of a railroad officer about 30 years ago; and there has not been another case like it in that State in 30 years.

Mr. ADAMSON. Speaking of the ratio between the local and interstate business, you stated that the proportion of interstate business on your road was very large, some 88 per cent of the whole. That is due to the condition of your road, that it is a transcontinental road and so much of your business is long hauls, is it not?

Mr. LOVETT. I do not believe our percentage on interstate business is much larger than most other large systems, except in certain States. I mentioned Texas because of its immense area and that, as an outlet, it reaches the Gulf ports. I mentioned California as another example. But take the eastern roads. I apprehend, without knowing, that quite as large a percentage of the business of the Pennsylvania Railroad, the New York Central Railroad, the Baltimore & Ohio Railroad, and the Southern Railroad is interstate as on the Union Pacific.

Mr. ADAMSON. Well, they are somewhat similar to your road. The three you mention in the East go through the populous part of a route that serves the Union Pacific Road.

Mr. LOVETT. I am sorry to say they do not handle much Pacific business.

Mr. ADAMSON. Yet, from Chicago and St. Louis to the East they do have long hauls?

Mr. LOVETT. Oh, yes.

Mr. ADAMSON. You stated that in all probability undertakings for construction and extension would be confined to the activities of existing roads. It would not be likely that independent roads would be constructed in the future. Would not the Federal incorporation which you seek insure that condition?

Mr. LOVETT. I do not think it would have any effect on it.

Mr. ADAMSON. Of course you must be aware of the fact, as an observer of men and measures, that old railroads, firmly established, having prestige, can, whether they openly assert it or publicly declare it or not, deter the construction of other lines of railroads where it would interfere with their existing business; and if you are fortified by this act compelling all railroads which engage in interstate commerce to be incorporated by the Federal Government, and the further fact that a road could not live on a 12 or 15 per cent of business allowed by your estimate of local business, I do not see how it would

be possible to ever construct another road unless one of your old corporations gave its consent.

Mr. LOVETT. Dividing that question, Judge Adamson, and answering first as to the ability of old established roads to prevent the construction of new roads, that is not my experience. I know that independent roads are being built in what we regard as our territory, and we can not prevent it.

Mr. ADAMSON. Possibly you have been fair and have not tried to prevent it.

Mr. LOVETT. No. If I could do it, I would do it, because I believe the roads are unnecessary and that they are not going to do the community any good.

Mr. ADAMSON. Right there is where you encounter another difference of opinion, is it not?

Mr. LOVETT. Yes.

Mr. ADAMSON. Some of these States think that the railroads have done wrong and pass local statutes, and you think you have not done wrong and think those statutes are oppressive?

Mr. LOVETT. Yes.

Mr. ADAMSON. I may know of a large section of the country, which I do know of, which has the right to be built up. It is not a finished territory like some of yours. It is there under all the blessings of Providence and surrounded by three or four railroads which do not think a new railroad is necessary, and although we have organized three or four enterprises, when we have gone into the money markets to get money, somehow the people that had money were quietly advised by somebody that that road was not necessary and ought not to be built; and I know one that was built in spite of all that. It relieved the monopoly in six or eight different places where it was constructed, but it had litigation at every point; was opposed at every point by the old roads; its finances were crippled; and finally it went into the hands of a receiver before it was finished. It has triumphed through the desire of the people and is there running, although not very profitably. Now, if you succeed in passing a law compelling all corporations to take Federal charters, I wonder if it would be insisted that the commission could compel any of them to become parts of a joint through route, with a joint rate in interstate commerce.

Mr. LOVETT. To continue, if I may, Judge Adamson, my answer to your first question. I do not understand that Federal incorporation would discourage the building of local roads. My judgment is it would promote it. The provisions of the act of Congress for incorporation, I take it, would be simple, and it would be quite as easy for a man or group of men to prepare their articles of incorporation, send them to the Interstate Commerce Commission, and file them as it would be, for instance, if it were in your State, to get a charter in Georgia.

It would tend to promote them further in this respect. A man in Georgia may be familiar with the Georgia laws and know the processes for incorporation of companies and their rights and powers as Georgia corporations, but a nonresident may not—probably does not. So, under Federal law every man in the United States would be controlled by the same law in incorporating railroad companies, and outsiders could more readily go to your State and incorporate and build a railroad, and you would get capital in there in that way.

I can not conceive it possible that there would be less building of local lines under Federal incorporation than under State law.

Mr. ADAMSON. I understood you to state, in answer to the chairman, that when you once secured the act compelling all to go into Federal incorporation that then you could amend and perfect it in detail as experience and study indicated. If that be true, why you might, after you once passed this law, then do something in a progressive way, and this is the crux, as I understand it, of the trouble I am putting to you right now. If in that original law you provided or omitted to provide that the commission may compel any local road to become a part of a through route or a joint rate——

Mr. LOVETT. I never meant to suggest that they become a part of any system. The independent road would be where it is now, except that it would be subject to the Interstate Commerce Commission in respect to its rates.

Mr. ADAMSON. Of course, at this time we all want them to go into interstate commerce and put an end to through routes and joint rates. If one of them builds up to a station where there is another interstate road and takes a passenger or a package, it is already interstate business. If you are going to compel everything to go into interstate commerce and the existing companies are going to do all the extending, and there is only 10 or 12 per cent interstate business, if a local company does not go into interstate business it can not live on 12 to 15 per cent.

Mr. LOVETT. That is going to be true whether you have Federal incorporation or not, because the situation is such that there are very few companies under the restrictions that exist in the various States which can build and succeed, and that is wholly without reference to whether you have Federal incorporation or not.

You mentioned a road that was commenced, or that attempted to operate, or an attempt was made to float it, and they could not get the money; and you assumed that was upon the advice of somebody, probably of some existing railroad.

Mr. ADAMSON. I do not think that is an assumption in the case I mentioned.

Mr. LOVETT. Perhaps not. But you must bear in mind that when a man goes to New York, where most people go to raise money for railroad enterprises, he is going into a community where there are on the market millions and millions of securities known to be of value. The business man who wants to invest his money—an investment, not as a speculation—can find all of the absolutely good railroad securities he probably wants to buy. If he is to take up a new railroad project that may or may not succeed, he wants something more than an investment; and under Government regulation that speculative element can not be given him any more. That is why—or one of the main reasons why—new railroads can no longer be floated independently. It will require the credit and backing of the existing systems. Why should you, being in New York, or elsewhere for that matter, take 5 per cent bonds on a new railroad down in Georgia—5 per cent bonds or 6 per cent bonds at par—on a railroad that may be a failure, when you can invest all the money you have in first-class gilt-edge established railroad securities at that rate?

Mr. ADAMSON. I understand your reasoning in that case; but suppose you take a certain premise and say three or four other corpora-

tions in that community who have their bankers in New York—and all the money is akin all over this country—and those three or four existing corporations having bankers that understand one another simply say, "That is not necessary because we can do the business." That is the trouble I speak of, and that is liable to be the case.

Mr. LOVETT. I have been rather intimate with certain banking circles in New York now for about 15 years, and maybe it is because they do not care for it, but I do not recall that they ever asked my advice about taking up a new railroad proposition. They need no advice.

Mr. ADAMSON. I do not think you would say anything against us if they had, Judge Lovett.

Mr. LOVETT. I am not sure I am so good as that. But they know; those men do not need to be told by railroad men. You can not get bankers in New York—at least, large banking houses—to take up a new and unknown and unestablished railroad enterprise when they are to get only 4 or 5 per cent on their money, when they can invest all they wish in securities they know to be good. Why should they?

Mr. ADAMSON. I have such a good opinion of you, I so like your statement, that I honestly believe, without asking, that you run good local trains so as to accommodate the local people as well as the through passengers, stopping at the stations. Is that not true?

Mr. LOVETT. Well, I am not so sure of that. Chairman Bristow, of the Kansas commission, is present, and he made us run some trains that we would not have run otherwise.

Mr. ADAMSON. That is one of the most potent influences that cause dissatisfaction of the people of the State with these consolidated systems. They forget about the local communities and give their attention to the through travel and let the local people, who have to make the verdicts for them, who give them a local patronage, and on whom they depend a great deal, let them have second-class cars and let them go in town before day and return after night, and run all their good trains through at top speed. That is the most provoking thing I have seen operated in local communities. Through that the railroads arouse a great deal of what they call unjust, oppressive legislation.

Mr. LOVETT. Undoubtedly that is true. It costs a lot of money to run trains, especially on the eight-hour basis, but we do try to take care of our local business. Our business comes from them, whether State or interstate. The business arises on our line, and we try hard to take care of it, and we do a good deal of it that does not pay us. We do not always do as much as some of the commissions think we should, and perhaps not as much as we should, but we try.

Mr. ADAMSON. If you have a couple of good towns within 100 miles of each other, doing a tremendous business and paying you lots of money, you can afford to accommodate the people between, you know, because the doctrine that the two cities ought to keep up the wagon road between.

Mr. LOVETT. We are very keen to develop our local business.

Mr. ADAMSON. It is apparent to you and to the chairman, who is a most advanced apostle of this innovation, who admits there will be some difficulty in getting the people and Congress to agree to this scheme at once—and it may be an indefinite length of time before it is secured—in view of those difficulties had we not better sort of

study about what we certainly can do and try to do the things that are needed—regulation of commerce, keeping the railroads alive and prosperous? For instance, do you know of any power, any regulatory power, that Congress, direct or through a commission, could exercise over Federal incorporations that it can not now exercise in controlling the local corporations, in regulating them, if it makes up its mind to do it?

Mr. LOVETT. Yes; I am afraid, as I indicated in my statement yesterday, that a State might be able to repeal the charter of its corporations and in that way defeat the object of Congress.

(Thereupon, at 1 o'clock p. m., the committee adjourned until tomorrow, Thursday, March 22, 1917, at 10 o'clock a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

THURSDAY, MARCH 22, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint committee met at 10 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. Judge Lovett, there is no consideration of courtesy now that prevent us going ahead. I secured the order of the committee yesterday that whoever was here might go ahead and meet.

When we suspended yesterday you were answering a question about the Texas situation. I had asked you if it were not possible at present, if Congress so willed, to regulate all the carriers as effectually as if they were under Federal charters; and you said except in the case of Texas, where they threatened to forfeit the charter if they complied with Federal regulation.

Mr. LOVETT. I do not recall that I specially mentioned Texas in that connection, but, however, that may be——

Mr. ADAMSON. Here is the way you stated it: That a State might forfeit a charter and that Texas had already threatened to do it.

Mr. LOVETT. Yes; but I had not finished my answer to your question.

Mr. ADAMSON. Very well; proceed.

Mr. LOVETT. I have no doubt that Congress has the power to accomplish all the objects I have indicated as being necessary by legislation with respect to State corporations, except where States have reserved, either in the constitution or in the charter of the company or in some general law under which railroad companies have been incorporated, the right to alter, amend, or repeal the charter of railroad companies—and most of them have reserved that power. In those cases, as I indicated in my direct statement, I believe it would be possible for a State to repeal the charter of any railroad company which issued securities or obeyed a Federal law with respect to the issue or sale of securities rather than the law of the State. That, to my mind, is the only substantial difficulty. I will not say "It is the only substantial difficulty," but it is the most serious difficulty that occurs to me in the way of legislation by Congress designed to carry out these reforms, by operating upon the existing State corporations. There are a great many inconveniences and handicaps that I can foresee would occur but which would not defeat the object of Congress. For instance, I believe one great

advantage of Federal incorporation would be in the fact that every railroad corporation in the United States would have the same power and be governed by the same law with respect to the issue and sale of securities.

Mr. ADAMSON. But I said "Congress"; I did not say "the present law," you know. I said the present instrumentalities could be as effectually regulated through the power of Congress as if they were Federal corporations. For instance, the charter you speak of is a State law; and any reservation in it is a State law. Anything that Congress does to regulate interstate commerce is a Federal law, to which every State law must bow. Now, if we see proper to legislate just as fully as Congress desires to do—it may be to the extent you wish, that they shall do so about stocks and bonds—would it make any difference whether a State railroad charter stood in the face of that?

Mr. LOVETT. In other words, you ask whether, with such a law by Congress, the State could repeal that charter—which would kill the corporation?

Mr. ADAMSON. Could anything in that charter stand in the way of regulation by Congress if Congress attempted to regulate that carrier as it now exists?

Mr. LOVETT. I am afraid the right of repeal would stand in the way.

Mr. ADAMSON. The power to regulate commerce applies universally in a plenary manner to every instrumentality engaged in interstate commerce, whether it is a corporation, an artificial person, or a natural person. As I understand it, the Federal law superadds, if I may so speak, to the duties and requirements of the State law, whether it is an individual or a corporation, and nullifies every local requirement inconsistent with the Federal law. For instance, you say the State could repeal the charter, which would kill the corporation. A State may kill a man, but if it is in violation of a Federal law it can not do so; we take it to the Federal court and save him. Now, it seems to me—and I just ask you if you will not agree with me—that if a State, in resistance of a regulation by Congress, should pass a law repealing a charter, the property rights in that road could not appeal to a Federal court and have a receiver appointed and an order entered that that road be operated until the matter could be settled and thus nullify entirely the act repealing the charter in that way?

Mr. LOVETT. If the State should repeal the charter, undoubtedly a receiver would be appointed. That would have to be done in order to administer the road. But that would not accomplish the financing of the enterprise.

Mr. ADAMSON. I understand.

Mr. LOVETT. To answer your question further, it is quite possible that if an act of Congress should go so far as to declare that any State law or any action of any State designed to repeal the charter of a railroad company should be void as an interference with interstate commerce, that might meet the difficulty. But that would be going too far.

Mr. ADAMSON. Well, I do not know. Your proposition is to compel, without even a vote of the directors or stockholders or the con-

sent of the State or anyone else, all these people to change their clothes and make them a Federal corporation. I do not see how anything could go further than that.

Mr. LOVETT. That is not going as far as your proposition, I think.

Mr. ADAMSON. If that does not nullify a State charter, I do not know what would.

Mr. LOVETT. Oh, yes; it would nullify State charters. But what I mean is that maybe there are some State charters that ought to be forfeited by the State some time; and, in order to prevent a State from forfeiting a charter for obeying a Federal law, you would have to make your prohibition so broad that it would prevent the forfeiture of a charter for any purpose.

Mr. ADAMSON. I do not want to submit any drafts of proposed law to you in view of the bad luck our illustrious chairman had in submitting his bills to you yesterday.

Mr. LOVETT. They were interesting.

Mr. ADAMSON. But I suppose Congress, in passing a general provision for the regulation of securities, should do something like this—I do not say just this: If the charter of any carrier engaged in interstate commerce shall be forfeited, repealed, impaired, or restricted in any way by State action, because of interstate regulation by the Federal Government, a receiver shall at once be appointed by the United States court and the receiver shall, under the direction of the court, operate the property under the terms of the original charter and in compliance with the requirements of Federal regulation until the railroad company shall be reorganized under either State or Federal charter?

Mr. LOVETT. I think, Judge, that would be making effective the action of the State in forfeiting the charter of the company. In other words, take a State railroad corporation in a situation presented under such a law as that. The State authorities would intimate to the railroad company that "If you issue these securities we will take steps to forfeit your charter." The railroad company would see that in case the charter was forfeited it would lose control of its property, and a receiver would take charge of it indefinitely, they certainly would not issue the securities and thereby incur the disaster of a receivership.

Mr. ADAMSON. They would operate under Federal regulation.

Mr. LOVETT. No. The receiver would operate for them. They could not issue stock or bonds; in other words, the receivership would mean bankruptcy for the road.

Mr. ADAMSON. I will make two more suggestions. The alternative you stated yourself, and therefore I do not propose it in submitting this to you; that is, that it would prevent the forfeiture of any charter, which of course would simply mean that from now on these corporations are, in effect, Federal corporations. Now, your proposition is to have a general incorporation act and to compel—I did not mean to say "your proposition," but I will say "your suggestion"—all common carriers at present to incorporate under Federal law. If that can be done at all, why have so much machinery and circumlocution about it? Why not just declare them, in effect, Federal corporations and be done with it? For instance, why not have something like this—short and sweet: "All carriers subject to the act to

regulate commerce shall immediately register with the Interstate Commerce Commission as Federal corporations and shall immediately become Federal corporations, with all the powers and privileges conferred by their charters and such others as may be imposed, directly or indirectly, by Congress, but shall be exempt from all duties and requirements of their charters and all State laws inconsistent with complete Federal regulation." What is the reason that would not do your work in short order?

Mr. LOVETT. That would be satisfactory to me.

Mr. ADAMSON. I should think so. I will favor that in preference to the other myself.

Mr. LOVETT. I am not in favor of any circumlocution about it. My idea would be that there should be a law that would define the powers of these corporations——

Mr. ADAMSON. Do you not believe, Judge, that you would divest the subject of more difficulties and smooth the path for Federal corporation by putting it this way: "Any existing State corporation engaged in transporting interstate commerce may, on unanimous vote of the directors and stockholders and with the consent of the State which chartered it, register with the Interstate Commerce Commission as a Federal corporation and shall immediately become a Federal," etc., just reading as the other did? One would be optional and the other compulsory.

Mr. LOVETT. I believe the State in many cases would not consent, and therefore I do not believe that would get us anywhere.

Mr. ADAMSON. Then, would you not encounter an insurmountable constitutional difficulty if you attempted to compel Federal incorporation when the State which chartered it, and together with it grew up in reciprocal rights, and without the consent of the stockholders—do you not think that would be depriving the people of something improperly without due process of law and without their consent?

Mr. LOVETT. No. I believe it is perfectly consistent with the Constitution, and I can not, myself, see any constitutional objection. I believe, Judge Adamson, if you will allow me——

Mr. ADAMSON. I understand your argument, Judge, that when we signed the Constitution, we agreed to be regulated by Congress, but that means reasonable regulation; and, that being true, do you think the court would hold so revolutionary a course, without the consent of anybody, to be valid? That would amount to just taking it out of the State jurisdiction and putting it into the Federal jurisdiction.

Mr. LOVETT. I am about as confident as one can be about the decision of a court, that they would sustain that. I believe, Judge Adamson, that a very important factor in any system of Federal incorporation of railroad companies is that it shall be uniform; that it shall apply to all railroad companies; that everybody who deals with the corporation shall know exactly the powers that it has; shall know the steps by which it must proceed to issue securities, and how it is regulated. Instead of having investors considering conflicting laws and questions of power under a great many different States it is simplified if all is embraced in one act of Congress, and flows from one source, with all corporations on precisely the same footing, so far as their corporate powers with respect to financial operations are

concerned. I believe that is a very important aspect for any system of Federal incorporation. Instead of merely allowing the privilege of becoming a Federal corporation, with the powers conferred by the State, and with such as may be added by Congress, compel it and give all the same rule.

Mr. ADAMSON. Now, you insist, as I understand you—and the Supreme Court has said some things that you think squint in that direction—that if you have a Federal charter it will abolish the distinction between interstate and intrastate transportation?

Mr. LOVETT. That can be abolished without a Federal charter.

Mr. ADAMSON. Do you mean to say that you understand, from cases like the Shreveport case and others, that it is necessary to the regulation of interstate commerce that the people within each State should have just the same rates, under similar circumstances and conditions, that other States have on intrastate transportation?

Mr. LOVETT. Oh, no; not at all.

Mr. ADAMSON. Do you mean to say that in a haul between two points a hundred miles apart in Georgia, the rates and practices should be equivalent, if the circumstances and conditions are the same, as between two points a hundred miles apart in Alabama?

Mr. LOVETT. Not at all.

Mr. ADAMSON. Then, what you mean is that the intrastate rates in a State shall be practically equivalent to the interstate rates in that State?

Mr. LOVETT. No; I do not mean that.

Mr. ADAMSON. Then why do you insist that it is necessary to interfere with orders inside of a State in order to regulate interstate commerce?

Mr. LOVETT. Under the existing system of regulation by the Interstate Commerce Commission it is not pretended, and never has been, that the same rate per ton per mile, or the same rate for the same distance, shall apply everywhere.

Mr. ADAMSON. Oh, not exactly the same.

Mr. LOVETT. Nor substantially the same. There is the same variety in the rates now as there was under the private management of the traffic men. In various sections of the country the schedule of rates or the general level of rates is much higher than in another section. The rates are adjusted with reference to trade relations and competition of markets, etc. All the circumstances that enter into a rate and to the relations of rates exist under the present system of regulation as under the private rate-making system. What I mean is this—to make a general answer to your question—that railroads engaged in interstate commerce are instrumentalities of interstate commerce. Congress has the right to regulate them as such, and it has the right if it deems it necessary in order to make the regulation effective to exclusively regulate them. In my view, Congress, without creating a Federal corporation, can take absolutely the regulation of existing railroad companies away from the States. How far Congress will go in that direction is a matter intrusted to the discretion of Congress, which is almost unlimited with respect to interstate commerce.

Now, if Congress concludes or authorizes the commission to decide whether it is necessary to take control of the State rates, in order to make interstate regulation effective, I believe it has the power to

do it—which comes from the fact, as I indicated in my direct statement, that Congress is vested by the Constitution with the power to regulate interstate commerce, with the right to establish post roads, with the duty of providing for the national defense, with the power of making war; and all of these powers enter into this question. Now, if Congress should conclude that, in carrying into effect these powers that are expressly granted, it is necessary to take over the exclusive regulation of railroads as instrumentalities of interstate commerce, and as agencies for these other purposes, why, it supersedes the control of that subject by the States.

Mr. ADAMSON. Then, your idea is that the control applies to the instrumental vehicle through its whole course?

Mr. LOVETT. Yes.

Mr. ADAMSON. And that the regulation should be under that control, for the same reason?

Mr. LOVETT. It ought to be, in order to be effective.

Mr. ADAMSON. Why should the control of a rate between Atlanta and Macon, Ga., have anything to do with a rate from New York to either one of those points?

Mr. LOVETT. I am not familiar with the rate situation in that particular locality.

Mr. ADAMSON. Well, any other State; just point to any State.

Mr. LOVETT. I know of a great many situations where the interstate rate adjustment is controlled entirely by State rates. I can imagine that a rate between Buffalo, N. Y., and New York City might upset the whole rate situation in trunk-line territory.

Mr. ADAMSON. If New York State is so prosperous, and the business is so prosperous that the railroad can operate more cheaply between two points in that State, is it right to make them pay for the deficiencies in some other State through which the railroad runs?

Mr. LOVETT. When the Constitution was adopted certain special and peculiar rights that a particular State might enjoy with respect to interstate commerce, were surrendered as a consideration for other rights, resulting from the Union.

Mr. ADAMSON. Reasonable regulation.

Mr. LOVETT. So I should answer your question by saying that if New York is so situated that it can make a rate that will benefit it, and injure all the rest of the country, it ought not to be allowed to make it.

Mr. ADAMSON. I am speaking of local traffic. Is it right that she should not be allowed to do her local business at a lower rate?

Mr. LOVETT. Not if it injures the rest of the country.

Mr. ADAMSON. How would it injure the rest of the country?

Mr. LOVETT. I can imagine, for instance, on grain——

Mr. ADAMSON. Before you answer that, if I understand correctly, in the Sherevport case there was a point in one State which made a lower rate to a point in that State than it did to a point out of the State, other circumstances and conditions being similar, and that did affect interstate commerce, but not the New York case.

Mr. LOVETT. Let me say, at the outset, that I do not limit my reason for Congress to regulate this subject merely to its right to regulation of the instrumentality. It has the right to regulate the rate and the interstate commerce included in it; and included in that

is the right to regulate all the instrumentalities of interstate commerce. The Shreveport case, as I understand it, arose from the fact that the Texas commission made certain rates from Dallas and Houston, cities and jobbing centers in that State, to certain points, whereas the prevailing interstate rates from Shreveport to those points were very much higher, and the Texas commission coerced the railroads into maintaining this relative rate situation. They intended that Houston and Dallas should do the business of that territory, and the railroads well understood that if they reduced the interstate rates so as to permit Shreveport to enter that territory, the Texas commission would further cut the local rates so as to preserve the relative difference against Shreveport. That is the situation, as I understand it.

Mr. ADAMSON. That was differentiating between two points in the State, and one point in the State and one point out of the State: in other words, interstate commerce.

Mr. LOVETT. To state it entirely accurately, it was shutting Shreveport out of the jobbing business of Texas.

Mr. ADAMSON. That was the effect of it.

Mr. LOVETT. And the object.

Mr. ADAMSON. And the way by which that was effected was to put a lower rate into the State than there was coming from the other State?

Mr. LOVETT. That is the way it was made effective, yes.

Mr. ADAMSON. Now, Judge, I understand that the way States unsettle or interfere with interstate rates is by making the intrastate rates too low. That is generally the manifestation of it, is it not?

Mr. LOVETT. I have known of instances where a railroad company joined in an interstate rate or accepted as its share of an interstate rate certain divisions which were necessary for the interstate rate to be made, whereupon the commission reduced that road's local rates on entirely different articles as punishment.

Mr. ADAMSON. Are you ever troubled by intrastate rates that are made too high?

Mr. LOVETT. Intrastate rates?

Mr. ADAMSON. Yes. You never encounter intrastate rates that are too high to interfere with the regulation of interstate commerce, do you?

Mr. LOVETT. I do not recall any such case.

Mr. ADAMSON. I do not.

Mr. LOVETT. They may exist.

Mr. ADAMSON. The troublesome rates are the rates that they make too low?

Mr. LOVETT. I do not know any railroad company that has suffered from rates that were too high.

Mr. ADAMSON. I understand.

Mr. LOVETT. There may be such cases, but if a rate is kept up on one road and cut on another, the road with the high rate would suffer.

Mr. ADAMSON. I understand; but I just wanted to understand clearly the source of the trouble about these intrastate rates that dislocate the interstate rates. It is always that the State commissions or authorities make them too low, and never too high within the State. Now, Judge, you stated the other day something about whether or not rates were ever based on the consideration of secur-

ities—stocks and bonds. I do not remember accurately whether you said the commission never did, or whether the roads, in making the initial rate, never did it. Which was that?

Mr. LOVETT. What I meant, Mr. Chairman, was that I have never known a case where railroads themselves made rates based upon the amount of stock or bonds, or paid any attention to the amount of stock or bonds, in making rates. Of course, I have known of cases where, in controversies with regulating tribunals, the question of revenue was in litigation, and the amount of stock and bonds and fixed charges and dividends required, etc., entered into the discussion and into the consideration. But I have never known where any traffic manager or rate-making authority of a railroad company paid any attention to the amount of securities. I believe it is safe to say, from my knowledge of the men and from my connection with rate making, that probably up to 15 years ago the majority of traffic men who made the rates really did not know how much stock and bonds the company had or what the dividend or interest requirements were. They did not deal with that subject. Within the last 15 or 20 years under Government regulation they have had to pay more attention to stock and bonds, etc.

Mr. ADAMSON. When you initiate a rate—of course, some people sarcastically say that you take “all the traffic will bear”—I presume it is true that you consider the traffic situation and fix a rate according to the circumstances which you think will be remunerative and excite the least opposition and objection?

Mr. LOVETT. J. C. Stubbs, who is, I believe, generally held responsible for that phrase “all the traffic will bear”—though he denies that and makes some modification of it by saying, “what the traffic ought to bear”—relates an incident which I think illustrates rate growth very well, if I may take the time to recite it.

He said that many years ago a gardener or ranchman, as they are called in California, came into his office when he was the head of the traffic department of the Southern Pacific and told him that he had grown some raisins and he would like to try a shipment to the East, and wanted to know what the rate would be. At that time the charge for foreign raisins from the East to California was \$3 per hundred. Stubbs asked the man what rate he thought he ought to pay for raisins per carload eastbound. The man told him he could afford to pay \$1.50 per hundred, and the rate was at once fixed at \$1.50 per hundred; and the rate ever since for raisins from California to the East has not been over \$1.50, whereas the westbound rate was \$3 per hundred.

I fancy that if you could go back into the history of every rate made it would be found that it was largely prescribed by the shipper.

Mr. ADAMSON. Judge, if this transition is made from State to Federal incorporation, I suppose it would be expected that provision would be made for acquiring other roads, extending the road, making mergers with extension lines, just as they may do at present?

Mr. LOVETT. I assume, of course, that such a law would provide, first, for the incorporation of new companies. Then it would provide for the reincorporation of existing companies. It would then prescribe, I assume, what the powers of these corporations should be, specify them in the terms with which we are familiar in various

State laws, and specify the powers that the corporations should have, whether new companies or reincorporated companies. I assume it would also provide for the merging or consolidation either of new companies or of existing companies or of new companies with existing companies; and I take it that in that connection it would not permit any merger or consolidation or the acquisition of one railroad by another except upon approval of the Interstate Commerce Commission.

Mr. ADAMSON. I understand. It would provide a method?

Mr. LOVETT. Yes; and it would also specify to what, if any, extent the acquisition or consolidation of lines that were competitive should be allowed. I assume it would not allow the consolidation of lines that are substantially competitive. My own judgment, as I indicated the other day, would be against the consolidation of competing lines.

Mr. ADAMSON. You would not want to repeal the antitrust law while you were getting rid of the State regulations?

Mr. LOVETT. I would not. I do not believe, though, that it ought to apply to railroads to the same extent it does to a good many other interests. I suppose some other interests think the very reverse. But I believe the Interstate Commerce Commission should be authorized, when an application is made for consolidation of lines that are in a remote degree competitive, to consider whether the public interest will be promoted by the advantages of the consolidation more than it would be by the competition that exists.

Mr. ADAMSON. The reason I asked you in regard to the consolidation and acquirement of other roads was not to go into the details of organization but as a foundation for a further question. As I understand, your idea of transferring a company from one authority to another is that you would not affect the relative position of creditors and debtors and stockholders, but simply change the name and the control, and let the status quo be maintained. Now, that being true, that company's credit would be just like it was before: but if you acquire another company, the first one being like this southwestern company reported by the Commerce Commission—I believe they said it was worth \$12,000,000; it had cost \$30,000,000, and it was bonded for \$42,000,000—if you take that in as a Federal corporation, as it is, its credit or discredit would remain the same. But, then, suppose it proceeds to merge or acquire another road that is solvent. Would you bring it in on the same basis or would you average up the two, or how would you do that to improve the credit of either?

Mr. LOVETT. I would not, as I indicated yesterday, undertake to provide for any consolidation in the process of federalizing the companies. I would first have them become Federal corporations. I should be careful in the act to have a provision that would leave all questions as to the validity of their stock or the bonds and all questions as to liability precisely as they are.

Mr. ADAMSON. Judge, I understand you on that, and I want to ask you—

Mr. HAMILTON. I beg your pardon, but I understood Judge Lovett was going a little further in answering your question.

Mr. LOVETT. I was.

Mr. HAMILTON. I should like to hear that, if you have no objection.

Mr. ADAMSON. I beg your pardon; I understood that he was merely referring to what he said yesterday. Go ahead.

Mr. LOVETT. I was stating that as a basis for a further answer I was going to make to your question.

After these corporations are federalized, and they come to a point where it is proposed to merge the corporations you have described, by consolidation or otherwise, that subject should be dealt with specially. Whether the merger or consolidation of an insolvent corporation with a solvent corporation is to be allowed is a question for the Interstate Commerce Commission; and it ought to be left to the Interstate Commerce Commission to determine whether such consolidation ought to be allowed under such circumstances. You can not foresee—nobody can foresee—the various questions that will arise in working out any system of consolidation. It must be dealt with at the time by a tribunal that you would intrust it to.

Mr. ADAMSON. Of course, you can not foresee all of those things. But this committee is not legislating; it is only going to advise Congress. Congress will ask us a lot of questions when we report about what is going to happen, and some are going to say, "Yes; the very thing Judge Lovett states is what we are afraid of, that they will blindfold us and slip this thing through into Federal authority, and afterwards you will amend the law and do all the rest to us." That is exactly what they will say. But this is what I mean: You have a right, and we have, although we can not prescribe the legislation, to foresee what the subsequent steps might be; and you say that the main purpose of this is to help the finances of the railroads; that is the great desideratum. Now, if you take in that insolvent corporation that I have mentioned—and there are others similar to it in the country—its credit certainly is not helped by the transition from State to Federal incorporation. Then, if it is going to be allowed by subsequent legislation to merge with other companies, these questions will arise about how you are going to arrange them, and how that is going to help the credit of either, and bearing in mind the necessity for financing these railroads, I think it proper for us to anticipate and consider all of these things.

Mr. LOVETT. The only answer to that, Judge Adamson, is that as it is now, Congress has no control over them; no agency to pass upon consolidations at all. The matter is left entirely to the States. All the things done in the past have been done, of course, under authority of the States. These dangers you apprehend are dangers that exist now. Perhaps there are more restrictions upon some of them now than formerly.

Mr. ADAMSON. That is exactly what I say, Judge. I say we will avoid the apprehension by just doing it directly, under present conditions.

Mr. LOVETT. The laws of the States vary. Some States will permit almost any kind of consolidation.

Mr. ADAMSON. I am talking about a law of Congress.

Mr. LOVETT. I do not know any State that in authorizing consolidations undertakes to review the validity of the securities or to determine whether there is wind and water in the stocks and bonds, but they generally content themselves with providing, I believe, that in

the process of consolidation the aggregate amount par value of securities shall not be increased.

Mr. ADAMSON. But, judge, we are not comparing the present action of the States with what may be done on either line by Congress. What we are comparing in your proposition for Federal incorporation and my proposition to exercise the existing power of Congress under the Constitution to regulate them as they are.

Mr. LOVETT. As I have answered earlier to-day, I believe, Congress has power to deal with the subject just as fully with existing corporations as it can by Federal incorporation, but not as well, not as effectively, not as orderly; not without a great many more difficulties and complications than would be encountered under Federal incorporation. But so far as dealing with consolidations under the act of Congress, my judgment would be to intrust that to the Interstate Commerce Commission when it is called upon to approve the consolidation.

Mr. ADAMSON. Under either plan?

Mr. LOVETT. Under either plan. You have got to do it. Congress can not itself, I take it, deal with such a complex subject to meet every possible case. I think this, Judge Adamson, if I may be permitted one further observation: The great trouble the railroads are suffering from is that in most of this regulating legislation the eye of the law-making power is centered upon some apprehended evil, such as you apprehend with respect to these mergers, and the legislation built with that central idea. In that way, perhaps, you reach and stop one, two, or half a dozen crooked transactions. While you are doing that you are hampering 99 per cent of the transportation interests of the country.

Mr. ADAMSON. Your legislation in that instance follows the unfortunate example of the one-eyed doe grazing with her blind side next to the ocean, not knowing that people can slip around in a boat and shoot her in the water.

Mr. LOVETT. I remember, if I may refer to Texas again, that Rev. Mr. Parker was elected to the legislature some years ago from Palestine, which is a point on the International & Great Northern. The trains that run from Galveston to St. Louis leaving Galveston in the early evening would pass Palestine at a very inconvenient hour in the night or morning. The first bill he introduced when he got to Austin was to prohibit any railroad company from starting a train from any station between 10 o'clock at night and 6 o'clock in the morning. He was thinking of Palestine only. Much of our legislation is framed with an eye to a single situation.

Mr. ADAMSON. I know several towns in that State, and I am in sympathy with that perfectly.

Judge, I interrupted the chairman, by his permission, when he was cross-examining you yesterday, to ask you about what remnants of conduct your proposition would leave to the State commissions, and, as I understand you, you decided a great many benevolent acts of a public nature that they might perform, but I do not remember any of them that related to railroads. Is it your idea that you are willing for the State commissions to regulate everything but railroads?

Mr. LOVETT. No. I stated yesterday—and I could add a great many items to the list, and I will add some now—I stated yesterday

that they would have the right to regulate the matter of grade crossings. They should have the right to regulate the matter of stations.

Mr. ADAMSON. Is it necessary for Congress to leave that to them?

Mr. LOVETT. Why, I take it that it depends entirely upon the act of Congress.

Mr. ADAMSON. Of course; we are talking about making an act of Congress.

Mr. LOVETT. Yes. Now, it is for Congress to say what shall be left.

Mr. ADAMSON. That is the purpose for which we are sitting here.

Mr. LOVETT. I think Congress should leave those. If Congress incorporates a railroad company it ought to say what the powers of that railroad company shall be and to what extent it shall be subject to regulation by the States. I believe that all of these local matters—and it is impossible to forecast all of them—ought to be left to the States. I will run over some of them for a moment: The matter of grade crossings, the matter of stations, the matter of sidings and facilities for shippers, the matter of trains blocking crossings. I may mention another matter about which I am sure you and I are in accord, the “Jim Crow” law. Personally I should be very much opposed to any law of Congress incorporating railroads that did not leave in the States full power over the classification of passengers on trains. I would not disturb the “Jim Crow” law. There are a great many other purely local matters that I think ought to be left to the States.

Mr. ESCH. Sanitation of depots?

Mr. LOVETT. Yes. It is impossible to——

Mr. HAMILTON. You mentioned taxation, did you not?

Mr. LOVETT. Taxation; I should leave taxation to the States.

Mr. ADAMSON. I am talking about the powers of the State commissions now. They do not regulate taxation.

Mr. LOVETT. Well, I am leaving it to the States; the States are entitled to adopt any agency they choose. They can leave it to the commission if they wish. Many of the State commissions do deal with the question of taxation by fixing the value of the railroads.

Mr. ADAMSON. Do you think you would adhere, on reflection, to the response you made Mr. Esch that the sanitation of depots, the matter of public health accompanying interstate transportation, should be left to the States?

Mr. LOVETT. I see no reason why the States should not be permitted to regulate that.

Mr. ADAMSON. We have a Public Health Service here, built up on the idea that our control over interstate commerce carried with it the obligation to protect the health along that commerce.

Mr. LOVETT. If Congress prefers it that way, of course it is for Congress to say.

Mr. ESCH. If you will pardon me, I think the Public Health Service now looks after the water supply on passenger trains, and I think it has some supervision with reference to cleaning up Pullman sleeping cars, and so on.

Mr. LOVETT. I do not think so. Mr. Markham, you know about that.

Mr. ADAMSON. The House passed a bill twice, I believe, which failed to meet with a response in the Senate, to authorize the Public

Health Service to clean up all these depots on interstate transportation lines.

Mr. LOVETT. I do not understand that there is any national regulation of sanitation of trains or stations. That is left to the States.

Mr. ADAMSON. Judge, it might be that some local conduct, either under State statute or without it, would interfere with interstate transportation at the grade crossings. It is necessary, to be competent, for Congress to take charge of that, is it not?

Mr. LOVETT. That depends, Judge Adamson. As it is now, the States require a good many things—the matter of stations, and various local measures—that some railroad men think are a little unjust. But they are not vital, and I believe the States should be left the regulation of all local matters that are not vital to the system of national regulation. It is possible that some State might become so discriminating and so unjust in its taxation—might seek to make other States contribute through the railroads to its revenues—that Congress would finally conclude to take over the subject of fixing taxation; not take it away from the States, but prevent discrimination. I think that is extremely remote. They might become so oppressive in their local requirements that it would be unjust to other States interested in the transportation line, but that is very remote.

Mr. ADAMSON. What is your idea as to provision for litigation? Would all those corporations have to be sued in Federal courts?

Mr. LOVETT. No; not one. I would distinctly provide—I stated that in my direct statement to the committee—that removal of suits to Federal courts by these corporations by reason of the fact that they are Federal corporations should not be permitted. As a matter of fact, under my idea of Federal incorporation, there would be very much less litigation carried to the Federal courts than is now carried there. As it is now, the corporation created in one State and operating in several other States can remove to the Federal courts its litigation in the other States. If it were a Federal corporation, then under my idea of what the Federal law should provide it could not remove any of those suits to the Federal courts. I would not permit it to remove any suit to the Federal court that any individual would not be allowed to remove. In other words, I would confine it to constitutional questions, question under the Federal law.

Mr. ADAMSON. Judge, so far as constitutional questions are concerned, a Federal charter enacted by Congress would merely be a law of Congress.

Mr. LOVETT. Yes.

Mr. ADAMSON. Whether under that changed system or this system, would any constitutional question be changed as between a State and Federal authority? Would not the Federal corporation be subject to the same constitutional questions that the State corporation would be subject to?

Mr. LOVETT. I should think so. Of course, that is a far-reaching question.

Mr. ADAMSON. If there is any reason in the Constitution now why the Federal Government could not do something because a State has exclusive authority, would not it remain so? Has the paternity of the corporation anything to do with its powers under the Constitution?

Mr. LOVETT. I should think not. I would like to state there, Mr. Chairman, if I may, that the central idea, the controlling thought with me, and with the other railroad executives, so far as I know, is to unify the system of regulation. So far as I am concerned, I am perfectly willing that instead of Congress exercising the power you may give the whole power to some particular State; I do not care.

Mr. ADAMSON. So it is one authority?

Mr. LOVETT. So it is one authority. I do not care who exercises the authority. But it ought to be a single authority. It is a subject that can not properly be regulated by a dozen or half a dozen different governments. It ought to be regulated by one only, and so far as I am concerned I do not care which one.

Mr. ADAMSON. A good deal has been said during your testimony about taxation, and some gentleman suggested that there be a general arrangement under the law of Congress so as to apportion the line among the States, and some other gentleman suggested that they collect and pay back to the States a portion.

Mr. LOVETT. That was Senator Newlands's suggestion, I think.

Mr. ADAMSON. You think it would be better just to leave the question of taxation alone, do you not?

Mr. LOVETT. I do. This is a difficult enough problem as it is. I would not at this stage undertake to change the system of taxation. I do not believe anybody has ever dreamed that the taxes of a State would be lessened in any way by Federal incorporation. Certainly we expect nothing of that sort. I would leave the question of taxation precisely where it is. I am not sure but what it would be fairer and more just to everybody if every railroad was valued as a unit—because we all know that that is what it is—and that aggregate value apportioned for the purpose of taxation or assigned for the purpose of taxation to the various States in which it was situated on a track-mileage basis. But that is a theory that perhaps was not worth while to mention.

Mr. ADAMSON. But you would not think it necessary or wise for Congress to assume to become the administrator for the States to collect and pay back the taxes?

Mr. LOVETT. I certainly would not.

Mr. ADAMSON. Judge, are you, in advocating this Federal incorporation, acting for yourself, or did your stockholders or directors delegate you to do it?

Mr. LOVETT. I am acting for myself.

Mr. ADAMSON. Has the matter of approval of an attempt to obtain a law for Federal incorporation of railroads been submitted to your board of directors?

Mr. LOVETT. It has not.

Mr. ADAMSON. Has your board adopted a resolution?

Mr. LOVETT. No.

Mr. ADAMSON. Have the stockholders?

Mr. LOVETT. No. I do not know whether the stockholders like it, and I do not know whether the directors like it. I might go further, but I will not.

Mr. ADAMSON. You have taken no steps looking to that?

Mr. LOVETT. No steps.

Mr. ADAMSON. You simply give that as your opinion?

Mr. LOVETT. Simply as my opinion as a citizen, based upon my experience in railroad administration, as to what I think is best for the interest of the railroads and for the whole country.

Mr. SIMS. Simply as a private citizen?

Mr. LOVETT. Simply as a private citizen.

Mr. ADAMSON. Do you not think the change proposed is a very fundamental change?

Mr. LOVETT. It is. It may be that my board of directors and my stockholders object to it very strenuously; I do not know and I can not help it. I can not control them and I am not binding them. I am speaking my own opinion.

Mr. ADAMSON. Do you believe that a general sweeping law such as some of you advocate here, compulsory on all companies, to go into the Federal incorporation, ought to be enacted without the action and consent of the people interested?

Mr. LOVETT. I do not say that, because I think the people interested are the public as well as the railroads. But I think it ought to be enacted without the approval or consent of the stockholders or directors.

Mr. ADAMSON. Do you not think the stockholders and directors in that railroad have a sufficient interest to give them a right to be consulted before changing the organic form of their control?

Mr. LOVETT. They have a sufficient interest, or a very large interest; but they ought not to be allowed to decide the question. I think Congress should decide it.

Mr. ADAMSON. Probably they would not have subscribed to the stock if it had been in one corporation instead of the one it is in.

Mr. LOVETT. Possibly not; but they did subscribe, and they did it with the knowledge that Congress had the power to do this, or, rather, they are presumed to have had the knowledge.

Mr. ADAMSON. They were presumed to have the knowledge with regard to reasonable regulation by Congress; but what I am asking you is: Is such a fundamental change as this without their consent reasonable?

Mr. LOVETT. I believe it is.

Mr. ADAMSON. You do not propose to secure the consent of any State that chartered them?

Mr. LOVETT. No; I think the States have already consented.

Mr. ADAMSON. Touching the question of litigation, do you not think that an effort of this sort, without the consent of anybody, would produce more litigation, and longer and more bitter, than almost any other proposition you could submit?

Mr. LOVETT. I think not. I believe there would be very little litigation about it.

Mr. ADAMSON. And is there not danger that pending these changes in the possible litigation the financial status of some of these companies might suffer instead of being improved?

Mr. LOVETT. I think not. I believe that the consolidation of the New York Central and the Lake Shore a year or two ago caused more litigation than this measure would cause.

Mr. ADAMSON. Judge, the committee of executives, of which you are a member—how many does that committee consist of?

Mr. LOVETT. I beg your pardon.

Mr. ADAMSON. The committee of executives that prepared this statement?

Mr. LOVETT. How many——

Mr. ADAMSON. How many are on that committee?

Mr. LOVETT. Fifteen.

Mr. ADAMSON. How many railroads are interested in it?

Mr. LOVETT. Have you got the list, Mr. Trumbull?

Mr. TRUMBULL. I think it has been printed in the record.

Mr. LOVETT. May I refer to the list that was submitted by Mr. Thom on the first day of the hearings?

Mr. ADAMSON. Yes; if any man remembers, all right. I just wanted to get it in my head.

Mr. SIMS. Mr. Chairman, Judge Lovett just appears here as a private citizen, and what difference does it make how many men constitute this committee?

Mr. THOM. Over 90 per cent, Mr. Chairman, of the gross earnings of the railroads which earn as much or more than a million dollars a year.

Mr. ADAMSON. How many railroads are represented on the committee?

Mr. THOM. I have undertaken to file in the record a list of them.

Mr. ADAMSON. I can not undertake to know that now. I am examining the witness right now.

Mr. THOM. About 60 systems, Mr. Trumbull says. He is chairman of the committee.

Mr. ADAMSON. Fifteen men represent all of them?

Mr. THOM. Yes.

Mr. ADAMSON. Some are just representatives and not officers of the roads?

Mr. THOM. I have been——

Mr. ADAMSON. I am trying to find out how many individual railroads have representatives on this committee.

Mr. THOM. Fifteen; and each man is a railroad executive.

Mr. ADAMSON. He must, then, represent some other railroads than the one with which he is connected.

Mr. THOM. Yes; but this committee representing 60, say——

Mr. ADAMSON. Well, I understand there are 15 men who represent personally 15 railroads, and, by selection, they represent some other railroads.

Mr. THOM. But some of those men may be connected with more than one system—have an office with them.

Mr. LOVETT. I think I can clear up, if I may be permitted to do so, the matter which you have in mind. Several years ago the situation with respect to the railroads, as affected by legislation, seemed to be so bad that a number of us thought we ought to consider it in conference and try to work out some system of constructive legislation to suggest. There were a number of conferences, and a number of railroad officers joined in them. At first, I believe, Mr. Walker D. Hines was chairman of the committee, or perhaps he was counsel for the committee. Certain railroad officers were on the committee with him, including Mr. Trumbull, from the first; and the various railroads were invited into the organization, if we may call it such, to deal with these questions. We had meetings occasionally, and there was some expense. We had to employ clerks and counsel and incur

other expenses, which are all open, and all subject to anybody's inspection. Finally, we considered that we should deal with it in a more thorough manner than had been done up to that time; and there was a committee selected, composed of Mr. Loree, of the Delaware & Hudson, Mr. Johnson, of the Norfolk & Western, and myself, to consider the kind of organization or association we should have. We considered the matter and agreed that there should be an advisory committee of railroad executives, and consider and advise from the standpoint of the railroads; and also that there should be a law committee to consider legal questions. Thus this advisory committee was formed, composed of 15 members, whose names have been given. I am a member and Mr. Trumbull is chairman. The law committee was formed, with Mr. Thom as chairman. The various officers of the railroads were invited to attend the conferences and to join this association. We did not have any articles of association. I think nearly 90 per cent, as represented by the gross earnings of the railroads of the United States, joined.

Mr. ADAMSON. How about the number of railroads?

Mr. LOVETT. I can not answer as to that.

Mr. ADAMSON. I think a gentleman said 85 per cent of the number.

Mr. LOVETT. How many, Mr. Trumbull?

Mr. TRUMBULL. There are about 60 systems. I do not know how many corporations there are. There are a number of corporations.

Mr. LOVETT. We apportion such expenses as are incurred on the basis of gross earnings, each company contributing to the expenses in proportion to its gross earnings. A full account is kept of the expenses for counsel fees, and all other purposes, and generally, about once a year, there is a report made of the expenses, and the accounts are audited.

Mr. ADAMSON. I do not doubt the regularity of all of that.

Mr. LOVETT. As I said a moment ago, anybody can see the accounts covering the expenses.

Mr. ADAMSON. I do not care about that.

Mr. LOVETT. Then this committee considered how to solve the railroad problem.

Mr. ADAMSON. Are they unanimous—that committee of 15—on the proposition which you have enunciated?

Mr. LOVETT. No; we had various conferences, not only with the 15, but the various officials representing the railroads were called in, and a general program was submitted. What we finally agreed to recommend was the result of discussion of the subject by various men, and involved concessions of particular views. There are many railroad companies that really would prefer to continue as they are.

Mr. ADAMSON. How many of the board of 15 failed to agree with you on the Federal incorporation idea?

Mr. LOVETT. I believe all are in agreement as to what should be done in the interests of the country. I do not want to claim any undue patriotism for the railroads—

Mr. ADAMSON. I know.

Mr. LOVETT. In this matter, but I am very greatly impressed with the patriotic manner in which it has been dealt with by the railroads.

Mr. ADAMSON. The question I have asked, however, is whether the 15 members of this committee agreed to this Federal incorporation plan?

Mr. LOVETT. I so understand.

Mr. ADAMSON. How many of them were backed by the action of their boards of directors and stockholders—any of them?

Mr. LOVETT. I do not know whether any of them submitted it to their boards of directors. Some of them may have done so. But, as I remember, some said, "If I agree to this plan, I do not know whether my board of directors will support it or not. My directors may object to it." My own opinion was—and I think it was the generally accepted view—that every man was acting for himself, and that when he should appear here as a witness he would be stating his own views.

Mr. ADAMSON. I am examining you as a witness now. I asked if you know whether any of the other representatives were supported or backed by their boards of directors and stockholders?

Mr. LOVETT. I do not know.

Mr. ADAMSON. I want to know if you know whether any of these railroad companies—if their boards of directors and stockholders have been consulted about it or not?

Mr. LOVETT. I do not know about that.

Mr. ADAMSON. Do you know why these other railroad companies which are left out did not participate with you in that movement?

Mr. LOVETT. No; I do not know what their reason was.

Mr. ADAMSON. Judge, are you a large stockholder in your company?

Mr. LOVETT. No; I am not. I own some stock.

Mr. ADAMSON. Are the 15 members of this committee large stockholders of their companies?

Mr. LOVETT. I do not know.

Mr. ADAMSON. Is it not true that most of these officials are simply elected for their merit as executive officials and do not own much interest in their companies?

Mr. LOVETT. I believe that is true of practically all of them, east and west.

Mr. ADAMSON. At least for their merits, whether they own much or not?

Mr. LOVETT. I do not know the extent of their investments.

Mr. ADAMSON. I believe you said that this committee of executives was composed of presidents and managers—high officers of the railroads?

Mr. LOVETT. Yes.

Mr. THOM. Entirely of presidents and chairmen of boards of directors.

Mr. ADAMSON. Well, high officials.

Mr. LOVETT. Executive officers, whatever their title may be.

Mr. ADAMSON. Your plan, so far as your ideas are concerned, does not contemplate progress toward Government ownership?

Mr. LOVETT. No.

Mr. ADAMSON. You would not advocate that?

Mr. LOVETT. No.

Mr. ADAMSON. But Federal incorporation would greatly facilitate it, if the Government should conclude to do it, would it not?

Mr. LOVETT. I do not see that it would.

Mr. ADAMSON. I suppose it is unnecessary to discuss with you in detail as to what you would put in your charter, your idea being

that if we once get the transition we can do what Congress wants to do?

Mr. LOVETT. Yes; I should think that the details were a matter for Congress to determine. I am interested only in the subject of unified regulation.

Mr. ADAMSON. You would want to retain the provision, I suppose, Judge, that matters passed on by the railroad commissions could be challenged in the courts, as now?

Mr. LOVETT. I think that right ought to be preserved. It is not worth a great deal practically, but still it ought to be preserved.

Mr. ADAMSON. Judge, if the commission is not materially increased and relieved, it would put the entire burden of financing the roads on them, and under either of our plans it would delay financing them, would it not?

Mr. LOVETT. Yes; it would be impossible for the commission, as at present constituted, to take on any additional amount of work without detriment. The matter of securities is provided for in the present bill—

Mr. ADAMSON. I am very much obliged to you, Judge, for your courteous answers to my interrogatories. I will pass you on now.

Mr. SIMS. I want to ask a question or two right along that line. It is Senator Cummins's turn, but I would like to have permission to ask the questions now.

Mr. ADAMSON. You may do so.

Mr. SIMS. But it is Senator Cummins's turn.

Mr. ADAMSON. I will yield to you in my time.

Mr. SIMS. You stated you appear here as a private citizen, and as such giving your views without any authorization of your stockholders or those whom you represent. Now, are we to understand that this executive committee of which you are a member is not being represented by you here at this time?

Mr. LOVETT. Is the executive committee—

Mr. SIMS. The committee of executives, of which you say you are a member?

Mr. LOVETT. I am here as an individual and as a member of that committee and am expressing my own views, which I understand to be the views of the committee also.

Mr. SIMS. That is what I want to know. Are you not speaking in harmony with the views of the committee of executives or representatives of the 60 systems, according to Mr. Thom?

Mr. LOVETT. I understand that we are in accord. I do not recall that I have presented any view here that generally is not shared by the members of that committee.

Mr. SIMS. Are you not acting as an agent or representative or a member of that committee, in addition to what interest you may feel in the matter as a private citizen?

Mr. LOVETT. That may be a little more of a refinement than I can appreciate, Judge. While I am a member of the advisory committee of executives, I am expressing my own individual views. I would not express any view here or offer any suggestion here that I do not personally approve.

Mr. SIMS. I did not mean that for a moment, but I do certainly think we should know the capacity in which you appear.

Mr. ADAMSON. He is a witness, of course.

Mr. SIMS. I know; but he also appears as a member of a committee which is represented by an attorney, Mr. Thom, before this body, and who has represented them, I think, very ably and very capably.

Mr. LOVETT. I am sure of that.

Mr. SIMS. And I believe I ought to attach more weight to you, as being a railroad executive, than would be attached to a mere citizen, who has had country-wide experience.

Mr. LOVETT. I am a member of the advisory committee of which Mr. Trumbull is chairman, and I am expressing my individual views, which I understand to be in accord with the views of that committee. Now, as I said a moment ago, all the railroad executives will, when they come here as witnesses, come as individuals, as witnesses must come and only as they can come, expressing their individual views.

Mr. HAMILTON. You are not authorized by any action of the committee to appear as representing the views of that committee?

Mr. LOVETT. No; I am simply expressing my views, which are in accord with the views of the committee. I am not authorized by anybody to appear.

Mr. SIMS. I do not want you to misunderstand me. I do not want anyone to misunderstand it and let it go to the country that way.

Mr. LOVETT. I have no doubt that a great many railroad executives have talked with their boards about this matter.

Mr. SIMS. I think we might as well be candid. It is collective in substance and fact, is it not?

Mr. LOVETT. Undoubtedly. We feel, Judge Sims, that probably for the first time most of the railroads of the country are entirely in accord in proposing or presenting and suggesting some method of dealing with the railroad question. In the past the railroads were too much given to contenting themselves with denouncing the legislators and Congressmen and criticizing and condemning legislation without proposing anything. We felt that not merely as a committee, but as men experienced in the railroad business, it was our duty to submit what we thought ought to be done toward the settlement of the railroad problem. Whether it is politically practical or not, or however much it may prejudice the cause to have suggestions emanate from that source, we resolved to give our deliberate judgment as to what is best for the country and the railroads.

Mr. SIMS. I do not see why concerted action on your part should prejudice the matter.

Mr. LOVETT. Mr. Thom stated fully to the committee at the outset the sentiment of this advisory committee and was expressing the composite views of this committee, and the remedies he suggested were the suggestions of this advisory committee, and in my statement, if you have observed it, I have generally said "we" in speaking of what we thought ought to be done. But I am expressing my individual views.

Mr. ADAMSON. If Judge Sims is through, before I turn the matter over to Senator Cummins I wish to state that while I appreciate the wisdom of your suggestion for unification in regulation it appeals to me that this is a matter which affects the railroads and the public more than would a purely executive or administrative matter, and my views are that when you come here suggesting legislation of this character, legislation of such a fundamental character that the executives are going rather far without consulting their boards of

directors and stockholders. This strikes me as being really a proposition that goes beyond the administration of your railroads.

Mr. LOVETT. That may be; but I do not think a man loses his right to express his views—

Mr. ADAMSON. I am talking to you now, Judge Lovett, as a witness.

Mr. LOVETT. And I am answering you as a witness.

Mr. HAMILTON. In that connection you appear here, then, with the knowledge and consent of the committee and with the full understanding of the committee that you are expressing the general views and understanding on your part that you are expressing the general views of the committee. Is that true?

Mr. LOVETT. I was invited by the joint committee to appear here.

Mr. HAMILTON. I think that ought to go into the record.

Mr. THOM. And you were invited also by the advisory committee?

Mr. HAMILTON. I think that is an important element.

Mr. LOVETT. I should not say I was invited by the advisory committee. I am a member of the advisory committee.

Mr. HAMILTON. The importance of your testimony is increased somewhat by the fact that you represent and express the opinion of these experts?

Mr. ESCH. Mr. Thom, in opening these hearings, used this language:

We shall be ready to appear at the order of the joint committee and to meet its convenience, but would like to have the opportunity of presenting our views in the light of what may be developed by those gentlemen who appear, as I understand it, in the public interest, and not as the representatives of any particular body.

Mr. ADAMSON. Judge Lovett is here as a witness, subpoenaed by the committee, and we are glad to have him here, and we are glad to have heard him. My object was for the purpose of discovering whether he had obtained any vote giving him any authority to speak—from the board of directors or his stockholders.

Mr. LOVETT. I am willing to give the committee my full pedigree if desired, but I shall have to ask the committee to set its own value on what I have said.

Mr. THOM. I think it may be stated here—I think Mr. Lovett has overlooked it—that Mr. Lovett and several others were invited not only by this committee but by the advisory committee of railway executives to appear to discuss the railroads' views.

Mr. SIMS. And you do not think he is misrepresenting them, either, do you?

Mr. THOM. No.

Mr. ADAMSON. I do not think there has been any attempt to impeach the regularity of the committee of executives by this committee, but my purpose was to show that he had no authority from the boards of directors or stockholders to ask for this revolutionary change in railroad matters.

Mr. LOVETT. I have such decided views that if I had not been afforded an opportunity to appear here I should have asked for it.

Mr. ADAMSON. Senator Cummins, it is your turn.

Senator CUMMINS. Judge Lovett, I did not hear your direct statement, unfortunately, and I do not intend to interrogate you about either the Federal incorporation of railroads or the reorganization

of the commission. There is one phase of the subject of regulation that has always perplexed me above all others, and I think it is fundamental; and I think, with your permission, I shall ask your view on that subject, if you are willing to give it.

Mr. LOVETT. I shall be very glad, Senator, to answer any questions I can.

Senator CUMMINS. I assume that the most important thing, after all, to be accomplished in regulation of common carriers is that the charge for the service rendered to the people shall be reasonable.

Mr. LOVETT. And the facilities adequate.

Senator CUMMINS. I was about to come to that.

Mr. LOVETT. I beg your pardon.

Mr. ADAMSON. Senator Cummins, consider yourself in the chair, please.

Senator CUMMINS. Disregarding all the technicalities of definitions—I do not want to get lost in any maze of niceties—the charge, to be reasonable, must be sufficient to bear all the cost of operation and maintenance and make such return on the value of the property rendering the service, or the capital invested, as will be adequate, and that will attract further investment as additional facilities are required? Have I stated that proposition with reasonable accuracy?

Mr. LOVETT. I think so.

Senator CUMMINS. You recognize, I assume, that there are strong roads and weak roads?

Mr. LOVETT. Undoubtedly.

Senator CUMMINS. It is also a matter of common knowledge that these roads must all render their service substantially at the same rates——

Mr. LOVETT. They do.

Senator CUMMINS. For they are nearly all competitive in some form or in some way with each other.

Mr. LOVETT. That is true.

Senator CUMMINS. Now, I will not ask you to affirm my hypothesis or basis—and I use it largely for illustration—but suppose at any given time the roads carrying 80 per cent of the traffic have sufficient revenue under existing rates to accomplish all these purposes—that is, pay the cost of maintenance and operation, accumulate whatever surplus may be required, return to the owners of the property adequate rewards—and that the roads carrying 20 per cent of the traffic need, we will say, \$50,000,000 more than they are receiving. The question that is uppermost always in my mind is how to give to these weak roads that need \$50,000,000 more without giving to the roads that do not need any more \$200,000,000. I would like your answer to that question.

Mr. LOVETT. I can not answer that, Senator. I do not know of any way in which it can be done.

Senator CUMMINS. You recognize, do you not, that that is the real, fundamental, unsolved problem in the regulation of railroads in private ownership?

Mr. LOVETT. It can not be done in the way in which you propose in any way that I know of; but if you remove one restriction you put on it can be done.

Senator CUMMINS. Under the present system it is utterly impossible to do it, is it not?

Mr. LOVETT. Under the present system?

Senator CUMMINS. Yes.

Mr. LOVETT. No; it is not.

Senator CUMMINS. I am not now speaking of comparing the system of private ownership with the system of Government ownership, but I am speaking of the present distribution of private ownership and the present grouping of railroads.

Mr. LOVETT. I can not answer your question, Senator, without making rather a full statement.

Senator CUMMINS. There is nothing that would help me more in reaching a conclusion as to what should be done than to have some one with your experience and study devote a few minutes to that subject.

Mr. LOVETT. Well, the impossible factor in the problem which you present is the statement that the proposition is, or what is desired is, to give these roads that constitute 20 per cent of the mileage the revenue——

Senator CUMMINS. I am not speaking of 20 per cent of the mileage, mark you, but 20 per cent of the business—the roads that do 20 per cent of the business.

Mr. LOVETT. The revenue they need without giving the other roads that do not need the revenue. That can not be done in any way I know of. I think you are assuming a status with respect to the returns on railroad capital that has never been adopted by this country as a whole or sustained by the Supreme Court. You are assuming that the earnings from a railroad company must absolutely be limited to a certain basis or a certain per cent. I do not understand that that is an accepted theory in our railroad regulation. I understand the doctrine of the Supreme Court to be that the railroads are entitled to a return upon the value of their property, and in determining that value you are not to consider the cost of reproduction, merely, but all the elements that enter into the value of the railroad.

For that reason I do not understand that we have come to the point of limiting a return to any certain per cent on the stock or bonds or on the cost, or on the cost of reproducing, and that there is absolutely no fixed return upon a railroad. I think the only basis is the return on its value, and that all these elements which have been enumerated by the Supreme Court and many others must be taken into account in determining their value.

Now, applying my view to your problem: If the railroad companies that are carrying 80 per cent of the traffic of the country are so situated, even though they are earning a large return upon their property, that without unreasonable charges, without extortion, not with reference merely to their return, but without unreasonable charges and at reasonable rates, the rates are so adjusted that, even though they earn more than these other roads can earn, I see no reason why they should not be allowed the earnings if the traffic can stand it without prejudice or injury. But there are some roads, and always will be roads, that carry a portion of the traffic that can not under any system of rates devised earn enough money to provide the facilities they ought to furnish. Those roads are simply insolvent.

It was a mistake to build them, and the owners will have to lose their money.

If the policy of the Government is to go further and say that every railroad must, without reference to its earning capacity, provide certain facilities for communities that are not provided with railroad facilities, and the opportunity to make money is not sufficient to justify the investment of capital, then Congress will have to make some special provision or the Government will have to provide the facilities itself.

Senator CUMMINS. You have observed, of course, that in my question I used the words, "the value of the property." I am not attempting to settle here the rule which shall be applied to railway property in determining its value, nor am I attempting to determine what return on the value of the property would be fair and reasonable. I am assuming that 80 per cent of the roads are earning enough now and that 20 per cent are not, and that they will have to have \$50,000,000 more each year in order to keep them alive; and they must be kept alive, because the territory which they serve can not be abandoned, and we shall have to find some way in which these weak roads can be not only preserved but improved.

Mr. LOVETT. I do not know any way, in that case, except Government aid.

Senator CUMMINS. That is, it is apparent that it would be vastly more economical, if you please, to make an appropriation of \$50,000,000 and distribute it among these railroads, than it would be to give the very large proportion of the railroads \$200,000,000, which I am assuming they do not need.

Mr. ADAMSON. Does not the commission now permit certain railroads to charge different passenger fares, owing to circumstances and conditions?

Senator CUMMINS. Oh, certainly; there is nothing that prevents different rates being put in on different roads. The Baltimore & Ohio could be authorized to charge more than the Pennsylvania Central, but it could not do it and get the business.

Mr. LOVETT. The field in which such a privilege can be availed of is very narrow.

Mr. ADAMSON. Yes; and I take it, as applied to the great bulk of the carrying business, the rates must be the same as between competing roads?

Mr. LOVETT. Yes; that is perfectly true.

Senator CUMMINS. Now, I have a suggestion, for I do not believe that the Government would be willing to make an annual appropriation to the railroads which can not under natural conditions sustain themselves. But is there not a way by which the railroads of this country could be grouped and consolidated that would distribute this burden so that the public would not be compelled to pay more than the required amount and the investors in railroads would not suffer? In other words, could you not take the railroad system of this country, considering it as a whole, and so group it that the strong railroad would be coupled up with the weaker ones, and whatever advance in rates were required, if any are required, would be sufficient only to make good the shortage which I am assuming now exists?

Mr. LOVETT. Personally I do not see, Senator, how that could be done short of Government ownership. A road that is so situated that it can make 25 per cent profit under rates that would cause a competing line to starve ought not to be required to give up its position and bear the burden of the unwisely constructed line. The stockholders in the successful line ought not to be required to take the burden of their unfortunate competitor. So I do not know any way that could be accomplished except by the Government.

Senator CUMMINS. Let us see about that. You have stated a great many times, and it is absolutely true, that there is no limit to the power which the Government has over the railroads in regulating them and in furnishing the service. Now, what prevents the Government from requiring a consolidation that would, even if it did, reduce the return upon some of the railroads that are now earning more than a fair, reasonable rate upon the value of their property?

Mr. LOVETT. Because that would be confiscation. Let me state again, Senator, coming back to the problem involved in my general statement in answer to your first question. If a railroad extending from Washington to New York were so situated that under reasonable rates, rates that will permit the traffic to move freely, it can earn 25 per cent while its competitor can not earn enough to live on, that road is worth the 25 per cent, it should be capitalized at 25 per cent in determining its value. That I understand to be the doctrine of the Supreme Court in *Smythe v. Ames*. We must not, I take it, at least until the Supreme Court changes its decisions, get fixed in our minds the idea that because a railroad did not cost a certain amount or could be reproduced for a certain amount theoretically, you are entitled to take that as its value—those are only circumstances. In determining the value of that road you must consider its location and its earnings. If you deprive it of the advantage of its position and of its good will and put it on a parity with a poor road by the side of it, you will be confiscating the property.

Senator CUMMINS. I realize that we are possibly getting into a doubtful zone in the law, but I submit that you are arguing in a circle. You can not fix the value of a property by capitalizing its net earnings when the public has the right to regulate the earnings. You must ascertain the value of the property in some other way than by merely capitalizing what it is then earning, otherwise the authority to regulate the charges would be of no consequence. The very thing you are trying to do, as I understand it, is to fix the earnings at a reasonable point.

Mr. HAMILTON. May I ask a question of you, Senator, so as to get the scope of your inquiry?

Senator CUMMINS. Yes.

Mr. HAMILTON. Is it your idea that by consolidation the stronger railroads should be directed to purchase the weaker railroad?

Senator CUMMINS. That is the general idea, although I do not give it—I am simply groping around to see if there is not some way by which we can reach this point, because I say frankly if we can not reach that point and protect it in some form of regulation, Government ownership is just as certain as the time is to go on.

Mr. ADAMSON. Senator, I wish you or the witness, either one, would tell me whether or not the authority of the commission to apportion through joint rates over through routes has even been used

to accomplish the very thing you suggest, to make the strong road help the weak one?

Senator CUMMINS. I have no doubt it has, although I have not examined it.

Mr. ADAMSON. Is that not one way to do it?

Senator CUMMINS. Yes; I think that is just what must be done. It must be true, Judge Lovett, that if the Government finds a railroad so situated, we will assume that it is earning 25 per cent a year upon any value of property that might be accepted, that the Government can reduce the rates on that railroad without confiscation?

Mr. LOVETT. Yes; I agree with that.

Senator CUMMINS. Well, if it can do that directly, why can it not do it indirectly by compelling such consolidations or organizations as will have that effect?

Mr. LOVETT. I do not think the Government can indirectly confiscate property. Take the road earning 25 per cent; it is doing it in competition with other lines. Now, the power of the Government is to fix "reasonable" rates, and a reasonable rate has a very wide range, as I indicated yesterday. Certainly in case of a road earning 25 per cent the Government could reduce its rates. But if it reduces that road's rates in competitive territory and keeps them up on the other lines it will increase the road's revenue. The Government, by the exercise of that power, can not accomplish its object. Its power is to reduce the rate, not to confiscate.

Senator CUMMINS. Of course it goes without saying that, employing those terms, the Government can not confiscate anything.

Mr. LOVETT. No.

Senator CUMMINS. But that is possibly begging the question, because the inquiry is, Does it confiscate the property of the railway company to bring about this result? I do not intend to pursue it, but to me—I simply suggest it to those who represent the railroads here—it is infinitely of more consequence than the question of Federal incorporation, because that is a detail in a sense, although a very important detail, and the work of the commission likewise. I hope that those who have gone into the question with care and given it great reflection will before we have finished try to find some solution of that problem, which I regard as the vital thing in Government regulation as distinguished from Government ownership.

Mr. LOVETT. In case a railroad is so unfortunately situated that it can not pay its way under rates that are reasonable for other lines with which it is competing the great question of public policy arises whether Congress, in order to let it live, will allow other roads to earn more than absolutely necessary to give them a fair return. If Congress does not want to do that, then the road is a failure, and we shall have to bear the consequences.

Senator CUMMINS. Of course that is the very question. One could easily mention a dozen of the roads, or more, which supply the needs of a great body of people and of a large territory. Now, those roads must live, and they must be reasonably efficient.

Mr. ADAMSON. If the Scriptures applied to railroads, your problem would be solved, because the Scriptures say, "Bear ye one another's burdens."

Senator CUMMINS. We have got to do something to sustain them. If we have to sustain them by giving them rates which will make the

capital invested in them reasonably remunerative, which at the same time will allow 80 per cent of the business of the country rates which are excessive, as determined by the returns, we are confronted with a pretty serious proposition, and I believe that is the exact situation. Of course many of you will not agree with me, but I think that the proof before this committee will show before we have finished that 80 per cent of the carrying business of this country is now being done with fair remuneration.

Mr. LOVETT. But there is no hope——

Senator CUMMINS. And that 20 per cent of the business is being done for a compensation that is driving the roads into bankruptcy and will keep them there.

Senator TOWNSEND. I should like to make just one other suggestion. You have appealed to the witnesses to come on to discuss that question. There is a corollary of that which occurs to me. If it is proposed that these bankrupt roads shall be carried by the successful ones, what are we going to do about permitting the organization of any more roads that may be in that same situation?

Senator CUMMINS. That is a very important inquiry. I am not prepared to assert it as a well-settled opinion, but I have a hope that the railroads of this country can be grouped and, considering each system as a unit, can be given rates that will make the entire property remunerative, but will not require an addition to the rates greater than we will be compelled to contribute from the National Treasury if we are trying to sustain the weak roads individually: and if that were done, then all the unoccupied territory that fairly requires railway service would be filled, because capital would be attracted sufficiently to warrant the operation of the roads.

Mr. HAMILTON. In other words, if you treat the systems as a unit, there would be certain parts of that system actually running at a loss, but you would make the rates applying to the system so that on the whole the system would be receiving sufficient compensation.

Senator CUMMINS. Just as it is now. I have no doubt that, properly considered, there are a great many branches of the large systems that are utterly unremunerative.

Mr. LOVETT. There is no doubt of that.

Senator CUMMINS. If they were looked at independently, but as part of the system, they receive the benefit of the larger earnings of the main trunk lines.

Mr. LOVETT. There is a way, Senator, but I have not mentioned it because I might be suspected if speaking in a facetious manner, which I do not mean. Of course, if the antitrust law were repealed and all restrictions upon making of rates was removed, roads such as you have described would develop a "nuisance value" that would tempt the strong roads to buy them. But so far as, by any lawful manner, requiring the other roads to take over the unprofitable lines, forcing the other roads to take them over, I do not see how it can constitutionally be done.

Senator CUMMINS. Of course, whatever was done would have to be done under the direction of some tribunal—the Interstate Commerce Commission or some other function of the Government.

Mr. LOVETT. Yes.

Mr. ADAMSON. Would not somebody call that pooling?

Senator CUMMINS. To me it does not make any difference whether they call it a pool or what they call it. I know there is a great deal of prejudice against consolidation, but that does not terrify me in the least.

Mr. LOVETT. I do not see any escape from the fact that if a railroad is so situated it can not live at rates that its rivals make, it is a bad investment, and the people who put their money into it will lose. The poorer it is the poorer the facilities and the poorer the transportation provided. Now, if public policy requires that road to be kept up to a standard with the others, the Government should bear the burden. I do not see how you can require the stockholders of the fortunate road rather than the Government or the people at large to assume the burden any more than you can require any other group of citizens to bear it.

Mr. SIMS. That would destroy private ownership completely?

Mr. LOVETT. Yes.

Senator CUMMINS. It does not seem to me it would go that far.

Mr. SIMS. I mean inducement to private ownership.

Senator CUMMINS. I can not easily imagine, assuming we have Federal incorporation, to which I have not given my assent entirely—supposing we have Federal incorporation. Here are certain gentlemen who incorporate themselves under the Federal law and they proceed to condemn certain railroads pointed out by the Interstate Commerce Commission, and they condemn those railroads and combine their ownership into one corporation, and I do not think there could be any question of confiscation arise.

Mr. LOVETT. But they would have to pay the value.

Senator CUMMINS. Oh, the value; but the value would not be determined by what the roads happened to be earning at that moment, in my judgment.

Mr. LOVETT. If I may be permitted to answer your suggestion that I am reasoning in a circle about this question, I should like to say that I understand the Supreme Court has said that in determining the value of a railroad you take the supposed cost—that is, the original cost, betterments, and additions since; the supposed cost of reproduction, the amount of the stock and bonds, the market value of such stock and bonds, the supposed earning capacity of the road under Government rates, and every other circumstance and condition that bears on value. I realize that when the Government has the power to fix the rates you can go round the circle and reduce rates, but those are the elements the Supreme Court said must be taken into account.

Senator CUMMINS. Judge Lovett, you will remember the decision in which those agreements were stated was rendered a great many years ago.

Mr. LOVETT. I do not know of any decisions inconsistent with it since.

Senator CUMMINS. And the subject is still in its formative stage probably?

Mr. LOVETT. Undoubtedly it is.

Senator CUMMINS. I beg pardon for this dissertation rather than examination, but I wanted Judge Lovett's mind directed to that subject, and I wanted his opinion upon the thing which seems to me more important than all others in trying to ascertain whether our present system of regulation is a success or a failure.

Mr. ADAMSON. The Chair will rule Senator Cummins's apology is unnecessary; that information from members of the committee may be just as valuable to the committee as information from a witness.

Mr. THOM. In connection with the further consideration of your suggestion, Senator Cummins, I should like to ask you at your leisure to read the case of the Monongahela in 140 U. S.

Senator CUMMINS. The case on which the locks and dams on the Monongahela River were condemned?

Mr. THOM. Yes; do that.

Senator CUMMINS. I am quite familiar with that decision.

Mr. ADAMSON. Before you dismiss the subject of your interrogation I want to call your attention to the existing law of recent enactment authorizing the commission to fix the rate at which mails shall be carried, and ask you if that would be considerable enough to contribute to the solution of the question you ask?

Senator CUMMINS. I think that legislation is founded on a fault, in my mind.

Mr. ADAMSON. If the Post Office Department pay to those weak railroads the prices for carrying the mails they originally paid to the star routes in those communities they would all be solvent?

Senator CUMMINS. I think so. That is all, Mr. Chairman.

Mr. ADAMSON. Before passing to Judge Sims, I forgot to refer to a subject which I think is of some importance, and I hope Mr. Esch, when he reaches you on examination, will take it up, as he is interested in it—that is the question of shortage of freight cars. No matter how far the legislation recommended by this committee may go, we certainly shall have to legislate about that unless the situation changes very materially. I wish you would tell us what the trouble is, the fundamental trouble, about the shortage of freight cars at different points.

Mr. LOVETT. I will give you my idea about it, Mr. Chairman. I am not an expert operating man, but I will give you my opinion merely as a supervising executive.

I believe the trouble with the freight-car situation is, first, the European war. That has dislocated all business, and certainly all transportation problems. The destruction of shipping as a result of the war and diversion to unusual lines of traffic is, I should say, primarily responsible for the freight-car situation. The enormous increase in our export business as the result of the European war, and this occurring simultaneously with an extraordinary reduction in ocean transportation from our ports, has resulted in a great congestion of cars at ports loaded with export business.

Mr. ADAMSON. Because they have to stand on the tracks unloaded, owing to the lack of ocean transportation?

Mr. LOVETT. They have to stand on the tracks unloaded. I put down first, and generally the European war, and the destruction and diversion of shipping to other than the ordinary lines of transportation. In connection with the increase in our export business the unparalleled increase in our manufacturing business calls for greatly increased quantities of raw material, and especially coal, for fuel, which employs a great many cars. Then the movement of the manufactured products to ports. Next the system by which long free time is allowed for loaded cars without demurrage. The free time allowed at the ports before charges accrue is very great. I do not remember

what it is—some of these gentlemen who are closer to the subject than I am can tell you better, but probably 20 to 25 days in some places. Then the free time at other places allowed consignees for unloading cars, and the abuse of that privilege by shippers. What does a man who orders a carload of automobiles, for example, care for a dollar a day or a \$5 a day demurrage on a car of automobiles? He can use the car for storage.

Another matter abused is the right of diversion in transit accorded to shippers of a great many products. There ought to be a change in the car service rules and the penalties. Reasonable time should be allowed for unloading to the man who wants to unload, but there should be some way of reaching with charges that would stop the practice of men who use cars not merely for the purpose of transportation, but for storage purposes. Next, especially in the West, is the change of lines of usual routes of traffic. Formerly the traffic between the Pacific and Atlantic coasts passed, in a constantly increasing degree, south and across the Tehuantepec line and the Panama Railroad. More particularly was the increase over the Tehuantepec route by the American-Hawaiian line of steamers. Then on the opening of the canal it started through the canal in a greatly increased volume. The canal was closed by slides in the early days of the war and the ships engaged in transporting this coastwise traffic between the Pacific coast and the Atlantic coast, as well as the ships that were before the war engaged in carrying European traffic from the Pacific coast through the canal or around Cape Horn, retired from that business. Even since the reopening of the canal there are very few ships carrying the business. The American-Hawaiian line, and many other ships that were engaged in that traffic, have been leased and have engaged in the traffic connected with the war.

Most all of the grain on the Pacific coast that was formerly exported went out through the Pacific ports. I am told there is no record of a carload of grain moving from Oregon or Washington over the Union Pacific to the Atlantic seaboard prior to the autumn of 1915. All that grain was exported formerly through the ports of Puget Sound or through Portland or the California ports. I do not know just how many thousands of carloads of grain were turned eastward late in 1915 because there were no ships to carry it out through the Pacific ports. It was carried overland. We have hauled many thousands of cars of grain since the summer of 1915 eastward; and other lines have done the same.

These cars would get in the East and be caught in the jam; and the activity in the East was so great that they were needed there and were kept there even when they were unloaded. The penalty for using a car was 45 cents a day, I believe.

Mr. ESCH. That has been increased. It was first 25, then 45, and now it is 75 cents.

Mr. LOVETT. Now, what do railroads care for 25 cents or 45 cents or 75 cents or \$5 a day for a good box car, when shippers are frantic for cars, and when the car can be loaded and handled in most profitable business? The result is that all the car service rules as between railroad companies broke down. They were practically ignored.

Take our own situation: Our cars have been in the East and we have never gotten them back. I guess we held onto all we could, but our situation was that a great deal of the business, 56 per cent of our

freight traffic revenue, is from traffic that originates on our lines. grain, potatoes, and various foodstuffs, and much of it goes off our lines. When cars left our lines loaded with these products we practically bade them farewell, at least as long as the congestion lasts.

The car movement on our line—and most of the Western lines—is eastward. The westbound movement is very much smaller than the eastbound movement.

Mr. ADAMSON. That is more so during the period you have described?

Judge LOVETT. Yes; and in consequence more cars were moving off the line than coming on. Now, as to the responsibility that rests on the railroads for any part of this condition, I do not know the opinion of railroad men generally, but I do not believe myself that there is a material car shortage in this country, aside from the extraordinary conditions of the European war. I believe if there had been the usual amount, relatively, of ocean shipping, and if there had not been such a frightful detention of cars for storage purposes, the railroads with the equipment they have could handle the enormous increase in products and manufactures of this country without any very serious inconvenience.

Mr. ADAMSON. If properly distributed and promptly unloaded, there would have been enough cars?

Mr. LOVETT. Not with the ocean facilities——

Mr. ADAMSON. If they could have been promptly unloaded. I mean.

Mr. LOVETT. There would have been some shortage, but I do not believe it would have been serious.

Mr. ADAMSON. Is there anything in the charge that some railroads which own lots of cars use the facilities with which they can offer them to compete for business and refuse them except under conditions favorable to themselves?

Mr. LOVETT. I do not believe I caught that question. Read the question.

(The stenographer repeated the question.)

Mr. LOVETT. I do not know. I do not believe there is. On the Union Pacific we were very short of cars and we also had a very great increase of business from the movement of this unusual traffic and we had the worst winter in our history. Our cars were held in the East where they went loaded with food products. We have been unable to get them back, and have been very short. There was congestion on our line, and we had to put on an embargo for a few days. In times of extreme shortage we asked our customers at competitive points, where there were other lines, some of them more fortunate than we were in cars, to give their business to rival lines so that we would handle the business at local stations where the shippers had no other line to serve them.

Our competitors in the Northwest had rather a short wheat crop last year in Minnesota and the Dakotas, and they did not have the same difficulties in that locality in respect to cars that they ordinarily have. Consequently they had more cars for Oregon and Washington than we had. I have described our practice, and I have understood that to be also the practice of other companies when unable to furnish cars. I do not believe any railroad company was struggling for business when it did not have the facilities for

handling it; and I should say, generally, without knowing what every railroad company has done, that the charge to which you have referred is not true. Railroads have not preferred competitive rather than local business.

Mr. ADAMSON. You mention the fact that the movement on your road is eastward more than westward. Is it not generally true that on the other systems it moves one way rather than in both directions?

Mr. LOVETT. I think so. I have not studied that, however.

Mr. ADAMSON. That would result in hauling empty cars one way?

Mr. LOVETT. Yes.

Mr. ADAMSON. And that very greatly embarrasses the efficiency of freight cars?

Mr. LOVETT. Yes.

Mr. ADAMSON. Have you considered any system or method by which that could be in any large measure avoided?

Mr. LOVETT. No; I have not. I do not know how it could be.

Mr. ADAMSON. Have you ever considered the subject as analogous to the Pullman Co., in mobilizing the cars in some way and letting the railroads have them as they needed them?

Mr. LOVETT. I have heard various suggestions about pooling the cars, etc., but I should say the Pullman Co. has to deadhead some cars sometimes—not as many as we do. But if the freight from a certain territory moves in one direction to the market, and with a much greater export than import business, I do not know of any way to balance that trade, except in the manner they do with the international trade—that is, ship back gold and securities——

Mr. ADAMSON. We had a subcommittee to consider the question of private cars some three years ago, and it got on my nerves somewhat, generally, because I think I was a wagoner in the early days and learned what it meant to have to move empty one way, and learned how unprosperous it was.

Judge Sims, you may have the witness.

Mr. SIMS. Judge Lovett, I hope you will bear with me in the questions I am going to ask, although they may appear crude and elemental?

Mr. LOVETT. I hope the answers will be as intelligent as the questions.

Mr. SIMS. Of course, I know from your reputation throughout this country that what you say on this subject will receive great weight—and it ought to—and that what you will say will be studied. Therefore I feel it important to ask you, perhaps, many questions that I would not ask some man who does not enjoy that prestige, and I hope you will not consider me unnecessarily tedious.

Mr. LOVETT. Judge, you embarrass me to such an extent that I am afraid my answers will not be——

Mr. SIMS. Oh, not at all. I think not. My first question is, If this movement to bring about this legislation which you favor and which Mr. Thom favors and which the Committee of Railroad Executives favor is not, in fact and effect, a political movement?

Mr. LOVETT. A political movement?

Mr. SIMS. I do not mean a party movement, but a political movement.

Mr. LOVETT. I wonder what you mean by "political"?

Mr. SIMS. An effort to secure legislation through public sentiment or by affecting public sentiment, as well as by directly appearing before the committees of Congress?

Mr. LOVETT. I think this is a fair answer to that question, Judge Sims: I believe that if the public were fully informed and understood the exact railroad conditions public opinion would force legislation along the lines that we have advocated. I believe the greatest blessing that could come to the railroads of this country would be for the people—all the people—to know the exact railroad conditions.

Mr. SIMS. To know the exact facts?

Mr. LOVETT. Yes.

Mr. SIMS. And this movement, at least in part, is caused by a desire by those interested in railroads—ownership and operation—that the people should know the reasons they have for the positions they maintain and the legislation they seek.

Mr. LOVETT. I do not know just what you mean by “movement” there.

Mr. SIMS. I mean that the movement is by concerted action to obtain legislation by the railroads—by these 60 systems.

Mr. LOVETT. As I understand the object—and certainly my object is to do everything I can legitimately to secure legislation along the lines I have indicated. I believe that it will come. It may not come now, but I believe it is so necessary that it will come in time. I recognize that Congressmen are representatives of the people and that they can not be and are not indifferent to the views of the people on any fairly debatable question—and my object now is to secure this legislation. I believe, as I said a moment ago, that if the people knew the conditions that this legislation would come. If as a result of this examination the people are better informed as to the real conditions, I think that will help the cause of legislation.

Mr. SIMS. My question was not simply intended to cover the services of the joint committee of the two Houses, but the general movement that preceded the organization of the committee that helped to bring it about.

Mr. LOVETT. “General movement”; let me see just what that can refer to.

Mr. SIMS. Just what you mentioned, to effect public sentiment and to get the benefit of public sentiment that may be developed by giving the information which you have to the public.

Mr. LOVETT. To go back a moment to the beginning of what you term “this movement.” We all felt the necessity of legislation dealing with this question in a broad way. Most of us had believed that a good way to defeat a measure was for the railroads to advocate it, because there are a great many people who, justly or not, suspect any legislation that the railroad executives advocate. We felt, while we realized the importance of this legislation, that probably we would hurt the cause more by advocating it than otherwise; but we concluded, after a discussion of the subject, that it was our plain duty to present what we believed was a constructive plan of legislation, regardless of the consequences. Because we are convinced that the responsibility for the future development of the railroads of this country will fall on Congress rather than on us, we felt it was our duty to present to Congress honestly what we think the situation requires.

Mr. SIMS. But to present it also to the country in connection with presenting it to Congress?

Mr. LOVETT. Well, I would like to see it presented in every newspaper and every household in the United States.

Mr. SIMS. And with that wish in view you are doing all you can to bring that about?

Mr. LOVETT. We are not doing very much about that. The summaries of the proceedings or the statements here are prepared and sent out, as I understand, to the newspapers—to those newspapers that want them—but they are exceedingly brief.

Mr. SIMS. But there are a number of organizations seeking to advance these same views, are there not?

Mr. LOVETT. I do not know of any organization except this advisory committee, and I am sure that the gentlemen who are handling this matter would be very glad to file with the committee, if the committee so desires, whatever summaries they send out.

Mr. SIMS. Let me read a statement, Mr. Lovett. I am holding here in my hand a speech or address delivered by Mr. John Muir, chairman of the Railway Investors' League. This address was delivered on December 14, 1916, at Evansville, Ind.

Mr. HAMILTON. Delivered where?

Mr. SIMS. At Evansville, Ind. This pamphlet, which is being sent out, contains a copy of that speech. It says this in the beginning, and I suppose—well, I will read it:

For the first time in the history of railroading a program bringing together all the complex elements which go to make up the railroad situation was arranged under the auspices of the Evansville (Ind.) Chamber of Commerce, to take place in that city on December 14 and 15. Railroad presidents, leaders of railway labor unions, members of commissions which regulate the railroads, counsels for railroads, shippers, and representatives of the great army of investors in railroad stocks and bonds were present.

Among those on the program to make formal addresses were Alfred P. Thom, counsel of the railway executives' advisory committee on Federal legislation; Mr. Frank Trumbull, chairman of the railroad executives' advisory committee; Frank P. Walsh, chairman of the Federal Commission on Industrial Relations; Clifford Thorne, chairman of the Board of Railway Commissioners of Iowa; W. G. Lee, president of the Brotherhood of Railway Trainmen.

Those were some of the gentlemen present.

Mr. Muir in his address says, on page 3, referring to—well, I will read a little ahead, so that you will know what he referred to:

The investors, 600,000 strong, the real owners of the properties, scattered all over this country, having an immense power vested in them, unorganized, are unable to come forward with the combined voice of even a paltry dozen. They are uneasy. They chafe. They hesitate. They ask the question, How about future investments in railroads torn by dissention between executives and employees?

They finally evolve this thought: The executives of the road represent us, and, in the main, do it satisfactorily; but owing to the fact that there is a prejudice against them in Congress, in the commissions, and in the mind of the public, they can't in their official capacity exert as much influence in certain fields as we could if we should act for ourselves independently. Let us get together, and let us, the owners of the roads, show to Congress and the commissions that political influence and voting power are not wholly confined to shippers and the four brotherhoods.

That is Mr. Muir, who is the chairman of this Railway Investors' League. He is speaking as the chairman of an organization to let

the country know that the railroads and their owners have political influence and voting power.

Now, I am not criticizing that. I think that any person who has any property that may be affected adversely by legislation, either national or State or county or city, has a right to present the facts in relation to the property in which he is interested. But, as a matter of course, we Representatives here must represent what our constituents favor. If we do not, we will cease to represent them. So this political movement is started out for the purpose, not to affect this committee—this committee was already selected and was at work when this address was presented and when this organization was formed—but, to use a plain, common, everyday expression, to bring a back fire upon the Representatives, so that if there are those here now who do not voice the same sentiment and are not willing to legislate in that direction—in the direction which the members of this organization desire—they will be sure to replace them with those who will. They have a right to do that; but I think we ought to look at this movement as it really is, and which appears to be an attempt to educate the entire people of this country, with the advantage altogether on the side of the railroads, because they have the means and the opportunity and the experts with which to do it.

Now, being a nonexpert, and about as “non” as you can find, and representing a constituency which no doubt is reading a great deal of this back-fire literature, I am going to try to get all the information I can from you, because I believe you are a broad-minded and capable man, as Mr. Thom has shown himself to be in answering questions. But, as a fundamental basis to start with, there are two extreme positions which may be taken with reference to railroad property.

Mr. LOVETT. Will you permit me to interrupt you for a moment—

Mr. SIMS. Certainly.

Mr. LOVETT. To speak of Mr. Muir's statement?

Mr. SIMS. Certainly. I only wanted to read that to show the reason why I am asking the questions.

Mr. LOVETT. I want to enter a strong protest to being associated with anything Mr. Muir says. I do not know Mr. Muir. I understand he is a broker in New York, dealing in what are called “odd lots” of stock; that is, one share or two shares or a dozen shares, but usually small orders. Some of the large brokerage houses do not take orders for less than 100 shares. He has been trying, as I understand, for some time to organize the railroad investors' league, meaning, I suppose, the stockholders and bondholders. I am not criticizing his efforts, because I see no objection to such an organization: but it was presented to me, and there was some suggestion that Mr. Muir would like to communicate with our stockholders and circularize them, and it was suggested that for that purpose some one engaged in such a plan should have a list of our stockholders.

This was not Mr. Muir himself. Naturally I declined to furnish anybody a list of our stockholders. There was then a suggestion of sending out circulars to our stockholders, with some commendation from us of the movement. I declined to make any suggestion to

our stockholders commending any plan. I said that if Mr. Muir had something he wanted to send to our stockholders, without telling him who they were, and it was submitted to me and I saw no objection to it, I might send it. It was never submitted, and I never sent it. I get circulars, as I suppose all railroad executives do, now and then from Mr. Muir and others, about such movements, but I send them to the wastebasket, because I think such an organization should rest with the stockholders. I see no reason why it should not be formed, but I am having no part in forming it, in promoting it; it is a matter that rests entirely with our stockholders. I have declined even to commend it to them. So I do not want to be understood as having any connection with Mr. Muir or his organization, although in saying that I do not wish to criticize him. He can do whatever he pleases; he is a free citizen; but I am not responsible, and I am quite sure the advisory committee is not responsible, for Mr. Muir's effort.

Mr. SIMS. Mr. Lovett, I did not know anything about Mr. Muir and do not know yet—I mean, further than you have told me—that is the first information I have had. But this appears as an address before the Central States Conference on Rail and Water Transportation, and I read the names of the other gentlemen who were to deliver addresses, several of whom are connected with this investigation here and are men of very high character and high standing; and as this address was delivered by this gentleman there, and this Central States Conference on Rail and Water Transportation, I take it, had invited him, naturally I judged him by the company I found him in, and I supposed he was a man whose words were worthy of consideration.

Mr. LOVETT. I am entirely willing to agree that he was in proper company and that the company was fortunate in the association with him. As to the presence of these other gentlemen, I understood they made addresses there, and I hope they will continue to make them at every opportunity, because I believe it is a very wholesome public service to do everything they can legitimately to give information to the public on this subject.

Mr. SIMS. I only referred to that matter to show that it was an organized political movement; that is, a movement to affect public policies and secure legislation along these lines.

Mr. ADAMSON. The witness has the right to decline to recognize Mr. Muir as a coeducator.

Mr. THOM. Mr. Chairman, I think it is proper to state in that connection that as I understand that conference, all phases of opinion were invited to be represented on the subject. For example, Mr. Trumbull represented the executive's idea on this labor question; Mr. Lee, of the railroad brotherhoods, represented the labor side. They both made addresses.

Senator TOWNSEND. Do I understand, Mr. Sims, that you present that as showing even remotely that that was a railroad meeting, that they instigated that?

Mr. SIMS. No; the meeting was the Central States Conference on Rail and Water Transportation. That was what the meeting was.

Mr. HAMILTON. What is that? Is that something just gotten up on paper, or what is it?

Mr. LOVETT. One of the gentlemen who attended told me that when he was being introduced to make an address it was announced that the purpose was to "put Evansville on the map."

Mr. SIMS. There is no member on this committee from Indiana. I suppose you are safe.

Mr. THOM. In addition to that, I received this morning a full report of the proceedings there, and the first thing in it is an indorsement by President Wilson of that conference.

Mr. SIMS. Then it is not to be ignored in this hearing.

Mr. LOVETT. Not by you, Judge Sims.

Mr. ADAMSON. It was proposed as a benevolent effort to settle all these controversies and close the whole question. I was present when the purpose of it was stated to the President, and the President declined to attend. He thought there would be enough able men there without him, I think.

Mr. THOM. But let it be understood once for all that the railroads had nothing to do with the suggestion or getting up of that conference. They were merely invited to attend, as other people were.

Senator TOWNSEND. I think that the report that Mr. Sims has read shows that clearly.

Mr. SIMS. Certainly; it shows the facts. I say, I judged of him by the company he was in, as I did not know anything about him.

Now, Mr. Lovett, there are two extremes in this matter, as I understand. One is unregulated, uncontrolled private ownership of public utilities; that is one position which, of course, is not being maintained or sought to be maintained.

Mr. LOVETT. I do not understand that anybody advocates that.

Mr. SIMS. I mean, that is a position that has been held in the past by some railroads and some thinkers. The other is absolute Government ownership. Now, we are between these two extremes, having left one of them entirely, if we ever maintained it. Now, as I understand, the whole question involved in your testimony is one of regulation, not regulation as a new method, but the character of the regulation. We have regulation now——

Mr. LOVETT. I think you are complimentary to it, Judge, in calling it regulation.

Mr. SIMS. Well, an attempt at regulation. We certainly do not have Government ownership and we do not have unregulated private ownership. So we do have regulation——

Mr. LOVETT. Partial regulation.

Mr. SIMS. We have regulation to a certain extent; and your belief is that this method of regulation should be changed from what it is to the character of regulation which you have advocated?

Mr. LOVETT. That is, it should be completed.

Mr. SIMS. Yes; consequently I want to examine you along that line. And understand that not for one moment do I think that because a man owns stock in a railroad company he has no civil rights or political rights, and has not the same right to exert them that anybody else has. That never cuts any figure with me, and I think perhaps there is an unnecessary degree of modesty among men connected with railroads about this matter.

Mr. LOVETT. They are getting over that, Judge.

Mr. SIMS. I think they are. I hope they will.

Now, you start out, as I understand it, first with the claim that nationalizing regulation is a necessity?

Mr. Lovett. That is my opinion.

Mr. Sims. And you show that from 1906 to 1915, a period of 10 years, there was about \$600,000,000 per annum of new capital required during that period for railroad purposes?

Mr. Lovett. For improvements, not counting the renewal or refunding of debts that matured during that period.

Mr. Sims. I was just going to ask you what you mean by new capital. That will give you an opportunity to state what your view is.

Mr. Lovett. I mean those expenditures which under the classification of the Interstate Commerce Commission are not charged to operating expenses.

Mr. Sims. In other words, there had to be an addition to the permanent investment funds of the railroads to the extent of \$600,000,000 a year?

Mr. Lovett. Yes; about.

Mr. Sims. If the railroads could not earn, under existing regulation, this \$600,000,000 per annum, the only chance to get it was to borrow it?

Mr. Lovett. Yes.

Mr. Sims. And then you, from the best information you have, conclude that for the next 10 years, for the same purposes, it will require about \$1,000,000,000 per annum?

Mr. Lovett. I did not state definitely any amount, Judge Sims.

Mr. Sims. I said "about."

Mr. Lovett. I expressed the opinion that for the same purposes, my judgment was it would be more than during the last 10 years, and that when there was added to these expenditures the amount necessary to refund debts that would mature during that period it would be nearly a billion dollars.

Mr. Sims. In other words, there must be an additional investment by investors in railroad property for the next 10 years in order to enable the railroads to meet the requirements of the public?

Mr. Lovett. Some of that money will come out of earnings.

Mr. Sims. Well, you use the words "new money."

Mr. Lovett. I include in "new money" that which according to the classification of accounts by the Interstate Commerce Commission is applicable to dividends; that instead of distributing it as dividends the company may put it back into the property.

Mr. Sims. In other words, borrow it from the stockholders; is that the idea?

Mr. Lovett. That is the idea.

Mr. Sims. But it is an investment; it is a permanent improvement to the property—new capital?

Mr. Lovett. In general it is new capital, because the stockholders have the right to take all of their earnings in excess of maintenance expenses as dividends if they want to. But instead of that, they will put some of it back into the property.

Mr. Sims. But in putting it back into the property, as it is called, they are not incurring a loss?

Mr. LOVETT. Well, that depends. May I interject just here a thought on that?

Mr. SIMS. Certainly; I want information.

Mr. LOVETT. Under the English system—at least, as it formerly existed—the stockholders of the company would always distribute as dividends all the money each year applicable to dividends, and for the new capital required they would issue additional securities, stock or something else. But each English stockholder expects, or formerly expected, a dividend to the amount of the entire surplus earnings after meeting expenses. That has not been the American system. Any railroad that distributes what is reported by the Interstate Commerce Commission as net earnings—distributes all of it as dividends—will sooner or later come to grief. There used to be a theory in Wall Street—I have not heard so much of it recently, though it may still be one of the maxims of Wall Street—that one half of the surplus should go to the stockholders and the other half back into the property. That is, from the system of accounts that is kept, you could not afford to distribute the entire surplus applicable by law to dividends as dividends, but would have to put some back into the property to cover improvements that will neither increase earnings nor reduce expenses.

Mr. ESCH. Is that one reason—excuse me, Judge Sims—why the capitalization per mile of American roads is so much less than that of Great Britain?

Mr. LOVETT. I think so.

Mr. SIMS. My question, Judge, was this: If the amount of the net earnings which might be distributed in dividends among the stockholders was not all so distributed, but a portion of it was retained in the company's treasury and used for the permanent benefit of the properties, if there was any loss to the stockholders of that fund?

Mr. LOVETT. If the stockholders are allowed to earn on that, I answer, no. But the stockholder has this option. Take the Union Pacific; we earned for the fiscal year ended June 30, 1916, from the railroad and from our investments, about 16 per cent. We paid in that year a dividend of only 8 per cent. We had the right to distribute all of that as a dividend, and in that case the stockholder would have had the money in his pocket. But instead we put the surplus back into the property, or reserved it, and the stockholder equitably and fairly is entitled to a return on it, because we could have given him the money and issued new securities for improvements.

Mr. SIMS. Is not the property worth just that much more than it would have been if it had all been distributed in dividends?

Mr. LOVETT. We think it is.

Mr. SIMS. And the stockholder is the owner of the property?

Mr. LOVETT. Yes.

Mr. SIMS. So, unless a loss occurs afterwards, for some reason or other, it is not a loss. It is not a primary loss, to say the least of it, because the property is worth that much more, if that surplus is regarded as part of the property.

Mr. LOVETT. Theoretically that is true. I could express some views on the subject of accounting by which this large surplus is shown; but the accounting system is prescribed by the Interstate Commerce Commission, and it is a complicated subject and I do not care to go into a discussion of it.

Mr. SIMS. If a railroad company did not pay a cent of dividends in 10 years, but during that time might have done so, but put all its earnings into a permanent improvement of the property, has the stockholder lost 1 cent, if the property is benefited to the extent of the money used?

Mr. LOVETT. I should say he ought not to lose. Of course, it may have been a bad investment to put it back into the property; but theoretically he has not lost.

Mr. SIMS. Now, the question arises, as appeared in Mr. Thom's examination, which necessarily appears in yours, that the railroads in this country for the next 10 years will have to use a sum of money in permanent improvements exceeding their earnings, or exceeding such portion of their earnings as may be so used, possibly to the extent of \$1,000,000,000 per annum; and that the opportunity, and the only opportunity, to get that money is by sale of the bonds of the company, or part of the ownership in it, through stock certificates. That is an admitted position—not agreeing to the exact figures, but that is the position that both you and Judge Thom take?

Mr. LOVETT. Yes; I believe it will be necessary to expend upon this property the amount that I indicated in my direct statement, in order to develop the railroads. Some of that will be surplus earnings if we happen to have good times. Some of it will be borrowed on stock, and some in one way or another.

Mr. SIMS. You do not call money obtained from stock borrowed money, do you?

Mr. LOVETT. It is money put in by the stockholder. It is theoretical as to what it is. It is one way of getting money.

Mr. SIMS. He buys an interest in the property?

Mr. LOVETT. I will concede that technical distinction.

Mr. SIMS. And the property is under no obligations to make him any earnings, either in law or morals?

Mr. LOVETT. It is not?

Mr. SIMS. No.

Mr. LOVETT. I will not concede that.

Mr. SIMS. I mean compulsory obligation; because if I pay \$5,000 for a farm, there is no law, moral or divine, that I know of, that says I must have an earning out of that per annum.

Mr. LOVETT. I think, Judge Sims, that a man who puts a dollar into railroad property, to serve the public, is entitled to a return on it, whatever may be the form of the evidence he gets representing it, whether it is stock or bonds or what not.

Mr. SIMS. That brings up a very important question which I was going to ask you later on. Do you mean that he is entitled to an earning on that investment, regardless of the rights of the public to a proper service through that piece of property?

Mr. LOVETT. Well, that is rather a big question.

Mr. SIMS. I know it is. I was going to come to it later, but you have come right to it yourself, now.

Mr. LOVETT. I am ready to discuss it now, if you prefer, or any time.

Mr. SIMS. The railroad, or any other public utility, as I understand it, exists for the public, and that investment in these utilities by private individuals is not compulsory; it is a voluntary act, and

unless the State or Government should make some declaration or promise, establish some policy that would lead the citizen into making this private investment by which the Government would then be estopped from regulating it, in such a way as to produce an injury, he is simply taking a risk, as he would in making any other kind of private investment, knowing full well that it is a public utility; that its first obligation is to the public, and that if in performing its obligation to the public money is lost, even if the investment is lost, that he has no remedy, so far as compulsion through process of law or legislation is concerned?

Mr. LOVETT. I will state my view in answer to that.

Mr. SIMS. Between the public and the private investor, under such circumstances, if either must lose it must be the private individual?

Mr. LOVETT. Yes. I understand that an investor in a railroad takes the same chances that every other investor takes; that he is entitled to engage in the transportation business and to have reasonable rates for that service; that a reasonable rate involves a fair return on his investment as one of the very first elements in it, if he can get it; and that a reasonable rate and the return that he gets is not merely what some regulating body chooses to make. But let us take a railroad that is built in competitive territory; under my view of the right of the stockholder, he takes his chances in getting a return on his money from such rates as can be charged in fairness to the public, the shippers, and the travelers, and such as competitive conditions will allow; that a reasonable rate is a judicial question to be inquired into, and under the circumstances decided what it ought to be; and that there is no hard and fast rule by which you can fix a reasonable rate. It is not an arbitrary act. No commission has the right arbitrarily to deprive a man of return on his property. Before they can do that they must inquire into the circumstances and determine, considering the investment, what would be a reasonable charge. The fundamental consideration is that the owner is entitled to a reasonable rate, and there is absolutely no yardstick by which a reasonable rate can be measured.

Now, when this man with the dollar puts it into the railroad, he exercises his judgment about it, just as the man who invests in any other property. He takes into consideration all the circumstances: he takes into consideration the power of the Government to determine, *prima facie* at least, what is a reasonable rate. That is one of the difficulties that confront the railroads for the future—the things that this man considers when he puts in his dollar. He knows the things that you mention, and if he does not see any prospect of a reasonably certain return on his investment, he will not make it. But the man who puts his money into a railroad, according to my conception and my understanding, is entitled to just the same consideration for that dollar as the man who puts it into Ford automobile stock or United States Steel stock, or any other. You have no right to confiscate it.

Mr. SIMS. In other words, he has a right to all the benefits of private ownership, with all the benefits of sovereign power which is given the corporation in behalf of the public utility, to condemn private property and appropriate it?

Mr. LOVETT. Yes. He has the right to a return for a reasonable rate. Upon the man who puts his money into a private enterprise.

there is no restraint as to what he can charge. But to the extent of a reasonable rate railroad property is just as much entitled to protection as any other; and in determining a reasonable rate you must consider the investment or value.

Mr. SIMS. I do not think, really—at least perhaps I did not catch it—that I have had my question answered. My question was this: If a man invested in a railroad doing interstate-commerce business, which is under the power of Congress to regulate or to own, and the earnings of the road should not be sufficient to pay him a dividend and operate the railroad—I mean a remunerative dividend—does not the public for which this road was authorized and created have a right to have the service performed regardless of the per cent of earnings; I mean, anywhere above confiscation? Does not the public have the right to demand that the public shall not be the sufferer as between the private investor, with this knowledge, and taking these conditions and this property cum onere; is not the public entitled to first consideration as against the bondholder or stockholder?

Mr. LOVETT. If he can not get a return out of a reasonable rate, he is not entitled to it.

Mr. SIMS. Is there any contract between the Government and a railroad corporation when it builds a railroad that it is to have reasonable earnings?

Mr. ADAMSON. Judge Sims's question was properly answered by the Negro who said, "Poor pay, poor preacher."

Mr. LOVETT. No, sir; but there is a contract between him and the Government that he is entitled to charge a reasonable rate.

Mr. SIMS. But suppose the so-called reasonable rate does not make earnings; I mean in connection with an efficient service to the public. Would he be permitted to abridge the efficiency of his service in order to increase his private gains?

Mr. LOVETT. That depends on what you mean by "efficiency." That involves another definition.

Mr. SIMS. Service equal to the expectation and requirement of a railroad located in that locality, as compared with what other railroads give.

Mr. LOVETT. As compared with what other railroads give? I do not think you can require that. Judge Sims, I can not possibly define a reasonable rate. I can only tell you that a man who invests his money in a railroad is entitled to have that railroad charge a reasonable rate. That involves a great multitude of circumstances.

Mr. SIMS. I do not expect you to go through them all now.

Mr. ADAMSON. Judge Sims, do you mean that the accommodation must be more than the revenues will pay for and justify?

Mr. SIMS. I mean this and nothing else—that when a man invests his money in a public utility he takes all the chances of profit and loss, no more and no less than goes with such an investment, and that it is encumbered with the power and sovereignty of the Government to place such conditions upon that railroad as are required in order to perform the public service.

Mr. LOVETT. It is entitled to place such conditions on that railroad as are necessary to establish a reasonable rate.

Mr. SIMS. Suppose a reasonable rate did not enable it to perform the duties and services of a public-service corporation?

Mr. LOVETT. Why, the owner would not get any return.

Mr. SIMS. Would he have a right to cease operating the railroad?

Mr. LOVETT. He could throw it over; let the public take it.

Mr. SIMS. In other words, he could lose his property?

Mr. LOVETT. He could lose his property.

Mr. SIMS. But the public, theoretically, must not lose the benefit of a public-utility service by reason of the financial inability of the private owners to operate it according to the public requirements?

Mr. LOVETT. A railroad once constructed, as I understand, can not be taken up without the public consent. If the owners do not operate it, the courts can take it and operate it by a receiver or in some other way.

Mr. SIMS. Or sell it?

Mr. LOVETT. Or sell it. The man who invests in railroad property makes a bad investment if he can not make a dividend on a reasonable rate; and in determining a reasonable rate you take into account the character of the service. An order that would require one railroad to render the same service, run the same number of trains with the same frequency and with the same equipment as perhaps is run by another, would be an unreasonable order in some cases. I can imagine, for instance, that an order that would require some roads to run as many trains and cars of the same character as the New York Central or the Pennsylvania run would be an unreasonable order. It depends on the circumstances, and there are a thousand of them in each case.

Mr. SIMS. Now, then, if private capital is seeking an opportunity to do a public service, it gets it by permission, not by right, and takes it subject to the known requirements of the public.

Mr. LOVETT. That is undoubted.

Mr. SIMS. If the operation of that railroad under reasonable rates, as determined by the body authorized to determine them, whatever they may be, can not perform that service, has he any right to fail to perform the service and yet retain the property in his control?

Mr. LOVETT. If you change the words "requirements of the public" to "rights of the public," I will agree to your statement.

Mr. SIMS. I use the words "requirements" and "rights" interchangeably; that is, to perform the service that a railroad ought to, under those circumstances and conditions. Then, whenever a bondholder loans money on a railroad, he loans it with a knowledge that it is encumbered with this public right.

Mr. LOVETT. Undoubtedly.

Mr. SIMS. And if the railroad can not pay interest on its bonds and operate the railroad within these rights, giving this reasonable public service, he must lose his interest or he must lose his principal, or so much of it as may be lost?

Mr. LOVETT. That is reinforced, Judge Sims, by the data given in the last annual of the Financial Chronicle, of New York, which shows that at that time something over 11 per cent of the railroad bonds of the United States, of companies whose gross earnings exceeded \$1,000,000 were in default.

Mr. SIMS. Well, I am trying to consider this matter in a fundamental way.

Mr. LOVETT. I do not want to appear as not wishing to answer your question.

Mr. SIMS. Are there not some things that the Government may require of the railroads that may cost them money, regardless of the profits of the road or the rates charged by the roads——

Mr. LOVETT. No——

Mr. SIMS. You stated that in national incorporation you would leave certain things with the States to be determined by them; one, for instance, is grade crossings. Now, suppose a State passed a law that required all the railroads operating in that State to abolish grade crossings, with a view to avoiding loss of life, and a compliance with that order renders the railroad unable to pay dividends or interest on its bonds. Would that make the order void on that account?

Mr. LOVETT. No; but it would raise the question of the validity of the order. The State would not have the right to confiscate a railroad under all circumstances by requiring that all grade crossings be abolished. That might be regarded as an arbitrary and unreasonable exercise of police power.

Mr. SIMS. But it is a police power?

Mr. LOVETT. Yes.

Mr. SIMS. And you are in favor of leaving that with the State?

Mr. LOVETT. Yes.

Mr. SIMS. How could there be a more important exercise of the police power than the one I have referred to?

Mr. LOVETT. There are a great many.

Mr. SIMS. And one that would cost the railroads more?

Mr. LOVETT. A great many, but so far it has not been confiscatory, and I do not believe the States would exercise it in a confiscatory manner; and if they did, there would be a remedy in the courts.

Mr. SIMS. I am speaking of a situation where I am supposing that a man who invests in railroad securities takes them with all these possibilities, whether some of them might be, in his mind, unjust or unreasonable, even if they are reasonable and proper it affects the market value of the stocks and bonds, does it not?

Mr. LOVETT. Yes.

Mr. SIMS. If he goes in and makes a mistake, the public should not suffer for his mistakes; but if anybody should suffer, it should be the man who makes the investment.

Mr. LOVETT. If it was the judgment of the legislature—subject to the court's view as to reasonableness—that the safety of the public required the elimination of grade crossings, they would have to be eliminated whether the stockholder gets his return or not.

Mr. SIMS. Who passes on that question?

Mr. LOVETT. The legislature, primarily and ultimately the Supreme Court of the United States, if it becomes confiscatory.

Mr. SIMS. If it is alleged to become confiscatory?

Mr. LOVETT. Yes.

Mr. SIMS. Is there anything more important to the public than the avoidance of accidents, than the frequency of accidents, or the infrequency of accidents, so far as the public service is concerned?

Mr. LOVETT. I do not know whether I am very good, Judge, in answering as to the relative importance of things.

Mr. SIMS. In other words, has human life a commercial value, to be treated simply as an asset?

Mr. LOVETT. Nothing is more important than a man's life.

Mr. SIMS. To the Nation or to himself?

Mr. LOVETT. Well, himself. But we all know that in the process of development of civilization lives are lost. We can not build railroads without losing lives, and accidents will occur. We can not have automobiles without now and then killing somebody. Any State law that would prohibit the operation of automobiles because a man might be killed some time or prohibit the operation of trains because a man might be killed in the building of the railroads would be an unreasonable law. It is inconceivable that a State should pass such a law. You must deal with these things relatively. If a State law arbitrarily required the elimination of all grade crossings, which would bankrupt some railroads, and do great injury to the people and discourage investments in railroads when there was no pressing need, perhaps, for the elimination of any grade crossings, that would involve a question of the reasonable exercise of the police power, which should be reviewed.

Mr. SIMS. Suppose the State of Tennessee or the State of Texas (the legislature) decides that human lives, in their estimation, are worth more than property or the earnings of the railroad companies, and they provide that the railroads in that State must eliminate all grade crossings within a period of 10 years, and it is not unreasonable in the sense that it is impossible for the railroads to comply with that order in that time, and it does and will save human life, and, in a sense, be a saving to the railroad companies themselves, would the fact that that encroaches on the dividends or the interest on the bonds prevent the passage of such a law by the State?

Mr. LOVETT. It depends on the circumstances. If it is a reasonable exercise of the police power, it does not make any difference whether there is a dividend or an interest payment——

Mr. SIMS. In other words, the proper exercise of the police power is one that must be obeyed regardless of expense to the railroad companies?

Mr. LOVETT. Yes.

Mr. SIMS. Yet you are willing to leave that power with the States?

Mr. LOVETT. Yes; that is where it belongs. I do not know of——

Mr. SIMS. If it is a power that is so great as to absorb the earnings of the railroads for a number of years and still be considered constitutional, do you think that is not as necessary to be vested in the Federal Government as any other power you want to vest in it?

Mr. LOVETT. I think the danger of an abuse of that power by the States is extremely remote, and if the States do abuse it there is a remedy in the courts.

Mr. SIMS. That is only a remedy to the extent of confiscation.

Mr. LOVETT. Yes.

Mr. SIMS. That is, it would have to be confiscation; that is, an unreasonable and arbitrary requirement which involves confiscation.

Mr. LOVETT. Judge Sims, I want it always understood that I realize that the people govern this country and always will. If we can not trust the people of this country to regulate the railroads properly, we can not trust anything. In suggesting Federal regulation, Great Heavens, I am not suggesting getting away from the people's regulation, but what I want is a unified system of regulation. As I have said before, I do not care who the regulator is, pro-

vided there is only one. I am not in favor of taking away from the States powers which affect purely local conditions. Leave them where they are. As long as there is a particular grade crossing in a community that ought to be eliminated, it is to be judged by the circumstances of that community and that particular crossing. That is a very different proposition, however, from allowing a State to establish a system of rates that may affect the whole United States or a large territory or to prohibit or restrict the issuance of securities that do not affect that particular locality perhaps one-tenth as much as it affects other localities.

Mr. SIMS. The grounds upon which you seek to have national incorporation apply with equal force to that police power if the proper and lawful exercise of that police power will infringe or reduce the ability of that railroad to discharge its full duties as a common carrier through all the States through which it passes; in other words, it becomes vital; and now, if it is vital, is it any less vital than any of the other things you have been treating as vital?

Mr. LOVETT. If an interstate railroad or any railroad—I do not care how big it is—runs through a community, it must do what is reasonable to protect the lives in that community. The police power of a community must not be sacrificed for the company's welfare. It must be subserved and preserved. It is precisely the same as if it were vested in the Federal Government or the State government. If the regulations are unreasonable, the remedy would be in the courts.

Mr. SIMS. But running through several States, one State might exercise this power in such a way as to cost the railroads running through it twice as much money as another or the other States, and therefore would be drawing upon the revenues of that railroad or its ability to serve the whole line.

Mr. LOVETT. That is possible.

Mr. SIMS. Consequently, the police power, wherever it is vital, or where it is exercised in such a way as to vitally affect the railroads as a whole, ought to be in the Federal Government if any of them are to be there.

Mr. LOVETT. Well, I do not quite follow that. I do not see why that results. I do not believe there is any danger of that condition arising, and if it does, why, there is a remedy in the courts for it.

Mr. SIMS. The assumption is, of course, Judge, that the nationally chartered railroads would comply with any reasonable order; and if it will why leave this in the hands of State legislatures and have further political activity about it in the different States through which the system runs?

Mr. LOVETT. I should like to make it clear, Judge Sims, that my position about this is not in hostility to the States or to State regulation. I have about as much confidence in the average State regulation of the subject as I have in Federal regulation; but it is the multiplicity of regulation and conflicting regulation that I object to. I should about as soon trust to the wisdom of the States in this matter as to the wisdom of the National Government. It is not in hostility to the States. I am personally willing to give it to any one State, but I want unified rules and regulations.

Mr. SIMS. Why leave out so important a thing as the possibility of burdening the railroads by placing upon them matters of grade crossings in one State where other States may not do that?

Mr. LOVETT. I do not give it the importance that you do.

Mr. SIMS. It may be important enough to result in confiscation.

Mr. LOVETT. Yes.

Mr. SIMS. And you could not pay as much dividends or lay aside as much surplus for permanent improvements as if you did not have to meet the requirements of this particular State over other States.

Mr. LOVETT. Of course, if Congress wants to put that matter for the Federal commission, of course it is all right with me.

Mr. SIMS. There is the rub. Even in your proposition, it leaves a great deal of power in the States, touching railroads doing an interstate business, which may be exercised within the law, and yet in such a way as to affect the total earnings of the railroads which run through the State, and therefore become important; and why make two bites at the cherry? If we are going into the nationalization of the railroads, why leave anything to the States?

Mr. LOVETT. Experience is the most valuable guide in such matters. I do not know of any case where that has occurred, and I do know of many, many cases where the national aspect of a situation has been much hampered and interfered with by State action.

Mr. SIMS. An investor who would be called upon to buy stocks or bonds or furnish money to make permanent improvements—has he not looked at all of these possibilities?

Mr. LOVETT. Yes; but more to the probabilities.

Mr. SIMS. He gives more weight to the probabilities?

Mr. LOVETT. Yes.

Mr. SIMS. Now, a railroad like yours, running through 11 States, is in this situation: You want to improve the credit of that railroad: in other words, sell bonds at the highest price or at the least interest it will bring.

Mr. LOVETT. Yes.

Mr. SIMS. Why should any of the essential interstate elements of that service be left in the States?

Mr. LOVETT. Because it is unnecessary to deprive the States of that power.

Mr. SIMS. Don't you think that such a possibility would cause your stocks and bonds to call for a higher interest and your stocks to sell for a less price?

Mr. LOVETT. I do not. I do not believe it would affect the price of our stock or bonds one-hundredth part of 1 per cent whether this power is vested in the States or in Congress.

Mr. SIMS. But if it gets to doing so, then you will rely on Congress to take action later on?

Mr. LOVETT. I think, Judge Sims, that the power of Congress to interfere with these purely local matters arises from its right to regulate commerce, and that this question of grade crossings has not burdened interstate commerce and has not hampered interstate commerce, and therefore there is no occasion for Congress to take that over. But the regulation of rates in a certain manner has hampered and disturbed interstate commerce, and the regulation of the issuance of securities has done so as well as the regulation of consolidations and leasing.

Mr. SIMS. Now, getting back to the question——

Mr. Lovett. I hope I do not appear as trying to evade your questions.

Mr. Sims. I do not for a moment think so. I am asking for information. Under present regulation and under regulation proposed by you and Mr. Thom, representing the railway executives, the railroads in the future for increasing their facilities, double-tracking, quadruple or quintuple tracking, if necessary, the increased terminals, and for such new construction as the country may require, must depend upon their ability to borrow money through bonds or otherwise, and at such a rate of interest as they can afford to put in this additional construction, or upon the sale of additional capital—stocks—at such a price as will enable them to do it. Therefore the possibility of increasing the railway service of this country equal to its demands and needs depends simply upon the chance of what the market will be for the next 10 years—should that be the period over which this improvement would go—depends entirely on the mere accident of the market as to whether you can do it or not. Is that not true?

Mr. Lovett. I would not say as to the accident of the market.

Mr. Sims. I mean market conditions, due to accident or otherwise.

Mr. Lovett. It is going to depend on whether the investors think that the money they put in is going to bring them a return.

Mr. Sims. Not simply a return, but a better return than some other form of investment offered to them at the time?

Mr. Lovett. Yes. If they believe the condition is going to be that whatever the public require comes ahead of them, whether reasonable or not, they will be rather slow to put it in.

Mr. Sims. I think you are exactly right about that. But I think the public's interest is the paramount interest, and it should be the object of Government and of Congress to provide such facilities and such efficiency of service as the public needs require, regardless of whether it pays or does not pay, because there is no compulsory investment in these matters. They do not have to invest.

Mr. Lovett. Yes; and the public is no more successful than an individual in getting all it wants. The public can not have all of the money necessary for the improvement of the railroad facilities of this country upon the public's terms. The public must accord to this additional capital returns in order to get it, because, as you say, the investor is not obliged to put in his money, and therefore the public can not dictate the terms on which it will get the money.

Mr. Sims. And the public does not have to have railroads privately owned and operated?

Mr. Lovett. Not at all.

Mr. Sims. So there are two independent conditions?

Mr. Lovett. Exactly.

Mr. Sims. But I want to see what prospects there are to get this money in the old way; that is, by the sale of bonds, by borrowing temporarily, or by sale of stocks for the next 10 years.

Mr. Lovett. Yes; that is the live question.

Mr. Sims. And to me it seems to be an exceedingly unfortunate question. Is it reasonable to suppose that railroad securities in the future will sell better than they have in the past unless there is an increased earning—I mean unless there is an increased dividend, or earnings out of which they pay an increased dividend—when they have to compete with every form of other investment, the earnings of

which have been increased by reason of the European war and by reason of so many other kinds of activities, industrial and otherwise, offering a higher rate of interest or dividend?

Mr. LOVETT. I indicated in my statement the other day that I believe investment rates are going to be higher for several years than they were prior to the European war, because of the great demand for money.

Mr. SIMS. Now, between the demand of the people for lower rates and better service and the demand of the private investor for higher interest is the real conflict?

Mr. LOVETT. Yes.

Mr. SIMS. And you believe that that conflict can be better met by having as few regulating bodies as possible and unifying all the regulations and by having national charters for all railroads by compulsion of law?

Mr. LOVETT. I would not say fewer regulating bodies. I do not care how many——

Mr. SIMS. I mean sovereignties.

Mr. LOVETT. But, for one, I am satisfied that money necessary for railroad development can be gotten more readily and upon better rates by having unified regulation and complete regulation than by having the present system.

Mr. SIMS. You referred to a very interesting matter in your leading statement with reference to the advanced rates in the official classification of territory. I remember with a good deal of interest that contest that went on for a long while, because I undertook to make what I call a "high-brow" speech on that subject the 14th of January, 1914, in which I took the position that the average 5 per cent rate increase was not needed by the good, well-to-do railroad companies of that section, like the Pennsylvania, and was not sufficient for the weaker roads. And so I had an opportunity to investigate that question. Finally, when the war came on, the commission, on account of causes presenting themselves that had not before presented themselves, granted the increase. Now, the railroad companies claimed that increase was absolutely necessary.

Mr. LOVETT. Did not your examination convince you that it was?

Mr. SIMS. You mean at the time that the increase was made? It did not convince me before because, as I say, I made a speech in opposition to it. But that was a "high-brow" speech, a written speech. That is what I call a "high-brow" speech, one that is prepared with care, which is the best way to prepare them.

Now, I never knew until to-day that the great State of Pennsylvania, the railroads of which State were perhaps benefited by that increase more than any other State in the official classification territory, by the power of the State commission nullified the action of the Interstate Commerce Commission, which the railroad companies said was absolutely essential. That was not an action by the Government; the Government did not direct it to be done or make an order or anything of that sort, but authorized it after three hearings.

Mr. LOVETT. All I know about it is hearsay. I heard at the time that the State of Pennsylvania made a reduction in coal rates that applied to tidewater in Pennsylvania.

Mr. SIMS. In Pennsylvania?

Mr. LOVETT. Yes.

Mr. SIMS. Which was one of the largest items; in other words, perhaps there was more coal tonnage than any other tonnage on the railroads in that State?

Mr. LOVETT. Yes; I suppose so. All I know about it is hearsay. If they reduced rates on coal in Pennsylvania to tidewater that would force a reduction on rates to New York, and that would be very far-reaching. I think you had better get some man from Pennsylvania to tell you the exact facts about that. That is my understanding of what transpired.

Mr. SIMS. But anyway the point is that a State did negative or nullify the action of the Interstate Commerce Commission in its application to coal?

Mr. LOVETT. It substantially did; that is my understanding.

Mr. SIMS. Could it not have done so in reference to every item contained in that permission?

Mr. LOVETT. Yes; I should think so.

Mr. SIMS. And the State judges of necessity making such orders themselves.

Mr. LOVETT. The State judges or the State commissioners?

Mr. SIMS. It is the same thing. The commissioners can only execute the law through the power of the State. What I am trying to get at and understand is, how are you going to get all this borrowed money in the next 10 years if the States are to retain the powers that now exist and to which they seem to be entitled under the Constitution?

Mr. LOVETT. It is not possible at all, Judge Sims, if they shall retain the power to do what they did in the Pennsylvania cases.

Mr. SIMS. There is no question about the validity of the power that they did exercise there.

Mr. LOVETT. It was perhaps valid at the time. I do not know as to that. But it would not be valid if Congress said they should not exercise it.

Mr. SIMS. By passing new laws?

Mr. LOVETT. Yes; that is the point.

Mr. SIMS. If the legislation which Judge Thom so ably mapped out here, and which you have gone over, can not be procured and is not procured, and regulation as has heretofore been practiced by the States continues, does that mean that we have reached a period of arrested development in railroad construction and operation in the United States?

Mr. LOVETT. To a considerable extent. There are many roads that will be able to continue development; there are many roads that will not. I do not mean to say at all that absolutely railroad development is going to stop. As I indicated in the very outset of my statement, even under existing conditions, certainly we will continue to develop on the Union Pacific.

Mr. SIMS. But you did state there would be no new independent construction hereafter, in your judgment?

Mr. LOVETT. No; and I do not believe there will be whether this legislation comes or not. Of course, there will be local roads here and there, but I believe the railroad facilities of this country in the way of new lines will have to be provided in future by existing systems.

Mr. Esch. In other words, you think there is not likely to be another Henry Rogers to build the Virginia Railroad or another Moffett to build the Cut-off?

Mr. Lovett. No.

Mr. Adamson. Gentlemen, on yesterday this committee agreed to postpone the morning meetings until half past 10. We will therefore adjourn now until 10.30 o'clock to-morrow morning.

(Thereupon, at 1.30 o'clock p. m., the committee adjourned until Friday, March 23, 1917, at 10.30 o'clock a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

FRIDAY, MARCH 23, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.30 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

The CHAIRMAN. The committee will come to order. Mr. Sims, you may proceed.

Mr. SIMS. I thought, Mr. Lovett, that I would go on with the national charter matter the first thing, but I found that there were some things in connection with the powers that you propose shall remain in the States that I had not interrogated you about. I spent, I think, most of the time talking about the possibility of inordinate expenses being placed upon a railroad by a single State requiring all its grade crossings to be abolished. Now, if I understand you correctly, my recollection is that you said that you favored leaving the taxing power over railroad properties to the States, or in the States, as it now exists?

Mr. LOVETT. Yes.

Mr. SIMS. And you made no exceptions?

Mr. LOVETT. Yes.

Mr. SIMS. Do you do that because you think it is sound economic policy to adopt, or are you suggesting it simply in order to get it out of the way of this general nationalization of railways, a matter that you think might prevent the States from more readily accepting it?

Mr. LOVETT. I do it from my general judgment of the situation as to what is best, bearing in mind, Judge Sims, the general proposition that I hope will always be understood—my belief that all these matters that are necessary to be exercised by the National Government ought to be exercised by the National Government and the other things that are not necessary and are more local than national should be left to the States. I believe that in the matter of corporate functions and corporate powers they should all be the same. I believe that in the regulation of the issuance of securities the power should be uniform. I believe that in the matter of consolidations and leases and sales they should be uniform, and that rates ought to be regulated by one authority. Those things are of national concern. Almost everything else is more or less local.

Mr. SIMS. Did you not also state in effect in some portion of your examination that taxation of railroads ought to be uniform?

Mr. LOVETT. I stated this: That a more ideal system would be one that would treat each railroad as a unit—a single piece of property—and would provide for the ascertainment of the value of that railroad as a whole, and then certify to the different States the portion of that value within that State upon a track-mileage basis. I think that would be an ideal system which would result in the taxation of every railroad to its full value, or rather in the ascertainment of the full value of each railroad, or of that portion of the railroad in each State, and still leave each State to determine how it would tax it. For instance, in Kansas and Nebraska, one of those States—I am not sure which—usually provides for the ascertainment of the full value of the railroad, and then taxes it one-fifth or some similar percentage of its value. Senator Bristow, does not Kansas have some such provision?

Mr. BRISTOW. No; it is the full value in Kansas.

Mr. LOVETT. Then I think it is Nebraska. But one of those States up to a few years ago would tax the road one-fifth, or some such percentage, of the total value, which was the percentage of value which other property in the State was taxed; whereas the other State would tax it to its full value. Now, if we want to get at the value of the property to be taxed, the most reliable way is for some Government tribunal to ascertain the full value and to allot it among the States. But I am not suggesting that. I say that is an ideal system. I do not believe it is of sufficient necessity to the national interest to require that to be done. Therefore, I am in favor of leaving to the States this question as all other questions not of national concern.

Mr. SIMS. Did you not also state that the taxation by States and counties and cities—in other words, State taxing powers—were gradually growing heavier all the time?

Mr. LOVETT. Yes; and especially by the National Government.

Mr. SIMS. I mean State taxation, county taxation, and city taxation.

Mr. LOVETT. Yes; I think all taxes are growing heavier.

Mr. SIMS. That State taxation is growing heavier all the time?

Mr. LOVETT. I believe that is true.

Mr. SIMS. Then the burden of all the railroads is being increased by State taxation?

Mr. LOVETT. Yes.

Mr. SIMS. And yet you would consider taxation as a local matter and negligible in the proposition that you have for nationalizing the railroads by and through national charters?

Mr. LOVETT. I would not say negligible, but something you can not remedy.

Mr. SIMS. But so unimportant that you are willing to leave it to these very taxing bodies of which you now complain?

Mr. LOVETT. I do not wish to be understood as saying that taxation is unimportant. Rather, in my main statement, I emphasized its importance.

Mr. SIMS. I mean in its effect upon the revenues or the earning capacity or the ability to serve the public by the railroads.

Mr. LOVETT. I do not wish to say that it is unimportant. I think it is very important.

Mr. ADAMSON. Judge Sims, I wish you would ask the witness right there, please, if uniformity of the system of taxation would not be just as important as uniformity in all other respects.

Mr. SIMS. You can answer it.

Mr. LOVETT. Relatively, no. I have never heard of any absolutely uniform system of taxation based upon ad valorem.

Mr. ADAMSON. You have never heard of any other system or situation like this, where railroads have grown into a national system, and for that reason demand uniformity?

Mr. LOVETT. I can understand the reason for wanting it. That is possible. It is not possible to obtain, so far as I know, any absolutely uniform system of taxation.

Mr. SIMS. Mr. Lovett, I have an opinion. It may not be worth anything, but it will have some effect on me. I can not get away from the idea that whatever may affect a system of railroads, as a whole, in its ability to serve the public, is a matter of vital concern, and of sufficient concern to be considered; and if it is important to get away from the power of the States to regulate, by forcible nationalizing by Federal charters of all railroads, so as to control rates within the States as well as interstate, I can not see why we should not include and take from the States every power that they now exercise which may be burdensome and operate without uniformity on different portions of that system of roads. That is the reason why I am talking to you about taxation. Now, in a general way, what possible benefit can it be to interstate commerce as to what kind of jails or schoolhouses a State may have through which a railroad runs? Why should an interstate transportation facility be burdened with the building of a certain kind of schoolhouse in Illinois, one costing twice as much as in Indiana, and another one-fourth as much in Ohio?

Mr. LOVETT. Judge, that is getting pretty far afield for me.

Mr. SIMS. These public schoolhouses are built by taxation, raised by the States and the localities, and if these railroads can be taxed at the option of the State, in any amount, it can make that railroad help build every single schoolhouse and jail and highway and bridge.

Mr. LOVETT. Well, I think it ought to help.

Mr. SIMS. You think it ought to?

Mr. LOVETT. Yes.

Mr. SIMS. But will not that affect its ability to render service, as a whole?

Mr. LOVETT. I do not see that it would. I believe that the Union Pacific is as much interested in the schoolhouses and the courthouses and the buildings and the development of the communities along its lines as anybody else, and perhaps more than any other single interest.

Mr. SIMS. I am speaking about interstate commerce. It may be interesting in developing business along its lines; and, of course, so far as jails are concerned, in which they may imprison violators of the law, it would be better for the Union Pacific or any other railroad to have the jails than not to have them, with the violators of the law running at large. But coming down strictly to the ability of

railroads to establish and maintain credit, that depending upon the amount of burdens that may be laid upon them by Governments. National, State, city, or county, may it not be very material to have such unhindered, unregulated, uncontrolled taxing power of the States?

Mr. LOVETT. Judge Sims, let me say again——

Mr. SIMS. I say now, is not that a possibility, and is it not more than likely a probability?

Mr. LOVETT. I must answer the question in my own way.

Mr. SIMS. In your own way; certainly.

Mr. LOVETT. Let me say again that so far as I am concerned, so far as my judgment goes, it is wholly immaterial to me whether Congress exercises this power or leaves it to the States. Either is satisfactory to me and is consistent with the system of regulation that I am advocating. But when you ask my opinion as to which should exercise the power, I say the States, because I say, first, that the probabilities are that the result would be the same for the railroad in either case. In neither case would there be any reduction in our taxes because of the method under which they are assessed. It is, second, a local matter which each State should determine for itself, how much revenue it wants to raise. It can not very well put more on the railroads than it puts on other classes of property. It ought not to. Sometimes they do, but as a rule they do not.

Now, that being true, I do not see why that authority should be taken away from the States. It is not a matter of national concern. I am not advocating national incorporation of railroads for the purpose of escaping any burden that the railroads ought to bear, but to unify the system of regulation, to unify the control in those matters that are necessary for the development of railroad transportation and that are strictly national in concern. I do not believe. I say again, that this matter of local taxation is a matter of national concern. It has not become so, so far as I have been able to observe. whereas the regulation of local rates in a manner to disturb and disarrange interstate rates is a matter of national concern.

I should like very much to make an answer that would cover the point you have in mind, but I do not see how I can make my position any clearer.

Mr. SIMS. "The power to tax is the power to destroy" is a very old statement by somebody in authority.

Mr. LOVETT. But it does not necessarily mean that the power to tax is going to be exercised as a power to destroy.

Mr. SIMS. Not at all; and neither does it mean that the power of the State to do such regulating as it is doing is going to destroy the railroads of this country or prevent their further development. judged by the development that has already occurred, because it has all occurred under just such regulation.

Mr. ADAMSON. Judge Sims, do you not understand the witness to mean that he does not care to transfer to Federal control anything except those things that are necessary to an efficient, unified system?

Mr. LOVETT. That is my point.

Mr. SIMS. I suppose that is his position. But I suppose the railroad owners and investors want to have peace; that they want to get their properties as far from conflicting control of whatever affects its

value and its earning capacity as possible. Now, if the State of Illinois for instance—because it has an immense number of railroads—should have a tax on railroads twice as high as Indiana, which it might very easily have, not on the number of miles, but the dollar's worth—or mileage, either—it might levy a tax of a dollar a hundred or \$2 a hundred in value; and Indiana might put it at 40 cents per hundred. The great mileage and the great value of the railroads in Illinois would be so large in the amount of taxes to be collected by the State of Illinois and its counties and municipalities as to take so large an amount of the earnings of a railroad that might run through Indiana or some other State as to become in effect a discrimination in favor of Illinois, by which it is indirectly getting back a part of the freight payments of its citizens; and how such a possibility can be inconsequential and negligible to the railroads and not worthy of notice in an effort to nationalize railroads and to make their burdens equal and their services equal to all its patrons I can not see. I can not escape the conclusion that it is important.

Mr. LOVETT. I understand, Judge Sims, that, if the State of Illinois needs ten times as much in taxes as the State of Indiana, the State of Illinois has a right to require the railroads in that State to pay ten times as much taxes as the State of Indiana, provided it taxes all property without discrimination contrary to the Federal Constitution.

Mr. SIMS. For the same purpose?

Mr. LOVETT. And I understand, further, that the Federal Constitution, the fifth amendment—or the fourteenth amendment, rather, as applied to the States—protects railroads against discriminating taxation with respect to their property, and that States can not discriminate unjustly against railroads—not discrimination as between States but discrimination as between property owners in the State of Illinois.

Mr. SIMS. That is, between the taxpayers on the same kind of property?

Mr. LOVETT. Yes. So I say that if Illinois needs ten times as much in taxes as the State of Indiana, and she levies it upon all property, substantially the same, she can compel the railroads to pay ten times as much.

Mr. SIMS. And that that will not affect the railroad in its ability to render its services?

Mr. LOVETT. Yes; it may.

Mr. SIMS. That is what I am asking you. Will it not affect it, and therefore is it not to be considered in a system of nationalization?

Mr. LOVETT. If Congress were to take over the subject of taxation, it is inconceivable to me that the American Congress would pass a law that would prevent a State from taxing railroad property in the same way that it taxes other property and requiring them to pay their just proportion of the State's taxes.

Mr. SIMS. Indiana may be willing to have wooden schoolhouses and Illinois may want brick.

Mr. LOVETT. Illinois, then, is within her rights if she requires brick.

Mr. SIMS. But at the same time she inflicts a tax burden on the same railroad, that serves the two States, out of all proportion.

Mr. LOVETT. No more than upon other classes of property.

Mr. SIMS. I know; but the interstate business is affected. Now, what I am trying to find out is, What is the logical reason for permitting the States to retain some powers which may cripple interstate commerce in the full exercise thereof, and then take from it other powers which they are now exercising in a way that, you think, does cripple interstate commerce?

Mr. LOVETT. Judge Sims, if I have not demonstrated the proposition that a State has the right to tax railroads consistently with the Federal Constitution for the purposes of the State, without reference to what other States may tax the same railroads, it is impossible for me to throw any more light on that subject. To my mind that is a perfectly obvious proposition, and is not really debatable.

Mr. SIMS. And, even with national incorporation, if I catch your meaning, a State would have a right to levy all taxes upon a railroad without the power of Congress to control it that they would have, or now have, if this power remains there?

Mr. LOVETT. Congress has the same power to-day that it would have under national incorporation to deal with taxation of instrumentalities of interstate commerce. I assume that Congress would not relieve the railroads; I certainly would not ask them to relieve the railroads. I believe it would be a gross outrage to relieve the railroads of their fair burden of taxation in each State in which they are situated.

Mr. SIMS. Nobody wants that, I suppose; nobody questions that. But I am talking about the effect of unequal burdens imposed by different States upon the same system, whereby they impair the ability of that system to render an equal service to all of its patrons at the lowest possible cost.

Mr. LOVETT. The State is within its rights to do it, and would be within its rights, whether under Federal incorporation or State incorporation. And our proposal here does not involve any overturning of the Constitution or anything that is impossible, so far as we can see.

Mr. SIMS. Then, so far as State taxation is concerned, you do not think Federal incorporation would make any difference at all in the power of the State to tax the property of the railroad?

Mr. LOVETT. My confidence in the justice and intelligence of Congress is such that I can not conceive that it would relieve the railroads of any burden of taxation they now are subject to in the States.

Mr. SIMS. You can not conceive of it; perhaps you think it is impractical?

Mr. LOVETT. No; it is unjust.

Mr. SIMS. Congressmen, being elected from the States, would not do that?

Mr. LOVETT. It is unjust, Judge Sims, as I said a moment ago. I think it would be an outrage for Congress to do anything of that sort.

Mr. SIMS. Do you not think that the people of Texas will think it is unjust and an outrage for Congress to destroy a system of laws which they have built up for their benefit touching railroads?

Mr. LOVETT. I have such confidence in the intelligence of the people of Texas that they will see that Congress is within its rights. They would rather keep the privilege themselves, but they are exer-

cising, in my judgment, a right that now belongs to Congress; and while there will be complaint, particularly by the commission, of such a system, because of the big advantage that it affords Texas, it is an advantage to which Texas is not entitled.

Mr. SIMS. You believe in leaving to the States, as I understand it, all the taxing powers that they now exercise—of course, lawfully exercise?

Mr. LOVETT. Yes; that is my idea.

Mr. SIMS. I understood you to make a very serious complaint—that you bring it up as an evidence of the evils of conflicting taxation and conflicting control—that the State of Illinois placed a tax, amounting to \$600,000, on the registration, I believe it was, of a mortgage securing certain bond issues proposed by the New York Central Railroad. Is not that true?

Mr. LOVETT. Yes. That was a license fee that was charged for doing business.

Mr. SIMS. Well, it was a tax, was it not?

Mr. LOVETT. I suppose it might be called a tax.

Mr. SIMS. Of course taxes are often collected by way of license?

Mr. LOVETT. I suppose they are.

Mr. SIMS. You propose to leave that, then, just as it is, after making complaint of it?

Mr. LOVETT. I do not.

Mr. SIMS. Then, you do not propose to leave the States with the full powers of taxation that they now possess?

Mr. LOVETT. I mean the powers of taxing railroad properties. This is a taxation of a corporate function. The Supreme Court denies the powers of the States to impose taxes that are a burden upon interstate commerce. We have pending now in the Supreme Court of the United States a case to test the right of the State of Missouri to tax us for a bond issue; that I mentioned in my direct statement.

Mr. SIMS. So you do not regard the license fee for the registry of that mortgage as taxation?

Mr. LOVETT. No, sir. I should say it is a fee charged by the State—it may be a certain form of taxation—I should say it is a fee charged by the State for doing what the State has no right to charge for.

Mr. SIMS. You mean a penalty, do you not?

Mr. LOVETT. I do not care what you call it, really, Judge Sims.

Mr. SIMS. It is really, in effect, a penalty, is it not?

Mr. LOVETT. I think it is penalizing an interstate corporation.

Mr. SIMS. But it is put into the public treasury and takes the place of taxation, and reduces taxation in the State of Illinois to that extent?

Mr. LOVETT. I have not heard of any reduction of taxation.

Mr. SIMS. It reduces the taxation on the other property of the State of Illinois to that extent; I mean it reduces the requirement for it. That mortgage was issued, was it not, to secure \$100,000,000 of 100-year debenture bonds?

Mr. LOVETT. I am not sure whether this fee was charged in connection with the mortgage or in connection with the consolidation of the Lake Shore and of the New York Central.

Mr. SIMS. Any way the New York Central did issue, or authorized the issuance, of \$100,000,000 of 6 per cent debenture bonds to run

100 years, and convertible at the option of the holder, after a certain period, into stock of the company?

Mr. LOVETT. Yes; not secured by a mortgage.

Mr. SIMS. I say, those are substantially the facts?

Mr. LOVETT. They did make such an issue.

Mr. SIMS. Well, they were bonds, were they not?

Mr. LOVETT. Yes; but not mortgage bonds.

Mr. SIMS. They are a lien on the property of the railroad so far as the stockholders are concerned, are they not?

Mr. LOVETT. They are not a lien on the property of the railroad.

Mr. SIMS. As between the stockholder——

Mr. LOVETT. They are not a lien on anything, Judge.

Mr. SIMS. They are preferred liability?

Mr. LOVETT. They are debentures; in other words, they are the promissory notes of the railroad company unsecured by any lien.

Mr. SIMS. The debts are to be paid before the profits are received; is not that correct?

Mr. LOVETT. That seems to be an elementary legal principle. I did not suppose you would ask me such a question.

Mr. SIMS. I hope people are going to read this who need a little elementary knowledge on the subject. Now, that bond issue was to run for a hundred years, at 6 per cent?

Mr. LOVETT. No; it was to run for 20 years.

Mr. SIMS. A hundred millions for a hundred years?

Mr. LOVETT. No, sir.

Mr. SIMS. Only twenty?

Mr. LOVETT. Twenty.

Mr. SIMS. I have not looked it up, but I saw it referred to in the papers as a hundred years, and that it had gone through.

Mr. LOVETT. I am not sure whether it was 15 or 20; but not over 20.

Mr. SIMS. Well, it illustrates what I am trying to get at, whether it is a hundred or twenty. Now, then, the interest on those bonds, so far as the stockholders are concerned, is a fixed charge upon the earnings of the railroad?

Mr. LOVETT. Yes. They must be paid before dividends.

Mr. SIMS. They must be paid before dividends?

Mr. LOVETT. Yes.

Mr. SIMS. Now, is it your theory that a rate should be allowed upon the property of that company that would pay all its operating expenses, maintenance charges, and all previous charges, and this 6 per cent on whatever amount of bonds they sell, and then to be added a reasonable dividend to the stockholders?

Mr. LOVETT. My theory is, Judge, that the rate should not be less than sufficient to pay a fair return upon the value of the property owned by the company. With such a rate, I feel quite sure they would pay the 6 per cent interest on these bonds and a dividend to the stockholders.

Mr. SIMS. That the earnings should be upon the value of the property regardless of the outstanding debts, or stock mortgages, or anything else?

Mr. LOVETT. No; I beg your pardon. I have said, I think, several times here that I am strictly opposed to the idea that the return on railroad property is to be limited in rate-making; that rates and

returns are a commercial proposition; that a railroad that under a good, fair, and reasonable rate can pay such a dividend is entitled to it, and a road that can not is not entitled to it. That is my theory of rate making.

I do not understand that this country has ever committed itself, or that the Interstate Commerce Commission has ever committed itself, or that even Congress has ever by any act sought to limit the return on railroad property beyond a reasonable rate—that is the only limitation that has been proposed or that has been established—and that Congress has not undertaken to say what is a reasonable rate.

Mr. SIMS. I understood you to say, just prior to that, that they were entitled to a reasonable rate on the fair value of their property.

Mr. LOVETT. I think they are entitled to a reasonable rate, and that in determining a reasonable rate they must take into account the fair value of the property, not as absolutely controlling, but as part of the evidence.

Mr. SIMS. Another question in connection with that, which comes up in a different State, and with which you may not be familiar—I will not name the State—but an existing railroad had leased another railroad company's lines, and it formed a part of the general system of that railroad. It had paid under the terms of that lease 10 per cent on the outstanding stock and maintained the railroad and done everything else that the owners were liable to do. That lease expired. Then the lessor re-leased the property from the owners for 999 years and agreed to pay during that time 7 per cent on all the stock of the company. Now, the lessor is compelled to pay that 7 per cent, as I understand it, as matter of law, whether that particular line of railroad earns it or not. Is not that true?

Mr. LOVETT. I assume so, if the lease so provides.

Mr. SIMS. I am saying that they guarantee this 7 per cent, and therefore they have got to pay it whether they make it or not?

Mr. LOVETT. Yes; if not they default under the lease.

Mr. SIMS. And that is putting a charge of 7 per cent upon the stock value of that road for nearly a thousand years. Now, do you think it is a matter of good public policy to allow any private corporation, in order to control and monopolize certain traffic or to create a system, to fix a burden of that character—as much as that—for a thousand years, without the power of the Government to relieve the people who pay the freight, provided a lower freight rate afterwards should be necessary or authorized?

Mr. LOVETT. I do not understand that such burden has been imposed or could possibly be imposed upon the public.

Mr. SIMS. It is imposed upon the leasing road?

Mr. LOVETT. Yes.

Mr. SIMS. Now, if the leased road does not pay this 7 per cent the leasing road must pay it out of other funds?

Mr. LOVETT. Yes.

Mr. SIMS. And in order to have the means out of which to pay it it must collect a remunerative charge, a sufficiently remunerative charge, on other traffic to provide the means to pay that 7 per cent?

Mr. LOVETT. No, sir; I do not agree with that. If it can not get funds at a reasonable rate to pay that 7 per cent it will default and will lose its lease. The public does not guarantee a lease, and the Government does not guarantee it. Nobody guarantees any return

on railroad property. All that the public guarantees or all that the Government guarantees is a reasonable rate, and it is up to the railroad to get the 7 per cent out of it and pay it if it can.

Mr. SIMS. That is the legal situation, I understand—the law.

Mr. LOVETT. And the practical situation, too.

Mr. SIMS. Yes; and the practical situation; but the company that has leased this piece of property, its stockholders, its operating officers, are under a strain and an effort to so manage that property as that this will be paid.

Mr. LOVETT. Undoubtedly.

Mr. SIMS. Therefore it is, to that extent, against the public interest that is being served?

Mr. LOVETT. I can not follow that, Judge Sims. The officers and directors of every railroad company are under a strain to make it earn money, to make it earn its interest, to make it earn not merely rental on the leased line, but to earn big dividends; but you can not earn interest and big dividends by working against the interests of the public.

Mr. SIMS. That is one of the incidents, of course, of private ownership—and we are considering private ownership and regulation at this time—that I do not see that a State commission or a national commission could change, unless they had the right to abrogate contracts.

Mr. LOVETT. I understand that the commission need not pay a particle of attention to the lease contract and the 7 per cent interest if they do not wish to; that when rates are challenged as too high they will hear the circumstances, and will consider not what the value of the lease is, but what is a fair return upon the value of the railroad property, and while they are not controlled by that, they will take it into account, and if the railroad can not earn enough to pay the lease rental it simply defaults. Railroads are not protected against improvident and foolish contracts. They make them like anybody else, and they have to pay the penalty through failure if they make too many.

Mr. SIMS. I wanted to take up this other matter which I suggested, as to the question of national incorporation and the way it may be affected by conditions that exist, or which may hereafter exist. I want, first, to get your idea exactly as to what power should be assumed by the Government—I mean actively assumed through national incorporation—that is not now within their power, or is not now being exercised fully by the national authority.

Mr. LOVETT. I have sufficiently stated that.

Mr. SIMS. I was going to say that I think I have a general understanding of what you stated about that and I will not ask you to repeat it.

Mr. LOVETT. I should be glad to do so, if you wish.

Mr. SIMS. No; it is not necessary at all, as to what I am going to ask you, as I see it. Have you ever, or has your committee ever formed or drafted a form of national charter for railroads which you would like or think it wise to be authorized?

Mr. LOVETT. I do not understand that the advisory committee has I suppose a great many members have made attempts in that direction. I know that I did at one time.

Mr. SIMS. Do you not think it would be of benefit to this committee to have a draft of a national charter which the railroads think it wise, or which you gentlemen think it wise we should permit them to have; not only permit them, but compel them to accept?

Mr. LOVETT. I do not think it would be wise for a railroad man to come forward with such a measure, because we all know, Judge Sims, there are many people in this country who would at once attack any bill or measure that a railroad officer brought forward, because of the source from which it emanated without regard to the merits of the bill. I do not think it would be fair to those who advocate national incorporation to call upon them to come forward with a bill embodying exactly their ideas because I think many people would be prejudiced against it.

Mr. SIMS. Senator Newlands presented, for your consideration, a draft of a bill which he had drawn about 10 years ago, for national incorporation, which you did not approve, as a whole.

Mr. LOVETT. Not as a whole.

Mr. SIMS. I say, as a whole you did not approve it?

Mr. LOVETT. No.

Mr. SIMS. You shot his bill to pieces, so to speak—his plan.

Mr. LOVETT. I am sorry.

Mr. SIMS. I do not mean in the sense of a high explosive, but I think the Senator admitted, practically, that you had shot it to pieces. Now, why is it not to the public interest to let everybody have a right to shoot any public measure into pieces, if they can do so? If there is ground for it, why not let us know what it is?

Mr. LOVETT. I believe it is very important that every proposition brought forward be shot at by anybody who really has any aim about such a matter.

Mr. SIMS. And do you not think that you can come nearer to hitting something that you are shooting at when you can see it in concrete form?

Mr. LOVETT. Yes.

Mr. SIMS. Seriously I believe it would be of help to the committee—and no injury to your cause—for the railroad executives' committee or the committee of railroad executives, if they have in their minds what they think is to the public interest, as well as their own—and they are part of the public—to come forward with a form of national charter for the railroad companies of the country to adopt under compulsion that they think will meet the requirements of the situation. I think this proposition is so new that you should present a draft of the bill that you think would answer the purposes which you seek, and let the public shoot it to pieces if they can.

Mr. LOVETT. I believe the discussion of the subject and the outlines of the plans we are advocating has been, and will be, such that nobody can very well misunderstand just the general form of the measure; and then it becomes a question of merely draftsmanship.

Mr. SIMS. If that is true, it will not hurt the proposition if it be drafted?

Mr. LOVETT. Yes; but when you come forward with a bill drafted by the railroads, I think you will agree with me that a great many people will attack it for that reason alone. I do not think it would help the cause we advocate, but I do believe it would distinctly hurt it.

Mr. SIMS. If the attacks were weak and not reasonable or logical, they would fall of their own weight. In other words, you could come back at the attacks, which, no doubt, you would do.

Now, Mr. Lovett, if Congress undertakes to legislate on this subject by requiring all the railroads doing business in the United States to take out a national charter, has not Congress full power to place every condition in that charter that it sees fit?

Mr. LOVETT. I would not say it has the right to destroy property rights.

Mr. SIMS. I mean, above confiscation, so far as regulations, requirements, and so forth, are concerned?

Mr. LOVETT. I do not think Congress has any power to destroy property rights.

Mr. SIMS. I said, "above confiscation," and "confiscation" means "destruction," as I understand it.

Mr. LOVETT. It has the power to incorporate in that act any regulation that it deems proper and necessary that does not take away property rights.

Mr. SIMS. I suppose, of course, that you expect the general charter law to be applied to all railroads exactly alike?

Mr. LOVETT. Yes.

Mr. SIMS. That there would be no charter granted to one railroad different from another?

Mr. LOVETT. I hope not.

Senator CUMMINS. May I ask a question just there?

Mr. SIMS. Yes.

Senator CUMMINS. It seems to me that your answer is rather broad. Could Congress put anything into an act of that sort that would constitute regulation of commerce within one of the States?

Mr. LOVETT. I think not. Of course I mean it might put in something based on the authority to establish post roads or for the national defense or something of that sort. I do not think the power of Congress to create corporations is limited to——

Mr. ADAMSON. Could it put anything in there in conflict with the Constitution any more than it could in any other matter?

Mr. LOVETT. No.

Mr. SIMS. Could it not put in a system of regulation, so far as any system of regulation could be incorporated in a charter? Could it not incorporate such a system of regulation in the charter?

Mr. LOVETT. Within the limits of the Constitution.

Mr. SIMS. Of course I am always assuming that Congress will not pass knowingly an unconstitutional law, and that neither the railroads nor the people will seek or ask for anything of that sort.

Mr. LOVETT. Congress has the right to regulate commerce, to establish post roads, to provide for the national defense, and to make war. Now, within those limits, and within the limit of such powers as may be necessary for it to exercise in order to make those express powers effective, and within the limits of constitutional restraint, it has the right to pass such a bill as it wants.

Mr. SIMS. Would you think it advisable to provide in this national charter that nothing in this charter shall be construed as abridging or affecting the rights of the several States through which any railroad may build its lines, from levying and collecting such lawful taxes as State or other taxing bodies may determine:

to make such police regulations and public health regulations as the States now do or seek to do? Would you be willing to have that made a provision of the charters—that the charters should say that it was not to abridge the States' rights in any of those respects?

Mr. Lovett. I would not say, "as they now do." I think the act ought to contain a provision that nothing in the act should impair the rights of the States with respect to the taxation of railroad property and the exercise of such police powers as are not inconsistent with the terms of the act. I take it that the act would expressly give the right to the Interstate Commerce Commission or other commission to exclusively regulate securities, exclusively regulate rates, and to exclusively regulate the consolidation and combination of railroad companies. Those are the main things. Now, consistent with those general purposes, of course, the act ought to provide that the States shall retain their powers.

Mr. Sims. In view of the recent decision of the Supreme Court, could not that charter provide—I mean the law authorizing the charter to be issued—that no laborer doing service for any of these incorporated companies shall be required to work over eight hours in any one calendar day?

Mr. Lovett. I think so.

Mr. Sims. To regulate the labor question so far as that is concerned with respect to the hours of service absolutely through the charter?

Mr. Lovett. I will not make any argument against the Supreme Court.

Mr. Sims. And would it not have the power to go further and to say that this charter shall not abridge the rights of the employees of railroad companies to voluntarily quit the service of those companies either individually or by concerted action at any time?

Mr. Lovett. Certainly it could go further and say that.

Mr. Sims. It could do all that?

Mr. Lovett. Yes.

Mr. Sims. I thought so, but I wanted to find out from an authority that I do not question and that nobody else will question.

Mr. Lovett. Thank you.

Mr. Sims. Now, let us come down to a practical question. I believe that you were the attorney for Mr. Harriman for a long time, and we have the authority of Mr. Roosevelt that Mr. Harriman was a practical man and took a practical view of all these things.

Mr. Lovett. That is the good "authority" to which you referred, I presume.

Mr. Sims. You have had a good opportunity to become a good practical man; nobody questions that. Now, any legislation that is impracticable is impossible.

Mr. Adamson. Is Judge Sims trying to bolster up both Roosevelt and Harriman by this witness?

Mr. Sims. I think perhaps I could.

Mr. Lovett. You can in their respective fields.

Mr. Sims. Their fields may have been larger than yours?

Mr. Lovett. As a hunter and as a railroad man.

Mr. Sims. No; I am talking now of great, broad, public-service questions, especially along the line of railroads.

Mr. Lovett. I believe that was a subject familiar to one of them.

Mr. SIMS. When we go to the people to be elected or reelected to Congress, and we say, "We propose in the national interest——"

Mr. ADAMSON. You noticed that Judge Sims prefaced his last question by saying, "Coming down to practical things," and he is talking about getting reelected.

Mr. SIMS. That is a very practical question, too, for every Member of Congress and Senator, too, and political party.

Mr. ADAMSON. Yes.

Mr. SIMS. And we say to them that we think it is in the national interest that all the authority now exercised by the States should be vested in the National Government; in other words, be just what you think it ought to be. Now, when we begin to tell them the reasons for that—that we do not want the States to have the power that Texas has exercised, to require every railroad that operates within its boundaries to take out a State charter; that you want to take away from Texas the power to do what they think is best for Texas, even though it is a broad, patriotic view, and defensible for national reasons, how many Members do you think would be elected from Texas on your platform?

Mr. LOVETT. I think, Judge, that if you were a candidate in Dallas or Houston on that proposition, you would be beaten, but if you were a candidate in Shreveport, you would be overwhelmingly elected.

Mr. SIMS. That is in Louisiana.

Mr. LOVETT. Yes.

Mr. SIMS. Now, I wanted to say, and I started to say this: That what is impracticable is impossible in legislation. If this charter can not be procured at this time—and I do not believe it can—admitting, for argument's sake, that it will accomplish all that you expect to accomplish—and you only wish to accomplish that which is best for the country as a whole—I am not myself opposing this thing, nor proposing it, but I am trying to find out all the facts pertaining to it—if this legislation which has been proposed by the committee of executives can not be procured, or some other legislation that will have the same effect upon railroad interests and railroad credits which you suppose this will have, what is to be the result to this country and its commerce and general well-being?

Mr. LOVETT. If this is a political question, Judge Sims, of course I am not authority. But I believe very strongly, that if the people understood this question, that if instead of going about and saying "This is what the railroads want; this is a railroad scheme," candidates and leaders would say that "As a result of our study of this subject we are convinced that some such system of regulation is for the general welfare of the country," and would explain it to the people, it would be perfectly practicable to make it effective.

Mr. SIMS. You think the people would sustain it?

Mr. LOVETT. I do. I believe if they turned it down it would be because they did not sufficiently understand it, except in those few localities that profit by the present arrangement.

Mr. SIMS. Of course, you are not answering my question, Mr. Lovett.

Mr. LOVETT. I thought I was.

Mr. SIMS. No. I asked you if nothing of this kind could be done or something else which would accomplish the same purpose, what would be the result upon the general welfare of this country?

Mr. LOVETT. I have studied this subject a great deal, and this is the best method that I am able to suggest of accomplishing the object. Now, the same purpose or the next best step in the same direction, if there be a prejudice against Federal incorporation, would be to attempt it through complete control of the existing State corporations. It would be less effective—not half so good—but it would be better than the present system.

Mr. SIMS. Do you mean by unification of some kind?

Mr. LOVETT. I mean by Congress undertaking to regulate all rates, both State and interstate, and all the securities of the corporations, and the question of the combination and leasing of those engaged in interstate commerce.

Mr. SIMS. That is a part of the legislation you are asking for in your general program?

Mr. LOVETT. Yes; but that is by existing corporations rather than by Federal corporations.

Mr. SIMS. I will ask you again: If none of these things which you suggest are done, or something else that will have the same effect, what will be the effect upon this country and its general welfare?

Mr. LOVETT. And the present system, or lack of system, of regulation continues?

Mr. SIMS. Yes; and nothing done along the lines you suggest?

Mr. LOVETT. Why, I think, Judge Sims, there will be rather a stagnation in railroad development, and the people will not have the character of railroad transportation that the business interests of the country require. That condition will continue until, sooner or later, something like this will be done.

Mr. ADAMSON. If you will permit me to ask him right there?

Mr. SIMS. Yes.

Mr. ADAMSON. I understood from your former statements that you do agree that a great deal might be done to improve the present imperfect system?

Mr. LOVETT. Yes.

Mr. ADAMSON. You do not denounce the present system as an utter failure, but you say it is incomplete and imperfect?

Mr. LOVETT. Yes; and the evils of it are not fully developed, because, as I pointed out in my direct statement, there was none of this conflicting State regulation in many sections as, for instance, in the trunk line territory 10 years ago, and the full effect of it has not been developed.

Mr. ADAMSON. So far as the regulation of securities is concerned, Judge Sims will remember, in connection with his repeated reference to the Texas situation, that a Texas Member has introduced and pushed legislation to regulate stocks and bonds under the present system.

Mr. LOVETT. But I think it is true that the Texas Member is not in favor of making his bill supersede regulation of the same matter by the Texas commission.

Mr. ADAMSON. I think he is willing to admit that whenever it is put in force it will supersede it, under the decisions of the Supreme Court.

Mr. SIMS. I introduced a bill to regulate securities, which did not provide that the State authority should be consulted, because I had

in mind that it would help the credit of the railroads to have a national authority pass upon, if not the wisdom, at least the regularity and validity of the issues, so far as those stocks and bonds were concerned, when marketing them in foreign countries.

Mr. LOVETT. It will help, Judge Sims, and it will be a distinct step forward to provide for exclusive regulation by the Interstate Commerce Commission of the issuance of securities. It will not solve the entire problem, but it will be an immense improvement on the present situation.

Mr. SIMS. I understand that the State commissions are not making any objection to legislation looking to that end.

Mr. LOVETT. I understood Chairman Thelen, of the California Commission, in his statement here to intimate that they were not opposed to it.

Mr. SIMS. I thought there had been resolutions passed along that line. Mr. Bristow, perhaps, could tell us, if he is present.

Mr. LOVETT. I fancy you will find some State commissions will be insisting upon cumulative regulation—not only their approval, but to give still another cause of delay, by adding the Interstate Commerce Commission without making it exclusive. I doubt if the State commissioners are unanimously in favor of Congress exercising this—

Mr. SIMS. What I meant more particularly was that there was no organized opposition to it. Now, I will ask you about a matter touching upon the earnings of these railroads under present conditions. The fiscal year beginning with the first day of July, 1914, and ending, I believe, the 30th day of June, 1915, taking it as a whole, as the war came on the 30th day of July, was not what you would call a hard year upon railway earnings or profits in this country?

Mr. LOVETT. The fiscal year ending June 30, 1915?

Mr. SIMS. Yes. Eleven months of it were covered by the European war.

Mr. LOVETT. It was a very hard year for the western roads, but it was not, I think, such a bad year for the eastern roads, because the improvement in business throughout the manufacturing districts commenced early in 1915. I know it commenced East before it reached the West.

Mr. SIMS. Let me ask you further whether or not the fiscal year beginning July 1, 1915, and ending June 30, 1916, was an average year or an extra good year?

Mr. LOVETT. It was extra good as to gross and also as to net earnings, I should say—an unusually good year.

Mr. SIMS. Now, if under those conditions the railroads made a good, satisfactory—and when I say satisfactory I mean not in the sense of satisfaction to private owners as to getting all they can, but satisfaction in the ordinary sense. Now, for the year ending June 15, 1915, the Union Pacific earned net 11 per cent?

Mr. LOVETT. June 30, 1915?

Mr. SIMS. Yes; ending that year.

Mr. LOVETT. Practically 11 per cent.

Mr. SIMS. I will say practically.

Senator CUMMINS. On what?

Mr. SIMS. Net earnings.

Mr. LOVETT. On its stock.

Mr. SIMS. The next year, then, it earned 15.65 per cent—about that. That is a western road, and the Southern Pacific also is a western road. During the hard year, I will call it the hard year by way of distinction, it earned 7.2 per cent?

Mr. LOVETT. You are talking about the year ending June 30, 1915, are you?

Mr. SIMS. Yes; we will call that the hard year, and the next year we will call the good or the average year. And the next year it earned net 11 per cent. That is a western road; and the Atchison, I suppose, you would term a western road, would you not?

Mr. LOVETT. Yes.

Mr. SIMS. The hard year its net earnings were 9.2 per cent; the next year 12.3 per cent. The St. Paul, which, I suppose, is also a western road, only earned 3.28 per cent in the hard year and 7.33 per cent in the next or the average year.

Mr. LOVETT. What are you calling the average year?

Mr. SIMS. The one beginning July 1, 1915, and closing with June 30, 1916, the fiscal year.

Mr. LOVETT. I say I think that was a good year for the eastern roads and good for the western roads.

Mr. SIMS. But I am stating what the western roads did during that year that was not distinctly good for them. The Northern Pacific, which is a western road, in the hard year earned 7.58 per cent net, and the next year, which was not particularly good, you say, for western roads, it earned 10.48 per cent. The Chicago, St. Paul, Minneapolis & Omaha road, which is a western road, as I understand it, in the hard year earned 7.72 per cent net, and the next year 11.97 per cent. The Northwestern, which I understand to be a western road, earned in the hard year 7.5 per cent, and in the next year 11.4 per cent. The Soo Line—is that a western road?

Mr. LOVETT. I should say yes, that was West, or Middle West.

Mr. SIMS. In the hard year it earned 7.87 per cent; in the next year it earned 16.3 net.

Mr. LOVETT. That is a Canadian road.

Mr. SIMS. It is a western road in the sense of commerce, I suppose, as far as this country is concerned. The Wisconsin Central in the hard year had a deficit; in the next year it earned 9.18 per cent net.

Mr. ESCH. That is part of the Soo system now.

Mr. SIMS. I am just taking what is published here in Mr. Thelen's article, taken from the Financial Age of October, 1916. That is my authority. In the South the Alabama & Great Southern earned 9.4 per cent in the hard year and 13.6 per cent net in the next year. The Illinois Central, both South and North, earned 6.27 per cent in the hard year and 10.8 per cent in the good year. The Louisville & Nashville, a southern road, earned 6.8 per cent in the hard year, and 19.4 per cent in the good year. I hate to read this next one, I am afraid I do not understand it. The Southern in the hard year earned 0.03 per cent, and 5 per cent in the good year.

Mr. ADAMSON. That is an eleemosynary institution.

Mr. SIMS. The Lehigh Valley is an eastern road, is it not?

Mr. LOVETT. Yes.

Mr. SIMS. It was among the group of roads you think had unusual earnings during the fiscal year, during the year ending June 30, 1916.

Mr. LOVETT. I think so.

Mr. Sims. The Lehigh Valley earned 10.4 per cent during the hard year and 12.65 per cent during the next year. The Pennsylvania Railroad earned 19.36 per cent during the hard year and 21.8 per cent during the good year, net earnings. The Baltimore & Ohio earned 8.5 per cent during the hard year and 11 per cent net during the good year.

Mr. Lovett. I suspect you have only part of the Pennsylvania system in those figures.

Mr. Sims. I beg pardon, I have made a mistake; that should be the Jersey Central instead of the Pennsylvania. It is the Jersey Central which earned 19.36 per cent in the hard year and 21.8 per cent in the good year. The Pennsylvania earned 8.05 per cent in the hard year and 11 per cent in the good year. The Baltimore & Ohio earned 5.5 per cent in the hard year and 7.3 in the good year. The Reading in the hard year earned 10.6 per cent and 11.5 per cent the next year. The Chesapeake & Ohio earned 4.25 per cent in the hard year and 11 per cent in the good year. The Norfolk & Western earned 8.8 per cent in the bad year and 16.7 per cent in the good year. The New York Central for the fiscal year ending December 31, 1915, earned 8 per cent in the hard year and 18 per cent in the good year.

Mr. Lovett. I would not call December 31, 1915, a hard year for the Pennsylvania or the New York Central, because there was quite a business boom.

Senator Townsend. I understand all this is in the record now.

Mr. Sims. I read it for the purpose of going in the record, as I did not want to cut Senator Newlands's magazine. But to add those years together, would it not show good, reasonable, remunerative net earnings for those railroads during the two years combined?

Mr. Lovett. For those two years?

Mr. Sims. For those two years; yes.

Mr. Lovett. I can not answer for any except the Union Pacific. I am not familiar with the details of the others. You show there that for the fiscal year ending June 30, 1915, the Union Pacific earned 11 per cent.

Mr. Sims. And 15.65 per cent in the next year.

Mr. Lovett. Only about 7 per cent of that was from the railroad. The rest was from security investments. Something over 7.15 per cent was what we earned upon the railroad. The next year, 1916, we earned 15.65 per cent. That was after the start of the big business I described yesterday. For the year ending December 31, 1916, we earned about 17 per cent, including investments. Of course those earnings were perfectly abnormal. Our gross earnings were \$10,000,000 more than it ever had been in the history of the company through these extraordinary conditions.

Now, take the earnings of other companies you have described: I do not know how much of it may have been from investments. And bear in mind that proper railroad management under the system of accounting by the Interstate Commerce Commission requires a substantial part of what appears surplus to go back into the property, to meet expenditures that will never add anything to the revenue or reduce expenses—items that in my judgment really ought to be charged against current income. In the case of the Union Pacific or any of the roads you mentioned, and out of their normal

earnings a good portion of the "net" you have described must go back into the property for purposes that will never benefit the company, but which are necessary to the proper maintenance of the property. I should like to add that apparently you read only those roads that earned dividends.

Mr. SIMS. These are those that are published in this Financial Age, and I did not look any further for the rest of them.

Mr. LOVETT. About 35 per cent of the capital stock of the railroads of the United States, year in and year out, pays no dividends.

Mr. SIMS. This does not refer to dividends; it is net earnings. I want to ask you as to these railroads I have here mentioned, unless it should be one or two, if the net earnings do not indicate a condition, taking a hard and a good year together, that would give them good credit anywhere that condition was known?

Mr. LOVETT. It is not a hard or a good year. The last year, the fiscal year ending June 30, 1916, was an extraordinarily good year. The year ending June 30, 1915, for the eastern roads, or rather the last half of it, was a good year—the first half was a hard year. The years you have taken are not at all illustrative of the normal conditions in the past.

Mr. SIMS. Well, one is extremely low, you admit that?

Mr. LOVETT. No; not extremely low.

Mr. SIMS. That is the very reason the Interstate Commerce Commission was urged to give the 5 per cent rate increase on account of war conditions having destroyed the service of railroads, the volume of their business.

Mr. LOVETT. The eastern railroads had applied for an increase and had been denied prior to the breaking out of the European war. Immediately after the breaking out of the European war they applied, and because of the bad business conditions and their financial necessities an increase of rates was granted.

Mr. SIMS. The reason was the war had so reduced their earnings?

Mr. LOVETT. That was in the early days of the war before the business resulting from the war in the eastern district started. That did not commence until the last half of the fiscal year ending June 30, 1915, as I understand, so there were some months of very poor business and some months of very good business during that year.

Mr. ADAMSON. I did not hear you read from Mr. Thelen's figures the Central of Georgia road, and I do not understand why he discriminates against a road that runs through the best country and serves the best people.

Mr. SIMS. I am reading from the Financial Age of October 21, 1916.

Mr. ADAMSON. That is discrimination that the whole railroad legislation is opposed to, you know.

Mr. SIMS. Now, in 1908, according to the report of the Interstate Commerce Commission, which I believe reports railroads where the gross earnings are a million——

Mr. LOVETT. They have a class, I believe, of roads with gross earnings of \$1,000,000 or more and a second class with earnings of a million to one hundred thousand.

Mr. SIMS. In mileage reported for 1908, 227,257.02 miles. The operating revenue for that year, eight years ago, and that was after

the panic, for the panic came in 1906 and 1907, the operating revenues for that year were \$2,440,638,832. The railway operating expenses for that year were \$1,710,403,451. There was a net revenue from railway operations of \$730,235,781. Now, that is the lowest year reported in either gross or net. I am not going to read all this out now for your benefit. These mileages are substantially the same all the way through, so I take it it is not necessary to repeat the mileage every time. The next year, 1909, the net operating revenue was \$823,171,097. That shows an increased earning and a slight increase in mileage, because it was 232,000 in 1909, as against 227,000 in 1908. The next year, 1910, there was a net revenue of \$930,262,457, with an increase of only about 2,000 in the mileage. The next year, 1911, was not so good as that one, being \$876,522,857. The next year, 1912, it was \$871,358,340; the next year, 1913, it was \$957,195,208; the next year, 1914, it was \$845,216,254; in 1915 it was \$867,510,246; and in 1916 it was \$1,176,804,001.

Now, leaving out 1916 as being somewhat exceptional, and really 1914 and 1915 ought to be left out, too, but it actually showed a greater net earning than it did before.

Mr. LOVETT. What year is that, 1914?

Mr. SIMS. I mean 1915 was \$867,000,000 in round numbers, and the year before, 1914, that was for 1913 and 1914, it was \$845,216,654 net. Now, this shows a continually rising or increase in the net earnings, decidedly more than the increase in mileage, while the operating expenses have increased also, but the net earnings of these railroads have increased in such a way that I do not see how it can possibly impair their credit for any money that they borrow or ought to borrow.

Mr. LOVETT. Does your statement show, Judge Sims, how much the expenditures for betterments and additions were; that is, how much new capital was expended during that time?

Mr. SIMS. Not at all. I do not think that cuts any figure in net earnings unless you are going to use it for that purpose. It does not keep it from being net earnings; it is a profit.

Mr. LOVETT. But net earnings, as stated there, is the amount remaining without anything on the capital.

Mr. SIMS. Net revenue from railway operations.

Mr. LOVETT. Exactly; that excludes interest, dividends, and everything else.

Mr. SIMS. Excludes it?

Mr. LOVETT. Yes.

Mr. SIMS. You mean the interest is not paid; that the interest then must come out of these net earnings?

Mr. LOVETT. Of course I mean that.

Mr. SIMS. Then it still shows their net operating revenues are increasing?

Mr. LOVETT. Yes.

Mr. SIMS. Whatever is done with this revenue it shows that railway operation per se is profitable?

Mr. LOVETT. Yes. I say yes to that, although I do not——

Mr. SIMS. These figures indicate it. You will be held responsible for being accurate, and I will not, and ought not to be, because I do not know as much about it as you do. But what this table here shows is that the railroads are not being impoverished.

Mr. LOVETT. I have not seen your table, Judge Sims, but I take it to be a statement from the Interstate Commerce Commission of the net operating revenue for the years you mentioned?

Mr. SIMS. Gross and net both.

(The table referred to is here printed in full as follows:)

Statement compiled from statistical reports of the Interstate Commerce Commission.

Year ended June 30—	Average single track mileage represented. ¹	Railway operating revenues.	Railway operating expenses.	Net revenue from railway operations.
	<i>Miles.</i>			
1916 ²	229,229.09	\$3,396,808,234	\$2,22 33	\$1,176,804,001
1915 ²	256,213.61	2,956,193,202	2,08 66	897,511,248
1914 ²	246,624.55	3,111,396,422	2,26 68	845,216,654
1913 ²	242,657.12	3,193,117,834	2,23 26	967,195,208
1912 ²	246,828.74	2,906,415,699	2,03 29	871,358,340
1911 ²	243,433.61	2,852,854,721	1,97 64	876,522,857
1910 ²	236,966.51	2,812,141,575	1,68 18	930,262,457
1909 ²	232,981.11	2,473,206,301	1,66 04	823,171,097
1908 ²	227,257.02	2,440,838,832	1,71 51	730,235,381
1907.....	227,454.83	2,889,105,578	1,74 14	840,589,794
1906.....	222,340.30	2,325,765,167	1,53 71	788,887,896

¹ These figures represent the mileage for which revenues and expenses are shown in this table and include some duplications of mileage operated jointly under trackage rights; also some mileage not in the United States.

² From monthly reports of revenues and expenses of companies having annual operating revenues above \$1,000,000.

³ Does not include returns for switching and terminal companies.

⁴ Does not include returns for companies having annual operating revenues below \$100,000, and switching and terminal companies.

Mr. LOVETT. It means, in the sense used there in respect to net, the amount of money remaining after maintenance and operation and taxes, I presume. I do not know whether it includes taxes or not. And that amount is to be applied to the payment of interest and to the payment of dividends, and it takes no account of the amount expended on the road. Now, I have not the figures, but I fancy you will find, if you get full figures on the subject, that during the years you have mentioned new money was put into these properties faster than the net earnings increased, and of course the interest on this capital has to be paid out of the net earnings.

Mr. ADAMSON. I understand what you expend on betterments is a part of your earned expenditures, and comes out before the net earnings can be known.

Mr. LOVETT. No; net earnings, under the system of accounting the Interstate Commerce Commission prescribes, shows the amount that remains after paying operating expenses and maintenance, not interest or dividends or improvements.

Mr. ADAMSON. Of course, you can not operate without maintaining the road.

Mr. LOVETT. No. To illustrate: If we put an ice box in the end of a dining car, if we add a refrigerator, if we buy a new set of china for the dining car, if we put an electric light instead of an oil light, these are not treated either as expenses or as maintenance but as new capital, and we have to pay for it out of the net earnings or from borrowed capital. In other words, by this accounting the property, so far as any betterment or improvement or upbuilding is concerned,

is skinned down to the last dollar in order to show net earnings, and everything in the way of improvement has to be paid out of that amount, as well as interest.

Mr. ADAMSON. If I ask you to deduct from your entire gross earnings all that you expend regularly in operating, the net earnings are the sum remaining which you are at liberty to dispose of in paying interest, making betterments, or to divide among your stockholders?

Mr. LOVETT. Yes; but with the burden or obligation we can not escape of making certain improvements to the property that really are to keep it in operating condition.

You asked about the track expenses. For instance, suppose we lay down new rails and replace an 80-pound rail with a 90-pound rail. the difference between the value of the 80-pound rail and the 90-pound rail is new capital and is to come out of this. If we put down a——

Mr. HAMILTON. Why should not the whole cost of the 90-pound rail go in as new capital, inasmuch as you are making new track?

Mr. LOVETT. Of course, there are different theories about that. Prior to 1907 railroads had the option either to charge this excess to capital or to operating expenses, and different practices were followed. We adopted the practice of charging the entire amount to operating expenses. Some of the roads, whose credit was a matter of more concern to them, and who wanted to show larger net earnings, availed themselves of the option to charge operating expenses only with the weight to the extent of the rail they took up, and took care of the other out of their apparent net earnings.

Mr. SIMS. Judge Lovett, we are getting away from the proposition I am trying to develop, and that is this, that railway operation within itself was successful to these roads in those years, and those years covered all roads. That is, that net earnings are increasing while the railway operating revenues are increasing and the railway operating expenses are increasing. But the freight payer, the patron of the road, is interested more in the gross than in the net. The railways that made these net earnings might think it was to their private interest to invest the whole of it in improvements, because the property would be worth just that much more after it was done than before and therefore they have not lost anything. They may decide to invest only part of it and pay dividends of 4, 5, or 6 per cent and then let the balance of it go into the property, but the stockholder has lost nothing when he has the right to withdraw the whole amount of this if he wants to and he thinks it is to his interest to put it in the road instead of encumbering the road with a bond liability and interest; that is simply a matter for him to determine. and I can not see that the public has anything to do with his private funds, providing he does not trench upon the ability of the railroad to do the service. But I am trying to show that the railroads as a commercial proposition, as an operating plant, as a whole, are increasing both their gross and net earnings all the time, and out of all proportion to the increase in mileage.

Mr. LOVETT. Do you want me to answer the entire question, Judge Sims, or only the latter part of it? There are various assertions and assumptions in the question to which I can not assent.

Mr. SIMS. You may make just such answer as you wish.

Mr. Lovett. So that I am understood as not assenting to it, I will undertake to answer not all of it, but only that part of it you wish me to answer. Just what is your question?

Mr. Sims. My question is this, that this exhibit of mileage, of gross earnings, of operating expenses, and of net operating earnings, for the years I have given you, does it not demonstrate that the railroads as a whole, those included here, are doing a prosperous business? In other words, that they are not failing concerns and that there is nothing in this exhibit which would impair their credit?

Mr. Lovett. I would answer that statement, Judge, distinctly no. Some railroads are prosperous, as I asserted in my main statement, and can live under the conditions and pay reasonable dividends. But if you take the period from 1907 to and including 1915, I would say that while in some of those years the railroads were prosperous, generally they were on a declining basis—that is to say, the new capital they invested to increase and improve their facilities was very much greater, or in a greater ratio, than the increase in their so-called applicable dividends on their capital. As you increase your fixed charges, and as you borrow more money to put into the property, unless your net earnings increase in the same proportion, you will soon get to the point where there will not be—

Mr. Sims. Any net earnings at all.

Mr. Lovett. Speaking of the railroads generally in the United States, the new money put into the roads increased much faster than the net earnings.

Mr. Sims. I want to ask you, Mr. Lovett—

Mr. Lovett. I suggest that you take the property investment account of the railroad companies during the years you mentioned, which shows the amounts of new capital which was put in, and compare the increases in capital with the increases in net earnings. For example, in my main statement I showed that during one of the years included in those you mentioned the additions to the capital by the railroads of the United States in a single year was one billion two hundred and some-odd millions. You will not find that rate of increase in the net earnings for any one year. So the railroads were in a position, generally, of pouring new money into the railroads and thereby increasing their interest charges or dividend requirements. That has gone on at a much more rapid rate than the increase in net earnings, which means they were on a declining basis.

Mr. Sims. You refer frequently to dividend requirements.

Mr. Lovett. Yes.

Mr. Sims. You do not mean there is any legal dividend requirement or compulsory dividend requirement?

Mr. Lovett. No; I mean there is a practical business requirement. Take the Union Pacific. It is established on a sound dividend basis. It commands a certain price because of the dividends it pays. It is held as an investment by many thousands of people.

Mr. Sims. You mean the stocks?

Mr. Lovett. Yes. People buy the stock expecting a return, and I naturally feel to these stockholders a moral obligation and that the moral obligation is as great as the legal obligation to the bondholders. If they put their money in on their faith of what they can reasonably expect us to do, and what we ought to do, there is a moral obligation on us to meet that expectation.

Mr. SIMS. Is there any moral obligation or legal obligation or anything else that ought to be binding on the public that persons who are entitled to dividends out of a public utility should be entitled to be paid semiannually or quarterly and in money?

Mr. LOVETT. I do not care whether it is a public utility or what it is. I consider that the man who has put his money into railroads is entitled to as much consideration as the man who puts it into a saloon or a corner lot or anything else. He has put his money in in the exercise of a right and at the earnest solicitation of the Government. The Government is solicitous about this matter. That is why this committee is sitting here, trying to provide the country with railroad facilities. I submit that a person who comes forward and puts his money into this great public purpose is as much entitled to a return as anyone else. I do not say that because he invests his money for a public use he is not subject to as great legal restrictions and regulation as anybody; but he, morally, is entitled to as much consideration as anyone.

Mr. SIMS. I am afraid you did not quite catch the question. Is there any moral or legal obligation to pay his dividends in money?

Mr. LOVETT. Yes; I consider there is a very strong moral obligation to pay the dividends to the stockholders of the Union Pacific.

Mr. SIMS. Annually or quarterly.

Mr. LOVETT. Yes.

Mr. SIMS. Is there not a greater moral obligation for you to earn them?

Mr. LOVETT. Yes.

Mr. SIMS. And suppose the Union Pacific has earned, net, 25 per cent, for instance, in one year.

Mr. LOVETT. Yes.

Mr. SIMS. And the directors, with the consent of the stockholders, think it is to their interest to invest that whole 25 per cent in the improvement of that property, and, when improved, that it is worth the amount of the dividend more than it was before. Have they not in morals and in fact received their dividends?

Mr. LOVETT. No; there are a great many people who live on what they get out of the dividends on the Union Pacific. We increased our dividends one-half of 1 per cent at the beginning of this year. I have a letter from a woman thanking me for the increase, and she said she owned one share. She is a working woman. A great many people look to this dividend for their income, and I believe that if the Union Pacific earned 25 per cent, and if it ought to spend that amount of money on some improvement, then it ought to pay the regular dividend and borrow the money needed. I think we should not force a loan from the stockholders when we can borrow it from those having it to lend.

Mr. SIMS. As a matter of policy, and all that, I understand your reasoning; but I asked you when they devote all their earnings, which they could devote to dividends, to a further improvement of the property, which they thought, in their judgment, was to the best interests of the owners—the stockholders—if they have not, in fact, received their dividends, not in money, but in property, in an added value to their stock?

Mr. LOVETT. I have just said that a great deal we might legally pay out as dividends is put back into the property for improvements which neither increase the revenues nor reduce the expenses.

Mr. SIMS. It adds to the value of the property. Your stocks reflect it in the market immediately.

Mr. LOVETT. I had not observed that.

Mr. SIMS. You know, perhaps, of Mr. A. J. County, do you not?

Mr. LOVETT. Yes.

Mr. SIMS. I am not going to again get caught up by quoting anybody to you without first asking your opinion of him.

Mr. LOVETT. I think you have not quoted anyone yet, with whom [—

Mr. SIMS. This gentleman has stated in this pamphlet—he is vice president of the Pennsylvania Railroad Co. and in charge of accounting. Now, I notice, nearly all of these addresses, delivered everywhere, in favor of this legislation, or something on the order of it, are in the main in agreement, which is all right. All of these wise men and all of these practical men may take the same view; but, summarized, Mr. County says:

They have, in my judgment, three barriers to cross that will require the most impartial statesmanship and the best administrative experience.

First, they must get larger earnings—

That is the first and all-important proposition, so far as the railroads are concerned. He states some reasons why, but I am stating the requirements—

First, they must get larger earnings.

Second, they must find a means whereby neither the companies nor their employees can stop the transportation service of the country.

Third, means must be found to remove the obstacle of confusing and conflicting laws and regulations of the various States and the Federal Government.

Now, the first—and I take it it is the most important, because he mentions it first—is the increase of earnings.

Mr. ADAMSON. Is not that a common complaint, not confined to the railroads? Everybody wants larger earnings.

Mr. SIMS. He says it is necessary. Does this mean or does he mean or you mean that you have got to charge more for performing the same service?

Mr. LOVETT. I should say that I indorse all Mr. County says, except as to the increase of earnings. There are certain qualifications to that. Many of the roads—I should say a very large majority of the railroads of the United States—must have increased earnings. When you increase by the eight-hour law, for instance, the expenses of a large class of men 20 or 25 per cent, and when the price of coal, which, outside of labor, is the largest single item in railroad transportation costs, practically doubles; when the cost of engines and other rolling stock almost double; when the price of rails is jumped from \$30 to \$40 a ton and the cost of everything entering into the maintenance and operation of railroads is almost doubled; when track labor jumps from \$1.25 to \$2.50 a day, as much of it has, it is perfectly obvious that as the railroads have no means except rates by which to get revenue to pay the increased bills they must have increased rates or go into bankruptcy.

Mr. ADAMSON. I agree with you in all of your answer except as to the statement of your additional expenses in connection with the eight-hour law. That depends on how anxious you are to comply with the eight-hour law. If you comply with the spirit of the law, it will not cost you much.

Mr. LOVETT. I hope you are right. We will comply with the letter and the spirit of the law.

Mr. ADAMSON. If it does cost you much more, we will secure, through the Interstate Commerce Commission, fair and just rates, according to your circumstances.

Mr. LOVETT. I hope so.

Mr. SIMS. If I catch the meaning of your reply, you admit or claim, as Mr. County says——

Mr. LOVETT. I do not like the word "admit."

Mr. SIMS. Well, "contend." You contend that on account of the facts you have just mentioned the railroads must have larger earnings. I suppose you mean net earnings?

Mr. LOVETT. Naturally.

Mr. SIMS. The question I asked you was, do you mean larger earnings by reason of an increased charge for the services you now perform?

Mr. LOVETT. I do not know of any other way to get it.

Mr. SIMS. I understand that is what you mean; but I wanted to know if I understood it correctly.

Mr. LOVETT. Yes.

Mr. SIMS. Therefore the additional earnings become a loss to the patrons of the roads; that is, if the freight and passenger rates and other charges for services performed are increased?

Mr. LOVETT. I think a man who increases the price of his coal from \$1 a ton to \$2 or \$2.50 and jumps the price of rails from \$30 a ton to \$40 a ton and still makes over 40 per cent profit——

Mr. SIMS. You think he can afford to pay some additional freight?

Mr. LOVETT. Yes; I think he ought to let us have a little.

Mr. SIMS. I think so, too. We might just as well admit the fact that as a whole the people pay the gross earnings, that as a whole every increase in freight charges is a burden upon the individuals or the business which pays it.

Mr. LOVETT. I would not call it a burden any more than food is a burden.

Mr. SIMS. It is an additional expense to them, is it not? If freight charges are increased, is not that an increase in the expense of doing the business?

Mr. LOVETT. Yes.

Mr. SIMS. And bound to be?

Mr. LOVETT. Yes.

Mr. SIMS. Therefore this is transferring or taking from the railroads a loss and transferring it to those——

Mr. LOVETT. You call that an expense, Judge Sims, but this man is doubling his profits, and in the process of doubling profits he simply pays a little more than he formerly paid for conducting the business; and that is why I hesitate to call it an expense.

Mr. SIMS. I am talking about all those who patronize the railroads.

Mr. LOVETT. I would like to say that this condition, Mr. County describes as to the needs of the railroads for increased rates will have nothing to do with Federal incorporation. It will have to come, regardless of the corporate system.

Mr. SIMS. I understand he is mentioning it in line with the railroads keeping up their present standards and continuing in business.

Mr. LOVETT. Yes.

Mr. SIMS. The next proposition is—

Second. They must find a means whereby neither the companies nor their employees can stop the transportation service of the country.

Mr. LOVETT. I consider that one of the most vital necessities in the railroad situation, not perhaps so much to the railroads as to the public at large.

Mr. SIMS. Don't you think this part of it is unnecessary—that neither the companies nor the employees can stop the transportation service? Have the companies ever tried to stop it?

Mr. LOVETT. I think the companies have been unable—

Mr. SIMS. But this would indicate an intentional effort.

Mr. LOVETT. Well—

Mr. SIMS. I think it is unnecessary to put that in. I think the policy of the railroads is always to continue furnishing the service.

Mr. LOVETT. When you come to analyze statements you will find that there is always something stated that is not necessary.

Mr. SIMS. I suppose it is put in to balance up and make them equal.

Now, we come to the labor cost, which we may consider very important, whether or not it is going to increase or decrease, and what effect it will have upon your future earnings—what effect the uncertainty of the labor cost have upon the credit of the railroads—I think it is a very germane consideration. Now, I read to you; no doubt you have read it, but I will put this in the hearings. This I am reading from is a statement entitled "Economic conditions—Governmental finance—United States securities," New York, March, 1917, by the National City Bank. Referring to the recent immigration law—the effects of it—passed by Congress over the veto of the President, this publication says:

It remains to be seen how serious a bar the literacy test will prove to be. This country has been developed largely by immigrant labor. Its common labor now is largely of the immigrant class, and unless there is a sufficient supply of such labor to enable our industries to expand there will be fewer opportunities for all our people. There can not be employment for more clerks, mechanics, craftsmen, tradesmen, or professional men unless there are also more laborers. There can not be an expansion of railway service without more track hands and laborers as well as trainmen and office employees.

That is a general statement. Do you not think that this is about correct?

Mr. LOVETT. Why, no objection occurs to me at the moment.

Mr. SIMS. That it is a fact, so far as we know? I am not disputing it. I am only referring to it as a fact.

Mr. LOVETT. I am not an expert on economics, but I think that is all right. It sounds all right.

Mr. SIMS. This publication indicates strongly that railway labor in the future, especially, will be affected by the shutting off of a part of the supply they have heretofore had, for common labor.

Mr. HAMILTON. May I interrupt you for a second?

Mr. SIMS. Certainly.

Mr. HAMILTON. It is very obvious, Mr. Chairman, that Mr. Sims, with his very interesting examination, will probably run out the whole time, and I wanted to say, so far as I am concerned, it will not be necessary to ask Judge Lovett to return, because I would have only a few questions anyway.

Mr. ADAMSON. Senator Townsend will probably want to ask some questions. If it is convenient for the judge to remain until to-morrow, perhaps Senator Townsend will want to ask some questions.

Mr. HAMILTON. I thought perhaps you had some engagement or something like that. Certainly I would not want you recalled for the few questions I have.

Mr. LOVETT. I thank you. If the committee will have a session to-morrow, I should prefer to remain, so that Mr. Hamilton can ask his questions.

Mr. HAMILTON. Senator Townsend may desire to submit several questions.

Mr. ADAMSON. Mr. Hamilton is capable of asking some very entangling questions himself, when he gets down to business.

Mr. HAMILTON. I thank the chairman for his compliment.

Mr. SIMS. I want it understood that I have no purpose, much less thought, of asking Judge Lovett any entangling questions. It seems to me these questions are important.

Mr. LOVETT. I am not at all impatient.

Mr. SIMS. I am glad you are not. I want to do my part, and then it will be poorly enough done.

Mr. LOVETT. I think not.

Mr. SIMS. Well, at any rate, it looks like the tendency of the times is to increase the cost of labor. Do you not think that it true, generally?

Mr. LOVETT. Yes.

Mr. SIMS. This is along that line, and, consequently, you will have to pay more for labor in the future than in the past.

Mr. LOVETT. I do not object to it at all. One thing I am sure of, so far as the railroads are concerned, the people who use the railroads must pay the bill. You can not get away from that. Whatever the Government chooses to do about this matter, the railroads must adjust themselves to.

Mr. SIMS. I was going to ask more about the labor, but I will leave that out, because it will come in better later on. I just happened to see that article of Mr. County's and referred to it.

Is it not a fact that the demands of the railroads are on the increase, regarding proper and necessary terminal facilities?

Mr. LOVETT. Undoubtedly. We need more terminals.

Mr. SIMS. Here is an article written by Robert J. McFall, Ph. D., University of Minnesota, in which he quotes from a publication, Droege, which stated in 1912, in Freight Terminals and Trains—I suppose that is the publication. I have never seen it.

Mr. LOVETT. I never heard of it before.

Mr. SIMS. Here is the quotation:

The terminals alone represent a greater amount of money than all the remainder of the properties of the roads. This statement is true even when smaller or intermediate stations are omitted and only the great water terminals and general intermediate distributing centers, known as division terminals or yards, are included.

Mr. LOVETT. That is true of some companies, and of some it is not. If you are speaking of the whole United States, I have no information on that, although I am rather surprised.

Mr. SIMS. I am including the whole United States.

Mr. ADAMSON. You would include the whole yard in your terminal?

Mr. LOVETT. Yes. I understand that he is including terminals, strictly speaking. At all events I am not prepared to dispute his statement.

Mr. SIMS. You do not know whether the requirements of the railroads are greater now for terminals—the investment for terminals is greater than the investment in the other property?

Mr. LOVETT. I do not. I know it is very great.

Mr. SIMS. Mr. Stuyvesant Fish, who used to be president of the Illinois Central Railroad Company in 1906, when the hearings were had before the Interstate Commerce Committee with reference to the Hepburn law, made a private statement to me—and I do not like to quote a private statement—but he said that if he were going to divide up the property of the Illinois Central between the terminals and the rest of the property, that he would take the terminals.

Mr. LOVETT. The Illinois Central has very expensive terminals on the lake front in Chicago.

Mr. SIMS. I see it alleged that the unit cost of freight and passenger service is on the increase, taken as a whole.

Mr. LOVETT. True; necessarily, when you increase wages, the cost of fuel, the cost of every element that enters into the maintenance and operation of railroads, including labor, the unit cost will increase.

Mr. SIMS. It will unless the volume is so much greater that the railroads get their earnings with less cost. That being the case, Judge Lovett, it being unquestioned that there are vast sums of money going into these large terminals, such as New York and others like it, Chicago—that the railroads are being burdened with an additional capital requirement in excess of like capital requirements in the past——

Mr. LOVETT. I stated the other day that the capital requirements of the railroads never ceased, and I ventured the opinion that in the next 10 years the railroads will have to spend at least as much as in the last 10 years.

Mr. ADAMSON. If it is convenient, I would like to suspend the examination here.

Mr. SIMS. I was going to speak next of the new New York terminal and ask what it cost.

Mr. ADAMSON. Mr. Thom stated, in connection with some questions asked of Mr. Lovett, he had some figures to put in the record.

Mr. THOM. Mr. Chairman and gentlemen, Judge Sims in his questions, read a lot of net returns from the list of selected roads.

Mr. SIMS. I did not select them.

Mr. THOM. You must have selected them, as you took them from some publication.

Mr. SIMS. They were printed in some publication. I mean I did not pick them out.

Mr. THOM. In connection with those, I want to read a few figures. The net income for return on stock—the gross amount of stock of all railroads—for the year ending 1913, was 5.94 per cent; for the year

ending 1914, it was 4.06 per cent; for the year ending 1915, it was 3.44 per cent; that is, when I say "the year ending," those dates were for the year ending June 30 of those years.

Taking 21 selected roads, the annual average net income for return on gross amount of stocks was, for the series of years from 1911 to 1915, 8.65 per cent; for all other roads than those 21 it was 2.64 per cent a year.

Each year there has been put into the companies a vast amount of additional capital. The earnings on this additional capital amounted, in 1911, to 2.02 per cent; for 1912, to 1.14 per cent; for 1913, to 3.47 per cent; and in 1914 there was a loss of 0.76 per cent; for 1915 they earned only 0.05 per cent.

Mr. SIMS. That is on the capital stock?

Mr. THOM. No, sir; on the additional new money.

Mr. ADAMSON. The time for adjournment has come. You may print the rest of your statement in the record if you so desire, Mr. Thom.

(Thereupon, at 1.30 o'clock p. m., the committee adjourned until to-morrow, Friday, March 24, 1917, at 10.30 a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

SATURDAY, MARCH 24, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.30 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. Judge Sims, you may proceed.

STATEMENT OF MR. R. S. LOVETT—Continued

Mr. LOVETT. I was requested on the first day of the hearing to submit a map showing in some distinctive manner the different units constituting the Union Pacific system. I have such map (p. 826) and now submit it, as follows:

Mr. SIMS. Mr. Lovett, I told you yesterday that I would want to ask you some questions this morning regarding railway terminals and the cost to the railroads having to provide such terminals. Have you anything like a definite idea of what the cost of terminal facilities is, or what per cent of the total cost of railroad facilities is embraced in what is called "terminal facilities"? Let that be sidings or stations or docks or whatever is usually meant when you say "terminal facilities."

Mr. LOVETT. I have not, Judge Sims. It is a very large part of the cost of railroad facilities, and I believe that future expenditures will be relatively larger for terminals, using that term in the general sense that you have just stated, than almost any other part of railroad development, but I do not know the proportion.

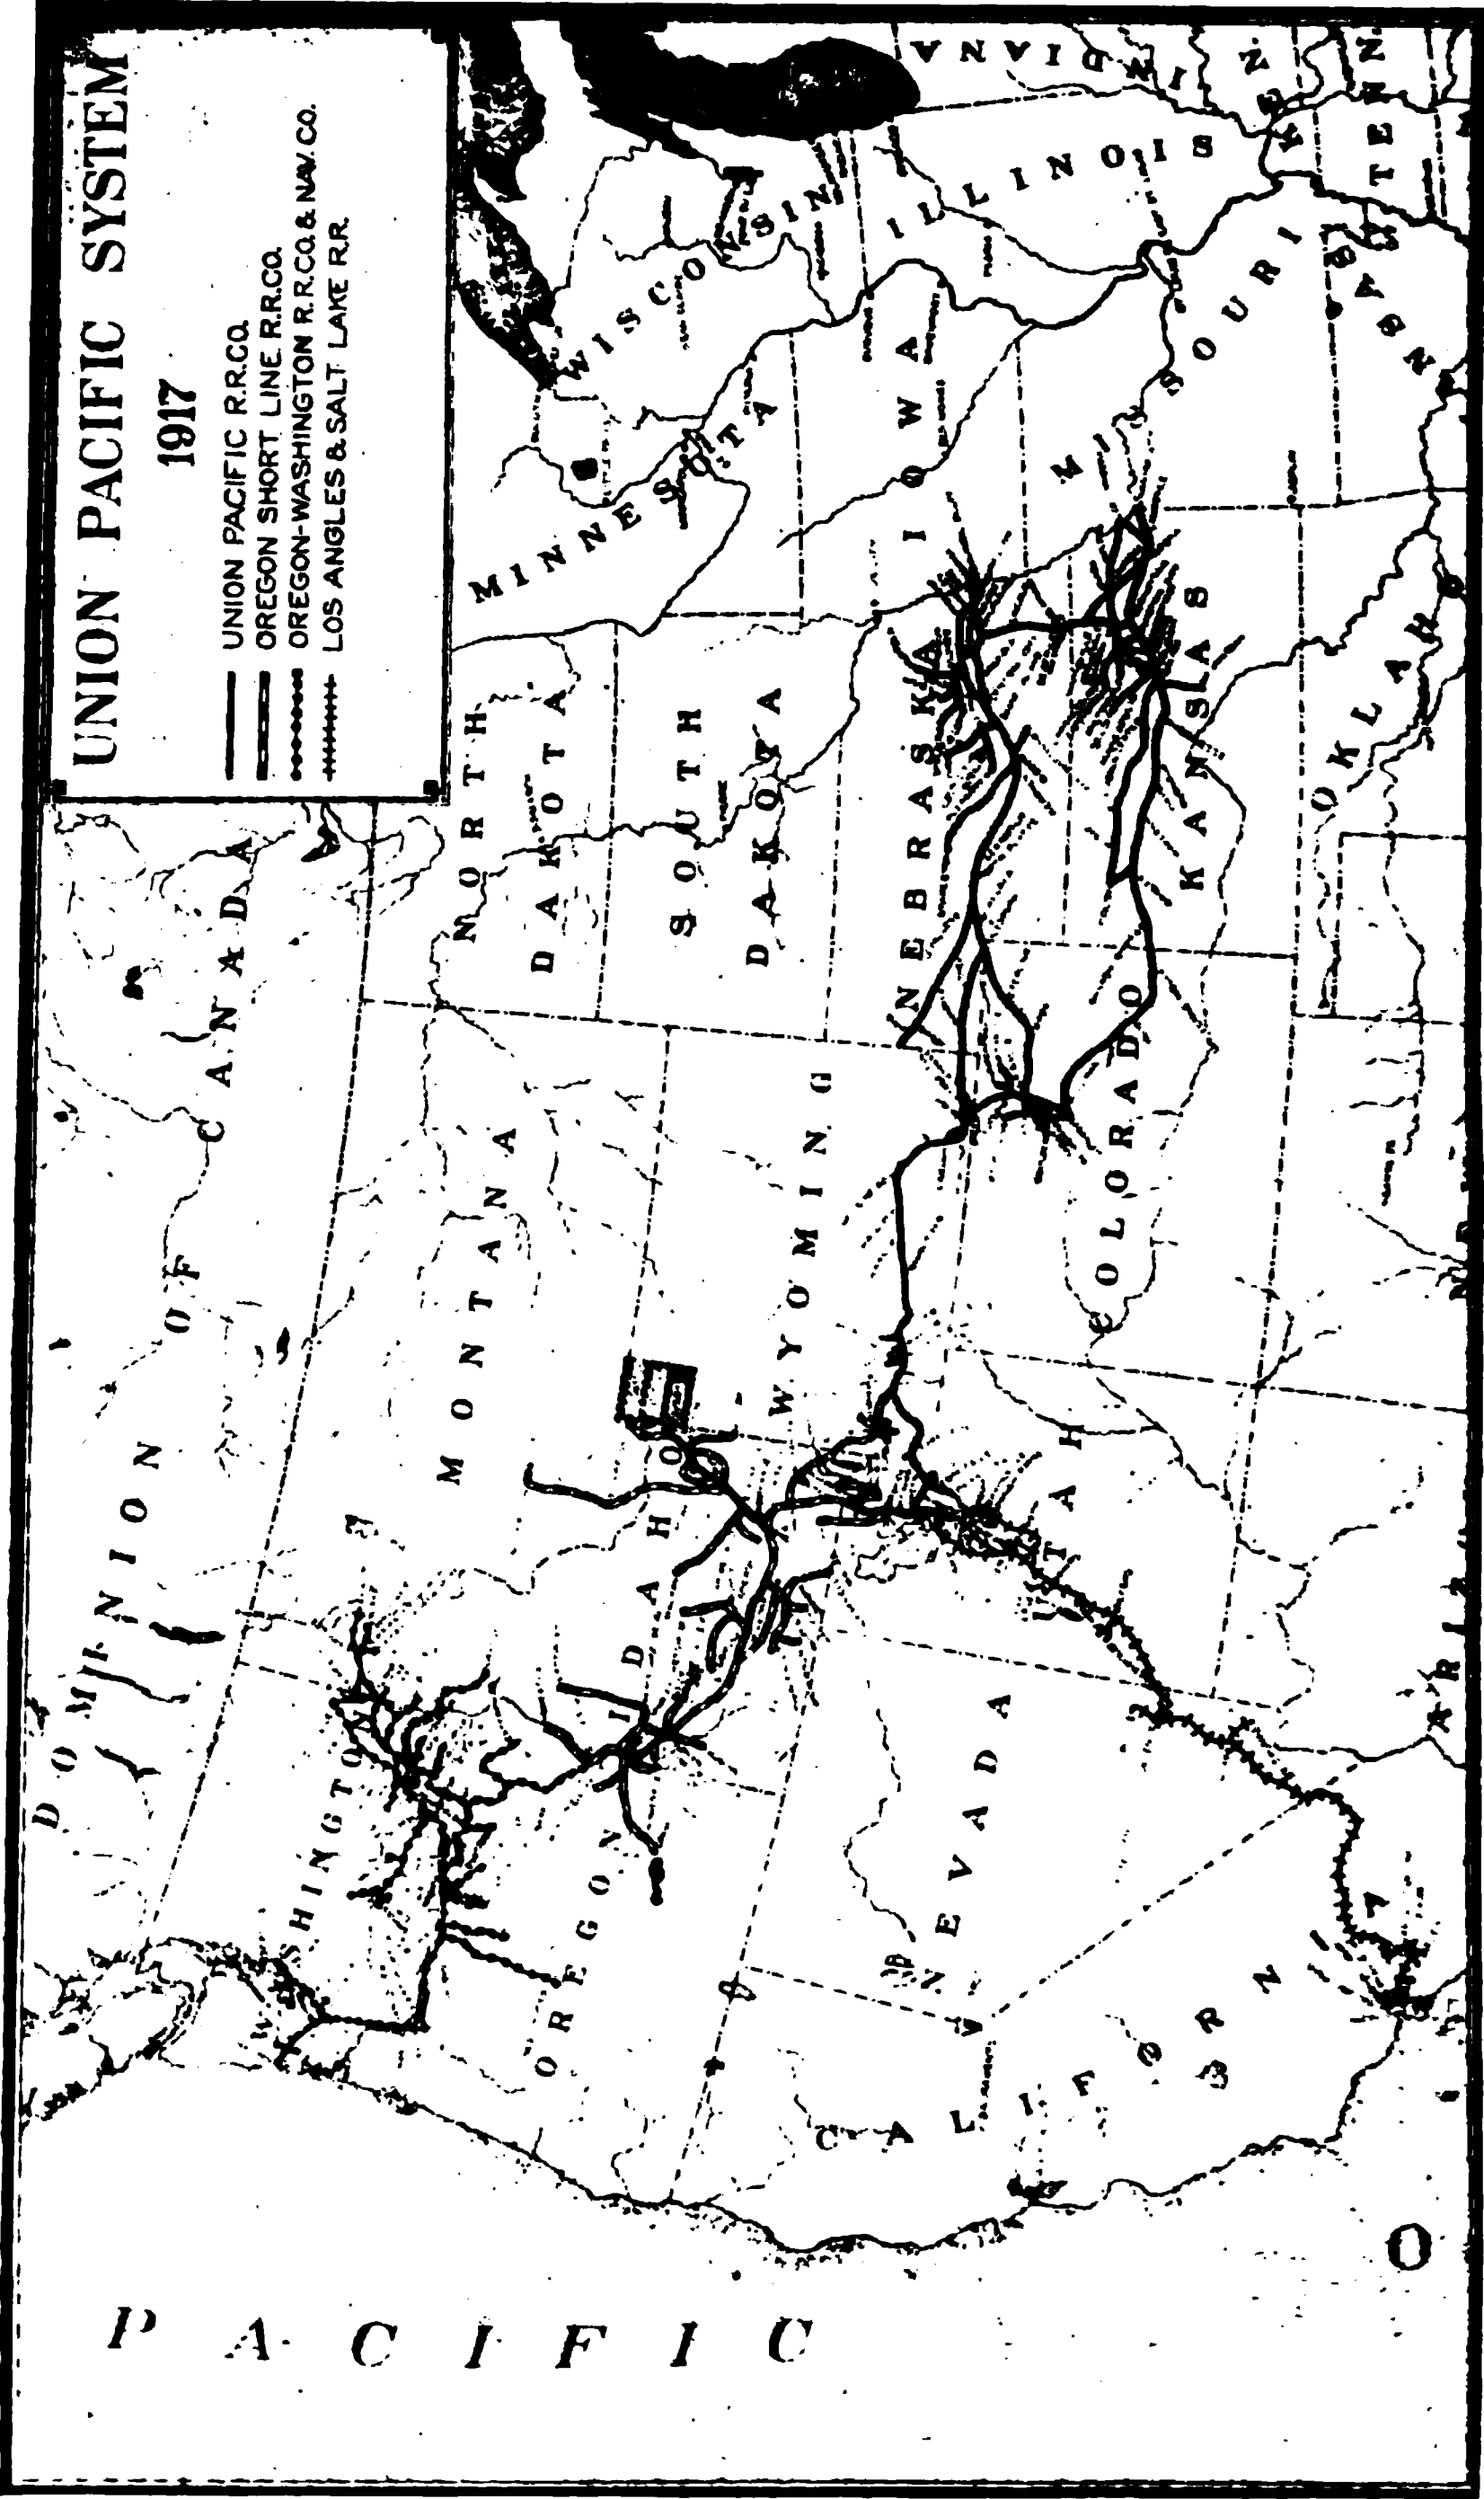

Mr. SIMS. And the tendency, then, will be that a larger proportion of railway earnings will have to be used in providing future terminals or enlarging those you now have than has heretofore been the case?

Mr. LOVETT. I believe that is true, using the word "terminals"—

Mr. SIMS. In a general way.

Mr. LOVETT. To include practically everything except main tracks.

Mr. SIMS. Now, is it also not a fact that that increase can not be prevented by anything or any kind of economic operation of the railroads that can be devised; that it can not be prevented, in other words, by any method that may be adopted in the way of administrative or economic policies by the railroads?

Mr. LOVETT. No; I do not know of any way of avoiding it. The only way that it will be prevented, of course, will be lack of money.

Mr. SIMS. I want to ask you another question in connection with that. Do you or not think it would be a wise policy to adopt, on the part of the railroads, to make a specific special terminal charge for all traffic that has the benefit of a particular terminal—the direct benefit—or passengers, in addition to the general line-haul charge, to be paid exclusively by those who receive the direct benefit from a specific terminal?

Mr. LOVETT. I believe the present method of dealing with that item of cost or expense in transportation is best. It is not the same in all cases; it is adapted to the needs of the particular situation, and is based on experience of the roads in dealing with the subject, and I do not know of any method of improving it. If there were any, I believe the railroads would find it out.

Mr. SIMS. The present method, as I understand it, is to have a terminal company organized—in other words, the terminal is operated by a separate corporation, the stock of which may be owned by one railroad or any number of railroads, or by anybody that may want to take the stock, and the railroads using the terminal pay such charge for its use as is determined by the terminal company. Is that, in substance, the way it is done now?

Mr. LOVETT. There are many terminals that are handled in that way, but there are a great many handled in other ways. There is a great variety of methods.

Mr. SIMS. I am not familiar with the methods used, and, as you said, “present methods,” I only wanted to know what they were, without going into lengthy details.

Mr. LOVETT. I meant that the present methods vary, that the arrangement for handling the expense is adjusted or applied to each particular situation, and there is no hard-and-fast rule for conducting terminals. There is a great variety of methods, and I think that each case is based upon the experience of railroad companies in dealing with the question.

Mr. SIMS. Are the terminal costs—I mean the New York terminal costs—in any way a charge upon the traffic, passenger or freight, of any railroad companies which do not either initiate from one of these terminals or in any way receive a specific benefit from such terminal service?

Mr. LOVETT. You speak now of the New York Central Terminal?

Mr. SIMS. I referred to the New York Central and the Pennsylvania, because they are the only terminals on Manhattan Island, N. Y., that I know of.

Mr. LOVETT. Yes.

Mr. SIMS. I do not believe there are any others.

Mr. LOVETT. No.

Mr. SIMS. And because they are very expensive terminals.

Mr. LOVETT. Yes; they are. Without going into all of the detail or the history of those matters——

Mr. SIMS. I care nothing about that; I just want to know what the effect of it is on the business not emanating in New York or going to New York.

Mr. LOVETT. A terminal, Judge Sims, answering your question in a general way, is merely a facility, and is part of the general plant, and it enters into the general capital requirements, and the general expenses of the railroad company. Now, rates—I am dealing with the two terminals that you spoke of, which are passenger terminals; not freight.

Mr. SIMS. Yes; I know. But they illustrate what I am trying to get at.

Mr. LOVETT. Yes. The passenger pays a certain rate. He is not concerned with the terminal, and the expense of carrying that terminal is a part of the general expense of the company, just like some intermediate bridge, the track, or anything else. It is part of the expense, and it does not figure separately in the passenger rate. I do not know how the railroads deal with that terminal in their accounts, except that, in the case of the New York Central Terminal, the New Haven, which is the tenant, pays a fixed rental of so much, regardless of the amount of business it does, which is very much less than one-half of the capital on the cost of the terminal. Then the expenses are apportioned on the basis of use. There is a certain amount required to carry that terminal, or to maintain and operate the terminal, and that is apportioned between the various companies that use it, on the number of cars they handle in and out of the terminal. That, however, is not fairly illustrative of the general terminal situation. In many cases there is an allowance—several cents a hundred or so much per ton—on all the freight that goes in and out of the terminal, for the terminal charge. But that is merely a matter of dividing the through rate.

Mr. ADAMSON. That terminal charge would go into the general fund?

Mr. LOVETT. Yes; that goes into the general fund. For instance, the Southern Pacific owns the terminals at San Francisco, and it being a very large expense and an apportionment of the through rate on a strict mileage basis being unfair to the Southern Pacific, as it includes that terminal, the Southern Pacific gets an allowance of so many cents a hundred out of the aggregate through rate on all traffic to and from San Francisco going into those terminals. Now, the shipper has nothing to do with that. The through rate is so much, and he is not concerned, as the Interstate Commerce Commission has said many times, with how that through rate is divided among the carriers. Take the Union Pacific: For our Missouri River Bridge and other terminals in Omaha the Union Pacific, out of transcontinental rates by its connecting lines, is allowed a certain amount in addition to its ordinary mileage division of the through rate to cover this terminal charge. The shipper is wholly unconcerned with that. He has nothing to do with the division of this through rate. It is a matter of trading between the connecting lines in apportioning among themselves the aggregate rate. Does that answer your question?

Mr. SIMS. It is information; that is what I am after. These two terminals in New York, which you have referred to, you have designated as "passenger terminals." Now, is there any increase upon the passenger tariff of these two companies in addition to the passenger tariff on any other company not using these terminals? I mean, as

compared with any other city they serve, in order to provide for this extraordinary passenger facility in New York?

Mr. LOVETT. No.

Mr. SIMS. None whatever?

Mr. LOVETT. I never heard of a passenger rate or a freight rate being raised beyond what it was formerly by reason of the addition of new terminals. That is one of the burdens a railroad company must bear in providing additional facilities.

Mr. SIMS. The burden, then, in New York of these two terminals is a burden upon the resources of the railroad companies in common?

Mr. LOVETT. Yes.

Mr. SIMS. On all their earnings—freight and passenger?

Mr. LOVETT. Yes; I should say so.

Mr. SIMS. But it is exclusively a passenger facility or benefit?

Mr. LOVETT. Yes.

Mr. SIMS. Do these two railroad companies make more money out of the passenger business by reason of these excessive terminal facilities—I mean excessive in the way of price or cost—than they would if they had less costly terminals?

Mr. LOVETT. Why, the hope of greater revenue and competition and the requirements of the public force these things. I do not know the motive of the passenger terminals in New York originally, but I think the purpose is rather apparent on the surface. The Pennsylvania Co., being a very progressive railroad company, felt that it ought to get into the city of New York. I have no information; I am just giving you my assumption.

Mr. SIMS. Surmising?

Mr. LOVETT. Yes. It was a very large expenditure. For the West, where it was in competition with the New York Central, it was at a disadvantage, because passengers going west, if going over the Pennsylvania, would have to go down town to Twenty-third Street, or farther down town, and take the ferry to Jersey City, and then take the train in Jersey City. It was an expedition that would take anywhere from half an hour to an hour or more; whereas they could go right to the Grand Central Terminal, go right into the car, and they were settled then for their western trip. I fancy that the Pennsylvania considered that they were at considerable of a disadvantage, and thereupon they determined to get into or onto Manhattan Island with a terminal. I am quite sure they were also actuated by a progressive spirit. The old terminals in Jersey City were really not up to what a first-class railroad ought to have in a great city. That actuated them. Now, the Pennsylvania having done that, and the New York Central being compelled by the growth and development of the passenger business, both of the New Haven and the New York Central, and the general growth of the city, and being under criticism for the antiquated method of handling the terminal in such a city, with steam engines in a tunnel, found it necessary, under pressure of public opinion, to build a new terminal and adopt electricity as a motive power. The Pennsylvania having made this expenditure and seeking advantage, the New York Central, in a progressive and competitive spirit, provided a very handsome and a very great terminal at a very large expense. That, I

should say, about explains the conditions that brought about the establishment of those terminals.

Mr. SIMS. And such additional expense as is added to these railroads makes them less able to reduce freight rates, does it not?

Mr. LOVETT. The cost of these terminals was an additional burden, a fixed charge upon the Pennsylvania Railroad and the New York Central, and it is a part of their general needs; but I would not say that it made them less able to provide freight facilities or to reduce freight charges, because nobody can measure the value of improvements of that character. The prominence, the great advertising effect of this new Pennsylvania terminal, I have no sort of doubt, enormously increased their freight revenue, and when the New York Central met it it increased its revenue.

Mr. SIMS. Although neither of those terminals is in any way used for freight traffic or is any money benefit to freight traffic?

Mr. LOVETT. Yes. In the case of the Union Pacific we run a number of transcontinental trains, and while I do not think we run any of them at a loss, some of them are not particularly profitable; but for us to abandon those trains would be a step backward that I am sure would hurt us a great deal in other directions.

Mr. SIMS. You spoke of the competition existing between the New York Central and the Pennsylvania on Manhattan Island regarding the passenger terminals, and of one having built a terminal, and that it did not confine its cost strictly to utilitarian purposes; that it then became almost necessary, as a protective measure, for the New York Central to make a like expenditure for the same purpose?

Mr. LOVETT. Yes.

Mr. SIMS. Consequently there is a burden put upon all the users of that railroad—the freight payers and the passenger payers, whether they ever go inside of those terminals or not—made necessary by existing competition between two great railroad companies or railroad systems that enter the same city.

Mr. LOVETT. I do not call it a "burden," Judge Sims.

Mr. SIMS. Well, it is certainly a financial burden.

Mr. LOVETT. And a financial benefit.

Mr. SIMS. You have got to have more earnings, and you do not get them out of the passenger stations; you charge nothing additional for a passenger coming into that station. If I go to New York and get off in Jersey City, on this side, I have to pay as much as if I had bought a ticket to the Pennsylvania Central Station. Consequently there is no additional revenue, so far as passengers are concerned, that is derived from these two terminals, unless by reason of having these finer terminals a greater number of passengers go to New York over your lines, or over those two lines, than would otherwise go. Therefore there is a greater profit in carrying passengers.

Mr. LOVETT. I believe that is true.

Mr. SIMS. Then, it should not become a burden upon the freight traffic of these two roads?

Mr. THOM. You said, Mr. Lovett, "I believe that is true"—

Mr. SIMS. I have reference to the increase in passenger business.

Mr. LOVETT. I believe there is an increase in passenger business by reason of those two terminals.

Mr. SIMS. We now have systems of railroads, and they are competing. In a general way, does not competition affect a system the same as it does two single railroads that are competing in the same cities for the same service, both good and bad? Does that have the same effect?

Mr. LOVETT. Are you distinguishing between a system of railroads and particular railroads?

Mr. SIMS. Take the New York Central Lines, or your lines; that is what I mean when I say a "system."

Mr. LOVETT. Yes.

Mr. SIMS. The railroads under one ownership and control?

Mr. LOVETT. Yes.

Mr. SIMS. They compete with other railroads under one ownership and control?

Mr. LOVETT. Yes.

Mr. SIMS. You have called them systems, I believe, in speaking of them.

Mr. LOVETT. Yes; that is what I meant.

Mr. SIMS. These systems, therefore, give the passengers a better service by reason of the two railroads competing with each other in the matter of terminals in New York City?

Mr. LOVETT. Yes.

Mr. SIMS. But while the passengers get a better service for their money than they did before, yet your earnings, your revenue, must be collected from the entire service of the railways in order to maintain these tremendously expensive terminals; therefore it is not a benefit in that way to have these extraordinarily costly terminals, and in that way competition has produced, you might say, an evil; and, furthermore, you have just stated that you think both of those railroads carry more passengers to New York City by reason of those terminals than they otherwise would, and I think so, too; it is common sense that they would. If I can go from here to the Pennsylvania Station on Manhattan Island for the same fare that I would have to pay if I got off at Jersey City, of course I will choose the former; but while that is true, the road that has not the benefit of such a terminal will lose all the passengers that the other roads gain. Now, is not that true?

Mr. LOVETT. It will certainly lose some; it will suffer some.

Mr. SIMS. It will lose to the extent of the gain of the other roads?

Mr. LOVETT. The other road may gain passengers from other lines.

Mr. SIMS. I mean, that for this particular and specific reason these two companies, I am confident, get a large passenger traffic that they would not get except for the reason of these terminals.

Mr. LOVETT. I am sure of that.

Mr. SIMS. And those passengers are persons who would otherwise go on some other road?

Mr. LOVETT. Undoubtedly.

Mr. SIMS. And, therefore, this competition takes from the weaker roads some of their traffic—those which can not avail themselves of these fine terminal facilities?

Mr. LOVETT. Yes.

Mr. SIMS. Therefore competition is war.

Mr. LOVETT. Yes.

Mr. SIMS. And it may be a peaceable war, as in this case—two great railroads trying to equal the facilities of each other?

Mr. LOVETT. Yes.

Mr. SIMS. But to the disadvantage of the weaker roads, which are not able to maintain such fine terminal facilities.

Mr. LOVETT. Yes.

Mr. SIMS. I believe that the railroad companies of this country have what they call "basing points." I suppose New York City is a basing point, is it not?

Mr. LOVETT. I am not familiar with the details of rate matters. Judge SIMS. I can not tell you very much of them.

Mr. SIMS. I thought, next to Mr. Thom, you were the most super-expert we have on this subject, and I have asked you all kinds of questions, supposing that you knew in a general way about all of them.

Mr. LOVETT. You flatter me greatly. I do not know about all of it.

Mr. SIMS. That was my understanding.

Mr. LOVETT. I know something, in a general way, about traffic matters, but when you ask me about particular basing points I can not tell you, Judge.

Mr. SIMS. We had quite a contention between the railroads basing on the Ohio River, running through Nashville, Tenn., to Atlanta, Ga., and the Nashville milling people have what they call milling in transit—if that is what it is called?

Mr. THOM. Milling in transit?

Mr. SIMS. Yes; milling in transit. Now, it was claimed that from these basing points on the Ohio River wheat would be shipped as wheat to Atlanta, as though it was going direct to Atlanta, and the through rate was charged, say, from Louisville to Atlanta, but giving the privilege for the wheat to stop off in Nashville and stay there six months, and then give a flour rate or a rate on the manufactured product of this wheat to Atlanta that was equal to the rate from or not exceeding the rate from Louisville to Atlanta in the first instance: but in shipping from Nashville to Atlanta—not to Atlanta, but to some point nearer to Nashville than Atlanta—

Mr. ADAMSON. Intermediate point.

Mr. SIMS. Well, one nearer Nashville than Atlanta, that Atlanta being the basing point the charge was made from Nashville on the flour to Atlanta, adding the local rate from Atlanta to this point to which the flour was actually going; and, as a matter of course, that cost Nashville flour people that much more money than it would by receiving the benefit of the milling-in-transit rate.

Now, I understand that a basing point, operated in that way, imposes upon every town or shipper or consumer within that basing radius the same rates plus the rate from the basing point to an intermediate point, although that intermediate point may be on the line over which the property would go if it went to Atlanta. Now, that is my idea of the practical effect of fixing a basing point. Is that, in a general way, correct? I do not know. I am asking for information.

Mr. LOVETT. I am not traffic man enough to answer as to whether you would call that a basing rate or not. I know that there are

certain basing points that are used as a means of arriving at a rate to some other point.

That is simply part of the argument—part of the reasons for arriving at it—but I am not sufficiently familiar with the rate structure of the country to give you any information really as to the details of rates or rate making, or rates from different basing points.

Mr. SIMS. Let me state a concrete case, then, that will illustrate it. If you do not know, of course you can not answer.

Mr. THOM. There will be certain rate men on the witness stand from the various rate territories of the country and you will have an opportunity of learning these things from them.

Mr. SIMS. I suppose they are special experts on that?

Mr. THOM. Sir?

Mr. SIMS. I suppose they are special experts on rate matters, but I should think that this committee of railroad executives would be experts on all of them; perhaps not the details, but in a general way.

Mr. LOVERT. I have been in litigation involving rate matters. I have had a great deal of experience in the principles of rate making, but I have never had occasion to deal with concrete rates from any particular place, and how any particular rate is made, except the rates involved in that particular litigation. I know, in a general way, the principles of rate making.

Mr. SIMS. That is exactly what I wanted to ask you about.

Mr. LOVERT. But I would not undertake to deal with any concrete rate problem, because the conditions change and we can not discuss the merits of a rate unless we know all of the circumstances that enter into its making.

Mr. SIMS. I am talking about the general rule that is adopted in rate making by railroads, with reference to what they call "basing points."

Now, suppose freight is leaving Louisville, Ky., and going in or out—I do not care what—to Atlanta, Ga.

Mr. ADAMSON. Judge Sims, I believe Mr. Thom will tell you that under the recent adjustment of the short-and-long-haul clause the commission has either done away with basing points or greatly modified them.

Mr. THOM. Greatly modified them.

Mr. LOVERT. I would prefer, Judge Sims—of course, I will undertake to answer your question——

Mr. SIMS. I will be frank with you on that question. I want to get this in regarding terminals; that is why I am laying this foundation.

Mr. LOVERT. Of course, we will send traffic men here who will answer any of these questions.

Mr. ADAMSON. It is dangerous to fool with them; I think we had better take our chances with you.

Mr. SIMS. My experience with experts, without any discredit to them, has always been that they know exactly how to tell what they want to tell and exactly how to keep a layman from finding out what he wants to and does not know how.

Mr. LOVERT. I will do my best.

Mr. SIMS. But you are general, and therefore I am considering you good on all of them, and not an expert on dodging, because I do not think you show any attempt to do anything in that line. But here is a manufacturing company at Louisville, Ky., manufacturing material. It gets a through rate to Atlanta! Now, on the same railroad, 50 miles nearer Louisville than Atlanta, we will say, there is a manufacturing concern that uses that material brought from Louisville. I am only taking it for granted that there is a freight terminal in Atlanta similar to that in New York, a great, expensive freight terminal in the city of Atlanta. I understand, in effect, and in operation to-day, that the railroad company will charge freight on this manufacturing material which is unloaded 50 miles nearer Louisville than Atlanta the full rate from Louisville to Atlanta plus the rate from Atlanta back to the manufacturing point, 50 miles. Now, in that rate, the freight not going to Atlanta, stopping as it went on, never having gone inside of the Atlanta terminal—it does not need the Atlanta terminal, does not use it directly or indirectly—do you think it is commercially just and fair that a terminal charge, or a portion of it, or any part of it, or an interest charge on terminal bonds should be placed upon this man outside of Atlanta, who has a shorter haul, to that extent becoming a burden upon his products? I am speaking about the policy, the principle involved in such a practice, if such a practice exists.

Mr. LOVETT. I think that depends upon the circumstances of the case. Perhaps I can answer your question better by telling of an immemorial practice in making rates to the Pacific coast. Whether that is still in force I am not prepared to say. But we will take Reno, Nev. The rate from New York to Reno, Nev., was formerly, and, so far as I know, is still, made by taking the rate from New York to San Francisco, the transcontinental rate, and adding to that the local rate of the Southern Pacific from San Francisco back to Reno. The carload of freight will move overland to Reno and stop there, never going to San Francisco, but the shipper pays exactly what it would cost him if that car of freight had gone to San Francisco and been hauled back. The Reno man, on a superficial examination, will say, "That is not fair; this car does not go to San Francisco; the Southern Pacific ought not to be paid for hauling this freight to San Francisco and back to Reno when it hauls it only to Reno." And upon the face of it, it looks as if he were right. Now, the Southern Pacific's answer to that is that the rate from New York to Reno overland really ought to be higher than this combination makes it; that considering the whole traffic of the railroad, the fixed charges, and all the obligations, and to afford a fair return upon the property, the rate from New York to Reno ought to be higher than the aggregate of these two sums. We will say that the aggregate of the rate from New York to San Francisco is a dollar a hundred and the rate from San Francisco back to Reno is 50 cents, making the Reno rate \$1.50. The Southern Pacific will say, as a matter of fact, and in justice to the railroads, the rate from New York to Reno ought to be \$2 a hundred, but it has to make the rate \$1 a hundred to San Francisco to meet water competition. That is all it can get out of the San Francisco rate, for if it

should charge the Reno man \$2, what he ought to pay, he could send it by water to San Francisco and pay the local rate to Reno and get the freight at \$1.50. Therefore it charges the \$1.50, which is all it can get.

Mr. ADAMSON. Then, in effect, you have to meet water competition everywhere, in some degree?

Mr. LOVETT. Yes, sir. That takes the New York-San Francisco as a basing rate and adds the local back, when the freight never goes to San Francisco or within 150 miles of San Francisco. Does that answer your question?

Mr. SIMS. I knew all that.

Mr. LOVETT. I am very sorry——

Mr. SIMS. That is all right; it goes in these hearings. We had that up before, though, and that is why I happened to know about it. The railroad company has to meet the water competition from New York to San Francisco or else not do business. Now, Reno prefers to pay the local rate from San Francisco to Reno in order to get the advantage to that extent of the water reduction.

Mr. LOVETT. Certainly.

Mr. SIMS. I understand that perfectly, and understand why it is. That is a special case and a case where it is compelled by water competition. But the question I am getting at—you have answered here, and, I think, very correctly, that the terminal costs are going to increase, and you have shown here why the New York Central had to meet the terminal expenditure for passenger traffic in New York City.

Mr. LOVETT. I can answer very briefly, Judge Sims——

Mr. SIMS. I will ask it, so as to make it contiguous. Your company operates from San Francisco to Reno, does it

Mr. LOVETT. No; the Southern Pacific does.

Mr. SIMS. I mean the Southern Pacific.

Mr. LOVETT. Yes.

Mr. SIMS. Now, if some other great company, a strong railroad company, enters San Francisco and puts up enormous, beautiful, and attractive passenger terminals, and the Southern Pacific, in order to compete with it, just as you have described in New York, puts up a very fine terminal there, the tendency of which is to reduce their ability to perform their general service as well as they otherwise could, ought the Reno man, have to pay an additional cost on his freight that neither goes to San Francisco nor, if it did, would enter a passenger terminal? I am trying to see what effect these increasing passenger terminal services are going to have in an economic way upon the railroads, unless there is a specific terminal charge paid by the passengers who use them.

Mr. LOVETT. I can make this general answer, Judge Sims: You can not split up the different elements in the cost of railroad transportation. It is easy to find sources of revenue, how much from passengers, how much from freight, and how much from particular commodities. The Interstate Commerce Commission attempted to require the separation of the expenses on the passenger and freight business, and we are making some statistics. What they do with them I do not know. But your idea, as I gather it, is that it is not

fair, for instance, to require a shipper of freight to be taxed with any part of the capital of providing these great passenger terminals.

Mr. SIMS. That is the thought.

Mr. LOVETT. Yes; that is the thought. You can follow that out, for instance, by saying that here is a coal shipper that does not use freight houses or freight terminals. Is it fair to require him to bear a part of the expense, not merely of providing a passenger terminal in New York but of freight stations all along the line and passenger stations at various points along the line? There is about as much reason in one as in the other. The shipper of freight who does not use the New York terminal is interested in the general operations of the New York Central. It is to be supposed that the construction of this very expensive terminal in New York was a good business proposition for the New York Central; that it either preserved its revenue against the aggressions of a competitor or produced additional revenue. In either event it lightened the burden on the shipper. If it was not a good business proposition, if it was not for the interest of the New York Central to build this terminal, and for the Pennsylvania to build its terminal, it was not for anybody's benefit. But, theoretically, and as far as I am able to judge of the situation actually, the construction of those terminals was good business for the general welfare, and either by increasing the passenger business or by holding what they had to their lines, they swell the general resources and general revenue of the company and to some extent lighten the charge which the freight shipper would otherwise have to bear.

Mr. SIMS. For competitive purposes and the purposes you have just named, it seems to me it is beyond criticism; it is ideal. But we get right back to the question, Is it a nation-wide benefit? You described yesterday, I think it was, a large number of weak roads that were carrying more traffic than the strong ones. Now, every competitive action of this sort further weakens the weak road, and if the weak road performs a service as it should be performed, of course the stockholders must either accept less revenue or the patrons must pay a higher rate, or else absolute bankruptcy must come by such means of competition. Now, competition is all right if competition is to be the theory; but to avoid competition is the very reason why these great systems of railroads have been brought-up and built up—to have as few competitive points as possible.

Mr. LOVETT. I do not agree to that.

Mr. SIMS. Now, if competition as a principle and as a practice, general competition, is beneficial, then the more competition the better for the public, for the people.

Mr. LOVETT. I am not expected to express any assent or dissent where you are expressing your own opinions.

Mr. SIMS. No; that is simply my own opinion. I would not expect you to indorse my views unless they are yours. And in this case I am not expressing my views; I am only saying what appears to me would be the effect if competition is to be the rule adopted with reference to public utilities. If all lines are to be competitive they would all have to build fine passenger stations, or none build them. But where competition is reduced, and by the very reduction of

competition you have built up such great systems as the Pennsylvania and the New York Central and the Union Pacific—I mean by reducing the number of owners, the number of competitive properties—you have brought about a benefit. Now, if reducing competition in an area is a good thing, why would it not apply to the whole United States, if it could be so applied?

Mr. LOVETT. I do not believe that reducing competition is a good thing. I have expressed myself several times before this committee as distinctly in favor of competition in facilities and service.

Mr. SIMS. I know you have. But reducing competition among quite a number of railroads was what made the New York Central system, was it not?

Mr. LOVETT. I do not understand so.

Mr. SIMS. It made the Pennsylvania, did it not?

Mr. LOVETT. I do not understand so.

Mr. SIMS. Without asking for any particular system, did you not say yesterday that many of these systems, or some of them, have absorbed many weak, unprofitable lines and made them a part of their system?

Mr. LOVETT. Yes.

Mr. SIMS. Do you not think that it was a benefit to the people on those weak lines to have them thus absorbed?

Mr. LOVETT. I think it was.

Mr. SIMS. Therefore this elimination of competition——

Mr. LOVETT. I did not mean to say that they absorbed weak lines that were competitors.

Mr. SIMS. You mean technically, I suppose. Well, it was a benefit to them, or they would not have done it?

Mr. LOVETT. Yes. They got them at a bargain, probably.

Mr. SIMS. It became a benefit to unify the service in this area?

Mr. LOVETT. Yes. There are a good many lines that we would like to absorb that are not competitors if we could get them at a satisfactory price. The question of price enters in.

Mr. SIMS. You would like to absorb the Pennsylvania, I imagine, and the New York Central, if you could buy them at a profit; I mean if you could make money by doing so?

Mr. LOVETT. It is a little too big for us.

Mr. SIMS. I said you would like to; I did not say you could do it.

Now, I do not know whether you have given thought to this or not, but when we take the burden of transportation—call it a burden or a benefit, whichever way you want to—of all transportation, railway and water, highway, trolley or other kind of railroad, transportation of every kind, I will ask you if, in a general and large way, taken altogether and all added together, if it does not amount to 50 per cent of the cost to the ultimate consumer—what he finally pays for it, upon the average?

Mr. LOVETT. I have no information on that subject, Judge Sims.

Mr. SIMS. The gross receipts of the railroad companies are shown in round numbers to be \$4,000,000,000 a year now for such as have reported gross earnings. Of course, the shipper or patron pays the gross charge; he has nothing to do with the net. Now, I have not heard of anybody claiming that the railroads of this country, includ-

ing every element of value, are worth over \$20,000,000,000. In five years the gross earnings would absolutely pay for every railroad in the United States, with all elements of value now included.

Mr. LOVETT. The gross earnings?

Mr. SIMS. The gross earnings would absolutely pay for every railroad in the United States in five years.

Mr. LOVETT. But who would pay the operating expenses?

Mr. SIMS. I am talking about what it would cost the person who pays the gross earnings; and gross earnings of every kind are net losses to the consumer.

Mr. LOVETT. Judge Sims, you know the cotton grower and the wheat grower will tell you that the producer pays the cost of the freight, and the man who buys the cotton and wheat will probably say that the consumer pays it. That is a big economic discussion that I can not go into.

Mr. SIMS. If this railroad problem is not a very big economic one. in a national way, I do not know why.

Mr. LOVETT. It is; very big.

Mr. SIMS. Of course, if rates are reduced from the wheat-growing regions of, say, Kansas to New York, the price of wheat products will be reduced to some extent in New York, and the price of wheat will be to some extent advanced in Kansas, due to that?

Mr. LOVETT. That is a theory, Judge.

Mr. SIMS. The farmer who ships from Iowa does not get all the benefit of a reduction of rates, because if the purchaser of the farm products in New York, who distributes them there, can buy them that much cheaper, of course, he will do it. Consequently, when there is 1 cent more charged for carrying these products from the place of production to the place of final and ultimate consumption. than might by some change in the method of transportation be charged, it must be either a net loss entirely to the shipper or a net benefit entirely to the consumer, or a divided cost and reduction?

Mr. LOVETT. That is a problem in economics upon which I have some views, but I think you are quite as capable of deciding that question as I am.

Mr. SIMS. It seems to me it is inevitable that such would be the result, only in exceptional circumstances. Therefore, every consumer of products that pays freight of any kind, wherever he may be situated, is vitally interested in the cost of transportation, and that makes him vitally interested in every element of the cost of transportation.

Mr. LOVETT. My own opinion, if I may observe right here, is that 99 per cent of the people of the United States are more interested in the quality of the service than in these fine shades of cost.

Mr. SIMS. Mr. Lovett, would a man in New York, making bread. care anything about whether the wheat was shipped in a silver-lined car or in an open flat, just so he got it?

Mr. LOVETT. No; but he would be interested in facilities that would put it to him when it was needed.

Mr. SIMS. With the greatest expedition and the least charge on the wheat. Now, I want to ask you another question, Mr. Lovett: Do you not think that if conditions remain as they are now—if the States

retain all their powers to regulate and do the things they are doing, and the United States Government exercises such as it sees proper—that the economic hindrances which are now felt by the railroad companies in the way of credit operations are going to be increased instead of decreased?

Mr. LOVETT. I think so.

Mr. SIMS. Is it not naturally inevitable?

Mr. LOVETT. I think the present method of regulation is intolerable or will become so.

Mr. SIMS. Do you mean by "intolerable" that it is going to cost, if it is continued to its probabilities, a sum which the people will not agree to pay in freight or passenger fares?

Mr. LOVETT. I will not say that it is going to cost any such sums as you suggest. It may or may not. But it is going to deprive the people of the additional transportation facilities they must have in this country.

Mr. SIMS. And is it not going to increase the cost to us of those that we have?

Mr. LOVETT. I think it will.

Mr. SIMS. Why, this very matter of terminals; if the cost of terminals is going to be an ever-increasing proportion to the total cost of a railway line, and the cost of these terminals must be absorbed in part at least—assumed, if you want to use that word—even that of itself will increase the operating expenses of the railroads to a very great extent that can not now be foreseen. Along a line that is a rather delicate one at this time, can anybody foresee now what effect or what the cost of the labor charge upon railroad services is going to be in the future?

Mr. LOVETT. I can not.

Mr. SIMS. It is utterly impossible to foresee just what effect it is going to have?

Mr. LOVETT. I am quite sure that it will not lessen.

Mr. SIMS. That it will not grow less?

Mr. LOVETT. Yes; I do not say that it should. I think labor ought to be well paid, fairly paid.

Mr. SIMS. And I see immediately, since the decision of the Adamson law case, that the railroads are applying for 15 per cent increase in freight rates.

Mr. LOVETT. I notice an application is made by most of the roads.

Mr. SIMS. I say there is an application for 15 per cent increase in freight rates due, I suppose, to some extent, perhaps very largely, to the supposed increase by reason of putting the Adamson law into operation.

Mr. LOVETT. I read Mr. Rea's statement to the effect that increase in the price of coal alone added six millions a year to the operating costs of the Pennsylvania, and the increase of the wages due to the application of the Adamson law meant nine millions, and that the increase in the cost of all materials required in maintenance and operation, which Mr. Rea estimated at one half of the total cost, the other half being labor, added an amount which I do not remember, but which, with increase in taxation due to recent acts of Con-

gress, meant a total addition to the operating costs and taxes of the Pennsylvania system aggregating \$29,000,000 a year. If that is true—and I have no sort of doubt it is—it simply means that the Pennsylvania and all other roads similarly situated must have an increase in rates.

Mr. ADAMSON. Judge Sims, pardon me right there. Congress, in passing the Adamson eight-hour law, provided a method of determining a dispute as to whether there would be an increased cost on a proper compliance with that law, and if so, how much it would be. Now, my suggestion to you is that if you would avoid that conflict for the present and avoid the law by letting the men run $12\frac{1}{2}$ miles an hour, with properly loaded trains, and base your application for increased rates on the irrefutable fact that money is cheaper now than at any other time in the history of the world, and does not buy so much, I think you would have some hope of your increase.

Mr. LOVETT. We know, Judge Adamson, just what it is going to cost us.

Mr. ADAMSON. You know what it is going to cost if you do not regard it; but if you regard it and let those men run 100-mile runs in eight hours, which they all say they can do, it will be quite different from Mr. Rea's estimates.

Mr. LOVETT. Yes; those men talk—they are very shrewd and they are good negotiators; I do not know any abler men in the country—but we know what it amounts to. We know if we increase the speed of our freight trains we have got to reduce the load.

Mr. ADAMSON. Of course, you have got to reduce them to a proper load.

Mr. LOVETT. And if we reduce the load, we will have to run more freight trains and employ more men.

Mr. ADAMSON. Engineers and conductors came to our committee room and told us that if you figure on your drawhead breaks and delayed time caused by derailed trains, that will more than counterbalance the saving.

Mr. LOVETT. It is too bad that out of all the supposed talent that is engaged in railroad operations in this country, the universal conviction of the men who are running the railroads is to the contrary. Put one of these men that came before your committee and told you that in the position of superintendent and see how long he would act on that principle.

Mr. ADAMSON. It is too bad, but nevertheless it looks reasonable that all the numerous conductors and engineers who run your trains may be supposed to know as much about the actual physical operation as superintendents and managers.

Mr. LOVETT. Yes; but you must also consider when a man is trading.

Mr. ADAMSON. We have got to consider that; and in considering that difference, we passed a law to determine it.

Mr. LOVETT. Yes.

Mr. ADAMSON. Now, I do not think you are going to get anywhere by forestalling or trying to forestall the method and instrumentality provided by Congress to decide that dispute between you.

Mr. LOVETT. I do not understand there is any effort to forestall it; but the railroads can show to anybody their present condition resulting from these various items. They have so much net money, the rates remain the same, and we have so much net under former conditions. Here, for instance, is the price of coal; we know what that is. We know what these additional taxes are. We know what difference we are paying for material, for equipment, and everything that is used for maintenance and operation of the road. There is no theory about that. And we think we know pretty well what the additional cost of the Adamson eight-hour law is.

Mr. ADAMSON. You have got a commission appointed to hear that during the next nine months.

Mr. LOVETT. Yes; and if we wait for the report of that commission for nine months to see what they are going to do, some of the roads may be in the hands of a receiver in the meantime.

Mr. ADAMSON. You had better change the way you have been figuring and tell the men that necessary overtime is allowed and let them run a hundred miles in eight hours, as they said they could do.

Mr. LOVETT. I know perfectly well that they can run a hundred miles in eight hours; but when they do it we must put on more trains and employ more men.

Mr. ADAMSON. You mean if you stop overloading your trains and make them less than 2 miles long, with two or three engines at the head of each one, you will have to put on more trains, of course.

Mr. LOVETT. I deny very emphatically that they are overloading.

Mr. ADAMSON. It should be required that you do not overload your trains and do not run them too long and that you do make trains that are mobile.

Mr. LOVETT. Any railroad man that overloads his train ought to be fired.

Mr. ADAMSON. I see it down in my country every time I see one.

Mr. LOVETT. Judge, perhaps you are not as good a judge of overloading trains as railroad men.

Mr. ADAMSON. I have been an administrator of railroads as long as you have. I have seen the trouble that these men have with trains breaking down and costing you more than if you made them of the proper size.

You and I are both administrators of these railroads. The difference is that you get paid for it and I do not; and I am not on the side between one class of employees and another.

Mr. LOVETT. Nor am I, Judge.

Mr. SIMS. Now, I want to drop back to where I started.

Mr. ADAMSON. I thought I would relieve Judge Sims for a minute.

Mr. SIMS. It was a very interesting break in.

Mr. ESCH. I assume Judge Lovett would like to finish his testimony by half past 1. There are two other members of the committee who have not yet put their questions. Would it be possible for us to finish with Judge Lovett to-day?

Mr. ADAMSON. I will ask Mr. Hamilton and Mr. Townsend if they can finish.

Mr. SIMS. I am trying to finish as quickly as I can.

Mr. ADAMSON. How much time do you want, Mr. Hamilton?

Mr. HAMILTON. I do not care how much time I get. I have only a few questions.

Mr. ADAMSON. How much time will you take, Mr. Sims?

Mr. SIMS. It all depends on Judge Lovett's answers.

Mr. LOVETT. I will answer yes and no, if you so desire.

Mr. SIMS. I want you to answer as you have been answering. I am after information. I have not come into this investigation with a fixed opinion one way or another. I want to get all the information I can get out of you gentlemen. I know this country will regard your opinions as entitled to weight, and I see no objection on earth to what Mr. Adamson has said or to the answers Mr. Lovett has given.

Mr. HAMILTON. I think the best information on earth is information that is boiled down.

Mr. SIMS. Then, if you want to abridge this examination—if you want to boil it down—we might as well say we will adjourn in 10 days.

Mr. HAMILTON. Oh, no.

Mr. SIMS. I do not want to get away from what I had in my mind and what I was intending to bring out by referring to this application for an increase. With the tendency and effect of State regulation and the exercise of the powers of the States which they now lawfully exercise, from the fact that Congress has not occupied the field—I suppose that these railroads that have applied for an increase of rates are candid and sincere and that they would not ask for it if they did not think that they had to have it; that they are not asking for it simply to augment profits. I am assuming that to be the case.

Mr. LOVETT. I think your assumption is entirely justified.

Mr. SIMS. I have no right to draw any other assumption unless I knew facts to the contrary. Now, suppose the Interstate Commerce Commission agrees with these railroad companies and authorizes the increase—it has no power to make it mandatory, of course—but suppose that each State through which these several railroads run, with reference to a part or all of the items on which the increase is made, exercises the power that Pennsylvania did and nullifies the increase. Would the railroads get any benefit by reason of the increase if it should be so treated by all the other States?

Mr. LOVETT. If the decreases of the States were put into effect it is obvious they would not.

Mr. SIMS. I am supposing they will do like Pennsylvania; that they will make an order nullifying the increase. It is within the powers of the States in the present condition of national legislation. So there is bound to be, necessarily, with the amount of power that the States have and with the unoccupied Federal field covered by State legislation and with the tendency to increase this exercise of power on the part of the States, that the commission is powerless to put in a rate or to give a rate that can be successfully operated or maintained, and therefore the uncertainty must not only remain—the uncertainty that now exists—but it must increase. Now, is not that a thing to be reasonably apprehended?

Mr. LOVETT. I have apprehended such conditions. Of course, as to how far the Shreveport case may be applicable to the particular situation you describe I am not prepared to say.

Mr. SIMS. I am speaking of possibilities, and possibilities to the States that are profitable to their inhabitants are very likely to become probabilities. I want to ask you, Judge Lovett, if Congress does not have the power, within the limitations of not making a law that will operate to confiscate property—if Congress does not have the power to declare all classes of traffic mailable matter and prescribe the rates of railway mail pay for any and all classes of property?

Mr. LOVETT. I should think so, within the bounds of reasonable rates.

Mr. SIMS. Railways doing an interstate business?

Mr. LOVETT. Yes, sir; I think so.

Mr. SIMS. Congress has created what is called the parcel-post law, which simply added a number of articles and increased the weight of packages and also reduced the postage; and the railways are complying with it because it is not confiscatory. Now, sometimes we get up the idea—at least it so appears to me—that there is something sacred about the movement of the United States mails; that if a strike should prevent the moving of the United States mails, it would be of greater consequence to the public on that account. In other words, if it is criminal at all, or immoral, it would be of a higher order of criminality or immorality to stop the United States mails than other kinds of property being transported, and we should give the United States Government the power to move the United States mails. I can not see anything sacred about the moving of the Sears & Roebuck catalogue in interstate commerce any more than moving a dozen of eggs through interstate commerce, or anything of that sort. Now, if Congress can declare all goods mailable, regardless of size or bulk, by simply prescribing rules that will make it practicable to do so, has not the United States Government, through Congress, at this time, the power to absolutely control all intra and interstate commerce, so far as the rate to be paid and general rules and regulations, by simply extending the present parcel-post law in the way I have indicated?

Mr. LOVETT. I have not supposed Congress had the power to declare everything mail matter.

Mr. SIMS. Why not?

Mr. LOVETT. It is not mail matter.

Mr. SIMS. What is constitutionally expressed mail matter?

Mr. LOVETT. I do not know that the Constitution expresses it.

Mr. SIMS. Then it is not unconstitutional to do it?

Mr. LOVETT. Congress can not make a cow a horse by simply declaring it so.

Mr. ADAMSON. The Constitution does not say "mail matter." It says "post offices and post roads."

Mr. LOVETT. I think this answers your question, Judge Sims, if I understand it: Congress has the same power over interstate commerce and with respect to the movement of interstate commerce as it has with respect to the movement of the mails.

Mr. SIMS. Now, in practice and in theory, what is the difference in sending a 50-pound package over a railway train——

Mr. LOVETT. And sending a carload of coal?

Mr. SIMS. Yes; and sending a 500-pound package?

Mr. LOVETT. The difference is a 50-pound package and a 500-pound package.

Mr. SIMS. I mean in principle and legal effect or constitutional power. The facilities certainly do not depend upon constitutional requirements. I think your first answer was exactly correct, that Congress does have the power. It might not be wise to exercise it, and it may never do it, but it does have the power to declare all kinds of products transportable in the mails, and prescribe the classes and the rates and everything as it does now, touching the present parcel post.

Mr. LOVETT. I stated in my answers to questions before, several times, that according to my understanding of the power of Congress under the Constitution, Congress can make complete regulation of commerce on interstate railroads—railroads engaged in interstate commerce. I believe it can do that without the necessity of declaring a carload of coal to be parcel-post matter—subject to parcel-post transportation or mail matter. It comes under the power of Congress to regulate interstate commerce. I think Congress has complete power over the subject, with existing corporations, and it is merely a question as to what is the best and most practical method of dealing with the subject—how will operate—whether best on existing corporations or whether it will be better to make them Federal corporations——

Mr. SIMS. I am coming to that. If we grant compulsory national charters, can we not make that one of the general provisions, that the railroad company shall carry, at the rates prescribed, whatever Congress declares to be mailable matter or subject to be carried by these railroads, and prescribe the terms?

Mr. LOVETT. That is a constitutional question. If Federal incorporation were not compulsory, but left optional, Congress could require corporations, as a condition, to assent to any condition that Congress might impose, and it would be a part of the contract. But if it is to be compulsory, I do not think Congress can compel them to carry except at reasonable rates.

Mr. SIMS. A rate that is not confiscatory is constitutional, is it not?

Mr. LOVETT. I think it is.

Mr. SIMS. It can, in this way, take charge of the traffic all over the country?

Mr. LOVETT. Yes.

Mr. SIMS. And in which case, the States through which the railroad may run, through its regulations, could not affect it?

Mr. LOVETT. No; it could not.

Mr. SIMS. And that is one of the things that is thought to be to the economic advantage of the railway service of the country.

Mr. LOVETT. To the extent that it involves rates and the issuing of securities——

Mr. SIMS. Rates is all of it. That is very fundamental, is it not?

Mr. LOVETT. No; I think the most urgent aspect of the matter is the necessity of regulating the issuance of securities.

Mr. SIMS. How can you market securities unless you can show to the parties to whom you wish to sell them, that you have a rate that will enable you to pay the interest?

Mr. LOVETT. You can not.

Mr. SIMS. Then, rates is a fundamental matter then, is it not?

Mr. LOVETT. Yes.

Mr. SIMS. As stated yesterday.

Mr. LOVETT. Yes.

Mr. SIMS. You remember Senator Cummins's inquiry the other day of you was, in substance, what can be done to give the weak railroads what they need and must have, without giving the strong roads the same degree of aid, which they do not need? I believe that was the substance of Senator Cummins's question.

Mr. LOVETT. I should prefer to refer to the record.

Mr. SIMS. That covers the substance of the inquiry. As I understand, he wanted to know what Congress can do—what can be done—to give the weak railroads such relief as they need, without giving that same relief to the strong roads, which do not need it.

Mr. LOVETT. I think I expressed my views on that.

Mr. SIMS. And your views were that the Government would have to do it; that it could not be done without the other roads participating in it.

Mr. LOVETT. Or, in substance, that I do not believe Congress or the Government could compel a comparatively small group of people owning the stock of the prosperous roads to assume for the whole country, or for the patrons of a weak road, a burden that did not concern them, but concerned, rather, the whole country; that if the interests of the country required the weak road to be operated, then either the Government or the whole people should bear the burden, or the people who are served by that road should bear it. That it should not be put on a particular group of people who have no interest in the matter.

Mr. SIMS. That looks like it applies to great terminals as well.

Mr. LOVETT. I do not think it is analagous. A great bridge may be required to be built over some stream involving an extraordinary expense. That may be used only by this particular line for a certain portion of its haul—

Mr. SIMS. And the railroad must necessarily collect something more out of that portion of the haul that does not use the bridge than they would ordinarily charge?

Mr. LOVETT. You can not separate it.

Mr. SIMS. And that railroad could not exist without doing that?

Mr. LOVETT. Of course not.

Mr. SIMS. Because it would be so oppressive to the freight that did go through the tunnel, where it goes over a mountain or a bridge, where it traverses a stream—it would be so oppressive to that particular traffic as to prevent the traffic from moving.

Mr. LOVETT. The Union Pacific has several hundred miles of railroad that does not produce a dollar.

Mr. SIMS. I know it will be a matter of relief to the committee, if not to you—I am about to quit—but I want to come down now to the inevitable.

Mr. LOVETT. Not on my account.

Mr. SIMS. No; not on yours. I have no mercy on you.

Now, looking at it as I do, that regulation will increase instead of decreasing through Congress, through the States, and every other regulating power, I can see how that regulation may not be profitable to the present stockholders of these railroads. I can see very easily how it may make it less profitable, but the object of all that regulation is, as I understand it, for the benefit of the public, as viewed by the regulating body. Now, if the Pennsylvania Railroad serves a section, which it does serve, better than it ever was served before, by means of consolidation and unification; by means of the economies it is able to adopt, why would it not be a good thing to have the Pennsylvania Railroad serve the whole United States? Of course, it would eliminate these things you spoke of in the way of competitive service.

Mr. LOVETT. The answer to that is——

Mr. SIMS. That would apply to the Union Pacific or any other well-regulated railroad.

Mr. LOVETT. In other words, whether one railroad should not own them all?

Mr. SIMS. And let this charge for transportation facilities, like you said about the bridge and tunnel, fall on the whole country.

Mr. LOVETT. My judgment, as I have expressed it several times, is that it would absolutely eliminate competition, and it would be a great detriment to the country; it would cause stagnation of improvements in railroad facilities. You would not have the conveniences and service and facilities which you have to-day. It takes the spur of competition and the spur of example to make these improvements and develop initiative. There was never a truer expression than "necessity is the mother of invention," and the necessity of meeting competition is responsible for the development and inventions in the railroad service to a very great extent. There is a difference of opinion among railroad men, but my best judgment is that competition in service and facilities is necessary for the development and improvement and progress of the railroad business of this country, and to avoid stagnation.

Mr. SIMS. Now, Judge, don't you think, if what you say is true—I am not controverting it—that if competition in ownership is a benefit to the whole service, don't you think, then, that competition in regulation might tend in the same direction?

Mr. LOVETT. No, sir; it is a hamper.

Mr. SIMS. You are not in favor of competitive regulation?

Mr. LOVETT. I am not.

Mr. SIMS. But you are in favor of competitive ownership?

Mr. LOVETT. Yes.

Mr. SIMS. But you must admit——

Mr. LOVETT. I do not know; "competitive ownership" is a new phrase. I am in favor of competition in service and facilities.

Mr. SIMS. Then you are in favor of competition in ownership.

Mr. LOVETT. I will accept that phrase. It is a new one to me.

Mr. SIMS. What you mean is the railroads should not be owned by one company.

Mr. LOVETT. Yes; I will accept your answer to that question.

Mr. Sims. Is it not a fact that, as a rule, your railroad company, or any other railroad, will not do a thing unless it will operate in a general way as a benefit to the company?

Mr. Lovett. It depends on your definition of "benefits." We do a great many things that produce no financial reward or return, but it goes to the general improvement of the public relations, or it may be advertising, or any other matter. It is to our benefit to have the good will of the people. We do a great many things for the sake of good will.

Mr. Sims. And you think that competition between different companies serving the public brings about more good to the public?

Mr. Lovett. More regard for the public.

Mr. Sims. Does not competition in systems as well as in railroads result in duplication of the instruments of service—unnecessary duplication of instruments of service?

Mr. Lovett. Yes.

Mr. Sims. And therefore adds to the general expense growing out of competition?

Mr. Lovett. Yes.

Mr. Sims. Now, as legislators we have to decide between necessary facilities—those that are absolutely necessary—and increased conveniences or luxuries. In deciding between them which do you think the country would indorse?

Mr. Lovett. Why, Judge Sims, the American people is a Nation of spenders and are progressive. They do not want to be held down to the smallest amount on which they can get through. They want the facilities and conveniences of doing business and they want comforts, and, generally, they are willing to pay for them. I do not think anybody would want to see the Pennsylvania terminal in New York or the New York Central terminal in New York eliminated, to avoid an infinitesimal amount in the general cost of the transportation afforded by those companies. We must have improvements and progress. The sentiment of the people, I hope, never will be such that they want to get through on the smallest possible amount.

Mr. Sims. Suppose the New York Central, of which you are a director, should run sleepers without charge on their lines. The Pennsylvania, serving the same points, would have to do it also, would it not?

Mr. Lovett. Undoubtedly.

Mr. Sims. You would either lose money by doing so or charge the people not using those sleeping cars more than they would otherwise be charged for the service rendered?

Mr. Lovett. Yes.

Mr. Sims. That explains the difference between what I think is a luxury, or comfort, and a necessity. I do not believe it is wise for us to adopt any policy which would permit increased cost upon the necessities of life that must move, simply in order that some people who are not limited in their resources may have accommodations for which they do not wholly pay.

Mr. Lovett. There is no danger of that. If the New York Central or the Pennsylvania should give free sleeping service, and wanted to increase their rates, the Interstate Commerce Commission would

say to them that the burden of transportation was not properly distributed and that they should charge the man using those accommodations, and get the revenue they wanted out of the men being carried free in the sleeping cars.

Mr. SIMS. Don't you think that is exactly what they ought to say?

Mr. LOVETT. Yes; and, therefore, there is no danger from that source.

Mr. SIMS. Why not, if competition makes it necessary?

Mr. LOVETT. Because they know the country would not stand for it.

Mr. SIMS. Supposing the New York Central and the Pennsylvania, both serving Chicago—one should furnish free sleeping cars, the other would have to do it, would it not?

Mr. LOVETT. Yes.

Mr. SIMS. And would they not get their money for that service out of the other people using these transportation facilities?

Mr. LOVETT. No; the Interstate Commerce Commission would say to them, "If you can afford to run these cars free, you can reduce your freight rates, because you are not distributing the cost of your service properly. We will make you reduce them."

Mr. SIMS. Would you not come back and say, just as you have about the terminals, that it increases the popularity of the road and the service to the patrons?

Mr. LOVETT. They are not analogous at all, Judge.

Mr. SIMS. They may not be. I am trying to ask questions in order that I may get this information from you.

Mr. LOVETT. Then I would say, as an answer, that there is no sort of relation between suitable terminal facilities and free sleeping facilities.

Mr. SIMS. If you pay twice as much for a terminal in New York as is needed from the standpoint of necessity, I can not see why you should not be permitted to do some other expensive service along that line if it is made necessary by competition.

Mr. LOVETT. That is, assuming they paid twice as much as was necessary.

Mr. SIMS. I am assuming they did, and that it was made necessary by one terminal being built, making it necessary to build the other.

Mr. LOVETT. I will have to take the contrary assumption that they did not.

Mr. SIMS. I want to ask you how can any theory of public-utility economics justify the placing of Mr. Cassatt's statue in the Pennsylvania Station in New York if it becomes a charge on the whole line?

Mr. LOVETT. I think that was a very proper and appropriate expenditure of the company's money.

Mr. SIMS. Of the stockholders' money.

Mr. LOVETT. Well, of the stockholders' money.

Mr. SIMS. That is right—the stockholders' money.

Mr. LOVETT. I think it was a very proper expenditure, whether you choose to call it the company's money or the public's money. Mr. Cassatt conceived that enterprise, and he pulled the Pennsylvania Railroad almost out of the mud and made a great railroad out of it. I think he was one of the greatest benefactors of the country.

Mr. ADAMSON. Considered merely as an ornamental statue, does not Mr. Cassatt's statue look as well there as anybody else's statue would look?

Mr. Lovett. Perhaps more so.

Mr. Sims. I am holding it is not necessary to put his statue or anybody else's statue there.

Mr. Lovett. That is where you and I differ. You assume that the people of this country want to hold the railroads down to the last cent in expenditures for necessities. I do not believe that is correct. I believe it is the policy of the Government, and I think it is the wish of the people, that we should make progress and development.

Mr. Sims. I do not care how much the railroad owners spend of their own money, but I do object seriously to the owners imposing this cost or tax upon the patrons of the railroad, simply to meet a certain standard of taste or art that they themselves regard as desirable.

Mr. Esch. This city has been filled with statues at the expense of the people.

Mr. Adamson. Along that line, I will say that one of the railroads in Atlanta has a flower garden in the grounds around the depot.

Mr. Sims. There is no objection to putting these ornaments there, or taxing the people of the country for statues in this city, but remember that the taxing power puts them there. Whenever a railroad goes to ornamenting its property with something not conducive to and not aiding it in the services performed for the public, involuntarily paid by the public, to comply with a requirement of art or taste that they may have.

Mr. Adamson. If Judge Sims will just yield to me for a minute, while he is on this subject of discrimination, I would like to ask if it is fair on the part of the railroads to transport Tom Thumb, who only weighs 75 pounds, at the same rate they transport Ollie James, who weighs nearly 500 pounds?

Mr. Sims. Self-interest forbids my being a disinterested witness.

Mr. Hamilton. I want to say, for illustration, that the station in my town, on the Michigan Central, or the New York Central line, has been greatly beautified. The company has spent a great deal of money beautifying the grounds, so that it is one of the most beautiful stations anywhere in the country, and nobody complains about it. The people all along the line are proud of it. I think that is the general feeling. They are glad to see the stations of the railroads improved and beautified.

Mr. Sims. Certainly. I am glad to see some women beautified and ornamented, but you do not want to pay for beautifying every woman in the country out of the Public Treasury.

Mr. Hamilton. They do not have to pay for it.

Mr. Adamson. I insist that it is rank discrimination for the railroads to transport Judge Sims and, for instance, one of the newspaper men over there, not weighing half as much as Judge Sims, for the same rate. Why is it fair to let a big man ride for the same rate as a small man?

Mr. Sims. I do not want to be understood as criticizing the putting of the statue of Mr. Cassatt in the New York Pennsylvania Station. I was trying to illustrate an unbridled and unlimited power of a public-service corporation to make an expenditure not necessarily related to the service performed.

Mr. Lovett. We violate what I understand to be the principle you favor in passenger cars we buy; we include things that are not abso-

lutely necessary to the use of the car. In every station we build we violate that principle. Every other railroad does the same thing.

Mr. SIMS. I have not any doubt that these gardens——

Mr. LOVETT. Yes; we try to keep gardens at stations in the Rocky Mountains. If we felt there was public sentiment against those things, we would not do them.

Mr. ADAMSON. When the president of a railroad wears a Prince Albert coat he has two buttons on the back which do not button anything on the face of the earth, and somebody might object to that.

Mr. SIMS. I really want to finish my questions.

Mr. HAMILTON. Those buttons have a historic purpose.

Mr. SIMS. Judge Lovett, I understood you to say, although I am not repeating your words exactly, and I do not want to misstate them, that the Union Pacific Railroad provides for the creation of a pension fund, or sick-benefit fund, or things along that line, for their employees, and that the cost of that is to be charged up as operating expenses.

Mr. LOVETT. Yes.

Mr. SIMS. That is true, is it?

Mr. LOVETT. Yes.

Mr. SIMS. Now, that operating expense is paid by patrons of the road, is it not?

Mr. LOVETT. Yes.

Mr. SIMS. And that is paid for by those who use the road?

Mr. LOVETT. Yes.

Mr. SIMS. I think you further stated that in case the employees left the road, quit the service, that they lost these benefits?

Mr. LOVETT. Yes.

Mr. SIMS. Then you offer these benefits as an inducement for them to continue their service, in part?

Mr. LOVETT. Yes.

Mr. SIMS. And the public is paying for those inducements?

Mr. LOVETT. Yes.

Mr. SIMS. But you think, I suppose, that in a general way the service of the road is enhanced, its ability to serve the public is increased, by such a policy to the extent of the cost?

Mr. LOVETT. It is one of the inducements to the men to take the service, just like the salary. We pay the wages provided under the Adamson bill for the purpose of keeping them in the service. It is an inducement.

Mr. ADAMSON. I demand that you comply with the law, that there be no overtime, and that you be declared criminal if you do not quit. [Laughter.]

Mr. SIMS. Then, is it not done to prevent strikes on that railroad?

Mr. LOVETT. I do not think it will prevent any strikes.

Mr. SIMS. I mean, is that not the purpose you have in view?

Mr. LOVETT. I believe a man will think the second time before he gives up that employment and takes the risk of not getting back. Judge Sims, we have built clubhouses at various points.

Mr. SIMS. And eating houses, which you have described?

Mr. LOVETT. No; we do not build eating houses.

Mr. SIMS. I thought you said you built eating houses the other day.

Mr. LOVETT. No. We have built clubhouses costing anywhere from \$20,000 to \$50,000 each, equipped with baths and reading rooms and various other facilities to make the men comfortable, where the men can go as you would go to a club. We make them attractive. We did not have to do that, but we believed it would make employment on the road more attractive to the men—keep them away from saloons, perhaps. In many western towns the saloon is about the only place in certain hours of the night where there will be a house open.

Mr. SIMS. You mean you have lockers in those clubhouses?

Mr. LOVETT. Yes; we do.

Mr. SIMS. You consider the erection of those clubhouses both economic and humanitarian, I suppose?

Mr. LOVETT. Yes. We did it for a variety of considerations. First, to make the place attractive to the men, take care of them, make them better men and afford them better working conditions.

Mr. SIMS. While from the standpoint of private ownership you have the right to fill your central station with statues of anybody—yours or anybody else's—you have the right to choose to do all these things with your own money, to do just as you please, so long as you are not interfering with anybody else. The only question about these things is that when there is an ever-increasing burden upon the railroads, as admitted by yourself, an ever-increasing tendency to thus increase expenses, and a character of regulation which adds to your expenses, do you not think that improvements like the statue referred to should be charged to the dividends of the owners? In other words, that they should be paid for by the owners?

Mr. LOVETT. I do not.

Mr. SIMS. And not by the public?

Mr. LOVETT. I think they should be charged as part of the expenses of the road.

Mr. SIMS. If you can charge any part of such expenditures to expense, you can charge all such things to expense, can you not?

Mr. LOVETT. Yes. I do not know how the Cassatt statue was charged.

Mr. SIMS. I do not know, and I do not care. It may have been put there by an individual admirer of Mr. Cassatt.

Mr. LOVETT. I represent the public that my road serves, and I represent as well the stockholders, the bondholders, the employees, and our trustees, for everybody else, and we do not expend any money we think the public would disapprove of or the public object to paying interest in the way of freight rates. We never have spent a dollar that I thought the patrons of our road would object to. I believe our patrons approve of the building of these clubhouses and the growing of these flower and grass plots at the stations.

Mr. SIMS. The necessary requirements for the future development of the country are such that freight rates should grow less instead of larger. Is that not true?

Mr. LOVETT. If the time ever comes when I feel the public disapproves of these things, I would want to quit the railroad business.

Mr. SIMS. It is not a question of the public approving when the rates are going up all the time. They have got to pay the rates whether they approve or do not approve them, and you are speaking of the multiplicity of regulation as tending to increase your expenses,

which naturally brings about the question of the amount to be charged for your service, and you have nothing but service to sell.

Now, everything that brings about an increase in expenses are reasons or grounds or excuses for increasing freight rates. It seems to me, in view of the situation, that all such improvements, such as a fine terminal or a fine sleeping-car service, should fall as far as possible upon those who use such facilities. Now, I want to make a suggestion as an answer to Senator Cummins's inquiry the other day, and you can express your opinion or not, as you may desire, as to the suggestion. I am trying to look at this question from the standpoint of what is best for the whole country, including the carriers and including the people who are served by the carriers.

Mr. LOVETT. So am I, Judge Sims.

Mr. SIMS. And including those whose cost of living, in a large part, depends upon transportation costs.

Here is the way I would answer Senator Cummins's question and retain private ownership. Of course, everybody knows that the alternative, when everything else fails, is Government ownership. You said a while ago if the people did so and so you would want to go out of the railroad business. That means, as a matter of course, certain kinds of regulation. If the railroads become unprofitable, the people who own them will want to dispose of them, and what makes me think they are profitable is that there does not seem to be any demand for Government ownership by the stockholders of the railroads. I think that this country, in order to further develop as it should as a whole, must have increased railroad facilities, and, if possible, diminishing freight charges, if it is possible.

Now, as to private ownership I am going to suggest the following: On the questions of eliminating competition by systems or otherwise, and in order that the weak roads may be supported by the strong, my answer to Senator Cummins would be this:

Create a national corporation and authorize it to purchase all the railroads, terminals, docks, and other property necessarily connected with the operation of the railroads through agreement as to the value of the roads so purchased, to be approved by the Interstate Commerce Commission, or through condemnation, sale, and purchase. The money to be raised by an issue of bonds bearing not exceeding 4 per cent interest, guaranteed as to both principal and interest by the United States Government, and to be free from all taxation, both as to principal and interest by the United States Government, or any other taxing power, and also by the issuance of capital stock in amounts to be determined by the Interstate Commerce Commission, but upon which no dividends are ever to be paid in excess of 6 per cent per annum, but no taxes of any kind or by any taxing power ever to be levied or collected, both as to the stock and dividends thereon. That all rates and charges of every character are to be subject to the approval of the Interstate Commerce Commission before being put into effect; that all improvements of existing railroad properties requiring the sale of stocks or bonds, or both, shall first be authorized and approved by the Interstate Commerce Commission, provided that all surplus revenues of the corporation shall be first applied to the maintenance of the road and structures and the cost of such new improvements before using any of the proceeds of such bond and stock

sales. I mean after paying the dividends and interest. That said corporation shall be authorized and required to build any and all such additional railroads that may be required by act of Congress, or by the order of the Interstate Commerce Commission.

Mr. HAMILTON. May I interrupt you, Judge Sims, to inquire of you if some such method as that has not paved the way to Government ownership of railroads in Europe?

Mr. SIMS. Whenever I get through with this statement I shall be very glad to answer any questions you wish to ask me. I just want to make my statement uninterruptedly.

Mr. HAMILTON. I thought you had finished it.

Mr. SIMS. No; I have not.

Mr. HAMILTON. I beg your pardon.

Mr. SIMS. The Government also to appoint a certain number of the directors of this corporation, such directors' salaries to be paid out of the earnings of the corporation, similarly to the members of the Reserve Banking Board.

Now, just a word of comment. I am trying to avoid the objections of Government ownership and at the same time get as much of the benefits of unified ownership as possible. If 4 per cent is guaranteed on the corporation's bonds by the Government of the United States, the Government, of course, retaining a lien upon the property or the right to appropriate its proceeds, which is the same thing, would eliminate all competitive conditions as to capital requirements as far as bonds are concerned. The investment would be inviting to permanent investors of every kind and would not allow them to be taxed, would make them very attractive, while leaving all the property of the corporation, which means all railroads and terminals, docks, etc., subject to State, county, and municipal taxation, requiring that all roads, whenever the Interstate Commerce Commission should determine that it would be to the public interests to double-track its line, and for such purpose to sell bonds of the corporation, guaranteed by the Government of the United States, both as to principal and interest.

And now, in order to encourage the speculative investor to some extent authorize the sale of stocks, the dividend on which never to exceed 6 per cent, in such volume as the Interstate Commerce Commission may prescribe. That would provide for an attractive form of stock investment to the man or woman of small means. The stock and earnings, being exempt from all taxation, would give it an element of value which the stocks of no private company could have. Part of the directors being appointed by the President of the United States and confirmed by the Senate for such length of terms as might be thought advisable would give the public a sitting in, so to speak, and I do not think it will be contended for a moment that if all the railroads in the United States were operated by one great railroad company, both the weak and strong, that there would be any question to-day about them being able to market bonds and securities at reasonable prices. But certainly by putting the Government of the United States back of all of it would remove all question as to credit of the railroad companies—it would eliminate all the objectionable features now existing, as it appears to me, without resort to public ownership.

This is my attempt to answer Senator Cummins' question within the limits and by means of private ownership and by private operation.

Mr. ADAMSON. I do not know whether Senator Cummins will subscribe to that answer or not, but I submit that it would be more easily fixed if we merely provide that every railroad should do the best it could, then eliminate all thought about credit and finances, and make up the deficit out of the Treasury.

Mr. SIMS. That would be coming out of the taxpayer.

Mr. HAMILTON. I should like to supplement that suggestion of Judge Adamson by the suggestion that France recently acquired the railroad system known as the Western France for some such reasons as would be involved in the method of financing which you suggest.

Mr. SIMS. Now, I want to ask Mr. Lovett, and I am serious about this thing, although it may be a very impractical and impossible thing to do; I want to ask you seriously, Judge Lovett, not facetiously—I have not made this proposition as a mere matter of levity: I do not feel that as a member of this committee I should perform my duties along such a plane.

Mr. HAMILTON. I was not indulging in that plane; I was not indulging in levity.

Mr. SIMS. It may be very laughable to everybody who hears it, but I want to know of you, Judge Lovett, as you have had long experience in connection with railroads and your opinion is entitled to great weight, and it has great weight with me, as I believe you are a candid man with opportunities to know the facts, do you think such a plan as that is constitutional and would put the railroads of the country upon an enduring and substantial basis and remove them from all these aggravating and annoying and expensive troubles, of which you speak, and if that would not avoid, possibly, ultimate absolute Government ownership?

Mr. LOVETT. I see no constitutional objection to the plan, Judge Sims; none appears to me at the moment. But that is about all that really I can say for it.

Mr. SIMS. You mean favorably?

Mr. LOVETT. Yes.

Mr. SIMS. I want you to say just what you think. It does not make any difference to me.

Mr. LOVETT. It means the elimination of all competition.

Mr. SIMS. That is undoubtedly true.

Mr. LOVETT. And I have already stated my very strong conviction that competition in service and facilities is absolutely necessary for the development of railroad facilities of the country. That is one very serious objection I have to it.

Mr. SIMS. This would be an absolute consolidation, I admit.

Mr. LOVETT. As I understood the statement of the proposition no provision was made for the regulation of future capitalization and future enterprises except by the directors, that they could make whatever—

Mr. SIMS. Subject to previous approval of the Interstate Commerce Commission.

Mr. LOVETT. I do not think any one commission could perform all the duties or half a dozen commissions could perform all the duties that would devolve upon them under that plan.

Mr. SIMS. That is a detail of the proposed plan.

Mr. LOVETT. It is something more than a detail. There are the questions of sidetracks, shop facilities, new stations, branch lines, the question of statues and gardens at stations, substituting electric lights for oil lights, and the thousand and one capital expenditures that on a railroad have to be made, and which would have to be capitalized on the credit of the Government. These would have to be supervised by somebody. You could not administer it through any one governmental agency, and yet it is to be done on the credit of the Government.

Mr. SIMS. Conditionally.

Mr. LOVETT. But I believe if the time ever comes when the Government's credit must be used to provide railroad facilities, the Government ought to own the facilities it provides, unless it be some particular enterprise that the Government should provide for some special purpose. But for general transportation facilities such as you have indicated, I think if the Government is to hold the bag it ought to have control. I am opposed, however, to using the Government's credit for any business that can be conducted by private capital. The Government has complete and practically unrestricted right of regulation; and with reasonable and proper regulation it will get all the railroad facilities and all the capital that is needed for transportation purposes. I do not for the life of me see why the Government should use its own money or strain its own credit to provide what private capital will provide and still leave absolutely subject to Government regulation at most to the same extent as if owned.

I can not indorse the wisdom of any such policy.

Mr. SIMS. Right there, in the answer to Senator Cummins, that I tried to frame, I had in mind your answer to Senator Cummins was as to these weak roads, that there was no recourse for them except Government aid.

Mr. LOVETT. I hope you did not understand me as advocating Government aid. Senator Cummins submitted the problem as to how this can be done. In telling how I thought it could be done, I do not wish to be understood as saying it ought to be done at all, because I do not think it should.

Senator CUMMINS. May I interpose a word there?

Mr. SIMS. Yes.

Senator CUMMINS. I do not want it understood that the thought in my mind contemplated the elimination of competition. I regard the maintenance of competition, so long as private ownership is our system, as absolutely necessary. The regrouping that I had in mind would have intensified rather than diminished the proper competition as to service, facilities, and the like. But not to treat lightly the plan just proposed by Judge Sims, because it has been very seriously studied, and it has been adopted in other countries, and is one of the things that is entirely possible, although I do not believe it is the best plan to handle the whole subject. Our railroads were not built upon any logical theory. The greater number of them were built because those who promoted them could make money out of their construction. That was a very worthy motive, too. But, as the country has built up, as the country has grown and expanded, these railroads are really not logically situated, and they can not compete with each

other on even terms, although they are compelled to compete with each other.

Mr. LOVETT. I do not wish to be understood as treating Judge Sim's proposition lightly at all.

Senator CUMMINS. I was not referring to Judge Lovett.

Mr. SIMS. I do not know whether you were through or not, Judge Lovett. I broke in there because I wanted to give you the reason why it was offered as an answer to Senator Cummins's inquiry, not that you suggested the remedy, and I thought Senator Cummins, as the saying is, "hit the bull's eye" in his question and in order to answer it as to how this can be done without Government ownership and yet have the benefits of Government ownership without the evils. If there are evils, I suggested this plan, of course, a mere crude outline, not including every administrative detail. I should like, if you have anything further to say about it, for you to proceed.

Mr. LOVETT. Nothing further occurs to me except possibly to refer a moment to somewhat similar systems in other countries. I am not familiar with all the details of them. But taking the French system, to which Mr. Hamilton referred, I understand that France has divided French territory into certain sections and fixed the rates on the railroads in each, and that the Government guarantee certain dividends and certain interest rates, which provide not only for the current return on the capital, but which amortize the capital, and after the expiration of so many years the capital will be paid off and the railroads will belong to the Government. That is about the only difference, and the fact that it provides only for a certain section of the country—that is about the only difference that exists, as I see it, between your plan and the French plan.

I think your plan would be much better than the French plan, because the French plan puts upon the present generation, or the present and the next generation the entire burden of the capital for these railroad facilities, whereas I think the burden of the capital ought to be a continuous burden to be borne by generation after generation that gets the benefit of it; and that would be the result of your system.

Mr. SIMS. I do not provide any length of time the bonds should run, because Congress could take care of that matter. Now, if private ownership with complex and multiple regulation results in an ever-increasing freight charge——

Mr. ADAMSON. I want to say something before you go any further. Judge Lovett and Senator Cummins have both explained that they are not guilty of levity. That leaves Mr. Hamilton and myself the only parties guilty if we remain silent. I want to say that I had not the slightest intention of indulging in levity. It was only a mild impulse on my part to express my failure entirely to agree with the proposition.

Mr. HAMILTON. I want to say most solemnly that I disclaim any intention of even smiling in that connection. It occurred to me that the guaranteeing of railroad obligations and some such system of finance also as suggested by Judge Sims had been tried out in various European countries, and had resulted in various instances in Government ownership of railroads, and it occurred to me that that was the next step in the direction of Government ownership, and

that Mr. Sims's proposal was paving the way to that end, and I therefore suggested it.

Senator CUMMINS. I mentioned it, because Judge Sims seemed to think or feel that there was in the room somewhere—I am not going to try to locate it—that there was levity, and I was trying to——

Mr. ADAMSON. I am sure I did not intend to be guilty of any levity. I urgently insist on perfecting the present system and look with disfavor on any proposed innovation. That is my position in the matter, and I agree with Judge Lovett——

Mr. HAMILTON. I think Judge Sims ought to be permitted to finish.

Mr. ADAMSON. But I do insist that if we are going to make a change and put the burden on the Government, there is no use for so much circumlocution about it. Just go ahead and put the burden on the Government without so much circumlocution.

Mr. SIMS. There is, it seems to me, in certain circles a disposition to treat the question of public ownership as a matter of levity. I do not mean by any member of this committee, but I am looking upon this resolution in its broad entirety, and it provides for the discussion of every possible situation or phase that can arise in connection with or touching railway transportation and other things related thereto. I have not any other motive, and I do not entertain any fixed opinion. I do want to ask another question, and then I am through as far as I know now. Mr. Lovett, do you think it would be more desirable and more beneficial to the country to have direct absolute Government ownership and control, thereby absolutely abolishing all private ownership of transportation facilities in this country rather than some plan by which we may have a unified control and service through a Government-controlled corporation?

Mr. LOVETT. I should consider either of them a great disaster, Judge Sims, to the country.

Mr. SIMS. I asked you to take your choice, if you would.

Mr. LOVETT. But if I have to take the choice of evils, I believe, if the Government is to be put in the position of guaranteeing the obligations, it might as well take the ownership in the first instance. I think that is what it would result in.

Mr. SIMS. Does not that imply, Mr. Lovett, that the Government would be doing an unsafe thing to do so?

Mr. LOVETT. Yes; I think so.

Mr. SIMS. Then, you think these railroads, all of them combined in one, getting capital at 4 per cent on bonds and not exceeding 6 per cent on stocks, eliminating all unnecessary and expensive competition, would not be able to pay the 4 per cent on bonds and 6 per cent on stock and maintain and keep up their lines?

Mr. LOVETT. Under such conditions as would exist, I think not.

Mr. SIMS. But I did not mean under present conditions. Of course, with a single corporation, a national corporation, doing all the business, to do which we now have several hundred. I understand the States would not have any regulative power over such a corporation.

Mr. LOVETT. The whole point about it, Judge, is that you eliminate by that sort of management all of the economies of private ownership. Every railroad management is struggling, while providing the best facilities they can at the rates they get, to do it in the most economical

manner possible. By that plan you absolutely eliminate the enormous forces working for economy.

Mr. SIMS. My own personal theory of all public utility service is that it should be done at the cost of performing the service without any kind of profit whatever; but if private ownership can give a service just as good as the Government can and, at the same time, make a profit upon the investment, the people are not hurt by private ownership.

Mr. LOVETT. Somebody has to pay for the railroads. If the Government takes them it has got to pay for them. My contention is that the railroads, through private management, can give the public better service at lower rates and still make a profit than the Government can, and pay interest on the bonds that are issued in securing the necessary capital.

Mr. SIMS. And build roads wherever they ought to be built?

Mr. LOVETT. Yes.

Mr. SIMS. Regardless of whether it pays to build them there or not?

Mr. LOVETT. The question of where they ought to be built depends on who is to determine that.

Mr. SIMS. Wherever they will benefit the country as a whole. When Germany took over the railroads my understanding is that they built railroads into parts of the country where the promised traffic would not induce private capital to build roads; but the Government built the roads, and afterwards those sections were so built up and improved by reason of the building of the roads that they became paying properties.

Mr. LOVETT. I know many sections in this country that would like to have additional railroads; that are without them and that probably never will get them under private ownership. I believe that if there were Government ownership they would, through a combination of interests and a pooling of interests in Congress—I mean no reflection by that; of course, you gentlemen know perfectly well what I mean—that many of those roads would be built and the burden would fall upon the whole people. Now, I do not believe the general commerce of the country ought to be burdened with the cost of building local roads that are not justified by commercial conditions and that can never support themselves.

Mr. SIMS. And because of the lack of which the locality they would serve can never be developed beyond its present status?

Mr. LOVETT. The locality would not be developed anyway.

Mr. SIMS. They were in Germany.

Mr. LOVETT. I know sections of the country that are unlike anything in Germany, and where Germany would not be able to do what they have done over there.

Mr. SIMS. I take it that Congress would never direct that a railroad be built where there was no possibility of development.

Mr. LOVETT. You have more faith in that than I have.

Mr. ADAMSON. I know some sections where the railroads say that, although they know that they are inviting to them, they do not want to encroach upon the territory of other railroads.

Mr. SIMS. The play of competition comes in.

Mr. LOVETT. I do not know of any such locality.

Mr. ADAMSON. I do. I am very familiar with several of them.

Mr. SIMS. I could give you one or two instances right in my own section of the country, but I do not think this discussion ought to proceed along the lines of exceptional conditions. I almost feel like apologizing to the committee and to you for the length of time I have consumed, but I might as well admit that it is my lack of information that has caused me to carry my questions so far.

Mr. LOVETT. It is absolutely all right, Judge.

Mr. SIMS. I am much interested in the subject, and in response to what I feel is my duty as an humble member of this committee, I want to say that I think you have been very frank and candid, and personally, as a member of this committee, I have derived very much benefit by taking up your time and the time of the committee.

Mr. LOVETT. Thank you very much, sir.

Mr. SIMS. I am through.

The CHAIRMAN. Mr. Esch, you may proceed.

Mr. ESCH. Judge Lovett, I want to take up the question of receiverships for interstate carriers for just a moment. Is the law with reference to receiverships for interstate carriers well established, or is there any Federal law that is sufficient to reach receiverships for interstate carriers?

Mr. LOVETT. I am not sure that I understand the question, Mr. Esch; but if you mean to ask whether there is any Federal law that provides for receiverships of interstate carriers as such, I should say no. Of course, if a Federal court gets jurisdiction of litigation, and if in the course of that litigation there is occasion for the appointment of a receiver, why, the court may appoint a receiver; but if you mean to inquire whether there is any law that provides for the receivership of an interstate carrier at the suit of the Government for the violation of any Federal statute, I do not remember any.

Mr. ESCH. I agree with you there is none. Of course, State courts can also take jurisdiction of these receiverships, can they not?

Mr. LOVETT. Yes; when they have jurisdiction of the subject matter of private litigation. And in addition to that the State, by virtue of the fact that it does create the corporation, has power to forfeit its charter for an abuse of its corporate privileges or for violation of the laws; and in forfeiting the charter may appoint a receiver.

Mr. ESCH. It is a fact, is it not, the court first takes jurisdiction regarding it?

Mr. LOVETT. Yes.

Mr. ESCH. Notwithstanding the fact it may extend into another State or into another United States judicial circuit; that has already been determined by the Supreme Court?

Mr. LOVETT. Yes. I do not understand, however, that a State court can take jurisdiction of that portion of the carrier's lines extending beyond the territorial bounds of the State.

Mr. ESCH. It is true it has no extra-territorial jurisdiction?

Mr. LOVETT. It has none.

Mr. ESCH. In appointing receivers, who makes the application?

Mr. LOVETT. If it is in a suit by creditors, the application is made usually by the complainant in the case. If it is in a suit by the State against a corporation created by it, the application is made by the State as complainant. I have known of many such cases.

Mr. Esch. Well, where the State guarantees the bonds, for instance, or has a direct pecuniary interest in the securities of the company, the State could do that?

Mr. Lovett. The State would have the same right as any other litigant. I do not know of any such case, but there may be cases.

Mr. Esch. There is no law and no custom as to the amount of securities or security that may be represented by the applicant for a receivership?

Mr. Lovett. There is not. One of the famous receivership cases of a railroad company was based upon a pending suit for damages over a telegram, which was charged to the railroad company in some way; and by reason of that unliquidated claim application for a receiver was made to a State court and was granted, and some thousand or fifteen hundred miles of railroad was put into the hands of a receiver, where it remained for a number of years.

Mr. Esch. That fact leads me to ask this question: Ought there, therefore, not be some statute that would make it a condition precedent to the granting of an application or to the permitting of an application for a receivership? Should receiverships be allowed on inconsequential causes that will enable the applicant to tie up, as you say, a great system?

Mr. Lovett. I should say no; that ought not to be permitted.

Mr. Esch. That, therefore, there ought to be some regulation?

Mr. Lovett. I should think so. If you are going to make it exclusive, I believe under the existing statutes of the United States courts, as courts of equity, that such matters are fairly well guarded. But the power of some of the States over the corporations they create, by virtue of the fact that they are the creatures of the State to put them into the hands of receivers, is one of the dangerous factors in the situation.

Mr. Esch. And you think that ought to be safeguarded?

Mr. Lovett. Yes; I think that would be one effect of the Federal incorporation of railroads. I have to go back again to Texas for an illustration, and you can find there a precedent for almost anything in railroad regulation. All companies operating in Texas, except the Texas & Pacific, are creatures of the State of Texas, and one of the favorite and most popular methods of coercion, if I may use that term, of Texas railroads is the threat of a quo warranto proceeding to forfeit the charter. Such proceedings are brought by the attorney general of the State in the district court at the capital of the State, and they can be summary to a very large extent. Any railroad corporation of Texas is liable at any time to find itself in the hands of a receiver.

Mr. Esch. But that does not obtain in any other State, does it?

Mr. Lovett. I do not know to what extent it is actually practiced in other States. It is just as possible in any other State as in the State of Texas.

Mr. Esch. In an application for a receivership notice is not given the stockholders or to the security holders, as a rule, is it?

Mr. Lovett. No.

Mr. Esch. Do you see in that a defect in the present practice? Should their interests not be safeguarded by having an opportunity of appearing before the receivership is granted and before the order is made?

Mr. Lovett. I do not see any need of giving notice to the stockholders, as such, or to the bondholders, as such, because notice to the corporation, its president, or secretary, or its directors, is notice, and ought to be considered notice so far as the stockholders are concerned. As to the bondholders, notice to the trustee should be considered notice to the bondholders.

Mr. Esch. Yet, if I remember rightly, the Grand Trunk got a receivership for the Vermont Central without even the president of the Vermont Central knowing anything about it. Receiverships are gotten overnight. They have been granted at 2 o'clock in the morning. They have been very summary proceedings; no notice. Do you think that that practice should be continued or should it be safeguarded?

Mr. Lovett. I think that in an action by creditors the present arrangement is sufficient so far as the Federal court is concerned. I am not familiar with the practice of the various States. But the other practice as to public proceedings for receiverships by the States for the alleged abuses of corporate franchises and functions may be an injustice.

Mr. Esch. As a rule who are appointed receivers by the courts?

Mr. Lovett. Are you asking now about the Federal courts as distinguished from the State courts?

Mr. Esch. No; the Federal courts; for I think the great majority of these cases go before the Federal courts.

Mr. Lovett. The great majority of the cases involving insolvency, I think, do go to the Federal courts. That practice varies. I notice in recent years the president or the chief operating officer of the railroad system generally is appointed receiver. Sometimes there are two or more receivers appointed, in which case some man known personally to the judge of the court is appointed as coreceiver.

Mr. Esch. Is it the modern practice to appoint as one of the receivers a man versed in railroad matters?

Mr. Lovett. Yes; that has been my observation.

Mr. Esch. And do the bondholders generally have a representative in receiverships?

Mr. Lovett. Frequently.

Mr. Esch. They are appointed, however, without any action of the security holders or of the stockholders?

Mr. Lovett. Generally at the instance of the trustee.

Mr. Esch. Of the trustee; yes.

Mr. Lovett. Take the receiverships that exist now as far as I recall them. Take Missouri, Kansas & Texas Railway; Mr. Schaff, who was the president and chief operating officer of that company, was appointed receiver, and I believe is the only receiver of the system. In the Frisco receivership the chief operating officer was appointed receiver, and I believe a merchant or a banker or some man residing in the same town with the judge who made the appointment, a well-known man, I assume, to the judge, was appointed coreceiver. In the Wabash receivership the chief operating officer was appointed receiver with an individual who is not a railroad man, but who, I presume, was well known to the judge was appointed. I think that is true of all the receiverships I recall now. In each

instance an operating man was appointed as receiver and really directed the operation of the railroad.

Mr. Esch. But, as a rule, one of the two receivers is an officer of the company itself?

Mr. Lovett. Yes.

Mr. Esch. And possibly one of the executive officers?

Mr. Lovett. Yes; but generally he is not a man who has any material interest in the property. He is a salaried man.

Mr. Esch. But he may have been one through whose mismanagement or want of judgment the company may have been thrown into a receivership?

Mr. Lovett. That is a possibility, but I should say it is highly improbable. I do not know of such a case and have not known of such a case.

Mr. Esch. When a receivership is threatened, and before application therefor, it is customary to have a reorganization committee named?

Mr. Lovett. At or before the receivership?

Mr. Esch. Yes.

Mr. Lovett. No; I have never known of such a case. There may be such, but I have never known of a case where a reorganization committee was named before the receivership occurred.

Mr. Esch. Well, if not before, immediately thereafter?

Mr. Lovett. I would say as to that, Mr. Esch, the practice now seems to be that as soon as a receiver is appointed there is a very active industry in organizing protective committees. I am speaking simply of my observation of these things. Let a large railroad system get into the hands of a receiver, and within the next day or two there is a protective committee on behalf of one class of bonds and a protective committee on behalf of another, and a protective committee on behalf of some division mortgage, and a protective committee on behalf of the common-stock holders, and a protective committee on behalf of the preferred-stock holders. It seems to be a very popular occupation—and then sooner or later those committees get together on some one committee as a reorganization committee. Sometimes a reorganization committee is selected from these various groups and they try to reconcile their differences, but generally all of them are in at the death.

Mr. Esch. As a rule some great banking house acts as the manager, does it not?

Mr. Lovett. It is not always a great banking house, but for successful reorganization they generally get a great banking house.

Mr. Esch. And then they ask for a deposit of securities, do they not?

Mr. Lovett. Generally each protective committee calls for the deposit of securities, which it purports to represent. They all start out with the usual statement:

Having been requested by the holders of large amounts of certain securities to act as a protective committee, you are invited to deposit your securities with a trust company and receive negotiable trust certificates, which will be listed on the stock exchange, etc.

When the reorganization committee gets control, all of the securities deposited are taken care of in the reorganization. Sometimes some of them are not taken care of.

Mr. Esch. I was going to ask, what is the penalty for a security holder who does not file with one of these protective reorganization committees?

Mr. Lovett. I do not know of any such. Sooner or later they will all come in.

Mr. Esch. I think in the case of the Pittsburgh-Wheeling Terminal Co.'s affairs, which were presented before our committee two years ago, there were several protective committees, and there were a large number of minority stockholders who contended they were practically left out in the cold.

Mr. Lovett. I understand this to be the course: Suppose you are a stockholder, or you are a bondholder, and you decide not to deposit your securities and go into the reorganization. Unless you organize a committee of your own, or individually are able to pay a higher price for the property than the others pay, you may be sold out; you may be left out. I do not myself see, so far as the deposit of securities and cooperation of a certain class of security holders are concerned, any harm. If some man is stubborn and is not willing to take the same his fellow security holders take, why, he can buy the property, if he is able, and if he is not able, he will be left out.

Mr. Esch. Of course, that is the trouble. The minority stockholders have not the financial means and can not get the financial companies of the country to maintain their rights. They have got to come in as a matter, perhaps, of protection. They have no alternative.

Mr. Lovett. I do not know of any way of solving the problem, Mr. Esch. Take my own case: I, unfortunately, have but a few investments, but I did have bonds of an insolvent railroad company, not a great while ago. I prefer not to call any names. I thought those bonds were good and I believe yet they were good. But a plan of reorganization was agreed upon which involved the taking of less than I thought my bonds were worth. It was a concession to an inferior bond or inferior mortgage that could prolong the receivership and delay the reorganization a very long time. The reorganization committee considered that the wisest thing to do was to make concessions. So they made concessions that I personally should not have made, and I would have fought it out. But I do not criticize the reorganization committee for that, for perhaps I was more belligerent and in a position better able to await a long contest than many other of the security holders, but if it had been left to me personally I should have fought it out. If I had had money enough to buy the property, I would have fought it out on my own account, but as I should have had to raise something like \$60,000,000 I gave it up.

Now, that is true of a great many people who go into these reorganizations. It takes a very large amount of money to swing a big railroad reorganization, and unless a man is willing to go along with others similarly situated it is up to him to swing it by himself.

Mr. Esch. Is that one reason why in recent times the great banks have got such a dominant hold upon the railroads of the country—through reorganizations?

Mr. Lovett. I do not believe the great banks have gotten a dominant hold on the railroads of the country. I believe the railroads are at this time far and away more independent of bank control or

any other control than that of the principal officers than they ever have been in the history of the country.

Mr. Esch. Do not these reorganization committees, after they have gotten in all the securities they can, reorganize and issue new securities and then establish a voting trust?

Mr. Lovett. That has been done by a number of banking institutions.

Mr. Esch. Was not that true of the Union Pacific?

Mr. Lovett. A voting trust? I do not recall any voting trust. If there was one, it did not last very long.

Mr. Esch. Through Kuhn, Loeb & Co., as reorganization managers, was it not true as to the Southern, when Morgan & Co. were reorganization managers and Morgan & Baker were made the voting trustees?

Mr. Lovett. First, in reference to the Union Pacific, I was not connected with the property at the time of the reorganization. My connection with the Union Pacific commenced January 1, 1904. It was reorganized, I think, in 1897 or 1898; but if any voting trust was created, it existed for a very short time and was not in existence when I went with the company.

I do not know as to the case of the Southern any more than hearsay.

Now, I believe voting trusts are usually created for a short time, and I think it eminently wise and proper. It ought not to be continued, however, very long. But a banking firm, a reputable banking firm that reorganizes a railroad property, wants to select the management itself to start with and wants to keep control of it for a short time, anyway, and when it is firmly on its feet they usually dissolve.

I understand, simply as a matter of public report in the newspapers, that the voting trust of the Southern and the voting trust of a number of the Morgan reorganizations was dissolved some years ago.

Mr. Esch. Well, the Southern voting trust was in existence in 1913 when the Monetary Trust Commission made its report.

Mr. Lovett. I think a number of them were dissolved about that time. There had been a number continued for some years. But so far as my actual knowledge is concerned no railroad company with which I am connected has had any voting trust, and I am a director of a number.

Mr. Esch. Now, all this matter with reference to the voting trust, with reference to the reorganization committee, is extrajudicial, is it not?

Mr. Lovett. Yes.

Mr. Esch. And the court that has jurisdiction over the receivers has nothing to do whatever with this voting trust or with the reorganization committee?

Mr. Lovett. That is true.

Mr. Esch. Do you believe that is a safe situation?

Mr. Lovett. I do. I believe it is the only possible situation. I believe that sometimes, probably in the Union Pacific, I am not sure, reorganization plans have been submitted to and approved by the courts, but it does not strike me that it is a matter with which the

court ought to have anything to do. The issuance of securities, capitalization, under Government regulation is a matter of governmental authority. The Interstate Commerce Commission should be vested with jurisdiction over such matters. I do not think the courts should control it.

Mr. Esch. Are you familiar with the English Companies Act, that deals with receiverships?

Mr. Lovett. I am not.

Mr. Esch. That gives power to the stockholders and the security holders in the matter of selection of the receivers. Three-fourths of each class of security holders voting for receivers puts them into office, and they also have the right to vote on the reorganization plan. There is nothing, under our practice, that permits them to vote on the reorganization plan, is there?

Mr. Lovett. No; I think it would be extremely unwise to allow that.

Mr. Esch. Yet the English system seems to have been working for some years, and working practically?

Mr. Lovett. Well, if we ever have in the railroad affairs of this country the freedom in railroad matters the English security holders have, it might be different, but we do not expect that; and even though it is an English practice well established I think it would be extremely unwise.

I will state briefly my reasons: If the reorganization plan is to be subject to the approval of the security holders—the stockholders who may be foreclosed and cut off, or the second, third, or fourth lien holders, who may be cut off by the foreclosure, it will render the first liens valueless and destroy the credit and ability of railroad companies to raise money by first liens, or will indefinitely prolong and delay the reorganization. Or, to use more expressive terms, the class of security holders who are to be foreclosed will hold up the others and force concessions to which they are not in law or equity entitled. The stockholder of a railroad company has a security that is inferior to the bonds and the way for him to protect his interest is to pay the bonds. Now, he ought not to be put in a position where he can destroy the value of the bonds on which his company borrowed money or impair the value of the security ahead of him by delaying or interrupting a reorganization plan.

Mr. Esch. Under the English system there is no sale; the property owners get possession of their property again and go on. Under our system, of course, we have a sale and the securities that are deposited with the reorganization committee are turned in by way of purchase, are they not? Is not that true?

Mr. Lovett. As to the first part of that question, Mr. Esch, I can not comprehend any system that does not permit the foreclosure of a mortgage and the sale of the property to satisfy it. Therefore I can not say anything of value upon that aspect. As to the latter part of the question about the disposition of the securities: Holders of old securities deposited with the various protective committees and ultimately with the reorganization committee, and to be taken care of in the reorganization, receive new securities in exchange upon such basis as the reorganization plan provides. They either keep them or sell them, as they like.

Mr. Esch. Do you believe it would be wise to give the Interstate Commerce Commission certain powers with reference to receiverships?

Mr. Lovett. I do not see any advantage that would be gained by giving the Interstate Commerce Commission any duties with respect to receiverships. But if you mean with reference to reorganizations and the issue of securities in carrying out a plan of reorganization I should say that as long as we are all committed to governmental regulation of securities the Interstate Commerce Commission ought to be given exclusive jurisdiction to pass upon the issue of securities in connection with a reorganization plan, just as they should be given exclusive jurisdiction to regulate the issue of railroad securities for any other purpose.

Mr. Esch. You think they should be given the power to pass on the plan of reorganization?

Mr. Lovett. They must necessarily consider the plan of reorganization in passing upon the issue of securities. The plan of reorganization involves a very large question of finance and of relative values. It is not a question as to what some one would like to do but what can be done. Now, to put the commission in a position to say: "Give the first mortgage certain securities, give the second mortgage certain securities, give preferred stock certain securities, and give common stock certain securities," would not only result in an impossible condition in many cases and prolong and delay the reorganization but it would be of very doubtful constitutionality. The holders of bonds are entitled, in the absence of agreement on their part, to foreclose their liens and take the property at foreclosure sale if they are not paid; and that is a right that nobody can or should take away from them; and any law that attempted to authorize the Interstate Commerce Commission to compel the holder of a first mortgage to concede something to the holder of a second mortgage bond, or to stock, would, I think, be unconstitutional.

Mr. Esch. Should there be anything in the law fixing the period or the duration of a receivership?

Mr. Lovett. No.

Mr. Esch. That has to depend upon the exigencies of every case?

Mr. Lovett. Yes; and the security holders are just as eager as any people can be to have the receivership ended, because usually their interest is suspended during the receivership.

Mr. Esch. Yet, as a matter of fact, there have been receiverships that have extended over six or seven years?

Mr. Lovett. Yes.

Mr. Esch. In one instance, I think, 20. There can be abuse in that?

Mr. Lovett. Yes; but there is another case of burning the barn to catch a few rats.

Mr. Esch. Yes.

Mr. Lovett. There will be evils in any system that can be devised, but I do not know, so far as my observation goes, of any case of a receivership where it was a creditor's bill that has been prolonged. The cases of prolonged receivership I know were what I call "political receiverships," to keep some people in desirable positions.

Mr. Esch. That leads me to ask this question: Is there any justification for the criticism that the fees in receivership cases are exorbitant?

Mr. Lovett. I think there is.

Mr. Esch. Is there any way in which you could reach that through legislation?

Mr. Lovett. Yes.

Mr. Esch. What would you suggest?

Mr. Lovett. Why, I think that when you invest the commission with power to regulate securities you very largely curb that. As far as I know, the cases in which receivers get excessive or unreasonable compensation are very rare, but there have been such cases.

Mr. Esch. Mr. Hamilton suggests that he would like an elaboration of what you mean by "political receiverships."

Mr. Lovett. I do not like to call names, but a case I have in mind is where the receiver was appointed for the nondelivery of a telegram, and where a number of men very prominent in politics were appointed receivers and receivers' counsel and masters in chancery and other similar positions, and the reorganization was delayed. It is perhaps fair to say that in that case the receivership was probably precipitated by the efforts of a large creditor, who was supposed also to be a large stockholder, to get a receivership of his own, and, to use a slang expression, "the others beat him to it."

Mr. Esch. Of course, receivers would be interested in retaining their office as long as possible?

Mr. Lovett. Yes.

Mr. Esch. Because, as a rule, the courts have been very liberal in their allowances to receivers, have they not?

Mr. Lovett. I would not say that they have been unduly liberal. I do not know of receivers who, as such positions go, and if they properly perform their duties, have been unduly paid.

Mr. Esch. As to those matters, the stockholders—the owners of the property—have little or nothing to say? The court passes, of course, upon these fees and charges?

Mr. Lovett. Yes.

Mr. Esch. But the property owners have really no voice in the matter?

Mr. Lovett. No; I do not see how they can have. You have got to trust the court. There has been criticism of practices——

Mr. Esch. There have been protests filed against reports of receivers and criticisms made of various items of their accounts?

Mr. Lovett. Yes.

Mr. Esch. And a hearing had by the court in that way?

Mr. Lovett. Yes. I have never known a case where any creditor who wanted to object to a receiver's allowance, or his counsel, so far as they were fixed by the court, has not had an opportunity to be heard. Sometimes the objections have been sustained. Those matters are usually covered, however, as far as my practice has gone, by agreement. Counsel representing the various interests involved, which would have to bear the burden, have conferred about it and have agreed, or the matter has been determined by the court. The allowances and payments over which the court has no control are

those made by the reorganization committee, or by these various protective committees.

Mr. ESCH. They sometimes have been very large?

Mr. LOVETT. I have a great many neighbors and friends who act in that capacity or who have acted in that capacity. I would dislike to say anything that would indicate they have been unduly very liberal.

Mr. ESCH. Recurring to the subject of the voting trust, as I stated, the voting trustee is generally a representative of some of the big banking houses in the country. in these that I have alluded to.

Mr. LOVETT. Well, the way that is generally handled, Mr. Esch, is this: After the various protective committees have organized themselves and selected their chairmen and their membership and their counsel, and the trust company which is to act, and filled all the positions, and have had a number of conferences and put in more or less time, they realize that the different interests will either have to organize and come to an agreement on a plan of reorganization or fight it out in court, which will take a long time. Then some banking house that has the standing with investors and the financial ability to put through the plan is called in and works out a plan that it is willing to underwrite. The plan is then submitted to the various committees, and if they approve and the bankers are engaged to undertake the underwriting they form a syndicate, the size of which generally depends upon the size of the undertaking. The banking firm designate themselves as "reorganization managers" or "syndicate managers," and invite various people of means—mostly large, but some of small, means—and various bond houses who sell and distribute securities, to take a share in this syndicate. The syndicate shares run all the way probably from \$25,000 to \$1,000,000 or \$10,000,000. I have known them to run as high as \$10,000,000. The syndicate interest is widely distributed. the banking house itself usually, as I understand, taking a very small interest itself; but it is the credit of the house and the character of the house that enables it to put through these big undertakings.

There may be thousands of people who will buy some of these securities simply because this banking house has organized the syndicate and is the manager of the reorganization. Then, the banking house generally feels, and very properly, a degree of responsibility not only to the syndicate but to all of its customers for the proper management of the road, and generally they either dictate the management or form a voting trust for four or five years, with power to dissolve it earlier if the reason ceases. I do not know any large banking house that wants to run a railroad; they have a business of their own. But naturally they feel a responsibility for the successful management of a company they have put on its feet, and they like to keep in pretty close touch and to select the management. A voting trust may continue—in some cases they go on for years, but generally they are of rather short duration, so far as my experience goes. Different banking houses have different policies with respect to that; some are more insistent upon holding on with the voting trust for the full term of it—usually five years—than others.

Mr. Esch. Would the surrender of the voting privilege by stockholders, under the reorganization, to the voting trustee give the voting trustee power in case of combination of systems?

Mr. Lovett. The power to bring about a combination?

Mr. Esch. Yes.

Mr. Lovett. Yes; the voting trustee acts for the stockholder, and he votes without consulting the stockholder.

Mr. Esch. Yes; he has the whole privilege?

Mr. Lovett. Yes. I should like to say one further word with reference to the voting trust, if I may.

Mr. Esch. All right. Certainly.

Mr. Lovett. One of the greatest, and to my mind the great necessity for a voting trust, is that when the company is reorganized and the stock is issued, the common stock is sufficient to control; it is the last security, and, generally, at the outset, it will sell for a very low price—10 or 15 or 20 or 25 or 50 cents on the dollar—and it affords a great opportunity, if there be no voting trustee, for some plunger or group of speculators to get the stock and take over at once the management of this reorganized enterprise for purely speculative purposes; whereas the bankers or the syndicate managers with the voting trust, in adopting the plan, naturally believe it will be successful and that with a few years' trial success will be demonstrated and the stock will rise. In the meantime, with a voting trust it will not be so easy for speculators or plungers to get control of the company through the purchase of the stock while it is very low. It is really done for the protection of the stockholders as well as the other security holders. While it is true voting-trust certificates are salable, yet to the average speculator nothing running four or five years has any attraction; he wants to get something he can turn over. He does not care much for a voting-trust certificate which will not give him control of the property but will simply represent his investment for four or five years. That, I think, is one of the sound reasons in favor of voting trusts for reorganized companies for a reasonable time.

Mr. Esch. Has the tendency of late been for great railroad systems to invest in the securities of other systems?

Mr. Lovett. If you mean by "lately," the last——

Mr. Esch. Say, 10 years.

Mr. Lovett (continuing). The last 10 years, I should say no.

Mr. Esch. Before this last decade, was there quite a tendency in that direction?

Mr. Lovett. Undoubtedly very great.

Mr. Esch. What was the main purpose for such investment?

Mr. Lovett. The Union Pacific, I suppose, was about the most conspicuous company that followed that policy; and a variety of purposes entered into and influenced it. I should say that the purpose of the earlier investments was to strengthen the position of the company with respect to traffic, and to extend the system. Other reasons entered into it. One was to prevent the acquisition by a rival line of the control of some property that would be very hurtful to the Union Pacific in the hands of the rival line. The purchase of the Southern Pacific control by the Union Pacific was, of course, for the

purpose of getting an outlet to the Pacific Ocean. At that time the shipper did not have any right to route his traffic; the line on which it originated absolutely controlled it. It could send it to any connecting line it chose; and the Union Pacific was wholly dependent on the Southern Pacific for such traffic as the Southern Pacific saw proper to give it at Ogden. That condition has changed, and was changed by the law that gave the shipper the right to route his traffic; and it was changed by the construction of another line of railroad to the Pacific coast, and then by fiercer competition by other lines with the Southern Pacific, and greater improvements to the short and direct line, and other considerations; though it is still vastly important to the Union Pacific. Then, there was the Northern Pacific purchase, the object of which was to prevent, as I understand, a combination of the Northern Pacific and the Great Northern for the control of the Burlington, in the interest of those companies and against the interest of the Union Pacific. Without taking too much time in relating these transactions, those were the large purchases.

Now, following that the Union Pacific failed, for reasons I need not take the time to go into, to get control of the Northern Pacific: so the Northern Pacific and the Great Northern combination, which brought the control of the Burlington into those two systems, was formed and still exists. Those two systems to-day control the Burlington. The Union Pacific, as it could not get control and could not achieve the purpose it sought to accomplish, sold the Northern Securities stock which it took in exchange for Northern Pacific, and then both the Northern Pacific and the Great Northern that it took upon the dissolution of the Northern Securities Co., and made a very large profit. The convertible bonds which had been issued by the Union Pacific to raise money for these stock purchases (the Union Pacific stock having risen) were converted into stock of the Union Pacific. So the Union Pacific had the proceeds of this Northern Pacific purchase and a profit of about \$58,000,000 on the transaction, which it proceeded to invest in other stocks. It bought Baltimore & Ohio stock; it bought New York Central stock; it bought some Atchison, Topeka & Santa Fe stock; it bought some Chicago & Alton stock—preferred stock—and various other stocks. It sold the Atchison stock, because that owned a competing line, although the amount was comparatively small—only \$10,000,000, I believe, out of a total of over \$200,000,000. After it lost control of the Southern Pacific it distributed the Baltimore & Ohio stock to its stockholders as an extra dividend. I forgot to say that it also bought Illinois Central stock in large amounts. Now, the stock buying or stock purchasing substantially ceased following 1907, when the great attack was made on the Union Pacific by the Interstate Commerce Commission through the investigation made at that time, or, as I always describe it, the “attack on Harriman.” Mr. Harriman died in 1909, and the policy since then has been not to invest in railroad stocks as a rule, but rather in bonds, and to avoid speculative securities.

The only stock I recall now that we have bought since 1909 was some additional New York Central stock. We increased our holdings from about seventeen millions of New York Central stock to twenty millions out of a total of three hundred and fifty million

dollars, and we have exercised our subscription rights with respect to stock of these companies in which we were already interested. Where a corporation would increase its stock, and we had the right to subscribe at par, and the stock was worth more than par, we exercised our subscription rights. If the stock was less than par we were likely to buy the amount we are entitled to subscribe at par, where we could buy it at less than par, keeping up our relative position.

Mr. ESCH. I notice all the way through your investments were in stock and not in bonds.

Mr. LOVETT. I beg your pardon?

Mr. ESCH. I say I notice all the way through that your investments were in stock and not in bonds of other companies.

Mr. LOVETT. No; I did not mean to convey that impression. We have bonds as well as stock, and at this time we have over \$100,000,000 of bonds.

Mr. ESCH. And how much of the stock of other companies?

Mr. LOVETT. Mr. Each, if you will permit me, I would like to hand in a table.

Mr. ESCH. Very well; you can do that.

Mr. LOVETT. That will show exactly the stock and bonds, rather than give them from memory.

(The tables referred to were handed in and are here inserted, as follows, viz:)

Mr. Esch. That will be satisfactory. I did not know but what the object in investing in the stock of another carrier was because stock carried the voting privilege.

Mr. Lovett. No. I would not say that that was the object. It was with some companies, but generally the stock pays a larger return, if it is well selected, than bonds; and Mr. Harriman testified in his examination by the Interstate Commerce Commission, as to many of these stocks, except the Southern Pacific, that the stock was purchased for the return. He believed the stocks to be good, and that was the object. Of course, there are different degrees of conservatism, and some men will invest in railroad stock and take whatever chance there is involved in it, believing that, as to many stocks, the risk is extremely remote. Others believe the safe rule is to buy bonds: even though they pay a smaller return, they involve less risk.

Mr. Esch. Just one or two other questions: You mentioned pooling several times in the course of your testimony. Pooling was, of course, abolished by law, and was abolished before the Hepburn Act in 1906. Do you favor pooling if under the regulation of the Interstate Commerce Commission?

Mr. Lovett. I do not. I am strictly opposed to it.

Mr. Esch. Any form of it?

Mr. Lovett. I am opposed to any form of it. As there was a good deal said yesterday about my possible representative capacity, I will state that that is a matter that has not been considered by the committee of executives. I do not know their view. I stated, as to the general plan that we were proposing here for legislation, not only my own individual views, but I knew them to be the views of the advisory committee. With reference to this question as to pooling. I am expressing only my own view. I do not know what the view of the advisory committee is, but I have not heard anybody suggest pooling. Personally I believe it would be unwise.

Mr. Esch. Even under regulation?

Mr. Lovett. Yes.

Mr. Esch. Why?

Mr. Lovett. It would tend to unreasonably restrict competition. I think. It would tend, perhaps, to create what I call a "nuisance value" in certain railroads that do not have much of any other value. But in principle I believe in competition in the railroad service, not competition in rates. Competition in rates is impossible without discrimination and rebates, and nobody wants discrimination and rebates. But competition in service and facilities is, in my judgment, necessary to prevent stagnation in the railroad business.

Mr. Esch. By "nuisance value" do you mean the power and ability of holding up?

Mr. Lovett. Yes.

Mr. Esch. Here is a situation: There are six lines from Chicago to St. Paul-Minneapolis—two lines under single management. There are four from Chicago to New York; there are five from Chicago to St. Louis. Every night at a given hour there are that number of passenger trains starting from Chicago to those respective terminals. None of them are full, but each has to maintain that service because of the competition of the other rival lines. Would it be possible to have a system of pooling that would enable two or three of those lines to do the passenger service and thus eliminate a certain degree of expense and possible waste?

Mr. Lovett. No; I do not believe it ought to be allowed. I think that is foolish management; but at the same time I suppose it is absolutely necessary under existing law. But I believe the managers of those roads ought to be allowed to get together and, subject to the approval of the commission, agree, if they can, to reduce some of those trains.

Mr. Esch. Could a like arrangement be made with reference to freight traffic?

Mr. Lovett. Well, I do not know about that.

Mr. Esch. The theory now is the largest possible haul per train. The ton-mile haul is the unit of measurement now, is it not?

Mr. Lovett. My feeling about it is that there are certain evils in the present system that are evils; but I do not believe it is any more possible to get perfection in the railroad business than in any other. Some things we have got to bear; we can not help the choice of evils. I know a good many railroad men who, if they could get together and agree on freight schedules, would serve the public, and it would at the same time be to the interest of the railroads. There may be some, however, to whom I would not cheerfully trust a power of that sort. I believe, however, that it is very desirable that railroad officers should be allowed to get together and agree on such things, but without pooling and subject to the approval of the Interstate Commerce Commission.

Mr. Esch. I have used up an hour, and I do not care to continue further.

Mr. Adamson. Considering the responsible positions held by the members of this committee, if this investigation shall result in nothing more than the education of the members of the committee it will be worth what it costs. Senator Townsend, have you some questions?

Senator Townsend. I had some questions that I wanted to ask, but I have not been able to attend all the sessions, and I think possibly some of them have been covered already. I have several, however, that I would like to ask. I think if the railroads are to be condemned for their expensive terminal facilities, this committee may be condemned for its lack of them.

Mr. Sims. Terminal practices.

Senator Townsend. And we ought to get through with this if it is going to be of any particular value, and I should attend the hearings, so as not to duplicate any questions that may have been covered. I therefore shall ask only one or two questions, congratulating you on the fact—and possibly the country—that many of the committee are absent.

Mr. Adamson. You will violate the rule against levity if you don't mind.

Senator Townsend. I wanted to ask you, Judge Lovett, if you can tell me, in connection with our proposition to study the question of railroad controversies, about what, in your judgment, will be the cost to the railroads of the country of the recent so-called Adamson Act?

Mr. Lovett. That was very carefully figured last spring and summer, Senator, by the experts of the railroads in operating matters, and it was then said—and we all believe—that, based upon the same business as was handled during the year 1915, it would cost them

about \$60,000,000 a year—well, sixty-four millions, I think. Is that about the amount, Mr. Kruttschnitt—about sixty-four million?

Mr. KRUTTSCHNITT. I think that was the estimate of the men: of the carriers it was nearly a hundred million.

Mr. LOVETT. No. It was this: The pay, based upon the Adamson law as passed, was a little over sixty millions—\$64,000,000, I think. If the time-and-a-half overtime—the punitive overtime—was granted; which was in the original demand and which was nearly \$40,000,000, it would make a total of about \$100,000,000. But as punitive overtime was not granted, and was not embodied in the Adamson law, the amount, based on what was granted in the Adamson law, was estimated by the railroads at a few thousand dollars over \$60,000,000 a year. The men estimated it, so I understand, at \$30,000,000.

Senator TOWNSEND. The court having determined that that law is valid, the railroads will have no difficulty in establishing that extra cost as an additional reason for the raising of rates, will they?

Mr. LOVETT. None whatever.

Senator TOWNSEND. As I understand it—it has been my theory, at least—most of these propositions are suggested by the railroads in order that that question may be determined as to whether that is a valid charge which they can make in asking for additional rates?

Mr. LOVETT. Well, I do not understand, Senator Townsend, that there is any question about it being a valid reason for asking an increase in rates. If it had been done voluntarily there might have been some question about it; but, being in obedience to a law that is sustained by the Supreme Court, we have not felt there is any doubt about the justification for the increase in rates.

Senator TOWNSEND. That has been my explanation for the opposition to many of these measures, because if it is true that these are legitimate charges which the railroads have to meet, and the railroads are permitted to raise their rates to meet those additional charges, there could not be very much objection on the part of the railroads to these impositions, could there?

Mr. LOVETT. Except this: That however legitimate and necessary they may be, in view of the time that is taken it is not an easy matter to get an increase in rates, however clear the case may be.

Senator TOWNSEND. But if the railroads were assured that they could get immediately the additional revenue needed for the additional burden they would not oppose it so strongly?

Mr. LOVETT. Why, no. If they were going to be entitled to an increase in rates, and knew that they would get it, why, the railroads would not oppose it further than their sense of duty to the public required them to oppose it.

Senator TOWNSEND. It has seemed to me that one of the principal duties of the Congress and the committees of Congress is to look after the interests of the people; but in these controversies they are more likely sometimes to look after the interests of the immediate parties—the railroad owners and the railroad employees—and the people are to foot the bill.

Mr. LOVETT. The people will always have to do that, Senator, sooner or later.

Senator TOWNSEND. I think I do not care to ask him any more questions, Mr. Chairman.

Mr. ADAMSON. I will call attention, in connection with Senator Townsend's question, to the language in the majority opinion of the court, if he has not read it, that they took full cognizance of what I said to you this morning—that the law requires you to run 12½ miles an hour and to do the work in 8 hours instead of 10.

Mr. LOVETT. Those men knew the most popular grounds upon which to base their contention.

Mr. ADAMSON. If you go to the commission on that proposition, you are going to encounter the trouble or there is going to be a contention that you could run those trains at that rate by properly loading them and making them of proper length, and that then there would be no additional expense, so far as operating those trains is concerned; and you may be met with the further question, if you are going to make an objection to the law, that it adds to your expense; that you could have made the same objection when they passed the 16-hour law, and stopped you from running 24 to 40 hours—that that increased the expense—but that is no answer to the humanitarian law.

Mr. LOVETT. The passing of the law removes from us the responsibility for the wisdom of it, of course.

Mr. ADAMSON. I understand that, but I am speaking about the raising of rates. If you ask for a raise in the rates on the ground that money is not worth half as much as it used to be, you will get it; but if you ask for an increase of rates on the ground that the finding of this commission puts an additional burden upon you, on account of the eight-hour law, I do not think you will get it.

Mr. LOVETT. If we can not demonstrate an increase in expenses, of course we are not entitled to an increase in rates on account of it.

Mr. ADAMSON. We have a commission appointed to inquire into it.

Mr. LOVETT. Yes.

Mr. ADAMSON. In other words, I believe the railroads will find less difficulty if they try to comply with the law.

Mr. LOVETT. We are not going to try to do it; we are going to do it.

Senator CUMMINS. I think there is some misunderstanding here about the Adamson law. The railroads say—and I accept it for the time being—that if the Adamson law—that the wages required to be paid during the period of 10 months, if they should be paid continuously, the increase would be about \$64,000,000 per year; but the Adamson law only requires that you should pay those wages over a maximum period of 10 months, and you are then permitted to pay whatever wages you please. Why, then, do you insist that your expenses will be increased by this amount?

Mr. LOVETT. Because we know, Senator, that a fact is a fact, and we know, as a matter of fact, that when this Adamson law and this schedule are put into effect we can not change the schedule and operate the railroads.

Senator CUMMINS. That is, you know that you can not reduce the pay per hour?

Mr. LOVETT. No, sir; nor per mile.

Senator CUMMINS. Why can you not?

Mr. LOVETT. Because we would have a strike.

Senator CUMMINS. Oh, well; but not because you regard the reduced pay as unreasonably low?

Mr. LOVETT. No.

Senator CUMMINS. Simply because you are afraid of a strike?

Mr. LOVETT. Yes.

Senator CUMMINS. But the law does not require it.

Mr. LOVETT. I understand that the law leaves it optional after the expiration of this period.

Senator CUMMINS. Yes.

Mr. LOVETT. To continue the same rate of pay per hour or per trip.

Mr. ADAMSON. But the provision that there shall be nothing but necessary overtime allowed applies even during that period, and you may have to account for that when you get into the controversy.

Mr. ESCH. Has not the commission, in a ruling not very old, denied an increase of rates because of a claim of the carrier that its operating expenses were increased by yielding to a demand for increased pay by its employees?

Mr. LOVETT. There has been something said by the commission in such case as that. We all feel, Mr. Esch, that whenever we apply for an increase in rates all of our expenditures are open to question by the commission. We can not call on the commission to increase rates for mismanagement or because we pay more than we ought to pay. The reasonableness of it is all taken into consideration.

Mr. ESCH. Of course, that may not be a guide to the actual attitude of the commission now, because that was more of an isolated case and the demand now is country wide. I do not presume to say what the attitude of the commission would be in the present situation.

Mr. LOVETT. I understand the commission has the right, when we apply for an increase of rates to meet expenses, to go fully into the question of expenses. In this case the increase of wages, if we had made it voluntarily, would have been open to the commission, and it would have been very hard for us to justify it, because we believe that the increase is too much. But since Congress has determined that it shall be applied we do not consider that that is an open question.

Mr. ESCH. Of course, you have got to make your proof. There was one objection made to the last 5 per cent increase—that it was not really a matter of proof; that the commission yielded to the fact of the war conditions in Europe.

Mr. LOVETT. We understand that we have got to make our proof.

Mr. ESCH. Yes.

Mr. ADAMSON. The commission is very likely to ask you, when you go before them on that question, whether you have so operated the road since the enactment of that law as to prevent the expenses from getting so high.

Mr. LOVETT. If we can not establish that, we will not be entitled to an increase.

Mr. ADAMSON. I agree with you. That is all. Go ahead, Mr. Hamilton.

Mr. HAMILTON. I have one or two questions. They may have been covered. You have been called upon to express an opinion about every phase of the transportation subject except the question of

governmental ownership of railroads. I simply want to ask you three or four questions in relation to that.

Mr. LOVETT. I shall be very glad to answer them if I can.

Mr. HAMILTON. First, what is the line mileage in the United States of railroads—about?

Mr. THOM. About 260,000 miles.

Mr. LOVETT. About 260,000 miles.

Mr. HAMILTON. What would it cost for the Government to acquire those railroads? Have you estimated that?

Mr. LOVETT. Well, I think the capitalization of the railroads of the United States is now a total of about eighteen billions, is it not?

Mr. THOM. Somewhere in that neighborhood.

Mr. HAMILTON. It has been estimated by one witness, Mr. Brookhart, that it would cost fifteen and a half billions of dollars to acquire the railroads; but he cited another authority to the effect that it would cost sixteen billions.

Mr. LOVETT. I say "capitalization." I am not sure about that. I am not sure whether it is the capitalization or the property investment account. There is probably not a great difference between those two accounts; but it is somewhere about eighteen billions. About 35 per cent of the stock does not pay dividends, and at this particular time about 11 per cent of the bonds are in default. Now, a bond, undoubtedly, although in default, is valuable, though perhaps it is not worth par; so something would have to be allowed for them. The stock has some value, although not paying dividends; but I should guess roughly—and it would be merely a guess—that it would cost probably fifteen or sixteen billions of dollars.

Mr. HAMILTON. If the Government should undertake to acquire the railroads, would it be necessary for the Government to acquire the telegraph lines?

Mr. LOVETT. I should think it desirable.

Mr. HAMILTON. For use in the operation of the railroads?

Mr. LOVETT. Well, I suppose it would take over the rights of the railroad companies with the telegraph companies, which would cover the question of railroad operation.

Mr. HAMILTON. Would not that involve additional expense?

Mr. LOVETT. To take over the rights of the railroad companies with the telegraph companies?

Mr. HAMILTON. Yes.

Mr. LOVETT. No.

Mr. HAMILTON. Then you would not estimate any additional expense, so far as the telegraph lines are concerned, in the acquisition of the railroads?

Mr. LOVETT. So far only as telegraph lines are required in the operation of railroads, no.

Mr. HAMILTON. Would that apply also to telephone lines?

Mr. LOVETT. Yes. Do not misunderstand me. I do not mean that this would include the commercial telegraph business. I mean only the use of the telegraph lines so far as required in the operation of the railroads.

Mr. HAMILTON. I so understood you.

Mr. LOVETT. Yes.

Mr. HAMILTON. Have you had an opportunity for personal observation of the operation of government-owned railroads in Europe or elsewhere—personal opportunity for observation?

Mr. LOVETT. No; I am not familiar with government ownership in Europe except from reading.

Mr. HAMILTON. And from your reading, of course, you have formed an opinion?

Mr. LOVETT. Yes.

Mr. HAMILTON. I think the time is too short to undertake to go into a discussion of Government ownership. However, it might be valuable to this committee, if you are willing, to make a general statement of your views in relation to the subject of Government ownership, and illustrate your conclusions by the history of Government ownership in certain cases.

Senator TOWNSEND. May I ask a question right there?

Mr. HAMILTON. Certainly.

Senator TOWNSEND. Mr. Lovett, are you going to be here throughout these hearings?

Mr. LOVETT. No; I had not intended to.

Senator TOWNSEND. I did not want you to stay for the purpose, but I wanted to look up some questions to see if they have been discussed, but I do not want you to come back.

Mr. LOVETT. I shall be glad to do so.

Mr. HAMILTON. Perhaps too much is involved in that question.

Mr. LOVETT. I shall be glad to state it briefly, if I may.

Mr. HAMILTON. If you will do so.

Mr. ADAMSON. If Senator Townsend or Mr. Hamilton desires to examine you at any length, I suggest that you come back here at some other time.

Mr. LOVETT. That is agreeable to me.

Senator TOWNSEND. No; I do not want him to come back here on my account.

Mr. LOVETT. It will be perfectly convenient for me to come back here at any time after April 1, and I would be very glad to come back, and I shall not regard it as any inconvenience but really as a privilege.

Mr. ADAMSON. This committee will probably adjourn after next Thursday's session until after the House has organized and until we can see what we are going to do.

Mr. LOVETT. I should like very much to have the privilege of coming back at any time that you gentlemen would like to have me. I can say a few words in relation to Government ownership now, Mr. Hamilton, if you wish.

Mr. HAMILTON. Yes; if you are perfectly willing to do so.

Mr. LOVETT. I can not give much information about Government ownership of railroads. I can simply express my opinion; it is purely an opinion, and not knowledge, and it is based largely upon what I have read about European railroads. The actual facts will be presented to you during the hearings. What I say is based upon my knowledge of our own country and of conditions that prevail here and of our system of government.

First, I think it would be unwise, for the reasons I indicated briefly in answer to Judge Sims's questions. I believe that where the Government has unrestricted power of regulation, as ours has, it

would be a waste of Government credit and Government energy to take over a business that can be conducted by private ownership, for the benefit of private enterprise, and with private initiative and private economies. It seems to me an unnecessary strain of the Government's credit.

I believe that Government ownership in an autocratic government, where no political considerations enter into the management, may be efficient. In saying this I do not want to be understood as criticizing Congress or any Member of Congress, but I am simply dealing with what we all recognize as facts in our system of government.

Mr. HAMILTON. You can find illustrations in Australia, for instance, of certain difficulties that grow out of legislation in this connection.

Mr. LOVETT. Yes. Now, in this country I believe if we had Government ownership there would be an immense pressure upon every Congressman and every Senator for improved facilities for his State and for his district; that there would practically be competition among the districts and the States and the different sections for improved railroads, handsome, ornate stations for the towns, and for the building of branches and extensions. I believe there would be a great waste of public money and of public credit in providing facilities and attractive features and additional lines that would not be justified by any public interest or any public consideration. Under the pressure that would be applied to every Congressman and every Senator by the people of their district I believe that combinations would be formed that would involve an enormous amount of public money.

I believe also that there would be an increase in jobs, in the number of positions, and that there would be a vast number of useless positions filled at the expense of the public by voters and influential citizens, which is not possible under private management. I have spoken before of the waste of capital. I believe this latter consideration would add enormously to the expense of operation and maintenance. If there should be Government ownership, the latter evil would be considerably lessened by disfranchising the railroad operatives.

Mr. HAMILTON. You know that was tried, in one instance, in Australia?

Mr. LOVETT. In Australia; I understand it was.

Mr. HAMILTON. But they restored the franchise, if I understand it correctly.

Mr. LOVETT. But I do not believe it would be done in this country, because the railroad employees are so numerous and so well organized politically that they would succeed in resisting politically any such effort. The consequence is that certain highly organized and politically influential organizations would succeed in getting very much more pay than they really would be entitled to, and would succeed in creating a great many unnecessary positions.

My judgment, in summing it all up in this very brief statement, is that through the waste of capital on account of unnecessary construction—construction of lines that are unprofitable and unjustified—and of ornate improvements and increased conveniences and luxuries the financial operation of the roads would prove a failure, and that in

time the Government's credit would be impaired. I believe it was stated before this committee that the Government would get the money at 3 per cent. The Government would not do anything of the sort. The Government's bonds are so valuable because there are so few of them, and the Government's credit is so high because it is not strained. But when the Government issued bonds to pay for all the railroads of the United States, or any other obligation, the supply of Government securities would be so abundant that the Government would have to pay about the same rate for money that other people pay. The Government's credit would not be nearly as good, because it would be under a greater strain.

Furthermore. I believe that by eliminating competition, as would be the case under Government ownership, the individual initiative would be very greatly impaired. Of course, there would be inventions and some improvements, but nothing like what there is under the force of competition, which stimulates private initiative so much. On the whole, I believe that if the Government would be saved from bankruptcy the rates would have to be increased. I am entirely satisfied that the general level of transportation rates would in the course of time, and probably a very short time, be very much higher than now.

That is stating in as few words as I can, in a general way, my objection as a citizen to Government ownership. From the standpoint of a railroad officer I ought to say that as between Government ownership and the system of diversified and conflicting regulations into which we have drifted, I believe in time Government ownership will come, because that system will not produce the transportation facilities the country must have.

Mr. HAMILTON. The time at our disposal is too brief to ask you to go into a discussion of the success or failure of Government ownership in specific instances in the various nations, and perhaps some time later, if you should happen to be here and it should be convenient, it might be illuminating if you would discuss that.

Mr. LOVETT. I should be very glad to do it, Mr. Hamilton. I will say also that the advisory committee has been trying to get the very best and most authoritative evidence on this subject possible to bring before this committee. I am not sure they will get just the men they want, but there will be witnesses before the committee on that subject.

Mr. HAMILTON. There will be witnesses?

Mr. LOVETT. Yes; and who would know more about its operation in other countries than I do. I have only undertaken to state to-day what I have conceived would be the result of Government ownership from my reading, as applied to our political and governmental institutions.

Mr. HAMILTON. Will you have witnesses with reference to the operation of the Inter-Colonial of Canada?

Mr. LOVETT. Yes.

Mr. HAMILTON. And the Prince Edward Island line?

Mr. LOVETT. Yes; those cases are being studied, I understand. Mr. W. M. Ackworth, the greatest English authority on railroads—and I do not know any man whose judgment is more entitled to respect than Mr. Ackworth's on the subject—we will either have him or a statement from him. He has been requested to make a statement, but whether we get him or simply produce a statement from him we can not tell now. But we will have him, among others.

Mr. THOM. I might suggest, Mr. Chairman and gentlemen, whether the convenience of the committee will be such as to hear him before he sails from this country.

Mr. ESCH. He is a most valuable witness. He appeared before the Senate Committee on Interstate Commerce in 1905, when they framed the Hepburn Act.

Mr. THOM. Perhaps this committee will hold a special session to hear him before he sails.

Mr. ESCH. It certainly would be worth while.

Mr. LOVETT. He could not come right now, because he is engaged as one of the advisors of the Canadian Government.

Mr. ADAMSON. Could he come next week?

Mr. LOVETT. My information is—Mr. Trumbull told me—that he could not come in the immediate future.

Mr. ADAMSON. Mr. Thom can keep in touch with him and advise the committee.

Mr. HAMILTON. His testimony would be most valuable. It would seem to me that it would be very important to have a discussion before this committee of the history of the operation of the various Government-owned railroads, with a view to determining whether they have been successful or otherwise in their operation.

Mr. LOVETT. Mr. Ackworth, I know, has made a study of that subject.

Mr. SIMS. He is absolutely opposed to Government ownership, as I have been informed.

Mr. LOVETT. You say he is absolutely opposed to Government ownership?

Mr. SIMS. I understand that he is.

Mr. LOVETT. I can not answer that. He discusses it and gives the history of it in various countries, and as far as I have followed him I do not understand that he is opposed to it in all cases.

Mr. HAMILTON. It seems to me, so far as that is concerned, that the question whether he is opposed to Government ownership or not is not as important as the question of whether he gives us accurate information as to the operations of these railroads.

Mr. LOVETT. Yes.

Mr. ADAMSON. The plan is suggested, Judge (with Mr. Hamilton's consent), that in case the Government should desire to take over the railroads that the holders of the present securities would be willing in a large degree to substitute the Government's securities for the present securities. What do you think of the probability of that?

Mr. LOVETT. I think that is true. They would want reinvestment, and I have no doubt that they would take the bonds; but a man getting a 6, 7, 8, or 9 per cent return on his investment would look about some before taking a 3 or 4 per cent return.

Mr. ADAMSON. Under the political aspects of the case, is there not another possible danger that you had not described, which might be the greatest one? That is, that if the present holders take bonds—and we all acknowledge that we have to have experts to run a railroad—we have to employ our creditors to manage our property. Do you not think that would probably create about the greatest political oligarchy that ever was in any country, and that we should have the

railroads owning the Government instead of the Government owning the railroads?

Mr. LOVETT. The railroads are not run, really, by their owners. Judge Adamson.

Mr. HAMILTON. All that the Judge is suggesting in this connection would arise in connection with the discussion of the operation of the various railroads in the various countries.

Mr. LOVETT. Yes.

Mr. HAMILTON. Most of these problems have arisen in connection with the operation of railroads so far.

Mr. ADAMSON. Have you finished?

Mr. HAMILTON. I think we might as well suspend.

Mr. ADAMSON. I want to ask some questions.

Mr. HAMILTON. I am only suggesting that because I feel that we are approaching the time when we ought to adjourn.

Mr. ADAMSON. I do not want to take your time, but if you finish before 1.30, I should like to ask Judge Lovett about a little matter. Of course, all great matters are made up of little matters.

Mr. HAMILTON. Go ahead now.

Mr. ADAMSON. You referred to the \$600,000 charge which Illinois inflicted on the New York Central. That was in the nature of a license, was it not, and not a registry fee?

Mr. LOVETT. No; as I understand, it was a charge either for granting the consolidation of these lines extending through six States, or for filing the mortgage.

Mr. THOM. It was not filing the mortgage.

Mr. LOVETT. Then it was for the consolidation, and it was based upon the capitalization.

Mr. ADAMSON. How much figure, in expense, does the fact cut that a mortgage to secure an issue of bonds must be recorded in every county through which the railroad runs? Is that material or is it negligible?

Mr. LOVETT. The mere recording fee, the ordinary recording for the purpose of notice to creditors, as under the real-estate laws, of course, is not affected by the amount of the mortgage, ordinarily.

Mr. ADAMSON. I know that.

Mr. LOVETT. But rather by the physical size of it. That is not an important item. But the fees charged in some State for registering or granting or recognizing a consolidation or a mortgage, not by the counties but by the States, are sometimes quite burdensome. I think the Illinois charge is 50 cents a thousand dollars, or something like that.

Mr. THOM. A dollar a thousand; and the tax in Illinois was for the approval of the security issue.

Mr. SIMS. It was a tax, then, and not a license.

Mr. ADAMSON. The purpose of any lien is to give notice to persons who deal in the same property?

Mr. LOVETT. Yes.

Mr. ADAMSON. Now, in the event of our adopting a centralized control of stocks and bonds, whether under your plan or the one that we suggest in the railroad bill, what will be the necessity of requiring any further record of mortgages in the locality, when nothing can be done except by the approval of the Interstate Commerce Commission? Why incur that expense, whether it is great or small?

Mr. LOVETT. It is not a matter of enormous importance, and I do not see any particular necessity for it, because the record of everything can be with the Interstate Commerce Commission.

Mr. ADAMSON. You would look there for all your information?

Mr. LOVETT. But the probabilities are that people who are interested in the company, as to what it owns, what liens there are, etc., might through force of habit rather go to the county recorder and examine it on the records than write to the Interstate Commerce Commission for a printed copy, which they could always get.

Mr. ADAMSON. Are there any further questions?

Mr. SIMS. I wanted to ask one, because it was brought out by a subsequent examination. It is this, Judge: With reference to the Adamson law, is it not reasonable to suppose that it would be more burdensome on the railroads in the earlier stages of its application than it will ultimately become?

Mr. LOVETT. No, Judge Sims; there is no supposition about it. In arriving at what it would cost before, we took for two months in the year, April and October, representative months, the time slips signed by the men. Each man as he gets his run signs a slip showing whether he draws pay on a time basis or on a mileage basis, and what it is, and that is turned in. Certain roads took these time slips and applied the eight-hour day in lieu of the existing schedule, and in that way arrived at the difference.

But the question, suppose that instead of putting in this time, we speed up the trains, as was suggested, to 12 hours. That is about the only way in which apparent economy could be effected. You would avoid overtime in that way. But these men gave their judgment, as to whether it would pay better to speed up the trains or pay the overtime. We wanted information about this, not merely for the public, but we wanted to know what it would cost; and the opinion of the operating men, without any dissent, so far as I know, was that it would be cheaper to run the same as we are running now and it would involve less money than to reduce the trainloads and put on more trains, and undertake to change terminal facilities. That is a matter of judgment.

Mr. SIMS. I mean by "immediately," that you can not make any kind of arrangement immediately, as I understand it, to avoid this, that would be less expensive than the payment of the wage scale as shown by your time slips; but, ultimately, will not the railroads adjust themselves as far as possible, wherever they can save money by doing so—will it not have a tendency to cause them to reduce the cost?

Mr. LOVETT. It would be criminal, almost, for them not to do it, if they can.

Mr. SIMS. Can they not do it? If you double-track the road, can't you move the trains faster?

Mr. LOVETT. That involves a question of the new capital, and the expenses involved as to whether it is cheaper to pay extra time or to double-track the road.

Mr. SIMS. I mean, not on that account, but double-track it for general purposes. Can't you move quicker on a double-track road than on a single-track road?

Mr. LOVETT. That depends, Judge Sims. A road is not double-tracked unless there is need for it.

Mr. SIMS. I do not suppose you would double-track a road simply for what you would save in wages to your trainmen.

Mr. LOVETT. Of course, it would be possible, if you dispense with sidings, and so forth, to run faster.

Mr. SIMS. I mean on a single-track road.

Mr. LOVETT. Of course, they are supposed to schedule the trains so as to avoid delays. The judgment of the operating men is that they can see no way of avoiding this increase; that it is better to pay the overtime than do the other things. I have no opinion on that except based on what the operating men state.

Mr. SIMS. I have none, either, and simply wanted to know what you thought of it.

Mr. ADAMSON. Judge, your indisposition to modify your system, to comply with the law, reminds me of a story told of Joseph Adamson, who rebuked his servant for drinking heavily on several occasions, but it did not seem to have any effect on him, and finally he thought he would reform him by telling him about a man who tried to blow out a cannon. He told him that he blew into the cannon, but his breath was so charged with alcohol from drinking that it caught fire and blew him up. After listening to that the man said, "Boss, I will never blow out a cannon while I live."

Judge, the committee wants to thank you for your services. We believe you have given us very valuable information, and we appreciate your courtesy and patience. We hope to see you again, if you have anything to tell us, or perhaps Judge Sims may have something else he wants to ask you.

Mr. SIMS. I want to say that I have refrained from asking any questions except those which I thought would give the committee information.

Mr. LOVETT. I am very grateful to the committee for its patience in hearing me on this matter, and perhaps, when I work out the application of your anecdote, I may be even more grateful.

Mr. THOM. I understand the committee will not to-day begin with another witness?

Mr. ADAMSON. No.

Mr. THOM. On Monday morning, at half past 10, which I believe is the hour for convening—

Mr. ADAMSON. If you can supply the committee with valuable witnesses—and you must remember that you have spoiled us by introducing us to such good ones, and I hope you will not reduce the grade—but if you can supply us with witnesses, we can hear you until Thursday. I think the committee will have to suspend on Thursday.

Mr. THOM. I understood that. That is the reason I addressed the chair. Mr. Kruttschnitt, chairman of the board of the Southern Pacific, who has been waiting patiently during this week, from Tuesday to the present, will be present. I assume that the importance of his testimony will probably cause the committee to consume the whole time from Monday to Thursday with him. Now, we had as a witness to succeed Mr. Kruttschnitt, Mr. Howard Elliott. If it is the judgment of the chairman, and the committee justifies me in doing so, I think I will notify Mr. Elliott that there will be no chance of hearing him next week.

Mr. ADAMSON. I have a letter from the committee with Mr. EVELS. They have Judge Lovett.

Mr. THOM. EVELS is a member of the Lovett, and we have the importance of the fact that there will be a

Mr. HAMILTON. We can do it. It is a great difficulty. Sim's examination by which we can be allotted to consume more than this might be some member. I think we should

Mr. ADAMSON. We have a committee. We have a lady and a lady. How to proceed. Thom that is a thing about the things over all.

Mr. HAMILTON. To come by the

Mr. ADAMSON. Mr. THOM. I do not think

Mr. ADAMSON. That every witness the witness

Mr. HAMILTON. Procedure.

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

MONDAY, MARCH 26, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.30 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. The committee will come to order. Mr. Thom, what witness will you introduce?

Mr. THOM. Mr. Kruttschnitt, chairman of the board of the Southern Pacific, will now come before the committee; and may I ask that he be allowed to read his statement?

Mr. ADAMSON. Mr. Kruttschnitt, the committee will be glad to hear you, and you may take your own time, without interruption.

Mr. KRUTTSCHNITT. Thank you.

STATEMENT OF MR. JULIUS KRUTTSCHNITT, CHAIRMAN OF EXECUTIVE COMMITTEE, BOARD OF DIRECTORS, SOUTHERN PACIFIC CO.

Mr. ADAMSON. Will you give your official station and post-office address, Mr. Kruttschnitt?

Mr. KRUTTSCHNITT. I am chairman of the executive committee of the board of directors of the Southern Pacific Co.; business address, 165 Broadway, New York.

Mr. Chairman, to save time and be as brief as possible, I will just read what I have to say. It will take much less time and much less space that way.

Mr. ADAMSON. Adopt your own course, Mr. Kruttschnitt.

Mr. KRUTTSCHNITT. The present condition of the credit of American railways is not good. Money can be borrowed by cities and States at very low rates; for instance, the cost of money borrowed by the State and by the city of New York is between 4 per cent and 4.25 per cent.

Bond sales.

Date.	Amount and term.	Interest rate.	Interest basis.
NEW YORK CITY.		Per cent.	Per cent.
May, 1913.....	\$45,000 000, 50 years.....	4½	4.490
April, 1914.....	\$65,000,000, 50 years.....	4½	4.190
June, 1915.....	\$46,000,000, 50 years.....	4½	4.437
Do.....	\$25,000,000, 1 to 15 years, serials.....	4½	4.297
April 1916.....	\$15,000,000, 1 to 15 years, serials.....	4½	4.030
Do.....	\$40,000,000, 50 years.....	4½	4.125
Average.....			4.260
NEW YORK STATE.			
March, 1915.....	\$27,000,000, 30 and 50 years.....	4	4.000
January, 1916.....	\$22,000,000, 30 and 50 years.....	4	3.850
Average.....			3.960

The cost of money to the Southern Pacific Co. for the last four years is 5.21 per cent, thus:

Bond sales.

Date.	Amount and term.	Interest rate.	Interest basis.
1913.....	\$5,120,000 Southern Pacific Co. equipment trust certificates, series A.....	Per cent. 4½	Per cent. 5.40
1913.....	\$2,010,000 Southern Pacific Co. equipment trust certificates, series B.....	4½	5.50
1914.....	\$54,532,500 Southern Pacific Co. 20-year convertible gold bonds.....	5	5.23
1914.....	\$6,361,000 Pacific Electric Railway Co. first refunding.....	5	5.75
1916.....	\$5,110,000 Southern Pacific Co. equipment trust certificates, series D.....	4½	4.62
1907-1916.....	\$23,486,000 Northwestern Pacific R. R. Co. first and refunding.....	4½	4.77
Average.....			5.21

In other words, Southern Pacific paid over 30 per cent more for its money than the State of New York paid.

Railroad stocks paying 6 per cent are quoted as follows:

SIX PER CENT STOCKS.

Railroads.

Union Pacific-----	138
--------------------	-----

Mr. THOM. What was their rate of dividend?

Mr. KRUTTSCHNITT. The Union Pacific?

Mr. THOM. No; the banks.

Mr. KRUTTSCHNITT. The average was 225.

Mr. THOM. In the amount of that dividend, you are comparing the Union Pacific with 8 per cent——

Mr. KRUTTSCHNITT. They were all 8 per cent stocks.

Mr. THOM. I did not understand that you stated that.

Mr. KRUTTSCHNITT. Yes. The banks were 8 per cent and the railroads were 8 per cent.

The appreciation of the security by the public is in inverse proportion to the rate; that is to say, the lower the return that the public is willing to accept, the greater does it consider the security, and vice versa. The same is true as to stock. Chamberlain on Bond Investments gives the elements of an ideal investment thus:

1. Security for principal; 2. A fixed and fair return in interest; 3. Marketability—sale without difficulty; 4. Acceptable as collateral; 5. Freedom from direct tax; 6. Freedom from care (purchase by sinking fund, etc.); 7. Maturity after a satisfactory lapse of time.

All of the foregoing qualities exist in New York City and State bonds. Account Federal and State regulation of railroads, it can not be said that all of the principal elements or characteristics of an ideal investment exist in railroad bonds, because control of revenues by regulating bodies detracts from element 2, 2 affects 3, 3 affects 4; they comply not at all with element 5 and partially only with element 6.

2. *Credit of American railroads not as good as the public interest requires.*—The credit of American railways is not as good as the public interest requires, because as shown in No. 1 they can not sell their bonds at rates of return on money at which States and municipalities can do so; therefore the public has to be coaxed or persuaded by higher rates of return to take the securities.

While there have been some instances condemned by public opinion as financial mistakes and dishonesty on the part of railway managers or financiers, such instances are the exceptions in railroad management, and do not constitute a condition prevalent enough to account for the decline which has taken place in railroad credit.

It is true that there have been some instances of financial mismanagement and dishonesty on the part of railway managers or financiers, but such instances are exceptions and do not determine a condition of railroad management in the United States. There

have been instances of dishonesty on the part of national-bank managers, but such instances have not shaken the confidence of the people in banks generally.

At the end of the year 1916 there were 69 receiverships of railroads that had occurred in the previous four years, of which comparatively few—not over 6 per cent or 8 per cent of the whole number, most of which were enumerated by Mr. Thelen in his testimony—were due to dishonest or fraudulent management, but these few cases should not stamp the general management and operation of all railways as dishonest to nearly the same extent as the 23 out of a total of 46 national-bank failures in the same years caused by dishonesty and fraud, or just 50 per cent of all failures (as evidenced in the report of the Comptroller of the Currency for 1916), should stamp the whole national-bank system as bad and in need of drastic and destructive regulation; yet the national banks have been under close Federal inspection and regulation for a much longer period than have the railways.

Governmental causes for the decline of railroad credit.—Outside of a few cases of dishonesty on the part of railway managers or financiers, which undoubtedly have affected railroad credit to some but not to a very important extent, the causes for the decline of railroad credit may be traced almost entirely to the hostile spirit of legislatures and regulating bodies and the resulting nature of many of the phases of regulation and management they have prescribed. Government regulation of national banks was the first regulation of corporations undertaken by the Federal Government. It has been constructive; the regulations are fair to the shareholders as well as to the public; their credit has in nowise been impaired by regulation, and under it they have prospered and their shares are eagerly sought as most safe and conservative investments. On the other hand, the regulation of railroads by diverse agencies in many instances overthrows all principles of economical operation, hampers the railroads by interfering in questions of management, subverts discipline, and is a far more potent influence in affecting the credit of the carriers than the comparatively few cases of dishonest management. Here are some of the unreasonable burdens imposed on the carriers:

(a) Arizona has limited the length of freight trains, and a bill has just been introduced in the Legislature of New York to limit the length of freight trains and to increase the number of men on switching locomotives. Bills limiting the length of freight trains have also been introduced in the State Legislatures of Missouri, Iowa, Kansas, Colorado, Utah, Nebraska, Texas, and Oregon, the details of all being alike in principle and purpose. (*Railway Age Gazette*, Mar. 2, 1917, p. 370.) In the years 1915 and 1916 7,000 freight trains were operated on Southern Pacific lines in Texas and Louisiana consisting of 50 cars or more. The number of accidents to these trains involving damage of \$500 or more was three; one due to a loose wheel, one to a broken rail, and the other to derailment of locomotive in frog, none of them having any relation whatever to length of train.

(b) Full crew, or superfluous crew, laws, operative now in 21 States, the most uncalled-for and useless expense ever imposed on

the carriers. An investigation by the bureau of research of the New Jersey State Chamber of Commerce finds:

1. That 97.6 per cent of railroad casualties have no relation to the size of the train crew, and that the remaining 2.4 per cent represent the highest conceivable percentage which could be affected through a change in the size of the train crew.

2. That casualties in Pennsylvania have been steadily higher since the enactment of the law, and that in so far as it was enacted as a safety measure designed to reduce the whole number of railroad casualties, it has been a conspicuous failure.

3. That a study of the casualty lists of other States which have, and States which have not, full-crew laws, fails to show any direct relation between the laws and the number of casualties.

4. That the estimated annual cost to the carriers in all States that have full-crew laws is \$5,000,000. (This would pay interest on \$100,000,000.)

Mr. Garrett, who made the investigation for the chamber, adds that it was of especial interest and significance to find that 55 out of 69 of the replies from engineers and 31 out of 66 of the replies from conductors, expressed "confidentially" that as individuals they were not in sympathy with the present New Jersey law, and that all of the only three replies from organizations of railroad trainmen were in sympathy with the law. This, of course, is easily understood, as the purpose of the law is to create positions for railroad trainmen.

During the calendar years 1915 and 1916 an inspection of the accident record of the Southern Pacific lines, on which 119,389,438 locomotive-miles were run (equal to circling the earth at the Equator 4,776 times) shows that not a single accident could be attributed to deficient numbers in the train crew.

(c) Headlight laws in 28 States, to avoid risks of accident that are imaginary or substantially nonexistent, introducing heavy expense and sources of danger through obscuring signals and blinding engineers of opposing trains. Inspection of the accident reports of Southern Pacific lines, covering the movement of 119,389,438 locomotive-miles (equal to circling the earth at the Equator 4,776 times) during the calendar years 1915 and 1916, shows that not a single accident could be attributed to improper illumination by headlights.

(d) Laws in eight States requiring erection of sheds for car repairs. House carpenters, farmers, and street and dock laborers all work in the sun and consider it no special hardship.

In legislating against imaginary evils the sense of proportion seems to be lost, and cures are prescribed when no disease exists. Full-crew bills were enacted to prevent accidents that had never occurred. As heretofore stated, the Chamber of Commerce of New Jersey has recently investigated this matter and finds that the full-crew bill, imposing heavy burdens on the carriers, had no relation whatever to 97.6 per cent of train accidents.

In April, 1916, a congressional committee held hearings on a bill to compel carriers to spend large sums of money on devices to eliminate less than 3 per cent of train accidents, ignoring the opportunity to prevent the other 97 per cent. Simply forbidding the public,

under penalty, as is done in Great Britain, to use the tracks as highways and requiring them to exercise the most ordinary reasonable and inexpensive precautions would eliminate over 80 per cent.

Other causes for decline of railroad credit are:

(e) Twenty States regulate hours of railway service, the variations running from 10 to 16 hours a day.

(f) Fourteen States have dissimilar safety-appliance acts.

(g) Twenty-one States in 1907 reduced railroad passenger rates.

(h) In 41 States, 1909, 664 new laws affecting railroads were enacted.

(i) In 40 States, in 1911, new railroad laws totaled 276.

(j) In 19 States, in 1912, 48 measures for further railroad control became laws.

(k) In 1913, out of the impressive total of 1,395 proposed enactments, 230 were placed upon the statute books of the several States.

(l) Between 1912 and 1915 upward of 4,000 bills affecting railroads were introduced into Congress and our several State legislatures, of which 440 have become laws.

(m) Nineteen States have legally asserted their right to control bond and stock issues of railroads operating within their limits, and doubtless this number will increase.

(n) In the fiscal year 1914, 166 railroads, operating 204,610 miles, reported total expense of \$28,703,983 in consequence of legislation regulating operation.

(o) Other laws affecting operation and increasing expense require 8-wheel cabooses instead of 4-wheel cabooses, reduced hours of service, days off at company's expense, additional watchmen at crossings, double track, safety appliances, electric headlights, etc.

(p) Federal railroad laws up to August 5, 1909, cover 175 royal octavo pages.

(q) Railroad statutes in force in New York to end of 1906 make up an octavo volume of 782 pages.

(r) Railroad statutes in force in Pennsylvania to end of 1907 covered more than 700 octavo pages.

(s) At a recent session of Congress upward of 2,000 railroad bills were introduced.

(t) Two million nine hundred and ninety-one thousand seven hundred and seventy-six reports of all kinds were filed with Federal, State, and other authorities during the year ended June 30, 1913. The preparation of these reports cost the carriers many millions of dollars.

(u) Recently the New York Central, which has only a total right of way in Illinois of 142 miles, although it operates 6,034 miles of first track, was taxed \$600,000 by the State of Illinois as a condition precedent to its approval of an intended financing.

(v) In 1913 the sale of \$67,000,000 of convertible bonds by the New York, New Haven & Hartford was approved by the States of Rhode Island and Connecticut, but failed because Massachusetts did not concur.

I realize that I have enumerated many subjects about which from the standpoint of different people many may differ. Some people may think all these measures wise and some people may think that some or all of them are unwise. The point, however, is not to arrive

here at a conclusion either that they are all wise or that they are all unwise, but simply to show that, as they substantially affect an industry as important as the railroad industry, which is continental in its extent and its importance, the wisdom or unwisdom of these measures should not be subject to be decided by so many diverse and perhaps differing authorities, but by one consistent and responsible regulating body.

Under existing systems of governmental regulation the amount of railroad revenues is largely determined by governmental regulating bodies.

Under existing systems of governmental regulation the amount of railroad revenue which is generally fixed with respect to prosperous years is almost entirely determined by regulation. The railroads were unusually prosperous in the calendar year 1916, not because of rate increases, but because of the very large volume of freight carried. In 1914, before the European war broke out, many were on the verge of bankruptcy through small volume, from which sufficient revenue did not accrue at existing rates to properly maintain credit. Net revenue is the product of traffic units by that part of the rate remaining after deducting the cost of operation per traffic unit, and of course will be greatest when the deduction is smallest. The cost of operation per traffic unit falls very rapidly with increase of volume as interest, taxes, and many items of operating expenses are not raised by quite large additions of traffic units. It follows, therefore, that, although that part of the rate per unit retained as net may be small, the number of units may increase to such an extent that the product or net revenue may be very large and satisfactory. The average rate received for 1 ton-mile in 1915 was 7.3 mills, of which one-third, or 2.4 mills, was net. Eight tons of freight—that is, 80 barrels of flour, 285 bushels of grain, 5,000 feet of dressed lumber—must be carried 1 mile to enable the carrier to buy a 2-cent postage stamp. Regulation, originally intended to stop rebating and discrimination and to insure reasonableness of rates, has been made to cover total revenue, and at the present day the conduct of a large volume of business on the lowest freight rates and highest wages in the world, in an unusually efficient manner, producing large returns, marks the carrier as an object of suspicion and attack, the excessive earnings in some way being considered reprehensible.

Power of the railroads to control their expenses, substantially affected by forces beyond their control, such as labor unions, the acts of legislatures, the demands of regulating authorities for facilities and service, etc.

The railroads have very little control over their expenses at the present time. Headlight bills, superfluous crew bills, laws prescribing hours of labor for employees, including eight-hour law now in the Supreme Court—this was written about two weeks ago—orders of commissions to construct needless and ornamental stations for political and monumental purposes, deafness of commissions to the pleas of managements to be allowed to use their own judgment in allotting capital for such vital purposes as ballasting heavier rail, substitution of judgment of commissions for that of the owners in questions of management, proneness of legislatures

to grant unreasonable demands of organized labor and unwillingness to do anything for the protection of the interests of the shareholders are some of the reasons why the control of expenses, and to a considerable extent the management of the railroads, have been taken out of the hands of their owners.

With this restraint upon the control of both their income and their expenses, forces are in operation which, unless controlled and safeguarded, menace the stability of the existing system of maintaining transportation facilities.

With the restraints upon control of income and expenses which are enumerated above, forces are in operation which, unless controlled, safeguarded, and checked, menace the stability of the existing system of railroad transportation facilities.

Principles must be introduced into systems of regulation which will reasonably assure proper income and reasonably protect railroads against the unjust exactions of labor and excessive demands in regard to conveniences and facilities in order to meet this situation and to create conditions that will attract investors.

There is no way of meeting this situation unless the interests of the shareholders and bondholders of railroads are reasonably protected, not only against arbitrary and unreasonable exactions of organized labor but by being relieved of unnecessary and unjustifiable expenses. Under constructive and intelligent regulation there is no reason why investors should pay \$160 per share for national bank stocks paying 6 per cent dividends, or 52 per cent more than \$105 per share for the shares of honestly managed railroads with large volumes of traffic and paying the same dividends. Eight per cent national-bank stocks command \$225, or 63 per cent per share more than shares of the Union Pacific, the only railroad in the United States that I know of paying 8 per cent, whose shares command only \$138 each.

Present systems of regulation do not contain adequate safeguards in respect to these matters.

The present systems of regulation for railroads pay very little attention to the interests of the shareholders and bondholders, afford no protection against the exactions of labor, and, in assuming many functions of management, subvert discipline and leave to the officers and directors little control and responsibility for the results of operation.

The present market for railroad securities is narrowed by the following causes:

(a) The European war has unquestionably narrowed the market for railroad securities. Mr. Loree's very interesting investigation of the effect of the European war on American securities shows that on January 31, 1915, American securities of a par value of \$2,704,000,000 were held abroad. On July 31, 1916, or 19 months thereafter, only \$1,415,000,000 of American securities were held abroad, showing that between the two dates some \$1,300,000,000 of securities were returned to this country. As there is evidence that securities are still being returned, and as Europe will probably be a borrower after the close of the war, it seems reasonable to expect that the market for American railway securities will then be very much more narrowed.

(b) The exhaustion of underlying liens and the necessity of obtaining new money through inferior liens or without security is undoubtedly a cause.

(c) Financing largely through bond and note issues involving fixed charges, as has been done in late years by the railroads, is undoubtedly a deterring cause.

(d) Other classes of securities are unquestionably more attractive, as is evidenced by the fact that the public is paying about \$160 and \$225, respectively, per share for national bank stocks yielding 6 per cent and 8 per cent dividends, while they are willing to pay but \$105 and \$138, respectively, for railroad shares paying the same dividends. (Chart No. 10.) The returns from shares of manufacturing corporations are much less affected by regulation and are more attractive to the public. (See Chart No. 10, p. 898.)

I have made some extra copies, Mr. Chairman, of the charts attached to these notes. I think I have six or eight separate copies which show, in graphic form, the returns from national banks, railways, and a number of industries which I will pass to you as of possible interest.

Mr. SIMS. This will be a part of your hearing—that is, printed with your hearing.

Mr. KRUTTSCHNITT. Yes; those are duplicates of charts attached to the hearing.

Mr. SIMS. Just give one to each member of the committee present.

Mr. KRUTTSCHNITT. (e) The arrogant attitude of labor, opposing arbitration in any form, unquestionably affects the attractiveness of railroad securities. Public acts of the Sixty-third Congress, first session, covering sundry civil expenses for the fiscal year ending June 30, 1914, provides that no part of the money shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering conditions of labor, or for any act done in furtherance thereof not in itself unlawful; and forbids the expenditure of any part of this appropriation for the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to and for the purpose to obtain and maintain a fair and reasonable price for their products. Appropriations for sundry civil expenses for year ending June 30, 1915, and for sundry civil expenses for fiscal year ending June 30, 1916, contain same proviso.

The Clayton Antitrust Act, after forbidding corporations doing almost everything imaginable, specifies that antitrust laws are not to forbid the existence and operation of labor, agricultural and horticultural organizations, and such organizations are not to be held illegal combinations or conspiracies in restraint of trade.

At the time of the threat of the four brotherhoods to strike, in August, 1916, the President and Members of Congress were very insistent that as soon as possible after passing the Adamson eight-hour laws, laws recognizing the public interest in contentions between labor and the carriers should be framed, adequately protecting the interest of the public. From every bill that has been introduced in Congress, obligations or restrictions of any description bearing on

CHART NO. 10

labor have been promptly removed on the protest of labor leaders. The interests of the public seem to be substantially ignored. It is proposed by some to seize the property of the carriers in case dissatisfied employees block operations, and that they be operated by the Government pending settlement of disputes.

(f) Inability of railroads to promptly increase their revenues to meet their needs.

The Interstate Commerce Commission is manifestly overburdened, and the promptness with which it can pass on questions submitted to it will be affected by the proposed increase in membership. It is now authorized to suspend proposed tariffs for a period of 120 days, and if a hearing can not be concluded within that delay, to extend the suspension for a further period not exceeding six months. Under this practice, if the increased rate should eventually be approved, the carriers are deprived of the revenue that should accrue to them during a period of at least 4 and frequently 10 months.

The length of time consumed in the investigation of advanced rates proposed by the eastern trunk lines, many of which were finally authorized, is in the memory of all of us. If the lines were entitled to these increases at all, they should have enjoyed their benefits from the date on which their tariffs were originally filed.

In its last annual report the commission recommends a lengthening of the period of suspension, but it is hard to see how the public would suffer through the modification of the suspension power suggested by the carriers, because, first, it would relieve the members of the commission of the responsibility of authorizing increases in rates, which they are reluctant to assume; and by requiring the railroads to assume the initiative it would leave the commission unprejudiced in future hearings upon complaints. Second, the power of the commission to grant reparation would assure merchants of the benefit of the lower rates previously in effect, whenever the commission, on complaint, should find the increases to be unreasonable and should order the restoration of the former rates. Third, it is a simple measure of justice to the carriers to give them immediate benefit of the revenue accruing from advanced rates to which they are entitled, inasmuch as the rights of the public are fully protected by the power of the commission to grant reparation.

Here is an instance in which the carriers sustained heavy losses through the delay incident to overloading the commission with work:

The opening of the Panama Canal in August, 1914, was anticipated by the quotation of rates by the steamship lines which contemplated service through the canal. This enabled the transcontinental carriers to determine what the competition would be, and their original application for authority to make necessary rates on a number of heavy sea-going commodities to meet the quotations on the canal lines was filed with the commission on July 9, 1914. A final authority under which the carriers felt warranted in proceeding was not received from the commission until May 17, 1915, after which the publication of tariffs and legal requirement of 30 days' notice postponed the effectiveness of the reduced rates until July 15, 1915, so that for 11 months after the opening of the canal the transcontinental lines were powerless to protect themselves against the diversion of an enormous volume of business.

Likewise, application for authority to make reduced eastbound rates via Sunset Route on certain heavy sea-going commodities was filed December 29, 1914, but under the machinery of the law could not be made effective until July 25, 1916, which subjected us to the diversion of the business for a period of more than six months.

By the delay incident to the granting of these applications and some others of lesser importance the transcontinental lines were deprived of the opportunity to compete against the steamships for traffic, which was taken by the sea routes, upon which the aggregate revenue on the basis of the rates finally authorized is conservatively estimated as at least \$6,000,000.

This is not intended as a criticism of the Interstate Commerce Commission which, it must be said, cooperated with the public and the carriers in solving a very complicated problem, but it is a forcible illustration of the costly burdens upon the carriers of existing regulation.

The leading editorial in the Wall Street Journal of February 26, 1917, comments on the necessity of enlarging the Interstate Commerce Commission thus:

How much the country is in need of an enlarged and reorganized Interstate Commerce Commission is illustrated in its recent handling of certain emergency measures proposed by the railroads. Eastern trunk lines attempted to reduce the "free time" on domestic freight held at New Jersey for final delivery in New York, Brooklyn, and elsewhere on New York Harbor. The commission suspended this reduction until June 15, as it did a new tariff increasing the charges for storage on freight for both export and domestic delivery held beyond the free time in carriers' warehouses at New York Harbor points.

Neither of these was a revenue measure. Both were primarily designed to spur consignees of freight to move it quickly off railroad premises and so facilitate the unloading of other cars and the efforts of the carriers to relieve the great evils of congestion. Both measures would have done a great deal to restrict whatever speculation in foodstuffs is going on and would almost certainly have exercised some restraint upon recent advances in food prices in New York. But the commission must allow itself four months in which to reach these cases and deliberate upon them.

Another recent case of a different sort concerns the efforts of the carriers to increase their revenues by raising rates which are out of line with the general rate structure. A year ago the eastern railroads served notice upon steel manufacturers of their intention to cancel on August 1 the export rates upon steel products and again subject them to full domestic rates. The steel men did not seriously object, but asked that the change be deferred until January 1. October 1 was then fixed as a compromise date.

The commission held hearings, after which it suspended the effectiveness of the new rates until January 29, or for nearly a month longer than the steel makers had asked their postponement, and later made a further postponement until July 29, the limit allowed by law. Fortunately the commission was able to reach a decision a few days ago, under which the railroads were able to make the change effective February 24. But for at least five months the railroads were prevented from relieving themselves of special low rates upon an important volume of traffic for which the commission itself found that all justification had long since disappeared.

When in July, 1914, the commission refused the trunk-line railroads any advances in rates, although admitting that their revenues were less than the public interest demanded, it adopted as the substantial ground of its refusal Mr. Brandeis's recommendations that the carriers seek other means of supplementing their income. Among the means specified were the abolition of free storage of freight and the adjustment of specific commodity rates found by him to be unreasonably low. Practically the only one of the steps then so highly recommended that the commission has not delayed or prevented was an increase in interstate passenger fares. The revenue results of this one do not begin to cover the increases in cost of labor and materials that have taken place since 1914.

(g) The exigencies of politics unquestionably affect the attitudes of commissions. In States where the commissions are elected it is noticed that orders for new stations are generally received about the time of elections. In one case where there was no complaint whatever about a station the question of a new one was raised by a member of the railroad commission who visited the town shortly before election, conferred with the citizens, and suggested the necessity of a new station, shortly after which the order was issued to build one. From time to time State commissions boast in their annual reports of the amount they have taken from railroad revenues by reducing rates and the benefits accruing therefrom to the public. These sums subtracted from railroad revenues impose very severe burdens on the carriers, while the reduction in rates often does not reach the consumer, and in most instances bears an insignificant and almost unappreciated proportion to the cost of the commodity. Chart No. 10-g, page 902, shows how slightly the retail prices of commodities are affected by freight rates for the years 1910-1917, thus:

Dressed beef, 1.68 per cent, or one-half cent per pound, Chicago to New York.

Ham and bacon, ninety-four one-hundredths of 1 per cent, or 3 mills per pound, Chicago to New York.

Flour, one-fourth barrel, 4.69 per cent, or 17 cents, Minneapolis to New York.

Underwear, suit, one-tenth of 1 per cent, or 3 mills, Boston to New York.

Underwear, suit, two hundred and sixty-nine one-thousandths of 1 per cent, or 7 mills, Boston to Chicago.

Shoes, pair, seventy-eight one thousandths of 1 per cent, or 5 mills, Boston to New York.

Shoes, pair, two hundred and nineteen one-thousandths of 1 per cent, or $1\frac{1}{2}$ cents, Boston to Chicago.

Men's suits, one hundred and thirty-eight one-thousandths of 1 per cent, or $4\frac{1}{2}$ cents, Boston to Chicago.

(h) Chart No. 10h-1, page 903—this is a most impressive one, Mr. Chairman—shows the rise of 115 per cent in commodity prices between 1895 and 1917, and the resulting fall in the purchasing power of the dollar from 100 to 45, or 55 per cent. The rise in the price of commodities is of no great consequence to those whose income is derived from the sale of commodities, for with them both income and outgo are proportional to prices, but the hardship is greatest on those, the selling price of whose commodities is regulated by law. The railroads are in this position, which is equivalent to being compelled by law to accept payment for their services from the public in debased currency, worth only 45 cents on the dollar.

You will observe that the fall in the purchasing price of a dollar there, which is what is received by the railroads from the public, is only 45 cents. It shows a fall of 55 per cent from the basing point.

Mr. ESCH. I suppose that the very rapid divergence from the middle of February, 1915, to February, 1917, is largely due to the war conditions?

Mr. KRUTTSCHNITT. Between what points?

Mr. ESCH. The middle of 1915 to February, 1917.

CHART NO. 162

CHART NO. 10h-1

Mr. KRUTTSCHNITT. Of course that rapid jump upward and fall in the purchasing power of a dollar were unquestionably due to war conditions.

Chart No. 10h-2, page 905, shows in full lines (A) passenger and freight rates, 1895-1915, and in dotted lines (B) what the rates would have been had they risen with prices.

Actual passenger mile rate, 1915, 1.985 cents; rates increased in proportion to commodity prices, 2.956 cents, or 50 per cent more; actual freight rate, 1915, 0.732 cents; rates increased in proportion to commodity prices, 1.216 cents, or 66 per cent more.

These differences represent savings to the public in the one year, 1915, alone of \$314,000,000 on passenger and \$1,340,000,000 on freight traffic, a total of \$1,654,000,000.

Chart No. 10h-3, page 906, shows comparative prices paid by Southern Pacific Co. for five material items in 1897, 1908, and 1917, and that between the earliest and latest dates the price of bridge timber has risen 75 per cent.

Those figures apply to our own company only. I was unable to get them for the other companies of the country, but our company is typical of the whole country:

Cross ties, 125 per cent; steel rails, 113 per cent; bar iron, 201 per cent; car-journal bearings, 161 per cent; while the average freight rate has fallen 13 per cent.

Mr. ESCH. What do you mean by "car-journal bearings"? Are those journal—

Mr. KRUTTSCHNITT. Those are journal bearings.

The next chart, Chart No. 10h-4, page 907, shows the effect of all causes, rises in prices of all commodities used on railways, and rises in prices of labor as well as fall in its efficiency, superfluous-crew laws, cost of valuation, hours of labor, on the cost of producing train-mile units, 1895-1915.

Senator TOWNSEND. What do you mean by "lessening the efficiency of labor"?

Mr. KRUTTSCHNITT. It is a universal complaint that labor, at the present time, per hour or per any other unit of time, is far less efficient than it was a few years ago; that their minds do not seem to be on their work, and we do not get the product out of them that we formerly did.

Mr. HAMILTON. How do you explain that?

Mr. KRUTTSCHNITT. Want of interest, want of loyalty to their employers—

Senator TOWNSEND. Well, now, that states what you believe to be the fact, what you say you know to be a fact. What is the psychology of it? How do you explain that, following up the facts?

Mr. KRUTTSCHNITT. That labor no longer looks to the carrier, to its employer, as in charge of its wages and destiny, but looks elsewhere; it looks to the State legislatures and to Washington. Their discipline has practically gone—all discipline, for instance, in train service. It is almost impossible to maintain any, because any superintendent who disciplines a member of the four brotherhoods has to stand trial for it. He is met by a grievance committee, who use every possible argument—intimidation and argument—to have him

remit the penalty. If they can not get it from him, they go to the general superintendent, and if they can not get it from him, to the general manager, and by threats of a strike and tying up the railroad they get conceded what they want.

I will illustrate that. I can not be very accurate as to the date, but my impression is about three years ago, when the situation with respect to Mexico and the border got acute, our officers on our lines in Louisiana and Texas had been in conference with grievance committees of the conductors, brakemen, switchmen, and firemen for six months over some 76 cases of discipline that had been administered, against which they fought. The cases were so clear that the officers declined to remit the penalties. I think arbitration was offered and refused, and the men threatened to strike and did strike. After the strike had been on a day or two I received a communication from the head of the mediation board, suggesting or offering his services. I agreed. I told him I was perfectly willing, but I understood the men were not. He finally telephoned me a proposal that the men be all reinstated on their agreement to take up again for arbitration, if necessary, the settlement of these 76 cases. We told him that under the recommendations of his board and the plea that he made, that the use of our line was necessary for conveying supplies and troops to the Mexican border; that we would sink our contentions and accept the proposition as it came from the men and which he and his board were submitting.

So these questions were submitted again to a board after this strike and under whatever persuasion had been exercised by the Federal Mediation Board. Out of the 76 cases 61 cases were at once dropped and withdrawn, as the charges were incorrectly made. In other words, the men abandoned them. About eight cases—seven or eight cases—were decided in favor of the men and the remaining cases were turned over to arbitration. Now, that represented the penalties, perhaps, of certainly not more than one year on that system of lines, and the officers were kept at work for over six months arguing with the men why these penalties should stand and why they had been incurred and why they were necessary for the purpose of discipline; and then followed the strike, mediation, another conference with the officers, the dropping or withdrawal of very nearly all of the complaints, and arbitration of a few, and yielding to the men in a very few. Now, that is a typical case.

Mr. THOM. You said that seven or eight cases were decided in favor of the men? You mean by the officers on the rehearing, and not by arbitration?

Mr. KRUTTSCHNITT. Yes; they yielded. In other words, they withdrew the penalties. That is a typical case on our system. We have two grand divisions on our system. A large part of the time of the officers is taken up every year with simply argument with grievance committees.

Mr. HAMILTON. I assume before you finish you will devote part of your statement to remedies, such remedies as you propose. Am I right about that?

Mr. KRUTTSCHNITT. Yes; this matter in former years gave me a great deal of trouble personally when I had direct charge of operations and I have given it a great deal of thought and have written a

number of memoranda in the past four or five years which I have brought up to date, and with your permission I will submit them later on.

Mr. DOREMUS. In your Chart 10h-3 you show the comparative prices paid for materials in 1897, 1908, and 1917. Why did you select the years 1897 and 1908 for the purpose of comparison with 1917?

Mr. KRUTTSCHNITT. Because this chart for the years 1897 and 1908 had been prepared to give testimony in—I think it was the Union Pacific and Southern Pacific merger suit—and the same chart was taken, with the year 1917 added.

Mr. DOREMUS. The periods 1897 and 1907 were periods of depression, were they not? I was wondering whether in your judgment that would be a fair sort of comparison. Of course, 1897 was a year of abnormally low prices; 1917 was a year of abnormally high prices.

Mr. HAMILTON. As to 1897, I fancy that might be regarded as a year of emergency low prices.

Mr. DOREMUS. I hardly think we had recovered in 1897 from the depression which had existed prior to that time.

Mr. HAMILTON. However, 1907 was a very prosperous year for the railroads. The panic struck the country in the last part of it, but the full effect was not felt until 1908.

Mr. DOREMUS. The panic of 1908——

Mr. KRUTTSCHNITT. If you will pardon me a moment and will turn to the next chart, 10h-4, you have the prices from 1895 to 1915, and you can see at a glance what the trend of the prices was for all those years, and those prices were taken for all the roads in the United States.

Mr. DOREMUS. That is No. 10——

Mr. KRUTTSCHNITT. 10h-4. Taking the operating expenses on that sheet, you will see that the operating expenses which reflected the prices of materials—that is the dash line marked “C”—was about at a maximum in 1907 and continued about the same in 1908 and fell slightly in 1909, and thereafter shows an almost uniform increase.

Mr. KRUTTSCHNITT. This chart, Mr. Chairman, that Mr. Doremus called attention to, may be ignored, if you choose, and pass over to the next chart, 10h-4, and you will see the line C, indicating the operating expenses of the railroads per track-mile, showing an almost uniform increase from 1894 to 1915, with a few gentle undulations in it, and one of the things that appeals to me in the use of charts is that you take them and draw your own conclusions from them.

Mr. SIMS. Whatever the causes may be?

Mr. KRUTTSCHNITT. Yes. That is the upper chart in front of you.

Senator TOWNSEND. Chart No. 10h-4 is brought down to 1915, is it not?

Mr. KRUTTSCHNITT. One shows the statistics for our own road, which I can get up to date, and the other is based on the statistics of the railways of the United States published by the Interstate Commerce Commission, the latest date of which we can get is 1915.

This chart, 10h-4, shows the combined effect of all causes—rises in prices of all commodities used on railways and rises in prices of labor as well as fall in its efficiency, superfluous crew laws, costs of

valuation, hours of labor—on the cost of producing train-mile units. 1895–1915.

Cost per train-mile, 1895, 92 cents; cost per train-mile, 1915, 17 cents; a rise of 93 per cent.

Universal bankruptcy was avoided by the carriers only by heavy capital expenditures to flatten grades, eliminate curvature, and to purchase heavier locomotives and cars, all incurred for the purpose of increasing efficiency in train movement by hauling more tons per locomotive, which increased between 1895 and 1915 from 190 to 472 tons, or 148 per cent, and this, the only avenue of escape from financial ruin other than substantial raises in rates, heretofore denied to the carriers, labor seeks to close by train-limit laws.

Costs per ton-mile in 1895 and 1915 can be computed from data on Chart 10h-4 by dividing the train cost by tons per train, and earnings per ton-mile are given on Chart 10h-2, thus:

	Freight rate.	Cost per ton-mile.	Net per ton-m.
1895.....	8.4	4.8	
1915.....	7.3	3.5	

An accomplishment highly creditable to American railway management in maintaining net earnings per ton-mile in face of rising costs and falling rates.

This chart, 10-i, page 911, was intended to show the rise of tax-per unit of railroad—that is, per mile. I did not chart the aggregate, because the aggregate is affected by other miles of railroad, but this shows the increase per mile from the lower left-hand corner of \$200 in 1890, to the upper right-hand corner of about \$575 in 1914, and a slight fall to a little over \$560 in 1915.

Mr. THOM. You said \$575. It is \$570 on your chart, is it not?

Mr. KRUTTSCHNITT. No; it rises, you will notice, above the 570 line; it is about 573.

Mr. THOM. Yes; I see.

Mr. KRUTTSCHNITT. That shows an increase in the taxes on line 1 of 186 per cent. The actual payments on this account, 1907 to 1914, follow:

Taxes—Statistical abstract.

1907.....	\$80, 000, 000
1908.....	84, 600, 000
1909.....	90, 300, 000
1910.....	99, 400, 000
1911.....	103, 900, 000
1912.....	115, 600, 000
1913.....	122, 800, 000
1914.....	136, 300, 000

Mr. ESCH. I notice you have starred the last three years—1913, 1914, and 1915—showing the data with reference to those years only apply to roads having an annual operating revenue of about \$100,000,000.

Mr. KRUTTSCHNITT. Because that is the way they have been published by the commission. We could not get them in any other way.

Mr. ESCH. So that in considering the line from 1890 up to 1915 we have to bear in mind that that does not include the railways with the annual operating revenues?

CHART NO. 124

ALL RAILWAYS OF UNITED STATES
TAXES PER MILE OF LINE

Mr. KRUTTSCHNITT. Yes; but I want to say to you that the aggregate earnings of all of the railroads with annual operating revenues below \$100,000 is so small that it has an inappreciable effect on the general conclusions.

Mr. ESCH. They are the little and weak roads?

Mr. KRUTTSCHNITT. Yes. In other words, they affect the totals very little.

Mr. ESCH. Yet beneficial legislation might help them more than the higher or better roads?

Mr. KRUTTSCHNITT. That is quite true; yet the making of the chart according to the available data does not exclude them from whatever relief Congress might see fit to give them that it would not give to the larger roads.

My aim in charting these expenses and data was to give a picture which, to my mind, is very much more easily absorbed and understood than a vast array of figures which is necessary to produce one of these charts. This is a picture. Anyone can see it at once; and to determine the trend of a sheet of figures requires a great deal of time and labor, and I might say really personal work that the man studying the chart has to give it. Because of the mass of stuff that I have to digest I have been using this system for 20 to 25 years, simply because I found myself mentally incompetent and without the time necessary to study the prodigious number of reports that are represented on one of these sheets.

Senator TOWNSEND. What do you include in taxes there?

Mr. KRUTTSCHNITT. All State as well as Federal taxes. Everything in the shape of taxes, municipal, county, State, Federal, and income taxes, as long as it has applied, as long as it has been in force.

Mr. ESCH. The 8 per cent tax, of course, was not operative when you finished the chart?

Mr. KRUTTSCHNITT. The new income tax?

Mr. ESCH. Yes.

Mr. KRUTTSCHNITT. No; we had no returns from that because the calendar year 1917 is the first year in which the increased income tax applied, and we shall not know what those taxes are until the close of our books after the 31st of December, 1917.

Mr. ESCH. You, of course, anticipate a sharp upward movement of the curve, do you not?

Mr. KRUTTSCHNITT. Unquestionably; a very sharp upward movement. Then comes on another element, the 8 per cent on profits in excess of 8 per cent. The Southern Pacific has a number of outside enterprises; numerous market carrier companies, not railroad companies at all, but oil development companies and others on which no doubt it will have to pay quite a large tax under that new tax law, the 8 per cent tax on the excess over 8 per cent. So that I am afraid, Mr. Esch, that our chart will not hold.

Mr. ESCH. You will not have room enough on the chart?

Mr. KRUTTSCHNITT. We shall have to make another.

Mr. SIMS. Do you proportion your income tax per mile of railroad?

Mr. KRUTTSCHNITT. No, sir; I did not say that this showed the income tax per mile.

Mr. SIMS. If that be added to it—

Mr. KRUTTSCHNITT. I think you misunderstood Mr. Esch's question. He asked me, or rather observed that of course it could not include the increased income tax, the 2 per cent normal tax, and the increases in supertaxes under the new income-tax law. I told him of course it did not, because those taxes are not matured yet.

Mr. SIMS. You were discussing the chart showing the per mile increase taxes?

Mr. KRUTTSCHNITT. Taxes per mile?

Mr. THOM. But that does include the income tax of the normal, of 1 per cent, etc.?

Mr. KRUTTSCHNITT. Yes; it includes everything that has accrued up to the end of 1915. Nineteen hundred and sixteen will no doubt be larger, because the earnings in 1916 were larger, the income tax is based on earnings, and in California the State taxes are based on earnings, so 1916 will be much larger than 1915, and 1917, for the reasons that the two new sources of tax will not appear until then, and that year will be still higher.

Mr. SIMS. But it can only affect the earnings in excess of 8 per cent?

Mr. KRUTTSCHNITT. No; the excess-earnings tax will not affect—

Mr. SIMS. That is, I mean this excess-earnings tax?

Mr. KRUTTSCHNITT. Yes; but the income tax has been largely increased.

Mr. SIMS. I know that, having been obliged to pay a little of it out of my salary every month.

Mr. KRUTTSCHNITT. I thought Congressmen were exempt?

Mr. SIMS. No; they are part of the burden-bearing people of the country.

Mr. HAMILTON. Most of them are willing to pay the tax if they can draw the salary.

Mr. ESCH. And there are a few bachelors.

Mr. KRUTTSCHNITT. This diagram, 10i-1, page 914, shows for the years 1900 and 1915 the relative calls made on a dollar of gross earnings for taxes and other purposes. In 1915 for every 11.2 cents received by the owners the tax collector received 4.5 cents. You will notice that operating expenses one year took 63.4 cents and in the later year nearly 67 cents out of the dollar. Interest on funded debt in the first period was 16.3 cents, in the later period 15.7 cents, or, if added to the other deductions, it took a slice out of the dollar, or out of the pie, if we choose to consider this circle a pie—3.2 cents in 1900 and 4.5 cents in 1915, leaving 11.2 cents in the latter.

Mr. SIMS. If it keeps on as it has been going, how long before it will take the whole dollar?

Mr. KRUTTSCHNITT. I am afraid about February, 1918, the slice of the dollar left and the net income will perhaps require the services of a microscope to find it.

Mr. ESCH. Why in the 1915 charge do you insert a new element, which is deductions, 1.8 per cent?

Mr. KRUTTSCHNITT. Those are copied simply from the Interstate Commerce Commission's statistics on railroads. It is put in simply because they put it in.

Mr. ESCH. Probably due to the requirements of section 15?

CHART NO. 102

ALL RAILWAYS OF UNITED STATES
DISPOSITION OF EACH DOLLAR OF GROSS RECEIPTS IN 1900 AND 1915

*Submitted by
Frank K. Knecht
March 26, 17*

Authority:—I.C.C. Statistics of Railways of U.S.

Mr. KRUTTSCHNITT. In 1900 I presume they did not split up the interest on the funded debt into the two items, and in the later date they did.

In 1900, after paying operating expenses and interest, there was left 20.4 cents of the railroad dollar, of which the tax collector took 3.2 cents, or 16 per cent; and in 1915, out of 15.7 cents left after paying interest and operating expenses, the tax collector took 4½ cents, or 29 per cent.

You see at that rate it will not take long to take it all.

Mr. SIMS. In other words, there will not be any profit under the present régime?

Mr. KRUTTSCHNITT. I mean unless conditions change.

Mr. SIMS. I mean if it keeps on it is only a matter of calculation, a matter of years, until it will absorb it all?

Mr. KRUTTSCHNITT. Yes; if things go on as they are going on, unchecked, there is no doubt about that.

Mr. SIMS. Do you not think this kind of illumination is liable to reflect on railway credit very adversely?

Mr. KRUTTSCHNITT. What illumination?

Mr. SIMS. Showing what is going on and what will take place without a change? What do you expect the effect will be on value of bonds and stocks?

Mr. KRUTTSCHNITT. All these things are thoroughly well known now. I am only presenting them to you in a way I thought would make the matter clearer.

Mr. SIMS. I am glad to have the illumination; but what I am thinking about is what effect is it going to have on railway credits?

Mr. KRUTTSCHNITT. I have read a good many pages here to show what the effect will be and what the effect has been up to date.

Mr. SIMS. If I had any railway securities, after hearing you read this, I would feel like going out and selling them.

Mr. KRUTTSCHNITT. If you had watched the trend of things, if you had a railway security, I think you might have yielded to your fears before this. There is no secret about this. The operations of the railroads are given the widest publicity; the most intimate statistics are filed right in the office of the Interstate Commerce Commission. Any citizen can go there and see them who has any interest in them, and any man who has any railway securities, no doubt, takes interest enough to either go there and see the statistics or to have some one go there and get him extracts of what he wants to see.

Mr. SIMS. Still, the average market value of stocks and bonds has not declined in proportion to what this would indicate if it had its normal effect.

Mr. KRUTTSCHNITT. But what I am saying here is not revealing any secrets. It is simply stating facts that exist to-day. They are known thoroughly well by investors, by bankers, brokers, and others who make it a business to study operations of railways. So I am not revealing any secrets; I am simply calling attention to facts that are given the widest publicity.

Mr. SIMS. And that this committee ought to know?

Mr. KRUTTSCHNITT. Yes; and that this committee, no doubt, does know to a considerable extent; but I am simply here trying to place this matter in such a way before the committee as to save them a

great deal of time and trouble that would be necessary to work those things up themselves.

Mr. SIMS. I think you are doing exactly what you ought to do: I am not criticizing, I am only asking what the effect will be on the markets of the country by showing the fact that the market is an ever-diminishing one under present conditions.

Mr. KRUTTSCHNITT. I do not think I am injuring railway credits at all by telling that, because bankers, brokers, investors, and a large part of the general public know it now.

Mr. SIMS. Well, if the truth injures them, we can not help it.

Mr. KRUTTSCHNITT. For instance, the Southern Pacific has now about 34,500 shareholders; they know it; they have their annual reports, and their attention is called to these things once a year.

Mr. ESCH. It is true that these statistics are filed with the commissioners and are available, but, as you yourself have said, the latest statistics go back only to 1915, and they are just about two years behind. I never could understand why the commission should be that far behind in developing its statistics of railways, in view of the requirements of section 15 of the Interstate Commerce Commission act.

Mr. KRUTTSCHNITT. I will say this, I have not used them because I can not vouch for them, but the railroads do make a stagger at getting the statistics in a rough form earlier than that.

Mr. ESCH. But the general public, the student of the question, like ourselves, for instance, not interested in any particular road but in the totals of all roads, can not get the available statistics until they are almost 2 years old.

Mr. KRUTTSCHNITT. Your criticism is a correct and a just one. I objected years ago to Mr. Harriman because our accounting department published the statistics for our roads from 40 to 70 days after date. He was not convinced much of the necessity of what I wanted to do until 1907, when the squeeze came, and he was putting questions to me fast and furious about why this was so and why that was so, and without disrespect, I said, "Mr. Harriman, it is impossible for me to tell you until I get the returns from the accounting department, and it may be 40, 50, or 60 days before I can answer you." He got very impatient. When he wanted something he wanted it very badly. He said, "What is the remedy for this?" I said, "The remedy is to get the statistics fresher, quicker." He said, "How can it be done?" I said, "In olden times, before the merger of the Union Pacific, we had methods on the Southern by which the statistics were furnished the operating men much quicker and much fresher," and, without bothering you with the details of the conversation, it ended with his saying, "Go ahead and do whatever you want, but get them." We get the operating statistics now as to what our locomotives are doing and our superintendents are doing 10 days after date, instead of 60 to 70 days after date.

Now, I can only faintly imagine the bulk of stuff that is dumped on the Interstate Commerce Commission by comparing it with the bulk of stuff in the way of statistics that are dumped on me. Our system is 13,000 or 14,000 miles. The Interstate Commerce Commission has to do with the railroads of the United States what I am doing simply for my employers, and, by a rule of simple proportion, the amount of stuff that they require for 260,000 miles of road is twenty

times as great as I get for 13,000 miles of road. I expect the answer is that it is almost a physical impossibility, but it seems to me that some kind of figures could be given for the use of Congress and the public somewhat fresher than those they give now.

As I remember it, there was a statement issued by the commission covering approximate results for 1916 that appeared about two weeks ago, just about the time I completed these memoranda. But that, I think, took in the roads of over \$1,000,000 revenue.

Mr. ESCH. It was only preliminary and the statement was not complete?

Mr. KRUTTSCHNITT. Yes. That is why when I looked at it I rejected it. I told the draftsman, who was preparing these charts, "Do not use that; I do not want to use anything for which I can not give the authority on the bottom of the chart." But I realize the embarrassing position in which you are put, that you have not these statistics, but that is a matter that I suppose the commission might be able to remedy.

Senator TOWNSEND. How often do you make your report to the commission?

Mr. KRUTTSCHNITT. We make a complete report annually, but we make a vast number at shorter intervals. They get full reports monthly from us as to earnings and expenses.

Senator TOWNSEND. Are your annual reports up to date when you make your report?

Mr. KRUTTSCHNITT. Our fiscal year closed, as that of most carriers did, on the 30th of June. Our annual report was ready about the latter part of September—roughly, three months after the close of the year. We do not get all of the monthly statistics complete until about the 20th or 21st of the month following. The statistics that I said we got 10 days after date are those on which we can check up the efficiency of operation by the men in direct charge of the property, but all of the statistics are not ready until about the 20th of the month, and the annual report takes about 40 to 45 days after the close of the last month to prepare. But I would say that the Southern Pacific is such an extremely complicated company, requiring returns from, I think, 112 or 115 different companies, that it takes longer to prepare its annual report than it does of almost any other road in the country.

Mr. THOM. Mr. Chairman, may I make just a brief statement here?

Mr. SIMS (presiding). Certainly; without objection.

Mr. THOM. I think the chairman's question a moment ago is a most important one and is one that has been giving all of us who have a responsibility about this matter great concern. The question was whether or not the stating of these conditions would hurt railroad credit. We arrived at the conclusion in the first place that the truth is due to the public at all times whatever it may be and that nothing is gained either in the public interest or anybody's by an attempted concealment of the real facts, and, in the second place, we felt it our duty as the manifest tendency of these conditions is so apparent to us that we should bring them to the attention of the responsible Government authorities before the collapse actually came, so that the remedy might be applied before the disaster to us, which, as we think, the tendency is inevitable.

Mr. SIMS. You may proceed, Mr. Kruttschnitt.

Mr. KRUTTSCHNITT. Diminishing surplus available for dividends: In 1908, fifty seventy-fourths, or 68 per cent, of all capital stock paid dividends; in 1915, fifty-two ninetieths, or 58 per cent, paid dividends; and the average dividend rate on all stock fell from 5.4 per cent in 1908 to 3.8 per cent in 1915, or 30 per cent.

The railroads, generally speaking, must finance themselves through securities involving fixed charges and certain returns to the investor. The public is not willing to assume the risks of a partner to contingent profits in enterprises in which it has little control as to management and expenses and none as to revenues. Its returns would be too uncertain, dependent as they would be on the judgment of persons with no sense of responsibility to owners. The trend of capitalization through interest-bearing securities for the last 26 years is thus shown: In 1890 the proportion of funded debt to total capital was 49.78 per cent, and in 1916 it was 65 per cent.

The fixed charges must be earned or the road becomes bankrupt. Large roads with correspondingly large earning capacities whose fixed charges are not more than 50 per cent of their gross income and whose funded obligations do not exceed 70 to 75 per cent of total capitalization are, of course, able to meet reverses in years of low earning with a much greater margin of safety than those whose fixed charges exceed these percentages. The relation between the amount of capital which imposes fixed charges that must be earned under pain of bankruptcy and the amount of capital contributed by the owners and represented by stock, a return on which is not compulsory but is contingent on earnings, should be certainly not more than in the proportion of two or three to one—that is, 67 per cent to 75 per cent—for large companies, and in the proportion of one and one-quarter or one to one—that is, 44 per cent to 50 per cent—for small ones.

In other words, that margin of safety has been passed as to small companies and it is rapidly being reached as to large ones.

American railways are never complete. They are growing organizations and need sustenance for both growth and operation like a boy. Grown men can reduce their intake and maintain their output, but boys and railways suffer under such conditions. Yet our system of regulation forbids the railways to charge rates sufficient both to earn income on capital and to provide funds for growth. The facts approved by experience are antagonistic to the theory that earnings on railways should approximate earnings on investments.

The safe proportion of fifty-fifty for small roads is now largely exceeded in American railroad capitalization, and the rapid trend upward in late years is a danger signal that inspires caution if not alarm in investors' minds. We show elsewhere why, under present conditions, there is little or no opportunity of financing by stock issues. A large percentage of railroads earn no dividends at all, and the average dividends for a period of years of all the railroads of the country is so small that the margin above fixed charges is not sufficient to make railroad bonds as attractive as they should be. The result is the railroads have to pay larger interest charges to secure money than if their incomes were better assured.

Chart 15, page 919, shows for 1904 and 1914 the changes in rates of interest on funded debts.

CHART No. 15

Percentage of total funded debt (excluding equipment obligations) at different interest rates.

	3 to 4 per cent.	4 to 5 per cent.	5 per cent. and over.
1904.....	38.5	32.0	21.1
1914.....	11.0	57.0	26.2

Mr. SIMS. Did you make an average for both periods there?

Mr. KRUTTSCHNITT. I did not make the average. On my own copy I find some pencil scratches here that I made after the chart was complete—that the average rate on all funded securities in 1914, the latter year, was 4.6 per cent.

Mr. SIMS. What was it on the first date mentioned, if you have that?

Mr. KRUTTSCHNITT. I can compute that, Mr. Charmain. I have not done it, but I will do it and will give it to-morrow if the stenographer will put it in.

Regulations should be based on normal conditions and not on abnormal ones, such as prevailed in 1916, that have grown out of an unusual volume of traffic traceable to the European war.

I have put a few figures as to the returns on our own company from the date of its organization:

Average capital stock of Southern Pacific and proprietary companies during 31½ years, since its incorporation in 1885.....	\$288,742,000
Average annual surplus over fixed charges, or only 4.19 per cent on capital stock.....	12,102,000
Property investment, 1885.....	409,000,000
Surplus reinvested in property to date.....	192,100,000
Money derived from sales of securities and invested in property..	589,500,000
Total.....	1,190,600,000
Surplus over fixed charges, 1916.....	29,950,000
Return on property investment, per cent.....	2.51

Rates which applied to abnormal volume of traffic in 1916 yielded a surplus of about \$30,000,000 would imperil dividends with a considerable decrease of volume and the present scale of operating expenses.

The public's greatest interest is in adequate transportation facilities and not so much in low rates, which as to most commodities bear a very small percentage of their cost. Excluding low-grade commodities the percentage of the freight rate to cost is so slight as to offer no justification to the dealer to substantially raise prices to the consumer. For example, California oranges can frequently be purchased at as low a price in New York and Chicago as in California; and it is a custom with tradesmen, such as greengrocers, grocers, etc., to pay the freight on purchases, delivering them for considerable distances around large centers of population at the same prices as they charge for city delivery. It may be stated with little fear of contradiction that the consumer seldom, if ever, profits from a lowering of freight rates. The middleman pockets whatever reductions his organized efforts can procure from commissions. The small influence of freight rates on ordinary purchases is shown on the chart I have already placed before you, 10-g.

Unquestionably the public interest requires that railroads should be put on a more stable basis than they now occupy.

New construction has been falling steadily because investors have found railroad securities unattractive and will not purchase them except at rates of return that the railroads can not promise. Chart 21, page 922, shows that less than 1,000 miles were added to operated mileage in 1915, a smaller number than in 1865, just after the end of the Civil War, or than in 1849, 66 years prior to 1915.

According to theorists and regulators, railway dividends should resemble mortgage interest, and rates should be reduced to bring that about. We see the result. Dividends on a mortgage rate do not attract speculative capital, and speculative capital is necessary to produce railway transportation in advance of its demonstrated necessity. There never was a scarcity of transportation when railway capital was allowed to earn good profits. On the contrary, there was a surplus of such size that it was thought the country could do with less. That is the root cause of the present situation, which reduces general trade and profits to an extent making the savings on rates to shippers not worth consideration. The railroads of the country have been kept up to the proper standards of safety, but improvements without which the railroads can not keep up with the times and give the best service possible have been sparingly made because of lack of money, lack of control of their operations through the assumption of management by commissions and Government bodies, and the general paralysis caused by fear of what the future may have in store. Efficiency of management is checked by deprivation of many means to increase it. The lack of control over earnings by inability to get their inadequacy recognized by commissions and the necessary relief through increased rates at times when the volume of traffic is small prevents the carriers from providing increased future facilities or looking ahead sufficiently into the future. The result is that in times of very heavy traffic many much-needed improvements are wanting, and purchases such as equipment and power at the present time are improvidently made at exorbitant prices. From 1900 to 1915, \$9,600,000,000 new capital has been put in the railways, or \$640,000,000 per annum, which has not sufficed to make all the additions and improvements required for the highest efficiency.

Bearing the expenditures in mind which have been already made and realizing that a large additional amount will be necessary to provide for the desired adequacy of transportation facilities and for the refunding of maturing debt, it is necessary for the responsible railroad managers and for the statesmen of the country to form some estimate of the capital requirements during, say, the next 10 years. It is, of course, impossible to be accurate in making this estimate. Mr. James J. Hill a number of years ago estimated that \$1,000,000,000 per annum would be necessary. Some have estimated that a very much larger amount would be required. Without undertaking to accurately state any amount, it is obvious that the necessary capital requirements to keep the railroads abreast of the times and to provide for the refunding of maturing obligations will be enormous, almost staggering to the imagination. And the question is: Where is this money to come from? Under existing conditions have the railroads the credit to secure it?

CHART NO. 27

Records of the Pacific Car Demurrage Bureau, operating on the Pacific coast, show that the average detention by consignees of cars in the State of Oregon is approximately 50 per cent greater than the detention in the State of California, where the railroad commission has permitted a sufficiently high demurrage rate to be charged to secure the prompt unloading of cars. In the period of from February to November, 1916, 76,200 cars were required to handle the State and interstate traffic in the State of Oregon, while if the cars had been handled under California demurrage rules 71,430 cars would have handled the traffic, a saving of 4,770 cars, or 6.7 per cent.

The California commission has been very cooperative with the carriers in bringing about a better use of rolling stock, and this measures the difference between the rules they allow and the rules prescribed in Oregon, the adjoining State.

Mr. SIMS. The railroads themselves do not fix their own demurrage charges; they are not permitted to do so?

Mr. KRUTTSCHNITT. Only under the approval of the commissions.

Mr. SIMS. That is Oregon?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. Is that general throughout the United States?

Mr. KRUTTSCHNITT. Yes. It is also under the Interstate Commerce Commission. The railroads can only propose demurrage rates, but they can not put them in force until filed with the commission.

Mr. SIMS. Therefore different States have different demurrage rates?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. I mean it is possible for them to have?

Mr. KRUTTSCHNITT. It is actually so in California and Oregon.

Mr. HAMILTON. The action of the Federal commission on these demurrage propositions—is it reasonably prompt, or is that again a case of congestion of work?

Mr. KRUTTSCHNITT. It is a case of delay; though in the emergency that existed this year the commission did act more promptly than usual.

Mr. HAMILTON. How more promptly than usual? Could you measure that in some way, so that we can get an idea?

Mr. KRUTTSCHNITT. I think about October or November, 1916, the complaints about congestion and inadequacy of car supply became very acute, and the American Railway Association appointed a commission to sit in Washington—a commission of their own selection—to take up matters with the Interstate Commerce Commission to secure a prompter release of cars, and what they proposed was a large increase in the demurrage rate for detention of cars after the free time and an increase in what is known as the "per diem rate"; that is, a rate that the roads pay to each other for the use of cars. The commission, after considering the matter a while—I think at first they refused to increase the demurrage rate at all—suspended the rate for five or six months; afterwards, at the instance of this American Railway Association Commission, the matter was taken up again; the Interstate Commerce Commission said that if there were a large increase made in the rental payments of one road to another, they would sanction an increase in the demurrage rate, which was done, but not to the extent asked by the carriers; in other

words, it was a compromise. The demurrage rate was made larger, but not enough larger, in the opinion of the carriers, and the per diem rate was increased from 45 cents to 75 cents a day on interchange of cars.

Mr. HAMILTON. By "free time," do you mean the time during which freight is permitted to remain upon the cars before demurrage takes effect?

Mr. KRUTTSCHNITT. Free time is the time allowed without demurrage.

Mr. HAMILTON. Yes. That is what I was trying to get at.

Mr. KRUTTSCHNITT. Yes.

Mr. HAMILTON. How is the free time determined?

Mr. KRUTTSCHNITT. That is determined by the carriers, who file the rates with the commission.

Mr. HAMILTON. Is there any uniform arrangement throughout the country as to free time?

Mr. KRUTTSCHNITT. No.

Mr. HAMILTON. That depends upon the locality?

Mr. KRUTTSCHNITT. Yes; it varies very considerably.

Mr. THOM. Some of the States fix it absolutely, as an act of initiation by the State authorities.

Mr. HAMILTON. Then there is a conflict between the Federal commission and the various State commissions as to demurrage and free time?

Mr. KRUTTSCHNITT. As I remember it, the carriers are required to put that on their tariffs, which are filed with the Interstate Commerce Commission; and my recollection is that all of that free time and demurrage has to be approved or, rather, not disapproved by the Interstate Commerce Commission, because it is a part of the tariff.

Mr. THOM. Yes; but the Virginia rule is made as to intrastate traffic by the Virginia commission, without the initiative of the carriers at all.

Mr. ESCH. I think the Car Service Commission rules, which are now enforced by the Interstate Commerce Commission, provide two days' free time; then a dollar a day, with an additional dollar for each succeeding day, up to a maximum of \$5.

Mr. KRUTTSCHNITT. My recollection is that the California rate begins with either two or three dollars and rises; but it has been most efficient in preventing car delays, and I can add that there has been, singularly, little objection or friction with the public because of it, the public seem to have accepted it, and it is working perfectly smoothly, and releasing cars much more rapidly than in adjoining States.

Mr. ESCH. Some States enforce reciprocal demurrage, but I do not think that has ever been established by the Car Service Commission or indorsed by the Interstate Commerce Commission.

Mr. KRUTTSCHNITT. I think you are right about that.

Mr. SIMS. About the car shortage in the northeastern Atlantic coast territory, one of the commissioners before our committee, my recollection is, said that they were enabled to relieve it largely by the cooperation of the railway companies serving that section, and that they cooperated to the extent of doing that which they could not be compelled to do either by law or regulation.

Mr. KRUTTSCHNITT. That is correct. This car commission that has been sitting in Washington has been clothed with such authority that very few railroad managers dreamed six months ago that railroads would ever agree to such a thing; but there is a very strong sentiment in the American Railway Association that emergencies warrant emergency measures, and although car commissions had not theretofore been given such plenary power as this commission possesses, the measure was voted through in the face of, I must say, a great deal of opposition, to give this commission sitting in Washington a free hand, permitting them to cooperate with the Interstate Commerce Commission and secure the support of their authority, in doing things that the railroads theretofore had never agreed to do; and I know that the Interstate Commerce Commission recognizes that the car commission, voluntarily created by the carriers, has been of great service in relieving the congested conditions.

Mr. SIMS. And that the railroad companies acted without any reference to their respective gains or losses for that period of time.

Mr. KRUTTSCHNITT. That is what I meant to say; but you have expressed it better than I did—that is to say, they sank all considerations of technical rights; they did a great many things that under ordinary circumstances they would not agree to at all.

Secret rebates, charging less than published rates, and discriminations between individual shippers are the evils which mainly led to the enactment of the interstate-commerce law, and they have been practically eliminated by the law. Such offenses so rarely figure in the reports of the commission or of the courts that they may now be regarded as an almost extinct species of evil. The discriminations of the present day are mostly presented by controversies between localities to which the real parties are competing markets or competing fields of production. The carrier is simply the medium through which the rival claimants bring their dispute before the commission. There is another significant feature in the matters which are beginning to come before the commission. I refer to complaints calling for increased service and enlarged facilities. Unlike the other classes of complaints, these demands for cars, especially designed equipment, and additional facilities involve expenditures and require increased revenues. The railroads will soon become judgment proof in respect to orders rendered in such complaints unless some way is found to increase their earnings and borrowing capacities.

There is a serious menace to effective regulation in the tendency on the part of the commissions to exercise the functions of management; in other words, to substitute their judgment on purely business propositions for the judgment of railroad managers.

No system of legislation or government regulation can be characterized as wise which shows passion, vindictiveness, unwillingness to give proper consideration to the rights of that part of the public that owns the railroads, which ignores constructive measures intended to insure the stability, adequacy, and growth of the instrumentalities of commerce and confines itself to mere infliction of penalties and to the assumption of management and control of the properties instead of their regulation; in other words, substituting the judgment of public officers not responsible to anyone for the condition or efficiency

of the property, for the judgment of the directors who are the representatives and trustees of the shareholders.

Extortionate charges are a thing of the past, and in aiming to cut rates to their lowest possible figures the interest of the whole public in the character and standard of transportation is subordinated to the interest of that part of the public only that profits by lowering rates; that is to say, the shippers and their agents and not the general public, the ultimate consumers. Chart No. 10h-2 shows the constant fall of passenger and freight rates since 1895.

Passenger rates per mile have fallen from 2.04 cents to 1.98 cents, or 3 per cent.

Freight rates per mile have fallen from 8.39 mills to 7.3, or 13 per cent, and in the same period operating expenses per train mile have risen 93 per cent. (Chart No. 10h-4.)

The interests of shareholders of railroads, the holders of their bonds, and the general public are all subordinated to the interests of organized labor and shippers. On account of the marked preference of the public to other than railroad investments it would seem that the time had come when a careful review should be made of regulation, of its benefits and shortcomings.

Investments must be attractive. People can not be forced to invest money where they do not desire to do so. Perfectly safe investments with larger returns than from railroad securities can be made in the stock of national banks, which are closely but reasonably and intelligently regulated by the Federal Government—in agricultural and other business—manufacturing, shipping, mining, etc. (Chart No. 10.)

	Per cent.
Return on railway stocks, 10-year average.....	4.6
Return on national-bank stocks, 10-year average.....	10.9
Return on two sugar stocks, 1917.....	14.5-18
Return on zinc mining stocks, 1917.....	16
Return on machinery-manufacturing stocks, 1917.....	16
Return on steamship-company stock, 1917.....	18
Return on petroleum-company stocks, 1917.....	20
Return on two copper-mining company stocks, 1917.....	48-50

I might add what has come out since I wrote this: That a steel corporation shows a return on its capital stock of between 48 and 49 per cent for the last past year.

Mr. SIMS. The United States Steel Co.

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. What does the Bethlehem Steel Co. show in the way of profits for the same time?

Mr. KRUTTSCHNITT. I do not know. I mentioned the steel company because they have published their results. They published them about a week or 10 days ago.

The time has come when in the public interest constructive regulation and encouragement must be substituted for destructive regulation and repression. A strong editorial in the *Manufacturers' Record*, February 15, 1917, calls attention to the present crisis in railway affairs thus:

Ten years ago, statistically reviewing the percentage of growth in railroad and business traffic in the United States, the *Manufacturers' Record* predicted a complete physical breakdown of our railways system unless \$10,000,000,000 should be expended within 10 years for increasing our transportation facilities at least 50 per cent, without counting in this the usual expenditures for maintenance of track and equipment.

That prediction is now fulfilled.

The railway system of the country has broken down.

This vital factor in the business life of the country, and in national safety if war should come, has practically collapsed, since embargoes on freight are being issued in every direction, traffic is congested, manufacturing enterprises are hampered, and all business is restricted.

The great problem before the American people to-day, because it is as vital to safety in time of war as to prosperity in time of peace, is how to find the billions that must be expended for an enormous expansion of railroad interests. We are squarely up against this problem, the magnitude of which legislators, National and State, financiers, business men, and even railroad people themselves, have not heretofore seemed to adequately grasp. Delay can not be endured longer without great disaster. How shall we meet the problem is the Nation's question.

Mr. SIMS. You have quoted that. I suppose you regard it as correct?

Mr. KRUTTSCHNITT. Substantially so; yes. Government regulation should unquestionably possess the elements of simplicity and homogeneity to the greatest extent possible consistent with the public interest. That it does not possess these qualities at the present time is evidenced by the following:

In 1911 the Railroad Commission of Louisiana petitioned the Interstate Commerce Commission to remove the discrimination against Shreveport in the rates to and from points in Texas, which existed because the carriers were forced by the Texas Railroad Commission to establish unusually low rates to and from Dallas and Houston, and because the carriers maintained what they considered reasonable interstate rates in and out of Shreveport. The Interstate Commerce Commission decided in March, 1912, that the rates were discriminatory against Shreveport and ordered the discrimination removed, and on appeal to the Supreme Court the order was sustained, and it was found that as the Interstate Commerce Commission had not found the interstate rates unreasonable the carriers would be justified in removing the discrimination by increasing the intrastate rates.

In August, 1914, the Louisiana commission requested the Interstate Commerce Commission to make a similar order in regard to rates from Shreveport to all points in Texas, and the relief was partially granted. During this same period efforts of the Texas carriers extending over a number of years resulted in the Texas commission granting increased rates on a limited number of commodities, but after the decision of the Interstate Commerce Commission the Texas commission expressed its displeasure by canceling all authority previously given to advance rates, and a bill has been introduced in the legislature by the attorney general of Texas, providing that if any common carrier after March 1, 1917, shall disobey or otherwise refuse to comply with any requirements of any statute of Texas, or of any rate, rule, or regulation of the railroad commission, it shall be deprived of the benefit of any law of Texas and no Texas court shall entertain jurisdiction of any cause filed by it, or secure or enforce any privilege or power claimed by it; and the charter of such corporation shall also be subject to forfeiture.

Senator TOWNSEND. Do you know what the status of the bill is now in the legislature?

Mr. KRUTTSCHNITT. It has not come up to vote yet.

Another case is what is known as the Houston-Galveston differential. The Texas commission, after informal conferences with a number of the carriers in or about 1911, stated to them, unqualifiedly, that unless the cotton rates from Texas to New Orleans were made 10 cents higher than the current rates to Galveston that they would reduce the rates to Galveston 10 cents per 100 pounds, with exception of Texas and Pacific and some of its connections, the object being to prevent the export of Texas cotton through the port of New Orleans.

Mr. SIMS. That is any port outside of Texas, is it not?

Mr. KRUTTSCHNITT. Yes, sir; I said that was the object, because I knew what it was. But they were not particularly aiming at New Orleans. What they wanted was to force the cotton through Galveston.

In 1913 arrangements were made with bankers for the sale of two-year notes of the Southern Pacific Co. at a satisfactory price, to meet the cost of improvements. Authority of the California Railroad Commission to issue the notes was obtained without delay, but the Arizona attorney general objected to the commission approving the issue unless litigation relating to a 3-cent fare bill be abandoned and unless a new station should be built in Phoenix, or that a definite part of proceeds of bond issue be allocated to Arizona. During the delay imposed by the action of the Arizona commission the condition of the money market had so changed that the proposed two-year note issue was abandoned and one-year notes, not requiring the approval of the Arizona and California commissions were issued instead and sold at prices yielding approximately \$275,000 less than would have been received had the delay not occurred in issuing the two-year notes.

The following is taken from an article appearing in the March, 1917, number of Railway and Marine News, of Seattle, entitled "Railroad regulation reaches limit":

One State requires cuspidors in passenger cars. Adjacent States prohibit this practice. This State is traversed by carriers passing through the "cuspidor" State. One State requires screens in the windows of passenger cars, and these cars traverse States where screens are forbidden. Indiana requires all locomotives to be equipped with automatic "bell ringers." It also specifies that cabooses must be at least 20 feet long—the usual length being 18 feet. To comply with the law in Indiana the railroads have spent \$800,000.

The tendency to long and continuous lines of railroad is sound from an economic standpoint and is thus in the public interest.

Unquestionably long and continuous lines of railroad can give better service and get better use out of equipment than a number of short ones of the same aggregate length. The Sunset Route of the Southern Pacific Co. was the pioneer in excellence of transcontinental service. The Sunset Route, composed of the Southern Pacific rail lines between California and Algiers, La. (a Mississippi River terminal opposite New Orleans), and its steamship line between New Orleans and New York, was opened February 1, 1883.

Prior to that time the all-rail lines were consuming at least 30 days in transportation of freight from coast to coast, each all-rail route being composed of two or three separate connecting lines between which there was no common interest or effective cooperation. Through billing had not been established and claims were not paid

until it could be ascertained to what part of the route the liability was allocated, thereby consuming many months in settlement.

The time inaugurated by the Sunset Route from coast to coast was about 18 or 20 days. Through billing was established and both overcharge and loss and damage claims were paid upon presentation when supported by evidence of carrier's responsibility without waiting to determine what part of the route was responsible. A system of notices to consignees of the dispatch of their shipments was adopted, and the time was so uniform and dependable as to enable them to determine with reasonable accuracy when their goods might be expected to arrive.

By this superior service, the major part of the coast-to-coast business was soon attracted to the Sunset Route, which after a while had the effect of stimulating the various component parts of the all-rail routes to a coordination of effort which resulted in a gradual improvement of the all-rail service from year to year until it caught up with the modern methods and services of the Sunset Route and overcame the ascendancy of that route because of physical disabilities, such as transfer en route and steamship versus rail terminal facilities at New York, which it was impossible for the Sunset Route to surmount, although in the meantime the Sunset Route kept up an improvement of its service by increasing the number and speed of its ships, enlarging its terminal facilities at New York, and expediting schedules on the rail portion of the route, so that the through time from coast to coast was reduced to from 12 to 14 days; and ever since the opening of the route it has been a continuous competitive spur to an improvement of the service of all-rail lines, to the great benefit of the shipping public.

This tendency due to the natural operation of economic laws which demand that transportation facilities shall accommodate themselves to the requirements of commerce is a desirable condition.

The existence of these long and continuous lines of railroad under a single management is in the public interest, and is justified by sound economic considerations, and there should not exist conflicting powers of governmental regulation over different parts of the same line of railroad or over different functions of the same line of railroad.

Since the present dual system of governmental regulation of railways was adopted, American railways have, practically speaking, ceased to be local or state facilities in the sense they formally were, and have in substance become highways for interstate and international business, and governmental regulation should recognize this fact and the policy of treating these facilities, which have now become national in their importance, as still local or State facilities in many of their substantial and controlling aspects should be abandoned.

Under a system of private ownership, the standards of efficiency and the maintenance of efficiency of an instrumentality of commerce are dependent on its earnings—in other words, high efficiency can not be continued without adequate earnings.

There should be but one public authority to determine what in the public interest the proper standard of earnings and efficiency shall be.

If the States have the power to fix rates and to determine the standard of service as to State business of a railroad company also

engaged in interstate and foreign commerce, they may, in cases where no question of discrimination against interstate or foreign commerce is involved, fix the State rates high enough to escape the line of confiscation but so low that no substantial contribution will be made by State business to the maintenance of the standard of efficiency deemed essential in the public interest by the Federal authorities.

This is answered by an explanation of the action of Texas in the Shreveport rate case.

Such a power on the part of the State involves the power either to fix the standard of efficiency of these instruments of commerce, contrary to the views of the National Government and to the views of other States, or to throw the burden of establishing and maintaining a high standard of efficiency on interstate and foreign commerce and on the commerce of other States.

This is not in the public interest.

A power to thus prejudice the interests and to obstruct the policy of other States can not be justly left to one of the States. It should be the right of each State to demand that no other State shall possess the power to determine a question in which both States have this important interest.

These important questions should be determined, not by one of the States which may have a different interest or a different policy from the others, but by the National Government acting for and on behalf of all the States, and thus alone able to act impartially between them.

Some of the influences tending to impede development of railroads and to interfere with free flow of commerce have been brought to my attention and have been explained already. For instance, the Shreveport rate cases, the action of the Arizona commission in respect to two-year notes, and the reduction of the Galveston-Houston differential.

Now we come to the detention of cars at seaports. The annual report of the Interstate Commerce Commission, recently issued, says:

The uncertainties as to ocean transportation have made it unusually difficult to secure expeditious or regular movement of export traffic through the ports, and this led to great congestion with consequent delay of equipment at the ports and on the lines leading thereto.

This condition was more serious even in the early part of 1916 than it is in 1917. The trouble is due to the fact that existing tariffs permit freight cars to be held at seaports 15 and sometimes 20 days before and charge for demurrage is made. Much of the congestion in both years has resulted through failure or inability of shippers to provide vessels to take care of their tonnage after it reached destination.

Records of the Pacific car-demurrage bureau operating on the Pacific coast, show that the average detention by consignees of cars in the State of Oregon is approximately 50 per cent greater than the detention in the State of California, where the railroad commission has permitted a sufficiently high demurrage rate to be charged to secure the prompt unloading of cars. In the period of from February to November, 1916, 76,200 cars were required to handle the State and interstate traffic in the State of Oregon, while if the cars had been handled under California demurrage rules 71,430 cars would have handled the traffic, a saving of 4,770 cars, or 6.7 per cent.

Mr. HAMILTON. I do not want to deviate from the rule of the committee, but I should like to ask a question for information.

Mr. SIMS. Without objection, you may do so.

Mr. HAMILTON. How is it that this free time as to seaports is different from the free time at other places?

Mr. KRUTTSCHNITT. The free time at seaports is made large to allow for the uncertainty in the arrival of ships to take the freight from the cars.

Mr. HAMILTON. And who fixes this free time at seaports?

Mr. KRUTTSCHNITT. That has been fixed by carriers and filed with the commission.

Mr. HAMILTON. The Interstate Commission—the Federal Commission?

Mr. KRUTTSCHNITT. The Interstate Commerce Commission; yes, sir.

Mr. HAMILTON. Thank you.

Mr. SIMS. Proceed, Mr. Kruttschnitt.

Mr. KRUTTSCHNITT. The failure of consignees to promptly unload cars themselves, an abuse of long standing, as consignees who have not provided and who can not obtain warehouse room for their commodities, deliberately plan to pay the small demurrage that has heretofore been charged in order to use freight cars as warehouses. In paying this small charge they not only obtain the use of a warehouse but the use of the ground on which the car stands, which is no doubt cheaper to them than to provide facilities themselves. The Interstate Commerce Commission, however, acted with commendable promptness in relieving this situation by sanctioning substantially higher demurrage rates that became effective about the middle of December.

I would say, in further answer to your question about the seaport free time, that is one of the troubles the carriers experience; that if they wish to vary their free time, change it, they can not do it without the commission's approval. If an emergency exists and ships can not be gotten, and the carriers know it, nevertheless they can not change this free time because it is incorporated in their tariffs, and it requires a long time to get that permission, and before the permission can be gotten probably the emergency has either passed or the trouble has cured itself.

Mr. SIMS. Right there, do you know what free time is allowed in foreign countries for cars to be loaded on to the ships—foreign countries doing business with the United States?

Mr. KRUTTSCHNITT. I do not; but as an indication of that I can relate this incident: Shortly after the outbreak of the European war, and before the date when everything in sight was being blown up, we were urged by the cotton shippers of Louisiana and Texas to send a few ships of our fleet to foreign ports with cotton as a relief. We did so. Our ships are unloaded at their termini, New York and Galveston, in about 36 hours, and they are loaded in about 36 hours, so that from the time of arrival of a ship to her departure does not exceed from 70 to 80 hours. We dispatched one of the ships to Gothenburg, in Sweden, and to unload that ship that in America was unloaded in 36 hours, required 12 days at Gothenburg, with a captain fussing all he knew how to expedite matters.

Mr. HAMILTON. What year did you say that was in?

Mr. KRUTTSCHNITT. That was just after the breaking out of the European war; I should say in the latter part of 1914 or early in 1915.

Mr. SIMS. I did not know but that possibly the demurrage charges for exports in foreign countries and ours were somewhat similar.

Mr. ADAMSON. I should like to know what constituted the great difference. Was it the cheap foreign labor, that was less effective than our labor, which caused the delay in unloading and loading?

Mr. KRUTTSCHNITT. I did not inquire, Mr. Chairman, as to just what the cause was. The captain made a brief report to the manager of the line to explain his long absence, and that was sent to me, and I read it; and that fact made an impression on my memory—that what we in America were doing in a day and a half took nearly 10 times as long to do in Sweden. We have a great many Swedish laborers on our docks. I do not know whether the atmosphere in this country affects them or not, but I suppose they are the same kind of people that unloaded the ship in Gothenburg.

Mr. ADAMSON. I thought possibly that accounted for it—that, due to the fact that wages were lower in foreign countries, they did not do as much as our laborers.

Mr. HAMILTON. I do not think that the chairman will be able to draw any general deduction from this single incident.

Mr. ADAMSON. It is only a concrete fact that I am trying to learn.

Mr. HAMILTON. I notice some make a greater impression than others.

Mr. ESCH. Might not that long delay be due to a lack of dock facilities?

Mr. KRUTTSCHNITT. No; the vessel was at dock all the time.

Mr. ESCH. And she used her own unloading facilities, I suppose? She has her own hoists, and all that?

Mr. KRUTTSCHNITT. Yes; the same that we used in America. There were scandalous delays to ships for want of dock facilities in Great Britain and other allied ports, but that was not the case at Gothenburg. Our ship got a dock promptly.

And, by the way, that scandalous delay of ships—the ability of ships to dock at Liverpool and London—was the beginning of the trouble in this country, of congestion. Congestion really started in London and Liverpool and worked back this way.

Mr. SIMS. Was it a delay involving moral turpitude? You used the expression “scandalous.”

Mr. KRUTTSCHNITT. No; that is not a proper word. I mean it was outrageous—that vessels would lie in the stream sometimes 6, 8, or 10 weeks waiting for a berth.

Railroad transportation is perhaps the one most important essential of national defense after the collection of adequate land and naval forces. For instance, in moving troops to the Mexican border from June 1 to October 31, 1916, the Southern Pacific lines operated 326 special trains, consisting of 2,522 passenger and sleeping cars and 2,635 freight cars, in which 98,357 troops with their luggage and accouterments were transported. In emergencies arising out of the necessity of moving troops for national defense, occasions will arise when saving a few hours may be vital, and unless the railroads can accumulate a reserve of passenger vehicles it appears reasonably certain that if any very large number of soldiers would have to be

moved in the United States, it would be at the expense of service to the public, which would probably have to be discounted entirely during the period of mobilization just as was done in England, France, and Germany in the present war.

In July, 1870, the mobilization of the French troops covered the carriage of 300,000 men, 65,000 horses, 6,600 guns and road vehicles, and 4,400 wagonloads of ammunition and supplies in 19 days intervening between July 16 and August 4. The German concentration, for which six railroad lines were available, was made in 11 days between July 24 and August 3, and covered the transportation in 1,200 trains of 350,000 men, 87,000 horses, and 8,400 guns and road vehicles.

I only give those figures on the mobilization in the great war of 1870 to compare with what was done in our own country, to show the relative number of trains, the relative number of men, and the way in which the work was done. In other words, the work of the American roads was not at all discreditable when compared with what had been done on the European roads in 1870.

Mr. THOM. In listening to you I understood that the European figures related to this war. It was the war of 1870?

Mr. KRUTTSCHNITT. It was the war of 1870. I tried to get figures for this war, but most diligent search failed to reveal them.

Mr. ADAMSON. I suppose they are all censored yet; the censors will not let them out yet, I suppose?

Mr. KRUTTSCHNITT. I suppose that is true, though I thought I had seen in general reading some figures relating to it; but, as I say, I could not find them when I was preparing this memorandum.

Senator TOWNSEND. You would not think that that would be a fair comparison, comparing railroads of 40 years or more ago with railroads now, would you?

Mr. KRUTTSCHNITT. No, sir; but further on I give the opinion of the President of the United States and the Army officers as to what the American roads did.

Mr. HAMILTON. In 1870, the Prussian roads had gone into the control of Prussia, had they not?

Mr. SIMS. No.

Mr. KRUTTSCHNITT. The Prussian roads, I think, had been State roads for a great many years at that time, and ever since.

Mr. HAMILTON. I was thinking that at least part of the roads of Prussia had gone into State control at that time; but I am not dead sure.

Mr. ESCH. No; that was Bismarck's policy after the war for the unification of the Empire.

Mr. SIMS. Yes; it went in afterwards.

Mr. HAMILTON. Yes; but Prussia does not own the rest of the roads of Germany. The other States own their roads, except for 300 or 400 miles in Alsace and Lorraine.

Mr. KRUTTSCHNITT. That may be true, but I should have said that all the roads of Germany are Government-owned roads. Some are owned by Prussia, some by Hanover, and so forth.

Mr. SIMS. Do you mean that in 1870 they were all Government owned?

Mr. HAMILTON. No; he says now.

Mr. KRUTTSCHNITT. I did not look up that fact as to whether they were all State roads in 1870. I do not know.

I read a short quotation from a most interesting work that has recently appeared, called "Rise of rail power in war and conquest, 1833-1914," by Edwin A. Pratt, bearing on this subject. After touching on the importance of uniform gauge and physical connections between the different systems the desirability of double track on all important lines, and the necessity of a very liberal provision of passing tracks and a sufficiency of sidings at all stations where troops are to be detrained or entrained he advises that preparations in advance should include:

I. The carrying out of a scheme of organization based on recognition of the following principles: (a) That, while the railway is an instrument capable of rendering great and even incalculable services in the conduct of war, the working of it is a highly skilled business only to be intrusted to those possessed of the necessary experience; (b) that interference with such working on the part of military officers not possessing the requisite technical knowledge of the details and limitations of railway operation may result in chaos and disaster; (c) that railway men in turn are not likely to be fully acquainted with the technicalities of military conditions and requirements and should not in any case be left with the responsibility of having to decide between the possibly conflicting demands of various military authorities; (d) that for these reasons there should be coordination of the military and the technical railway elements operating throughout the whole scheme of organization in its manifold details, avoiding conflict of authority, insuring harmony of working, and offering the fullest guaranty that all military requirements will be met so far as the capacity of the railway, together with a due regard for safe and efficient operation, will allow; and (e) that effect can best be given to these various conditions by the appointment of intermediary bodies which, representing the dual elements, shall alone have power to give directions or to make demands in respect to military rail transport during the continuance of war.

II. Collection of data concerning the physical character, resources, and transport capabilities of the railways both in the national territory and in any other country to which the war operations may extend.

III. Study of all movements of troops, etc., likely to be necessary on the outbreak of war; the preparation of special time tables for the running of troop trains, etc., and the working out of all essential details respecting military transport in general.

IV. Creation and training of bodies of railway troops qualified to undertake the construction, destruction, repair, and operation of railways in time of war.

Great masses of troops can be entrained only at stations where facilities for their so doing have been prepared in advance. The provision of these facilities is even more necessary in the case of cavalry or artillery than in that of infantry. Hence the movement of considerable bodies of troops may be restricted to certain lines, and their entrainment or detrainment even to certain large stations. In the case of road marching these restrictions would not apply.

Vehicles specially constructed for the purpose can alone be used on railways. Any deficiency in their supply must needs cause delay.

Substantially all the foregoing has been followed in our country by the appointment of a general chairman and four regional committees of railroad presidents by the American Railway Association to cooperate with the War Department and department commanders as to measures concerning national defense.

The paramount need of cooperation between the transportation companies and the Government and the inevitable congestion resulting when it is wanting is strikingly outlined by Pratt in describing the mobilization of the French armies in 1870, thus:

All this activity on the part of the railway companies was, however, neutralized more or less by the absence of any adequate organization for regulating and otherwise dealing with the traffic, so far as concerned the military authorities themselves.

* * * * *

Typical of the general conditions as they prevailed not only in Paris, but elsewhere in France, were the circumstances under which the Nineteenth Army Corps, of 32,000 men, 3,000 horses, and 300 guns, was sent from Cherbourg to Alencon. The troops were late in arriving at the station; the officers neglected to look after the men; the men refused to travel in goods trucks; orders and counter-orders succeeded one another in rapid succession; two or three hours were required for the dispatch of each train and delays occurred which must have disorganized the traffic all along the line.

Great as the confusion undoubtedly was at the points of dispatch, it was far surpassed by that which prevailed at stations to which trains were sent regardless of any consideration as to whether or not they could be unloaded there with such dispatch as to avoid congestion. * * * There were, consequently, many stations close to the frontier where the rails leading to them were occupied for miles together by loaded wagons, the number of which was being constantly added to by fresh arrivals. Many of these wagons were, in fact, used as magazines or storehouses on wheels.

I would say paranthetically that I have put these quotations in, although they relate to operations in 1870, to show how strikingly similar the conditions as to army transport are to the conditions on the seaboard at the present time that are causing our present congestion. In other words, they are strikingly similar.

Mr. SIMS. The word "wagon" there means a car, does it not; what we would call a car here?

Mr. KRUTTSCHNITT. No, sir; they call cars "trucks." "Wagons" mean the wagons in which the army supplies are loaded.

Mr. SIMS. The same as we have here?

Mr. KRUTTSCHNITT. The same as you have here; that would be run up on a flat-car and carried bodily.

Mr. SIMS. I have seen the word "wagon" in reading referring to a car.

Mr. KRUTTSCHNITT. Well, they do use that also; but here they seem to have used the words "goods trucks" for that.

He goes on—

It suited the officers or the military department concerned to keep the supplies until they were wanted in the wagons, and this arrangement may have appeared an especially desirable one from their point of view because if the army moved forward or backward, the supplies could be more readily moved with it if they were still in the wagons. * * *

It was evidently a matter of no concern to them that the wagons they were detaining might be wanted elsewhere, and that, for lack of them, other troops might be experiencing a shortage in their own supplies.

Here he does use the word "wagon" in the sense of a car.

Mr. ESCH. I think that is the sense in which it is used in the quotation before. He says that the rails were occupied for miles by loaded wagons.

Mr. KRUTTSCHNITT. That is right; he does mean a railroad car.

Mr. ESCH. Is this Pratt an English authority?

Mr. KRUTTSCHNITT. Edwin A. Pratt; he has written two books—this one, called "Rise of Rail Power in War and Conquest," and the other is, I think, called "Railway Transportation."

Mr. ESCH. There is an English authority by the name of Pratt.

Mr. KRUTTSCHNITT. It is that man, because I had to send to England for these books.

These conditions are strikingly similar to those now existing on United States railway lines east of the Mississippi River, where freight has been moved so rapidly by the railways that the receivers (in this case, however, the public and not the Army) can not, or will

not, unload the cars until their contents are actually required, which has resulted in an accumulation so great as to paralyze the power of the carriers to serve the public.

The wisdom of the plans drawn up for the mobilization of the Regular Army and the National Guard at the time of the threatened trouble with Mexico, and as amplified at the present time in expectation of mobilization in case of trouble with European powers, is confirmed by England's example. She placed the operation of her railways entirely in the hands of a committee of railway officials at the beginning of the war, and all of her calls on them have been promptly and efficiently met.

Finally, it is all-important to the national defense that the standards of railroad efficiency should be established in times of peace. Practice mobilizations should be made from time to time, as is done in Europe.

Under proper rules, I do not believe the transportation facilities in America are inadequate to handle the increased business due to the war in Europe, but I do believe that under the conditions of operation and rules for penalizing delay to equipment and expediting unloading of freight prescribed by Government bodies they are totally inadequate to handle the increased business. A given conduit may be adequate to deliver a certain quantity of water at a given pressure, and it can be made to deliver twice the amount by doubling the velocity; but this doubled delivery is not possible if the rate of outflow is obstructed and the water prevented from leaving the conduit as fast as it reaches its end. Emergency rules are required in emergencies. The railroads can not reduce free time at destination, can not increase demurrage without the permission of commissions, and if the proposed rules are held in suspense from three to six months it is evident they can not be of the slightest use in the emergency that prompted their imposition.

It is important to the national defense that in times of peace the standard of railroad efficiency should be established, so that in times of war the railroads could be readily made available for the purposes of national defense.

Notwithstanding what I have said, I think it perfectly obvious that the railroads of the country have not been able, with the credit which they have had at their command, to keep their facilities up to the standard required by the national defense in preparation for any serious war. Neither in equipment, nor in tracks, nor in yards and terminals, nor in strength of bridges, have the transportation facilities of the country been kept up to a standard which would render them reasonably capable of doing their part in an important national emergency. As transportation is at the foundation of successful national defense, it seems manifest that the National Government, which is charged with the duty of national defense, should also have the power of fixing the standards of efficient transportation in times of peace as well as in times of war—otherwise the Nation might perish while the preparations are being made.

As the duty of national defense rests upon the National Government, transportation is so essential to the national defense that the National Government alone should have the power to fix the standard of railroad efficiency.

●

The duty of national defense carries with it the duty to fix the standard of railroad efficiency by the National Government, which should provide for its wants through the existing operating organization of railroads and should not substitute its operating rules and judgment for the existing rules and judgment of officers now operating the properties.

The standard of railroad efficiency can not be established and maintained by the National Government unless it has the power to deal with all questions of railroad credit and railroad policies as far as they are within governmental control.

In view of the constitutional power and obligation of the Federal Government as to the regulation of interstate and foreign commerce, of the Federal Government's responsibility for the national defense, and in view of the necessity for prompt and harmonious governmental action in respect to security issues, there should be a single governmental system of regulating security issues of carriers engaged in interstate and foreign commerce, and this power should rest in the National Government alone.

For the purposes of national defense alone the railroads of the entire Nation should arrange to place their facilities at the disposal of the Government and to operate them as a unit.

A standard of earnings such that in prosperous years an adequate surplus may be laid up to carry the railroads over the lean years, without the necessity for any diminution of the work of maintenance and improvement, and without the necessity for a suspension of reasonable returns to those whose means have created the instrumentalities of commerce, should be permitted.

Under normal conditions and with a volume of business such as moved in 1916, the earnings of most railroads would be adequate to pay fixed charges, fair dividends, and some surplus, but the railroads should be able to do this with absolute certainty in order to make their securities attractive, and the rates should be sufficient so that when applied to the volume of business carried in lean years, fixed charges, dividends, and some surplus—though small—will be earned, an adequate surplus being provided by averaging the small surplus in lean years with the larger surplus yielded by an increased volume of business, without increases of rates in the prosperous years. (See p. 2176, figures for Southern Pacific Co.)

In view of the power of regulation which is exerted by the Interstate Commerce Commission over carriers engaged in interstate and foreign commerce, which, of course, involves a power to prevent abuses, there is no reason for the application to railroad companies of the antitrust laws.

This is especially so in view of the necessity for commerce from all sections to move on relatively equal terms and of the fact that, commerce being continuous over several lines of railroad, there must be an understanding as to through rates. These considerations involve the necessity for traffic officers to meet and to agree upon rates and terms of service, subject, of course, to the approval of the Interstate Commerce Commission.

There is no reason for the application to railroad companies of the antitrust laws, inasmuch as they are closely and absolutely regulated by Government authority. The rates from and to all important points are the same, regardless of the route over which the traffic

is carried, so that the only competition amongst carriers at the present time is in excellence and certainty of service. The public interest certainly could not be affected by permitting railroad officers to meet to agree upon rates, terms of service, schedules, etc., subject to the approval of the Interstate Commerce Commission.

As the continued operation of railroads is essential to the public welfare, the laws should not permit such operation to be interfered with either by combinations of capital or by combinations of labor.

The laws should bear just as heavily on combinations of labor as they do on combinations of capital. There should be no discriminations.

As investments of capital are by law required to be subject to the public obligation to keep the railroads in operation, the law should attach to labor, when it enters into this public service and enjoys employment in it, an obligation not to combine to prevent the operation of these facilities which are essential to the public welfare, it being, of course, understood that no law should undertake to limit the freedom of individuals in respect to service or terms of employment, but only to prevent combinations and conspiracies to unlawfully obstruct or interrupt public service.

The railroads, being public servants, should be kept in operation by laws that would hold all employees, whether designated as officers or laborers, to a strict accountability and should prevent either one or the other from combining to prevent the operation of the roads by conspiracies or other unlawful acts.

If in the public interest labor should be thus deprived of the power of combination for the purpose of preventing the operation of a public facility, the law should deal with the question of wages, so that the system may be balanced by preventing the oppression of labor by capital and the oppression of capital and the public by combinations of labor.

I have a very wretched cold and inflamed throat.

Mr. ADAMSON. I think the committee will be glad to yield to you here, if you desire.

Mr. KRUTTSCHNITT. I am very near through. If you will permit the reading of this answer that I told Mr. Hamilton I had prepared about regulating trouble with employees, I should be glad to have my secretary read it.

Mr. ADAMSON. It is hardly time to adjourn; but if you are feeling uncomfortable—

Mr. SIMS. It is within 25 minutes of the time.

Mr. KRUTTSCHNITT. I will ask my secretary to read it.

Mr. ADAMSON. That is perfectly satisfactory to me.

Mr. KRUTTSCHNITT. This is the memorandum I mentioned as having been consolidated, taking in several memoranda made by me within the last four or five years. I will ask my secretary to read it.

I do not see how the law could fix the wages of railway employees unless the Government should take over the railways.

The act of Congress approved June 15, 1913, known as the Newlands Act, providing for mediation, arbitration, and conciliation in controversies between certain employers and employees, is a great improvement on the Erdman Act, which it superseded, but it relates to employees engaged in train service or train operation only of common carriers engaged in interstate commerce. Its usefulness would

be greatly increased if it were made to apply to all railway employees engaged in the interstate business of the employer, including those engaged in keeping in repair cars, locomotives, appliances, machinery, track, roadbed, and other instrumentalities of interstate commerce. The Board of Mediation and Conciliation appointed by the President, under the act, has proven useful in maintaining industrial peace, but, as it frequently results, as a consequence of invoking the services of the board, that railway expenses are increased, it is very important to the carriers that the board should be closely coordinated with or, better still, subordinated to the Interstate Commerce Commission, so that the same authority responsible for increasing expenses of the carriers should at the same time incur a corresponding responsibility for providing revenue to meet the expenditures. The reasonableness of such a provision is apparent when the complete control of revenues and almost equally complete control of expenditures by the Government at the present time is considered.

The Newlands Act provides that when a controversy arises either party may apply to the Board of Mediation and Conciliation for its adjustment, and the board may offer its services to the parties in controversy where interruption to public service is imminent. There is no obligation, however, other than a sense of obligation to the public, on either employer or employee to submit differences to mediation. Instances have occurred where mediation and arbitration have been stubbornly refused, with utter disregard of the public's interest and rights, and the act offers no remedy. This defect could apparently be remedied, as is done in the Canadian industrial disputes investigation act of 1907, which makes a combination, lockout, or strike illegal until the questions at issue shall have been thoroughly investigated and made public; and there should be a provision that where the board offers its services for investigation, mediation, and conciliation it shall be obligatory on and not optional to the parties to submit their differences, so that the public may judge the dispute intelligently.

The desirable feature in the Canadian act is that it compels investigation and publicity, and peace pending investigation and paves the way, as the Newlands Act does, to arbitration, which, however, is optional with the parties to the dispute.

Report of the United States Board of Mediation and Conciliation, November 1, 1916, shows that from the passage of the Canadian disputes act in 1907 up to October 18, 1916, a total of 212 disputes were referred for adjustment under its provisions. The total number of boards of conciliation and investigation established under the act was 182, the remaining 30 being settled without the establishment of boards. The number of disputes where a strike was not averted or ended was 21. The report states, "In approximately 90 per cent of the cases brought under the act, therefore, its provisions were effective so far as actually preventing strikes was concerned." The report adds that an inquiry of the Canadian authorities in 1915 as to the outcome of strikes which occurred legally after the reports of the boards if investigation had been made showed that settlements were "ultimately effected closely, if not wholly, on the lines recommended by the boards."

In a report dated December 9, 1912. on the industrial disputes investigation act of Canada, 1907, made by Sir George Askwith, chief industrial commissioner to the British Board of Trade. and presented to both Houses of Parliament of Great Britain, the purposes of the act are defined as follows:

The simple purpose of the act is to insure the recognition of the interests of the public as a third party in trade disputes and the insistence that that third party, through the Government, shall have a voice in regard to a dispute affecting their interests, and, according to the act, before a stoppage of work takes place. In practice the recognition extends to cases arising before or after a stoppage of work. While this principle of the recognition of the public interest in trade disputes is emphasized in the act, the actual interference with the parties in the settlement of their differences is sought to be reduced to a minimum by the act being confined—

1. To industries whose uninterrupted continuance is of high importance to the well-being of the nation (mining, railways, shipping, and other public utilities); and

2. To a brief suspension of the right to stop, as distinct from a complete prohibition of stoppage.

And further on occur the following views, which are as applicable to our country as they are to Great Britain:

* * * And I think that it might be feasible in the United Kingdom, with advantage to both employers and employed, to give opportunity for such investigation and recommendation as would bring into light the real causes of difficulties and create in the public mind and in the minds of employers and employed the opinion that when opportunity exists by law such opportunity should be taken advantage of, and that strikes and lockouts ought not to be commenced, and certainly not supported by "sympathetic" strikes, while such investigation and recommendation are pending. Investigation and recommendation would not be necessary in all cases and could well be confined, at any rate in the first instance, to cases in which the public were likely to be seriously affected.

From the point of view of the public the advantage of such a course is obvious. The public have no use for strikes or lockouts, and such a course might reasonably be expected to lessen their number. While the public might often have much difficulty in bringing opinion to bear in favor of acceptance or rejection of technical decisions, which in many trades it would be impossible for persons who had not examined the question to understand, their support to the principle that the ordeal of battle should give place to reasonable judgment would probably be emphatic and frequently effective.

From the point of view of the employers such a course need not interfere with the administrative details of business or discipline but should give better opportunity for regular and consecutive business by reducing the number of strikes, by bringing strikes to an earlier conclusion, and by the powerful effect which I am convinced would result in the direction of rendering unnecessary and ineffective the progress of those sympathetic strikes by which employers having no quarrel with their own workmen are now so frequently disturbed.

Reports of the satisfactory operation of the Canadian act and a conviction that like benefits would accrue through the adoption of some of its provisions in the United States induced me to send an assistant to Canada in September, 1914, to learn at first hand from the managers of Canadian railways and from the Canadian department of labor their experience with the operations of the act. The opinion alike of railway executives and of the commissioner of labor was that their disputes and investigation act was satisfactory and very successful in preventing lockouts and strikes. In discussing the results of our observations with the executive heads of 11 of our important railway systems the opinion was expressed, without exception, that the provisions of the Canadian act were most helpful in the interests of employers, employees, and the general public, the three parties to every industrial disturbance.

If such a plan were adopted the board should be charged not only with the duties of mediation and conciliation, but also with the duty of securing settlements of all questions at dispute, not on the basis of making concessions that would dispose of the matters for the time being only, but on the basis of justice to employer, employee, and to the general public. The chairmanship of this board should certainly be a permanent position, so that the incumbent should become thoroughly familiar with labor contracts, which have grown to be extremely complex. The Interstate Commerce Commission should name a member, the Federal Trade Commission a member, the railways one, and the employees one. As the last two would admittedly be partisan, the decision would rest with the permanent chairman, the member from the Interstate Commerce Commission, and the member from the Federal Trade Commission. The public would thus have three representatives, and its interests would seem thereby to be fully protected.

That, briefly, was the plan that seemed to me to offer most promise of settling these industrial disputes.

Mr. ADAMSON. Now, have you completed—

Mr. KRUTTSCHNITT. The principle underlying it is simply this—compulsory investigation and compulsory publicity. There is nothing forbidding labor unions to strike after they have gotten through with this, if they wish, but the operation, I might say, just across the fence in our neighbor's country shows it has been extremely successful in stopping strikes. In one or two strikes that they have had, despite the efforts of these mediation committees, the strikes have afterwards been settled substantially on the same terms as suggested at first by the committees.

Mr. ADAMSON. You have not finished your direct statement, have you?

Mr. KRUTTSCHNITT. Yes; except one or two things that I wanted to bring out.

Mr. ADAMSON. I thought you were weary, and it occurred to me that the committee might excuse you for the day, if you were uncomfortable.

Mr. KRUTTSCHNITT. The time is very nearly up, and I should appreciate it.

Mr. THOM. Before you adjourn, I sent for the copy of the laws of Illinois of 1913, in order to answer accurately a question asked by Judge Sims as to the nature of the imposition by the State of Illinois in regard to issues of securities.

Mr. SIMS. On the New York Central?

Mr. THOM. On the New York Central; yes. The law on this subject is found in the chapter entitled "State public utilities commission," which is the act approved June 30, 1913, which went into effect January 1, 1914.

After providing in section 23 of that act that any securities therein mentioned which should be issued without the order of the commission authorizing the same, then in effect, shall be void—

Mr. ADAMSON. Will you please repeat that statement, please.

Mr. THOM. In section 23 of this act that I alluded to there is a provision that all stocks and every stock certificate and every bond, note, or other evidence of indebtedness of a public utility not payable

within 12 months, issued without an order of the commission authorizing the same, then in effect, shall be void, unless issued upon the authority of any articles of incorporation, etc.

Now, in section 31, the tax or fee, or whatever you call it, is imposed. and I shall read that section now. Section 31—it is entitled at the head of it, "Fees for issuance of stocks or bonds," and the text of the section is:

The commission shall charge every public utility receiving permission under this act for the issue of stocks, stock certificates, bonds, notes, and other evidences of indebtedness, an amount equal to 10 cents for every \$100 of such securities authorized by the commission, and the same shall be paid into the State treasury before any such securities shall be issued.

Now assume that is imposed in pursuance of the taxing power of the State.

Mr. SIMS. In other words, it is a tax.

Mr. THOM. They call it a fee, but I think it is a tax.

Mr. ADAMSON. We will adjourn now until 10.30 o'clock to-morrow.

(Whereupon, at 1.25 o'clock p. m., an adjournment was taken until to-morrow, Tuesday, March 27, 1917, at 10.30 o'clock a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION,

TUESDAY, MARCH 27, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.30 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. The committee will come to order. Mr. Kruttschnitt, are you ready to proceed?

Mr. KRUTTSCHNITT. Yes, sir.

STATEMENT OF MR. JULIUS KRUTTSCHNITT—Continued.

Mr. KRUTTSCHNITT. I want to take a very short while in commenting on some of the statements made by Mr. Thelen, president of the California State Railroad Commission. There is a quotation he makes on page 431 of the hearing, from the *Financial Age*, entitled "Evidences of railroad prosperity," to show how well the railroads were doing. Those figures relate to 1916, an extraordinarily good year, and they only take in a number of large systems that did extremely well. If you take the statistics of the Interstate Commerce Commission, covering all the roads of the country, instead of showing 10, 11, 16, 18, and so on, per cent available for dividends, we find that the average rate on all railroad stock for the year 1915, which is the latest for which the commission gives data, is a fraction under 4 per cent.

Mr. SIMS. All railroad stocks; par value?

Mr. KRUTTSCHNITT. All railroad stocks.

Mr. SIMS. Par value?

Mr. KRUTTSCHNITT. Par value. It is fair enough to show that some railroads are very prosperous. I do not deny that; but to draw a general conclusion for the railroads of the country we should take the statistics covering all.

Mr. SIMS. Those statistics that Mr. Thelen gave there could only come up to October. The article in the *Financial Age* was published in October, 1916, and did not include all for 1916.

Mr. KRUTTSCHNITT. The quotation is dated October 21.

Mr. SIMS. Then it could not have figures later than that.

Mr. KRUTTSCHNITT. Yes; he could have figures for the year ending June 30, 1916.

Mr. SIMS. Oh, you mean the fiscal year.

Mr. KRUTTSCHNITT. Yes; the fiscal year.

Mr. SIMS. The fiscal year of 1916 was half of it 1915 and half of it 1916, in fact?

Mr. KRUTTSCHNITT. Yes; but until the recent order of the commission making the fiscal years coincide with the calendar years the practice was almost universal with the carriers to make their fiscal years end on the 30th of June.

A great deal of what Mr. Thelen says there is true, as to the pleasant relations between the California commission and the carriers. I want to say that of all the State commissions we have ever had anything to do with we have found the California commission the most progressive and most conservative and reasonable to deal with.

Mr. SIMS. Such a statement on your part necessarily strengthens Mr. Thelen's statement, I suppose—that is, that they are reliable?

Mr. KRUTTSCHNITT. Yes, sir. As to some of his statements he is in error, and I just wanted to point them out.

Mr. ADAMSON. But you applied to the California commission two descriptive words that in modern parlance are usually held to be contradictory to each other—"conservative" and "progressive."

Mr. KRUTTSCHNITT. Yes; that is perhaps a proper criticism. What I meant was that they were conservative and not seeking to pull down and destroy.

Mr. ADAMSON. I did not mean it as a criticism.

Mr. KRUTTSCHNITT. And by "progressive" I meant that they are up to date and alive to the necessity for improvements and safe methods, and so on.

Mr. ADAMSON. They go ahead prudently?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. ADAMSON. I did not mean it as a criticism, but simply to call your attention to it in order that you might make a more explicit statement about it.

Mr. KRUTTSCHNITT. There is an old, very apt Latin criticism which I remember from school days, which is to "make haste slowly," which fits it.

Mr. ADAMSON. Some other old American patriarch has said. "Be sure you are right and then go ahead."

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. He did not say go ahead too fast, though.

Mr. ADAMSON. Be sure you are right and it does not make any difference how fast you go.

Mr. HAMILTON. Let me ask you this, before you pass to what you have in mind: Have you prepared or are you going to insert in your statement a list of the railroads that were not taken into consideration in Mr. Thelen's statement as to dividends?

Mr. KRUTTSCHNITT. No; I did not intend to do that. His statement covers a quotation from a New York financial paper, taking in about 15, as I should take it, large roads and very prosperous ones. The commission's statistics take in all the railroads of the United States.

Mr. HAMILTON. Precisely. So it is easier to differentiate, taking your statement into consideration with his. I understand.

Mr. KRUTTSCHNITT. Yes, sir; the statement I give is based on the latest copy of the Interstate Commerce Commission's Statistics of Railroads of the United States.

Mr. SIMS. But do you insist that the percentage of earnings based on par value is a fair way to look at the matter? Some stocks are

above par and some below—I mean the market value—some of them are above par and some below.

Mr. KRUTTSCHNITT. You must necessarily make some standard on which to base the returns.

Mr. SIMS. Take the market value of the stocks.

Mr. HAMILTON. That is fluctuating, is it not?

Mr. KRUTTSCHNITT. If you stated, for instance, that a stock was paying 4 per cent, and it was selling at 50, paying 2 per cent, no one would know exactly what was meant. But if you say a stock is paying 4 per cent, it is universally understood that you are referring to the par value of the stock, which is well-nigh universally 100. There are some stocks lower, but in such cases, both in the reports of the stock market and in conversation, you would specify par value 25 or 50. But they are very unusual; there are very few roads that have par values of less than 100.

Mr. SIMS. Very few, you mean, of the whole number of roads?

Mr. KRUTTSCHNITT. Yes. I say the practice is almost universal to have the par value 100.

Mr. SIMS. I know; but the market value of the stocks?

Mr. KRUTTSCHNITT. The market value varies from day to day, and you might say from hour to hour.

Mr. SIMS. Well, the average.

Mr. ADAMSON. You are not talking about returns on the market value of the stock?

Mr. KRUTTSCHNITT. No; I mean the par value.

Mr. HAMILTON. We have got to have some standard for comparison.

Mr. KRUTTSCHNITT. Senator Phelan speaks of a certain number of roads here to show the activity of railroad construction in California, to show that construction is active and reasonably rapid. He gives, for instance, the Panoche Valley Railroad. That railroad has not been built. It is nothing but a spur to a magnesite mine. It was projected, but has never been built. The Martinez & Concord, one of his other roads, is dead. The California Southern, 20 miles, is a little spur of the Santa Fe. The Patterson & Western is another spur to a magnesite mine, not a regular railroad. It is a spur from the Southern Pacific. The Hetch Hetchy road is a road built to carry the materials up into Hetch Hetchy Valley for the San Francisco city water development.

Mr. HAMILTON. Will that road cease to exist after the water development is completed?

Mr. KRUTTSCHNITT. Presumably.

The Fresno Interurban is a short road built for sale, is for sale, and I know can be bought very cheap. It is on the bargain counter.

Mr. HAMILTON. You referred to a road back there as dead. What did you mean by that?

Mr. KRUTTSCHNITT. It has been abandoned. The project has been abandoned; nothing done.

Mr. HAMILTON. No track laid, even?

Mr. KRUTTSCHNITT. No; it was projected, but nothing has been done.

The Tidewater Southern was another small road built in the San Joaquin Valley southward from Stockton, notably for sale, and it has been sold to the Western Pacific.

The Indian Valley road is a copper mine spur.

Those are the ones referred to by Mr. Phelan. There are others that he did not refer to. The San Diego & Arizona, in his narrative testimony, he said had been revived, I think, by the California commission. I thought it had been revived by the Southern Pacific, as we made arrangements with the owners and projectors of that road some time to acquire a half interest in it and to finance it. The road had stopped, after constructing part of its mileage, on account of difficulty in obtaining money.

There is the Northern Electric Railway, finished some time ago, a system of 152 miles, that was for sale and in bankruptcy a few months after it was completed. There was the Western Pacific Railroad that has recently been through bankruptcy. The Tidewater Southern I have referred to. He referred to 16 miles. I have here 33 miles that they completed, but that has all been sold to the Western Pacific.

The Ocean Shore Railroad, of 54 miles, down the Pacific coast from San Francisco to Santa Cruz, was notably built for sale, and it went into bankruptcy a few months after its completion. I speak advisedly because the projectors of the road several times came into my office jokingly and said that we would buy that road sooner or later. I told them I thought not. We had made the surveys, had them on file, and knew that the road was impracticable; yet they built it.

In Texas there is the San Antonio, Uvalde & Gulf, of 360 miles, that was in a receiver's hands almost as soon as it was completed.

There is a short road built very near San Antonio, from McDonough Station, on our line, southerly. That road was in difficulty from the beginning in getting money; and it is unique, perhaps, in being a road that was offered as a gift twice and refused. It was offered to our road as a gift, without payment of any money, if we would operate it. I told them we could not afford to take it.

The Lake Charles & Northern road is a little road that was in very sore straits in Louisiana and was bought by us some years ago.

There is the Yosemite Valley road, of 78 miles, built from a station on our line in the San Joaquin Valley, up to the entrance of the Yosemite Valley, that was also built for sale, the promoters stating that we should buy it sooner or later. It is not in bankruptcy, because it has rich friends, but it has for many years been on the bargain counter.

I have had sent me the rates of money borrowed by proposed and existing steam roads in California, gotten from the annual reports to the State railroad commission, to show by the rates at which the bonds are taken by the public, the measure of the desirability of those bonds. There is the California Western Railroad & Navigation Co., which sold bonds during the year ending June 30, 1915, at a price which yielded $6\frac{1}{4}$ per cent. The Death Valley Railroad sold bonds in 1915 and 1916 at prices which yielded $6\frac{1}{4}$ and $6\frac{1}{2}$ per cent. The Nevada County Narrow Gauge sold bonds in 1915 on the basis of $6\frac{1}{8}$ per cent. The Western Pacific first-mortgage bonds, due March 1, 1946, sold quite recently at a price to yield $5\frac{1}{8}$ per cent. The Nevada, California, Oregon Railway sold bonds in 1915 and 1916 on a basis to yield $7\frac{1}{4}$ and $7\frac{1}{2}$ per cent.

Mr. Sims. Are those long time or short time bonds?

Mr. KRUTTSCHNITT. I can not give you that, except as to the Western Pacific. Their bonds are due in 1946.

Mr. SIMS. That 7 per cent bond that you referred to, that is what I am asking about.

Mr. KRUTTSCHNITT. I have not their term. I assume they are reasonably long periods, because the term "notes" is generally used when they mature in a very short period—from 2 to 10 years.

Mr. SIMS. Is that 7 per cent road a solvent road, the one that sold bonds that would earn seven and some odd per cent?

Mr. KRUTTSCHNITT. I think that is the Nevada, California & Oregon. I should say now, as part of the road has been sold to the Western Pacific quite recently, that the owner called on me about a month ago and told me that he was at the end of his rope, and he had to sell a piece of the road in order to keep the other piece. It was not prosperous; it was very much the reverse.

Mr. HAMILTON. Just in what relation to Mr. Thelen's testimony, will you state, have you referred to these railroads?

Mr. KRUTTSCHNITT. A good deal of Mr. Thelen's testimony is taken up in showing that the influence of State regulation is benign and fosters railroad construction and railroad prosperity. I did not refer to it particularly, because the answer is almost self-evident. He takes, for instance, the Santa Fe and the Southern Pacific to show how prosperous they were. Neither line has a very large percentage of its mileage in California. The Southern Pacific has perhaps 20 to 25 per cent of its total mileage in California, but the other 75 or 80 per cent is in other States; and the same with the Santa Fe.

Mr. SIMS. And the roads that you have just referred to are not prosperous roads, and a greater percentage of them is located in California?

Mr. KRUTTSCHNITT. They are all in California, except where I stated otherwise. I mentioned a road in Louisiana and several roads in Texas.

Mr. SIMS. But they are weak and short, not prosperous roads, as a rule?

Mr. KRUTTSCHNITT. Yes, sir.

I think, Mr. Chairman, that is about all I wish to say.

Mr. ADAMSON. Judge, do you want to cross-examine?

Mr. SIMS. You are chairman of the committee.

Mr. ADAMSON. I have not heard all of his statement, and I will defer my examination.

Mr. SIMS. I would suggest that the Senator be permitted to lead, as he was last the other day.

Mr. ADAMSON. Senator Townsend, you are the only Senator present, I think. I yield to you to cross-examine.

Senator TOWNSEND. I was trying to find the testimony of Mr. Gompers and several other gentlemen who were before the Committee on Interstate Commerce of the Senate on the question of the regulation of railroads a month or two ago. I have not been able to locate that testimony, but I am going to quote from my memory, which I think is correct, on the subject. He insisted that the Canadian arbitration act was a failure; that it was approved by no one, as I recall it, neither the men nor the shippers, nor the people themselves; that it had not resulted in such benefits as were expected of it,

and, in fact, that the condition in Canada under that law was worse than the condition in the United States under the Newlands arbitration law. Your testimony on yesterday, as I recall it, was to the effect that the investigation that had been made there by the Government and others had pronounced that law a success. Am I correct as to your statement?

Mr. KRUTTSCHNITT. You are. Mr. MacKenzie King, the ex-Canadian minister of labor, in an address made before a meeting which I attended, explained the workings of that law and pronounced it a most unqualified success. I had the pleasure afterwards of meeting Mr. King socially, and on account of my interest in the matter, I took the matter up again with him and discussed the workings of the law, and he again assured me that the law had been very successful in its workings. I stated in the memorandum that I had read by my secretary yesterday that I sent a representative to Ottawa perhaps two or three years ago to interview the minister of labor, Government officials, and railroad officials, and received the same assurance as to the success of the law that I got from Mr. King.

I embodied in my memorandum an examination made of the law by Sir George Askwith, chief industrial commissioner of the British Board of Trade, which was presented to both Houses of Parliament of Great Britain. He investigated the workings of that act, and I quoted about a page and a half from his report, which corroborated everything that the Canadian ministers of labor had said of it. That you will have before you, as it is in the proceedings.

I think we have to judge of the act by what it has accomplished, or, to use the old-time adage, "The proof of the pudding is in the eating"; and I give here in my memorandum a report of the United States Board of Mediation and Conciliation, dated November 1, 1916, which shows that from the passage of the Canadian disputes act in 1907 up to October 18, 1916, a total of 212 disputes were referred for adjustment under its provisions. The total number of boards of conciliation established under the act was 182, the remaining 30 disputes being settled without the establishment of boards. The number of disputes where a strike was not averted or ended was 21. The report states in approximately 90 per cent of the cases brought under the act, therefore, its provisions were effective, so far as actually preventing strikes was concerned.

It seems to me that if we can not stop 100 per cent of strikes we would be making a very good stagger if we could stop 90 per cent of them; and if that could be done under an act similar to the Canadian disputes act we might, by the wisdom acquired in administering this act, get sufficient information to reduce the remaining 10 per cent—perhaps get a little more off. I do not know that we could ever attain perfection and stop all strikes. It is a condition very much to be desired; but if we could stop 90 per cent it would be a splendid beginning.

Senator TOWNSEND. I have been, as is known, for years a very ardent supporter and believer in a compulsory investigation law. I did introduce several bills in the House and had them pending in the Senate and received a favorable report in the House and also in the Senate, but the statement that was made was that under the Newlands Act fewer strikes had occurred in the United States than occurred in Canada under that act for the same length of time; and

it was presented here as being opposed not only by the laborers, but by the people generally. I was surprised when I heard that testimony, because it had been contrary to my understanding of the situation.

Mr. KRUTTSCHNITT. I share your surprise. This statement—not mine, but of the United States Board of Mediation—that there were 21 strikes in nine years, or an average of a little over 2 a year, it seems to me is a very strong confirmation of the opinion that the act is helpful in preventing strikes.

Senator TOWNSEND. Can you speak for the railroad managers sufficiently to state whether they are in favor of a compulsory investigation law which would make public all of the incidents connected with a strike or a pending strike?

Mr. KRUTTSCHNITT. At the time I had the personal investigation made, by sending a representative to Canada, I prepared a brief report of his visit and the opinions he had gotten from Canadian railway officers and from the Canadian Government officers of the utility of the act, and I sent it around to 11 executives of the principal American railways, and they all approved it. To be very accurate, I think one said at the time that while he approved it he did not think the time was opportune to try to have such a law passed; but my recollection is quite clear that with that one single qualification the indorsements were all unqualified.

Senator TOWNSEND. Another thing that you have mentioned several times is the fact that legislation has hampered the operation of the railroads and thereby affected their credit. Do you believe that the interstate-commerce law, even with its amendments, as a whole, has been detrimental to the railroads of the country?

Mr. KRUTTSCHNITT. No; I do not.

Senator TOWNSEND. It has been highly beneficial, has it not?

Mr. KRUTTSCHNITT. I think so. It has substituted regulation for freedom of action in a great many directions, but I think there has been compensation and more than compensation by the elimination of abuses.

Senator TOWNSEND. And yet that law, as I recall it, when the bill was before Congress and when amendments had been proposed generally—the railroads appeared in opposition to it, did they not?

Mr. KRUTTSCHNITT. I think in the main you are right.

Mr. ADAMSON. Has not that been true of every amendment?

Senator TOWNSEND. I was just getting into that.

Mr. KRUTTSCHNITT. I think this is also true: That the railroads have learned their lesson, and have learned it quite thoroughly.

Senator TOWNSEND. I was wondering if they had. That is the point that interests me, because you gentlemen are certainly skilled in your business, and your reputation is such as to warrant confidence. But, having been on this committee throughout so many years, and met with opposition to things that seemed to us to be good, and which were subsequently demonstrated to be good, and admitted now by you and others as being good, I should like to know that we could have confidence in your judgment at this time on these subjects.

Mr. KRUTTSCHNITT. I will say that there are some few things that we would like to see altered. For instance, this stereotyped delay in the application for increase of a rate. That delay is nearly

always the maximum delay allowed to the commission by the law. We do not think for a moment that that is because of the indisposition of the commission to listen to our side of the case, but that it is due to the fact that they are overworked; that they have not the time, and that they are forced to procrastinate.

Senator TOWNSEND. I realize that; I think everybody does.

Mr. KRUTTSCHNITT. The principal reason we have come before you now is to ask to be relieved of a large number of masters; in other words, to be subjected to the regulation and control of one master instead of many. I think from what has been said here already to the committee that it must be evident to you that the multiplicity of views about regulation and interference in the management of railroad affairs is embarrassing, very embarrassing, and when these facts are known to the investing world it makes investment in railroad securities unattractive in comparison with other securities in companies the operations of which are not hampered by either close regulation or management.

Senator TOWNSEND. You have mentioned several times, as did also Judge Lovett, that the element of speculation must enter into the financing of railroad properties; there must be an opportunity for extraordinary earnings else capital would not invest. Now, to what speculation do you have reference? What speculative value could be found in legitimate railroading?

Mr. KRUTTSCHNITT. I would illustrate that in this way: A community wants a railroad. They get out a prospectus and figure that the earnings are going to be very, very large, very profitable. Most men, when brought face to face with that, would naturally ask the community, "If they are so very profitable, why don't you build a road?" There are always a great many excuses why they should not. I remember distinctly the case of a road in Oregon, the construction of which came under me at a time when I was serving the Union Pacific as well as the Southern. Communities in Oregon had been doing just what I said; they had been circulating prospectuses as to the fertility of the country to be served, the amount of tonnage to be expected, and painted the situation in the most rosy colors: and it was the practice whenever Mr. Harriman or I went up into Oregon, particularly to Portland, for these people to tackle us and urge construction of this road. We asked several times "Why don't you gentlemen build this road? It is a very small affair"—I think it was 150 or 160 miles—"If the profits are so great and the demands are so urgent for transportation facilities, this must be a splendid investment, and why do you neglect the opportunity of going into it?"

I never remember that they gave a very satisfactory answer, but at a dinner that they gave Mr. Harriman, at which I was present, when they urged him to build it, he finally said: "I make you this proposition—let us go into this road as partners. I will go into it with you. I will furnish half the money, you to furnish the other half. Now, it is a fine investment, according to you, and you ought to have no trouble getting a very high return on your money." As I remember there was dead silence. There was no answer to Mr. Harriman's proposition.

The situation remained so acute and was the cause of so much irritation that Mr. Harriman at last yielded and did build the road.

which was completed about 1911 or 1912, before the unmerger of the Union Pacific and the Southern Pacific systems. About a year ago a man who has been associated with us in former years in building branch roads conceived the idea of building some roads in the same territory, and asked me, as a friend, for advice; and to write him a proper letter of advice I went to my former Union Pacific associates and asked them if they would mind telling me what had been the returns on this road that Mr. Harriman had been almost compelled to build. They told me they had no objections whatever, and they showed that the road had just about paid its operating expenses—a little more—and all the money invested in it was a dead investment—was producing nothing, and that was about the early part of 1916. The road was finished, I should say, in 1911 or 1912, and after four years was barely paying operating expenses.

Senator TOWNSEND. What would have been the loss to the country if that road had not been built?

Mr. KRUTTSCHNITT. I do not think there would have been any. Of course it is a convenience to the people there, but they can not possibly produce enough tonnage to support the road.

Senator TOWNSEND. Your speculative value that you have illustrated there was in reference to a new road. Of what value is the speculative interest—before I get to that question: What right have intelligent people anywhere to believe that there could be an exorbitant return on the proper operation of a railroad, under the regulations prescribed for interstate commerce, which prescribe only just and reasonable rates?

Mr. KRUTTSCHNITT. I had hardly finished my answer. I had started by stating that communities wanted these roads built, and were unwilling to put their own money in these enterprises, but were quite willing that others should put their money in on the speculation that they might get returns that would justify the risk. I want to state, out of respect to Mr. Harriman's business acumen, that I do not think he ever built this road with the idea of every getting very large returns, but he built it because the public he was serving in a great many other directions practically insisted that he should.

Senator TOWNSEND. You are not asking for any special legislation that would help such a proposition as that, are you?

Mr. KRUTTSCHNITT. I would not ask any except as has been pointed out before that we should get reasonable rates. If the road can not live under them, I suppose we should have to charge it up to bad judgment or excessive good nature.

Senator TOWNSEND. Now, I say, your example has referred to the financing of a new proposition. How does the speculative value enter into the operation or management of roads already in existence?

Mr. KRUTTSCHNITT. This speculative element entered into the construction of those roads from the beginning. If the parties who put their money in are restricted, we will say, to 4 per cent or 4½ or even 5 per cent returns on a project, the future of which is uncertain, they would be very foolish to put their money into such a concern, because they can find investments elsewhere the returns on which are certain and on which they can get that much or more.

Senator TOWNSEND. Now, you are referring to newly constructed roads?

Mr. KRUTTSCHNITT. I can not refer back, or I can not very well suppose a road now in operation where that speculative element did not enter into its construction.

Senator TOWNSEND. Well, now, what proportion of the roads of this country are owned to-day by the men who built them, who put their money into them with the proposition they were going to get a speculative value out of them?

Mr. KRUTTSCHNITT. Oh, I can not say.

Senator TOWNSEND. A very small proportion of the railroads, is it not?

Mr. KRUTTSCHNITT. I would say that I believe that a great many—perhaps most, as you put it—of the men who promoted these roads are no longer in them.

Senator TOWNSEND. Well, then, I am at a loss to understand the application of the argument that we must encourage a speculative element in order to have the roads properly operated.

Mr. KRUTTSCHNITT. If the people who have their money now in these roads, who now own them, have no certain or guaranteed return—that is, if they are not lured on by the spirit of speculation and hope of getting a larger return in the future to make up for what they consider unsatisfactory returns, now or in the past—they will take their money out of those projects and put it into others that offer more certain and more attractive returns, and you will get no people who will invest in the securities of the roads under the conditions that put a very low maximum on the returns and let the minimum take care of itself.

Senator TOWNSEND. I am in hearty sympathy with the proposition that there should be stability, and that there should be reasonable certainty, as nearly as can be, in reference to railroad operation; but I still must beg your pardon if I fail to see how you have demonstrated, or anyone else has demonstrated, as a statement of fact, that speculation is necessary in order to operate railroads. What right has any man of intelligence to expect a speculative profit out of railroad operation with the laws of our country as they are to-day and these questions having been determined so often by the Supreme Court of the United States?

Mr. THOM. May I interrupt a moment, Senator, to say a word there?

Senator TOWNSEND. Certainly.

Mr. THOM. I made an argument on this subject, and I heard Judge Lovett's remarks on the subject, and my understanding of his position and my assurance as to my own in respect to this matter, was that we recognized that under regulation the speculative element is withdrawn, and therefore in order to get the new capital necessary to keep these utilities up to the point of adequate usefulness you must now appeal not to the speculative element but to those investors who require assurance as to stability and as to certainty, and consequently eliminating the speculative element and eliminating the other sources of credit we come down to the problem before the American Congress and the country as to how now we are to get the necessary money out of the only class of investors which is left, and that is the class which must be attracted by stability and certainty.

Senator TOWNSEND. I understand that position very fully, but that has not been the position that has been taken.

Mr. ADAMSON. My recollection, Senator Townsend, of Mr. Thom's argument was that he was emphasizing the fact that formerly speculative instinct led men to go into these railroads, but under strict regulation that has been eliminated.

Senator TOWNSEND. I was not a member of the committee and present when Mr. Thom was testifying, and while he told me he was going to send me his testimony, I have not yet received it. I simply listened to the testimony of Judge Lovett and of the present witness.

Mr. THOM. Judge Lovett's position, unmistakably, Senator, if you will read what he said, accords with what I said.

Mr. HAMILTON. I understood the railroads' position to be, so far, that there was no longer room for adventure; that the time for adventure had passed.

Mr. THOM. That is it.

Senator TOWNSEND. Another thing that you stated the other day, or a complaint that you made, was that under existing regulation by the States generally, and possibly by the Interstate Commerce Commission, the claims for shippers, or rather proposed increases in rates for railroads, should go into effect at once instead of waiting for some time for determination by the Interstate Commerce Commission, during which time the proposed rate is suspended. You figure that it would be better, as I understand, to have that go into effect at once, and yet I can not understand how, if that proposed rate should be declared illegal, how the shippers would be able to get any redress at all. Some of them would, I can readily see that, but the great majority of them, whose goods and products had been mingled with others and who had sold their stuff to the local dealer, possibly, and the freight rate had entered into the proposition—how are those people going to get any redress if they should be made immediately operative and then afterwards found illegal?

Mr. KRUTTSCHNITT. The freight rate, as I pointed out yesterday, in a majority of articles of commerce is an extremely small percentage of its cost. It should not affect the price of commodities to the consumer to any extent. Of course, if the middleman has bought goods and has largely increased their prices and sold them to the ultimate consumer, it would perhaps be difficult for the ultimate consumer to get back the increases from him, but the amount of those sales must be small, and if the rate went into effect at once and the commission ordered a restitution, it devolves upon the railroads to keep account of the freights paid and to return them to the people who paid them. On the other hand, if the suspensions continue to be made as they are now, the carrier has no redress if the commission finds the rates justifiable and reasonable. The carrier in the interim of the suspension has lost, without any hope of ever getting back, the difference between the rate finally fixed by the commission and the one appealed from.

Senator TOWNSEND. I see that. I understood that when the law was passed, and I could see where possibly there would be an injustice done, but let us take the example, for instance, of the farmer who sells his wheat to the local elevator man. The elevator man pays him, as I think he will admit, less by the amount of the additional freight, for the wheat. How is the farmer going to get his freight back if the rate is declared an improper one by the commission?

Mr. KRUTTSCHNITT. Well, that is a matter that I expect you gentlemen charged with seeing justice done between the shareholder of a railroad, who, on the one hand, would be deprived of the earnings to which he would be entitled under a proper rate, and the former who might pay a little more under the suggested conditions—that somewhere it would become your duty to cast a balance between those two, and to prescribe a law that would recognize the rights of both sides.

Senator TOWNSEND. If that could be done——

Mr. KRUTTSCHNITT. There are a great many shareholders who own the railroads of this country. They are no longer owned by a few men, as was the case perhaps 15, 20, or 25 years ago, but they are owned by a vast number of people, spread over the country. Our company, which not many years ago was really owned by four men, is now owned by over 34,000 people.

Senator TOWNSEND. I understand that.

Mr. HAMILTON. May I ask, at this point, how long ago it was when you said your railroad was practically owned by four men?

Mr. KRUTTSCHNITT. Well, Mr. Huntington died in 1899.

Mr. HAMILTON. I was only trying to get at the period covering this rapid spread of ownership.

Mr. KRUTTSCHNITT. He died in 1899. Up to that time the road had been practically owned by four people.

Mr. HAMILTON. Then this wonderful rapidity of growth of ownership has gone on in approximately the last 16 years?

Mr. KRUTTSCHNITT. Practically; yes, sir.

Senator TOWNSEND. The theory, as I understand it, of the lawmakers was that the railroads proposed an increase of rates; rates that had been in existence probably many years, and the proposition was that before those rates were changed there should be an opportunity given to determine whether or not they were just and reasonable, and leave the matter in statu quo—as it had been—until that determination. It was not placing any additional burden on the railroads, but simply giving them an opportunity to make good the claim that the rates should be increased. That was the theory, as I understand it.

Mr. KRUTTSCHNITT. It was not imposing any additional burden, but it was not giving the railroads relief from burdens which had become intolerable under changed conditions.

Senator TOWNSEND. Now, I do not want to occupy very much of your time. I was interested—greatly interested—in the statement you made the other day to the effect that labor employed by the railroads was becoming less efficient, and was now less efficient under the laws which have been passed, ostensibly and openly, for the benefit of labor—that it had resulted in less efficiency.

Mr. KRUTTSCHNITT. I will try to point that out somewhat in detail. I thought a great many of the reasons that I read yesterday were almost self-explanatory. Let us take what is known popularly as the full-crew law. A certain number of men have been operating trains successfully and safely, and, I will say, efficiently. Suddenly the claim is made that it is unsafe to operate trains with that number of men, and they should have one more man, and a great many States have said, "All right, we will put on the one more man." That is making for efficiency. We are paying one man for doing work

that could be done by those who were on the trains before. We are paying four, for instance, in place of three.

Take the law limiting the length of trains, in favor of which a very active campaign is being waged at the present time. I pointed out yesterday that in a period, I think, from 1895 to 1915, that although the cost of running a train-mile on the railroads had increased very largely—93 per cent—the roads by increasing the efficiency of operation have maintained their net constant. It was 3.6 mills 20 years ago and it is 3.5 mills to-day. It is substantially the same. The roads have been able to do that by vast expenditures of capital. They have reduced grades so as to make their locomotives of the same power haul more freight, which they can do on a low-grade line as against a high-grade line. They have straightened their lines. A locomotive can haul more freight on a straight line than it can around or over a very crooked line or a line cut up or made up of a great many curves.

Now, that efficiency that the roads have obtained by expenditure of vast sums of money, not only in altering the physical condition of the roads, as I have pointed out, but by buying more efficient locomotives and cars, has been taken away in some States from the roads by the inefficiency of labor. Labor says, "We will not haul these long trains, and if you do not stop making them up we will go to the legislature and have them order you to stop." They have succeeded in one or more States, and I have told you that the measure is pending in a large number of others.

Take the very contracts that have been given a great deal of publicity—I do not think enough, but a great deal—in this contention that was made last August under the threat of a strike. The railroads must pay a certain number of dollars for a day's work whether it be 10 hours or 8 hours, or they must pay money for a certain number of miles per run. If the miles run are 100 and the speed be 12½ miles an hour, it figures out eight hours work. Twelve miles and a half is a moderate speed, but a great many freight trains, such as stock, dressed beef, and perishable freight, are run at speeds from 18 to 25 miles an hour. If the speed is 25 miles an hour and the run is made in four hours, we are required or labor demands that we shall pay the same for the four hours as for the eight. There is a fall in efficiency. Take the——

Mr. ADAMSON. How is it a failure in efficiency when he does the same thing——

Mr. KRUTTSCHNITT. I beg your pardon.

Mr. ADAMSON. If it does the same thing in four hours as in eight hours, how do you drop in efficiency?

Mr. KRUTTSCHNITT. Because we are paying for eight hours' work and should receive it.

Mr. ADAMSON. No; you are paying for running 100 miles; that is the basis on which that eight-hour bill passed, and I do not think you will ever get any consideration for increased rates on account of that law until you put that law in force. Allow them to run 12 miles an hour and see if they can not get out the same amount of work in eight hours.

Mr. KRUTTSCHNITT. Mr. Chairman, you seem to consider that as entirely an academic question, to be proven by trial.

Mr. ADAMSON. On the contrary, I believe it is a practical question. I have not only watched both sides of the question, but I have watched trains for 40 years, going from a pull of 900 tons from Macon 30 years ago to a pull of 2,700 tons now at \$5.25 a day, and the Georgia Legislature has tried two or three times to pass a law that you shall not run a train over a mile long; and it will not surprise me, if you all do not quit exaggerating Mr. Hill's idea of loading trains to the capacity, that Congress will eventually limit your tonnage and the length of your trains.

Mr. KRUTTSCHNITT. Mr. Hill has, perhaps on account of his prominence in the railroad world, attached his name to the running of long trains. It is a fact, however, that whether advocated by Mr. Hill or anybody else, as I tried to point out yesterday and again this morning in answer to Senator Townsend's questions, the only way the railroads could live was by increasing the hauling power of their locomotives, either by reducing the grades, straightening their lines, or buying heavier locomotives. I do not know whether your observations as to the length of trains in Georgia have extended to the character of the locomotives pulling the trains.

Mr. ADAMSON. Yes, sir.

Mr. KRUTTSCHNITT. They were probably heavier locomotives.

Mr. ADAMSON. Yes; I would rather see one heavier than a double-header, I think.

Mr. KRUTTSCHNITT. But if the time should come, as suggested by you, when Congress will step in and absolutely prohibit the roads from using the only life-saving methods left to them, that day will mark, I believe, the beginning of Government ownership.

Mr. ADAMSON. I think, on the contrary, Congress will do that in advocacy of life-saving methods. They admire the system, whether properly named from Mr. Hill or somebody else, of loading of vehicles to proper capacity, making the train of mobile length and weight, but I think the consensus of opinion of all is that you are overloading them entirely, and for that reason you make overtime unnecessary on your roads, but that is more than balanced by your accidents and losses connected with that.

Mr. HAMILTON. May I ask a question there of Mr. Adamson? Would it not react upon the railroads if they overloaded their trains?

Mr. ADAMSON. It does do it.

Mr. HAMILTON. Or overextended their trains? Now, if that is true, the railroads, being managed by men of ability, would they not recognize that, and would not there be a natural limitation in the operation of the traffic?

Mr. ADAMSON. Well, they send out one long train and three or four drawheads pull out from the weight on the front cars, and the engineer and the conductor and one brakeman tug at it with a big chain and lose time, and it takes 16 hours to make an 8-hour run: therefore it looks to me like the losses and overtime more than balance the losses on that train.

Mr. HAMILTON. But would not a few such instances as that——

Mr. ADAMSON. Yet hope springs eternal in the human breast, and these gentlemen are confident that they know more about it than anybody else, and they think the next time it will not break; that they will run it through all right.

Mr. HAMILTON. That would be very experimental railroading, I think.

Mr. ADAMSON. That is where the speculation comes in.

Mr. KRUTTSCHNITT. I should like to answer the question implied in the chairman's remarks, if I may.

Mr. ADAMSON. I should be glad if you would. If I am wrong, I want to know it. I have been looking after it mighty hard.

Mr. KRUTTSCHNITT. I want to give an illustration that is not speculative. I will begin by saying, of course, as Mr. Hamilton has properly remarked, if the railroads of the country continue going on doing what the chairman has outlined, their officers would be monumental asses, absolutely unfit for their positions; and I do not think the shareholders would allow them to remain there very long.

Mr. ADAMSON. Congress could direct them, though, without calling them those names.

Mr. KRUTTSCHNITT. That is not a very bad name. Now for the illustration.

When I was located in San Francisco as general manager of our company's properties I started a practice of getting efficient work out of the locomotives. We certainly before that time had not been getting it. I attached to my office as an assistant a very intelligent man and instructed him to act with the engineer of maintenance of way, who was familiar with the grades and curves, and with the superintendent of motive power, who was familiar with the capacity of locomotives, in devising a table of locomotive loads for each and every division. And I said to them, "I do not want locomotives overloaded," because I appreciated just what Mr. Hamilton did. I said, "I do not want the traffic delayed by trains unable to make the time simply in the vain effort to get a few more tons, but I want the locomotives rated at a reasonable rating; give them what they can pull comfortably and no more."

Well, as we expected, there was more or less opposition to this, but the opposition was most pronounced on one particular division, where the reports came in every morning, "Locomotive overloaded; could not make time." I got impatient and tired of these reports, and at the end of a week or 10 days I instructed this assistant to get out on that division and live on it until he ascertained what the causes of the delays were. We knew thoroughly well that the cause was not overloading of the locomotives, because the power of a locomotive to haul a load on a given grade or any given system of grades is as easily computable as the interest on a promissory note. There is no doubt about it. Well, he went out on the road, and within two days after he had been there the delays were lessened. At the end of a week the locomotives were pulling with perfect comfort and making time over the division the loads that were assigned to them, and when he came back I asked him, "What was the trouble?" "Well," he said, "most of the trouble was loafing on the sidetracks, getting in a sidetrack and not taking any particular interest when they got out." He said, "In no single instance did I ride a locomotive in which the engineer claimed he could not comfortably pull the assigned load." That ended the trouble, and we have never had any trouble on that division in pulling the assigned loads, and have

not had any on others. We have had drawheads pulled out; that was due to other causes. There are ways in which the train is handled; it may be started in such a way as to insure pulling out of the drawhead. It may be handled over undulating grades in such a way as to guarantee pulling out the drawheads. In other ways the trains can be hauled over the same undulating grades and pull the same loads with almost absolute immunity from pulling out drawheads. So it is not the loading of trains that does this.

Possibly on some roads, possibly on the roads you have watched. Mr. Chairman, there has been injudicious loading and bad judgment shown; but I do claim as to the roads of the country generally that the men in charge of the management have reasonable ability and are not doing things that would simply obstruct traffic on the road in the vain endeavor to haul a few more tons than they should.

Now, we will see what happens from increasing speed. You take a typical freight locomotive. To make a speed over the ground of 10 miles an hour we have always assumed, and the assumption is very close to correct, that the locomotive has to run about 50 per cent faster than the schedule; in other words, she has to make 15 miles an hour running. Now, the capacity of a locomotive at that speed, a typical freight locomotive, is 33,300 pounds of traction. If you increase the speed to 12½ miles an hour and add 50 per cent, as we did, the traction falls to 28,883 pounds, or 13 per cent. Now, if we examine the freight train-miles that are made on the railroads of the United States in 1914, the last complete statement that we have of locomotive miles, there were 638,500,000 made with the average trainload of 452 tons. If that trainload is cut 13 per cent on account of the loss in tractive power of the locomotive at the higher speed, it would require 735,000,000 train-miles, or an increase of 96,500,000 train-miles, to handle the same traffic.

Mr. ADAMSON. The trouble is, though, you make a hodgepodge out of all of them, while there may be 75 per cent of those trains not overloaded, while the other 25 per cent are, and it would not be fair to cut those that are not overloaded now. You cut all of them horizontally, according to your figures.

Mr. KRUTTSCHNITT. The hodgepodge was introduced by the Interstate Commerce Commission in sizing up the trains and the average load of the entire United States. I followed their example only. If the hodgepodge is unjust in one case, it is unjust to the same extent in the other; and the comparison of the two conditions, or their relative conditions, are not affected.

Mr. ADAMSON. But it is evidently unfair, though, to say that those trains that are not overloaded should be cut also because you are correcting errors in those that are heavier loaded.

Mr. KRUTTSCHNITT. You have to have a unit of measure, and the unit of measure of train loading and the number of train-miles run is derived from taking, as you have called it, a hodgepodge of everything run and reduce it to an average.

Mr. ADAMSON. But talking about averages does not mean that when you undertake a correction you have got to correct all horizontally, but only those that need it.

Mr. KRUTTSCHNITT. Yet the effect of correcting those that need it is the same in one set of figures as the other. That is what I want

to insist on, and if there is any inaccuracy the inaccuracy enters into both computations, affects them alike, and therefore a comparison is just of the two methods. Incidentally in running at more train-miles you make 28 per cent more stops, meeting points of trains, and sources of delay.

Mr. ADAMSON. Then, the slower you go and the fewer meeting points you have the faster you will go on the entire journey?

Mr. KRUTTSCHNITT. No; I do not say that.

Mr. ADAMSON. Would that not result from the argument?

Mr. KRUTTSCHNITT. No.

Mr. ADAMSON. I am much obliged to you. I am glad to know that on your system of roads you do not overload the trains and the engines.

Mr. KRUTTSCHNITT. I, of course, can speak with more authority for our system of roads.

Mr. ADAMSON. I do not doubt that you act wisely, from my knowledge of you.

Mr. KRUTTSCHNITT. But I know, Mr. Chairman, that while there may be exceptions—and I do not question at all what you stated about the trains that have come under your observation, but I am speaking now with the greatest authority about Southern Pacific operations, and with the authority derived from the information given by the Interstate Commerce Commission of the operations of all of the roads of the country grouped.

Mr. ADAMSON. Mr. Kruttschnitt, you know it is an unfortunate fact in civilization that you have to legislate for the correction of the few evils that you find; that very often it is those not doing wrong who complain. If the majority of the citizens committed crimes, it would be a horrible state of affairs; but we have to legislate with a view to those that do wrong in order to correct that. It is for the protection of the good ones, not for their correction.

Mr. KRUTTSCHNITT. That is quite true, Mr. Chairman; you do punish a few for the good of the many; but in this case you are punishing the many to reform the few.

Mr. ADAMSON. While it is not desired to punish any innocent ones, sometimes inconvenience is visited on people who are not really guilty in order to catch the guilty ones.

Mr. KRUTTSCHNITT. I want to impress on you as earnestly as I can that your suggestion that it might lead to legislation on the part of the Congress to control absolutely the tonnage hauled by locomotives would mean robbing the railroads of substantially the only effective means they have now of making both ends meet.

Mr. ADAMSON. Now, Mr. Kruttschnitt, you say to make regulations to prevent certain practices would be robbery. Before the 16-hour law the evidence was before our committee that men had to run 24, 30, and one said he had to run 40, hours without rest. When we passed the 16-hour law, requiring you not to let any man work longer than that, it kept you from working them overtime; it changed that practice. I do not say you—I mean some of the railroads. Would you call that robbing the railroads because they were required to stop that practice?

Mr. KRUTTSCHNITT. No; not at all.

Mr. ADAMSON. Is it proper to say that you are robbing the railroads if, for the safety of travelers and the good of society, we say

you shall not do a thing because the thing is wrong and dangerous, although you make more money by continuing it?

Mr. KRUTTSCHNITT. No; I should say, if you found an abuse of the kind that you describe to exist, the proper remedy would not be to say to the railroads, "We prohibit you from doing that which you have done before in order to make your service more efficient and in order to live under the rates that you receive, but we forbid you from working men more than a maximum number of hours." You have done that already; that is the 16-hour law.

I want to say here that I approve most heartily what was done in that case, and I want to say now, without any disposition to brag, that I passed a 16-hour law myself 10 or 12 years before Congress did, and I threatened, if necessary, that I would discharge any superintendent who kept a man on the road over a certain number of hours.

Mr. ADAMSON. What you meant to say now in substance was, if Congress should pass any such law that you thought drastic and unnecessary you would differ in judgment from Congress?

Mr. KRUTTSCHNITT. I say, Congress ought to consider, in passing a law, whether it is possible for railroads to live under it.

Mr. ADAMSON. You would not say Congress is robbing the railroads?

Mr. KRUTTSCHNITT. Mr. Chairman, you selected that word of sinister sound.

Mr. ADAMSON. No, sir; I beg your pardon; you said if we ever did that we would be robbing the railroads of their rights.

Mr. HAMILTON. He did not say rights.

Mr. ADAMSON. Profits.

Mr. KRUTTSCHNITT. There are two meanings to the word "rob," one to hold a man up at the point of a pistol and take what he has got, and the other meaning, the less sinister one—and I used the word "rob" in that sense if I did use it—the other meaning is that it would deprive him—

Mr. ADAMSON. Then you should say "deprive."

Mr. KRUTTSCHNITT. I will say "deprive" hereafter.

Mr. HAMILTON. Senator Townsend, bearing directly upon what Judge Adamson asked, may I inquire of the witness?

Senator TOWNSEND. Yes; I shall be very glad to have you.

Mr. HAMILTON. I want to ask just one question. Is not the lowering of grades and the straightening of curves on a railroad analogous to the making of good highways, in this, that the good highway permits the farmer to haul at one load what he otherwise might have to haul at two loads; and is it not the very purpose of the lowering of the grade and the straightening of the curve to enable the railroad company to haul a greater load; and does that not in the end, under the control of the Interstate Commerce Commission, inure to the benefit of the patron of the road in lowered freight rates, should it not do so?

Mr. ADAMSON. Before you answer that I should love to ask Mr. Hamilton, What would you think of a farmer who would string a row of wagons along one after the other—make a string of wagons around a block?

Mr. HAMILTON. I say your trainload is analogous to your wagonload. I am asking the witness; he is an expert. I ask you for your judgment on the question.

Mr. KRUTTSCHNITT. I think you are entirely right in your conception of the trainload. I have said before, and I will repeat, that the only way in which the railroads have been able to keep going, to live under the constant fall in rates and in face of the constant demands made on them by labor for increased wages—both have been constant in their trend, a constant trend upward in wages as I showed you on the chart yesterday, and a constant trend upward of the prices of materials; and a mere child could see that the railroads long ago all would have been bankrupt if they had not adopted something that would counteract those tendencies, and that something was increasing the capacity of their roads to handle freight by reductions in grades and elimination of curves, and by buying more efficient locomotives; in other words, by hauling greater loads.

Mr. ADAMSON. Suppose a railroad was straight as a die and level as a plain, could there ever be any limit in the judgment of railroad men according to the ideas of some to the length of trains and weight of loads?

Mr. KRUTTSCHNITT. Absolutely, Mr. Chairman. There is an element that comes in there that takes care of the trainload.

Mr. ADAMSON. Where would the limit be?

Mr. KRUTTSCHNITT. I am going to try to tell you. The upper limit would be no trainload. You put on a perfectly straight, perfectly level track and speed up your locomotive to a point where she could haul herself only, could not haul anything behind her. The other limit is if you load her so that she could move at such a slow rate of speed as practically to block her progress. Now, the wise point is to gauge her load to a speed that is considered practicable and the most economical, and having fixed that limit for a trainload, just see that she makes it.

Mr. ADAMSON. And you say there is no room for difference of judgment as to where those points should be?

Mr. KRUTTSCHNITT. I say there is no room for difference of the computations and fixing the capacity of the locomotives. That is fixed by mechanical laws that are inflexible. There may be a variance of judgment in different men's minds as to whether the economic speed is 12, 15, or 20 miles an hour. It varies with traffic and with what the railroad has to do.

Mr. HAMILTON. In one instance you save speed without traction and in the other you strike an average between speed and traction?

Mr. KRUTTSCHNITT. Yes. In other words, the traction decreases so largely with the speed, because of the fact that every time the wheels are turned around the cylinders have to be filled and emptied of steam, and you very soon, at very high speeds, get to the capacity of the boiler; it can not possibly steam fast enough to fill the cylinders.

Mr. HAMILTON. It is like the description that Lincoln gave of the steamboat on the Mississippi River; it had such a big whistle that every time the whistle blew the boat had to stop.

Mr. ADAMSON. Ultimately Mr. Hamilton's argument would lead to a train so long that the front end would arrive before the back end started.

Mr. HAMILTON. Well, if it was a crooked road.

Mr. KRUTTSCHNITT. That might happen if a bad stop was made and a drawhead pulled out.

Mr. ADAMSON. That does happen often now.

Senator TOWNSEND. Would you wish to give any other cases of the inefficiency?

Mr. KRUTTSCHNITT. I just wanted to give a few more. It is generally on the same lines; you might put it under the general head of limitation of output. Those I have given already are limitations of output. Take the limitation of the output of the bricklayer. The bricklayer is not allowed to lay more than a certain number of bricks a day. Mechanics in other lines have their daily output fixed by their organizations, and dare not exceed them.

I was in a meeting, not over two months ago, of manufacturers, a kind of an experience meeting, and a number of New England manufacturers were there, who gave instances of where certain devices were made under the ordinary shop rules at the rate of 30 or 36 a day on certain machines, and where they put men to work that were not under organization rules in other factories the output went up to as much as several hundred per day of the same devices on the same machines. You find it every day.

Senator TOWNSEND. Were they working the same hours in both cases?

Mr. KRUTTSCHNITT. Yes. That seems to be a well-nigh universally imposed law with all the organizations, to limit the output.

Senator TOWNSEND. I am in hearty sympathy, I desire to state, to render railroads more efficient. I think it is unpopular to some extent, but I think that is the duty of the common carrier and the public, provided it does not put unnecessary and improper burdens upon the employee, because the public is interested also in it; but the primary object of legislation in my judgment is service to the people, and if you have your trains long and it is necessary for efficiency, and that does not interfere with the life and health of the employees, why, I confess I believe in it.

But now you have answered part of this question in the suggestion of the bricklayers and other organizations. Your men are organized. are they—your men on your road?

Mr. KRUTTSCHNITT. Yes; pretty thoroughly, except as to some of the shop crafts, who struck some years ago and the organizations quit the roads, and I do not know to what extent the new men have been organized or not, but I do not think they are.

Senator TOWNSEND. When you deal with your men do you deal with them as organizations or individually?

Mr. KRUTTSCHNITT. We have always dealt with them in the way they wished, which was as organizations.

Senator TOWNSEND. Is your discipline as effective where the men are contracting with you individually as it is where you deal with them as an organization?

Mr. KRUTTSCHNITT. Yes; quite so. After the men have been broken in and understand their duties thoroughly they are more efficient. There are not as many objections to doing this, that, and the other; that increases efficiency.

Senator TOWNSEND. What can you say as to the general condition of labor, whether it has improved the conditions of living, and so on.

of laboring people who have been under your employ under organizations, compared with under the individual-contract system?

Mr. KRUTTSCHNITT. I can only speak with the knowledge of a citizen generally as to the conditions of labor. I do not know that we have ever made investigations following the individual worker to his home to see how he lived in comparison with the organized worker. We make no difference in the rates of pay; they are all paid the same, the organized and the unorganized; there is no discrimination. I would say generally, what is universally known, that the conditions of labor as to living conditions, conditions of food, clothing, and comfort generally have increased immeasurably. There is no doubt whatever that organization has had a large part—perhaps the largest part—to play in those improvements. I have never objected—on the contrary, I have heartily approved of all of the aims of organization when they did not go beyond improving the conditions of the laborer, either as to living conditions, labor, or hours. But what I have objected to, and what nearly every employer of labor objects to, is the assumption of the rôle of managers by the committees of laborers.

Senator TOWNSEND. I think I have nothing further to ask, Mr. Chairman.

Mr. ADAMSON. Judge Sims, will you take the witness?

Mr. SIMS. Mr. Kruttschnitt, what did you state was your present official position concerning railroad operation? You stated at the beginning, but I just do not remember.

Mr. KRUTTSCHNITT. I am chairman of the executive committee of the board of directors of the Southern Pacific Co. The executive committee is vested with all of the powers of the board when the board is not in session.

Mr. SIMS. The board of directors, you mean?

Mr. KRUTTSCHNITT. Yes; the board of directors.

Mr. SIMS. Yours is an organization superior to, or supplementary to, the board of directors?

Mr. KRUTTSCHNITT. It is part of the board. The board deputizes its full powers to six of its members, to be exercised when the board itself is not in session. When the board is in session its authority, of course, is supreme. When it is not in session the power of the executive committee of the board is supreme. It is simply a committee of the board.

Mr. SIMS. Now, whatever the executive committee does in the absence of the board, is it subject to review, repeal, or modification?

Mr. KRUTTSCHNITT. Oh, yes; the committee has to report every month to the board what it does. Our committee meets weekly, the board meets monthly, and every month the acts of the executive committee are reviewed by the full board.

Mr. SIMS. And either approved, modified, or vacated?

Mr. KRUTTSCHNITT. Yes; they take such action—the board takes such action as they deem fit.

Mr. SIMS. What office or position did you occupy when you were connected—

Mr. ADAMSON. My attention has been called to the fact that we agreed on each subsequent examination that we would change the order for examination and begin with the junior members instead of with the senior members. Accidentally, that happened with Senator

Townsend, but unless Mr. Hamilton waives I will ask you to let him go ahead, Judge Sims.

Mr. ESCH. We might as well go on now and revert to the rule afterwards.

Mr. SIMS. I do not object.

Mr. HAMILTON. I yield, Mr. Chairman, very gladly, to Mr. Sims.

Mr. ADAMSON. Judge, will you suspend a minute?

Mr. SIMS. Certainly.

Mr. ADAMSON. My attention is called to the fact that we agreed when we came to the examination of witnesses that we would change the order of examination and begin with the junior member instead of the senior member. Accidentally that happened with Senator Townsend, but unless Mr. Hamilton waives his turn I will ask you to let him go ahead, Judge Sims.

Mr. ESCH. Mr. Chairman, I think we might as well go ahead in this way as long as we have started and change the rule in the future.

Mr. SIMS. I do not care. It is immaterial to me.

Mr. ADAMSON. Well, of course, we can do anything by unanimous consent.

Mr. HAMILTON. I yield very gladly. I thank the chairman, however, for the suggestion.

Mr. SIMS. It is perfectly satisfactory to me any way you gentlemen care to have it.

Mr. ADAMSON. Well, just proceed.

Mr. SIMS. Before you held the position you now hold, what official relation did you have with the Southern Pacific Railway Co.?

Mr. KRUTTSCHNITT. Before my present position?

Mr. SIMS. Yes.

Mr. KRUTTSCHNITT. I was, you might call it, operating vice president and director of maintenance and operation. I had full charge of the maintenance of the property, of construction, and operation.

Mr. SIMS. How long have you been engaged in railway employments or service?

Mr. KRUTTSCHNITT. Since 1878.

Mr. SIMS. How long have you been connected with the Southern Pacific?

Mr. KRUTTSCHNITT. The whole time, from 1878.

Mr. SIMS. You began your railroad service with the Southern Pacific?

Mr. KRUTTSCHNITT. Well, it was not the Southern Pacific then. It became the Southern Pacific in 1885. I was with the Louisiana and the present Southern Pacific.

Mr. SIMS. You have had every opportunity, then, to know the conditions of operation, service, credit, and everything else connected with the Southern Pacific ever since it became the Southern Pacific?

Mr. KRUTTSCHNITT. I had nothing to do with the credit of the company until I became——

Mr. SIMS. You had an opportunity to know. That is all I asked.

Mr. KRUTTSCHNITT. Yes; in a general way.

Mr. SIMS. Do you know the miles of railroad operated at the present time by the Southern Pacific—the mileage? I think you stated it. I do not know whether you did or not, though.

Mr. KRUTTSCHNITT. We have in actual miles of road about 11,300. Then we have half ownership, I should say roughly, of six or seven hundred miles more, which would raise it to about 12,000, and then the additional tracks, second tracks, third tracks, and fourth tracks, yard and side tracks, which would add largely to that—probably five or six thousand miles.

Mr. SIMS. That half ownership—is that the part referred to by Judge Lovett as owned half by ex-Senator Clark and the other—

Mr. KRUTTSCHNITT. No; that is the Union Pacific and Clark interests. The half interest is in certain lines north of San Francisco Bay, running up to Humboldt, and in lines—

Mr. SIMS. I do not care to have you mention them in detail. I only wanted to know if that was the same one referred to by Mr. Lovett?

Mr. KRUTTSCHNITT. No.

Mr. SIMS. Is not the Southern Pacific a good solvent railroad company?

Mr. KRUTTSCHNITT. I certainly think so.

Mr. SIMS. Enjoying good credit?

Mr. KRUTTSCHNITT. I certainly think so.

Mr. SIMS. It markets its bonds and securities perhaps at as good a rate as perhaps any other railroad company in the United States, does it not?

Mr. KRUTTSCHNITT. I would not say that. There are roads which can market at a less price than we can. We are fairly high up on the list, but there are others, for what reasons I do not know, that can market their securities at a better rate than we can.

Mr. SIMS. Your railroad company has no trouble about getting all the money it needs at this time?

Mr. KRUTTSCHNITT. No; but as I said the other day—I gave a list of the security sales here. We pay an average of $5\frac{1}{4}$ per cent for money, but during the same years New York City paid $4\frac{1}{2}$ per cent. In other words, we were paying about 1 per cent more.

Mr. SIMS. Your statement was, as I remember, the Southern Pacific pays 30 per cent more for money than does the State of New York.

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. Those were your words in your direct statement?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. I was trying to find out whether or not the Southern Pacific was commercially low in credit or is it a road that is not entitled to credit—

Mr. KRUTTSCHNITT. I say it is a road that is entitled to credit, although I qualified it by saying that there are some roads that get money, I know, cheaper than we do.

Mr. SIMS. The credit of your road and the conditions warranting credit are above the average of the railroads, taking all the railroads in the United States, is it not?

Mr. KRUTTSCHNITT. Yes; I think so—decidedly.

Mr. SIMS. Decidedly above the average?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. Then it follows, on account of the existing conditions, without going into details as to what they are and why they are,

that the credit of the Southern Pacific Railroad Co., which is above the average of the railroad companies of the United States, is 30 per cent lower than the credit of the State of New York?

Mr. KRUTTSCHNITT. As measured by the cost of money these years.

Mr. SIMS. That is, measured in that way—in the sale of securities?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. Therefore, if your securities are to sell as high in the market as do the securities of the State of New York, it must be brought about by increasing the revenue to be derived in the way of interest or dividends upon the securities?

Mr. KRUTTSCHNITT. You mean necessarily considered on a parity, by investors?

Mr. SIMS. Yes; on a parity; to make them equally as desirable for investors as the bonds of the State of New York, the bonds of the Southern Pacific, having the same time to run and all, would have to provide for an interest 30 per cent higher than the interest rate on the bonds of the State of New York?

Mr. KRUTTSCHNITT. I think so; yes, sir.

Mr. SIMS. Then, is not that statement a fair measure of the difference in private corporation credit, however good that may be, compared to State credit, as measured by the Southern Pacific bond sales and those of the State of New York?

Mr. KRUTTSCHNITT. If you will refer to the chart I gave you yesterday——

Mr. SIMS. I have not had time to study those charts.

Mr. KRUTTSCHNITT. That chart shows from 1904 to 1914 some influence at work on railroad securities that has changed the measure of their desirability in that period of 10 years. Railroad securities are not as desirable in 1914 as they were in 1904, so that something has been at work to make that change.

Mr. SIMS. There is a change?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. Whatever the cause, railroad credit is on the decline, is that what you mean to express?

Mr. KRUTTSCHNITT. Yes; it is not as good as it should be.

Mr. SIMS. And yet freight rates have not declined during that period, upon the average?

Mr. KRUTTSCHNITT. In that period?

Mr. SIMS. Yes; the gross freight rates or passenger rates have not declined upon an equal ratio?

Mr. ESCH. Chart No. 10h-2 shows a part of it, I think.

Mr. KRUTTSCHNITT. I have it here. I am computing the percentage.

Mr. SIMS. I supposed you could state it offhand. I did not mean the fraction of a per cent. Just give me the general tendency.

Mr. KRUTTSCHNITT. Between 1903, which is the nearest figure to 1904, on chart 10h-2, up to 1915, the decline in freight rates has been from 7.63 to 7.32, or about 5 per cent.

Mr. SIMS. You mean 5 per cent decline upon the average on freight rates in a like period?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. What was the other decline that you mentioned? I do not remember the percentage. You stated there had been a continued

decline, but did not state the percentage, in the credit—I mean there would be an increase in freight rates or decline in the sale of securities on account—

Mr. HAMILTON. For some reason, he said.

Mr. SIMS. He did not say what it was. I do not know whether he has it.

Mr. KRUTTSCHNITT. The decline in credit is measured in the increase in the average yield of the bonds. That increase—or cost of the money, you can put it—that increase was 11 per cent from 1904 to 1914.

Mr. SIMS. You mean the decline in credit or the increase of the cost of the money—which means the same thing, I suppose.

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. That was 11 per cent?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. And the decline in freight rates upon an average was 5 per cent?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. So there was a widening of the margins both as to profit and loss?

Mr. KRUTTSCHNITT. Yes; but when you take the decline in freight rates for the purpose of the trend of the questions that you are asking, you should consider the net; that is, you should consider the increased cost of conducting transportation.

Mr. SIMS. Well, the decline, anyway, in credit. I will call it decline, because that is really practically what it means—the decline in the credit of the railroads for the period you have mentioned, was 11 per cent, did you say?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. It has been progressive, has it?

Mr. KRUTTSCHNITT. Yes; quite progressive—quite uniform, I should say.

Mr. SIMS. Uniform and progressive?

Mr. THOM. Uniformly progressive.

Mr. SIMS. Yes; uniformly progressive declines. That is, it has been continuous. Now, if no legislation of any kind should be passed by Congress, and if the railroads should continue to be operated as they have been, under such authority as the States should see proper to exercise, within their constitutional rights and powers, do you see any reason why the decline of railroad credits will not continue progressively in the future as it has done in the past?

Mr. KRUTTSCHNITT. If the present conditions continue?

Mr. SIMS. Yes, sir.

Mr. KRUTTSCHNITT. Whether the decline will not continue?

Mr. SIMS. Yes, sir.

Mr. KRUTTSCHNITT. I should think it was. It is like a sick man. He can get sicker and sicker, but there is a limit to how sick he can get. He will eventually die.

Mr. SIMS. A man who does not improve and continues to decline in health, is certain to die, is he not?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. If present conditions should continue as they have been, for the periods you have mentioned, as there is a decrease of 11 per cent, or a decline of 11 per cent in par value of railroad securities.

how long will it take them, similarly declining in railroad credit, to stop the wheels completely?

Mr. KRUTTSCHNITT. Well, I should say, Judge, that with the—now, leaving aside speculative estimates—I am taking those that we are certain of—the increase that has come in the price of fuel, the abnormal increase piled on top of normal increases that have prevailed for the last 8 or 10 years, in the price of materials, in the past few years, the increase in the cost of wages will be such, in the calendar year 1917, that unless relief comes some way, I can predict with great certainty there will be a very large number of receiverships—railroads that will become bankrupt. It can not be avoided.

To give you an illustration——

Mr. SIMS. That will be all right as argument; I do not need it as far as I am personally concerned.

Mr. HAMILTON. I think the illustration should be given.

Mr. SIMS. Perhaps it will be of advantage to the committee. Go ahead.

Mr. KRUTTSCHNITT. A few days before I left for Washington we closed the fuel contract for our steamship fleet for this coming year at an increase of \$2 per ton for the coal we have got to buy. We use substantially a quarter of a million tons a year. There is an increase in one contract of half a million dollars, for one fleet. The fuel expenses in the west end of our line have been running along steadily for the last three months at an increase of half a million dollars a month.

Mr. ESCH. Do you use oil or coal?

Mr. KRUTTSCHNITT. It is both. Some oil and some coal.

Mr. SIMS. That is due to the extraordinary conditions now prevailing, is it not?

Mr. KRUTTSCHNITT. I prefaced my remark by stating that there are some conditions existing in 1916 and 1917 that will go far to insure bankruptcy of roads that had been considered good roads.

Mr. SIMS. It will accelerate it, but with the continued decline in railroad credits, and the increase in cost of railroad operation and maintenance, it seems to me there is but one thing that can possibly be expected, and that is that they will have no credit at all.

Mr. KRUTTSCHNITT. Well, you asked me the question, and my replies were directed to your question.

Mr. SIMS. Certainly.

Mr. KRUTTSCHNITT. As to what I thought would happen this year.

Mr. SIMS. I did not mean this year. I mean in a like period.

Mr. HAMILTON. You asked if a sick man would not die.

Mr. KRUTTSCHNITT. I think a great many of the sick men will die this year.

Mr. SIMS. I did not mean to limit it to this year or any number of years, but to the future in general.

Mr. HAMILTON. Will you allow me to ask a question right here?

Mr. SIMS. Yes.

Mr. HAMILTON. Is there a compensating increase in returns to offset this very large increase in fuel expenses and other expenses?

Mr. KRUTTSCHNITT. Now, again, I must discriminate between our own road and the others.

Mr. HAMILTON. I mean your own road. You used your own road as an illustration.

Mr. KRUTTSCHNITT. As before, I use intimate statistics, the statistics of my own road, all that I could get, it being impossible to get them for the others. Our road has been singularly fortunate in the last year in that its traffic has increased very largely. We have had some, but not very bad congestions on our road. Congestions increase the expenses at an abnormal and alarming rate.

Mr. SIMS. What do you mean by congestion—congestion of freights?

Mr. KRUTTSCHNITT. Yes; inability to get rid of it. Our one inability has been at Galveston and New Orleans, where our railroad lines connect with the steamer lines. That was due to the inability to get steamships. We would pile more freight into those ports than we could possibly ship. We tried to get more boats, and succeeded in making a great many outside charters, paying for some of the charters the entire freight earnings that we got; in other words, leaving nothing for the net, and in three or four instances I authorized charters where we paid more for the outside ships than the earnings on the freight, simply to maintain the prestige of the company and keep the freight moving.

Mr. HAMILTON. So you are actually hauling at a loss?

Mr. KRUTTSCHNITT. We are hauling at a steamship loss. We divide the proceeds in carrying the freight between the rail lines and the steamship lines. The steamship lines—the outside ships—carried it at a loss.

Mr. HAMILTON. But there was a gain when you figured the land line?

Mr. KRUTTSCHNITT. Yes, sir; considered as a whole, there was. I say we have been singularly fortunate in the last six or seven months. The volume of our traffic has been so large that if I had been asked beforehand whether we could have handled it or not, I would have said, without hesitation, no, we could not handle that much; but the volume has been very great. That is why I put the clause in one of my statements yesterday that the traffic under ordinary conditions might be absolutely unremunerative, yet if you increase the volume enough it may become very remunerative. The Southern Pacific rates have fallen, as I remember it offhand, 12 or 13 per cent in the last few years, but its gross and net earnings have been extremely satisfactory because of its excessive volume. But at the present rates and present scale of expenses, if some power cuts that volume down to what it was in 1914, I should say that the Southern Pacific would be very, very sick.

Mr. SIMS. In other words, your fuel charge is likely to stay up; while it may come down some, you think it may not come down in proportion to your income decline, if, we will say, these abnormal conditions should become normal?

Mr. KRUTTSCHNITT. Generally, prices go up very rapidly; but it has been the experience of everyone of us that when prices go up they are extremely slow in coming down again. They will, no doubt, come down eventually.

Mr. HAMILTON. You mean the prices of commodities and not the price of the service; you distinguish between prices of commodities and freight charges?

Mr. KRUTTSCHNITT. We generally call that rates.

Mr. HAMILTON. You distinguish between prices and rates?

Mr. KRUTTSCHNITT. Yes, sir; and we have it in our household expenses. I remember in August, 1916, when this threat of a general strike came on, the tradesmen in the little Connecticut town where I lived raised their prices tremendously. The excuse was we were going to have a strike. The prices went up, and we were advised that we had better get under cover. I was absent from home, but my wife accepted their advice and loaded up with canned goods, flour, and a half a barrel of sugar, etc., and when the fear of the strike was over, when it was temporarily settled, the prices never came down. They remained where they were; the assigned cause had vanished, but the effect was not evident. So it is with all commodities. They go up, and those controlling those commodities for self-interest do not want them to come down, because they are making more money.

Mr. SIMS. Now, Mr. Kruttschnitt, you referred to the fact, and stated it was a fact, that bank stocks—national-bank stocks, national banks being regulated by the Government——

Mr. KRUTTSCHNITT. And where they are not, the State banks of almost every State are quite as closely regulated as the national banks are.

Mr. SIMS. I understood you to mean national banks, national-bank stocks regulated by one authority.

Mr. KRUTTSCHNITT. I did.

Mr. SIMS. And you stated, as I remember, bank stocks paying 6 per cent dividends sell for a very large amount more than do railroad stocks paying 6 per cent dividends, subject to diverse and multiple regulation, for the purpose of comparisons. I do not remember the difference you mentioned, but it was large.

Now, I wish to ask you if that is, in all respects, a fair comparison, for this reason: The bank stock is all paid for by the owners of the shares. The bank has no capital except the capital paid in by the owners of this stock. It is not mortgaged, hypothecated, or anything of that kind. Consequently, the bank, not having to issue bonds or increase its capital by burdening or mortgaging its property, would have a tendency to increase the value of the shares of that bank, paying a similar dividend, over any kind of an industrial stock, which is secondary in consideration to a mortgage upon the same property: further, banks do place, as a rule, earnings over and above the per cent paid out in dividends to a surplus fund, and it is often the case that the surplus fund of a bank exceeds its entire stock issue, and therefore if that is different in banks, although regulated to some extent—regulated by the National Government—does not that make a difference in the selling value of the shares as compared with railroads having Government regulation and also State regulation: is it not, in part, due to the fact that the railroad is mortgaged and the stock does not represent the absolute unencumbered title to the property itself; in other words, is that comparison on all fours—are the two situations so analogous as to make that a fair comparison as to the effect of regulation by one authority or many?

Mr. KRUTTSCHNITT. There may be some little effect to what you speak of, as, the bank having no mortgage, unquestionably the price of bank stocks is kept up and is high because the banks do earn a

surplus over their dividends; and if all the roads of the United States earned a fair surplus over their dividends, unquestionably their stock would stand a good deal higher and their securities would than they do now. My illustration was intended principally to contrast what a reasonable, constructive, conservative regulation did for bank stock, and I have no doubt that the close supervision kept of the business of national banks by the Federal Government enhances very much the price of their stocks at which they are held in the open market. But we do say, on the other side, that the little respect paid, the little consideration paid to constructive regulation by the diverse masters of the railroads has a good deal of influence in the other direction.

Mr. SIMS. I do not question that at all, but I did not think they were on all fours, because the banks are not regulated by the different States as the railroads are, neither do they have encumbrances which are a lien on their earnings.

Mr. THOM. Do they not have obligations, debts, coming ahead of the stock?

Mr. SIMS. The property of the bank is subject to the payment of debts, and the stockholder is also liable for an assessment of an equal amount of his stock if the bank does not pay them.

Now, Mr. KRUTTSCHNITT, I understood you to say in the beginning of your first statement that the public will have to be coaxed by larger interest rates on railroad bonds in order to make them sufficiently attractive to answer the purpose of the required credits of the railroad companies. That is substantially what you said, did you not?

Mr. KRUTTSCHNITT. I think so.

Mr. SIMS. They will have to be coaxed by increasing the interest rate of the bonds, and, of course, to increase the interest rate there must be an increase of earnings, provided the rates of interest can not be paid out of the present earnings, and the railways maintained in such condition as to perform the services required?

Mr. KRUTTSCHNITT. That is one of the burdens put on the railroads. In other words, to get a hundred dollars of borrowed money they have got to pay more than they otherwise would if they were not handicapped by these handicaps to which I have called attention in my direct statement. That is also shown in the chart, which shows the gradual increase in cost of money to railroads.

Mr. SIMS. Then you are positive—that is, that is your judgment about it, not taking one particular railroad but taking them all in mass—that the return on bonds, in view of existing conditions and what seems to be reasonable and probable for the near future, will have to be higher in order to coax investors sufficiently to market the bonds in such quantities as will be needed?

Mr. KRUTTSCHNITT. Yes, sir; or “attract” is probably a better word than “coax”—to attract investors.

Mr. SIMS. That is what I mean; “attract” has the same meaning. I used it because you used the word “coax.” Then you follow immediately by saying that high rates of interest paid on railroad bonds are not in the public interest. That is a positive statement also of yours, of which you have no doubt, I suppose?

Mr. KRUTTSCHNITT. No. The lower the rate at which the railroads can get money the less they will have to earn from their properties, and what they earn from their properties can come from nothing but rates paid by the public.

Mr. SIMS. Well, a high rate of interest paid on railroad bonds is not in the public interest, and, whatever may be the cause, higher rates will have to be paid in the future than have been paid in the past in order to attract private investors sufficiently to meet the requirements of the railroad companies?

Mr. KRUTTSCHNITT. Yes, sir; I think I said that substantially.

Mr. SIMS. That is the conclusion and is stating the facts as you see them now and as they likely will be. Consequently we are faced by a situation that is not and can not be conducive to the public interest; and you, I believe, with others, have stated, and I believe it is generally admitted, that on account of the vast offers of securities of ordinarily high grade, and which will be of relatively high grade in the future, at a higher rate of interest than has ever heretofore been offered, that will necessarily either cause the bonds of the railroad companies to have to bear a higher rate of interest or sell for less money on the market?

Mr. KRUTTSCHNITT. Yes, sir; the two really mean the same. If they sell at a lower rate and bear a certain rate of interest; it means higher money.

Mr. SIMS. With the vast amount of Government bonds coming on the markets of the world due to the recent war—I mean to the existing war of nations—and our own Government bond issues may be very largely increased, due to similar causes, how is it going to be possible with any sort of regulation, or with the lack of any sort of regulation, to cause railroad bonds to sell upon the same parity that they have heretofore sold in competition with all this tremendous increase of offerings of high-grade securities?

Mr. KRUTTSCHNITT. I have explained—I tried to explain—in my direct statement some of the handicaps to which the railroads are subjected. I believe if you will remove these handicaps their credit will be improved.

Mr. SIMS. You think their future credit will be improved?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. That is, it will be better in the future than it would be without that?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. But from the information which you and others have furnished this committee, will not railroad credit be depressed by reason of the increase in competition in the offering of securities that are of equally high grade—Government securities bearing interest larger than many railroad bonds now bear or have borne?

Mr. KRUTTSCHNITT. Yes; the investor will compare the relative securities of the two, and particularly the securities as to the future, and he will act accordingly.

Mr. SIMS. If railroad securities have to be sold in competitive markets, competing with securities having speculative values in addition to investment values, will not railroad securities suffer in value by comparison with all other securities having both investment and speculative values?

Mr. KRUTTSCHNITT. I should think they would.

Mr. SIMS. This was suggested by what Senator Townsend asked, and your answer to it. I have asked this question based upon the idea that in the future there will be no speculative element to go

along with the sale of railway securities that would prove an element of attractiveness to a purchaser who might have a speculative disposition; or, in other words, he would be willing to give more for a railroad bond that carried with it a bonus of stock or something of that kind. Although valueless at the time, the stock might become afterwards of some value.

Mr. KRUTTSCHNITT. Yes; but in a bond the speculation would come in the price at which he would expect to get it.

Mr. SIMS. Some industrial bonds are sold, carrying with them permission to purchase stocks lower than the market value, or stocks not having any market value at the time.

Mr. KRUTTSCHNITT. What I mean is this: That if you take two sets of bonds, both being 5 per cents, and a man should come to the bargain counter and look at them and find that one bond paid 5 per cent, that the return was certain on it, that he was not taking any chances either as to principal or interest in investing, and he looked at the other bond and found that while the interest was reasonably certain it was not as certain as the other, he might say, "Well, I am willing to give par for the first bond, but there must be a little speculation in the second; I will only give 90 for the second." Now, the speculation comes in there as to the enhancement of the value of the bond through the operations of the property.

Mr. SIMS. This question of mine ought to apply to stocks as well as bonds, because I understand it is not desirable for any railroad to have its whole value covered by its bond liability; that there should be some margin between bond liability and actual value, which should be represented by stock ownership.

Mr. KRUTTSCHNITT. You are quite right; but I did not think at the time of saying this to Senator Townsend, but I will say it now: That you can not prevent a man from speculating, I do not care what the nature of the bond is. Let us assume a United States Government bond, which is the standard of stability and return. Suppose United States bonds are to-day selling at 104. Through something that occurs they may fall to 95. Now, a man coming to buy bonds is going to speculate on that margin between 95 and 104. He may say, "Well, this fall in bonds is perhaps due to this war scare and I do not believe this war scare is all that it has been made to be. I am going to take a chance; I will buy these bonds at 95, though the rate is very low and the return poor, and I will gamble on there being no war and that they will come back to 103 or 104, in which case I will have made a very favorable investment." No matter what the security or the bond is, you can not prevent speculation, and that is evidenced by the fact that the bonds do not remain at a fixed market value. Their value fluctuates, not as rapidly as stocks, because the earnings on stocks are contingent; on bonds, as I said yesterday, interest must be earned or bankruptcy faces the corporation. But the fact of fluctuation in the prices shows that the element of speculation always comes in.

Mr. SIMS. That is an element to this extent, I suppose, that naturally persons would buy when things were low and sell when they were high, and if the bond was thought to be low by the investor he would purchase it. But at the same time the railroad company

selling that bond is losing by having to take a less price for it in order to attract speculative investors; and what I had in mind was, how are we going to issue railroad bonds, and what regulation in law shall apply to them that will enable them to be sold for the greatest amount of money in the markets?

Mr. KRUTTSCHNITT. By insuring the railroad a reasonably certain revenue, by fixing it so that when volume shrinks very much the shrinkage of volume may be followed by a reasonably prompt increase in the rate, or vice versa. If the roads under a given rate, with a very large increase of volume, are earning too much, that is a valid reason to consider a reduction of the rate. But there should be flexibility, and greater flexibility than now, and that flexibility can only be gotten by lodging the rate-making power in one body instead of 48 or 49 and by having it reasonably promptly responsive to the needs of the railroads.

Mr. SIMS. I believe you stated that there are 20 States that regulate hours of service. We have 48 States. Therefore there are 28 States that do not regulate hours of service. But does it not stand to reason that if the States regulating hours of service show results that are popular in those States that then the other 28 will adopt regulation of hours of service?

Mr. KRUTTSCHNITT. Yes; but even those that have adopted them have not adopted uniform ones.

Mr. SIMS. But they have adopted some sort of regulation; and this regulation of hours of service by the States is one of the things you present as affecting railway credit—expense of operation, and so on. Therefore, as only 20 States have adopted it, and as the 28 other States may adopt it, the chances are that if this affects operating expenses now to a material degree that when they all regulate the hours of service it will have a still greater effect, will it not, on railroad credit?

Mr. KRUTTSCHNITT. Yes, sir; we will be even worse off than we are now.

Mr. SIMS. Yes; I was going to say you will be worse off.

You also state that 19 States have asserted their rights to regulate bond and stock issues. Do you mean 19 States have passed laws authorizing it, or what did you mean by saying that they have asserted their rights? That was the language you used, but I do not know what you intended specifically.

Mr. KRUTTSCHNITT. I would understand by that that proposed issues of securities must be submitted to some regulating authority.

Mr. SIMS. In other words, they have laws requiring them to be submitted to a State authority?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. Now, do you also think, or do you not think, that that authority has at least a sentimental effect upon the value of securities?

Mr. KRUTTSCHNITT. A sentimental effect?

Mr. SIMS. Well, a market effect.

Mr. KRUTTSCHNITT. I think it certainly does affect the market prices.

Mr. DOREMUS. Adversely?

Mr. KRUTTSCHNITT. Adversely, of course.

Mr. SIMS. If all the other States adopted similar statutes, would it not still further impair railroad credit?

Mr. KRUTTSCHNITT. I should say, then, that the worst is yet to come.

Mr. SIMS. Does it not stand to reason that if 19 States have thought well enough of this power to assert it that the rest of the States in course of time will do the same?

Mr. KRUTTSCHNITT. Yes; and that if the assertion on the part of 19 States hurts credit, the assertion on the part of the remaining States will still further hurt it.

Mr. SIMS. I do not see how any other conclusions can be reached; and that the reasonable probability is that the rest of the States will assert it, provided it is proven to be of value to the States that have asserted it.

Mr. THOM. You mean unless Congress intervenes?

Mr. SIMS. I mean as it is now.

You stated, according to my note here, that almost all loss of revenue is caused by regulation?

Mr. KRUTTSCHNITT. Almost all loss?

Mr. SIMS. Almost all loss. That is, you were speaking of the decline in railroad credit, or losses affecting the railroads, on stocks and bonds, as I understood it. I may not have that accurately. As I stated, I have just made hurried notes here.

Mr. KRUTTSCHNITT. It does not sound familiar to me.

Mr. SIMS. It is revenue, not stocks. "Almost all loss of revenue is caused by regulation." That is the way I have it down. I suppose you have reference to the regulation to which they are now subject?

Mr. KRUTTSCHNITT. I probably said, or probably meant—no doubt meant—that the loss of revenue was due to the control exercised on rates by either the Interstate Commission or the State commissions.

Mr. SIMS. I understood this to cover it all—"almost all loss."

Mr. KRUTTSCHNITT. Of course, there would be another influence at work to which I have called attention several times this morning, that there might be a very large loss in gross revenue through a diminution of volume without any change of credit.

Mr. SIMS. Yes; that is incidental. I think I made this note from your typewritten statement, and, of course, it is in there, whatever it is; but I wanted to ask you about it. The way I have it here is "almost all loss"—not all, but almost all.

Now, further—I am confident that I am exactly right about this—in referring to operating expenses or capital charges, either or both, you say they have been increased or augmented "by needless and costly terminal stations." I intended to quote that exactly from your language. Therefore that implies, I suppose, beyond any question that there have been needless and costly terminal stations that have been required by State regulation or local regulation, or some kind of regulation.

Mr. KRUTTSCHNITT. I am quite certain that you have one word in there that I did not use.

Mr. SIMS. What is that?

Mr. KRUTTSCHNITT. That is "terminal."

Mr. SIMS. "Terminal stations" is the way I wrote it.

Mr. KRUTTSCHNITT. What I had in mind was this, and it is a trouble that we have experienced in a great many States and that

is orders to build costly stations—not terminal stations. I was talking of our own experience. Numbers of orders have been issued to build costly stations to take the place of others that were serving the public perfectly and adequately.

Mr. SIMS. I will strike out the word "terminal."

Mr. KRUTTSCHNITT. The object of these orders and the reason I complained of them was that some of them rankled still. The orders were issued on roads whose physical condition was not such as to properly serve the public, and although we asserted our judgment to the commissions that we should be allowed to spend the money that we had for ballasting, for rails, and for better bridges, they brushed all that aside and compelled us to spend the money for stations that we thought were not needed. There has been a number of instances where the Southern Pacific has been ordered to tear down a perfectly serviceable, clean, and well-kept wooden station building and to put up instead either a stone or a concrete or a brick building. Now, for years we have held the reputation, and I think we have deserved it, of being the best housekeepers in the United States; that our buildings for the service of the public are better kept, they are scrupulously clean, and at all times they are well painted, well kept up; and in a great many cases the surroundings of the passenger stations are nicely graveled; there is a small grass plat or a flower bed, and the surroundings are made as attractive as possible to the public using them; and we know that the public has had no cause for complaint, except perhaps some man interested in a real-estate scheme, or some one desiring, as they often say, to have a monument at the entrance of the town, at the railroad station, and therefore they want a brick or a concrete building instead of this wooden building. It is a natural desire, but I do not think that when the managers of a property represent to the regulating body that there is a much more urgent need elsewhere, and in directions where the public can be much better served, that they ought to sweep aside the judgment of those men and substitute their own, to what seems to us to the detriment of the general public.

We have a complaint now, and I have often referred to it, because I have repeatedly said to our directors that I did not know of a single case of irritation or trouble on the whole line of the Southern Pacific, after one of my inspection trips and mixing with the people; and that grievance I do not think anybody could ever imagine if they should guess a hundred years. The grievance is this: We have in the heart of the city of Oakland a block of ground that formerly, years ago, was used as a local freight station. We have built on one corner of it now a passenger station for the accommodation of our suburban passengers—a station into which they merely rush to get their tickets and rush through to the trains. The rest of the block, which is vacant, has been sodded and is simply a bit of lawn. The grievance is that a party of real estate men in Oakland, who own property near this, have got it into their heads that we should spend from a million and a half to two millions to erect a monumental office building on this block, because, say they, "as long as this lawn is there our property does not increase in value." We have told them time and again that if we had \$2,000,000 that we did not know what to do with we would not object; but at

the present time there are many directions in which we can put it to give better service to the public, better ballasting, heavier rail, better freight receiving facilities, than to put it in a monumental building here, simply because they want us to improve the property.

That is one of the greatest sources of irritation on our road that I know of at the present time—the greatest.

Mr. SIMS. Mr. Kruttschnitt, I did not mean to question the accuracy of your statement. Possibly I did use the word “terminal” in error, because we have been using it so much. I might have written it unconsciously. But after all, it is a fact that State regulation, or local regulation, or demand, or something, whatever it may be, is causing railroad companies to put up needless and costly stations.

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. And what I want to ask you about is this—I am admitting that that is a fact as a matter of argument and if it is due to the retained or potential power that the States have over railroads, or if it is due to the exercise of the power of the States through their commissions, if one State requires a certain standard of stations which is, according to your judgment, needless or useless, will it not have a tendency to cause every other State through which that railroad runs to want to be treated just like that State, and to have stations just as good and just as expensive as the other—the railroad having already built such stations at the demand of the railroad commission of a State or for any other reason?

Mr. KRUTTSCHNITT. Well, I can not say that it would induce them. They are all at it now.

Mr. SIMS. Then you do not expect that cause of useless expense to abate without legislation that will enable you to refuse it without bearing the penalty of a refusal?

Mr. KRUTTSCHNITT. I suppose we have got to live under that, as we have. In other words, we will continue our arguments with the regulating bodies. Sometimes the personnel changes and certain men are not as unreasonable as others.

Mr. SIMS. Well, is not legislation——

Mr. KRUTTSCHNITT. There are ups and downs in that. I have already spoken in the highest terms of one railroad commission. By the way, I noticed that the President himself stated that the relations with the railroads are altogether pleasant. They are because the commission is a reasonable one; because you can sit down to a table and argue questions out. If you make a reasonable showing, they will decide your way. There are other commissions which will never decide your way no matter what your argument is. That is a condition under which we have had to live and which I suspect we will have to continue to live under.

Mr. SIMS. The cost of railway service, then, to the public, is not all shown by the gross receipts of the railroads; in other words, these State commissions and local authorities which exercise a regulative control are an expense to the States that have them, and all expenses are directly or indirectly a burden to transportation. Is not that true?

Mr. KRUTTSCHNITT. That is true, but there are certain expenses—there is a control of certain expenses that I do not see how you can take out of the hands of the States—that is, as to these local matters.

I enumerated the demands made on us for useless stations as one of the handicaps we labor under.

Mr. SIMS. Why can't that power now exercised by the States be taken out and placed under the control of the Federal Government, as well as any other power exercised by the States?

Mr. KRUTTSCHNITT. Theoretically it could, but I don't suppose the Federal Government would be very familiar with the facts, we will say, at Fair Oaks station, in California. That is an actual case, as to whether it should have a pagoda or flag station or whether there should be a water-closet there. The commission would not understand the situation as well as the local people out there.

Mr. SIMS. The argument you make is that the State commissions are an increased expense to the railroads, because the demands of some States are not uniform, and therefore the demands of one State, if complied with, would be practically a discrimination in its favor by the railroad company, unless other States make uniform demands. Now, if all the States make demands for useless and expensive stations, is not the burden of that on the operations of the railroads, or its revenues, to be progressive and ever increasing, if this power is to remain where it is now? Is not the very fact you must give uniform service in every respect one of the reasons why you want a national charter, to put all control under the National Government?

Mr. KRUTTSCHNITT. It seems to me I can answer your question best by comparing the condition of the carriers to a man who, perhaps, has a very severe or very bad carbuncle and corns that interfere with his powers of locomotion and sitting down, and might also have a small pimple on his cheek. It would interest him much more to get rid of the carbuncle and corns and let the pimple take care of itself. In other words, he can stand it. The carriers, if they can have one power to take care of their revenues, which is their life—their 100 per cent—they could very well leave the control of certain of their other expenses, amounting to a small fraction of the revenue, in the hands of the States, where it is now.

Mr. SIMS. In other words, leave the pimple?

Mr. KRUTTSCHNITT. Yes; bear the pimple, if they could get rid of the carbuncle.

Mr. SIMS. But if the person who has the pimple is very anxious to get rid of it, and is having the operation performed by a doctor who could get rid of both the pimple and the carbuncle at the same time, why should he reserve the pimple?

Mr. KRUTTSCHNITT. Well, to continue the simile, it might be a fellow with a limited amount of money; only enough money to stand the cost of an operation for the carbuncle. He will say, "I will take the risks of the pimple."

Mr. SIMS. But when you are proposing legislation to remove a carbuncle, why leave a pimple, even if it is not as expensive or as hard to endure as the carbuncle? Why is it being left? For the life of me I do not know why you railroad people want to leave this matter that you complain of with the States. Not a member of your railroads' representatives who have appeared before this committee but who has made complaint of the exercise of the power of the States as an added cost on operation or service, but then in proposing legislation to remove troubles you do not provide for the removal of all of them.

Mr. KRUTTSCHNITT. I should say, Judge, it is a good deal this way, that we are laboring from a 100 per cent of evils; that we have enumerated them all so that you might understand fully our condition; we are asking you to remove most of them by eliminating this control of 48 or 49 masters over us and putting it under the control of one. In other words, I should think if we should ask for all we would probably not get it.

Mr. SIMS. That is exactly what I wanted to know.

Mr. KRUTTSCHNITT. If we asked for the most important, we feel we might get Congress to see the necessity of giving some relief.

Mr. SIMS. In other words, remove the carbuncle.

Mr. KRUTTSCHNITT. Yes, sir.

Mr. SIMS. And if Congress removes the carbuncle will you not later on come and ask Congress to remove the pimple?

Mr. KRUTTSCHNITT. No; a man might be so appreciative of the relief from the carbuncle that he might forget the pimple.

Mr. SIMS. I do not see any use of making two bites at a cherry. I do not see why you should come here and ask——

Mr. ADAMSON. Judge Sims, if the first surgical operation were successful it would inspire the patient with more confidence to come back for the second operation, don't you think?

Mr. THOM. I have noticed the trend of your questions, Judge, and I want to say for the railroads that they have no covert purpose——

Mr. SIMS. Oh, I do not think so. I do not understand how they could have a covert purpose.

Mr. THOM. They are not using this as an entering wedge. They do not propose to do anything more than lay their whole case before you; to tell the thing that is essential to their prosperity and their duty to the public. They have nothing in the background about coming again.

Mr. SIMS. Now, I want to say this most emphatically, because I do not see how you can escape it: That if the State of Illinois collects from the railroads in the State of Illinois \$5,000,000 a year in taxes, and the State of Indiana does not collect a cent, and the railroads willingly pay that \$5,000,000, that it is in effect a rebate to that State. If taxation is not to be uniform on railroads in all of the States, on all the railroads doing interstate business, I think it amounts to more than a mere pimple, because it can become a carbuncle. Illinois next year can put it, of course, within the limits of their constitutional limitations, high enough to make the railroads pay all the expenses of the State, and if necessary it will not take long to amend their constitution so that they can do it.

Mr. KRUTTSCHNITT. The view we take of it is this: Illinois can not treat the railroads with such clear injustice as you suggest without treating all of its other citizens in the same way. It can not make railroad taxes confiscatory. If, at the same time, it keeps the taxes within reasonable limits on the other industries and citizens, we have found, from our dealings in the past, that we can trust our fellow citizens to treat us justly, and, to abandon the simile of the man with the ailments, and take this little circle showing the disposition of the dollar, the circle itself represents a hundred cents to the railroads. That is its revenue; it is all it can earn. Now, we are asking you gentlemen to consider protecting us as to the earning power of the entire dollar—the 100 cents. There is a little slice in

there of taxes, taking up, at the present time, four and a half cents out of the dollar. We are willing to risk that with the States that are handling it now. They control four and a half cents of the dollar. The body controlling our revenues controls 100 cents. The relation of the two is very nearly 25 to 1.

Mr. SIMS. All I have to say about it is that if a railroad company—should you have a national charter with the power to act and treat all States exactly alike by requiring uniform taxation—that if a railroad director in that company did not exercise that power, when one State levied twice as much as another State on the railroad running from one State into another, such a director would not be doing his duty as such. If the irregular tax burdens under the different States are to be such that Texas may burden the railroad—running through it to such an extent as to make it impossible to render as good service to all the States through which it runs as it otherwise would, to that extent they ought to lower their taxes to the common level so as not to be getting in effect and fact a rebate upon the railroad service in that State. I do not see any use of being modest or backward about it, because one of the complaints made by the railroad representatives is that taxation is not uniform on railroad properties, as compared with other property in the several States.

Mr. ADAMSON. How can you affect that, or change that, Judge Sims, by transferring it to the Federal Government or forbidding the States from taxing at all?

Mr. SIMS. If Congress grants a national charter, Congress can state whether the States may continue to tax the railroads or not.

Mr. ADAMSON. They can say just the same about the State charters, as well as the national charters.

Mr. SIMS. They can stipulate the provisions of the national charters.

Mr. ADAMSON. They can regulate anything in interstate commerce.

Mr. SIMS. Mr. Kruttschnitt, I think you have been very fair and open, and I think all the witnesses have been, but every complaint that is made against State regulation is based upon the idea that the State is getting a special benefit out of that regulation. I speak with reference to Texas, because that has been discussed so much. The very fact that States can do what you say they can do, the very fact you comply with those requirements—all that is an inducement on the part of the States to refuse national incorporation—that is a reason for refusing it. I think this investigation is very illuminating, and I think you have been candid and ought to be candid, but how do you expect to get Representatives elected by the States to rise—as it has sometimes been referred to—to rise above local conditions and pass a law such as you admit as to the States exercising such powers is to their interest to continue to exercise those powers! How do you expect to get a law passed for national incorporation—

Mr. KRUTTSCHNITT. Do not the representatives of the different States admit that they have national obligations to perform as well as local ones?

Mr. SIMS. Yes; they are national representatives.

Mr. KRUTTSCHNITT. I should think, then, it was entirely within their power and proper that they should say, "While we have the

right to take over everything—rates, taxes, road crossings, and new stations—we do not think, in the public interest, that it is necessary to do that.” Could they not say, “We think that these evils, or most of them, can be corrected by our turning over to the National Government the power of regulating revenues and of passing on security issues and fixing rates generally, and we leave to the States everything else”? Take it as a matter of expediency. I suppose if you proposed to absolutely emasculate State commissions, there would be an infinitely greater opposition to whatever you wanted to do than if you recognize their rights to do certain things and only proposed to deprive them—pardon me, Mr. Chairman, you will notice I substitute “deprive” for “rob.”

Mr. ADAMSON. I forgive you. However, I can not forgive you for desiring to deprive the communities of their right to regulate that 12 per cent of the business which is confined to them alone, with which the General Government has no interest, and that does not cross the State line and can not in any way affect interstate transportation.

Mr. KRUTTSCHNITT. Pardon me if I disagree with your percentages. I have asked for the Southern Pacific percentages.

Mr. ADAMSON. Judge Lovett said 12 per cent was the percentage on his road.

Mr. KRUTTSCHNITT. They are very different on ours, but still I stand by my answers to Judge Sims. I think the public generally would consider that that position was quite reasonable.

Mr. ADAMSON. I am not going to forgive Judge Sims for his language “rising above the local requirements.” I think he should say “betray his local constituents.”

Mr. SIMS. I should have said, perhaps, “in defiance of his constituents.”

Mr. ADAMSON. You must remember there are two arms to this Government. A part of the duty lies with the Federal Government, and a large part with the States. If you will read the Constitution you will observe the rights of each to perform its own functions.

Mr. SIMS. Yesterday, Mr. Kruttschnitt, you stated, if I do not quote you wrong, that the railroad system has broken down—our present system.

Mr. KRUTTSCHNITT. I read the quotation from a manufacturing record making that statement. You asked at the time if I indorsed it, and I said yes. I do, in the main. You can quote something without absolutely indorsing everything. I think I should not go as far as the record does, and I showed that in my personally written memorandum. I should say that a better language would be that it is breaking down.

Mr. SIMS. That our system is breaking down. You said it had broken down, as I understood it.

Mr. KRUTTSCHNITT. The editorial writer did say it had broken down. I think it is more accurate to say it is breaking down.

Mr. SIMS. I quoted you as I understood you at the time.

Mr. KRUTTSCHNITT. That is right.

Mr. SIMS. It is no longer a question of choice as to whether this breakdown is complete or not. The railroads have been built and have covered the whole country and are performing a service that the

country can not do without. That being so, then it is a national breakdown and not local, and if legislation can not be passed preventing its complete breakdown and retain the ownership where it is now, in private corporations, there must inevitably follow—I believe you referred to it yesterday—Government ownership of the railroads.

Mr. KRUTTSCHNITT. I think this——

Mr. SIMS. The present system is breaking down?

Mr. KRUTTSCHNITT. There are three conditions: There is a breaking down under present conditions; there is the ultimate solution—Government ownership—but there is an intermediate solution. We claim that regulation has never been given a fair show, and that that is the fair thing to do as between the public and the owners of the railroads before applying the last remedy.

Mr. SIMS. We should further experiment with regulation?

Mr. KRUTTSCHNITT. I should say that I think it is beyond the realm of experiment; that you gentlemen are competent to frame legislation here that would remove future legislation from the realm of experimentation and put it in the realm of unqualified certainty.

Mr. SIMS. But regulation is a failure, according to your statement.

Mr. KRUTTSCHNITT. But it has not been proper regulation.

Mr. SIMS. Will you ever have proper regulation, from your viewpoint?

Mr. KRUTTSCHNITT. It is in your power to give it; but whether or not we get it is in your hands.

Mr. SIMS. Were you present when I asked Judge Lovett the question about the authorization of the creation of one corporation in the United States and giving it power to purchase by agreement or condemnation every railroad in the United States?

Mr. KRUTTSCHNITT. I think I was.

Mr. SIMS. And give it power to issue bonds, not exceeding 4 per cent, and guarantee them; provide that the bonds shall neither be taxed by the States, Nation, or county; stocks to be issued, bearing 6 per cent, without any income tax?

Mr. KRUTTSCHNITT. I listened with a great deal of interest to the points in your bill, and while some seemed to be attractive it seemed to me it was fatally defective in this, you permitted the earnings of 6 per cent but did not guarantee anything on the stock.

Mr. SIMS. If this one corporation buys all the railroads and owns them all the service will be uniform and similar in every part of the United States, and its credit will be sufficient to cover all the weak roads now giving a weak service, and make a uniform and efficient service. I consider that the twilight zone of the present condition and ultimate Government ownership.

Mr. KRUTTSCHNITT. It does not follow that the earnings on the stock would be made.

Mr. SIMS. It does not make any difference whether you make them or not. You do not have to buy them. We will issue all the bonds necessary to buy all the roads in the United States and build more—all that is needed—allowing the Government, of course, to have directors in the corporation and to be controlled by the Interstate Commerce Commission.

I do not think I want to ask you anything to-morrow except touching the labor matters to which you have referred, and I hardly think

I will occupy more than 15 or 20 minutes. Of course, I do not know about that. Your answers may require more time, and I think you should not be abridged in your answers.

Mr. KRUTTSCHNITT. You say I have dealt with you frankly, and I will continue to do so.

Mr. ADAMSON. I wish to say here, that there is no man in America more anxious to see the system of railroads prosper and succeed, but I want to state that in 1904, 1905, and 1906, when we were trying to enact regulation by Congress over the railroads, the railroad men came over to me—I remember in 1904 we sat for 12 weeks in our committee hearing this matter—and they lifted their hands in holy horror at the suggestion that the Government regulate the railroads. They wanted State regulation then. Later, when Mr. Townsend brought in a bill for Federal regulation in the House it was defeated. Up to that time the railroads were opposing it, and the men wanted it. They have reversed themselves now, and that is a matter that renders us more or less incredulous in these matters.

Mr. KRUTTSCHNITT. I came from a State myself, but I was rather young at the time. However, I remember there was a lot of blood and treasure spent to settle that question, but I have considered it settled ever since.

Mr. ADAMSON. I am talking about the course the railroads took at one time and their course now.

Mr. KRUTTSCHNITT. The railroads, of course, have made mistakes, and I want to testify that the railroads have done a great many things that we do not now approve.

Mr. ADAMSON. I have never shot anybody in sustaining the doctrine of State rights, but I do stand on the doctrine of the States being allowed to compel the railroads to perform their duties in the various States.

We will adjourn now until to-morrow at 10.30.

(Whereupon, at 1.35 o'clock p. m., adjournment was taken until to-morrow, Wednesday, March 28, 1917, at 10.30 o'clock a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

WEDNESDAY, MARCH 28, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.30 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. The committee will come to order. Judge Sims, you may proceed.

STATEMENT OF MR. JULIUS KRUTTSCHNITT—Resumed.

Mr. SIMS. Mr. Kruttschnitt, as you are not a lawyer, I have thought you would be a more valuable witness, in some respects, than a lawyer would, from the fact that you are not looking at it alone from the possibility of legal requirements or legal power, or court decisions; but I do not want to appear to be using an undue part of your time, or holding you over here unnecessarily, and I certainly have no thought of exploiting any views of my own or any propositions of my own, but I do want to ask you somewhat in detail about the suggestion that I made the other day.

I assume the country is not willing nor ready to go to Government ownership. I am satisfied that nobody wants us to go to Government ownership, if through private ownership the country can be best and most economically served. Some of the objections raised to Government ownership, as presented by Judge Lovett, were in the nature of "pork-barrel" objections; that Members of Congress would demand unnecessary construction of roads, and one thing and another, to meet the requirements of their districts, and so forth and so on; all of which is practical and well to consider. Then, the disposition, or rather what we assume would be the adverse position of States and counties to being deprived of all local control, taxation, and one thing and another that might possibly come about through national incorporation, as shown even in the investigation here, in the positions taken by the representatives of railroad properties, that they do not propose to deprive them of that which they might otherwise do, simply in response to local sentiment; but, as between that which you all admit is absolutely inevitable—a betterment of present conditions or Government ownership—there might come between it a unified consolidated private ownership, with absolute Government regulation through the Interstate Commerce Commission or any other body that Congress might authorize to do so, and making all the railroads liable for all the necessary issues of stocks and

bonds, giving the Government the power to control them, and guaranteeing a rate of interest on the bonds not exceeding 4 per cent, and making both bonds and income free from taxation, and allowing a margin of profit between 4 and 6 per cent for stock, but not guaranteeing that 6 per cent on the stock, nor any other sum, but relieving the stock and dividends from all character of taxation, so as to enable the strong roads to carry the weak roads, and enable construction to be had where it is necessary to develop portions of the country, where the development itself would not afford sufficient revenues in order to have the development undertaken by private capital.

Now, I do not know whether that is wise or feasible. I was only trying to think of something that would get away from the "pork-barrel" possibilities referred to by Judge Lovett, and get away from the idea of selecting the agencies of the carriers—the labor and executive officers and operating men—through political favoritism or political pressure, which none of us could possibly view in any other way than with fear and apprehension; and I suggest, as a possible means to retain private ownership, with absolute public control, with unified service and rates, and with the credit of the railroad company, as it would then be, guaranteed by the Government of the United States, the Government, of course, retaining a lien upon all of the property of this corporation to secure its against any loss that might be incurred by guaranteeing the bonds. I do not care about elaborating on it or saying more, because there are many details which would have to be considered that nobody but practical men like yourself could consider; and therefore I am going to confine what little additional or what few additional questions I shall ask you to a cross-examination of what you said yourself. You did not bring it out or suggest what I have spoken of, but I would like to have the opinion of a practical railroad man like yourself, not simply looking at regulation as to what can be or what can not be done, but what is best for the people of the country and for the transportation companies. In the eleventh note I have here you used an expression which related to labor, where you said, "The arrogant attitude of organized labor adds to the cost of railway expenses." I may not have that, like a good many others, absolutely correct, but you referred to the subject of the increased cost of railway expenses on account of the "arrogant attitude of organized labor." That is substantially correct, is it not?

Mr. KRUTTSCHNITT. I think so.

Mr. SIMS. Now, what do you mean to include, so far as it affects the expenses of railway companies—the "arrogant attitude of organized labor"?

Mr. KRUTTSCHNITT. What I had in mind when I said that—

Mr. SIMS. Yes; elaborate it—what you meant.

Mr. KRUTTSCHNITT (continuing). Was the attitude of railroad labor as evidenced in its absolute contempt of public opinion, contempt of the President of the United States, of Congress, and of the Supreme Court. If we are to believe what we have seen in the papers—and the reports have not been contradicted—the decree of the Supreme Court has been criticized by the leaders of organized labor as suiting them to a certain extent; that part of it did not suit at all and that they would attack it; and hat it would have to be

changed sooner or later. I also had in mind the attitude of organized labor when I and some 50 or 60 other railway executives were in Washington last August, when the threat was made to the President of the United States and to Congress that if certain things were not done within a specified time they would proceed to paralyze all the transportation interests of the United States. Now, with that attitude, which our intimate relations with organized labor has proven to us has existed for a long time but which was made evident to the general public in August last only, we can not get very good service from men who have no respect whatever for properly constituted authority or for the laws of our country; that goes without question. The employer should have some kind of authority over the employees; but the attitude then revealed, I say, shows how very little the employer can have if the laws of the country, the Chief Executive, and the most august tribunal, I suppose, in the world are to be treated as the President, Congress, and the Supreme Court have been treated and talked about by these men since August last.

Mr. SIMS. Mr. Kruttschnitt, do you mean to be understood as contending or implying that the attitude which you have described of organized labor has affected the action of Congress or the action of the Supreme Court of the United States?

Mr. KRUTTSCHNITT. No, sir; I did not say anything, I think, that could be remotely construed into meaning that.

Mr. SIMS. If the attitude of labor has no effect upon the lawmaking body and the law construing and enforcing body, what difference does a vacant, void, and influenceless attitude make?

Mr. KRUTTSCHNITT. You asked me what I had in mind when I spoke of the arrogant attitude of organized labor.

Mr. SIMS. Yes.

Mr. KRUTTSCHNITT. And I was explaining to you.

Mr. SIMS. What I am trying to find out is how to limit, as much as possible, the effect of the attitude which you have just described, as to the powers and agencies of regulation.

Mr. KRUTTSCHNITT. I thought I had explained that; but I will try again.

Mr. SIMS. No; I understand you. I think I do—what your explanation is; but I did not know, without further explanation, but that it would be contended that you were intending to imply that this attitude had already affected Congress and the President of the United States.

Mr. KRUTTSCHNITT. No; I do not think, Judge, you could construe anything I said into meaning that.

Mr. SIMS. I said that it might be construed or understood that that was your meaning; but I did not think, myself, that you intended for it to go out to the country that, as a fact, the President and Congress were influenced, either through fear or political hopes, in passing the Adamson law. Now, I think this about it—that if either Congress or the President were so influenced it was solely unconsciously, as has been described by Mr. Adamson, the distinguished author of the Adamson bill.

Mr. ADAMSON. While you are on the subject, I wish you would ask Mr. Kruttschnitt, who has been able to familiarize himself with it, and able to get around, if the attitude of these heads of the brother-

hoods can have an effect on the railroad train operatives, how far they could make effective their extreme views, if he has any opinion on that subject.

Mr. KRUTTSCHNITT. How far these men could have carried out their threats?

Mr. ADAMSON. Could have influenced their men? In other words, could they prevail upon the bulk of the train operatives to follow them?

Mr. KRUTTSCHNITT. I had reason to believe last August that if the order had been issued to strike there would have been quite a respectable percentage of the more conservative men that would not have responded; at least, the officers of our and of a number of other companies were assured by these men, on their own initiative, that they disapproved of what was being done and did not intend to strike if ordered. You ask my opinion. I should say that these men were honest in expressing what they intended to do, but I doubt very much whether, if a strike had been ordered, with the usual coercion, violence—either open or concealed—whether these men would have had the backbone to stand out alone. I do not know how many would have struck, in other words. I think if the chiefs had issued the order they would have tied up the commerce of the country.

Mr. ADAMSON. You know there are a great many engineers and conductors throughout the country who are very intelligent men, and men of high order, fully equal to any of these heads of the brotherhoods?

Mr. KRUTTSCHNITT. I agree with you most cordially there. I have worked most of my life with these men. In my earlier life I was in a position where I could call them "Bill" and "Jack" and "Tom." Unfortunately, with the growth of systems, the intimate relations between the officers and the men have been largely destroyed, but I believe thoroughly what you say, that if action were left to the free and uncontrolled judgment of the intelligent men, unbiased by either violence or threats of violence, that the order would not have been very generally obeyed.

Mr. ADAMSON. You know that these heads of the brotherhoods have made loud and numerous protests against what they call "involuntary servitude." I just ask you, as an observer of men and events, if to compel a man to quit work is not just as much slavery as to compel him to work?

Mr. KRUTTSCHNITT. I do not think it admits of argument, Mr. Adamson; I do.

Mr. ADAMSON. And on either side of the case, it is a matter of contract; they simply agree to stick together on their side, and on your side they agree to work for you?

Mr. KRUTTSCHNITT. I think that anyone who will cast back his thoughts or his memory to the examination of the brotherhood men by the Interstate Commerce Commission in the investigation held as to the headlight law will come to the conclusion that the involuntary servitude of a man to his union is absolute and vastly greater than any involuntary servitude to his employer.

Mr. ADAMSON. I am much obliged to you, Judge Sims.

Mr. SIMS. That was along the same lines of my examination. It was not a break-in at all.

Mr. ADAMSON. I thought it would be a fit-in.

Mr. SIMS. That is what it really was. I am glad to have had your assistance, Mr. Chairman, because I was on that subject.

Now, then, Mr. Kruttschnitt, do you advise such legislation, both by Congress and the States, or by Congress alone, as will curb this arrogant attitude of organized labor?

Mr. KRUTTSCHNITT. I think anyone who shows a disregard or contempt for the laws, contempt for the opinion of his fellow citizens, by absolutely refusing to submit any question in dispute to arbitration, should be taught a respect for the laws and a respect for his fellow citizens and the public by some regulating authority, and that regulating authority, of course, is the Congress.

Mr. SIMS. What sort of regulation would you suggest, that would cause a man to cease to violate the law? You spoke of his showing his contempt for the law.

Mr. KRUTTSCHNITT. The trouble is, there are penalties prescribed in existing laws, to prevent him from violating them; but we know, from previous experience in strikes, that very little is done in the way of enforcing them. What I propose was read in my memorandum of Monday, in which I proposed compulsory investigation. I do not believe in compulsory arbitration. In other words, I think the two words in "compulsory arbitration," are contradictory.

Mr. SIMS. Neutralizing?

Mr. KRUTTSCHNITT. You can not have such a thing as a compulsory arbitration; in other words, the words do not convey to my mind anything at all; one really offsets the other. But you can have compulsory investigation and all of the facts relating to the dispute laid before the public, and either a strike or a lockout prohibited until the public shall have had time to fully absorb the report of the investigating body. We think if that is done, that the results that have followed in Canada can not fail to follow in the United States. The people are of the same general race, with the same habits and customs, and pretty much the same form of government—there is very little difference. I am a firm believer in the controlling effects of public opinion when it is properly informed.

Mr. SIMS. Then, your object of compulsory investigation is not to inform the railroad owners and operators, for they already know; and not to inform the railway employees, because they already know everything connected with it; but the object of your compulsory investigation is simply, through such a method, to let the public know the contentions of both sides and the facts and arguments to sustain each side? Is not that really the effect of it?

Mr. KRUTTSCHNITT. Yes; but I disagree with you, to a certain extent, in so far as letting the railroad employees know about it. I think that is very important. I do not think, in this last contention, when the strike vote was taken—I will change that and say I know that many of the railroad employees did not know what they were voting for, and whither they were drifting; so I think it is very important for an investigating body to let the mass of the railroad employees also know just what the contentions are, and what is proposed.

Mr. SIMS. Do you think that compulsory investigation is also necessary to let the railway executives and their subordinates know the facts also?

Mr. KRUTTSCHNITT. Well, I did not say that it was necessary for them to know, because they are generally informed, and the leaders of labor do not leave them in much doubt as to what they want and what is going to happen if they do not get it. Still I am perfectly willing to admit that no amount of extra information that you could give the railroad executives could possibly hurt them, and it might possibly aid them.

Mr. SIMS. Then, the object of your compulsory investigation, and precedent action of other sorts, is not to enable the railway executives and those operating under them to know more about the facts than they already know, and it is not to let at least a portion of the employees know, but only the other portion of them, from which the light has been withheld, either by a lack of opportunity to find out, or by the controlling officers of their organizations keeping them in the darkness? Now, do you think it would be possible for men who are engaged in earning their daily bread by the sweat of their brows, in all sorts of organized-labor service connected with railway operation, to read and know and keep up with and understand the facts that are being laid before such an investigating body, to such an extent that at the end of, say, 30 or 60 or 90 days, or even six months, that they would have such information as would enable them to take action, based upon additional information that came to them from that investigation, throughout this entire country?

Mr. KRUTTSCHNITT. I should say, as to most of them, if the report were not too long and too involved, they would know all about it in six hours.

Mr. SIMS. And understand it?

Mr. KRUTTSCHNITT. And understand it fully in six days.

Mr. SIMS. It took the Members of Congress a good deal longer than six hours to understand the demands that were made by labor—I mean the railway trainmen—as to the eight-hour day; and the contention was made on the part of many that Congress acted without sufficient knowledge, without knowing what it was doing; that it was sandbagged; that it was duressed with political possibilities, right in front of the general election.

Mr. ADAMSON. I hope Judge Sims does not intend to hold down the standard of intelligence of the rest of the country to that of those who are Members of Congress.

Mr. SIMS. But I am thinking of the superior intelligence of these railway trainmen, if within six hours they could sufficiently understand the report of an investigation to act intelligently upon it, when it takes the Members of Congress a number of months.

Mr. HAMILTON. Judge Sims does not want to put himself in that category.

Mr. SIMS. No; for the sake of the chairman, as well as myself.

Mr. ADAMSON. The stockholders and bondholders, in common with the executives, should be informed, as well as the trainmen?

Mr. KRUTTSCHNITT. I assert that the failure on the part of a gentleman entirely unfamiliar with these matters to comprehend them at once is no reflection whatever on his intelligence. The trainmen's ability to understand it on a few hours' notice is not surprising, because the trainman is reading about matters with which he is already quite familiar, and all he has to learn is the opinion of some outside

body on matters with which he is already thoroughly acquainted and in which he has been drilled for his entire railroad life. I do say, however, that I think in six days anyone could read and understand such a report.

Mr. SIMS. Six hours, you said.

Mr. KRUTTSCHNITT. In six days, I say. I do not want to be misunderstood about it.

Mr. HAMILTON. I think we clearly understood what you said.

Mr. SIMS. You said they could read the report of an investigating body and understand it in six hours.

Mr. KRUTTSCHNITT. I said a trainman could get a good idea of it in six hours.

Mr. HAMILTON. And that he would certainly know all about it in six days.

Mr. KRUTTSCHNITT. Yes; and I was proceeding to say that anyone of ordinary intelligence who really wanted to know what the questions at issue were could read the report of such an investigating body and understand it, certainly in the period of a week.

Mr. SIMS. To be perfectly frank, Mr. Kruttschnitt, I can not free myself from the conclusion or the surmise—I will not call it a “conclusion”—that one object of the demand for this previous investigation—I mean that the whole object of the demand for this previous investigation is not to inform the parties to the contest; it is not for the information of the parties to the contest; is not for the guidance of the parties to the contest—I mean the immediate parties, the railway trainmen and the railroad executives—but that the real object more than anything else is that the general public may read in advance the report of a committee which investigated the subject, and which makes a statement with reference to the causes——

Mr. KRUTTSCHNITT. And merits——

Mr. SIMS. And merits and demerits of the contention, as made between the parties themselves; and that all legislation that has been proposed to the end that no strike should take place during the period of investigation, and none for 30 days afterwards, was in order that the public might be sufficiently influenced to cause it to bring pressure to bear, either on the railway employees or on the railway executives, or both, so as to avoid the strike in that way——

Senator TOWNSEND. Do you object to that, Mr. Sims?

Mr. SIMS. I am asking a question now; not stating my own opinion or giving any testimony. I say I can not get away from the inference that the chief purpose in having this previous investigation is to influence the public and not simply to enlighten the immediate parties to the controversy. Now, is or is not that the fact, or is not that a proper inference?

Mr. KRUTTSCHNITT. I could answer that either yes or no. It is of the greatest importance to inform the public; but I have already said that I think it would be a good thing to let the rank and file of railroad men, as well as shareholders and others, learn the issues and the merits of a controversy also; in other words, let all the people know, and that embraces everybody. If a man knows part of it already, it will not hurt him to learn a little more—to learn what the opinion of an outside disinterested board is.

Mr. SIMS. You do not advocate compulsory arbitration, and I think you are logical in that. It always appeared to me that saying

"compulsory arbitration" is equivalent to not saying arbitration at all.

Mr. ADAMSON. Judge, what did the Chair understand you to state yesterday about 20 minutes?

Mr. SIMS. I did not know that the Chair was going to come in and aid me so much, for which I thank him. As I said before, I do not feel that any member of this committee ought to be limited to such an extent that he can not even develop one point while he is on it. I think Mr. Kruttschnitt is as competent to give us light upon the subjects about which we are investigating as any man that has been or can be brought before this committee.

Mr. ADAMSON. I beg Judge Sims's pardon; he is the man that said 20 minutes.

Mr. SIMS. And I did not think it would take longer than that. It all depended on the answers. I said I did not think it would take more than 20 minutes to ask the questions; but one question leads to another.

Mr. KRUTTSCHNITT. I should say, Judge, in further answer to that question, that I think the report of a disinterested outside body would be helpful to everyone. I am looking at that from a personal point of view. If I had preconceived notions about some issue with our employees on which I was going to make a stand, and if I knew that an outside impartial body, after looking into it, held different views, it would certainly make me pause and ask myself whether I was quite sure that I was right or not. I think it would so affect every man who found that his preconceived notions differed from the report of an outside investigating body composed of men whose names and records would inspire universal respect and confidence. I say it would affect me, and I think it would affect everyone.

Mr. SIMS. What I was trying to agree with you about when I was interrupted was that I do not understand the railway owners—I mean the stockholders or those representing their interests—to demand compulsory arbitration.

Mr. KRUTTSCHNITT. No. I defined that Monday, when I read my memorandum.

Mr. SIMS. I understand, and I agree with you about it, so far as I am personally concerned. But your contention is that during this period of investigation, and until such time afterwards as Congress may determine, there must be no leaving of the service of the railroads by the employees by agreement with each other or by concerted action, and that the leaving, if so done, shall become a crime and punishable as such. Is that, or not, a correct statement?

Mr. KRUTTSCHNITT. Yes, sir; that is correct.

Mr. SIMS. Now, in its effect upon railway service and railway men, what practical difference is there between forcing them to arbitrate something that they do not want to arbitrate and forcing them to remain in service contrary to their wish and will until an investigation which they have not asked, made by a body which they have not selected, shall pass upon whether or not that particular body or committee or commission agrees with them in the demands they have made? I mean in its effect upon labor itself—would they not regard compulsory arbitration just as favorably as they would—

Mr. KRUTTSCHNITT. I have not suggested compulsory arbitration.

Mr. SIMS. I know you have not. You abandoned that; and now I want to see whether or not you are ready to abandon the other.

Mr. HAMILTON. I should like to call attention to some testimony before our House committee, in which some of the railway employee leaders declared that they were in favor of investigation.

Mr. SIMS. Yes; but not to penalize their men for quitting service by concerted action during the period of investigation.

Mr. KRUTTSCHNITT. Of course, there is very little use of having an investigation if the parties involved conclude to act on their own judgment before the report of the investigation is made.

Mr. SIMS. But I asked you if there was any difference in practical effect from the attitude of labor and from the interests of labor to be compelled to submit to compulsory arbitration of their matters in dispute or being compelled to serve regardless of their demands or what they may determine to be their interests under penal laws during the period that a committee they did not select and had no part in the selecting should pass upon whether or not their demands ought to be granted or not. In other words, is not compulsion in the one instance equivalent in its effect to compulsion in the other, so far as labor is concerned?

Mr. KRUTTSCHNITT. No, sir. In my mind they are entirely different. It is entirely different if some one having power over me should say, "We compel you to submit your difference to arbitrators, and we compel you, under pain of punishment, to abide by the result." That takes away from me liberty.

Mr. SIMS. Oh, no; not to abide by the result but submit to it. That is what I am supposing in my question. You submit to arbitration.

Mr. KRUTTSCHNITT. What is arbitration except an agreement to submit differences to selected persons and to abide by the result? If you are not going to abide by the result, why arbitrate?

Mr. SIMS. They say, absolutely they will not arbitrate questions of personal relationship. That is the very thing we are talking about. You are talking about compulsory arbitration and a personal relationship which they themselves are at liberty to abandon after your arbitration has been made. They can cease to labor after it is made as well as before.

Mr. KRUTTSCHNITT. I am afraid I am a little dense this morning, but I really do not see how I can answer your question differently from the way in which I have answered it several times already. I can not see the bearing of your question about compulsory arbitration when I have never suggested it at all.

Mr. SIMS. I know——

Mr. KRUTTSCHNITT. You asked me, if I understood you right, whether there is any difference between compelling a man to arbitrate and compelling him to keep his relations with his employer in status quo until some outside disinterested parties could investigate. It seems to me the difference is as great as the difference between night and day.

Mr. SIMS. In its effect upon compulsory service of the employee—that is what I mean—that if the arbitration should take three months or six months, he is compelled to stand there and serve as a railroad employee pending this arbitration.

Mr. KRUTTSCHNITT. Then he should never have entered a service in which he assumes an obligation to the public. The shareholders

surrender many of their rights when they undertake to serve the people.

Mr. SIMS. And if you do not have compulsory arbitration and you have compulsory investigation, he is compelled by penal provisions to remain in service during the period of investigation and report. So both involve involuntary servitude, or the permission to quit service simply as an individual, and not acting in concert.

Mr. KRUTTSCHNITT. Judge, I am not a lawyer, but this occurs to me: Every day in contentions between individuals the court steps in and tells the individual, "Halt; do nothing now until we investigate this matter."

Mr. SIMS. They enjoin, in other words?

Mr. KRUTTSCHNITT. Exactly. Now, what is the difference? The remedy by injunction is so common that everybody in the country knows about it. The court simply tells the litigants, "Hold up; and do nothing until we look into this matter," and they submit. It does not seem to be considered any particular hardship. It bears everyone alike.

Mr. SIMS. Did you ever hear of a court of equity enjoining a criminal court in a prosecution for crime?

Mr. KRUTTSCHNITT. I am afraid I am out of my depth, but as the Supreme Court has affirmed the power of Congress to use emergency remedies in emergencies—a power denied by many able lawyers—I assume, although no lawyer, that it can forbid action pending investigation.

Mr. SIMS. In other words, the injunction applies to civil remedies, and to equitable civil remedies, and involves no imprisonment at all unless the person after the injunction is issued should violate it, and then he only incurs the penalties of contempt of court. If compulsory arbitration is compulsory service during investigation and is a service enforced and continued by criminal liabilities, or criminal penalties, enforced by the State in behalf of the public—assured at least—and has no analogy to penalties for a violated injunction which is a civil remedy, as I see it. But now let us get down to the practical. That is the reason why I said I should like to talk with a gentleman who did not shape or attempt to shape all his answers with reference to legality or illegality, or the possibility of enforcing a law or having it declared void by a court. I believe it is admitted in round numbers, generally, that the railway trainmen that were involved in that strike if they had all joined in it was about 40,000. Is that correct?

Mr. KRUTTSCHNITT. I really do not know. That was the figure generally used, but I do not know whether it was correct or not.

Mr. SIMS. That is approximate. Now, then, organized labor engaged in railway service, shop men, and others was a number larger even than that, was it not?

Mr. KRUTTSCHNITT. Yes; I should think so.

Mr. SIMS. I saw it stated by parties who were favorable to the railway position about the matter, that there were about 1,500,000 employees in railway service in the same railway companies that were involved.

Mr. KRUTTSCHNITT. If you mean that that is the number of employees less these trainmen, I think that is about right. I think

are about two and a quarter million railway employees; therefore that total less 400,000 would be about correct.

Mr. SIMS. I want to ask you approximately how many of these employees are organized; I mean those in labor organizations.

Mr. KRUTTSCHNITT. It is difficult—it is impossible for me to answer that question. The two and quarter millions is the number, as I remember, determined by the reports to the commission, as the correct number of railway employees. I do not know how many of them are organized and how many are not.

Mr. SIMS. Now, the arrogant attitude that you referred to had reference largely to the four brotherhoods, as I understand; that is, you had specific reference to their attitude?

Mr. KRUTTSCHNITT. Yes; they are the ones who have been doing the talking.

Mr. SIMS. Yes; and making it known what their attitude was?

Mr. KRUTTSCHNITT. Yes.

Mr. SIMS. In this country, as I understand it, political power is about the highest power that can be exercised, and the political power of the organized labor within railway employments, and the political power of all other organized labor, is a very considerable political power in the United States. You are ready to admit that, are you not, that it is so large as to amount to a very considerable political power? I do not mean partisan power; political power.

Mr. KRUTTSCHNITT. Yes; that can be admitted.

Mr. SIMS. Is not one of the objections to public ownership the political power that the employees would have if they were all appointed through political agencies?

Mr. KRUTTSCHNITT. Yes; that is one great objection.

Mr. SIMS. Now, how is it going to be possible to enforce a criminal statute and a criminal penalty against organized railway trainmen throughout the country through the ordinary machinery of criminal prosecutions? In other words, suppose we had had a law against striking without this previous investigation—a criminal law—that would involve felony penalties, a penitentiary offense, and then suppose that whole 400,000, regardless of this penal law, had gone out. Would it have been practically possible for the United States district courts having jurisdiction to have successfully prosecuted, throughout the entire Union, such a vast number of criminals, who become criminals in the assertion of their own rights, as they believed or claimed to believe, in view of the wide extended personal sympathy and political influence that that vast number of men would have throughout the country? Would it have been practically possible to have enforced such a law by criminal prosecutions if they had to actually be applied? In other words, would not the very magnitude of enforcing the law itself break it down?

Mr. KRUTTSCHNITT. I can not conceive, judge, that 99,600,000 people should admit that any 400,000 should, because of their numbers, political influence, or any other reason, have permission to violate the laws with impunity. If necessary, I think the 99,600,000 should assert the rights of the majority, which rules in this country, and should say, "Our representatives having enacted such and such laws, every person in this country, to the last one of the hundred millions, must obey that law regardless of cost or consequences."

Mr. SIMS. You are speaking now from a theoretical standpoint.

Mr. KRUTTSCHNITT. Well, I do not know what you call a theoretical standpoint.

Mr. HAMILTON. The question was theoretical.

Mr. SIMS. No; it was practical.

Mr. KRUTTSCHNITT. That is my opinion. You ask whether it would be possible to enforce the law against 400,000 people if they chose to ignore it. I say it seems to me that the answer is patent—yes.

Mr. SIMS. I have reference to the 400,000 committing this crime simultaneously and by concerted action; not that some one of the 400,000 should assert his right as an individual.

Mr. KRUTTSCHNITT. I would not modify my answer, whether it was one or 400,000.

Mr. SIMS. Of course, your answer should be as you think. Now, what is practically impossible might just about as well be physically impossible, so far as legislative and administrative questions are concerned. Now, I do not believe, Mr. Kruttschnitt, that if there had been just such a law passed as has been advocated and asked for, making it a crime for these 400,000 men to strike without first serving the railroad for so long a time—that is, three months or six months, whatever you please, pending the investigation and a required time afterwards—that if they had violated it by concerted action, for the reasons given—that they denied the right of Congress to make it a crime for these men in a body to select their employees or to refuse to continue an employment already entered into—I do not believe, nor can I think it is even possible—practically possible—that there could be successful prosecutions throughout the United States of these 400,000 criminals; I mean criminals in the sense of violating this criminal law; that the power they have in politics, which is perhaps no greater than any other 400,000 representative men would have, the sympathy of other labor organizations, the sympathy of the whole people, would be such that the prosecutions would absolutely break down and be absolutely worthless and ineffective, and that there would be a demand made upon Congress, upon every Member of Congress seeking reelection——

Mr. HAMILTON. May I ask a question, Judge?

Mr. SIMS. In a moment. (Continuing:) That he should vote to repeal or modify this law, and that the repeal would promptly follow.

Mr. HAMILTON. I simply wanted to ask you, Judge Sims, whether the railroad history of Australia has any bearing on this question that you are raising.

Mr. SIMS. I do not know enough about it to answer your question. In other words, if it is impracticable, if you can not enforce a law, what is the use of merely irritating the public by passing it?

Mr. HAMILTON. Why not go to a practical illustration rather than indulge in conjecture?

Mr. KRUTTSCHNITT. Law, I think, has been defined as the crystallization of public opinion. If we accept your assumption that the entire public would be in sympathy with 400,000 men if they engaged in breaking the law, I think we then might just as well admit that our whole system of government is a failure, and any number of

people, no matter how small, if they can win over the sympathies of the people generally can do as they please and run the country regardless of the wishes of the majority. And I confess that I can not see the object of imagining these difficulties when our neighbors just across the border have been doing what I am advocating that we should do for a number of years, and through their public officers and through the railways that have been affected by these laws, they say, successfully. Are we not simply alarming ourselves by creating bogey men? Why should it not work on this side of the border as it does on the other side of the border?

Mr. SIMS. Your investigation, which you are contending for, as admitted by yourself, prior to a strike, after the investigation has been made, is to affect public opinion; in other words, to cause as many of the public to take your side of this controversy by reason of this investigation as possible, and thus to affect public opinion.

Mr. KRUTTSCHNITT. Put it a little differently, that the object of my suggestion is to get the public properly informed, so that they will take sides with those who are right.

Mr. SIMS. And believing, of course, that your side is right.

Mr. KRUTTSCHNITT. Not necessarily—with the side that is right. This tribunal will say which side they think is right and what the merits are, and I think it will follow necessarily that when the report is given wide publicity that the public generally will agree with these impartial investigators and will array themselves on the side which is pronounced in the right.

Mr. SIMS. As a matter of course, nobody is going to contend, Mr. Kruttschnitt, that individuals, either singly or by concert of action, have a right to obey or ignore laws just at their sweet will. I am not assuming that ethically or legally they have the right; I am commenting on the impossibility of enforcing such a law where it takes 12 men to agree unanimously that these parties are guilty, and I do not believe myself, with what experience I have had, observing and reading on such matters, that it would be possible to effectually prosecute and convict 400,000 men all over this country who violated this law simultaneously and at the same time, and the statute of limitations running on the offense would be the same. I believe that you could not get juries enough or officers enough; that the means of enforcing the law would break down absolutely and you would very likely, by any attempt to prosecute 400,000 laborers at one time, create such a public sentiment through the efforts they would make and the personal contact they would have with the votes generally as to make it impossible to keep such a law upon the statute books.

Now, why not take a view of this thing which is practical and which is possible? I do not believe that is possible, regardless of whether we have the constitutional right and power to do it or not. Is it wise to undertake such a thing?

Mr. KRUTTSCHNITT. I want to call your attention to the fact that the United States Board of Mediation and Conciliation, in a report dated November 1, 1915, gives the figures as to the success of the measures taken in Canada to prevent strikes. I gave you my opinion, formed from the report of an officer whom I sent to Canada for the purpose of looking into the matter; I gave you the opinion of the present Canadian minister of labor, and I gave you the opinion of the

ex-Canadian minister of labor, given to me orally, and also made public in an address in New York City, and I gave you the report of a commission created by you that has examined this matter and reported on it and say it is successful. Now, if that does not convince you of the practicability of doing something of that sort, I confess I am at the end of my rope; I can not say anything more.

Mr. SIMS. I am confining this largely to the proposed strike of the railway trainmen that was prevented by the passage of the Adamson law from the fact that you, as well as others, have referred continually to the power that organized labor in that instance seemed to have been able to exert somewhere from the attitude that they took. Now, of course, a strike on a short railroad, one perhaps involving only a single State, might not have the same effect all over the United States in prosecuting all those who violated that law in that particular locality that it would have if the prosecution applied to a numerous class of individuals all over the United States, as it would have applied to these 400,000 striking brotherhoods. As I say, suppose there had been a law at the time, and they all had violated it, would it have been possible to successfully prosecute those who violated it by convicting them? There would have been no question about the evidence; there would have been no question whatever of that kind. but I believe it was Burke who said, on the trial of Warren Hastings, that we can not indict a whole nation; neither can we get a public sentiment that would want to send to the jails and prisons of this country 400,000 otherwise law-abiding good citizens at one time, because they contended for the right to quit work by concerted action, regardless of this law requiring them to serve for so long a time pending an investigation.

Mr. HAMILTON. He said that about the electors of Bristol.

Mr. SIMS. Anyhow, it was said by a very able man in England. It might not have been the trial of Warren Hastings.

Mr. HAMILTON. Who do you say said it?

Mr. SIMS. I thought it was Burke.

Mr. HAMILTON. Yes; Edmund Burke.

Mr. SIMS. Why not resort to some other means which can be obtained and which can be enforced and which perhaps will grow in popularity after it is done? I am by this like I am by thinking that you can deprive all the States of the United States of the powers which they are exercising through their commissions simply by showing that it would be an advantage to railroad credit or railroad owners to do such a thing. There are some things, of course, that are more to be considered than profits of railway investors—more than the profits of railway owners or owners of any other kind of property. But, Mr. Kruttschnitt, it does not seem to me that the railway owners of this country at this time have any fears whatever, as far as I can see it, of going to Government ownership or of destructive State regulation.

Now, I will give you the reasons why I think so. If I owned a piece of property and I thought it was going to become less valuable for any reason, I would not go out and advertise that fact; I would try to sell that piece of property, and I would say nothing at all about what may affect adversely its value when I undertook to sell it. But if I think it is continuously going to become less valuable and

less desirable, I will first try to sell it before I make known the reasons why I do so. Now, here is an attempt to seek national legislation, which they have a right to seek, by showing that railway credit, to say the least of it, is breaking down. If I thought that the railway people, the railway owners, the owners of railway stock, all believed it was breaking down, my opinion is that instead of advertising to the country and the world the facts which they allege are causing the breakdown, and for which they are asking legislation, that they would say nothing about the symptoms of the breakdown, but would be trying to sell their property by present methods—I mean by sale of the stocks.

Now, not speaking in a restricted way at all, or in a contemptuous way, but it looks like all railway owners have become all at once an organized body of “calamity howlers.” All of them are maintaining that if something is not done along these lines the railroad operations will absolutely break down; that is, the service of the railroads to the country; that they can not possibly finance the railroads of the country; that they can not find a market for their bonds and stocks, and giving the whole public the reasons why they think so, and yet the stock market for these identical securities is not declining as a rule, and the owners of these stocks, who say they are going to be wrecked and robbed, are not selling them in any increasing volume. If you want the country to believe that railroad securities are becoming less valuable all the time—I mean stocks and bonds—the best evidence would be a declining value and an effort of the present owners to dispose of them to other people, even at a loss.

In ordinary, private transactions, buying and selling wheat, corn, cotton, or any other large product that covers a wide area of the country, if you want to stop sales advance the price rapidly; if you want to stop sales reduce the price rapidly. I live in a cotton country and know its effect. If cotton begins to advance rapidly, every man who has got a bale of cotton says, “I will hold on a little longer.” If it declines rapidly, he will say, “This is only temporary, and I will hold it a little longer.” Therefore, bringing forth indictments of present conditions of railway property and the laws affecting it certainly ought to, if generally believed by the country, have a depressing effect on the values of these securities if the public took these statements as serious and believed that the evils predicted are likely to take place. Now, if you are sure you can bring about the legislation which you seek, which would be remedial according to your judgment, then I could see the wisdom of making this fight just as you are making it; but not believing it is possible to get what you wish to get, it seems to me you are only augmenting the troubles the railroads will eventually have to contend with, and that Congress can only do that which their constituents indorse.

This last statement is not intended as a question, but simply as a suggestion, as I am going to quit. That is my valedictory observation.

The CHAIRMAN. Mr. Hamilton, will you proceed to examine the witness?

Mr. HAMILTON. I really feel I ought not to take the time of the committee. I have only one or two questions.

The CHAIRMAN. You are sustained by precedent as well as theory in your right to examine as long as you please.

Mr. HAMILTON. You spoke, Mr. Kruttschnitt, about the speed of freight trains a while ago, I believe a day ago. How rapidly is the electrification of railroad lines proceeding? Can you give some statement in relation to that?

Mr. KRUTTSCHNITT. I think I can, from memory, give you the principal electrifications. The first extensive one was the electrification of the traffic through the Park Avenue Tunnel, at New York, of the New York Central and the New York, New Haven & Hartford. The New York, New Haven & Hartford first electrified to Stanford, a distance of 32 miles from New York. They have recently extended the electrification to New Haven, which is about 72 or 73 miles from New York. Both of those electrifications were brought about by the necessity of keeping the atmosphere clear at the Park Avenue Tunnel. It was hastened by a very bad accident that preceded the electrification by two or three years, in which a large number of people were killed through the obscuring of a signal by the smoke of a preceding train. That electrification, therefore, was inspired by motives of safety, comfort, and convenience of the passengers only, not from economic motives.

The Norfolk & Western has recently electrified part of its heavy-grade line.

The Chicago, Milwaukee & Puget Sound has electrified their line through the Bitter Root Mountains, where they get electric power generated by water power at very low rates.

The Great Northern Railway, I think, has electrified a short part of its line through their Summit Tunnel, for the same reason the New Haven did, to get rid of the smoke and gases. They had several bad accidents there through which enginemen and firemen were overcome by the gases, and they wanted to get rid of them.

Those, as I remember, are the principal, if not the only, changes of steam into electrotraction in the United States, except the Southern Pacific suburban lines on the east side of San Francisco Bay, serving the San Francisco public and the publics of Berkeley, Alameda, Oakland, and suburban towns east of Oakland. That was formerly a steam service that was converted into electricity on account of the continued objections and complaints of the citizens of the noise made by the escape of the steam locomotives and the smoke.

We have had three or four reports made ourselves on the possible electrification of our Sierra Nevada grade, which is a very heavy grade, between Sacramento and Truckee, over the Sierra Nevada Mountains, and also for our heavy grade over the Siskiyou Mountains, that divide California from Oregon. We had both those investigations made purely from motives of economy. The electric companies had criticized the steam operation and said they could convince us that electricity was better and cheaper, and we told them to go ahead, that we were ready to be convinced, and if they could operate cheaper than we could with coal we would make the change: but they never could convince us.

Mr. HAMILTON. In the present state of the development of electricity, is it considered cheaper to move heavy freight by electricity?

Mr. KRUTTSCHNITT. Heavy freight is being moved by electricity.

Mr. HAMILTON. Then that is in practical operation, as I understand you?

Mr. KRUTTSCHNITT. Yes; but except in abnormal conditions, there is no money in it. It costs you more.

Mr. HAMILTON. Would it be possible to move freight more rapidly with electricity?

Mr. KRUTTSCHNITT. No; it is a question of the amount of power you use. You can move a freight train just as fast as you like by either steam or electricity.

Mr. HAMILTON. Then there would be no advantage as to the rapid movement of freight in the electrification, in your judgment?

Mr. KRUTTSCHNITT. No; unless the conditions were such that the cost of your electric motive power and cost of operation and the interest on the additional fixed plant were less than the interest on that part of your steam plant that you could discard by using electricity and the cost of the power developed by the consumption of coal or oil and cost of operation. That really, to continue the answer, was the reason we did not electrify on the Sierra Nevada. We considered the cost of moving the traffic with power by burning coal in the locomotive fire box, as contrasted with the cost—that is, the interest on the hydroelectric development, using some streams in the mountains, long transmission lines, and the cost of the electric locomotives, crediting the project with the cost of the steam locomotives released, which we could use elsewhere. Now, there was no money, as I remember it, but the report is four or five years old, but it figured out about this way: We could save about \$400,000 a year on our coal bills, but our bill for interest and maintenance of the electric property, which would be superadded to everything we had, amounted to much more than \$400,000, and therefore the conclusion was easy that the time was not ripe to change to electric power.

Mr. HAMILTON. I understood that some witnesses were to be presented who had expert knowledge of the subject of Government ownership, and I think, Mr. Chairman, out of regard for the other members of the committee, I will not ask any further questions at this time.

Mr. ADAMSON. You need not limit yourself. Go on and inquire.

Mr. HAMILTON. I think I will ask no further questions.

Mr. ADAMSON. Mr. Doremus, will you examine the witness?

Mr. DOREMUS. I only want to ask one or two questions of the witness. You give us as your opinion, and the opinion that I think is shared in by a great many people, that the railroads, under private ownership, are largely broken down. Do you regard the great contributing cause for that condition to the fact that the railroads have numerous masters, represented by railroad commissions and public-utility commissions in the various States, instead of one controlling authority?

Mr. KRUTTSCHNITT. That is one of the potent causes, the numerous orders, sometimes conflicting, issued by these numerous masters. The effects of these orders are very far-reaching and cumulative, and when there is an order that affects our company, we will say, to the extent of \$500,000 or \$600,000 a year, and another one \$200,000 a year, and you go on through the list and finally find that the resultant of all these orders is perhaps several million dollars a year, in the end it becomes very burdensome.

Mr. DOREMUS. Do you consider it the principal contributing cause to the present condition of the roads?

Mr. KRUTTSCHNITT. I do. I consider that and the rapid rises in the cost of labor and materials the principal causes. The railroads have no means of offsetting the rapid rises in the cost of the material and the cost of wages except by seeking to operate their properties more efficiently. They can not raise the price of the commodity—transportation—that they manufacture, as manufacturers of all other commodities do.

Mr. DOREMUS. To what extent, if any, do you think the financial mismanagement of American railroads is responsible for the present conditions?

Mr. KRUTTSCHNITT. That I touched on before you came to the committee. I will repeat it briefly; that there has been dishonest management, I am sorry to say, in the railroad business, and that has affected to a certain extent, but I do not think to any very great extent, the confidence of investors in their securities. At the end of 1914 there were 69 roads in the hands of receivers; 69 roads with bonds to the amount of about one thousand eight hundred millions of dollars; were not paying any interest on their bonds at all, and, of course, nothing on their stock; and there was a large number of other roads representing four thousand or forty-five hundred millions of dollars of stock that were not paying any dividends. Now, the proportion of roads that went into receiverships through dishonesty was about 7 or 8 per cent of the total. In the same period, covering four years, the report of the Comptroller of the Currency shows that 46 national banks went into the hands of receivers, and 23 of those, or 50 per cent of the total, failed through dishonesty. In other words, the proportion for the national banks was about six times as great as for the railroads. These dishonest failures have not affected the confidence of the people in national banks, or in their securities—they keep on buying. They appreciate that in all businesses you have black sheep, but if the business in the main is well managed they charge the existence of those black sheep to the weakness of human nature, and they go on about their business and invest in stocks; and so they do with the railroads.

Mr. DOREMUS. Are you through?

Mr. KRUTTSCHNITT. Yes.

Mr. DOREMUS. You were speaking particularly of dishonest management of railroads. I presume that it is as easy to wreck a railroad by mismanagement as by what you term dishonest management? That would be true, would it not?

Mr. KRUTTSCHNITT. Yes; except one would be unintentional and the other intentional.

Mr. DOREMUS. Yes; but the effect might be the same, whether brought about by dishonest management or mismanagement?

Mr. KRUTTSCHNITT. Yes.

Mr. DOREMUS. Are you familiar with the recent history of the Hartford & New Haven Railroad?

Mr. KRUTTSCHNITT. Not except as a general reader would be familiar with it.

Mr. DOREMUS. Could you suggest a remedy in the way of Federal legislation that would prevent a recurrence of the experience of the Hartford & New Haven?

Mr. KRUTTSCHNITT. I think you have that to a considerable extent now. The financial operations as well as the physical operations of railroad properties are inspected and examined by the Interstate Commerce Commission most minutely, and the carriers are required to report to the commission annually, in the greatest detail, everything that has been done during the year. The control would be absolute if the issuance of all securities were placed under the Interstate Commerce Commission.

Mr. ADAMSON. Has not that been true for a long time, under section 20 of the commerce act?

Mr. KRUTTSCHNITT. The section may be the same, but the inspection has become, year by year, closer and closer.

Mr. ADAMSON. That is, the section has been better complied with?

Mr. KRUTTSCHNITT. Yes. I think I know what Mr. Doremus refers to in the New York, New Haven & Hartford. As I say, in a general way, I know that there was considerable excitement on account of a revelation of their improvident investments, that ran back 10 or 12 or 15 years. Those investments antedated the time when this very close inspection of accounts was made by the Interstate Commerce Commission. They were brought to light in the last few years.

Mr. DOREMUS. Do I understand you to mean that we already have the legal machinery which, if it had been put in motion, would have averted the misfortune that overtook the New York, New Haven & Hartford?

Mr. KRUTTSCHNITT. I think if they had been put in motion at the time those expenditures were being made, which, as I say, in a general way, I trace back 10 or 15 years ago, it would not have occurred.

Mr. THOM. May I make a suggestion there, Mr. Doremus?

Mr. DOREMUS. Yes; certainly.

Mr. THOM. My understanding is that a part of the general report is that there shall be a power conferred by Congress on the Interstate Commerce Commission to supervise the issuance of securities.

Mr. DOREMUS. That is what I wanted to draw out from the witness—whether he thought that would have a corrective effect?

Mr. KRUTTSCHNITT. That would increase, very largely, the power of the commission to stop just such abuses. Its authority would be complete and absolute.

Mr. DOREMUS. Your railroad, the Southern Pacific, is a dividend producer, is it not?

Mr. KRUTTSCHNITT. Yes.

Mr. DOREMUS. What dividend does that road pay now?

Mr. KRUTTSCHNITT. Six per cent.

Mr. DOREMUS. That is, on the common stock?

Mr. KRUTTSCHNITT. It has no stock but common.

Mr. DOREMUS. All common; no preferred?

Mr. KRUTTSCHNITT. No.

Mr. DOREMUS. How long has it been paying 6 per cent?

Mr. KRUTTSCHNITT. Since about 1907.

Mr. DOREMUS. What dividends did the road pay previous to that time?

Mr. KRUTTSCHNITT. I will have to make a mental computation, which may not be accurate, but will be reasonably so. In 1905, 1 per cent; in 1906 it was 2.8 per cent; then after that the dividends seem to have been reasonably regular at 6 per cent.

Mr. DOREMUS: You have never paid, then, more than 6 per cent?

Mr. KRUTTSCHNITT. No.

Mr. DOREMUS. And that began in 1907?

Mr. KRUTTSCHNITT. Yes; and from the incorporation of the company, in December, 1885, up to 1905 no dividends at all were paid, though the surplus ran from seven-tenths of 1 per cent up to 3 per cent in those years. In other words, that surplus was earned, but it was not divided up and given to the shareholders.

Mr. DOREMUS. Would it be fair to assume, from what you have said, that the multiplicity of regulation which has grown up in recent years has not seriously affected the welfare of your shareholders?

Mr. KRUTTSCHNITT. You mean in that from 1907 to date they have paid 6 per cent?

Mr. DOREMUS. And that previous to that time you paid practically no dividends.

Mr. KRUTTSCHNITT. The property was being developed at that time; development was going on.

Mr. DOREMUS. And previous to 1907 your earnings were put back into the property, and that accounts for the failure to pay dividends?

Mr. KRUTTSCHNITT. I just said that whatever we earned, which varied from seven-tenths of 1 per cent to a little over 3 per cent, was put back into the property; but, continuing my answer to your question, I would say that the fact of paying a 6 per cent dividend and borrowing money, which was put into the property, at rates of sometimes 6 per cent and at times 5 per cent or over 5 per cent, is not an evidence of any very great prosperity; not evidence of such prosperity as would make the securities of the company very attractive to investors, when other concerns were doing so much better.

Mr. DOREMUS. What is the market value of the stock of the Southern Pacific now?

Mr. KRUTTSCHNITT. From 93 to 95. You will observe that that is very low for a 6 per cent stock.

Mr. DOREMUS. Yes. I suppose it has been much higher than that, has it not?

Mr. KRUTTSCHNITT. Yes; I think it went up at one time to 125 or 130.

Mr. DOREMUS. Your stock purchased on the market at 93—did you say—to 95?

Mr. KRUTTSCHNITT. Yes. I think the last I noticed—I looked in this morning's paper, and my recollection is it was about 95.

Mr. DOREMUS. That would yield a net return to an investor of something above 6 per cent, would it not?

Mr. KRUTTSCHNITT. A little over 6.

Mr. DOREMUS. You were telling us yesterday the extraordinary increase in the cost of coal to your company. Have you made any investigation of the causes of the extremely high price of coal?

Mr. KRUTTSCHNITT. I have not.

Mr. DOREMUS. Can you suggest any remedy to the committee that would have a tendency to reduce the price that railroads have to pay for coal?

Mr. KRUTTSCHNITT. I do not know of any.

Mr. DOREMUS. Are you in favor of national incorporation of railroads?

Mr. KRUTTSCHNITT. National incorporation of railways? You mean Government ownership?

Mr. DOREMUS. No; I mean the national incorporation as distinguished from incorporation under State charters—Federal incorporation.

Mr. KRUTTSCHNITT. Yes. That is the proposition that we are discussing here; that is, that the railroads be required to take out Federal charters.

Mr. DOREMUS. I was not here. I wanted to know as to whether you believed in that. I do not suppose you have given any consideration to the question of how——

Mr. THOM. I would like to have Mr. Kruttschnitt get that answer in. Mr. Doremus said he was not clear as to your attitude.

Mr. DOREMUS. I am very clear now that he is in favor of it.

Mr. KRUTTSCHNITT. Yes; I am in favor of the roads getting Federal incorporation.

Mr. DOREMUS. I do not suppose you have given any consideration to how, in the event we nationalize the railroads through Federal incorporation, the property of the old corporations would be transferred to the new corporations?

Mr. KRUTTSCHNITT. The question of details—indeed, the entire question as it was first broached in our deliberations and in committees—was submitted to counsel, and he went over the proposed Federal incorporation and advised the directors that it was practical and, he thought, desirable; and I can not answer you many, if any, questions about the details, because I am relying on his judgment.

Mr. DOREMUS. That is more of a legal question, anyway.

Mr. KRUTTSCHNITT. Yes, it is; and I have acted on the judgment of counsel.

Mr. DOREMUS. I think that is all.

Mr. ADAMSON. Mr. Kruttschnitt, in speaking of the electrification of roads, the force is not developed sufficiently as yet—the electrical energy of the country—to enable you to secure that energy cheaply enough to operate the railroads on an extensive scale by electricity, is it?

Mr. KRUTTSCHNITT. We have not yet found cheap enough power, Mr. Chairman, to replace the steam.

Mr. ADAMSON. At present does the equipment for electrification cost as much as the current itself—your connecting lines and your other equipment—transmission lines?

Mr. KRUTTSCHNITT. The equipment is very costly. I am going to give you the best information I have got. I have a fairly accurate memory, and my recollection is that for the electrification of our Sierra Nevada grade, a distance of about 120 miles, the capital expenditure necessary to put in the generating plants near the water power that we proposed to use, the cost of the transmission lines to the line of the railroad, and the cost of the electric locomotives, and the cost of the transmission lines along the railroad, ran up to eight or nine millions of dollars. That was some years ago. The cost would be very much greater now. That was one side of the problem. The additional cost, then, would be the capital cost, or the interest charge on eight million or nine million dollars, plus the operating cost of the power house and locomotives, and the repairs

of transmission lines. On the other side of the account was the cost of the coal burned in the locomotives to do the work that the electric line was to do, as well as their operating costs, and a credit of the value of the locomotives that would be displaced, because they were good locomotives, and we are buying locomotives every year, and we could simply transfer them to another part of the line and not count them a total loss.

Now, the difference between the possible economies from using the electric system and the actual cost of the steam system as we are using it was a difference of \$300,000 or \$400,000. In other words, all we could accomplish by abolishing the steam system was the saving of the coal bill; and the coal bill was between \$300,000 and \$400,000; but the interest bill and the cost of running the electric machinery ran up to very much more than that; it was \$600,000 to \$800,000. There was a difference of about \$300,000 between the two at that time.

Mr. ADAMSON. I heard a railroad man say that it would cost as much to erect this construction, including the necessary transmission lines, as it did to build a railroad. I suppose that is exaggerated?

Mr. KRUTTSCHNITT. No, it is not; it is substantially correct. In other words, the officers of our electric properties in California—and I think we have the largest mileage of electric properties of any railroad in the United States—have often stated to me, as rough estimates, when I have asked them what it would cost to go to this place or that, just what you did—that you can count very closely on the overhead costing just as much as the railroad itself.

Mr. ADAMSON. Then it would be most expensive and the longest postponed on the longest stretches of road?

Mr. KRUTTSCHNITT. I do not think you can get any general answer to that. It would depend on the circumstances. On a long stretch of road you might get the power so low that you could sweep aside all other objections.

Mr. ADAMSON. That is what I was going to ask you—if the abundant opportunities in this country for the development of hydroelectricity are permitted to be developed and the cost of operating by electricity—I do not mean lighting little towns or such trifling things—but if the generation of hydroelectrical power becomes so abundant as to reduce the cost from something like \$28 per horsepower per annum down to \$7 or \$8, which is what it costs when used for manufacturing purposes, would not that greatly facilitate the electrification of railroads?

Mr. KRUTTSCHNITT. Unquestionably.

Mr. HAMILTON. Suppose, having water power and the plant and all the facilities for the electrification of 120 miles, you had desired to extend the line of electrification from 120 to 500 miles. Could you have used the same plant and the same power house and all that?

Mr. KRUTTSCHNITT. No. The power was not available in the stream.

Mr. HAMILTON. Oh, I see. Precisely. But suppose you had a stream where you could get sufficient power, would it add very materially to the expense to extend the electrification, we will say, to 500 miles, simply by way of illustration?

Mr. KRUTTSCHNITT. Taking the rule I have just given, the extension of the transmission lines along existing railroad lines would about equal the cost of the railroad line in place.

Mr. HAMILTON. That is, just simply extending the line?

Mr. KRUTTSCHNITT. That is, in ordinary country. I want to explain that a little. That is true in an ordinary country, where, say, the expense of the ordinary line would be \$25,000 to \$30,000 a mile; in other words, the overhead would cost about that; but on a mountain grade, such as ours over the Sierras—I have never had it computed—but I should say the cost of that line would run up to probably \$150,000 or \$175,000 a mile on account of the excessively heavy rockwork, snowsheds, and tunneling; but it would cost about as much as I told you on an ordinary line; in other words, probably \$25,000 or \$30,000 a mile. That cost runs up, you see, pretty rapidly with distance, and then with this long transmission you have got to take into account your waste factors; there are leaks and losses in transmission by which you do not get all the power at the end of 500 miles that you put in at the beginning.

Mr. ADAMSON. Now, while you may have a long stretch of road—I suppose you have stretches on your road over a thousand miles long without coming in contact with any water at all?

Mr. KRUTTSCHNITT. Yes; more than that.

Mr. ADAMSON. Of course, if you derived all your power from one source, it would be a long transmission; but while it may not be true of your road, probably there are water powers collaterally that may——

Mr. KRUTTSCHNITT. I can give you an illustration there, because we have gone into this thing so thoroughly that we can talk from almost any angle. Mr. Harriman was a great believer in water power and was constantly after me to do something to electrify our lines. Parties owning water powers on the Snake River in Idaho, north of our Central Pacific line and substantially parallel with it, told Mr. Harriman that they could run the Central Pacific a great deal cheaper than we were running it. I did not believe it, but I have a stereotyped course to take in such cases—to tell the applicant, “Prove it.” So when they came with this claim I said: “There is the Central Pacific Railroad; I will turn you loose on it; you will have all the information you want; I will detail men to give you the train mileage, the locomotive mileage, the grades, the distances, the density of traffic, everything you want, and all I ask you is, when you get that, give me the report as to what you can do, what you can run the road for.” And they proposed to do exactly what you say; that is, they had sources of power at four or five different points which they proposed to drop down——

Mr. ADAMSON. To feed the line?

Mr. KRUTTSCHNITT (continuing). Into the line at different points. The only thing I did not give them was the cost of running the Central Pacific by steam. I did not want their report to be affected by knowledge of what we were doing. But when their report came in it meant a very large increase in operation to the Central Pacific by electric power as against coal. I simply said to them, “You have not made good. You have said to the president of the road that you could operate the road cheaper than we could with coal. Now, we

have turned you loose and given you all the information you wanted, and you come in with a report that shows that you can not do it. There is no use in taking up any more time with you. If you can modify this, and go over this report at some future time, come and see us again; but we are not ready to act on this report." And the truth is that we have had two investigations of the Siskiyou grade made, and three of the Sierra Nevada, by owners of electric power and by manufacturers of electric machinery who talked at random just as these other parties talked—that "you people do not know what you are about; we can save a vast sum of money for you if you will operate your road electrically." And in every one of those cases we said to them, "Gentlemen, go ahead; if we do not know how to do this, show us." In every case the report came in that it would take very much more than we were spending with coal.

Mr. ADAMSON. Is the Snake River a large stream?

Mr. KRUTTSCHNITT. Very.

Mr. ADAMSON. How much horsepower could you develop by a dam?

Mr. KRUTTSCHNITT. Well, almost unlimited. The Snake River is the principal fork of the Columbia, and up in the country where they propose to develop it is a stream, I should say, probably a thousand or twelve hundred feet wide and 8 to 15 feet deep.

Mr. ADAMSON. Is it a flashy stream or does the current run uniform through the season?

Mr. KRUTTSCHNITT. No; it varies according to the season.

Mr. ADAMSON. Now, there may be, of course, different conditions applicable to your road which might not make it economical for you to adopt it at the present prices of electricity, but there are sections of the country where different conditions exist as to topography and the length of lines and also the production of water power. For instance, there are shoals in the southern and southwestern country on navigable streams where there is no difficulty in producing water power at from \$7 to \$10 per kilowatt per year. I know I have heard offers of 1 mill per kilowatt hour. Of course, that would fill with consternation the little power companies; but suppose they were permitted to allow private capital to construct the dams on those shoals and generate power at that price, are there not railroads which could then economically substitute that for coal?

Mr. KRUTTSCHNITT. I would say right here, Mr. Chairman, that if we could find any power company that would deliver us power at a mill per kilowatt hour, I do not think it would take much more than an hour to make up our minds to electrify our Sierra Nevada grade.

Mr. ADAMSON. I know of half a dozen streams on which there are shoals capable of producing vast quantities of power, and those shoals break the continuity of hundreds of miles of navigation. Private capital has been anxious to build those dams, if permitted, on liberal terms for the development of the country by building factories, running railroads, and other uses of electricity, and I have been assured by those who inspected those propositions of those low prices at which they are capable of producing electricity.

Mr. KRUTTSCHNITT. That is phenomenally low.

Mr. ADAMSON. Yes; well, it has to be that low for manufacturing some commodities. I know in Norway, where they have fine water-

powers, and in Germany they say they have to have it \$6 and \$7 a kilowatt-year for the new process of steel making and other things. We have got just as good water power, fifty or sixty thousand horsepower, and if those who are opposed to the development of these navigable streams could be persuaded to accord liberal terms to private capital that wanted to build those dams, I have demonstrated by investigation among many of them that the capital would be forthcoming, and that those low prices—probably not exactly as low, but approximately—would result. Now, I understand from you that if anything approximateing that price could be attained a good many railroads in the country would electrify their lines?

Mr. KRUTTSCHNITT. I can only say as to ours that I think every one of the electric projects I have mentioned would go in at once, if we could get power at such a rate as that.

Mr. ADAMSON. But your system is more favorably situated for it than many others?

Mr. KRUTTSCHNITT. Well, I do not know. There are a good many parts of our system that are very unfavorably situated to get power, because there are no running streams near by.

Mr. HAMILTON. In view of what you have said—I beg Mr. Doremus's pardon.

Mr. DOREMUS. I will yield to the gentleman.

Mr. HAMILTON. In view of what you have said, what are the reasons, in your judgment, that appeal to corporations to construct electric lines in the first instance? There are a large number of electric lines doing business in competition with steam lines.

Mr. KRUTTSCHNITT. You mean the electric interurban lines?

Mr. HAMILTON. Well, more than that. For illustration, I recall an electric line running from the city of St. Joseph, on Lake Michigan, south to Indianapolis. I think it is a complete line for that whole distance. It is doing business, of course, in competition with steam railways. In view of what you have said, what are the reasons which induce that construction? They are apparently doing a profitable business; and I may add that within the last five years an electric line has been constructed in the State of Michigan extending between Grand Rapids and Kalamazoo, doing business in competition with steam railways, and apparently prosperous. I should like to have you state what, in your judgment, are the reasons which appeal to these corporations to construct these roads in competition with steam railways.

Mr. KRUTTSCHNITT. There are several. I think I can give you enough to show you that they are controlling reasons.

In the first place, the standard of construction of the electric road is much lighter and below that of the steam road. The rails are lighter; the ballasting is not as heavy; the equipment is much lighter and is much cheaper. An electric car complete with motors to operate on an ordinary electric road costs about eight or nine thousand dollars. A locomotive and one coach to operate on a steam road costs, for the locomotive, at present prices, about \$25,000 and the coach about \$10,000, or \$35,000 in all. There are expenses for equipment to 1 in favor of the electric road.

Second, and perhaps the most potent factor is the free right of way. The counties and towns allow these roads to take part of the

public roads, and they build generally on the edge of the public roads. The right of way costs them nothing. The steam road built across private property, and its right of way is one of its most expensive elements.

The wages accepted by the electric-road employees are far smaller than those that have to be paid by the steam road. The electric road has two employees, a motorman and a conductor. The smallest steam train we can run—a locomotive and one coach—has four employees—an engineer, a fireman, a conductor, and one brakeman. The electric stations are few and inexpensive in comparison with steam lines, and the terminals are far less expensive.

As to cost of power, that will vary in different places, but electric roads are frequently run in connection with power plants; that is to say, the company that runs the electric road also sells power to the public, and therein is a great advantage. The electric road puts a plant that is sufficient to run its property. It uses that plant principally in the daytime and has no use for it at night. But if it find a profitable use for it at night its fixed overhead charges are very, very much reduced. Now, it finds that night use by selling power for illuminating.

Those, briefly, are the reasons why the average interurban road can, to use a vulgar expression, "do up" the steam road.

Mr. HAMILTON. Can these electric roads, equipped as you state, handle bulk freight, heavy freight?

Mr. KRUTTSCHITT. Yes, sir.

Mr. HAMILTON. As well as the steam road?

Mr. KRUTTSCHITT. Yes, sir.

Mr. ADAMSON. They can pull freight cars as trailers, can they not?

Mr. KRUTTSCHITT. I will give you an illustration. We have the Pacific Electric Railroad in southern California, which is a system of about 900 miles of line. That runs from Los Angeles north and south, and it was built for the very reasons that you give, for fear of the steam lines. We were running steam lines south of Los Angeles to gather up the people and bring them into Los Angeles to feed the through trains, and we concluded it was much cheaper to do it electrically. Now, the Pacific Electric handles also a great deal of freight and handles it just as well as the steam line does.

Mr. HAMILTON. Of course they run much more frequently?

Mr. KRUTTSCHITT. They run the passenger trains much more frequently; and then they have spurs to the orange orchards. They pick up the orange cars, accumulating a train of 30 or 40 cars, and that train is brought in to a central point, and the orange cars are switched to other trains that go at once east and north.

Mr. HAMILTON. Then they handle freight and passengers very satisfactorily—

Mr. KRUTTSCHITT. They do.

Mr. HAMILTON. And economically, evidently?

Mr. KRUTTSCHITT. There again comes in the question of development. The Pacific Electric has been "done up" by the jitney. The State has improved the roads, and the automobile has taken the passenger traffic, the short-line passenger traffic, away from the electric road, and we have had to spend a great deal of money putting in sidetracks and sidetracks to make good the loss in passenger business—gains in freight business.

Mr. ESCH. Mr. Chairman, may I ask a question?

Mr. ADAMSON. I yield to the gentleman from Wisconsin.

Mr. HAMILTON. Before Mr. Esch starts I should like to ask just one more electric question. I wanted to call attention to this fact: There is an electric line running out of Detroit, and it runs as far down, I think, as the city of Kalamazoo, and all the way it parallels the Michigan Central, running very close to the Michigan Central lines, or what is known now as the New York Central. It is doing good business, apparently, in competition with the Michigan Central line. At the same time the business of the Michigan Central does not seem to have fallen off. Both lines seem to be prosperous; and in many of these instances—two of the instances that I have cited to you—these roads do not run along highways, but have had to purchase their right of way across the country, as a steam road would have to do. I simply wanted to make that suggestion as having some bearing on what you had already stated.

Mr. KRUTTSCHNITT. Well, roads are built that way. This road of ours that I speak of has been built on private right of way almost the entire distance. We did not want to rely on the pleasure of communities to put our tracks in the road and perhaps be hampered by speed regulations. We would rather have them on private right of way, and the right of way fenced in, so that we could give very fast service.

Mr. HAMILTON. I only spoke of it as suggesting a possible means of perhaps solving in part the problem of quick transportation of freight which has been raised here.

Mr. KRUTTSCHNITT. We have already done that to an extent greater than any other road, I think, in the United States.

Mr. ADAMSON. Before you begin your examination would you let me ask him one more question?

Mr. ESCH. Yes. Mr. Doremus wants to ask another, too.

Mr. ADAMSON. I was asking you about these electric lines—that is, electrically propelled trains—and you made a statement about the advantage in getting free right of way. I wish you would emphasize and specify approximately what advantage that would be in the construction of a line—that the right of way and terminal facilities were donated to the road.

Mr. KRUTTSCHNITT. Of course, where the right of way is given, particularly in the case I had in mind in southern California, where the lines run through orange orchards and walnut orchards and the cost is very high, that advantage is very great.

Mr. ADAMSON. Then, if a city and county should grant to one of these electric roads the right to run in any street or highway in the city or county, it would constitute a very great inducement, ordinarily, for the construction of that road?

Mr. KRUTTSCHNITT. Yes, sir.

Senator TOWNSEND. Did I understand you to assent to that proposition, Mr. Kruttschnitt, that that would be an inducement, rather than having your own right of way, not subject to any accident that might occur?

Mr. KRUTTSCHNITT. I say that to the ordinary road that would be an inducement, the saving of that large expense; but there are electric roads and electric roads. I said in respect to ours that we did

not consider that much of an inducement, because we had bought private right of way to be relieved of the chance of accidents or the passage of laws that would require us not to exceed a certain speed.

Senator TOWNSEND. The very road to which Mr. Hamilton has referred, running from Detroit to Kalamazoo, practically across the State, had the right of way offered to it in many instances, but it preferred to purchase it, and did purchase it, so it is running on its own right of way. The argument that was presented to use at the time was that it was much cheaper in the end, everything considered, and it was safer and cheaper to the railroad to own such right of way.

Mr. KRUTTSCHNITT. We have reached that conclusion, because our railroad lines have been built that way.

There is a map of the lines I am referring to, Mr. Chairman, which may be of possible interest to you.

Mr. DOREMUS. I understood you to say yesterday that you thought the railroads should have the legal privilege, when their volume of business decreases, to increase the rates. Did I understand you correctly?

Mr. KRUTTSCHNITT. I did not put it just that way—"should have the legal privilege"—but that when the volume does decrease and the revenues are not sufficient to pay operating expenses, fixed charges, and a fair return on the capital, there should be a prompt answer to the plea of the carriers to increase rates.

Mr. DOREMUS. That was the substance. It would amount to a legal privilege to raise the rates when the volume of business decreased, subject, of course, to the approval of the Interstate Commerce Commission. Upon what ground would you justify a privilege of that kind; that it would stabilize the credit of the road?

Mr. KRUTTSCHNITT. It would stabilize the credit of a road and would keep it out of bankruptcy. I said that if the volume of business that is being carried now by our road and many others, at the rates prevailing and with the expenses that have increased since even the opening of the European war, should decrease, many of these roads would go into bankruptcy, because the gross revenue would not be sufficient.

Mr. DOREMUS. What I am getting at is this: Would not that throw around the railroads of the country a privilege that is not enjoyed by other kinds of business?

Mr. KRUTTSCHNITT. The railroads do not now enjoy the privilege enjoyed by other kinds of business of being able to sell their product—transportation—at the market rates based on cost of production. They are restricted. On the other hand, they are compelled, in order to keep going, to pay the market rates for everything they need, wages included, at whatever prices prevail. Now, those two influences are directly antagonistic, and if you hold them to the influence of one and relieve them from the benefit of the influence of the other I do not see how bankruptcy can be avoided.

Mr. DOREMUS. Do you not think that would constitute of the railroads of the country a peculiarly favored class? For instance, in ordinary mercantile business a decrease in the volume of trade, I think, is almost uniformly coincident with falling prices; and viewing it from that standpoint would it not constitute of the railroads a peculiarly favored class?

Mr. KRUTTSCHNITT. I think not. The railroads now are in a peculiarly handicapped class, in that their revenues and their sources of revenues are absolutely controlled by regulating bodies, and no one controls for them the prices of materials that they have to buy and of labor. In every other industry except railroading increasing costs are offset by increasing profits. If the manufacturer, whatever his line, has to pay higher costs for his material and for his labor, he recoups himself by charging more for his output. But law and regulation says to the railroad, "It is immaterial to us what you pay for the materials necessary in your business; it is immaterial to us what you pay for labor; but we regulate your revenues and they stay fixed." And it is the only industry in which that course is taken. Our suggestion is not to favor railroads, but to accord them the benefits of economic laws that govern prices in all other manufacturing enterprises.

Mr. ADAMSON. Is that strictly accurate? Does not section 20 of the commerce act require the commission to keep itself advised of all these elements of expense, as well as all other features of operation; and is not that for the sole purpose of enabling them to fix proper regulations?

Mr. KRUTTSCHNITT. Quite true. It may provide that they shall keep themselves informed; but I do not remember that the act anywhere requires them to act on that information.

Mr. ADAMSON. What other purpose could there be for the information except to discharge their duty? And it may be that individual commissioners may not always agree with you as to what action they ought to take and for what reasons they ought to minimize the value attached to any one of these features. The law remains that they can and should consider them.

Mr. KRUTTSCHNITT. That is all quite true; but I have tried to show you by charts and by my oral testimony that as a resultant of rise of wages, prices, and costs of materials the railroads are in a position to-day of being paid in a debased currency—a dollar that is worth only 45 cents.

Mr. ADAMSON. That is another proposition. I have stated to you gentlemen frequently that if you would base your claim for increased rates on the fact that money has come to be cheaper than anything else in the world, and will not buy as much, you would have a much more plausible case for your demand.

Mr. KRUTTSCHNITT. Well, I am sorry to know that I have failed. I have tried with great earnestness, and with all the ability I possess, to make plain that the purchasing value of our railroad dollar had depreciated to the extent that it was worth only 45 cents instead of a hundred cents, and I have devoted a large part of my time for the past month or so in trying to get up argument to convince you of that.

Mr. ADAMSON. But we are not the people to be convinced of that. My position is that you already have a law, and that your statement was inaccurate when you said that the law prevents you from making an adequate return, because the law is that you shall have a reasonable and just rate, and the law prescribes what these commissioners shall consider and keep themselves informed on. And they should—whether the individuals do it or not is another question—but

they should consider and keep themselves informed on all these questions and consider every one of them in seeing that you have a reasonable and just rate.

Mr. KRUTTSCHNITT. Mr. Chairman, we are here before you a committee of doctors. We are telling you of our ailments and what we are suffering from.

Mr. ADAMSON. You will only have to ask us to recommend to Congress, you know; and I am telling you what already exists, where it seems to me you ought to get redress.

Mr. KRUTTSCHNITT. Well, there is an old adage, you know, about taking a horse to water.

Mr. ADAMSON. You can probably do just as a railroad official said to our committee in 1904, when the railroad officials were stubbornly combating the theory that the Government had any right to regulate them at all. I said, "What if we overrule you, and Congress does decide that it will make your rates; what will you do?" They said, "We will try to get another." Now, if this committee is not a good one, you can get a better one; but the law, it seems to me, is ample to provide you just and reasonable rates.

Mr. SIMS. The low purchasing value of your dollar applies to labor just as well as it does to material; in other words, the laborer has to pay more out of his wages than he did before?

Mr. KRUTTSCHNITT. Yes, sir; but the laborer, by combination, when he does not think he has enough, comes and says that he must have some more, and he generally gets it; and when we say we want some more, we generally do not get it.

Mr. SIMS. You do not always get it. Sometimes you do.

Mr. ESCH. Are you all through?

Mr. ADAMSON. I am not through, but I am going to yield to the gentleman from Wisconsin.

Mr. ESCH. I do not want to proceed unless you are through.

Mr. ADAMSON. I am going to wind up this examination.

Mr. ESCH. Senator Townsend asked yesterday with reference to the operation of the Canadian act, and you quoted something from the report of Mr. Asquith, the English authority. Mr. Asquith gave certain grounds of opposition or objection to that act, did he not?

Mr. KRUTTSCHNITT. I do not know; I do not remember. This memorandum I wrote was written, except that part that quotes the United States Board of Mediation and Control, two or three years ago.

Mr. ESCH. One of the objections which Mr. Asquith cites against the operation of the Canadian act is as follows:

Labor claims, further, that employers are guilty of exploitation during the period in which strikes are not legally permitted.

Did your special representative report anything on that feature of the law?

Mr. KRUTTSCHNITT. I think that claim has been made by labor. I do not remember whether this report stated that or not.

Mr. ESCH. Is it not a fact that in some of those cases of strikes on some of the railroads pending the investigations, when the employees could neither strike nor the railroads lock out, did not the railroads build stockades, employ men and provision them, so that they might

be ready in case the strike was declared, notwithstanding the finding of the arbitration award?

Mr. KRUTTSCHNITT. I expect that may be true. On the other hand, labor can prepare also.

Mr. ESCH. Do you know whether or not labor did prepare in these cases of strikes or threatened strikes?

Mr. KRUTTSCHNITT. No; I do not.

Mr. ESCH. There is another objection made against the Canadian act, and that is with reference to enforcement of its penal provisions. You are familiar with the act, are you not?

Mr. KRUTTSCHNITT. Reasonably so; yes, sir.

Mr. ESCH. You know it provides very severe penalties for the employees to go out on strike pending the investigation or for the companies to declare a lockout pending the investigation?

Mr. KRUTTSCHNITT. Yes.

Mr. ESCH. Have those penalties been enforced under the Canadian act?

Mr. KRUTTSCHNITT. I do not know. All I can tell you is that this paragraph from the report of the Board of Mediation attracted my attention and seemed to be extremely convincing. Now, how far those gentlemen went in these questions I do not know. I accepted their conclusion.

Mr. ESCH. According to Mr. Askwith's report, those penal provisions have not been enforced in Canada, for the reason "the employees felt they could not afford to prosecute and the employers did not think it wise to prosecute, hence the penal provisions have been made inoperative, much to the disappointment of the Canadian officials."

Would there be any different result if we adopted a like law in the United States?

Mr. KRUTTSCHNITT. Possibly not. But if we adopted a law that would stop 90 per cent of the strikes, as the Canadian law has done, penalty or no penalty, I think it would be a good thing.

Mr. ESCH. Notwithstanding the fact that the penal provisions, which in any penal statute are supposed to be the essence of it, remain unenforced?

Mr. KRUTTSCHNITT. I would judge the law by its results. A competent United States board examined it and has said that it has been, in their opinion, successful. They give statistics showing that it has prevented 90 per cent of the strikes. Now, in writing my memorandum and in forming my judgment years ago, when similar reports were published in the reports of the United States Department of Labor, I concluded that whatever the effects of the act might be, if they were productive of that much good they were well worth imitating.

Mr. ESCH. What percentage of labor difficulties on American railroads go to strike?

Mr. KRUTTSCHNITT. In the last five or six years we have had a strike of firemen; we have had a strike of trainmen; we had a general strike of all kinds of shopmen. We should have had this general strike, if it had not been averted by legislation. That is four strikes in about five years on one system, which is a very much larger proportion than reported by the United States Board of Mediation as prevailing in Canada.

Mr. ESCH. A great percentage, however, of those difficulties were settled short of strike, were they not, by our own board of conciliation and mediation?

Mr. KRUTTSCHNITT. The board of mediation and conciliation is reporting on Canadian strikes that 90 per cent were averted.

Mr. ESCH. I understand that; but in the United States under the Newlands Act has not the vast percentage never gotten to a strike?

Mr. KRUTTSCHNITT. This firemen's strike you speak of was up to the board of mediation and conciliation, and yet they struck. The trainmen's strike was up to the board, and yet they struck. The shopmen's strike—that did not come under the Newlands Act. The Newlands Act was for railway men alone, but the shopmen struck despite suggestions of arbitration; the trainmen, in August, I say, would have struck. They spurned arbitration, and they would have struck but for legislation.

In three of those cases, certainly, out of four, the Newlands Act had a chance to work. The board, under the Newlands Act, did not take up the trainmen's matter, because they spurned it; they said they would not arbitrate, and they would not put their troubles up to any commission or any tribunal. The railroad presidents suggested that they be submitted to a tribunal to be named by the President—a special one—and they would not do it.

Mr. ESCH. What assurance would we have had with the Canadian act at that time that those difficulties would not have gone to strike?

Mr. KRUTTSCHNITT. None, except the experience of the past with the act in Canada.

Mr. ESCH. Your conclusion, therefore, is that something along the lines of the Canadian act would be beneficial in the United States in minimizing strike troubles and lessening their number?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. ESCH. And that that is a system that is adaptable to the United States?

Mr. KRUTTSCHNITT. I do not know of any conditions in Canada that differ materially from our conditions here, and I have, therefore, assumed that what worked over there ought to work here. They have the same things to contend with; the brotherhoods have their organizations on the Canadian lines, just as they have them on the American lines; the Canadian people are pretty much the same as ours. I suppose if you took a dozen of each and mixed them up nobody could sort them out. Their ideals seem to be the same; their form of government does not vary very much from ours, as I understand it.

Mr. ESCH. Do you know whether they have had any labor troubles on the Inter Colonial, which is owned by the Government of Canada?

Mr. KRUTTSCHNITT. No; I do not.

Mr. ESCH. I was wondering whether or not Government ownership lessened the liability of strike troubles?

There is another subject matter. You spoke of the great losses of life owing to trespasses upon railroad tracks or upon railroad property. Why is it that they are so vastly greater than on European roads?

Mr. KRUTTSCHNITT. Because there does not seem to be either any law prohibiting it in the United States, or, if there is a law, that it

is enforced. When this matter was discussed before a committee of Congress—I think you were a member of the committee, when I appeared a year or two ago, were you not?

Mr. ESCH. Yes.

Mr. KRUTTSCHNITT. Some gentleman said there is a strict law in New York against trespassing on railroad tracks, and I said at the time that I believed then, and I believe now, that however excellent the law, it is not enforced. I do not know of any State in the Union that I am familiar with at all, where there is the slightest restriction about walking on railroad tracks.

Mr. ESCH. Notwithstanding the fact that some 30 States have passed such laws, there is little or no enforcement of them; is that the fact?

Mr. KRUTTSCHNITT. That must be the fact if they have passed the laws. There seems to have been no diminution in the deplorable number of deaths from trespassing.

Mr. ESCH. I happened to see some statistics, gotten out by the American Railroad Business Association, showing that in the decade from 1900 to 1910 there were 60,000 people killed in the United States and 53,000 injured, while in Great Britain during the same period there were a little over 1,000 killed and a little over 4,000 injured, making a total of a little over 5,000 in Great Britain as compared with 103,000 in the United States for the same decade.

Mr. KRUTTSCHNITT. In drawing conclusions from the statistics on that, you are very apt to be misled by mere magnitude of numbers. I have studied these matters quite closely for the last 15 to 20 years, with a view of stopping loss of life on our own lines, and the thing that has impressed me most is the fact that you can not get any very intelligent comparison of injuries as between the roads of any two countries, for the reason that a man pinching the end of his finger injures himself, or he may have one of his legs torn off and he injures himself, and the two are very different, yet it seems to be almost impossible to get any basis of comparison.

The statistics of the Interstate Commerce Commission are based on the inability to perform any labor for a given number of days. That is not the same in England. If we had exactly the same method of gauging injuries, the disparity would not be as great. We must remember that in England they are operating about 23,000 miles of railroad. In the United States we are operating 260,000 miles of railroad.

Mr. ESCH. Yet they have denser traffic conditions, more passengers hauled per mile per year?

Mr. KRUTTSCHNITT. Quite so, but the standard English railway is a double-track railway. The standard American railway is still a single-track railway. The disparity in conditions and the risk of accidents is not as great as the general public imagines.

Now, of the great number of killed on the American roads, trespassers make up, as I remember it, over 80 per cent of the deaths, and it has always seemed to me that there was no more unjustifiable taking of human life than the killing of trespassers, because if they were made to obey the law and keep off the railroad tracks, they would not be killed. I have found fault with the slow diminution of the number of people killed on the Southern Pacific, but analysis shows that where safety is dependent on means that the company can

control our results have been remarkable and surprising, even to me. We have reduced the fatalities to passengers to nothing. On our system, large as it is, there has been but one death of a passenger on a train due to any accident for over six years. The number of fatalities amongst employees engaged in train service is only from 14 to 15 per annum. We have reduced the number of train accidents 86 per cent in about 15 years, and the only dark spot in our record is the killing of trespassers, and that has not been reduced in proportion to the number of trains run, simply because we can not control it.

Mr. ESCH. There is not any State through which your whole system runs, except the State of Washington, that has sought to legislate on the subject of trespassers on railroad lines?

Mr. KRUTTSCHNITT. Not one has done so.

Mr. ESCH. Only one. You go into Washington?

Mr. KRUTTSCHNITT. No; we do not touch Washington. The northern terminal of our system is Portland, Oreg.

Mr. ESCH. Then there is not a single State that has passed a trespass law?

Mr. KRUTTSCHNITT. No. Yet our counsel have been instructed year after year to present this matter to the legislatures when they assemble, and it has been without any effect whatever.

Mr. ESCH. The only relief sought has been to the State legislatures; no action has been taken by Congress? I should like to submit, with your permission, a question to Mr. Thom on the constitutional right of Congress to pass a law with reference to trespassing upon the tracks or property of interstate carriers.

Mr. THOM. I think it has that undoubted power. I think it follows from the decision of the Supreme Court of the United States in the Southern Railway case, where the power of Congress to provide for safety appliances on intrastate trains was upheld as endangering the operation of the road in interstate commerce. They said that it was one instrumentality, and that Congress had complete power to protect it in all its aspects.

Mr. ESCH. Then you think that Congress could exercise its police power in that direction, do you?

Mr. THOM. Yes. And I will say more, Mr. Esch, that a committee of men connected with the railroad service has for a considerable time been requesting me to draw an act to be presented to Congress, and the only reason I have not done so is for the lack of time.

Mr. ESCH. Then you would think that was not such power as ought to be left to the administration of States?

Mr. THOM. Well, inasmuch as it is not being prevented now, and most serious loss of life is being caused by it, I think it would justify the Congress in taking hold of it, and I think the States would not object to Congress taking hold of it.

Mr. KRUTTSCHNITT. I do not see how they can complain, because they have not done anything about it themselves, and this killing of trespassers goes on from year to year unabated. My recollection is between 5,000 and 5,500 a year are being killed right straight along.

Mr. ADAMSON. I agree with Mr. Thom that if the power of Congress is necessary, exercise it; but will not the local communities insist that you require the railroads to abolish grade crossings if Congress does that?

Mr. KRUTTSCHNITT. These accidents do not occur on grade crossings. The commission does not allow us to class the death of a person on a crossing as that of a trespasser. He has a right to be there. He is not a trespasser. A trespasser is a man who leaves the road crossing, walks along the right of way, or trespasses on the trains of the carrier to steal rides. Take the thousands of men who undertake to ride on freight trains, standing on the buffers between freight cars, or riding on the trucks, and getting in other positions of danger. Those people are trespassers. It is the most frequent thing in the world in reading about a freight wreck to find that one or two dead men have been found in the wreckage, bodies of men who were stealing rides.

Mr. ADAMSON. I do not see how there could be any question on earth of prohibiting men from stealing rides on those freight trains.

Mr. ESCH. You have stated that Canada, with reference to her railroads and their management and operation, is very similar to the United States. Canada does have a trespass law and enforces it. The penalty is \$50, I think. If she can enforce it, is the sentiment of the public toward observance of law sufficient to comply with a like law in the United States?

Mr. KRUTTSCHNITT. I am afraid there that you have asked me a question that I shall have to answer in the negative. I expect the Canadian, from his English origin, has a respect for the law that is entirely absent in our people. There is a disposition to ignore laws which is just as common as the disposition of the executives of the States not to enforce them. I can not, however, help feeling that if there were a penalty against trespassing on railroad tracks you would have the energies not only of the executive officers to enforce these penalties, but they would be spurred on by the railways for their own protection.

Mr. ESCH. As it is now, many roads have their own railroad police for the very purpose of arresting trespassers, and they take them to the local justice courts, and they fail to convict them, do they not?

Mr. KRUTTSCHNITT. Well, we have done quite a good deal of that work ourselves. We have secured a good many convictions, but it has been discouraging that the percentage was so small. I remember when I first went to the Pacific coast there was a piece of line running to San Francisco, one or two cuts, that were used by the public and the school children as short cuts in going on their errands, and I stationed, at our own expense, a watchman at these cuts, and at that time there was a law against trespassing in San Francisco, a city ordinance, and I had a number of arrests made, and all I secured was a lot of personal abuse in the press, that treated me as a fresh "tender foot," as they called it, and stating that they would not stand for it.

Mr. ESCH. You were circumscribing the liberties of American citizens?

Mr. KRUTTSCHNITT. Yes; the court discharged those people, and after a trial of a week or ten days I gave it up.

Mr. ESCH. As illustrative of the different attitude toward law in Canada and the United States, let me just read this one quotation:

The Wabash Railroad operated part of its mileage through Canada in the year ending June 30, 1914. Ninety-four trespassers were killed and 135 in-

jured on the lines of that road, of whom only 3 were killed and 3 injured in Canada.

After quoting from one of the railroad authorities, President John B. Kerr, of the New York, Ontario & Western, in answer to an inquiry with reference to trespassing says:

I do not know of any locality in which the law against trespassing is enforced or where the magistrates are entitled to any recognition for the enforcement of the law. It is a very difficult problem for which I see no solution except by education of the people, which is an extremely slow process.

That would mean, then, if that idea were adhered to, that we would go on killing and maiming for life what is equivalent to half an army corps every year in the United States. If Congress can pass a law, the fact that a Federal statute is more respected than a State statute or a city ordinance might enable us to reduce this terrible loss of life. Would it be your opinion that a Federal statute should be sought?

Mr. KRUTTSCHNITT. It is the experience of all of us, Mr. Esch, that a Federal statute always is more respected than a State one.

Mr. ESCH. Leaving that subject, now——

Mr. ADAMSON. Before you leave that subject, Mr. Esch, I would like to ask you, or the witness—whoever has the figures there—does the density of population or the number of persons transported bear any constant relation to the number of accidents or injuries?

Mr. ESCH. Not in the data that I have. Of course, density of population would have some effect, because of the constant tendency of people to cross tracks, getting to their places of work. On long stretches of your lines, Mr. Kruttschnitt, there would be no danger from trespassing whatever, but near the congested centers there would be very great danger.

Mr. ADAMSON. Mr. Esch stated that the density of population was much greater in England, and the number of passengers per mile: but how about the aggregate number of people hauled in a year in the two countries?

Mr. ESCH. They are greater in Great Britain than in the United States.

Mr. ADAMSON. The total amount?

Mr. ESCH. Yes; the total amount. If I remember rightly, the number in Great Britain amounts to about one and a half billion per year and the United States to a little over one billion. I will not be bound by those figures.

Mr. KRUTTSCHNITT. But the liability of a passenger to accident depends also largely on the length of his journey.

Mr. ESCH. True.

Mr. KRUTTSCHNITT. And when you take into consideration the number of passengers carried, it is far greater in the United States than in Great Britain.

Mr. THOM. The number of passengers carried 1 mile, you mean?

Mr. KRUTTSCHNITT. Yes.

Mr. ESCH. The railroads complain because of various State enactments regarding various railroad appliances, and also practices, and you have cited them: The length of cabooses, the number of wheels under the caboose, cuspidors, window screens, headlights, hours of service, full crews. If Congress passed a law as to them, and occu-

pied the field, it would supplant all of these State statutes, would it not?

Mr. KRUTTSCHNITT. Yes. Congress has already, or, rather, the Interstate Commerce Commission—I will put it that way—has, as I remember, already taken jurisdiction of headlights.

Mr. ESCH. That was under our act amending the boiler-inspection law, giving inspectors power to examine and investigate all parts of the locomotive; they get jurisdiction of that under that law.

Mr. KRUTTSCHNITT. I say they are exercising that now; they have prescribed standards, and Congress could, as to all of these other matters, no doubt prescribe uniformity.

Mr. ESCH. Would that be advisable, and would the roads prefer Federal action, rather than to further submit to the varying enactments of the several States?

Mr. KRUTTSCHNITT. I will cite our experience with the headlight law. Before I left the Pacific coast I had started devising a better headlight, and there was devised by our motive-power people at our Sacramento shops an extremely efficient and low-priced acetylene headlight. You can judge of the brilliancy of that headlight in comparison with the old oil headlights by simply remembering that most of the automobiles in our streets that have such brilliant lights are lighted with acetylene gas. That is really what inspired the thought. This headlight was improved, made very efficient, and was applied to substantially all of the 2,200 or 2,300 locomotives of the Southern Pacific System. That included the State of Texas. The headlight law was brought up in the Texas Legislature by the lobbies of the employees, who wanted the arc electric light put on the locomotives. Our officers appeared before legislative committees and told them that we had already incurred the expense of equipping our locomotives with a headlight almost undistinguishable from the electric headlight. The legislators were familiar with it, because they could see it on trains all over the State. Notwithstanding that, and notwithstanding the experiments made, which showed the illuminating power and the space-penetrating power of the acetylene beam, a law was passed prescribing the arc-electric headlights, and, under it, we had to scrap the headlights on 350 or 400 locomotives and buy others, which were no better. That is one of the results of different headlight laws.

Mr. ESCH. In the omnibus safety-appliance bill, as to which we gave you a hearing, you remember we did not prescribe the candle power of the lights, but left it to the commission to determine.

Mr. KRUTTSCHNITT. Yes.

Mr. ESCH. The Interstate Commerce Commission has now determined and fixed the standard, has it not?

Mr. KRUTTSCHNITT. I think so.

Mr. ESCH. That brings uniformity throughout the United States and supplants a great many State enactments with reference to headlights?

Mr. KRUTTSCHNITT. That will clear up the headlight situation. As I remember, the Interstate Commerce Commission requirements prescribe the candle power, and I think they also state the distance at which an object of a certain size—

Mr. ESCH. Eight hundred feet, I think.

Mr. KRUTTSCHNITT. Such as a man should be distinguishable. Had that provision existed in the Texas law we should have been saved an expense of over \$100,000 in buying other headlights, when those we had fully complied and more than complied with the specifications that the commission has now issued.

Mr. ESCH. And a like result would follow with reference to these other State statutes, in the matter of car equipment and so on?

Mr. KRUTTSCHNITT. Congress has already passed laws as to safety equipment on cars; we have had uniform practice in that respect for some time.

Mr. ESCH. That was the result of the standardization of freight-car equipment, in the act of 1907?

Mr. KRUTTSCHNITT. Yes.

Mr. ESCH. That has been complied with now?

Mr. KRUTTSCHNITT. Yes.

Mr. ESCH. I would like to ask you some questions with reference to mobilization of railroads in time of war. You alluded to that and cited, as an instance, the action of your road and other roads in sending troops to the Mexican border. I understand that the Council of National Defense, in conference with railroad executives, have planned for such mobilization, have they not?

Mr. KRUTTSCHNITT. Yes; that was done since the writing of this memorandum. The executive committee of the American Railway Association met about the time that the German Ambassador was sent home and discussed ways and means of meeting the situation. There was some conference with Mr. Willard, who is on the Federal Board of National Defense, and, as a result of these conferences, we appointed a national chairman, Mr. Fairfax Harrison, who should have complete charge of conferences with the Government and the Army officers as to their requirements. In addition to that we appointed four regional committees—one for the East, one for the Middle West, one for the Southwest, and one for the Pacific coast. These regional committees, each of which has a chairman, are composed of an aggregate of eighteen railroad presidents, who, under the general control of Mr. Harrison as general chairman, take up these questions with the Government. The four regional committees were appointed at the suggestion of the Army, to be located at or near Army headquarters for the four districts into which the country is divided, or "departments," I think the Army calls them, and we are now working under that plan. The Army officers were extremely complimentary to the railroads on the work they did in the Mexican mobilization. They expressed themselves in terms of the highest praise of the spirit of cooperation, the freedom from delay and accident, and, in general, of the way in which the railroads had done their part of the work. We think that the machinery we have created is far more efficient than that which was operating at the time of the Mexican mobilization, and we think under it that the railroads of the country, working as a unit, can give the Government and the Army most excellent service, that is to the limit of their present facilities, and do everything that they are called on to do.

Mr. ESCH. That would be true as to existing equipment, but in time of actual hostilities there would have to be special facilities constructed—terminal yards, loading and unloading platforms, special cars to carry the heavy ordnance, and things of that kind?

Mr. KRUTTSCHNITT. Certainly; to a great extent; that I touched on in my memorandum. Those details, I think, can be worked out by our railroad committee with the Government authorities. In the Mexican mobilization, foreseeing what would be necessary, and to avoid the trouble of answering frequent messages from our presidents, I issued a general instruction that, without reference to the New York office, they should do anything that was necessary to facilitate the handling of the troops, and then talk about it afterwards; and under that instruction our people laid a great many temporary sidings for the use of the Government without charge. We have recently spent \$75,000 building through the city of San Antonio to the Government reservation there and providing them with additional tracks and facilities. That was partly for the Mexican mobilization and partly for future necessities.

We are now considering spending about \$40,000 to connect the Fort Bliss Military Reservation, near El Paso, with our tracks. Under that arrangement our officers turned over to Army officers, simply on their giving them a receipt for the material, everything that they asked for in the way of rails, spikes, bolts, fastenings, bridge timbers, piles, lumber—all that they wanted—so that there has been no lack of cooperation. But I am sorry to say that at the present day the Government owes us two and one-half millions of dollars for services rendered, which is not disputed but which the Army officers tell us they are ready and willing to pay. Some of those bills are 10 months old already, but they say, "We have no money," and we shall have to wait, no doubt, a number of months more and we shall lose from \$100,000 to \$125,000 in interest.

Mr. ADAMSON. Why can not those bills be appropriated for next week at the next session?

Mr. KRUTTSCHNITT. I do not know. The Army say they have done everything they could to get us the payment, but there is no money.

Mr. ADAMSON. We can make an appropriation for it next week.

Mr. ESCH. We passed two or three deficiency bills, did we not?

Mr. ADAMSON. Oh, yes.

Mr. ESCH. That evidently would come under a deficiency appropriation.

Mr. THOM. Would it not come under the Army appropriation?

Mr. ESCH. It might be under that. Mr. Doremus says that one of the deficiency bills did not pass.

Mr. DOREMUS. The general deficiency bill did not pass, nor did the sundry civil bill.

Mr. ESCH. Both of those carried large appropriations for the Army, necessitated by operations near the border. As your railroad, Mr. Kruttschnitt, is the only one that parallels the border, your company is probably concerned more than any other road in the United States in that regard. But I was thinking of special facilities in a time of emergency. We are now going to the 16-inch gun basis. There is only one car in the United States that can carry a 16-inch gun—and I think that is owned by the Bethlehem Steel Co.—and our new battle fleet is to be supplied with them, I understand. How many roads in the United States can sustain a car carrying a 16-inch gun? They have got to be transported from the place of manufacture.

Mr. KRUTTSCHNITT. What does a 16-inch gun weigh?

Mr. ESCH. A 16-inch gun, 49 feet 3 inches in length, weighs 284,000 pounds. A 16-inch gun, 67 feet 2 inches in length, weighs 367,000 pounds.

Mr. KRUTTSCHNITT. Sixty-seven feet long?

Mr. ESCH. Sixty-seven feet long. Now, there is no existing equipment—

Mr. KRUTTSCHNITT. Weighs 367,000 pounds?

Mr. ESCH. Yes.

Mr. KRUTTSCHNITT. Why, there is no important railroad in the United States that is not to-day carrying weights in its locomotives fully as great as that, in that length; and the only thing necessary would be a vehicle that could carry that weight properly and distribute the weight properly along the rails. That is such an exceptional kind of work and so few of those vehicles would be needed, and so seldom, that it seems to me that the Government itself or the Navy Department should provide the vehicles.

Mr. ESCH. There is only one, as I understand it, now; and that is owned by the Bethlehem people.

Mr. KRUTTSCHNITT. It would be a comparatively easy matter, say, to construct 10 or 12 of them. The cost would not be very great. They would have to have, of course, more wheels than the ordinary flat car, so as to distribute the weight better.

Mr. ESCH. That leads me to this thought: Then, in case of emergency, the Government ought to supply, at its expense, these conveniences?

Mr. KRUTTSCHNITT. Those what you might call exceptional conveniences?

Mr. ESCH. Yes.

Mr. KRUTTSCHNITT. The railways can supply flat cars in almost any number for the transportation of field artillery and supplies and other things necessary for the Army or for the carriage of ordinary guns. We have carried a great many guns over our road—not as large as this, of course—but a great many to the Benicia Arsenal, where I have seen them, on blocking alongside our track, in large numbers. Some of them were very large guns, but, of course, nothing approaching this; and the carriage of those was effected without any particular trouble. I think some of those ran up to 10 or 12 inch guns, for the fortifications around San Francisco; but very special equipment, I think, the Government should provide. Now, the equipment that will be most sorely needed—I do not know how it would be provided in a very large mobilization—is passenger equipment, either coaches or sleeping cars. It has been the custom of the Government heretofore to transport its troops in sleeping cars. A sleeping car carries only about 30 or 32 men. A coach that has 70 or 80 seats in it is parceled out by the Army to troops, giving them from $1\frac{1}{2}$ to 2 seats per soldier. Now, that requires such a large number in case of any large movement that it has often seemed to me that there ought to be some way to supply a large number in case of mobilization. The roads have not enough to supply any very great number without interfering seriously with our service to the public. However, the European nations, I understand, in times of emergency simply use the railroads for the purpose of mobilization requirements.

regardless of public needs; they use everything for that purpose. I know numbers of friends returning from Europe have said that in certain periods they could not move because the railroads were transporting soldiers and they would not take passengers.

Mr. ESCH. All business is barred under stress of military necessity over there, and that could be done here, I suppose.

Mr. ADAMSON. We have the same act now in the last Army bill, Mr. Esch.

Mr. ESCH. Yes; I think that is true.

Mr. KRUTTSCHNITT. What I want to emphasize is this: That the railroads, in cooperation with the Government, have already taken steps to operate the entire system, such as it is, as a unit, regardless of corporation lines, in case they are called on by the Government. The small amount of double track and want of sidings at detaining points will, however, seriously embarrass movements.

Mr. ESCH. Mr. Baker, of the office of the vice president and general manager—Mr. W. R. Scott, of the Southern Pacific—gives these figures with reference to moving an army unit. To move a field army would require 2,115 passenger cars, 385 baggage cars, 1,055 box cars, 1,899 stock cars, and 775 flat cars; a total of 6,229 cars, which makes about 366 trains, and requires that number of locomotives.

Mr. THOM. That is Col. Baker of the Army.

Mr. SIMS. What is a unit? A corps?

Mr. ESCH. Yes; that consisted of an Infantry, Cavalry, Artillery (Light), Horse Artillery, and Mountain Artillery regiments; also an Engineer battalion, a Signal Corps, and other organizations.

Mr. SIMS. How many men?

Mr. ESCH. Twelve thousand two hundred and thirty-one.

Mr. THOM. We have requested the Secretary of War to permit Col. Baker to come before this committee, at its request, and testify; and we shall ask the committee at the proper time for an invitation for Col. Baker to come here.

Mr. ESCH. I think it is a very important line of inquiry.

Mr. ADAMSON. The time for adjournment has arrived. We will adjourn now until 10.30 to-morrow.

(Whereupon, at 1.30 o'clock p. m., the joint committee adjourned until to-morrow, Thursday, March 29, 1917, at 10.30 o'clock a. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

THURSDAY, MARCH 29, 1917.

UNITED STATES SENATE,
JOINT SUBCOMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint subcommittee met at 10.30 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

Mr. ADAMSON. The committee will come to order. Are you ready to proceed, Mr. Kruttschnitt?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. ADAMSON. Proceed, Mr. Esch.

STATEMENT OF MR. JULIUS KRUTTSCHNITT—Resumed.

Mr. ESCH. I think I will ask to have printed in the record a table that was presented in the address of W. L. Park, vice president of the Illinois Central Railroad Co., delivered before the National Association of Railway Special Agents and Police, at New Orleans, La., May 25, 1916. I gave the summary yesterday, in asking a question of Mr. Kruttschnitt; but I think it would be better to have the whole table inserted. The table seems to be based upon data presented to Mr. Scott, of the Southern Pacific, by Col. J. E. Baker, of the War Department.

Now, taking another line of inquiry, and I want to be very brief, because I think it is desired to start with another witness to-day—

Mr. ADAMSON. If we get through with Mr. Kruttschnitt we will start with Judge Nolan.

Mr. THOM. Judge Nolan will not take very much time.

Mr. ESCH. In hearings had before our committee on various bills in the last six or eight years and hearings before the Senate Committee on Interstate Commerce and hearings before the Interstate Commerce Commission on rate increases, or the rate-advance cases, the railroads have uniformly contended that owing to a limitation on their earnings, because of a proscription of rates by the commission, the said carriers were not able to keep up with the needs of traffic, and therefore there was a shortage in car equipment. Has not that argument been commonly made?

Mr. KRUTTSCHNITT. I think it has been made more commonly by the press and by boards of trade. The carriers have provided equipment, perhaps not as much as they should like to provide, but the use of equipment is elastic. If they have a certain number of cars by proper movements, by reducing free time and reducing the time held

by consignees, by higher demurrage, by a higher per diem rate established against other carriers who use the cars they can expedite their movement and make them carry a great deal more traffic, as much as 75 or 90 per cent more.

Mr. ESCH. It is a fact, however, that some roads are underequipped, so far as cars are concerned, is it not?

Mr. KRUTTSCHNITT. Yes, sir; some are. A great many short roads have no equipment.

Mr. ESCH. They depend on the cars of other carriers to do their own local carriage, as well as exchange traffic?

Mr. KRUTTSCHNITT. Yes, sir; that is principally the case with small independent roads built out from larger systems. There are quite a number of small roads built out from our lines that have no equipment at all. You never see a car bearing their initials off their line. They have a moderate number which they use for local business but nothing which they let leave their line.

Mr. ESCH. I ask a question based upon a report made by the American Railway Association of February 6 of this year:

Ten years ago the railroads had 1,840,000 freight cars; on December 31, 1916, the number had grown to 2,518,855 cars, an increase for the 10-year period of 678,000 cars, which would make an average annual increase of 67,800.

In your opinion, was that a normal increase, an increase sufficient to meet the growing needs of commerce during the past decade?

Mr. KRUTTSCHNITT. I think, if you will take the capacity of the cars in the aggregate for the two periods, you will find that it was.

Mr. ESCH. The capacity of freight and flat cars—the gondola—has been increased during the decade?

Mr. KRUTTSCHNITT. Very much.

Mr. ESCH. So that increase in capacity added to the increase in the number of cars, you think, has met the requirements of commerce?

Mr. KRUTTSCHNITT. I mean, taking the aggregate capacity of cars in the first period and the aggregate capacity in the second you will find it about in proportion with the increase of freight traffic.

Mr. ESCH. Has the carload lot increased or decreased within the last 10 years—the weight?

Mr. KRUTTSCHNITT. For all commodities?

Mr. ESCH. Yes.

Mr. KRUTTSCHNITT. I think it has. I can not tell you offhand how much. That will appear in the statistics published by the Interstate Commerce Commission.

Mr. ESCH. My recollection was that the carload weight had diminished.

Mr. KRUTTSCHNITT. Not diminished. But it is true—I can not give you the figures—it is true that the average carloads have not increased very rapidly and have not increased as rapidly as the capacity of the cars. I wish to say that while the roads have ordered fairly liberally of equipment, I think it is also true that they have cut their requisitions down on account of hard times with them and the high rates they have to pay for money.

Mr. ESCH. That was one of the arguments presented which would result in rather less than normal production of cars for the country.

Mr. KRUTTSCHNITT. Well, the figures you read show an increase in the number of cars less than the increase in the freight traffic.

Now, those figures will be modified when you take the aggregate capacity of the cars.

Mr. Esch. And yet, it has been found they have not increased according to the tonnage.

Mr. Kruttschnitt. Some; not much.

Mr. Esch. During the last 10 years there have been several periods of car shortage, have there not?

Mr. Kruttschnitt. Yes.

Mr. Esch. In 1907 there was a car shortage almost the entire year. I do not know whether you have the chart to show that or not.

Mr. Kruttschnitt. Yes; I have a copy of that chart.

Mr. Esch. You will notice in 1907 there were only possibly three months, during the midsummer season, when there was a surplusage?

Mr. Kruttschnitt. That is true.

Mr. Esch. And the largest shortage amounted to possibly 140,000 cars?

Mr. Kruttschnitt. Nearly that, or a little over 135,000.

Mr. Esch. That was not during any period of hostilities. No war conditions were existent during that time?

Mr. Kruttschnitt. No; but it was an unusually active year.

Mr. Thom. May I make a suggestion there on the question you are asking?

Mr. Esch. Certainly.

Mr. Thom. I would like to call the committee's attention to the importance of numbers of cars as well as the capacity of cars in the matter of meeting the necessity for car distribution. You can not distribute a car of twice the capacity to two places. If there was a call in two places for two cars, and you have but one car, no matter how great the capacity of that one car is you can not answer the calls.

Mr. Esch. But those increases were more in the capacity of the open cars, the gondolas, and the cars carrying coal and supplies of that type. Their capacity was increased more than the box-car capacity was increased, was it not?

Mr. Thom. Mr. Kruttschnitt can tell you more about that than I can. But here was an abnormal time. They were not keeping up the normal number of cars, and consequently you were not meeting the necessity for distribution to the same extent as if you had the numbers and capacities both.

Mr. Esch. Why should you increase the capacity of your cars if you do not have the commerce to fill them?

Mr. Thom. Well, of course, we should not; but we think there is a commercial demand for all the capacity we can get, and so as to reduce the expense of the service, too.

Senator Townsend. The thing I am interested in, if the Congressman will yield——

Mr. Esch. Certainly.

Senator Townsend. Mr. Kruttschnitt has said they have not materially increased the carloads; they have not used these cars to the full capacity. Mr. Thom suggested they needed more cars. Would it not have been better economy to have increased the number of cars than the size of the cars?

Mr. Thom. I think that is an important question to put to the witness.

Mr. KRUTTSCHNITT. The trend in handling traffic is toward larger units. I can speak more intelligently as to the practice followed by our road than I can for the roads in general. We started building nothing but cars of the highest capacity some 9 or 10 years ago. The wisdom of that policy was questioned, and the question was put to me by our president why we should do it, and we found if we could get a 50-ton car loaded to its full capacity 10 per cent of the time it was profitable. It justified the extra expense of the 50-ton car over the expense of the former standard 30-ton cars, and therefore we have been building that heavier car all along; and while for the United States the increase in car loading has not been great, it has been great on our lines, and has justified us in doing what we did.

Mr. ESCH. There was no car shortage, barring a brief period in the latter part of 1909, for the years 1908, 1909, 1910, and 1911. Then in the latter part of 1912 there was a considerable shortage, coming up to something like 55,000 or 60,000 cars. That was not due, of course, to war conditions. Was that due to an unusual yield of agricultural products?

Mr. KRUTTSCHNITT. You may have it almost any time on account of increased demand for agricultural products. You may have demands made on the carriers for cars in excess of the numbers that they have at hand to fill the requisitions. I would say that no carrier could possibly afford, unless they could get money at ridiculously low prices, to keep parked on sidings enough cars to meet the maximum demand at any one time. I think for such conditions as might be brought about by a war the roads are very much underequipped. They could not meet the demands, because those demands must be met instantly, and a question of hours would make a great difference with the Government frequently in moving supplies. But in moving the traffic of the country a shortage of, we will say, in two and a half million cars of, say, a hundred thousand at any one time means only slight delay—a delay of perhaps a day or a day and a half in moving traffic—and the carriers might make up the want of numbers by better service of the cars, by moving them more quickly, and trying to get them unloaded more quickly.

Mr. ESCH. In 1914 and 1915 there was a large surplus, due to stagnation of the traffic because of the war. Is not that true?

Mr. KRUTTSCHNITT. Yes.

Mr. ESCH. But in 1916 there was a shortage in March and April, and there was a very marked shortage for the last half of 1916, reaching a point of 120,000 cars in the latter portion of last year. I think that was about November. That condition extended into January, and still exists, does it not?

Mr. KRUTTSCHNITT. It does. And yet for the entire 10 years covered by the diagram before you there was an excess of cars for 93 days out of every hundred and a shortage on 7 days out of every hundred. The maximum surplus ran up to about 400,000 cars, which is about 16 or 18 per cent of the total, and the maximum shortage never exceeded about 6 per cent of the total.

Mr. ESCH. Is it a practice of the roads to take care of what is ordinarily known as peak loads, just as an electric lighting company has to maintain equipment and power for a peak load? Does a railroad company provide itself to take care of peak loads of traffic?

Mr. KRUTTSCHNITT. It does. It takes care of many peaks, but these you called attention to were abnormal peaks, where the extra equipment failed to take care of them promptly. If the railroad companies could do as the electric companies, it could take care of these peaks thoroughly. The electric company, when a peak comes along, overloads its machinery, which it can do perfectly safely, and counts on doing that for a short time. If the railroads could completely control their equipment by varying the rate of demurrage, varying the free time and working the equipment at overload, as the electric company does, it could handle these peaks very much better, and without over much dead capital.

Mr. ESCH. Of course, the equipment, when the peak is not being met, is very largely idle capital, as you say.

Mr. KRUTTSCHNITT. It is idle on our sidetracks.

Mr. ESCH. Every public utility must suffer that loss, must it not?

Mr. KRUTTSCHNITT. It should suffer some loss, but I do not think it should be compelled to suffer an unreasonable loss by being deprived of the capacity of working its plant overload.

Mr. ESCH. And, in your opinion, there is sufficient car equipment now?

Mr. KRUTTSCHNITT. There is sufficient car equipment now to handle very well the peak load of the latter part of 1916 and that existing now in the early part of 1917 if the carriers had been in possession of authority to work their equipment overload, but they did not have that authority.

Mr. ESCH. From whence would they derive this authority?

Mr. KRUTTSCHNITT. From regulating bodies.

Mr. ESCH. There is not any regulating power now as to car service, is there?

Mr. KRUTTSCHNITT. Yes; the carriers must file with the commission, as part of their tariffs, the free time allowed on equipment and the demurrage rates. Those are figured for normal times. The logical course to take with those charges would be in time of peak loads, to which you referred, to have them materially changed. The rate of demurrage should be raised, the free time should be reduced, and everyone using a car should be put under pressure to release it in the least possible time, but the carriers can not do it. They have to apply for permission to increase the demurrage or reduce the free time, and while the commission has that matter under consideration, overworked as it is, the emergency probably goes by.

Mr. ESCH. Heretofore, however, the matter of car shortage was in the hands of the railroads themselves, was it not?

Mr. KRUTTSCHNITT. Only to the extent that I spoke of.

Mr. ESCH. They, through the American Railway Association, adopted certain car-service rules and enforced them among themselves, or sought to?

Mr. KRUTTSCHNITT. Those were car-service rules among themselves with reference to what one road could do with the cars of another, as to returning them.

Mr. ESCH. There was no power behind those rules except the carriers themselves, who assented to their enforcement?

Mr. KRUTTSCHNITT. Yes; but the difficulty with the carriers has been, to take a concrete example, a large number of our cars came

East laden with goods for export. They were turned over at Chicago, to the Pennsylvania, the New York Central, the Baltimore & Ohio, or the Erie, roads reaching the Atlantic seaboard. If there were no ships to take the contents of the cars away and no warehouses to take the contents of the cars, we might fuss and fume and get after the Pennsylvania and the Baltimore & Ohio and other lines to return our cars, but they do not do it, because they can not get them unloaded and released.

Mr. ESCH. I agree with you, that if war conditions create a present car shortage by reason of congestion at port terminals, legislation given the Interstate Commerce Commission would be quite futile, but war out of the question, could not the commission be given power that would help to relieve the situation in time of emergency?

Mr. KRUTTSCHNITT. That is being done now by cooperation between an American Railway Association committee and the commission. The commission, whether they could do it constitutionally or legally or not, assumed control over car distribution, and said if an improvement was not brought about they would simply assume the authority—which they thought they had, although a number of lawyers consulted by the railroads thought they had not—and would handle the cars themselves, regardless of the wishes of the owners. To prevent that drastic action the American Railway Association conferred with the commission and appointed a committee of their own, to sit in Washington and enforce car-service rules more drastic than any ever enforced before, and that committee was given authority to fine recalcitrants, and we have the assurance of the Interstate Commerce Commission that much good has resulted therefrom. They backed up this committee of the railroads with their authority. The carriers know that the Interstate Commerce Commission is watching them and is ready to pounce on them and handle the matter themselves, if the conditions are not bettered, and under that pressure the condition has been very much bettered, as the commission has publicly stated.

Mr. ESCH. In the Interstate Commerce Commission car-service investigation order No. 9894, passed on the 18th of January of this year, the commission revised the car-service rules and ordered them to become operative on a given date, which date has subsequently been extended. There were three members on the Interstate Commerce Commission that filed dissenting views on the ground that the exercise of that power by the commission was beyond the powers granted in the act, and was an assumption of legislative powers.

Now, in view of that doubt as to the power of the enforcement of the car-service rules, which were largely framed in the first instance by the American Railway Association, would it not be well to have legislation to clear up any doubt as to the authority under the interstate-commerce act?

Mr. KRUTTSCHNITT. I do not see that that would make any particular difference. If you want to legislate it, and the legislation is reasonable and pays some respect to the rights of ownership, I can see no objection to it. It simply would confirm and, as you say, make more certain what is being done to-day. Carriers have not officially questioned that right of the commission. They are acting just as if the commission possessed that right. That they are doing good

is shown by quoting a press dispatch from Washington, dated February 25, 1917, to this effect:

Commission has issued the following statement: "The Interstate Commerce Commission has confidence in the commission on car service of the American Railway Association as the authorized representatives of the railroads of the country. Its members are doing excellent work in the interest of the general public, and much good is resulting from cooperation of the railroads in their efforts to meet the present emergency."

Mr. Esch. I agree with you that the car-service commission has done a very excellent work; but where you leave it to the carriers to enforce the penalties prescribed by their own rules, you do not have much enforcement of such penalties; is not that a fact?

Mr. KRUTTSCHNITT. Except that we drew up very much more drastic rules and put more power in the hands of this car committee than any railroad committee has ever possessed in the history of the American Railway Association. Now, behind them they have the Interstate Commerce Commission; I think it is the particular province of Commissioner McChord to watch that part of railway operations, and he is there to spur them up if they do not apply the penalty, and if the penalty is applied and not obeyed he is there also to help them with the authority of the commission.

Mr. Esch. Are any penalties now being enforced?

Mr. KRUTTSCHNITT. I do not know. I have not watched the operations of the committee since we formed it; but the Southern Pacific had a representative on the committee until a short time ago, who sat for four months on it, from November until about two weeks ago, and he informed me from time to time what they were doing; that the roads were then obeying their orders, and things were going along very smoothly. There was a period of interruption during which, I think unwisely, the American Railway Association took the committee away from Washington, and for about a month there was more or less discussion in the association as to what to do; but they finally acted, as I think properly, and sent the committee back here.

Mr. Esch. Yes; they went up to New York.

Mr. KRUTTSCHNITT. It was sent back under the pressure of threats from the commission. But I am frank to admit it was an unwise thing ever to have taken them away from here, because they were doing good work, and their work was suspended for practically a month, until they were sent back.

Mr. Esch. Might it not be wise in cases of emergency, which have occurred, as I have already indicated, to give the commission certain defined powers with reference to car service, interchange, and return of cars?

Mr. KRUTTSCHNITT. The difficulty is this: That if the regulation left in the hands of the owners to some extent control of their property, I do not think there would be any objection to it. But take, for instance, the railroads as a whole. There was a law, as I remember, passed early in the Civil War, giving the Government the right to simply seize railroads and work them during war conditions. Now, as it looks at present, that law will not be invoked to provide the Government with proper transportation, because the officers of the roads have formed a cooperative committee to act with the

Government to operate the roads themselves, but in such a way as to give the Government all they want, and has, we think, given it to them better and more promptly than they could have it if they assumed charge of the railroads and put military men to run them.

The VICE CHAIRMAN. You are aware, I suppose, Mr. Kruttschnitt, that that act has been revived in the last Army bill?

Mr. KRUTTSCHNITT. Yes, sir. I purposely referred to the Civil War law because, although I knew that there had been some proposition to revive it in a different shape, I did not know whether the new law was effective now or not.

Now, the analogy in handling cars with the Interstate Commission is very close to that. In other words, the carriers are cooperating with the commission to do everything that the commission could ask them to do.

Mr. ESCH. That is due to the very peculiar conditions due to the war; but there was not such like cooperation of the American Railway Association in the previous car-shortage periods that I have referred to.

Mr. KRUTTSCHNITT. I think that question has been settled forever by the creation of this commission; that war or no war, or after the war shall have ended, if any conditions exist creating car shortages, it would lead at once to the re-creation of or the assumption of its activities by this railroad committee.

Mr. ESCH. It is very difficult to enforce these penalties, one carrier against another, because of their close relationship in traffic matters. Therefore may it not be necessary to have the punch of law to secure enforcement at times?

Mr. KRUTTSCHNITT. That is for you to say. I have pointed out that under present conditions they have the punch—you can not call it of law, but assumption of authority which has been acquiesced in on the part of the carriers. The commission is exercising this authority, whether they have a law for it or not, and the carriers are acting with them exactly as if such a law existed. I think it is perfectly proper to collect fines, because they tell a pretty good story on me when I was president of the American Railway Association—that I started a committee that was to keep close watch of cars and compel their return to owners, and to fine offenders at the rate of so much per car per day who did not do so, and who misused equipment. We made Mr. Harrison the chairman of that committee, and the other members of the committee were selected from the executive committee of the association, under the specification, of course, that they were not interested in the matter at issue. The first case brought up was of our southern lines, who were accused of having misused the cars of a connection. They were put on trial and found guilty, and a very round fine imposed. The president of our company wrote me privately that he did not see how he could pay it: that he thought there were extenuating circumstances. I wrote him back, privately also, and said, "The jury has found you guilty and you will have to pay this fine whether you like it or not." And, after some further demurring, he paid his fine. He never incurred another. He was never brought up again. It cured him. But he paid a fine, as I remember, of between \$9,000 and \$10,000.

Now, I say that a few fines like that imposed would cure this trouble very quickly, and this committee has the right now to impose the fines.

The VICE CHAIRMAN. You could not correct your own system until you got to be president of all the systems?

Mr. HAMILTON. He probably did not anticipate that he was going to have to correct his own system.

The VICE CHAIRMAN. The story is told about Brutus that he could not correct his own household until he got to be a judge, and then he got his own son hanged.

Mr. KRUTTSCHNITT. Probably I was in a place where I could not make excuses for the man.

Mr. ESCH. You say the commission has assumed this power. That is true in the decision I have cited, and Commissioner McChord, writing a majority opinion, said:

While all the members of the commission are not in accord with reference to the powers of the commission to make an order in this case, the wrongs are flagrant, and even if there were doubt as to the commission's power to give full relief by formal order, we think in an emergency that doubt should be resolved not only in favor of the carriers who are wrongfully deprived of their cars, but in favor of the shippers and the general public who would be without protection if, having the power, we fail to act.

Then Clark, commissioner, filed minority views, raising the question of their constitutional powers in the case, claiming that it was an assumption of legislative power.

Mr. THOM. Did he claim it to be unconstitutional—the assumption of that power?

Mr. ESCH. No; I probably had better read it. Here is what Clark, commissioner, says:

The commission is essentially an administrative body, exercising powers specifically delegated to it by the Congress. It also exercises quasi judicial powers likewise delegated; but if the law is to be interpreted differently from time to time to fit conditions that obtain on the railroads and the commission exercises in a time of stress a power which it has not only never before felt that it had, but which it has several times said it did not have, it adds to its delegated administrative and quasi judicial powers legislative powers for the exercise of which I can find no justification.

Mr. KRUTTSCHNITT. Taking a broad view of this freight-car situation, and prefacing what I am going to say by repeating that to move troops promptly in a war emergency, the railroads unquestionably require a very considerable addition to the numbers of their locomotives, and passenger cars particularly, and a very large addition to the number of special sidings and yards required for the entraining and detraining of troops exclusively, I think some equitable mode of providing for those expenditures should be devised by the Government. I do not think it is right to require the carriers for an emergency service to spend very large sums of money for providing at X, Y, or Z very large entraining or detraining yards to expedite the movement of troops, because they would be needed for that occasion, or, we will say, for that war only, and afterwards they are of no use except to the extent of whatever salvage the road might get.

One of the principal improvements that has gone along more and more slowly as time has gone on has been double-tracking. The standard railroad of the United States, you may say to-day—and

by standard I mean the standard established by the large percentage—is a single-track road. There are very few double-track roads in comparison with the total mileage, and certainly the double-tracking of the important roads leading to points where the Government would likely require rapid movement of troops is of the greatest importance. Unfortunately, that is an expenditure so great that any carrier at all short of funds for improvements has deferred that kind of an improvement.

Now, as to the freight cars, some thoughts occurred to me as to how their efficiency might be increased, and I have drawn up a little memorandum here, based on past experience, which I should like to read if you do not object.

The VICE CHAIRMAN. Mr. Kruttschnitt, before you proceed with the matter you have just mentioned to Mr. Esch, if in an emergency—in war time, for instance—the United States Government should furnish the money to make these necessary conveniences and accommodations itself, I presume, whether or not the company would be willing afterwards to pay for them would depend on their usefulness in time of peace?

Mr. KRUTTSCHNITT. Why, certainly; if the Government made these improvements in an emergency and the carrier had a reasonable need of them thereafter, I do not assume that anyone would object to taking them off of the Government's hands.

I make this suggestion because, as I told you, we have spent very liberally and without raising any question whatever with the Government. The emergency was too near to raise it. But I stated yesterday that we had spent money freely—I think in the aggregate \$75,000 or \$80,000—to provide those temporary facilities.

The VICE CHAIRMAN. A great many of them might be so useful that although you might not deem them worth what they cost, you yet would be willing to take them at some price?

Mr. KRUTTSCHNITT. I mentioned also yesterday that some of them were in that category. Others will certainly be of no use to us and will have to be taken up.

The condition of freight-car equipment in this country is now and for a number of years has been that of a totally lawless and unregulated pool. That is, the cars have been used regardless of ownership. Any carrier who could borrow, beg, or steal cars of neighbors in an emergency, used them as if they belonged to him; and, as you very properly said, the directive power to require these cars to be returned has not been great, and in times of very great stress orders issued to that effect have been ignored. I said that they were ignored because the penalties have been light, and the offenders found it more profitable to incur and pay the penalty than to obey the law.

But, watching the operations of the Federal reserve banks, these thoughts occurred to me.

Senator TOWNSEND. May I ask a question before you proceed to that? Do the State commissions assume to regulate your handling of cars as to demurrage, and so on?

Mr. KRUTTSCHNITT. Only to this extent, that in emergencies we have been confronted with threats. Generally we have been able to explain to the State commissions the conditions we were in, and to convince them we were doing all that mortal men could do to relieve

the situation, and they have been commendably patient; but they have threatened on numbers of occasions to take the law in their own hands and establish drastic penalties if we did not provide so many cars for the use of the State.

Senator TOWNSEND. Another question: Supposing the president of your company, in the case you have mentioned, had continued to refuse to pay that \$10,000 fine, is there any way to collect it?

Mr. KRUTTSCHNITT. He would not have remained president of the company.

Senator TOWNSEND. You regarded it as a moral obligation rather than a legal obligation?

Mr. KRUTTSCHNITT. I regarded it as both, in the circumstances. We were parties to these agreements; we were members of the association, and not only as president of the association, but as chairman of the Southern Pacific Co., I had approved these rules under which he was working, and as a question of discipline, company discipline, I could not have permitted him to disobey.

May I proceed?

Senator TOWNSEND. Yes.

Mr. KRUTTSCHNITT. Car shortage may be caused by—

(a) Insufficient additions to equipment to keep pace with growth of traffic which at times may increase abnormally fast or to replace equipment worn out.

(b) Improper distribution of equipment, causing shortage in one section and surplus in another.

(c) Inefficient use of equipment by carriers.

(d) Improper use of equipment by shippers and consignees, resulting in unusual delays.

The causes (b), (c), and (d) are remediable by adequate control, which, if vested in and exercised by the carrier, could in the comparatively few instances that arise under (a) tide over the emergency.

Statistics show that normally a surplus of cars has prevailed in the United States; that in the past 10 years an idle surplus has stood on yard and sidetracks 93 days out of every 100; that shortages exist for but 7 days out of every 100; that the maximum surplus at any one time was 20 per cent of the total equipment and the maximum shortage at any one time but 6½ per cent of the equipment.

The attached chart (which is the one that you have before you) shows that a very slight increase of efficiency in the use of equipment would easily offset, and far more than offset, the comparatively few shortages that have occurred. For instance, in the first eight months of the year ending June 30, 1917, the Southern Pacific handled an increase of 79 per cent in ton mileage over 1915, without embarrassment, by loading cars 17 per cent more heavily and getting 54 per cent more mileage out of each one. The number of cars now owned by the carriers is sufficient, and much more than sufficient if properly controlled, to handle the traffic of 1917, the heaviest that has ever been offered, and a large increase even over that if offered in the future.

From the fact that under existing conditions every carrier in times of stress begs, borrows, or appropriates cars wherever it can find them, it follows that the freight cars of the country are used as if

they belonged to a common owner; that is, they are pooled with absolutely no regulation nor control. Inasmuch as the circulation of cars is analogous to the circulation of money, we may receive valuable suggestions by studying the latter problem, which has been regulated to a considerable extent. Thus:

1. Require as a condition precedent to engaging in interstate commerce that each carrier shall contribute to a box-car reserve a percentage of its box cars based on its use of such cars. There are about 1,000,000 box cars owned by the carriers of the United States; assume a car reserve of 200,000 or 250,000 cars; the contribution of each carrier to this total should be based on the number of days' use of box cars on such lines for the preceding year.

The VICE CHAIRMAN. Before you go any further I will have to ask you about your first suggestion there. Do you propose to place an embargo, either absolutely or conditionally, upon the entry of any carrier into interstate commerce? Is it not the policy rather to compel all of them to enter interstate commerce?

Mr. KRUTTSCHNITT. Yes; I was not aware that I had said anything in conflict with that.

The VICE CHAIRMAN. You said you would place a condition on them that they should not enter interstate commerce unless they made such a contribution as you suggest.

Mr. KRUTTSCHNITT. Then the language is unfortunate.

The VICE CHAIRMAN. I called your attention to that because I thought it was inadvertent on your part.

Mr. KRUTTSCHNITT. It was, and it can be corrected by stating that on taking Federal incorporation they shall contribute.

2. Place the administration of the box-car reserve under a commissioner with plenary power, assisted by the necessary staff, who shall report to the executive committee of the American Railway Association.

3. Prescribe standards of condition, capacity, etc., for box cars that will be accepted as contributions to the reserve. Rate them according to capacity—for instance, unity for a 40-ton car, more than unity for a 50-ton car, scaling downward for lower capacity. The reserve cars to be prominently marked. The ownership lettering to be inconspicuous.

4. Make the present per diem rate of 75 cents permanent for all except reserve box cars; for the use of reserve box cars, either by owner or foreign lines, assess a per diem rate 10 per cent to 20 per cent higher than for other cars.

5. Clothe the car reserve commissioner with ample authority to assess penalties for failure to obey such rules and instructions as may be adopted.

6. Impose a straight \$3 demurrage, which has been working satisfactorily for some time in California under the authority of the State and Interstate Commerce Commissions, has caused little or no complaint from the public, and has cut down the delays by one-third.

7. Reduce free time whenever possible.

8. Require the roads in times and places of car surplus to hold reserve cars on their lines if not needed elsewhere, with remission of per diem.

9. Require roads with a surplus of cars on their lines over their ownership to equalize with lines showing deficits either with reserve cars or with others of equivalent rating.

10. Repairs and maintenance of reserve cars chargeable to owners to be assumed by the commissioner, to whom shall be paid per diem earnings on such cars. Out of these earnings shall be paid administration expenses, repairs, and maintenance, the balance to be apportioned to contributors to the reserve fund in proportion to their contributions.

11. Roads that make repairs on their own cars in the reserve should charge to the commissioner repairs usually chargeable to owners.

12. The commissioner to keep all necessary records of car location, per diem returns, etc., that will enable him to equalize equipment with minimum haul of cars and to properly account for money received and distributed by him.

Car reserve plan need not be confined to box cars; flat cars could be included. Roads using special types of cars—coal cars, etc.—could create regional reserves of such cars.

Under such a plan all roads that use box cars in interstate commerce would have to contribute to the car reserve.

The high per diem on reserve cars would induce holders to want to get rid of them; would therefore promote their circulation, and under the close watch kept of them would produce mileage approximating twice the 25 or 30 miles of the ordinary car. Two hundred thousand such cars would render the service of 400,000.

A high per diem on all cars would induce lines with an excess to seek to get rid of enough cars to reduce the number on their lines to those owned. When in this condition the high rate is not burdensome, because the road receives per diem at the same rate that it pays.

No plan, of course, can be successfully carried out without the approval and cooperation of the Interstate Commerce Commission, whose authority for charging increased demurrage and allowing shorter free time must be obtained.

The VICE CHAIRMAN. Referring to that 75 cents per diem for a car, do you not think that could safely be increased several hundred per cent? You know they charge a dollar and a dollar and a half a day for a buggy and \$5 or \$10 for an automobile, and it does seem to me that 75 cents a day for a car is ridiculously small.

Mr. KRUTTSCHNITT. If you had to pay the per diems, and knew how rapidly they ran up at even 40 cents a day, you would understand that it was a blister that drew pretty hard.

The VICE CHAIRMAN. But if the business was prosperous, as you just observed, it would not be much of a hardship to increase the per diem?

Mr. KRUTTSCHNITT. The hardship comes, as I said to Mr. Esch, on the small road, which is generally a lumber road. For example, the McCloud River is a lumber road, a branch from the Southern Pacific up in northern California. It has a mileage of 150 or 160 miles. It has a few cars of its own that it uses locally. The bulk of the cars that it uses are those of foreign lines. The Southern Pacific, for instance, has some Union Pacific cars, some Rock Island

cars empty. These people have lumber to go to Rock Island and Union Pacific territory; those cars are put in, loaded, and sent out. If we have not those, we have to put in our own cars to serve these people. Now, if you impose on them too high a per diem charge, they just can not live.

Now, under this box-car pool, you see, those roads would be required to buy enough box cars to contribute to this pool.

The VICE CHAIRMAN. That hardship would not apply if you increased the demurrage, would it? Demurrage would spur them up.

Mr. KRUTTSCHNITT. Demurrage, in a case where you deliver cars to a connection, is called per diem.

The VICE CHAIRMAN. They do not charge each other demurrage at all?

Mr. KRUTTSCHNITT. No; the entire road payments are called per diems and the payments made by the public demurrage.

Mr. ESCH. This plan that you have suggested would be for the voluntary adoption by the American Railway Association, as I understand it?

Mr. KRUTTSCHNITT. No; it is proposed, and what we are here before you to ask for, is to provide for the Federal incorporation of railroads; and when they take out their Federal incorporation that at the same time they be required to contribute to this box-car pool.

Mr. ESCH. That would be a part of your legislative program, then?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. ESCH. Do the car-service rules of the American Railway Association recognize the doctrine of reciprocal demurrage?

Mr. KRUTTSCHNITT. Their car-service rules are based upon the principle of reciprocal payments. They do not call it demurrage when it is paid by one line to another. It is called demurrage when it is a delay by the receiver of freight, when he delays unloading the car.

Mr. ESCH. Suppose the carrier delayed in furnishing the car—that is what I meant by reciprocal demurrage.

Mr. KRUTTSCHNITT. A law has been passed in some States providing for that, but I think it was more to establish a club over the carriers' heads—to make them more active in meeting car supplies. I do not know of any cases where severe penalties have been imposed.

Mr. ADAMSON. The interstate-commerce law requires that they furnish cars in a reasonable time. I believe that is the language.

Mr. ESCH. Upon due notice and reasonable demand. We have received in the mail a letter from Mr. Tipton, traffic manager of the Jacksonville Traffic Bureau, Jacksonville, Fla., in which he states:

We are very much interested in the question of a reciprocal demurrage—not a reparation for delay in furnishing equipment for loading, but to cover the delay in placing cars for delivery after arrival at destination.

If the carrier is entitled to demurrage to cover the delay of equipment after arrival at destination when the delay in delivery is due to failure of consignee to accept delivery, then—or so it seems to me—the consignee is entitled to demurrage, based upon the same scale, where the carrier fails to make prompt placement for unloading after consignee has given orders for placement and has satisfied the demands of the carrier covering transportation.

What would be your view as to that request coming from this traffic bureau?

Mr. KRUTTSCHNITT. That view has been advanced in a great many States, and a great many States have passed a law to that effect, but I am quite positive that they have not been enforced. I suppose, under extreme circumstances, the law might be invoked, but up to now I have not heard of any severe penalties having been imposed.

Mr. ESCH. I think some States have passed laws penalizing a road so much per car per day for not furnishing the car. I think some Southern States have done that—Kentucky—

Mr. THOM. North Carolina is one. A number of them have those laws.

Mr. ESCH. I think that this letter of Mr. Tipton should be incorporated at this time.

(The letter referred to is as follows:)

JACKSONVILLE TRAFFIC BUREAU,
Jacksonville, Fla., March 26, 1917.

Transportation: Reciprocal demurrage.

Hon. JOHN J. ESCH,

*Joint Committee on Interstate Commerce,
Washington, D. C.*

DEAR SIR: We are very much interested in the question of a reciprocal demurrage—not a reparation for delay in furnishing equipment for loading, but to cover the delay in placing cars for delivery after arrival at destination.

If the carrier is entitled to demurrage to cover the delay of equipment after arrival at destination when the delay in delivery is due to failure of consignee to accept delivery, then, or so it seems to me, the consignee is entitled to demurrage—based upon the same scale—where the carrier fails to make prompt placement for unloading after consignee has given orders for placement and has satisfied the demands of the carrier covering transportation.

We have handled this matter with Chairman Meyer of the Interstate Commerce Commission, who, like myself, feels that the present act to regulate commerce does not cover this feature, and that accordingly the Interstate Commerce Commission is powerless to take action, and, being powerless to act, do not care to take the matter under consideration.

At the suggestion of Chairman Meyer, I requested, on December 12, an opportunity to submit to your committee our views, as it is our opinion that this feature should be embodied in your report to Congress, accompanied by a recommendation that the defect in the act to regulate commerce as thus indicated be remedied by appropriate corrective legislation, and we have been advised by Mr. Healy that effort would be made to accord us this opportunity, but I am this afternoon in receipt of letter from Mr. Healy stating that your committee has decided to suspend on Thursday, March 29, and that the witnesses so far summoned will consume your time up to the time of suspension. Further, that the date of resumption is contingent upon so many possibilities that at the present moment the committee can not set definite dates for appearance.

I am therefore thus writing you, as well as each of the other members of the Joint Committee on Interstate Commerce, asking, in view of the circumstances, if you will not accept this letter, and, based thereon, give the matter consideration, which we hope may be followed by favorable recommendation embodied in the report to be submitted to Congress.

Yours, very truly,

T. C. TIPTON.

Mr. ESCH. I have taken up too much time. I think, Mr. Chairman. I will yield.

Mr. KRUTTSCHNITT. Have those laws been very stringently enforced?

Mr. THOM. Sometimes they have.

Mr. ADAMSON. I should like to ask a few questions, but we want to hear from another witness, and I think I shall forego my examination of you. Your examination has been very complete and satisfac-

tory. Perhaps you may be around some time before the hearings end. We wish to thank you for your contribution to the literature on the subject.

Mr. SIMS. I have a note in my memoranda that I have overlooked. It is very important, and nobody has said a word about it. It was along the line of sleeping cars.

Mr. ADAMSON. Do you suppose you will be about the committee again during the summer, Mr. Kruttschnitt? Do you suppose it will be convenient for you to attend the committee hearings again in the summer? We will probably be at work until late in the fall somewhere in the United States.

Mr. SIMS. I think I will not be over 10 minutes.

Mr. HAMILTON. Can't you get your information from some other authority?

Mr. SIMS. I want to get it from an authority that can not be questioned.

Mr. THOM. I should like to get one of the members of the committee to ask a question for me. I understand I can not ask it.

Mr. ADAMSON. State your question, Mr. Thom, in my name.

Mr. THOM. The witness has detailed certain respect in which the standard of efficiency for ready use of these carriers in time of war is not sustained; for instance, in double tracks, occasioning a shortage in case of a large movement of troops to some point on the South Atlantic seaboard, requiring a great number of trains, that point only being reached by one road; that there was no way of getting the equipment out of the way so that there must be, as I understand it, some standard of efficiency maintained in time of peace which would render the carriers' facilities readily made adequate in case of war. and in that view I would like to have this question put:

While it is true that the railroads can not be expected to keep themselves all the time equal to the requirements that may, as the result of war, be made upon them, is it not also true that it is necessary in the public interest that such a standard of efficiency be maintained in time of peace that the railroads may, if war come, be readily put in condition to meet the national needs for war purposes, and that as the duty of national defense and of making war is imposed on the National Government, the standard of the carriers' efficiency in time of peace must be fixed and controlled by the National Government?

Mr. KRUTTSCHNITT. Unquestionably that is true. The carriers when the last demand was made on them, cooperated to the extent of their ability; that is, they gave all they had for the use of the Government. I have said that under stress and high pressure that I thought there were enough freight cars now to handle the traffic that is offered, but I did not mean to say, and I do not wish to be understood as saying, that if we should become involved in war that the stresses laid on the carriers by the demands of the Government to move troops quickly, as quickly as possible, and supplies also, the carriers would not be very much overtaxed, and if we are in times of peace to prepare for war, which we have not done heretofore, we should have to have very large additions to our equipment, particularly in the way of passenger cars, also double track.

Mr. ADAMSON. I presume you noticed the breadth of Mr. Thom's question. Did you understand that, during times of peace, in prepa-

ration for war, that the Government should help the railroads to build a double track to every port?

Mr. TOWNSEND. I understood him to make an argument for Government construction of railroads.

Mr. THOM. I confined my question to the fixing of the standard of efficiency, not to national operation, but to national regulation, so as to provide what ought to be, in the judgment of the Government, the standard in time of peace, so that if war should come this essential to war making could be readily made efficient for war purposes.

Mr. ADAMSON. That language is so broad and admits of so many different interpretations that I wanted the witness to get the matter clearly in his mind. You know this question is supposed to be coming from me. I understood your question to mean that you thought the Government, in time of peace, should assist these railroads in double-tracking their systems, etc., whether that should come under ownership or by unloosening of rates, changing of regulations, loaning money, or donating money, or anything else. The idea of the Government in providing that they should liberalize and enable the railroads to make preparations for time of war in time of peace is so broad that I think it should have some specifications.

Mr. THOM. Here are transportation facilities of the country having their standard fixed by separate governmental authorities.

Mr. ADAMSON. This question is being asked in my name and it is to be charged to me. I did not understand it was to be a speech by Mr. Thom, but that he was to ask the question of Mr. Kruttschnitt, and I cross-examined Mr. Kruttschnitt to know how he understood Mr. Thom's question asked by me. If it involves a long discussion and explanation, Mr. Thom, I think it should be withdrawn.

Mr. HAMILTON. But you required a diagram of Mr. Thom's question.

Mr. THOM. What I meant is this: Here is the standard of efficiency of the American railroads now determined by a number of governmental authorities; is it in the national interests, where the railroads are such an essential part of the national defense, that that standard should be established by a number of authorities or the control be under the control of one authority?

Mr. ADAMSON. Now, you are going back to your 48 masters. I do not know a single one of your little roads that terminates at one of the ports that is subject to 48 masters. I do not believe you can mention one that operates under such a condition.

Mr. THOM. I think I can.

Mr. SIMS. I intended to ask you these questions in my first examination, but I overlooked the note. I have absolutely no information on it.

Mr. ADAMSON. Now, ask the witness the question, Judge.

Mr. SIMS. I am explaining why I did not do it before. I am apologizing.

What is the general rule as to the use of sleeping cars by the different railroad companies; what do they pay? What do they pay for the use of the cars, or what do the sleeping car companies pay for being hauled over the railroad tracks? I do not know anything about that and want to get a statement of that from you.

Mr. ADAMSON. Judge, we have had hearings on that before a subcommittee. We have reports on that in our committee, and everything on that subject.

Mr. KRUTTSCHNITT. Sleeping cars are almost universally owned by the Pullman Co. A few roads own their own, but they are very few. I think the Chicago, Milwaukee & St. Paul and the Great Northern are the only American roads that own their own sleepers. All the others rent the cars from the Pullman Co.

Mr. SIMS. Do I understand from that that the railroad companies pay the Pullman Co.——

Mr. KRUTTSCHNITT. The contracts are——

Mr. SIMS. For the use of the cars?

Mr. KRUTTSCHNITT. It is a matter of negotiation. Some contracts are more favorable to the railroads than others. I will give you, roughly, the condition of ours, as I remember it. I think we agreed with the Pullman Co. to maintain certain repairs on their cars, of the running gear and the outside of the car; that is, maintain the repairs of the vehicle as a vehicle only, and the Pullman Co. maintains the interior, the hotel or lodging-house part of the vehicle. I do not think we pay the Pullman Co., as I remember it, anything for the use of the cars. They do not pay us anything for hauling them. In other words, the hauling of the car is considered sufficient consideration for getting the use of it. When the earnings per car per annum exceed certain sums—that differs for the first-class cars and what are called the tourist cars—the railroad company is then paid by the Pullman Co. a proportion of the excess over that as compensation for hauling the car over the road.

Mr. SIMS. Well, is the weight of these Pullman cars, the sleeping cars, as great as the ordinary car?

Mr. KRUTTSCHNITT. Much greater, of course.

Mr. SIMS. Then it does require as much or more steam power or whatever may be used to haul those cars over your line as it does the ordinary day coaches or other cars?

Mr. KRUTTSCHNITT. Yes; of course.

Mr. SIMS. Is not the wear and tear on the tracks due to the heavy equipment as much or greater than that caused by the use of other cars?

Mr. KRUTTSCHNITT. It would be slightly more.

Mr. SIMS. And is not the use of sleeping cars on the increase?

Mr. KRUTTSCHNITT. I think that is true. That, however, is a matter that does not concern the public. Whatever handicaps accrue to us through the use of sleepers we have to assume on account of our duties to the public. It is our duty to provide the public with sleeping cars. We once owned our sleeping cars, and we found it very much more expensive and unsatisfactory to own them ourselves than to arrange with Pullman in some way to furnish accommodations under a contract about as outlined.

Mr. SIMS. In a way, the receipts to the railway company from the Pullman Car Co. for the use of these cars depends entirely on what you have just stated, as to a certain amount of the earnings being received as the passenger fares paid for the use of them, at the end of the year. It is not done currently as you go along?

Mr. KRUTTSCHNITT. I do not think I used the term "annually." The payments are made, as I understand, currently, perhaps quarterly or monthly, but they are adjusted finally at the end of the year.

Mr. SIMS. That is, you do not collect anything out of each passenger?

Mr. KRUTTSCHNITT. No, sir; the passenger pays the Pullman company for the sleeping accommodations.

Mr. SIMS. What additional receipts does your railroad company, as a railroad company, receive for hauling these Pullman cars?

Mr. KRUTTSCHNITT. It does not seem to be segregated in the earnings in the annual report. I expect it is under the head of miscellaneous earnings.

Mr. ADAMSON. Could you not let him write a statement and append it to the hearings, giving that in full?

Mr. KRUTTSCHNITT. I can give that to you. It does not happen to be here.

Mr. SIMS. You can send it if you want to. It does not make any difference whether it is two dollars or one dollar.

Mr. KRUTTSCHNITT. The earnings are substantial; I should say from memory perhaps six or seven hundred thousand dollars.

Mr. SIMS. What I am trying to find out myself is this, whether or not in the way of receipts and payments and expenses actually incurred the sleeping-car service is rather an expense than a profit to the railroad companies.

Mr. KRUTTSCHNITT. I can answer that in a general way by saying that there is not much in it for the railroads. When you take the expense of hauling the heavy cars and the small number of passengers they accommodate, I do not think the earnings we get from them represent any material or any substantial payment for the service. There is no money in it.

Mr. SIMS. Or the damage in wear and tear on your railroad for carrying those cars over it.

Mr. KRUTTSCHNITT. I covered that in stating the expenses of hauling them.

Mr. SIMS. In determining what the railroad receives per passenger per mile, is this sleeping-car expense to the company—is that included in it generally? Is it included in estimating; say, for instance, it costs you 1.98, or the railroads get 1.98 or 2 cents, or whatever it may be per mile for carrying a passenger; is that 1.98 intended to include what it gets for its sleeping-car service, where it gets anything?

Mr. KRUTTSCHNITT. My understanding is that any receipts from the carriage of a passenger would be put under the general heading of passenger earnings.

Mr. ADAMSON. You get the same rate out of every passenger, whether he rides in a sleeper or a day coach.

Mr. KRUTTSCHNITT. The point the judge wants to make, if I understand, is this: If we spread the sleeping-car earnings, whatever they may be, over the entire passenger-car traffic, it does contribute possibly a fraction of a mill to the average received for hauling a passenger-mile.

Mr. SIMS. But as a matter of fact, it is very small if anything?

Mr. KRUTTSCHNITT. It would be very small.

Mr. SIMS. While the expense relative to the profits and earnings received by the railroad company is relatively small as a whole, there is some loss to the railroads?

Mr. KRUTTSCHNITT. I can give you its proportion roughly. The earnings from the sleeping cars are from five to six hundred thousand dollars, from memory, and the total passenger earnings are about \$35,000,000 on our road, so that the sleeping-car earnings would be only about one-seventieth.

Mr. SIMS. If you do lose on the traffic in sleeping cars, it is as an accommodation to the public?

Mr. KRUTTSCHNITT. Yes, sir.

Mr. ADAMSON. And it is not a rebate to anybody, because everybody gets it.

Mr. KRUTTSCHNITT. That is true. Dining cars do not pay, but it is an accommodation we have to afford.

Mr. SIMS. It is an economy, however, in that the passengers do not have to stop to eat at restaurants.

Mr. KRUTTSCHNITT. It is an economy to the passenger; he gets to his destination quicker.

Mr. SIMS. There is some economy to the railroad company in not having to stop the trains to allow him to eat.

Mr. KRUTTSCHNITT. In this matter you have to take the plusses and minuses——

Mr. SIMS. Oh, of course, there is no doubt about that; but I wanted to know whether or not the sleeping cars and the sleeping-car expenses were a profit or a benefit to the railroads as a general thing and in a general way, and like the stations the number of sleeping cars that will be operated in the future will be an increasing burden on the railroad companies instead of a profit. That is all I wanted to find out about.

Mr. KRUTTSCHNITT. It is an increasing burden. I can not give you the gross earnings per mile and the expenses per passenger mile, because we have never figured it out; and from the conditions of the problem you will see that a great many assumptions and estimates will have to be made. It will be only roughly approximate if made at all.

Mr. SIMS. And it does not figure to any great extent to what you get per mile per passenger?

Mr. KRUTTSCHNITT. I have just stated——

The VICE CHAIRMAN. The Chair wishes to express to you the thanks and appreciation of the committee and the gratitude of the committee and their good wishes.

Mr. KRUTTSCHNITT. I thank you very much, Mr. Chairman and gentlemen of the committee.

The VICE CHAIRMAN. Mr. Thom, the committee is ready for your next witness.

Mr. THOM. Mr. Chairman and gentlemen of the committee, I should like to introduce Judge Marcus P. Knowlton, of Massachusetts. I will say, in introducing this gentleman, that he has had a very large experience in public matters, having passed all through the various legislative bodies, from the common council of Springfield, through the house of representatives and senate of Massachusetts; he has been justice of the superior court of Massachusetts from

1881 to 1887, and succeeded Justice Holmes as chief justice of the supreme judicial court of Massachusetts in 1902, and held that office until September, 1911. He also was appointed by the United States Department of Justice—at least, recommended by it—to the Federal court in the dissolution proceedings between the New York, New Haven & Hartford Railroad and the Boston & Maine Railroad, and he is chairman of the board of trustees having control of the stock of the Boston & Maine Railroad and the dissolution of those properties.

We desire that Judge Knowlton give his experience in connection with that matter, and, on account of his eminent judicial and professional position, we have asked him to present also an argument on some of the law questions you have to consider.

The VICE CHAIRMAN. We will have an hour and a half before adjournment. Can Judge Knowlton complete his direct statement in that time?

Mr. THOM. He says he can complete his direct statement in three-quarters of an hour.

The VICE CHAIRMAN. We shall be glad to hear you, Judge. Under the rule of the committee you are not to be interrupted until you complete your direct statement, and you have an hour and a half.

STATEMENT OF MARCUS P. KNOWLTON, CHAIRMAN OF THE BOARD OF TRUSTEES, BOSTON & MAINE RAILROAD, 391 STATE STREET, SPRINGFIELD, MASS.

Mr. KNOWLTON. Mr. Chairman, the Boston Railroad Holding Co., incorporated in Massachusetts by the Statutes of 1909, chapter 519, acquired and held, and still holds, a majority of the capital stock of the Boston & Maine Railroad. The New York, New Haven & Hartford Railroad Co. took and held most of the stock of the Holding Co., and in this way had a controlling interest in the Boston & Maine Railroad. A suit was brought by the United States Government to terminate this control, on the ground that it was in violation of the Sherman antitrust law. A decree was entered by agreement of the parties, that the New York & New Haven Co. should assign and transfer all its stock in the Holding Co. to five trustees, who were to hold its stock, and through their holding were to control a majority of the stock of the Boston & Maine Railroad, and ultimately were to sell it conformably with the public interest, for the benefit of the New York & New Haven Co., in such a way as to end the alleged monopoly. Although I am the chairman of these trustees and the president of the Boston Railroad Holding Co., and a director of the Boston & Maine Railroad, I do not come here officially, nor in any representative capacity. In anything that I may say, I speak only for myself, I propose to present a few facts from my personal experience, upon which, with others that will be before you, you may find such opinions as seem to you correct.

I also ask permission to present some considerations on the question whether it is within the constitutional power of Congress to provide that interstate commerce, conducted over railroads, shall be carried on by companies incorporated under Federal laws.

In October, 1914, when the Federal trustees were appointed, they found the Boston & Maine Railroad a corporation with a capital stock of \$44,655,190, and owning a bonded debt of \$43,338,000, and operating and managing a system of railroads comprising 25 corporations, whose lines extended into five States—Maine, New Hampshire, Vermont, Massachusetts, and New York—and the Dominion of Canada. Most of these railroads it operated under leases, many of them for long terms of 99 years or thereabouts, and besides its liability to pay its floating debt of about \$24,000,000, in addition to its bonded debt, it had guaranteed in some of these leases the payment of large bonded debts of lessor corporations. For about two years the corporation, without making dividends, had been unable to earn enough to pay its fixed charges, and the deficit of earnings below the fixed charges during the fiscal year which had just ended on June 30, 1914, was \$2,044,742.

Many of the leases were made when the net earnings of railroads in New England were much larger than they have been in recent years. Two years ago all the trustees and, so far as I know, all the directors were confident in the opinion that the corporation could not go on and serve the public properly without a reorganization that should diminish its fixed charges and give it better credit. The Boston & Maine Railroad is incorporated under different special charters in Maine, New Hampshire, and Massachusetts, having but a single capital stock and a single board of directors, and conducting all its financial affairs as a single corporation. At the same time it is a domestic corporation, regularly incorporated in each of the three States, and subject to the peculiar legislation, general and special, of each of these States in which its railroad is located; and in this respect it is three different corporations, each without authority superior to that of the others, as neither of the incorporating States has any authority or control over either of the other incorporating States. Other railroads belonging to this system are in Vermont, New York, and Canada, and governed by the laws of those places.

Everybody recognizes the fact that it is for the interest of the public, as well as for the interests of the several corporations belonging to the system, that these corporations, or at least most of them, should be kept together. It has also been the general if not the universal opinion of those who have studied the subject that no practicable, desirable form of reorganization can be adopted without special legislation to authorize it in Maine, Massachusetts, and New Hampshire, if not in the other jurisdictions also. It was the hope of the directors of the Boston & Maine Railroad and of the Federal trustees that substantially uniform permissive legislation might be obtained in these three States. After extended hearings and much discussion statutes were enacted in Maine and Massachusetts in the year 1915 giving such authority; but these statutes differ materially in their provisions, and it will be very difficult, if not impossible, to proceed under them without the enactment of amendments. Massachusetts Acts of 1915, chapter 380; Maine Acts of 1915, chapter 186. In New Hampshire it was impossible to obtain any practicable statute in aid of the project.

In September of this year the corporation was put into the hands of a receiver. I ought, however, to say that in part from the increase

of traffic connected with the foreign war and the different kinds of business that have affected the earnings of many of the great railroads of the country, and largely from the practice of strict economy in the operation of the railroad, its net earnings have greatly increased lately, so as to produce this year a substantial surplus above the fixed charges.

This corporation, being directly subject to the legislation of three different States, must make returns to the public-service commissioners of each of these States and obey their orders. It is, of course, subject to the jurisdiction of the United States Commerce Commission. Each of these tribunals has jurisdiction over the general as well as the local affairs of the corporation. In cases of a conflict in the laws passed by the legislatures of the different States, or in the orders of the several commissions, there would be, in some matters, great doubt as to which should control. Statutes and orders that are only local in their effect are no doubt binding to the exclusion of others as to permanent local conditions within the State. Those that are intended to affect the corporation generally, like a change in the amount of its capital stock, or regulations as to the issue of stock, or provisions limiting or regulating the corporate indebtedness, if in conflict with the law of another State where the company is also incorporated, give rise to doubts and uncertainties which are most troublesome.

In the case of *Attorney General v. New York, New Haven & Hartford Railroad Co.* (198 Mass., 413-417), the defendant corporation was incorporated in Massachusetts, Rhode Island, and Connecticut, and it operated railroads under leases elsewhere. Its acts in question in the case were held invalid under the laws of Massachusetts and were set aside, although they were within the general authority given to the corporation by the statute in Connecticut. These acts directly affected local conditions in regard to other corporations in Massachusetts. The court gave no intimation as to what the result would have been if the acts had had no special local application.

In reference to a possible reorganization by the consolidation of corporations or the transfer of the property and franchises of the selling corporations to the purchaser, it is held in New Hampshire that the legislature can not constitutionally authorize such a change, or even the lease of one road to another, by action of the directors and stockholders of the corporations, however large the majority, without providing for a valuation by a jury of the stock of the objecting minority stockholders and a payment for it in cash at the valuation by the acquiring corporation. (*Dow v. Northern Railroad*, 67 N. H., 1.) Statutes have been enacted in that State accordingly.

In Maine and Vermont there are decisions and legislation tending somewhat in the same direction, without carrying the doctrine quite so far. (*State v. Maine Central Railroad Co.*, 66 Me., 488; *Stevens v. Rutland & B. Railroad Co.*, 29 Vt., 545.) In Massachusetts and New York the law is held otherwise by the courts. (*Hale v. Cheshire Railroad Co.*, 161 Mass., 443; *Hart v. Ogdensburg & Lake Champlain Railroad Co.*, 89 Hun., 316.) What rule shall be applied to such conditions in cases of a general reorganization is a question of great difficulty and importance. In the same

reorganization it would be unjust and impracticable to apply one rule in one State and a different rule in another State.

The recent statutes enacted in Maine and Massachusetts authorizing a reorganization, and the one reported and chiefly considered in New Hampshire, all contain a provision subjecting the directors of the Boston & Maine Railroad to punishment by fine or imprisonment for a violation of the statute. As the two statutes differ from each other in important particulars, it seems that action under either of them would involve a choice by the directors of the State in which to suffer imprisonment for compliance with the law of the other State.

I ought to say that in connection with continued effort to obtain a reorganization of the Boston & Maine system a renewed attempt to provide a permissive act in New Hampshire is now being made before the legislature in session there. There is also a bill in the Maine Legislature now in session to obtain an extension and modification of the Statute of that State enacted in 1915. If a reorganization is accomplished, we shall still be subject to different codes of laws in the different States and to the orders of different tribunals seeking, each in its own way, to regulate the public service.

It is a long time since statutes were first enacted in New Hampshire forbidding an increase of rates upon certain railroads belonging to the Boston & Maine system, and it has been contended that these statutes were not only prohibitive of an increase as to intrastate commerce but also of action of the Interstate Commerce Commissioners for the increase of rates in interstate commerce. In other States there has been legislation as to rates which was unjustly discriminating in its effect upon interstate commerce.

In Massachusetts, about two years ago, when the New York, New Haven & Hartford Railroad Co. sought to increase its capitalization by issuing \$67,000,000 of convertible bonds, and the issue had been underwritten and had been assented to by the public authorities of Rhode Island and Connecticut, the prohibition of the issue of bonds of this class by the laws of Massachusetts prevented this increase and greatly interfered with the plan of the corporation to provide for the proper transaction of the public business. In other States burdensome conditions have been imposed upon proposed plans of other railroads for providing necessary capital to the detriment of commercial interests in neighboring States.

With the enormous growth of business in the United States in the last few decades it has for a long time been becoming more and more evident that the only convenient and economical way of conducting interstate commerce over railroads is by combinations of the small and short railroads into extended systems, each under a single general management, covering long distances and classified continuous movements, with as few changes of route and train as possible. Such systems can not be bounded by State lines. Not only in the densely population States have the railroads been brought together into such systems by leases or otherwise, for economical management, but in the great States of the West we find such combinations crossing the mountains and plains, without reference to the boundaries of States.

In amount and importance, especially when we consider the long distances of its transportation, the interstate commerce over railroads

n the United States very greatly exceeds the intrastate commerce over these railroads. The Interstate Commerce Commission has prescribed elaborate regulations of interstate commerce over existing railroads; but Congress has never attempted to provide the instrumentalities for carrying it on, or directly to authorize the creation of such instrumentalities that should derive their sole authority, under the Constitution, from the Government of the United States. If the corporations that are to engage in this business through the operation of railroads were directly chartered by the United States, it would relieve the public from the great difficulty and expense of dealing with different jurisdictions having conflicting laws in the establishment and maintenance of these instrumentalities, and from the labor and cost of subjection to the requirements of numerous commissions, all supervising the same matters, which can be properly and completely supervised by one, and from the official salaries and expenses of the members of unnecessary corporate organizations. It would relieve from most of the difficulties in the special cases to which I have referred. It would save the necessity of such a statute as was held unconstitutional in *Central Georgia Railway v. Murphey* (196 U. S., 194), which required a common carrier receiving goods for transportation over its own line and connecting lines, if the goods were subsequently lost or damaged, and if it would relieve itself from liability to the consignor, to furnish evidence which would enable him to fix the liability upon the carrier primarily responsible for the loss. If there was a Federal corporation extending through the different States it would be unnecessary for the owner to find out and prove affirmatively where and how the loss occurred.

It is evident that the creation of Federal railroad corporations to act as carriers in interstate commerce would have many advantages over the present method of providing separate railroad corporations in the several States where the railroads are located. Whether there should be legislation to authorize or compel the enjoyment of these advantages is a question for Congress to answer.

Has Congress, in the exercise of its power to regulate interstate commerce between the States, a constitutional right to provide railroad corporations incorporated under Federal law for the transaction of the business? If so, it naturally follows that it may require all interstate commerce conducted over railroads to be carried on by such corporations. An act might merely permit incorporation under the Federal law, although such an act would be of little or no practical value, or it might provide that railroad corporations incorporated by the States should not engage in interstate commerce after the expiration of a prescribed time; or it might require a certificate of authority to engage in it from the Interstate Commerce Commissioners; or the regulations might be more or less strict in other ways.

In the great case of *McCulloch v. Maryland* (4 Wheat., 316) it was decided that Congress might constitutionally establish a United States bank for the transaction of the financial business which was to be done in its interest and under its supervision. Said Chief Justice Marshall:

Although among the enumerated powers of Government we do not find the word "bank" or "corporation," we find the great powers to lay and collect taxes, to borrow money, to regulate commerce, to declare and conduct a war.

and to raise and support armies and navies. The sword and the purse—all the external relations and no inconsiderable portion of the industry of the Nation, are intrusted to its Government. The power being given, it is the interest of the Nation to facilitate its execution. It can never be their interest and can not be presumed to have been their intention to clog and embarrass its execution by withholding the most appropriate means. Throughout this vast Republic, from the St. Croix to the Gulf of Mexico, from the Atlantic to the Pacific, revenue is to be collected and expended, armies are to be marched and supported. * * * Is that construction of the Constitution to be preferred which would render these operations difficult, hazardous, and expensive? Can we adopt that construction, unless the words imperiously require it, which would impute to the framers of that instrument, when granting these powers for the public good, the intention of impelling their exercise by withholding the choice of means? The Government which has the right to do an act must according to the dictates of reason, be allowed to select the means; and those who contend that it may not select any appropriate means, that the one particular mode of effecting the object is expected, take upon themselves to prove the exception. * * * But the Constitution of the United States has not left the right of Congress to employ the necessary means for the execution of the powers conferred on the Government to general reasoning. To its enumeration of powers is added that of making all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or any department thereof. * * * To employ the means necessary to an end is generally understood as employing any means calculated to produce the end, and not as being confined to those single means without which the end would be entirely unattainable.

In the most explicit terms, the Constitution gives to Congress the power to "regulate commerce, * * * among the several States." (See *Gibbons v. Ogden*, 9 Wheat., 1.) This includes the right to prescribe the means and instrumentalities by which it shall be carried on, if in the opinion of Congress, it is important or desirable so to do. As Congress could decide that a bank under a Federal charter was an instrumentality for use in conducting the financial business of the Government, so it may decide that railroads incorporated under a Federal law, extending across State lines, furnish a desirable means of carrying on interstate commerce. The power to regulate such commerce in any way that seems to Congress reasonable and proper is as complete as the power to provide for the management of the finances of the country, and it includes the determination of the means and instrumentalities to be used in the business.

The language of Chief Justice Marshall, quoted above, and its doctrine, more fully set forth in other parts of the opinion, have been reaffirmed many times by the Supreme Court of the United States, and are the law to-day. They seem to me fully to cover the question which we are considering. They have been definitely applied to questions arising under the commerce clause of the Constitution, and are reiterated with emphasis in the opinion of the majority of the court in the *Northern Securities* case (193 U. S., 197, 336, 344, 350, 253). In giving an opinion of the minority in that case, Mr. Justice White said (p. 369), "that if the end to be accomplished is within the scope of the Constitution, all means which are appropriate, and which are plainly adapted to the end, and are not prohibited, are constitutional." This language seems directly applicable to the present situation. He also said (on p. 393):

True, the instrumentalities of interstate commerce are subject to the power to regulate commerce, and therefore such instrumentalities, when applied to interstate commerce, may be regulated by Congress, as to their use in such commerce.

Much of the argument of this part of the opinion of the minority relates to the proposition that ownership of stock in corporations engaged in interstate commerce is not interstate commerce, and the argument has no tendency to show that Congress, under its right to regulate interstate commerce, may not prescribe the means and instrumentalities by which the business of such commerce is to be carried on.

There is a peculiar similarity between the question in *McCulloch v. Maryland* and that which we are now considering, inasmuch as the constitutional power of Congress considered in each case is the power to charter a Federal corporation to do the work which Congress may control and regulate. It seems that the principle was applied to the chartering of the corporations for the promotion of interstate commerce which are referred to in *California v. Central Pacific Railroad Co.* (127 U. S., 1, 39), and *Pacific Railroad Removal cases* (115 U. S., 2, 16, 18). (See also general doctrine in *Houston & Texas Railway v. U. S.*, 234 U. S., 342. *Texas & Pacific Railway v. Rigby*, 241 U. S., 6, 23.)

If Congress should decide that such railroad corporations should be established to engage in interstate commerce, the question whether its decision was wise or unwise could not be considered by the court. There seems to be no doubt that the kind of corporation, in its origin and control and in the extent of the field that it may cover, has such a direct relation to the business of interstate commerce as may come within the regulating power of Congress that it includes everything directly involved in such commerce. This being so, it is settled by many decisions that the final determination of Congress to act or not to act, or to act in one way and not in another way, within its constitutional domain, is not subject to review by the court.

Personally I can not doubt the constitutional power of Congress to charter railroad corporations to engage in interstate commerce and to prevent railroads not so chartered from engaging in such commerce after a certain date if it chooses so to do.

If I am right in this conclusion, does it make any difference that at the time when this constitutional right is first sought to be exercised by Congress the country is traversed by railroads used in interstate commerce, owned by corporations which were chartered by the States? I think it does not. It seems to me that the proposition stated to the committee by Mr. Thom is sound, that everyone who engages in interstate commerce is bound to know that he and his property are subject to the right of Congress to regulate interstate commerce at any time, which right includes constitutional authority to declare that interstate commerce conducted over railroads shall be conducted only over railroads operated under Federal charters. This, in a possible case, might involve great diminution, or even the destruction of the value of a railroad in a State, by the construction of another railroad under a Federal charter, if Congress should go to the extreme limit of its power without making a provision for the utilization of existing railroads.

Such possible congressional action would test the constitutionality of the legislative act to the utmost, for courts would be reluctant to permit the unnecessary destruction of valuable property, and they

would consider carefully the question whether any material benefit could come from conducting interstate commerce over railroads operated under Federal charters instead of conducting it over State railroads. I think the courts would be obliged to say that in the organization, management, control, and regulation of Federal railroad corporations engaged in interstate commerce advantages might be found over the effect of similar dealings with State railroads such as to bring the subject within the field of constitutional regulation of interstate commerce. If this result was reached the wisdom or folly of congressional action in a particular case would be a subject with which the courts could not concern themselves.

It is not to be supposed that Congress would ever put the question to this extreme test by legislating in a way that would involve the destruction of great public works. National legislators can be trusted to do their duty in providing for the conservation of valuable property. The legislation should open a way for the owners of State railroads, valuable for use in interstate commerce, to sell their property to the new Federal corporation, or to have it taken over at a valuation, subject to the supervision and approval of the governmental tribunal created by Congress to pass upon the establishment and organization of Federal railroad corporations.

It might be provided that, subject to such approval, stock in the State railroad companies might be exchanged for stock in the Federal corporation, upon proper terms, and that ownership of the property of the State corporation should follow ownership of the stock, and that, through such purchases or exchanges, control of the State railroad might be acquired by the new corporation. These things should be permitted only after the voluntary action of the stockholders of the State railroad company by a majority vote, or a two-thirds vote; while the new corporation should be compellable, in a proper case, as a condition of its organization, to take over upon reasonable terms the stock or property of the State corporation.

The question arises whether objecting minority stockholders of a State railroad corporation could be bound by a two-thirds vote of the stockholders in such a case. If the answer depended upon the very elaborate opinion of the court in *Dow v. Northern Railroad* (67 N. H., 1), it would be in the negative; if it depended upon the decision in *Hale v. Cheshire Railroad Co.* (161 Mass., 443), it would be in the affirmative. The decisions in Vermont are similar to those in New Hampshire. *Stevens v. Rutland & B. Railroad Co.* (29 Vt., 545). Those in Maine and New York follow more nearly the cases in Massachusetts. *Waldoborough v. Knox & Lincoln Railroad Co.* (84 Me., 469). *State v. Maine Central Railroad Co.* (66 Me., 488). *Hart v. Ogdensburg and Lake Champlain Railroad Co.* (89 Hun., 316).

The underlying question in every such case is, "What is the contract that stockholders impliedly make with one another when they become members of a railroad corporation?" It is to be remembered, first, that for many years, beginning soon after the decision in the *Dartmouth College* case, charters of corporation in almost all of the States have by statute been made subject to amendment, alteration, or repeal, and the stockholders, when they join the corporation, agree to be bound by applicable legislative provisions by way of

alteration or amendment. Of course, such alterations must be germane to the subject. Legislative authority which provides for a change of form of incorporation, if the stockholders desire it, from a State charter to a Federal charter, under which the same kind of business may be done, over the same line extended to include additional distance into a neighboring State, is plainly promotive of the original general purpose of the corporation. It is an enlargement and extension of the same general kind of business that formerly was done, for the same objects, namely, the service of the public in transportation and the acquisition of gain from the compensation received for it. It is no greater a change in the relations of the stockholders to one another, or to the enterprise in which they are engaged, than is the leasing of one railroad to the owners of another railroad for an extension of the line. If the arrangement is such that the grantor or assignor no longer has an interest in the business, but parts with his property finally for a pecuniary consideration, this, so far as he and his associates are concerned, is like the winding up or liquidation of a corporation. There is no doubt that the body of the stockholders, under legislative authority, have a right to bind the minority by their vote to wind up the affairs of the corporation.

All the tendencies of social and business life in recent years are in favor of liberality in the management of such enterprises. It would be a very narrow construction of the implied contract between the members of a railroad corporation, when they have organized to serve the public and to make money by running a railroad between two points, and have impliedly agreed that a majority may control in the management of their business, and when the legislature has declared that their business may be extended by taking a lease of a connecting line, to say that such an extension is so at variance with the general purpose and policy of the corporation that the majority can not bind the minority in voting for it. If such a construction could have been given to such an implied contract in the early days of railroads, it would be utterly at variance with the demands of business and the methods of management of railroads in these times.

Upon a question of this kind, which relates primarily to a mere change of form and which does not affect adversely public business or the public interests and which, so far as the State corporation is concerned, is nothing more than a liquidation of it, with an arrangement that the service of the public shall be continued, it can make no difference that the formal authority under which the stockholders of the corporation make these changes comes from the Government of the United States, exercising its powers under the commerce clause of the Constitution, instead of from the legislature of the State. The authority is ample, and the stockholders exercise their own rights of property as an organization, all implied restrictions upon them having been removed by authorized congressional action. There are no State laws that prevent them from taking advantage of the conditions created by Congress affecting their property.

There is no occasion for the exercise of the right of eminent domain by taking their property for a public use. There is simply the control and management of the property of the corporation by the stockholders and owners, within the general purpose for which

the corporation was organized, a control which is permitted, in the particular form in which it is exercised, by the removal of all possible restrictions under a favoring enactment of the supreme legislative authority acting in its own domain. If there is doubt as to the correctness of the last propositions, all difficulty can be removed in any case by a permissive act of the State legislature.

I can not believe that the extreme doctrine of *Dow v. Northern Railroad* will ever be adopted by the Supreme Court of the United States and applied to a case like the leasing of a connecting line of railroad by one railroad corporation to another.

I shall be very glad, gentlemen, to answer any questions, if I can.

Mr. SIMS. The chairman is not present, but the agreement was made that Mr. Hamilton had the right of way now.

Mr. HAMILTON. I had the right of way before.

Mr. SIMS. But you yielded to me.

Mr. HAMILTON. I do not care to ask any questions at this time.

Mr. SIMS. You mean during this appearance?

Mr. HAMILTON. Unless something should develop during the course of the examination.

Mr. SIMS. Mr. Esch will come next.

Mr. ESCH. Your argument in favor of national incorporation, judging from your address, is largely based upon your experience as one of the holding committee of the Boston & Maine Railroad Co., and its financial distress in recent years.

Mr. KNOWLTON. I should hardly say my opinion is largely based on that. My opinion is based on broader and more general considerations, but my experience to which you have referred has been illustrative, in a very emphatic way, of the difficulties of the situation, and it seems to have strengthened, perhaps, by bringing home, particularly, the views which I presented.

Mr. ESCH. Have you entertained the views which you now express, with reference to national incorporation, prior to your experience in connection with the Boston & Maine?

Mr. KNOWLTON. I think so, although I had not given special study to the subject until I had this particular duty, which has forced the study on me.

Mr. ESCH. You desire, as chairman of that committee, to get the Boston & Maine on a working basis, and it has required you to appear before the legislatures of the several States, in order to get assent to your legislative program?

Mr. KNOWLTON. I have appeared before the legislatures of three of the four States which are interested. It includes the State of Vermont, wherein the Boston & Maine Railroad is not incorporated.

Mr. ESCH. I think you stated whereas the bills that you had advocated in two of the States were reasonably satisfactory, they were not satisfactory to the Legislature of New Hampshire.

Mr. KNOWLTON. The Legislature of New Hampshire refused to pass any act in its session two years ago. It has had another session since.

Mr. ESCH. You are now seeking legislation in the present session?

Mr. KNOWLTON. Yes, sir.

Mr. ESCH. Along that line?

Mr. KNOWLTON. There are a number of New Hampshire railroads that are active in this business, and the Boston & Maine has been

awaiting such action as they may accomplish, because we think they have a purpose similar to our own in that respect.

Mr. Esch. As I recollect your statement, you say that prior to 1916 the Boston & Maine was operated at a loss.

Mr. Knowlton. The deficit for the year ending June 30, 1914, was between two and three millions of dollars, without dividends.

Mr. Esch. In the last year you developed a comfortable surplus?

Mr. Knowlton. A surplus. I do not know whether it is a comfortable surplus.

Mr. Esch. I think that was the language you used.

Mr. Knowlton. It is a substantial surplus.

Mr. Esch. If that surplus should be continued into 1917—into the 1917 operating year—would it enable you to refinance the Boston & Maine without the aid of the State legislatures?

Mr. Knowlton. I suppose our committee, as a committee, has no power except through the ordinary machinery of the railroad, which is the directorate of the railroad. Of course our desire would be to refinance the railroad in a strong way, if we could, but I think every member of the board of directors is of the opinion that from the present outlook we could not expect to refinance successfully unless we could have a reorganization. A part of the trouble is that the Boston & Maine Railroad is not a great system. The capital, which I stated, you see is small, and it has leased a large number of corporations, and when the times are a little hard and the earnings do not come the loss all tumbles right down on the Boston & Maine Railroad, which is bound to pay these rentals in bad and good times.

Mr. Esch. Do you consider those rentals, in the line of experience of recent years, rather high?

Mr. Knowlton. I think as a class, taken together—there is a great difference in them in that particular—they are very high. Other people think differently, I know.

Mr. Esch. These leases you say run for a period of 99 years or thereabouts?

Mr. Knowlton. Yes, sir.

Mr. Esch. So that those obligations under your leases will run for many years yet to come?

Mr. Knowlton. Yes.

Mr. Esch. Under your reorganization did you hope to get rid of those obligations?

Mr. Knowlton. The plan of reorganization which has been most approved involves the taking in of these railroads into a consolidated corporation with the Boston & Maine and giving them preferred stock at rates similar to their rentals or equivalent to them. A plan has been proposed and agreed to by various parties to give them their dividends in preferred stock whenever the earnings would permit of it.

Mr. Esch. Was the Boston & Maine at one time a subsidiary of the New Haven?

Mr. Knowlton. Yes; well, I do not know whether that is the word. The New Haven got control of it through the Boston—

Mr. Esch. By stock ownership or how?

Mr. Knowlton. The Boston Railroad Holding Co. was created, and it acquired a majority of the stock and holds it to-day. It was

a subsidiary of the New Haven Railroad, and that is the way in which the New York & New Haven Railroad controlled the Boston & Maine when we were appointed.

Mr. ESCH. During such holding by the New Haven road were there any net revenues of the Boston & Maine, or did it run behind as it did prior to last year?

Mr. KNOWLTON. It ran behind, certainly, the last part of the time. I am not quite sure whether there were any net earnings during the earlier part of the time, because I can not fix the time.

Mr. ESCH. Did that running behind of the Boston & Maine add to the troubles of the New Haven which brought on the crisis on that road?

Mr. KNOWLTON. Not in any very material degree. Perhaps it was one of the elements, but not a great element.

Mr. ESCH. Have you read ex-Secretary Olney's letter to Mr. Thom. printed in the early part of the hearings?

Mr. KNOWLTON. No; but I happened to be before the committee when Mr. Thom read the letter from Mr. Olney, which is the one I suppose you refer to.

Mr. ESCH. What is your opinion of the plan therein suggested?

Mr. KNOWLTON. I never have seen the letter or any copy of it. I only heard the reading of it at that time. With the highest respect and regard for Mr. Olney, at that time it seemed he had not worked out the best way of dealing with such a subject.

Mr. ESCH. I have not read it recently myself, but if I recollect correctly he provided for some system of condemnation of the stock.

Mr. KNOWLTON. I think so.

Mr. ESCH. In order to get rid of objecting minority holdings which might sometimes interfere with the ease of transition from State to Federal control, under your plan, how do you get rid of that?

Mr. KNOWLTON. I do not think there is any difficulty in the law with that. The State of New Hampshire, in the case to which I have referred, decided that the legislature could not constitutionally authorize the lease of one railroad by another, which would bind the minority stockholders, even if the vote was ever so large, whether one-third or two-thirds. My belief is that that decision is not good law, and will not be considered good law anywhere else in the United States. The decision in Massachusetts is to the contrary. I think the reasoning, when you reflect on it—I think that reasoning and authorities, as far as I happen to know of any, are against that doctrine. It is true that the legislatures of some of the States—New Hampshire, of course, primarily—and some of the others to save questions have legislated so as to avoid that difficulty in some of their past acts, but my own belief is that that difficulty is not a very serious one.

Mr. ESCH. You do express the opinion that Congress had the right to establish this Federal corporation, which is to take over the stocks of the State corporation, and that Congress can fix a definite time within which that transfer should be made, and that thereafter a common carrier should no longer lawfully engage in interstate commerce?

Mr. KNOWLTON. If I understand your question aright, my answer is in the affirmative. I understand Congress has the right to regu-

late interstate commerce, which includes the power to establish Federal corporations to do all the business in interstate commerce. If it has that power it must necessarily mean it can exclude the further transaction of such business by a State corporation. I do not think for one moment you gentlemen would pass a statute to do that without making some provision to enable these people who own State corporations to avail themselves of their property, and so I have indicated some of the ways in which it can be done.

Mr. THOM. In your question you spoke of the Federal corporation taking over the stock——

Mr. ESCH. He referred to taking over the stock of the State corporations.

Mr. THOM. My understanding was not that the Federal corporation should take over the stock of the State corporation, but that there should be a requirement that the owners of the State corporations reincorporate under the Federal law, and when they did that, by virtue of the statute itself, the property and assets of the State corporation should pass to the Federal corporation, and not the stock; that should remain in the hands of the owners.

Mr. ESCH. The original holders.

Mr. KNOWLTON. I did not elaborate it quite that way. My idea was that Congress would provide for the establishment of Federal railroad corporations, and in connection with that would provide an arrangement whereby the Federal corporation, as a condition of its being, should be obliged to take over the stock of the State railroad corporation that wished to be taken over and voted to be taken over by a proper tribunal to be created to deal with this subject.

Mr. ADAMSON. Don't you think that that idea would be far easier and better if you want a Federal corporation for interstate transportation, to enact a law to authorize new companies, and at the same time to authorize the State corporations to change when they desire, and let it be voluntary?

Mr. KNOWLTON. That would come very nearly to my view. The authorization of new instrumentalities is a part of the plan.

Mr. ADAMSON. I think it would be more agreeable, reasonable, intelligent, and far more likely to be constitutional, as a proposal of this committee.

Mr. KNOWLTON. I should contrive some way to give the State corporations the right and power, upon a proper vote, to have their rights available—to get the benefit of them in one way or another.

Mr. ADAMSON. I can understand how that might be constitutionally, reasonably, and easily worked out.

Mr. KNOWLTON. It seems to me so.

Mr. DOREMUS. Judge, I was called out of the room just as you began your reference to the case of McCall against Mills. Do I understand you to cite that case as authority to settle the authority of Congress to provide for the Federal incorporation of the railroads?

Mr. KNOWLTON. Indirectly, yes; and perhaps I ought to say directly. Yes; that case establishes, in the strongest terms, the power of Congress to establish a Federal corporation to transact the business which ought to be supervised and controlled and managed by the United States, and while that relates to Federal banks, I say this, that the same doctrine has been directly and specifically applied to interstate commerce.

Mr. DOREMUS. I have not had occasion to read that case in a long time, but my recollection of it is—and you will correct me if I am wrong in my recollection—that among the questions involved was the power to tax this national bank.

Mr. KNOWLTON. That is in the case.

Mr. DOREMUS. And the court held that the national bank was an instrumentality of the Government and as such was not subject to taxation; in other words, they put the national bank, as it then existed, in the same category with the United States mint and customhouse, the post office, and other instrumentalities of the Government. Is that your recollection of it?

Mr. KNOWLTON. Well, the fundamental question, the proposition for which I cited the case, the argument of Chief Justice Marshall, which I have quoted, relates to this fundamental question, whether the establishment of such a Federal corporation to transact the banking business for the United States is legal and valid under the Constitution, and that is the only part of the case with which I dealt particularly. All the rest to which you refer is there, but that is rather incidental.

Mr. DOREMUS. You do not wish the committee to infer that a railroad corporation or railroad company incorporated under the Federal law would be an instrumentality of the Government?

Mr. KNOWLTON. I should not, for myself, have the corporation a corporation created directly by a special act of Congress, but under legislation which would authorize it and which might subject it to taxation.

Mr. ADAMSON. That is the way the national banks are authorized, is it not?

Mr. KNOWLTON. Substantially, I think.

Mr. DOREMUS. In the letter of Mr. Olney to which Mr. Esch refers and which Mr. Thom has inserted at page 113 of this printed argument, Mr. Olney makes these suggestions regarding the transfer of the property and rights of the railroad companies organized under State laws to the corporations that would be organized under the Federal statute—

4. It can not be doubted that a railroad corporation created by a national charter is an apt instrument for the carrying on of national transportation and that the organization of such a corporation with all appropriate powers and duties is a fit subject for treatment under the commerce power.

5. Nor is it to be doubted, because ample experience has shown, that in this matter of national transportation by railroads, public policy and the public welfare are at one with the law of the country. They imperatively require that the subject should be dealt with in all its phases by a single authority which can be no other than the Nation itself. The mixed jurisdiction over the subject now prevailing—the States exercising a part mostly through State charters and the United States a part, mostly through the commerce power—is thoroughly archaic, originated before the true scope of the commerce power was generally understood, and has resulted in a serious waste and inefficiency in railroad operation which is at once matter of public notoriety and public scandal.

6. In view of the settled law of the land as respects the national commerce power, as by virtue of this the United States practically undertakes to exercise the power for the benefit of the several States and of all the people, and as transportation by railroad is within that power and is to-day in a condition most unsatisfactory to the private owners of the railroads, as well as seriously prejudicial to the national interests, the question is of the remedy for that condition.

It may be claimed that Government ownership of all national railroads is the only true and adequate solution, a claim which time and sufficient experiment may show to be well founded. Yet Government ownership would have political hearings of such depth and moment as ought to prevent its consideration until and unless it is established that there is no way out. It is best to assume, in the first instance, therefore, that there is some other way out; that the question is essentially administrative rather than political; that it concerns our national housekeeping rather than the structure and stability of the house itself. * * *

Fourth. Stockholders of the old corporation, common or preferred, to be offered common or preferred shares or such other interests in the new corporation as, in the judgment of the organizers, will make their interests in the new equivalent to their interests in the old.

Fifth. Share in the old corporation to be purchasable for the new corporation by the organizers on terms which they may deem fair and not injurious to other parties to the proposed corporation: in the event of such purchase shares of the new corporation to be sold by the organizers to an amount sufficient to enable them to pay the agreed price.

Sixth. Shares of the old corporation not obtainable by exchange or purchase as above provided to be taken by the new corporation at its option under the power of eminent domain at a price fixed by a court of competent jurisdiction, or by such court and a jury at the election of the stockholder.

Do you care to give the committee the benefit of your opinion as to those suggestions?

Mr. KNOWLTON. I think that is all possible and all practicable in a way, but I think that his provision as to taking stock under the power of eminent domain is unnecessary, and that a statute could be passed such as would bind the minority and objecting stockholders to take the value of their stock or take the price at which the stock should be sold by a vote of two-thirds, just as they would in winding up the corporation take what would come from it.

Mr. DOREMUS. He also makes this suggestion:

The organizers to operate the national railroad concerned with all the powers of receivers of an insolvent railroad until a majority of the capital stock of the new corporation shall have been issued as hereinbefore authorized.

What would you say as to that?

Mr. KNOWLTON. Well, I have not undertaken to work out in such elaborate detail all the procedure for accomplishing the general purposes which I think ought to be accomplished, as Mr. Olney did in his letter, and I do not know whether I fully appreciate that particular part which you just read.

Mr. DOREMUS. I think that is all, Mr. Chairman. I notice that Mr. Thom. in his statement, indicates that they have in mind a method that is much simpler than this, than the one outlined by Mr. Olney. I suppose it will be presented to the committee later on.

Mr. THOM. Yes, Mr. Doremus. I say now that the proposal that we have in mind does not deal at all with the Federal corporation taking over the stock of the State corporation but with the Federal corporation taking over the property and assets of the State corporation and also assuming all of their liabilities, leaving the stock in the hands where it is now; and that, as this power is a power exercised under the constitutional authority to regulate commerce, if it is a power to regulate commerce, then all those original stockholders took their stock subject to the subsequent exercise by Congress of this regulating power and can not be heard to object if Congress does do that, and as a proper method of regulating commerce requires Federal incorporation. I shall ask the committee for an opportunity of

presenting an argument on this legal question before we finally get through with the hearings.

The VICE CHAIRMAN. I wanted to supplement the answer to Mr. Doremus's question before turning the witness over to Mr. Sims, if Mr. Sims will permit.

Mr. SIMS. Certainly.

The VICE CHAIRMAN. Touching the vote and method of going into these Federal corporations, if it is a voluntary system of development, which you and I seem to favor—that is, if we have to have any I would rather agree with you than with the other people—then it would require just the same vote and procedure as it would to sell the property, would it not?

Mr. KNOWLTON. I think just the same.

The VICE CHAIRMAN. That is all.

Mr. SIMS. I do not think I want to ask the judge very many questions; but if I understand you, Judge, in your replies, you are not in favor of a general compulsory requirement upon all railroad companies to take out a Federal charter?

Mr. KNOWLTON. Well, yes. I do not say take out Federal charters, but I am in favor of a compulsory requirement that all interstate commerce shall be conducted over railroads acting under Federal charters; and that, of course, would virtually preclude the successful operation of State railroads and would compel the State railroad to avail themselves of such provision as is made for them, to save loss on their property.

Mr. SIMS. In other words, you would stop the wheels of interstate commerce?

Mr. KNOWLTON. No, sir. After due time, and when there is opportunity to accomplish the whole business, I should say that interstate commerce must be conducted over railroads chartered under Federal law, and that virtually, of course—as to all great railroads, certainly—would wind up the State railroads, compel them to dispose of their property or to avail themselves of the provision Congress makes for them.

The VICE CHAIRMAN. I want to withdraw my agreement to part of your views.

Mr. SIMS. But, Judge, is not the good that is to come from universal Federal incorporation to be mainly to concentrate regulation in one regulating authority and one regulating body?

Mr. KNOWLTON. I think that is a very important element in it.

Mr. SIMS. Is it not the chief object and aim and end of it?

Mr. KNOWLTON. I think there are numerous other advantages besides that. That may be the most important of them all. That is a very important one.

Mr. SIMS. In your judgment, you think that the States would over-regulate, or may if they continue; that the States would regulate to the extent of the powers that they have unless the Federal Government should go in and assume the regulating authority, which it has the right to do?

Mr. KNOWLTON. Different States regulate the same railroad in different ways, if it happens to be a railroad incorporated in these several States, and different public-service commissions act somewhat differently. Of course, there is harmony in many particulars, and I

assume that they are trying to approximate harmony; but the difficulties, I think, are great in that particular.

Mr. SIMS. One of the troubles, then, in your judgment, is that there is too much adverse and diverse and contradictory and unnecessary regulation on the part of the States?

Mr. KNOWLTON. Yes, sir; that is one.

Mr. SIMS. And you want to avoid that by having all the railroads incorporated under the Federal Government, so as to avoid this State regulation, so far as that will avoid it, and concentrate it in one regulating authority?

Mr. KNOWLTON. I think there should be a single system of regulation, and not several systems covering the same railroad.

Mr. SIMS. Would it not be necessary, then, to have a single regulating authority?

Mr. KNOWLTON. In a sense it would be; that is, the Interstate Commerce Commission, or something corresponding to it.

Mr. SIMS. The Interstate Commerce Commission is exercising only such authority as Congress confers upon it. It is Federal regulation—Government regulation.

Mr. KNOWLTON. Yes; the Federal Government does it. I want to ask the chairman—perhaps he was absent—if he noticed this in what I read: I said that the regulations or the provisions in reference to Federal incorporation might be more or less strict in various particulars, and much might be accomplished, probably, stopping short of what I said I should think would be the best thing; but my own view would be that as to interstate commerce the logical result would be to have it all done by railroads acting under Federal charters.

The VICE CHAIRMAN. Under that view of interstate-commerce railroads every old woman carrying a basket of eggs across a State line is acting in interstate commerce; and the birth of a man or the incorporation of a company has nothing on earth to do with the control of sovereignty over that man or that company.

Mr. KNOWLTON. What I said in this paper was that interstate commerce conducted over railroads should be under railroads having Federal charters. I agree that as to the woman who takes a basket of eggs across a State line, Congress would hardly make any statute.

The VICE CHAIRMAN. Suppose there was a different law in each State for the marketing of eggs; would you think that that ought to be under Federal incorporation?

Mr. KNOWLTON. I am inclined to think that that carries us further into details than I anticipated.

The VICE CHAIRMAN. You are dealing only with railroads, and you have not broadened out and looked at everything. Railroads are one feature.

Mr. KNOWLTON. Railroads are the feature with which we are dealing.

The VICE CHAIRMAN. Take mortgages in different States; are you going to require that Congress shall regulate all those mortgages?

Mr. KNOWLTON. What I have been considering is interstate commerce conducted over railroads.

The VICE CHAIRMAN. You can get yourself lost in theorizing on uniformity and run right counter to God and nature and the Supreme

Court of the United States, which has formally declared that there is no such thing as uniformity in the United States.

Mr. SIMS. In concentrating the power of regulation or control in the Federal Government, do you not think it wise that the National Government should exercise all the control over these railroads doing an interstate business, which it has the power to provide and exercise every element and every detail of it?

Mr. KNOWLTON. I do not quite think that, Judge Sims. I think that there are local matters about which Congress might legislate, and which it might subject to national regulation, which it might be better, because of the narrow local quality of them, to leave to local tribunals. But as to those things which affect the great general business of commerce, I think there should be a single source of regulation.

Mr. SIMS. Then, anything that a State or county or city might do that would substantially interfere with the ability of the railroad to perform the functions of interstate commerce equally and impartially and fairly, in all its relations with all the different States through which it runs, and with all the services that it may be called on to perform—in other words, uniform service?

Mr. KNOWLTON. I think that Congress in providing for the regulation of interstate commerce should go as far as it is reasonably necessary to achieve the best results, to make effectual the regulation; but I think it might stop short without interfering with general results: it might stop short of some specific local matters.

Mr. SIMS. If you do not cover the whole field, then may not the States occupy the uncovered field, and to that extent be an annoyance and a vexation and a detriment to the economic operation of the railroad company?

Mr. KNOWLTON. Yes, sir; but if the uncovered field is large enough and of such a kind as to be a serious detriment to interstate commerce, then Congress ought to go a little further and take care of it. I would not leave a field of that kind.

Mr. SIMS. Would you leave taxation to the State, as it is now?

Mr. KNOWLTON. I do not know whether I would say as it is now.

Mr. SIMS. Well, would you leave taxation to the States, unaffected and unregulated or uncontrolled by the National Government through its instrumentalities?

Mr. KNOWLTON. My impression is that I should leave taxation to a certain extent and in certain fields to the States, and perhaps not others.

Mr. SIMS. You would split it up, then?

Mr. KNOWLTON. Well, taxation is split up into a good many fragments nowadays.

Mr. SIMS. I know; but you are going to let the States retain part of the taxation which the Federal Government may have the power to prevent or to exercise itself?

Mr. KNOWLTON. Of course, it is possible to do those things one way or another. Which would be the wiser way in such a detail as that I am not prepared at this moment to answer to my own satisfaction.

Mr. SIMS. Suppose the different States levy taxation which is so unequal as between each other, in miles of road or value of property.

or income, net or gross, as to make it a substantial discrimination in favor of or against a particular State; I mean the people of some particular State served by the line; would you then think that the National Government should exercise its authority to prevent the States from taxing at all this nationally incorporated railroad?

Mr. KNOWLTON. I think the National Government should prevent taxation to that extent and with that result. I do not know that it necessarily follows that it should prevent taxation at all.

Mr. SIMS. I mean regulate taxation; I do not mean prevent it, but regulate or fix or determine what tax shall be levied and collected, and should be uniform in the different States served by the corporation.

Mr. KNOWLTON. If you are not going to put all your taxation into the General Government or State governments, just where you would draw the line may be a matter of difficulty calling for nice and careful consideration. My impression now is that I should draw the line, leaving certain qualities of taxation to the State; but perhaps that would not be the wisest way.

Mr. SIMS. In taxation, as a general principle, would you tax railroads upon their physical, tangible properties located within the States, or would you tax them upon the amount of outstanding capital, stocks, and bonds, or would you tax them according to net or gross earnings?

Mr. KNOWLTON. Those are details which I have not considered in particular, and I could not give you an opinion which I should feel was certainly my final opinion upon such questions as that. I think they are details that we need not undertake to work out at this moment.

Mr. SIMS. It seems to me that if you are going to deprive the States of the authority to do anything that they now do, we should know why; and then if the National Government, under national charter, is going to exercise any authority that it does not now exercise, it should exercise this authority where the States are not now uniformly exercising the same authority, with its effect on the ability of the corporation to perform its services.

Mr. KNOWLTON. In Massachusetts, as to taxation of railroads, we tax them just as we tax any other property, any real estate owned by the railroad company outside of its regular right of way. We tax that. We do not tax its property within the right of way which is devoted strictly and narrowly to a public use, but we impose a franchise tax upon the railroad, upon all its property; so that there are two kinds of tax. The franchise tax is a general tax which depends upon the value of the capital and the value of the property as a whole; and then taxation of property which it happens to own outside of the strictly and narrowly public use of a right of way. There are various ways of working out taxation.

Mr. SIMS. I am not asking you for the details of the Massachusetts taxation; I am only thinking whether the Government should have the taxation or the State of Massachusetts.

Mr. KNOWLTON. I mentioned that rather by way of illustration of the different ways in which you can deal with such questions.

Mr. SIMS. Here is a table of State railroad taxes for the year 1914 which has just been published in a book which was loaned me. The book is entitled "Government Partnership in Railroads." Mr. Mark Wymone is the author of it, but I suppose he took his figures from official sources. New Jersey collected in that year \$6,604,781 in taxes, which equaled \$3,068 per mile of line. New Jersey has 2,152 miles, or about that. She collected on that 2,152 miles \$6,604,781. I do not know the system by which New Jersey collects its railroad tax, but I know that \$3,068 per mile of line, if it is applied to all of the railroad mileage in the United States upon a mileage basis, that a good many of them are going into receivers' hands to stay.

Mr. ESCH. That does not show whether it is single or double track, Judge.

Mr. SIMS. I am supposing that the "per mile of line" all mean the same thing.

Mr. ESCH. But they may be double track.

Mr. SIMS. But I am supposing that in every State here the "mile of line" means the same thing in this table. Now, New Jersey got \$3,068 per mile of line in 1914, and South Dakota got \$255 per mile of line. The average for all the railroads of the United States during that year was \$579 per mile of line. The amount collected was \$136,263,054. But if every State in the United States collected per mile of line the same amount in taxes as did New Jersey for that year the taxes would have amounted to \$681,315,270. Now, do you not think such a power of taxation exercised by a State might hamper a railroad running through that State into another State whose tax is but \$255 a mile in rendering such service and charging such rates and making such improvements throughout its entire mileage as it could if no such tax was collected?

Mr. KNOWLTON. There would have to be some method adopted of working out what seemed to be the best approximation to justice. I think, taking all the railroads in the United States together, that taxation by mile of line would be a very inequitable manner of taxation when you take South Dakota and compare it with Connecticut.

Mr. SIMS. There is no doubt about that. Now, in your State, Massachusetts, in that year you collected \$3,232,883, or \$1,550 a mile. You collected a little less than half what New Jersey did per mile of line. The State of New York for that year collected \$10,709,702, or \$1,311 per mile of line. The State of Texas, having 14,658 miles of line, collected for the same year \$4,382,808, or \$299 per mile. If the State of Texas had collected the same tax per mile of line that New Jersey did, for that State alone it would have amounted to \$44,970,744 for that year. And the State of Illinois, having 12,000 miles of line, instead of collecting what it did collect, \$8,097,545, or \$675 a mile, would have collected \$36,816,000 a mile.

I will ask to have the complete table inserted in the record at this point.

(The table referred to is here printed in full, as follows:)

State railroad taxes, year 1914.

State	Amount.	Per mile of line.			
New Jersey.....	\$6,604,781	\$3,068	Maine.....	35	3496
Rhode Island.....	365,262	1,845	Nevada.....	27	472
District of Columbia.....	57,394	1,678	Arkansas.....	98	466
Massachusetts.....	3,232,883	1,550	Tennessee.....	20	448
New York.....	10,709,722	1,311	Wyoming.....	40	448
Ohio.....	9,235,378	1,032	Delaware.....	02	448
Connecticut.....	1,013,836	1,017	Montana.....	12	445
Washington.....	4,860,609	995	New Mexico.....	41	443
Pennsylvania.....	8,824,363	831	Mississippi.....	28	442
Maryland.....	983,434	732	Nebraska.....	51	420
Oregon.....	1,730,266	683	Kansas.....	97	396
Illinois.....	8,097,545	675	Louisiana.....	23	381
Indiana.....	4,840,652	670	Colorado.....	19	372
California.....	4,925,589	665	Alabama.....	82	357
Idaho.....	1,738,925	662	North Dakota.....	44	354
New Hampshire.....	909,313	649	Iowa.....	44	337
Wisconsin.....	4,387,545	619	North Carolina.....	43	338

Arizona.....	1,133,451	525			
Michigan.....	4,316,394	519	Total, United States.....	136,263,054	579
Vermont.....	499,224	509			

¹ Excludes \$4,769,512 assessed by the United States Government and other smaller items on Canadian mileage.

Mr. SIMS. Now, are not these enormous differences in the amount of taxes collected per mile of line in the different States of the Union sufficient of themselves to show that if it is necessary for the Federal authorities to take exclusive control of any burden of the railroads that they now have to bear it certainly ought to take charge of the amount of taxes that might be collected from the same railroad company operating in different States; and why should taxation be left out and excepted from the provisions of a national charter?

Mr. KNOWLTON. I have no doubt that Congress should make some provisions in reference to taxation of Federal corporations.

Mr. SIMS. That, then, should be uniform?

Mr. KNOWLTON. Well, I would not say that it should be the same rate per mile in Dakota that it is in New Jersey.

Mr. SIMS. No; uniform taxation does not mean that. This is done in this way by mile of line. Now, it seems to me the suggestion of taxation on gross earnings of a railroad is the best and most uniform system that can be adopted; but, whatever the tax is on a railroad doing an interstate business, it should be uniform. Therefore I can not understand why a gentleman coming before this committee advocates leaving the taxing power, which is the power to destroy, unhampered, uncontrolled, and unregulated, in the hands of the States but wants to take away from it the other powers that the States can exercise.

Mr. KNOWLTON. I would not leave it unhampered, uncontrolled, and unregulated in the States.

Mr. SIMS. Now, then, in granting a national charter, would not Congress have a right to place any condition in the charter that it saw proper?

Mr. KNOWLTON. I think so.

Mr. SIMS. With reference to everything pertaining to the functions to be performed by the charter?

Mr. KNOWLTON. I think so.

Mr. SIMS. I agree with you. I think so, too; but I am asking you for your opinion and judgment on it. And if overregulation is affecting the railroads economically—and I think it is; I do not think anybody can question that, that some regulation is, by the States and multiplicity of regulatory bodies—can we tell to what extent it is going to go if it goes to its limit in all of the States of the Union?

Mr. KNOWLTON. I have assumed that these Federal corporations will be corporations covering a certain system, a certain part of the country; that it would not be one great corporation for the whole country, and, on the other hand, it would not be a corporation limited by State lines, and that there would be some tribunal created that would deal with the matter of incorporation, with various powers, and that there will be some provision with regard to taxation as to these corporations in different parts of the country, some system adopted. I have not attempted to work out what will be a good system of taxation.

Mr. SIMS. Now, I will ask you a practical question. It is often, perhaps, better to do something that we are not doing, or refrain from doing something that we are doing; but when it has to be done by law, and the law has to be made by a legislative body, and the members of that body have to be elected by the people, it makes it practically very difficult to carry out the theoretically best plan. Now, do you think it is reasonable to suppose for a moment that the State of New Jersey and these States, like your own, where you get \$1,150 per mile, and New York \$1,311 per mile, that they will readily consent to give up this power to tax the tangible property through their States to the United States Government?

Mr. KNOWLTON. I should hope that the people of the different States—the people of the State where I live—would want to do, and would consent to do, that which was for the public interest if they are convinced it is for the public interest.

The VICE CHAIRMAN. The time for adjournment has arrived; and without objection by the committee, it will be ordered that the committee shall stand adjourned, subject to the call of the chairman, or the acting chairman in the absence of the chairman, at any time after two weeks from to-day.

Gentlemen, the hearings that have been printed have been exhausted, and repeated references have been made by Judge Lovett and Mr. Kruttschnitt to the testimony of Mr. Thelen, and I shall take the liberty to print either the statement that Mr. Sims read from the newspapers from Mr. Thelen or to reprint his testimony; also a speech which was printed in Mr. Thelen's testimony by a gentleman from Virginia, whose name I have forgotten. I will also print in the hearings, touching the car service that Mr. Esch examined Mr. Kruttschnitt about, the paper from Mr. Prince, who has a plan with reference to car shortage.

That being understood, the committee will stand adjourned.

(Thereupon, at 1.30 o'clock p. m. the joint committee adjourned, subject to the call of the chairman.)

[Utilities Magazine, January, 1917.]

THE NEWLANDS RAILROAD INVESTIGATION.

By MAX THELEN, *President National Association of Railway Commissioners.*

The Federal Government is now engaged in two public-utility investigations of momentous importance.

The first investigation, in order of time, is the valuation of all the interstate railroads and telephone and telegraph companies, now being conducted by the Interstate Commerce Commission, by its Division of Valuation. This proceeding is the most gigantic public-utility valuation ever undertaken.

The second investigation is far broader than the first in its scope, and may result in an entirely changed relationship between Government, State and Federal, and all public utilities engaged in commerce among the States or with foreign nations. The Newlands railroad investigation, so-called, is not confined to railroads. It includes all public utilities engaged in commerce among the States and with foreign nations—railroad, telegraph, telephone, wireless, cable, water carrier, and express companies. It covers not merely the public regulation of these various classes of utilities but also the entire subject of Government ownership of these utilities and the relative merits of Government ownership as compared with Government regulation of all these utilities. Never before has the Federal Government undertaken an inquiry so colossal, so fraught with momentous potentialities, economic, financial, and governmental.

PRESIDENT'S MESSAGE.

The Newlands railroad investigation was initiated in response to the President's message to Congress, presented on December 7, 1915. The relevant portions of the message read as follows:

"In the meantime may I make this suggestion? The transportation problem is an exceedingly serious and pressing one in this country. There has from time to time of late been reason to fear that our railroads would not much longer be able to cope with it successfully as at present equipped and coordinated. I suggest that it would be wise to provide for a commission of inquiry to ascertain by a thorough canvass of the whole question whether our laws, as at present framed and administered, are as serviceable as they might be in the solution of the problem. It is obviously a problem that lies at the very foundation of our efficiency as a people. Such an inquiry ought to draw out every circumstance and opinion worth considering, and we need to know all sides of the matter if we mean to do anything in the field of Federal legislation.

"No one, I am sure, would wish to take any backward step. The regulation of the railways of the country by Federal commission has had admirable results and has fully justified the hopes and expectations of those by whom the policy of regulation was originally proposed. The question is not what should we undo. It is whether there is anything else we can do that would supply us with effective means, in the very process of regulation, for bettering the conditions under which the railroads are operated, and for making them more useful servants of the country as a whole. It seems to me that it might be the part of wisdom, therefore, before further legislation in this field is attempted, to look at the whole problem of coordination and efficiency in the full light of a fresh assessment of circumstances and opinion as a guide to dealing with the several parts of it."

THE JOINT RESOLUTION.

In response to the President's suggestion, Senate joint resolution No. 60 was introduced in the Senate. After amendment on the floor of the Senate so as to include the question of Government ownership, the resolution was adopted by both Houses of Congress and approved by the President on July 20, 1916. The resolution reads as follows:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled. That the Interstate Commerce Committee of the Senate and the committee of the House of Representatives on Interstate and Foreign Commerce, through a joint subcommittee to consist of five Senators and five Representatives, who shall be selected by said committees, respectively, be, and they hereby are, appointed to investigate the subject

of the Government control and regulation of interstate and foreign transportation, the efficiency of the existing system in protecting the rights of shippers and carriers and in promoting the public interest, the incorporation or control of the incorporation of carriers, and all proposed changes in the organization of the Interstate Commerce Commission and the act to regulate commerce, also the subject of Government ownership of all public utilities, such as telegraph, wireless, cable, telephone, express companies, and railroads engaged in interstate and foreign commerce and report as to the wisdom or feasibility of Government ownership of such utilities and as to the comparative worth and efficiency of Government regulation and control as compared with Government ownership and operation, with authority to sit during the recess of Congress and with power to summon witnesses, to administer oaths, and to require the various departments, commissions, and other Government agencies of the United States to furnish such information and render such assistance as may, in the judgment of the joint subcommittee, be deemed desirable, to appoint necessary experts, clerks, and stenographers, and to do whatever is necessary for a full and comprehensive examination and study of the subject and report to Congress on or before the second Monday in January, 1917; that the sum of \$24,000, or so much thereof as is necessary to carry out the purposes of this resolution and to pay the necessary expenses of the subcommittee and its members, is hereby appropriated out of any money in the Treasury not otherwise appropriated. Said appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said subcommittee, which audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of such subcommittee."

As will be observed, the joint resolution provides for investigation of the following subjects:

1. Government control and regulation of interstate and foreign transportation.
2. The efficiency of the existing system in protecting the rights of shippers and carriers and in promoting the public interest.
3. The incorporation or control of the incorporation of carriers.
4. All proposed changes in the organization of the Interstate Commerce Commission and the act to regulate commerce.
5. Government ownership of all public utilities, such as telegraph, wireless, cable, telephone, express companies, and railroads engaged in interstate or foreign commerce; the wisdom or feasibility of Government ownership of such utilities; and the comparative worth and efficiency of Government regulation and control as compared with Government ownership and operation.

THE JOINT COMMITTEE.

The following members of the Senate and House were appointed members of the joint committee:

Senate: Francis G. Newlands, Nevada; Joseph T. Robinson, Arkansas; Oscar W. Underwood, Alabama; Albert B. Cummins, Iowa; Frank B. Brandegee, Connecticut.

House of Representatives: William C. Adamson, Georgia; Thetus W. Sims, Tennessee; William A. Cullop, Indiana; John J. Esch, Wisconsin; Edward L. Hamilton, Michigan.

The members of the joint committee organized by selecting as chairman Francis G. Newlands and as vice chairman William C. Adamson.

THE HEARINGS.

The first hearing was held in Washington on November 20, 1916. Subsequent hearings were held on November 23, 24, 25, 27, 28, and 29 and December 1, 2, 6, 7, and 9. On the last day the joint committee adjourned until the further call of the chairman. It is supposed that Congress will continue the joint committee and will extend its time to report, and that sessions may be resumed after March 4, 1917, if not earlier.

More than nine months ago the railroads publicly announced that they had a plan or program of remedial legislation which they desired to present to Congress. In fact, it is generally understood that the hereinbefore-quoted paragraphs from the President's message of December 7, 1915, were inserted because of the representations of the railroad executives to the President that

the railroads were suffering and that they had a program of remedies which they desired to present to Congress.

Nevertheless, at the first hearing of the joint committee the railroads took the position that they were not ready, that their minds were in a formative stage, and that they wished thereafter to formulate suggestions in the light of such testimony as might first be presented by the "representatives of the public," meaning thereby various chambers of commerce, boards of trade and bourses, economists, publicists, bankers, and financiers. It may be pertinent in this connection to observe that most of the various chambers of commerce, boards of trade, and bourses which have entered their appearance before the joint committee intend to present the railroad program, or parts thereof, and that most of the economists and publicists, bankers, and financiers who are to appear were suggested by the carriers, who had been in communication with them with reference to the evidence which they are to present to the joint committee. The representatives of the "public" have, of course, seen none of these witnesses, nor have they vied with the railroads in the tremendous publicity campaign which the railroads have been waging for almost a year preparatory for these hearings.

The railroad plan before the joint committee very obviously was to have their program presented not by themselves but by the supposed "representatives of the public." We may assume that after their plan had been thus presented the railroads would have graciously assented to it, thus producing perfect harmony and accord.

Even at this late date some railroad executives and their advisors still seem to think that the way to play the game with the public is to play one card on the table and keep three under the table. Some friend should tell them that that way of playing the game will no longer win in this country. The maneuvers of the railroads at the opening of the Newlands investigation reminded me of a great ostrich looming in the foreground, clearly seen by every observer, yet with its head in the sand, imagining that no one saw it.

The joint committee at once saw the situation. The committee very properly directed the railroads, who, as everyone knew, were there to propose changes in the existing order of things, to stop their maneuvering and to present their program.

The following witnesses have appeared, in order, before the joint committee: Alfred P. Thom, William J. Bryan, Max Thelen, and Smith Brookhart.

Mr. Thom is general counsel for the Southern Railway Co. and counsel for the advisory committee of railway executives. He presented the railroad program. He testified on November 23, 24, and 25 and was cross-examined by the members of the joint committee on November 27, 28, and 29, and December 1 and 2.

Mr. Bryan opposed the taking of power over railroads from the States and the centralization thereof in the Federal Government, as urged by the railroads. He testified on December 7.

Mr. Thelen presented the opening statement on behalf of the National Association of Railway Commissioners and the various State railroad and public-service commissions. He opposed those portions of the railroad program which contemplate taking from the people of the States all important powers over railroads and which urge the Federal incorporation of all the railroads as the means to accomplish this purpose. He testified on December 6 and 9. He stated that later during the hearings the National Association of Railway Commissioners will give consideration to each change suggested by the railroads and will probably present their own constructive suggestions.

Mr. Brookhart represented the Board of Railway Commissioners of Iowa. He advocated Government ownership and operation of the railroads. He testified on December 9.

The completion of the cross-examination of Mr. Thom and the cross-examination of Mr. Bryan, Mr. Thelen, and Mr. Brookhart were deferred until a later date.

CONTENTIONS OF RAILROADS.

The contentions of the railroads were ably and eloquently presented to the joint committee by Mr. Alfred P. Thom.

Mr. Thom first drew attention to the financial needs of the railroads, present and prospective. He admitted that the railroads have failed to supply the necessary cars, equipment, and terminal facilities, and that the railroads require and will require large amounts of additional capital for additions, bet-

terments, and extensions. He referred to the necessity of large expenditures to make the railroads more effective instrumentalities of national defense. He testified that during the next 10 years the railroads will be compelled to expend \$1,250,000,000 annually for additions to capital account and \$250,000,000 annually for refunding maturing indebtedness.

Mr. Thom urged that railroad credit has been seriously impaired, and that unless the legislation now proposed and hereafter to be proposed by the railroads is enacted they will find great difficulty in securing the necessary additional funds. He testified that in 1915 less than 1,000 miles of new railroad were constructed in the United States, and that this is the least additional mileage of railroads constructed in this country in any year since 1848.

Referring further to railroad finances, Mr. Thom testified that the percentage of the bonded indebtedness of the railroads to the total face value of all their securities, including both stock and bonds, had increased from 49.78 per cent in 1900 to 61.8 per cent in 1914 and 65 per cent in 1916. The result of financing railroads almost entirely from other people's money through the sale of bonds appears all the more serious when attention is drawn to the fact that the 100 per cent face value of securities referred to by Mr. Thom includes the full par value of all outstanding capital stock, including all the water therein.

Addressing himself then to the cause of impaired railroad credit, Mr. Thom urged that the cause is public regulation of the railroads, both Federal and State, but principally State. He urged that from the point of view of the railroad financier there are two great objections to public regulation, first, that the regulating authority can affect the railroad's gross revenues, and, second, that it can affect the railroad's gross operating expenses, including taxes. These two conditions are, of course, inherent in public regulation of the railroads, and would exist as well under exclusive control by the Federal Government. Mr. Thom conceded that public regulation must continue, but argued that regulation has been undertaken and is being carried forward in a spirit of vindictiveness. He urged that there be now a change in what he alleged to be the public attitude toward the railroads.

REMEDIES PROPOSED BY RAILROADS.

To alleviate the alleged existing conditions the railroads proposed to the joint committee the following nine specific remedies as the first installment of their program:

1. The taking away from the States and the vesting in the Federal Government of all power over railroads, as to matters both State and interstate, except only the power of the States over taxation and police powers which are not "vital," which two powers are to be left to the States "for the present" as a matter of policy.

2. The compulsory incorporation under charter from the Federal Government of all railroads to any extent engaged in interstate commerce and the removal of all such corporations from control by the States under their existing State charters, this being the instrumentality suggested by the railroads to enable them to accomplish their purpose to take away the powers of the States.

3. The taking away from the Interstate Commerce Commission of all powers except those which are judicial; the vesting of all powers of supervision, detention, prosecution, and correction over railroads in a new Federal commission to be known as the Federal railroad commission, with a right of review of its orders to be exercised by the Interstate Commerce Commission; increases in the salaries and tenure of office of the members of the Interstate Commerce Commission; and the creation of an indefinite number of "regional commissions," 15 or more, subordinate to the Interstate Commerce Commission, to sit in various sections of the country and to assist the Interstate Commerce Commission, not merely to exercise its present functions but also to perform the tremendous mass of local and detailed work in the regulation and supervision of railroad, telephone, and telegraph companies, which is now being done, promptly and generally wisely and efficiently, by the railroad and public service commissions of the various States of the Union.

4. The establishment of minimum rates, in addition to maximum rates, as at present, by the Interstate Commerce Commission, with power to determine the relationship between rates and differentials.

5. (a) The amendment of the interstate-commerce act, so as to provide that in passing on the reasonableness of railroad rates it shall be the duty of the

Interstate Commerce Commission to give consideration to certain specified factors, namely, the value of the service (our old friend—"all the traffic will bear"), the rights of the passengers, shippers, and owners of the property transported, the expenses incident to the maintenance and operation of the carrier's property, the rights and interests of the stockholders and creditors of the corporation, the necessity for the maintenance in the public service of efficient means of transportation, and for the establishment from time to time of additional facilities and increased service, and any other pertinent elements.

(b) The amendment of the interstate-commerce act so as to limit the power of the Interstate Commerce Commission to suspend rates from 10 months to 60 days, with provision for refunds if the increased rates should not have been allowed to become effective.

6. The grant to the Interstate Commerce Commission of the power to establish railway mail pay. (This has already been done.)

7. The grant to the Federal Government of the exclusive power "to supervise the issue of stocks and bonds by railroad carriers engaged in interstate and foreign commerce."

8. The grant to the railroads of the right to merge and consolidate, under authority of the Interstate Commerce Commission.

9. The grant to railroad traffic and other officials of the right to meet and agree with respect to rate practices, subject to disapproval of such agreements by the Interstate Commerce Commission.

Mr. Thom states that, at least for the present, the railroads would not go into the question of wages before the joint committee.

RAILROAD DRIVE AT STATES.

While each plant in the railroad program deserves, and will no doubt receive, careful consideration, the main effort of the railroads and their allies is being centered on the drive against the States. It is proposed to take from the States not merely all the powers which they are now exercising over interstate commerce (by reason of the failure of the Federal Government heretofore to enter certain field of activity in the regulation of interstate commerce), but also to deprive the people of the States of the right to regulate and supervise the purely State rates, service, facilities, equipment, and safety of operation of practically every railroad in the United States. The only powers over railroads to be left to the States are to be the taxing power and the power over police regulations, which are not "vital." These powers are to be left "for the present" only, as a matter of policy.

Up to the present time, the charges of the railroads against the States rest almost entirely in mere generalities.

The railroads allege that their financial difficulties have been caused largely by the action of States in reducing their rates to "just above the point of confiscation." When we remember that, on the showing made by the railroads themselves, only 15 per cent of their entire business is State business it is difficult to understand how the difference between reasonable State rates and rates "just above the point of confiscation" could have placed the railroads in their present financial condition, even if all the States had systematically entered upon a campaign to do the things with which the railroads charge them, which the States, of course, have not done. It is more difficult to disprove than to make mere general charges. The representatives of the States before the joint committee have called upon the railroads to point out, by page and volume of the record, the instances in which they claim that railroad rates have been cut to the point of confiscation. When these cases are specified the States will be prepared to present further testimony with reference to them.

The railroads further urge that some States have reduced railroad rates unduly for the purpose of discriminating against the business of sister States or against interstate commerce. If such instances have existed, they are now all taken care of by the decision of the Supreme Court of the United States in the last Shreveport case, *Houston, East & West Texas Ry. Co. and Houston & Shreveport R. R. Co. et al. v United States*, the Interstate Commerce Commission, et al. (234 U. S., 342). Whatever the representatives of the States may hereafter present concerning this decision, the point urged by the railroads has been fully met by the Supreme Court.

It is further contended that in three instances the power of the States over the security issues of railroads has been used unwisely or improperly. The representatives of the States have consistently urged that the Federal Government

should perform what we believe to be its clear duty in providing for effective control of the issue of securities and kindred matters of all railroads engaged in interstate commerce. Such control might be either concurrent with the States affected or exclusive. In either event, any existing difficulties could easily be adjusted. Action in this field of regulation can readily be taken without interference in any other field of railroad regulation.

If the railroads should be successful in their drive against the States, the inevitable result would be either the breakdown of all public regulation of the railroads or the establishment of an enormous Federal bureaucracy, not familiar with local conditions and removed from access by the local citizen who now finds adequate and speedy relief at the hands of his State commission.

In advocating the taking from the people of the States of practically all power over railroads, even in purely State and local matters, the railroads have taken on themselves a burden of proof which, in my judgment, they never can sustain.

RAILROADS PROSPEROUS.

The railroads have chosen a particularly inappropriate time to raise the cry that public regulation has driven them to the wall financially.

Every person familiar with financial conditions knows that the fiscal year 1915 was a good year for the railroads; that the fiscal year 1916 was the most prosperous year in their history; and the fiscal year 1917 has been at least as good for the railroads as the corresponding period in 1916.

The following table, taken from the financial columns of the *Financial Age* of October 21, 1916, contains a comparison of income available for dividends on the common stock of the railroads named in the fiscal years 1915 and 1916:

Comparison of income available for dividends earned by the railroads named in the fiscal years of 1915 and 1916.

	1915	1916
	Per cent.	Per cent.
Union Pacific.....	11	15.5
Southern Pacific.....	7.2	11
Atchafalaya.....	9.2	12.5
St. Paul.....	3.28	17.2
Northern Pacific.....	7.58	17.4
Chicago, St. Paul, Minneapolis & Omaha.....	7.71	11.7
Northwestern.....	7.50	11.4
"Soo Line".....	7.87	11.1
Wisconsin Central.....	(3)	9.5
Alabama Great Southern.....	5.4	11
Illinois Central.....	6.27	11
Louisville & Nashville.....	6.8	18.4
Southern.....	.03	12.5
Lehigh Valley.....	10.4	11
Jersey Central.....	19.36	21
Pennsylvania.....	8.5	11
Baltimore & Ohio.....	5.5	11
Reading.....	10.6	11
Chesapeake & Ohio.....	4.25	11
Norfolk & Western.....	8.8	11.7
New York Central (fiscal year ending Dec. 31).....	8	11.5

¹ Common. ² Deficit. ³ Preferred. ⁴ About. ⁵ Nearly. (10.96.) ⁶ Probably.

Referring to the great prosperity of the railroads the *Financial Age*, in its issue of October 7, 1916, said:

"That the railroad list should have occupied so much of Wall Street's attention during the past week is not surprising in view of the remarkable statements of railroad earnings that are daily coming to hand. Recently published returns of several of the companies' largest systems are not only impressive in their aggregate but all the more so on account of the substantial increases over corresponding periods of last year, when traffic on all the leading systems was beginning to show material improvement over previous years. A notable instance of this was furnished by the publication during the week of the Union Pacific's report for the fiscal year ending June 30, which shows the largest gross earnings in the company's history, with surplus income after deducting all charges, including the preferred stock dividend, equivalent to 15.65 per cent on the common stock, which compares with slightly less than

11 per cent in the preceding year. Another remarkable showing was that of the Louisville & Nashville, whose income balance for the last fiscal year was equivalent to about 19.4 per cent of the company's capital stock, as against 6.75 per cent in 1915. Such instances might be multiplied indefinitely, but all of them are eloquent of the fact that the wonderful activity and prosperity in mercantile and industrial lines that have developed since war began have spread freely to the railroad world."

The railroads are in a hysteria of pessimism. With earnings beyond all previous records and constantly growing larger, the railroads seem to be engaged in the absurd task of trying to ruin their own credit. Is it not time for the railroads to get off the mourners' bench, to come out into the sunshine of their prosperity, and to devote themselves to the business of running their railroads and of supplying cars, equipment, terminal facilities, and extensions which the public urgently requires?

That is what the railroads of California are doing. Why should not other railroads pursue the same sensible course?

"THE FORTY-NINE MASTERS."

The first reference which our railroad friends and the various chambers of commerce, boards of trade, bourses, and others who are associated with them in their campaign make through their very active publicity bureau, in their newspapers and magazine articles, their speeches, lectures, and addresses on this general subject, is, with every recurring unanimity, to the "49 masters." When I first heard this phrase I took it seriously. I immediately looked into the railroads of my own State—California—but found that out of 61 operating steam railroads, 56 are located entirely within the State, and hence are subject to only two masters—the State of California and the Federal Government—instead of 49 masters. Of the other five railroads, 3 run through 3 States each and 2 run through 10 or 12 States each. Investigating further, I found that the two railroads which operate in the most States, and hence are subject to the most masters—the Southern Pacific and the Santa Fe—are the most prosperous of all.

I went further. I examined assiduously all the railroad maps I could secure, trying to find the railroad which runs through 48 States. Notwithstanding the most persevering efforts I have been unable to find any railroad which runs through more than one-third that many States.

About that time some kind friend told me not to take the matter too seriously, that these words were merely language to tickle people's ears—and that they were so understood by all who use them.

REVERSAL OF GOVERNMENTAL PRINCIPLES.

The proposals of the railroads to take from the people of the States practically all their power over local railroad matters constitutes a complete reversal of governmental principles which were established at the beginning of our constitutional history and have been recognized and in effect ever since.

Those powers which affect the Nation as a whole and which can best be exercised by the central government were delegated by the Constitution to the Federal Government. The remaining powers, which it was assumed could best be exercised by the local authorities, were left to the States and to the people.

It is proposed now by the railroads to reverse this policy by taking from the people of the States their local powers over railroads and to throw these powers in their tremendous aggregate, into the lap of the Federal Government. It is proposed to tear up by the roots the State commissions which have grown up out of the life, the needs, and the aspirations of the people of the States and to substitute in lieu thereof an enormous Federal bureaucracy superimposed upon the people of the States by the central government at Washington.

The States are handling promptly and generally fairly and effectively a multitude of local matters affecting the railroads. During the year ending June 30, 1916, the railroad commission of California disposed of 3,212 informal complaints, of which 767 affected railroads, and of over 900 formal complaints and applications, of which over 350 affected railroads. The railroad proceedings disposed of by the California commission during this period included questions of rates, refunds, service, extensions, grade crossings, separation of grades, issue of securities, transfers, incumbrances and lease of property, rules and

regulations, safety of construction and operation, discontinuance of operation, trackage agreements, and many other matters. These proceedings are generally heard or investigated in the locality affected by men familiar with local conditions and are promptly disposed of. The work of this one State commission is indicative of what is being done by the other 45 State commissions.

To persons intimately acquainted with the work now being done by the various States in regulating railroads in State matters it seems impossible that this work could be done as well and as effectively by an immense centralized bureaucracy with headquarters at Washington as it can be done by the States themselves.

I have always been of the opinion that the Federal Government should do whatever the Federal Government can best do for our people, and that the State governments should do whatever they can best do. In my opinion, this is the best practical test of where the line of division between the powers of the Federal Government and the powers of the State governments ought to run. Judged by this test, it would seem that, with the exception, probably, of the control over the issue of railroad securities and of railroad mergers, consolidations, and similar matters, the States should retain the powers which they now have over local railroad matters as long as the railroads remain in private ownership.

RAILROAD DIAGNOSIS INCORRECT.

The railroads have made an entirely incorrect diagnosis of their financial ills.

The cause of impaired railroad credit is not public regulations, either State or Federal.

Railroads went into receiverships before the days of public regulation, and they will continue to go into receiverships under regulation unless regulation strikes at the root of railroad financial ills and is made thoroughly effective.

California disproves the claim that public regulation injures the railroads and other public utilities. During three years of regulation by the State railroad commission more than \$200,000,000 of new money has been invested in California public utilities. The steam railroads alone have added \$55,000,000 to their investments. During the last five years over 1,200 miles of new railroads have been constructed in California. At present, under State regulation, nine railroads, with a total mileage of 221 miles, are under construction or extension in California. The prosperity of California railroads and other public utilities under efficient regulation by the State railroad commission proves conclusively that the cause of impaired railroad credit is not to be found in public regulation.

The real causes of impaired railroad credit, to the extent to which such impairment exists, are not to be found in public regulation but in unsound financial structures, unwise railroad construction, and at times criminal mismanagement of railroad finances. The claim of the railroads that their impaired credit has been caused by public regulation seems to be merely a blind to divert attention from the real causes. It is significant that in their presentation before the Newlands committee the railroads not once referred to the acts of their financiers and executives, which have been the cause of most of their troubles, but dwelt solely on public regulation.

To cut off the powers of the States over railroads, on the pretext that the States have caused the financial difficulties in which some of the railroads find themselves, would be just as absurd as to cut off a patient's good right arm when the real cause of his trouble is a diseased liver or appendix.

The railroads are not suffering from the good right arm of public regulation, but from a case of acute gastritis, caused by an overdose of undigested securities.

REAL CAUSES OF IMPAIRED RAILROAD CREDIT.

As already indicated, the real causes of impaired railroad credit, to the extent to which such impairment exists, are to be found principally in the acts of railroad financiers and executives in building unsound financial structures, in constructing railroads where not needed, and in mismanaging the finances of the railroads whose trustees they were. As is so often the case, the railroads which have been honestly and wisely managed have suffered from the acts of the others. Investors who have lost their money in one railroad are not generally eager to invest it in another.

One of the most potent causes of impaired railroad credit has been the unsoundness of railroad financial structures. By this I mean principally the unsoundness of the relationship between share capital and fixed capital and of the relationship between the value of the property and the face or par value of the securities outstanding.

A man who would expect to borrow \$120 on a horse worth only \$100 would be considered erratic, to say the least. Yet many railroads have been constructed entirely from bonds sold at a discount, and in addition have issued large amounts of capital stock without consideration. Railroad financiers have largely refused to invest any of their own money by purchasing stock, but have secured their funds from the public by selling bonds. When such railroads later needed funds for additions, betterments, and extensions they have found it difficult or impossible to secure them. They have been unable to sell stock because the outstanding stock represents little or no value, and unable to sell bonds because the outstanding bonds already exceeded the value of the property. Such a financial structure inevitably crashes. When the receivership comes it comes not by reason of regulation, but by reason of the absence of such regulation as would have prevented such unsound financiering.

Whenever a railroad is constructed where it is not needed the result is not merely financial disaster to it but also impairment of credit for its competitor whose revenues are diminished by the competition. Such construction leads to general impairment of railroad credit.

The glaring cases of criminal mismanagement of railroads by financiers and executives which have come to light within the last few years have been far more effective in impairing railroad credit than the combined effect of all public regulation, State and Federal. What is needed is more regulation, not less.

As contrasted with the generalizations of the railroads with reference to the causes of impaired railroad credit, the representatives of the public before the Newlands committee drew the attention of the committee, by reference to page and volume of the official reports of the Interstate Commerce Commission, to the real causes of impaired railroad credit, as shown by the official records of the Federal Government. The attention of the committee was drawn to the following decisions of the Interstate Commerce Commission and to the comments of the Commission on the causes of impaired railroad credit therein set forth.

"Harriman Investigation, 12 I. C. C., 319; New England Investigation, 27 I. C. C., 560; in re Receivership of St. Louis & San Francisco Railroad Co., 29 I. C. C., 139; St. Paul & Puget Sound Accounts, 29 I. C. C., 508; in re Financial Transactions of New York, New Haven & Hartford Railroad Co., 31 I. C. C., 32; and in re Financial Transactions of Chicago, Rock Island & Pacific Railway Co., 36 I. C. C., 43."

CONSTRUCTIVE REMEDIES.

A wise doctor first finds the cause of the patient's disease and then applies the remedy.

In the present instance the disease, as diagnosed by the railroads themselves, is impaired railroad credit. The cause of the disease is not public regulation, as claimed by the railroads, but principally their own financial transactions, the large amount of their issued securities as contrasted with the value of the property, the unsound relationship between share capital and fixed capital, the construction of railroads and their extensions at times where not needed and at times through construction companies yielding ill-gotten profits to the railroad financiers and executives, the diversion of the proceeds of securities to improper purposes, the deception of investors by the publication of misleading financial statements, and unfaithful stewardship of railroad finances by railroad financiers and executives. These acts by some railroads have affected all, even the increasingly large number which are honestly and wisely managed.

Having found the cause of the disease, the sensible thing to do would seem to be to apply the remedy to the cause. The first constructive remedy, in my opinion, is to provide for adequate and effective regulation by the Federal Government of the issues of capital stock, bonds, and other securities of all railroads engaged in commerce among the States and with foreign nations, and of their mergers, consolidations, sales, mortgages, and leases. This regulation

could be either concurrent with the States or exclusively in the Federal Government. The legislation might well be modeled on the statutes of a number of the States which are doing very effective work in supervising and regulating public-utility finances. This power, however, should not be conferred upon the Federal Government unless at the same time adequate machinery is provided so that applications of the railroads to issue securities can be promptly heard and disposed of by some responsible authority. No phase of public-utility regulation requires more prompt attention than financial matters such as proposed issues of securities.

Such a measure would go far to substitute sound financing for unsound financing in the future and would thus help to restore public confidence in railroad securities. But how about the past? How about the impaired financial structures which now exist, not because of regulation, but because of the absence of regulation?

The railroads, it appears, are trying to lay the foundation to support a claim hereafter for increased rates to enable them to pay interest and dividends on all their present outstanding securities, whether issued for value or not, and to establish new borrowing power for the future. In other words, the mistakes, the faults, and the crimes of railroad financiers and executives in the past are to be fastened on the public in the form of higher rates. In my judgment, the people of the United States will never consent to pay increased rates for any such purpose. The remedy in such cases is not higher rates, but reorganization of the railroad—reorganization on an honest basis under public authority with a view to the substitution for the existing unsound and impaired structure of a sound, healthy financial structure with a chance to succeed.

Furthermore, railroad credit would be much improved if the railroads, instead of crying calamity in the days of their greatest prosperity, should cease injuring their own credit and should adopt an attitude of optimism in lieu of their present attitude of assumed pessimism. Never before have I heard of business men needing funds for the enlargement of a prosperous business apparently trying to scare off every investor who is willing to assist in the further development of the business.

Finally, all public authorities, both State and Federal, must, of course, deal with the railroads in a spirit of sympathy and of broad constructiveness. Public officials represent the railroads just as much as they represent the traveling and the shipping public. The railroads are a very vital part of our industrial life and may hereafter become of supreme importance in the national defense. The interests of the Nation require that our railroad systems be at all times adequate and effective.

The railroads, however, must do their part. They must cease bearing false witness against the public authorities, State and Federal. They must play the game openly and honestly, with every card on the table, face up. They must cease crying calamity when there is no calamity.

If the railroads fail to do their part, or if, notwithstanding good faith on their part hereafter, it appears that because of their financial structures and management in the past they are unable to do their full duty without unjustly high rates, there is only one alternative—Government ownership.

The situation should be most carefully watched. In view of the possibility that private ownership may break down, the wisdom and patriotism of our statesmen will prompt them to take steps at once to study Government ownership in its every aspect, and to make provision so that if Government ownership of the railroads comes it will find the American Government and the American people ready to handle the new problem efficiently, wisely, and patriotically.

[Utilities Magazine, January, 1917.]

THE PROBLEM OF TERMINAL RATES.

By ROBERT J. McFALL, *University of Minnesota.*

Matters of far-reaching consequence are brought into the foreground by a recent case before the Interstate Commerce Commission. The authorities of the State of New Jersey have filed a petition to require the rates for traffic ending on their side of New York Harbor to be readjusted, giving recognition

to the fact that it costs more to carry goods to the New York side of the river than to leave them on the Jersey side. The problems involved were suggested in the Lighterage and Storage Regulations at New York case decided by the Interstate Commerce Commission on July 7, 1915; they are now introduced in more elaborate form and are as yet unsettled, even in so far as this specific case is concerned.

The Associated Press reports this case as a battle for commercial supremacy between the States of New York and New Jersey. This, in so far as true, is an important issue. Commissioner Lane, in writing the opinion of the Interstate Commerce Commission for the Western Advance Rate case, spoke of the traffic manager as a statesman determining zones of production and consumption and setting aside the spirit of the laws of the land. In the case here considered the commission itself performs the function of the statesman, and the issues involved are of greater consequence than those spoken of in the former case. The real problem involved is not the comparative importance of two areas in the Nation; it is a problem which goes so far as to affect the social and economic status and growth of the whole Nation. According to Mr. Brandeis, the terminal problem is more trying even than the notorious rising costs of labor.¹

The problem is the proper adjustment between terminal costs and rates. Should rates to a terminal be framed on the basis of cost? If it costs more to take freight into New York City than into the near-by cities of New Jersey, should recognition of this fact be made in the establishment of rates? The authorities of the State of New Jersey have filed a petition seeking "to so readjust and reorganize the port (of New York) as between New York and New Jersey territory, as to put into intensive use all the natural conditions, and give to the New Jersey side advantages which nature has provided."² They claim that the present rate system, making the whole general region, including both New York and New Jersey points, a blanket zone which takes exactly the same rates irrespective of costs is a serious discrimination against New Jersey. The Engineering News says:

"The present railway rates entirely ignore the high cost of terminal handling in large cities. Freight rates on a carload of goods hauled between Chicago and a factory located in Newark, Paterson, Jersey City, or Hoboken are the same as if the freight had to be lightered across the Hudson River to or from a factory on Manhattan Island or in Brooklyn. Since railway rates must, on the whole, be sufficient to pay all the operating expenses, fixed charges, and profits of the railways, it follows that the merchants and manufacturers of Jersey City, Hoboken, and Newark are actually paying in their freight rates part of the cost of carrying goods for their competitors located on the eastern side of the Hudson River."³

The authorities of the State of New York have filed an intervening petition, saying:

"If the prayer of the petitioners were granted, it would, in fact, result in unreasonable discrimination against the city of New York. The commercial, industrial, marine, and manufacturing facilities of Greater New York are inextricably bound up with the prosperity of the country. To serve the country, New York City early became a natural basic and distributing center, through which passes commerce to and from all parts of the world. It was inevitable that in fixing railroad rates Greater New York should be a basing point, around which territory contiguous would naturally form a zone or district. Following the American method of rate making, very early in the history of New York's commerce, the port of New York, including a large part of Long Island, Staten Island, and New Jersey, became a zone or district, in which were generally established fixed schedules for freight carriage, including terminal service. To furnish the terminal service at all points within the district involves at some point a loss, but in general, because of the volume of business thus accommodated, results in a profit and in lower general rates. To adopt a new system based upon a separate charge for line haul plus a separate charge for terminal service, would demoralize the entire commercial situation, to the injury not only of Greater New York but also of its neighbors in New Jersey and its business connections throughout the country."⁴

THE AMERICAN SYSTEM OF RATE MAKING.

The problem raised is not only local; it has its application in every section of the country. Should each locality pay for its railway service in accordance with what it costs to supply such service, and so stand on its own feet? Should we perpetuate the situations established by former insane competition between carriers, a competition now relegated to the scrap heap? Should we leave it to traffic managers, even supervised by the commissions, to determine arbitrarily zones of production and consumption by the rate-making powers? Or shall we leave the matter to be decided by the battle of the Titans, the struggle between the powerful commercial interests of competing localities, a struggle in which the lowly are trampled under foot?

The Engineering News deals with the problem over-summarily when it says that "every one recognizes that transportation rates should be based on the cost of service plus a fair profit to the transportation company."¹ We know that there are joint costs in the railway business that no one has yet been able to allocate between the various parts of the service, whether as between localities or between various services. These costs, it is pretty generally admitted, should be borne in accordance with the comparative ability of the service or localities to bear them. As a matter of fact, as between localities, these costs are generally borne in accordance with the comparative ability of the localities to avoid bearing the charges. Then, too, it is pretty generally admitted that a zone system of rate making, putting all places of similar cost and in similar situations on the same rate, is not only fair but the only way to avoid endless difficulties of accounting the rate adjustment. The question here is as to how inclusive the zone should be. New York claims that the two States should form one zone. New Jersey considers that the costs for service of the two regions are so dissimilar that they should form two separate zones, not that the zone system should be given up.

Greater attention is being paid recently, however, to the costs of service in rate making, one great reason for this being that costs have been rising and making themselves more prominent. Not only have the prices of railway supplies and labor been rising along with our general rise in prices; the more striking thing is that while the traffic density on our railways has doubled within these last 15 years, the cost per unit of handling this traffic has also increased. A most unorthodox thing for railway costs to do! Economists have always said that the railways implicitly obeyed the law of diminishing costs; that as the traffic increased the cost per unit of handling this traffic always decreased. So long as this was true, and it really was true in general until recently, it can easily be seen why the rate makers should care so little about what each item of service cost. The main thing was to get the traffic: let the cost be borne as best it might. Recently, however, we have been awakening to the fact that, while our traffic has been growing by leaps and bounds, the cost per unit of caring for it has not decreased, but actually increased. Under such circumstances we must more carefully scrutinize the costs. If costs are rising per unit, it is not profitable to stimulate greater traffic unless we can also raise rates. Under rising costs per unit each element of traffic must more nearly take care of itself. Hence railway men and commissioners alike are paying attention to the cost of each kind of service as they never did before. For a time they blamed the rising costs on the wages of the laborers. They still do, but see now that this is not the only cause. The extraordinarily heavy and rising terminal charges now come in for their share of the blame, and justly so. The contention is that, in so far as the costs can be allocated to the terminal service, they should be borne by the particular terminal traffic in question. The problem involves not only finding out what terminal charges are in general, but the relative costs of handling traffic as between different terminals, particularly the relative costs of the service in small stations as compared with large terminals.

What is this which the New York intervening petition calls the "American method of rate making"? The Engineering News says:

"The present system of railway rates is based primarily upon distance. It harks back to the time when the railway was the competitor of the stage-coach. The cost of hauling over the road was then the main expense in transportation, and the cost of handling at terminals was trifling. The last half century has revolutionized these conditions. The cost of hauling traffic over

¹ Engineering News, v. 79, p. 129.

the road has been reduced to a mere trifle, while the cost of handling in the terminals of great cities has been multiplied manyfold."¹

This is perhaps as fair a statement as could be made of the situation the country over, but no one statement would cover the rate-making systems of the whole country. The Engineering News's presentation of the matter is entirely too mild to fit the situation in the South, where not only is no account taken of terminal costs in general, but the rates are made much less even to the terminals than between intervening points; this in spite of the long-and-short-haul clause in the act to regulate commerce. The rates on traffic to a point through which the goods would be hauled on going to a terminal—that is, on the route—are made by taking the rate to the terminal and adding the local rate for the back haul; this even though the goods are not taken to the terminal for redistribution, and in a territory where the plea that the practice is due to carload ratings for the jobbing business of the larger places is singularly inapplicable. In the South one would think it cost less than nothing to handle the traffic at the terminal. The South is not the only region where this system is used, but is the outstanding example of it.

The transcontinental rate system violates not only the cost principle as regards terminals, but violates the distance principle as well. There, as in the South, the attempt has been made to base the rates on certain points, making the rates for intermediate cities the rate to the basing point plus the back-haul charge. Though this has been modified by the Interstate Commerce Commission to a certain extent, yet the mountain cities still pay higher rates than those on the coast. The distance principle has also been violated here by a gigantic application of the zone system of rate making. As Prof. Ripley says, "For some years every city east of the Mississippi has been able to ship goods to San Francisco at the same rate which is paid from Boston and New York, which may be more than a thousand miles farther away."² Of course, to the extent that the distance has been ignored, we would naturally assume that the terminal cost held a comparatively greater importance. This is in reality untrue; the rates are built as commercial pressure dictates.

The northeastern section of the country, known as trunk-line territory, is the only section which pretends to take real account of both the distance principle and the terminal cost. Here the rates are built on the New York to Chicago rate as a standard, using a fixed terminal cost that is totally inadequate at present and pays no attention to the widely different amount of this cost at the various terminals, and a hauling charge varying in accordance with the relation which the distance between the places in question bears to the standard New York to Chicago distance. The rates to the great terminal cities of Boston, New York, Philadelphia, and Baltimore are related to each other on the principle of commercial competition, a certain standard differential being given the rates of each city as compared with the New York rates.

TERMINAL COSTS NEGLECTED IN RATE MAKING.

Thus we see that hitherto but little attention has been paid to the terminal costs in making up rates. In fact, the Interstate Commerce Commission does not require any separate attention to be paid to terminal costs in the accounts which it requires under the law, and the railway men would have it that if we want knowledge of the comparative importance of terminal costs we must turn to either Japan or Australia. The officials of one of the important systems, who really have made important statistical investigations, say that they do not know the relative importance of the costs of large and small terminals though they have carefully computed the average terminal costs in the southwestern part of the country.

The railway men are exceedingly diffident about telling what they know on the subject, or even whether or not they know anything at all. This is not to be wondered at; they fear what the over-zealous cost statistician might do with the figures if he had them, and, doubtless, they feel that their figures are not yet sufficiently accurate to be of much value in rate making. It must not be inferred, however, that no statistics for terminal costs are known, nor that they are not used in rate making. Much is known on the subject and is being used by the various parties concerned in the question.

¹ Engineering News, v. 79, p. 129.

² Ripley, Railroads: Rates and Regulations, p. 397.

The widest application of the principle of special attention to terminal costs, in theory if not in careful practice, is found in the system in vogue in trunk-line territory, the MacGraham scale, as outlined briefly above. The Wisconsin system of rate making takes account of the terminal costs as carefully as possible with the data at hand.¹ The Interstate Commerce Commission also has made use of the principle in special cases, though it has not committed itself to its general application nor has it required such statistics to be kept.

In the *New Orleans Vegetable Growers, Merchants & Shippers' Association v. Illinois Central Railroad Co. et al.*² the Interstate Commerce Association took account of the figures presented to it on terminal costs in determining the reasonableness of the rates involved. The Commission took account of the relatively high terminal expense in the Eastern Live Stock case;³ they also took account of the terminal cost figures supplied in the Shreveport case,⁴ although questioning their accuracy. In the *Boardman Co. v. Southern Pacific Co.* case⁵ the commission said: "The right to impose a reasonable and nondiscriminatory charge in addition to the line-haul rate for terminal services performed by connecting carriers was recognized in the Pacific Coast Switching cases and has been affirmed by numerous decisions of the commission and the courts." A separate charge for switching and other terminal expenses is more common in the case of connecting carriers than if the whole service is performed by one company, although under such circumstances it is exceedingly common for the carrier to "absorb" the extra charges and not pass them on to the patron.

Enough has been said to show that the terminal costs have played a comparatively small part in American rate making, although they have not been totally neglected as a separate element, as the intervening petition of the Chamber of Commerce of the State of New York would intimate. It is safe to say that increasing interest is being directed to this large element of railway costs these last few years as the traffic per unit, in spite of its growing density, has become more expensive to haul. It would appear that this change from diminishing cost to increasing cost per unit of traffic was due, in addition to the part played by rising wages and taxes, to the increasing complexity and consequent costly handling in our large terminals. Unquestionably both the actual cost of handling and the overhead expenses due to expensive terminal facilities and real estate are very high and rising at a rapid rate. It would appear that this concentration to the point of congestion of our business in large centers made the costs of this phase of the business mount up so increasingly high with increased traffic as to offset the economies which are constantly being achieved in our line traffic.

THE COSTS OF TERMINALS.

What are the comparative costs of terminals and terminal handling? Droege said in 1912, in his *Freight Terminals and Trains*, "For every 3 miles of railroad there is in use to-day 1 mile of switching or terminal tracks."⁶ He also shows how this proportion has been growing rapidly and is much greater in the more densely populated regions of the Northeast. He says in regard to the money invested in terminals, "The terminals alone represent a greater amount of money than all the remainder of the properties of the roads. This statement is true even when smaller or intermediate stations are omitted and only the great water terminals and general intermediate distributing centers, known as division terminals or yards, are included."⁷ In the Minnesota Rate case the terminal property of the Northern Pacific Railway Co. was put at \$17,315,000, the land outside of terminals at \$3,708,000. The figures for the Great Northern Railway Co. were \$19,847,000 for the terminals and \$5,325,000 for the land outside of terminals.⁸ Droege says in his recent book, *Passenger Terminals and Trains*:

"The American railroads have frequently been criticized for having lavished such great amounts of money on their passenger stations, or, as one authority has aptly said, they have indulged too much in 'gilded stairs and

marble halls.' It is certainly true that this is one thing on which the railways do not skimp. The recently completed Union Station at Kansas City cost \$40,000,000, of which \$11,000,000 was spent on the station itself. It has been said that some of the lines which use the terminal pay more for the privilege than they receive in gross receipts from their entire Kansas City passenger traffic. The New York Central's passenger terminal facilities in New York when completed will probably have cost approximately \$200,000,000, sufficient to build 2,000 miles of double-track railway line costing \$100,000 a mile. It has been estimated that the fixed charges, taxes, and depreciation will total \$20,000,000 yearly and the operating and maintenance expenses \$3,000,000 more. The total passenger receipts of the New Haven and New York Central from New York City traffic certainly do not total much more than this. The Pennsylvania's terminal on Manhattan has cost between \$110,000,000 and \$120,000,000. One authority has made the statement that the terminal charges are about equal to the entire gross receipts of the Pennsylvania and Long Island from passenger traffic in the city. It has been further shown that the passenger terminals in which the Pennsylvania is interested in Washington, Baltimore, New York, and Philadelphia have a combined value of \$178,000,000 equal to an average of about \$800,000 per mile for the 223 miles from New York to Washington."¹

The terminal properties, while enormous in their value, unfortunately will have to be expanded still more, according to foremost authorities. The late Mr. James J. Hill said in an address before the Railway Business Men's Association in New York December 19, 1912:

"Every interest and every community should understand that the main need to-day of transportation and of the many activities connected with and dependent upon it is an increase of terminal facilities. It is no exaggeration to say that the commerce of the country, its manufacturing and agricultural industry, its prosperity as a whole, and the welfare of every man in it who engages in any gainful occupation, can escape threatened disaster only by such additions to and enlargements of existing terminals at our great central markets and our principal points of export as will relieve the congestion that now paralyzes traffic when any unusual demand is made upon them."²

We need not, however, depend alone on the word of American railway men for opinion on this subject. Mr. W. M. Acworth, a prominent and impartial British authority in a recent statement to the American public through the National City Bank publication, said: "You will have to spend vast sums of money to enlarge and improve your terminal accommodation, and the land required for the purpose you will have to buy and adapt at modern prices."³ The truth of this will be the more readily appreciated in view of the present unprecedented car shortage. The Iron Age said of the congestion of 1902: "The transportation facilities of the country broke down under the weight of prosperity in 1902 and 1903, not so much because the supply of locomotives and cars was insufficient, though that was a factor, as from the utter inadequacy of terminal facilities."⁴ If this was noteworthy of the 1902 situation, what of the present when we are experiencing such a serious shortage of rolling stock?

THE COST OF HANDLING TRAFFIC AT TERMINALS.

In regard to the cost of handling the traffic at the terminals we can not do better than to draw our facts from the statements of Mr. Brandeis before the Interstate Commerce Commission in recent important rate cases. Mr. Brandeis as is commonly known, has won much fame from the prominent part which he has played in fighting proposed rate increases. The New York Times, in an editorial of November 14, 1916, in quoting Mr. Brandeis, says: "Terminal costs absorb 80 per cent of the total rate and leave nothing for the haul. In one case named by him, the terminal costs being deducted from the rate of 4 mills, there remained seven-tenths of a mill for the haul of 428 miles. If the cost for foreign cars also were deducted there remained, according to Mr. Brandeis, nothing for the maintenance of the tracks."

In the Five Per Cent case Mr. Brandeis testified as follows:

"As Mr. Delano has pointed out so clearly in his statement, various parts of which are quoted in the brief, it came to a point where the switching cost in

RAILROAD PLAN.

incorporation now being urged by the railroad committee omits, in my opinion, most of the conditions plan, and apparently has in view solely removal from the jurisdiction of the States and the control of the Federal Government, of all their property, whether used for value or not.

It has yet presented the details of their plan, and in the testimony thus far presented by the committee.

It is proposed by the Federal Congress of legislation that on a certain day no railroad in the United States shall engage in interstate commerce unless it has secured a charter under a statute to be enacted by Congress. The corporation is to be compulsory, as distinguished from the present of the State from which the railroad has been chartered.

Of all their powers over railroads with reference to the management, and facilities, the issue of securities, and the regulation of interstate commerce as well as interstate commerce of policy, the States are to be permitted to exercise their power to tax railroad property located within their limits. The Federal Government has powers over railroads and matters which

are now under the jurisdiction of the States. The Federal Government is to acquire the property of the existing railroad corporations, and all outstanding bonds and other indebtedness.

The Federal Government is to issue bonds in an amount equivalent to the entire outstanding debt of the railroad corporation. In a word, all the outstanding debt of the railroad corporation, entirely without regard to the value of the property or to the existing relation to the share capital, are to be perpetuated in the form of bonds, and new capital stock is to be issued by the Federal Government in an amount equivalent to the entire outstanding debt of the railroad corporation without any regard whatsoever. The railroad corporation is to be under compulsion of the Federal Government. The railroad corporation is to be converted into a Federal corporation except to the extent to which mergers or combinations are authorized, there will be just as many Federal railroad corporations as there are now State railroad corporations.

FEDERAL RAILROAD CORPORATIONS.

When 1862 and 1871, the Federal Government has incorporated railroad corporations. In each of these instances it was done by special act of Congress for the purpose of carrying out the policy of the Government, by means of land grants and other assistance to the new railroad.

The first was the Union Pacific Railroad Co., which was incorporated by an act of Congress of July 1, 1862, for the purpose of constructing a railroad from the hundredth meridian east of Greenwich, west, to the Pacific Ocean. The second was the California Pacific Railroad Co., a California corporation. (12 U. S. Stat. L., 365.)

The third was the Northern Pacific Railroad Co., which was incorporated by an act of Congress of July 2, 1864, for the purpose of constructing a railroad from Lake Superior to Puget Sound, in the State of Washington, and thence to Portland, Oreg. (13 U. S. Stat. L., 365.)

The fourth was the Atlantic & Pacific Railroad Co., which was incorporated by an act of Congress of July 27, 1866, for the purpose of constructing a railroad from Springfield, Mo., to Albuquerque, N. M., and thence to the Pacific Ocean. In the same act of Congress the California Pacific Railroad Co. was authorized to be incorporated.

The fifth was the California Pacific Railroad Co. at the California State li

and incorporated during the period hereinbefore mentioned. The California Pacific Railroad Co., which was incorporated

Chicago equaled and sometimes exceeded the total amount which the railroad received for carrying the freight. There you have an extraordinary situation.

"When you come to the less-than-carload lots you have an even more serious situation in many respects. There you have the situation which bred ferry-car service, by which you had the switching from a place of business of less-than-carload lots from one railroad not only to another railroad, but sometimes through a third to another railroad, and all at the expense of the carrier who made the haul. * * * What is certain, and what nobody for a moment could controvert, is that these practices, which have grown up as an incident to the creation of these great cities like Chicago, have increased the terminal cost so much as to make a large part of the traffic not only unremunerative but practically free, so far the the haul from place to place is concerned.

"There is quoted in this brief a most illuminating statement also of Mr. Pfeifer, counsel for the Chicago & Eastern Illinois, in regard to that situation. He shows that not only is this true in respect to business destined to Chicago or shipped from Chicago, but that it is true of much of the business that passes through Chicago to other points beyond. He says that he can furnish proof that on less-than-carload business from Pittsburgh to Milwaukee the cost of handling that business in Chicago—I mean incidental cost—is more than the total amount paid for the haul from Pittsburgh to Milwaukee, and that Pittsburgh and Milwaukee are cities in which the terminal costs are considerable, or certainly in one of the cities the terminal costs are considerable.

"But Mr. Maxwell testified on this subject in a very clear and convincing way. He showed that in regard to an appreciable part of the business on the Wabash the terminal cost at Chicago ate up everything; that the terminal cost in Chicago on some of the coal which came from the mines left nothing, not enough to pay for the interest and depreciation charge on the equipment which was used in carrying the coal from the mines; that after paying the switching charges there was but \$3 left, and there had been a haul of 200 miles. The average cost of a freight car, considering its service, is over 2 cents a mile. Here there was only a cent and a half for the cost of hauling, for the terminal cost at the other end and a return on the capital invested. The terminal cost at Chicago had absorbed practically everything.

"Mr. Johnstone, of the lake lines, showed exactly the same thing. He showed how, in this period from 1903 to 1913 the cost of switching which the lake lines had to absorb had more than doubled, almost trebled—from \$4.50 up to about \$12 a car."¹

Mr. Brandeis then shows that the lighterage and other special New York terminal services have risen in cost from 2 cents of 30 or 40 years ago to 6 cents a hundred pounds at present, which means \$26.40 a car, for taking the car from the New Jersey side of the river into New York. Just what proportion of the revenue that is would depend upon the rating and origin of the car, but he thinks that in the average case this would mean that 33 per cent of the total revenue from the car was taken up by the extra cost of getting it into New York. He continues:

"That is one of the changes which Mr. Willard has had to battle against when he has been trying, through greater efficiency, to meet these rising costs. It is not the increasing cost of labor. Those costs he can meet in the larger part, but it is the increase in the cost of these other free services which are coming along and which are extending all the time, and the cost of which is extending. * * * The lighterage district of New York has been extended and the haul made longer. How can the efficiency in train movement overcome such things as that? Mr. Willard battles in vain with such leeches and such burdens as that upon his traffic. Taking the Erie Railroad, which is one of the great sufferers here, we find that 25 per cent of the freight revenues are on business destined to or shipped from New York City. You have in the East just the same situation as you have in Chicago in the West.

"These conditions have developed and grown up year by year, the costs are becoming greater, and no general increase in freight rates can keep pace with such leeches upon the service.

"I took New York and Chicago because they are the most important centers in the country, and conditions are perhaps worse there than elsewhere. But what is true of New York and Chicago is true of these other cities, and it presents itself in different forms in different cities. We took Buffalo, we took

¹ Interstate Commerce Commission, The Five Per Cent case, S. Doc., v. 14, 63d Cong. p. 5251.

Toledo, we took Philadelphia, and in every one of those places you will find these or other similar leeches upon the revenue, growing and eating into the vitals of these railroads."¹

Others could be quoted showing the immense and growing part which terminal costs are playing in our transportation service. The problem is growing; it is greater in our large cities than in the smaller ones. Undoubtedly the terminal service is not one that is subject to decreasing costs per unit of service as the service is increased; it apparently follows exactly the opposite rule: As traffic increases in the large terminals, it becomes increasingly more costly per unit to handle it; complexity and congestion bring decreasing economics in their train.

BANEFUL EFFECTS OF NEGLECTING TERMINAL COSTS IN RATEMAKING.

And yet the present system of neglecting costs in rates to terminals is artificially stimulating the growth of these large centers. The burden of transportation cost is on the business of the country in general; the large center gains the advantage. The large centers getting their service at less than cost, the general business of the country is taxed to build up the large cities, to perpetuate and increase a more expensive system of conducting our business, to make their burdens in turn still greater to support these centers in the future. We may be sure the railways themselves do not pay this extra cost. They can not. They are not in the charity work.

The Chamber of Commerce of New York claims for New York the share of 46.59 per cent of the foreign commerce of the United States; it claims that in 1909, with 5 per cent of the population of the country, the city of New York had nearly 10 per cent of the industrial establishments of the country, while the value of its products was almost 10 per cent of the Nation's.² And so, forsooth, it claims that a system of ratemaking should be perpetuated which would continue the present rapid stimulation of our large centers and urban population at the expense of the rest of the country.

The battle between cities for commercial supremacy is an important thing; it is trivial as compared with some other matters. The present system artificially stimulates the growth of our cities and consequently our manufactures at the expense of our agricultural life. Stimulating the growth of our large industrial centers it stimulates a more expensive way of conducting our transportation, and proof could be cited, did space permit, to show that the industrial life itself becomes more complicated, and hence more costly, in these large centers built upon a bonus from the rest of the country.

Lack of extra remuneration for terminal services has made the carriers more cautious in laying out money in developing this branch of the service, so that in spite of the immense sums which they have expended recently the United States faces a shortage of terminal facilities and consequently is in the pangs of a car famine.

Other and perhaps more serious consequences might be spoken of, but enough has been pointed out to show the importance of the problem.

What, then, is the solution? Should we reorganize our rate systems, giving full weight to the different terminal costs? Such a thing would be impossible. We can, however, and it would seem as though we must, give full weight to the increases in costs as these occur in the future. The conclusion may, and probably will, be reached that part of the extreme costs now involved in the terminal services shall be borne by the services in question. The future increments of such costs certainly should not be borne by the service in general, but by the terminal traffic itself.

[Utilities Magazine, March, 1917.]

FEDERAL INCORPORATION OF RAILROADS.

By MAX THELEN, President National Association of Railway Commissioners.

One of the most important public-utility problems now before the American people is the proposal of the railroads that the Federal Congress enact legisla-

¹ Interstate Commerce Commission, The Five Per Cent case, S. Doc. v. 14, 64d Cong., p. 5253.

² Intervening petition of Chamber of Commerce of New York, pp. 3, 7.

tion compelling each railroad to any extent engaged in interstate commerce to secure, in lieu of its present State charter, a charter from the Federal Government.

As nearly every railroad in the United States is to some extent engaged in interstate commerce, this proposal would result in the transmutation of practically every railroad corporation in this country from a State corporation to a Federal corporation.

INTERESTING QUESTIONS.

The proposal for Federal incorporation of the railroads presents some very interesting questions.

Is the withdrawal from the States of practically all their powers over railroads—the avowed purpose of the Federal incorporation plan—desirable?

What will be the effect of Federal incorporation of the railroads on the powers now exercised by the States with respect to purely State commerce?

Will the Federal incorporation of the railroads enable the railroads to remove themselves from State jurisdiction over purely State commerce, without amending the commerce clause of the Federal Constitution?

Is the particular plan of Federal incorporation advocated by the railroads in the public interest?

What would be the effect on railroad rates and on the compensation hereafter to be paid by the Federal Government for the railroad properties if the Federal Congress should now enact legislation in effect compelling all railroads to take out national charters under a plan which perpetuates all outstanding railroad securities, including all the water therein?

These and many other interesting questions are involved in the plan of Federal railroad incorporation which is being urged by the railroads before the Newlands joint committee of the Senate and of the House of Representatives.

It is not my purpose in this paper to discuss the merits of the proposal of the railroads to take from the States practically all their powers, even over purely State railroad business. This is a subject of very great importance which merits consideration in a paper devoted to that subject alone.¹ It is my purpose to consider in this paper, as succinctly as possible, the other questions just suggested.

NEWLANDS PLAN.

For several years Senator Newlands, of Nevada, has been urging the enactment by the Federal Congress of legislation providing for the Federal incorporation of railroads. Such incorporation, however, is to be only part of a comprehensive plan for the regulation of the relationship between the railroads and both Federal and State Governments, the railroads and their patrons, the railroads and their security holders, and the railroads and their employees.

The plan of Senator Newlands provides that any railroad corporation may secure a Federal charter, but only with the consent of the parent State; that the States shall retain their power to regulate the rates of purely State commerce and their power to enact police regulations with reference to such commerce; that the physical properties of the railroads shall continue to be taxable by the State wherein such properties are located; and that the new Federal railroad corporation shall issue, in exchange for the property of the State railroad corporation, securities not exceeding the fair value of the property to be transferred, as such value may be determined by the Interstate Commerce Commission.

The Newlands plan also provides for the establishment of an accident and insurance fund for the benefit of employees; for action by the Interstate Commerce Commission as a board of conciliation between the railroads and their employees; for the limitation of dividends to 7 per cent on the outstanding capital stock; and for the application of net earnings in excess of such dividends, betterments, extra dividends, or future inadequacy of earnings, as directed by the Interstate Commerce Commission.

¹ See article by Mr. Thelen on "The Newlands railroad investigation" in *The Utilities Magazine*, January, 1917.—The Editor.

RAILROAD PLAN.

The plan of Federal railroad incorporation now being urged by the railroads before the Newlands joint committee omits, in my opinion, most of the commendable features of the Newlands plan, and apparently has in view solely the withdrawal of the railroads from the jurisdiction of the States and the perpetuation, by direct compulsion of the Federal Government, of all their outstanding securities, whether issued for value or not.

While the railroads have not as yet presented the details of their plan, its broad outlines clearly appear in the testimony thus far presented by them to the Newlands joint committee.

The railroads urge the enactment by the Federal Congress of legislation providing, in effect, that after a certain day no railroad in the United States shall be permitted to continue to engage in interstate commerce unless it has secured from the Federal Government a charter under a statute to be enacted by the Federal Congress; that such incorporation is to be compulsory, as distinguished from elective; and that the consent of the State from which the railroad holds its charter shall not be necessary.

The States are to be deprived of all their powers over railroads with reference to rates, service, safety, equipment, and facilities, the issue of securities, and every other matter affecting purely State commerce as well as interstate commerce, except that, as a matter of policy, the States are to be permitted "for the present" to retain their power to tax railroad property located within their borders and to exercise police powers over railroads and matters which are "not vital."

The new Federal railroad corporation is to acquire the property of the existing State corporation subject to all outstanding bonds and other indebtedness, and is to issue its capital stock in an amount equivalent to the entire outstanding capital stock of the State corporation. In a word, all the outstanding securities of the existing State railroad corporation, entirely without regard to their relationship to the fair value of the property or to the existing relationship between bond capital and share capital, are to be perpetuated in the form of the existing indebtedness, and new capital stock is to be issued by the Federal railroad corporation in an amount equivalent to the entire outstanding capital stock of the State railroad corporation without any regard whatsoever to its fair value, this to be done under compulsion of the Federal Government.

Each existing State railroad corporation is to be converted into a Federal railroad corporation, so that, except to the extent to which mergers or consolidations may later be authorized, there will be just as many Federal railroad corporations as there are now State railroad corporations.

EARLY FEDERAL RAILROAD CORPORATIONS.

In four cases, ranging between 1862 and 1871, the Federal Government heretofore incorporated Federal railroad corporations. In each of these instances the railroad was incorporated by special act of Congress for the purpose of connecting the Middle West by rail with our Pacific coast possessions, and in each instance the Federal Government, by means of land grants and other considerations, gave generous assistance to the new railroad.

The first Federal railroad was the Union Pacific Railroad Co., which was incorporated by act of Congress of July 1, 1862, for the purpose of constructing a railroad from the one hundredth meridian east of Greenwich, west, to connect with Central Pacific Railway Co., a California corporation. (12 U. S. Stat. L., 489.)

The second Federal railroad was the Northern Pacific Railroad Co., which was incorporated by act of Congress of July 2, 1864, for the purpose of constructing a line of railroad from Lake Superior to Puget Sound, in the State of Washington, with a branch line to Portland, Oreg. (13 U. S. Stat. L., 365.)

The third Federal railroad was the Atlantic & Pacific Railroad Co., which was incorporated by act of Congress of July 27, 1866, for the purpose of constructing a line of railroad from Springfield, Mo., to Albuquerque, N. Mex., and thence to the Colorado River and to the Pacific Ocean. In the same act, the Southern Pacific Railroad Co., a California corporation, was authorized to connect with the Atlantic & Pacific Railroad Co. at the California State line. (14 U. S. Stat. L., 292.)

The fourth Federal railroad incorporated during the period hereinbefore referred to was the Texas & Pacific Railroad Co., which was incorporated by

act of Congress of March 3, 1871, for the purpose of constructing a line of railroad from Marshall, Tex., to San Diego, Cal. (16 U. S. Stat. L., 573.)

LEGAL PROBLEMS.

The proposed Federal incorporation of the railroads presents a number of very interesting legal problems.

That the Federal Government has the power, whenever deemed necessary in the exercise of a governmental function, to create a corporation has been unquestioned ever since the decision of the Supreme Court of the United States in the leading case of *McCullough v. Maryland* (4 Wheat., 316). The same doctrine was announced in *Osborn v. United States Bank* (9 Wheat., 737).

The power of the Federal Government to create a railroad corporation to act as its agent or instrumentality in the performance of a function of the Federal Government is equally clear. (*California v. Central Pacific Railroad Co.*, 127 U. S., 1.) The power of the Federal Congress to create a corporation for the purpose of constructing a bridge across navigable water between two States has likewise been upheld. (*Luxton v. North River Bridge Co.*, 153 U. S., 525.)

Many more legal problems in part as yet unsolved are involved in the plan of the railroads. Among the most important of these problems are these two: (1) The means to be used to transfer to the new Federal corporation the title to the property of the existing State corporation, with due regard to the rights of the stockholders of the State corporation; and (2) the effect of Federal railroad incorporation on the power of the States to regulate purely State commerce. I shall consider herein only the latter question. The effect of the proposed Federal incorporation of the railroads on the powers of the States will be considered with reference to various classes of State powers in the following order: Rates, taxes, securities, service, safety, and police regulations.

RATE POWER OF STATES.

The railroads frankly declare that it is their purpose to take from the States their entire power over railroad rates, specifically including their power over purely State rates. The railroads advocate the Federal incorporation of the railroads principally for the purpose of accomplishing this end and contend that the Federal incorporation of the railroads is a means adequate to accomplish their purpose.

The reports of the Supreme Court of the United States are full of decisions holding that under the commerce clause of the Federal Constitution the power of the Federal Government to regulate commerce is limited to commerce "with foreign nations, and among the several States, and with the Indian tribes," and that the States have the right to regulate purely State commerce as long as such regulation is not confiscatory and does not discriminate against commerce subject to the jurisdiction of the Federal Government.

The claim now urged by railroad lawyers that by reason of its control over the instrumentalities of interstate commerce the Federal Government has complete control over each railroad to any extent engaged in interstate commerce, even as to rates for purely State transportation, finds greater comfort in the hopes of these lawyers than in the decisions of the Supreme Court of the United States. It is unquestionably the prevailing opinion among well-informed constitutional lawyers that the railroads can not prevail in their campaign to take from the States their power over purely State commerce unless they shall first have persuaded the people of the United States to amend the commerce clause of the Federal Constitution so as to take from the States the powers which apparently have been reserved to them.

However, a number of decisions of the Supreme Court of the United States, dealing specifically with railroads incorporated by the Federal Government, lend strong support, on an entirely different theory, to the plan of the railroads. These cases strongly intimate that if the Federal Government, in incorporating a Federal railroad corporation, declares that such railroad shall be used for military purposes and shall be a post road, and clearly expresses the intention that such railroad shall not be subject to regulation by any State, such railroad will be subject to the exclusive control of the Federal Government in all matters, including purely State transportation. This conclusion is reached, apparently not under the commerce clause, but under the military power of the

Federal Government and under its power "to establish post offices and post roads."

In *Reagan v. Mercantile Trust Co.* (154 U. S., 413), decided on May 26, 1894, the Mercantile Trust Co. brought an action against the Railroad Commission of Texas and the Texas & Pacific Railway Co., to restrain the enforcement against the Texas & Pacific Railway Co. of the railroad commission act of the State of Texas. The Mercantile Trust Co. was trustee under an issue of bonds of Texas & Pacific Railway Co. The Mercantile Trust Co. and the Texas & Pacific Railway Co. both earnestly contended that Texas & Pacific Railway Co., being a Federal corporation, was not subject to the control of the State of Texas, even as to rates for transportation wholly within the State. Mr. Justice Brewer, in presenting the opinion of the Supreme Court of the United States, held that this contention was unsound for the reason that there was nothing in the language of the act incorporating the Texas & Pacific Railway Co. to justify the claim that the Federal Government had shown an intention that this railroad should be removed from the jurisdiction of the State of Texas as purely State affairs. At page 416 of the Reporter, Mr. Justice Brewer says:

"Similarly we think it may be said that, *conceding to Congress the power to remove the corporation in all its operations from the control of the State*, there is in the act creating this company nothing which indicates an *intent* on the part of Congress to so remove it, and there is nothing in the enforcement by the State of reasonable rates for transportation wholly within the State which will disable the corporation from discharging all the duties and exercising all the powers conferred by Congress. By the act of incorporation Congress authorized the company to build its road through the State of Texas. It knew that, when constructed, a part of its business would be the carrying of persons and property from points within the State to other points also within the State, and that in doing so it would be engaged in *a business, control of which is nowhere by the Federal Constitution given to Congress.*" (Italics mine.)

Continuing Mr. Justice Brewer says:

"It must have known that, in the nature of things, the control of that business would be exercised by the State, and *if it deemed that the interests of the Nation and the discharge of the duties required on behalf of the Nation from this corporation demanded exemption in all things from State control, it would unquestionably have expressed such intention in language whose meaning would be clear.* Its silence in this respect is satisfactory assurance that, in so far as this corporation should engage in business wholly within the State, it intended that it should be subjected to the ordinary control exercised by the State over such business." (Italics mine.)

It will be observed that Mr. Justice Brewer was willing to concede, for the purpose of this decision, that Congress has the power to remove a Federal railroad corporation in all its operations from the control of the State, but that he based his decision on the fact that the charter of the Texas & Pacific Railway Co. did not show an intention on the part of the Federal Government to thus exempt the Texas & Pacific Railway Co. from State control in State affairs. This position of the Supreme Court is all the more significant in view of the fact that the briefs of counsel for Mercantile Trust Co. and the Texas & Pacific Railway Co. specifically drew the attention of the Supreme Court to the fact that the incorporation of the Texas & Pacific Railway Co. could be sustained not merely under the commerce clause, which clause has always been construed to contain a limitation reserving to the States the power to regulate purely State commerce, but also under two additional powers of the Federal Government, the one power being the military power and the other the power to establish post roads. Under the language of the Federal Constitution, neither of these two powers is subject to any limitation with reference to State lines.

In *Smyth v. Ames* (169 U. S., 466), decided on March 7, 1898, certain stockholders of Union Pacific Railway Co. brought an action against the railway and certain public officials of the State of Nebraska to enjoin the enforcement against the Union Pacific Railway Co. of an act of the Legislature of Nebraska regulating railroads and fixing maximum freight rates. It was urged by the stockholders of the railway company that Union Pacific Railway Co. was a Federal corporation, and that under its charter the Federal Government had reserved to itself the exclusive control of rates, both interstate and purely State. Mr. Justice Harlan, in delivering the opinion of the Supreme Court of the United States, held that the language of the Federal charter could not reasonably be construed so as to reserve to the Federal Government these exclu-

sive powers. Mr. Justice Harlan refers with approval to the language hereinbefore quoted from *Reagan v. Mercantile Trust Co.*, and concludes, at page 522 of the Reporter, as follows:

"Until Congress, in the exercise either of the power specifically reserved by the eighteenth section of the act of 1862 or its power under the general reservation made of authority to add to, alter, amend, or repeal that act, prescribes rates to be charged by the railroad company, it remains with the States through which the road passes to fix rates for transportation beginning and ending within their respective limits."

This language contains a clear intimation that the Federal Government has the power, in incorporating a Federal railroad corporation, to reserve to itself complete authority over such corporation, even as to purely State commerce. The intention to reserve such power, however, must be clearly expressed in the act of incorporation.

In the *Minnesota Rate Case* (230 U. S., 352), decided on June 9, 1913, Mr. Justice Hughes, on page 425 of the Reporter, refers as follows to the contention of the *Texas & Pacific Railway Co.* in the *Reagan* case:

"It was insisted that this company was 'not subject to the control of the State, even as to rates for transportation wholly within the State,' the argument being that it was not within the State power to limit the Federal franchise to collect tolls. But the court held that the act of Congress did not go to the extent asserted but left the company, as to its intrastate business, subject to State authority."

Three times the Supreme Court of the United States, speaking successively through Justices Brewer, Harlan, and Hughes, has thus clearly intimated that if the Federal Government in incorporating a Federal railroad clearly expresses the intention that such railroad shall not be subject to State control, the States will have no power over the railroad, even as to purely State commerce. It may be urged that in none of these three cases was the point necessary to the decision and that it would be a more sound doctrine to limit the exclusive control of the Federal Government under the military power and under the power to establish post roads to matters of a military and postal nature, and to hold that with reference to other classes of commerce the limitations of the commerce clause must govern. But it may be suggested that this qualification was not made in the decision in any of the three cases hereinbefore cited.

In view of these three decisions, I consider it to be entirely unsafe to support the proposition of Federal incorporation of the railroads on the assumption that the power of the States over purely State commerce can not be taken from the States, even under Federal incorporation, without an amendment to the commerce clause of the Federal Constitution. If the plan of Federal incorporation of the railroads should be successful, the railroad lawyers will undoubtedly argue before the Supreme Court of the United States, in confident reliance on the three decisions hereinbefore cited and on language showing the intention of the Federal Government, to be inserted in the statute, that the railroads have been entirely removed from control by the States, even as to all purely State matters, with the sole exception of the taxing power and police powers in matters "not vital," it being the intention at present to so word the general statute as to reserve these two powers to the States.

TAXING POWER OF STATES.

As already indicated, the railroads are willing, as a matter of policy, to leave to the States, "for the present," their power to tax railroad property.

That the railroads could thereafter, by simply amending the Federal incorporation statute, take this power also from the States, would seem to be clear from the decisions of the Supreme Court of the United States.

In *Thompson v. Union Pacific Railroad Co.* (9 Wall., 579), it was urged that the Union Pacific Railway Co.'s property in Kansas was exempt from the payment of taxes levied by the State of Kansas, not under any specific language in the act of Congress incorporating this railroad but "from the relations of the road to the General Government."

The Supreme Court of the United States, speaking through Chief Justice Chase, distinguishes between the instrumentalities employed by the Government and the property of the agents employed by the Government and holds that as long as Congress has not interposed to protect from State taxation the physical property of a Federal railroad corporation such property may continue to be taxed by the State. However, at page 589 of the Reporter, the Chief Justice holds that Congress may "exempt, in its discretion, the agencies

employed in such services (referring to Federal railroad corporations from any State taxation which will really prevent or impede the performance of them." And on page 590 of the Reporter the Chief Justice holds that "in the absence of express legislation to that effect" Federal railroad corporations continue, with reference to their physical property, to be subject to State taxation.

In *Railroad Co. v. Peniston* (18 Wall., 5), the Supreme Court of the United States held, by a divided court, that the public authorities of the State of Nebraska might levy taxes on the physical property of Union Pacific Railroad Co., a Federal railroad corporation, but not on its operations in the State. Justices Strong, Clifford, Miller, and Davis held that the State tax under consideration was valid because it was merely a tax on the tangible property of the railroad and not on its operations. Mr. Justice Swayne concurred solely on the ground that Congress had not granted to Union Pacific Railroad Co. exemption from State taxation, but added that this railroad corporation "is a national instrumentality of such character that Congress may interpose and protect it from State taxation whenever that body shall deem it proper to do so." Justices Bradley and Field, dissenting, held that under its Federal charter the Union Pacific Railroad Co. is exempt from all State taxation. Mr. Justice Hunt also dissented. It seems entirely clear that if the Federal act incorporating the Union Pacific Railroad Co. had expressly exempted this railroad from State taxation, the State of Nebraska would have been deprived of the right to tax even the tangible property of Union Pacific Railroad Co. located within its borders.

In *Central Pacific Railroad Co. v. California* (162 U. S., 125) the Supreme Court of the United States said:

"It may be regarded as firmly settled that although corporations may be agents of the United States their property is not the property of the United States but the property of the agents, and that a State may tax the property of the agents, subject to the limitations pointed out in *Railroad Company v. Peniston*."

The Supreme Court then continued as follows:

"Of course, if Congress should think it necessary for the protection of the United States to declare such property exempted, that would present a different question."

From these authorities the conclusion may fairly be deduced that if the Federal Government, in providing for the incorporation of a Federal railroad, should clearly express the intention that such railroad shall not be subject to State taxation, no State would thereafter have the power to tax such Federal railroad corporation, not even its tangible property located within the borders of the State.

POWER OF STATES OVER SECURITIES.

That the Federal Government, under a plan of Federal incorporation of the railroads, could provide by appropriate language for executive control over the issue by such railroads of capital-stock bonds and other evidences of indebtedness seems entirely clear.

The Supreme Court of the United States has frequently held that whenever the Federal Government enacts legislation providing for regulation in a particular field of interstate commerce the States may not thereafter lawfully exert any authority in that particular field of interstate commerce. *Northern Pacific Railway Co. v. State of Washington* (222 U. S., 370); *Southern Railroad Co. v. Railroad Commission of Indiana* (336 U. S., 439.)

The matter would seem to be too apparent to necessitate further discussion.

POWER OF STATES OVER SERVICE.

At the present time the various States exercise important powers with reference to the service equipment and facilities of railroads. These powers include matters such as the quality and adequacy of the service; the adequacy of equipment, both passenger and freight; the construction, heating, lighting, and sanitation of depot and station buildings; the number and stopping of trains; the construction of spur tracks; and the construction of physical connections between railroad tracks.

Under the decisions hereinbefore referred to the Federal Government under a plan of Federal incorporation of railroads could provide that these powers even as to purely State commerce could be completely withdrawn from the States.

POWER OF STATES OVER SAFETY.

The States likewise exercise important powers over safety of railroad construction and operation from the point of view both of the railroad employees and of the traveling public. These powers include such matters as the investigation and prevention of railroad accidents; the establishment of proper operating rules; the maintenance of proper clearances, both vertical and horizontal; the installation of block or other signals and of interlocking devices; the condition and manning of equipment; and the safety of the construction and operation of railroad crossings.

Under the decisions hereinbefore referred to, the use of appropriate language in the Federal incorporation act would presumably withdraw from the States the exercise of all these powers over all railroads to any extent engaged in interstate commerce.

POLICE POWERS OF STATES.

The States at the present time exercise important police powers, applicable to railroads, with reference to health, safety, and morals. Although some constitutional lawyers have expressed the opinion that the Federal Government can not interfere with the exercise by the States of their so-called "police powers," this view is in conflict with the decisions of the Supreme Court of the United States. The law of the land, as expressed by these decisions, undoubtedly is that as to interstate commerce the Federal Government has the power to enact regulations which shall supersede the police powers of the States. *Hipolite Egg Co. v. United States* (220 U. S., 45); *Hoke v. United States* (227 U. S., 308); *Sligh v. Kirkwood* (337 U. S., 552); *Seven Cases of Eckman's Alternative v. United States* (239 U. S., 510).

A familiar case of the exercise of State police powers over railroads is to be found in the laws of many of the Southern States providing for separate coaches for whites and blacks. Under the decisions hereinbefore cited, the Federal incorporation act, either as originally adopted or thereafter amended, could undoubtedly provide that with reference to this matter as well as all other police matters the State should thereafter exercise no power whatsoever, in so far as any railroad to any extent engaged in interstate commerce is concerned.

EFFECT OF RAILROAD PLAN.

With reference to the effect of the railroad plan on the powers now exercised by the States, it may be said that if the doctrine announced in the *Reagan* case and subsequent cases should be applied by the Supreme Court of the United States, the Federal Government, by the use of appropriate language in the Federal incorporation act, could deprive the States of all powers of any character whatsoever over any railroad to any extent engaged in interstate commerce.

The plan as actually proposed by the railroads is to deprive the States, "at present," of all such powers, with the exception only of the power to tax and the power to enact "nonvital" police regulations.

The effect of the railroad plan on the financial structures of the railroads themselves is a matter which requires the most serious consideration. The railroad plan provides, in effect, that the new Federal Railroad Corporation shall take over the property of the existing State railroad corporations, subject to the entire outstanding indebtedness, and that the new Federal Railroad Corporation shall issue its capital stock to an amount equal to the entire outstanding capital stock of the State railroad corporation. Whatever water exists in the railroad stock now outstanding is to be perpetuated, through the act of the Federal Government, in the new capital stock which is to be issued by the new Federal corporations.

As hereinbefore pointed out, the Newlands plan provided that the property of the existing State railroad corporations should be transferred to the new Federal railroad corporations on the basis of the issue of the new Federal corporations of securities not in excess of the fair value of the property which is to be transferred. This would seem to be not merely a fair proposition, but also a very necessary step in order to establish sound railroad financial structures in lieu of many which are now unsound. However when Mr. Alfred P. Thom, who appears in behalf of the railroads before the Newlands joint committee, was asked by Senator Cummins whether the railroads would be willing to limit the issue of securities by the new Federal corporations to the fair value of the property, Mr. Thom flatly refused to entertain such a

proposition, stating that the issue of securities equivalent only to the fair value of the railroad properties "would result in the financial ruin of the world." (Transcript, p. 399.)

Mr. Thom suggested, in reply to the argument that it would be most inadvisable to have the Federal Government compel the issue by the new Federal corporations of large amounts of stock in excess of the fair value of the property, that the new stock might be issued without par value and that in this way the difficulty might be overcome. However, as Senator Cummins pointed out, such a solution of the problem would "simply delude the country." One of the chief causes of the financial difficulties in which many of the railroads now find themselves is that their outstanding securities are largely in excess of the fair value of their property. Additional funds for capital expenditures can not be secured by these railroads from the sale of bonds for the reason that the amount of bonds already outstanding is equivalent to or greater than the fair value of the property, nor can such funds be secured from the sale of capital stock for the reason that there is little or no equity at present behind the existing capital stock and no possibility, under just and reasonable rates, of earning substantial dividends to be paid on new capital stock in addition to capital stock which was issued by the railroads for little or no consideration. The issue of capital stock without par value in lieu of the capital stock now outstanding would not add a single dollar to the value of the property or increase by a single dollar the amount of net earnings available for dividends on capital stock, or in any way improve the present financial structure of the railroads. Unless the investors of our country are "deluded," as suggested by Senator Cummins, they will be very slow, as long as the financial structures of these railroads remain as they are, to purchase additional securities, either bonds or capital stock. These comments, of course, do not apply to railroads whose financial structures are sound.

Furthermore, the plan suggested by the railroads may involve most serious consequences with reference both to future railroad rates and to the price which the Federal Government will ultimately pay for the property of the railroads. As already pointed out, the new capital stock is to be issued, in effect, under compulsion of the Federal Government. Will not the railroads therefore urge, under these circumstances, that the Government is estopped from claiming that the property of the railroads is worth less than the amount of the securities the issue of which was thus compelled? Is this not one of the real reasons for the plan of Federal incorporation proposed by the railroads? Is it not their desire to lay the foundation for hereafter urging increases in rates on the basis of the securities to be issued under compulsion of the Federal Government? And, furthermore, are they not attempting to lay the foundation for hereafter claiming a high value, based on the issue of such securities, when the people of the United States finally purchase this property? In either event, this aspect of the railroad plan is worthy of the most careful consideration from the American people.

In my opinion, entirely apart from other features of the plan, the railroad proposal should never be adopted except on the basis of the limitation of the issue of the new securities to the fair value of the property and on the basis of a proper relationship between the various classes of securities.

FEDERAL INCORPORATION UNNECESSARY.

The representatives of the railroads before the Newlands committee repeatedly admitted that they can accomplish by direct legislation, such as by the amendment of the interstate commerce act, everything which they hope to accomplish by the indirect instrumentality of Federal incorporation. This admission is subject to the qualification that it may be possible, under a Federal incorporation act passed in the exercise of the military power and the power to establish post roads, to take from the States powers which could not be taken from them under the commerce clause of the Federal Constitution as it now reads.

Referring specifically to the control of the issue of railroad securities, Mr. Thom has repeatedly admitted that exclusive Federal control of such issues can just as effectively be established, as a matter of law, by the passage of the Rayburn bill or some other amendment to the interstate commerce act as by providing a plan of Federal incorporation of the railroads.

Then why do the railroads advocate the enactment of the indirect means of Federal incorporation when they can just as readily accomplish their purpose

by dealing directly and openly by amending the interstate commerce act? Is it because they think that they can more readily accomplish their purpose by indirect means which are not clearly seen and understood than by direct action in the open? The only answer given by the railroads is that before bankers would purchase railroad securities issued under Federal control thereof established by amendment to the interstate commerce act they would insist on having the legality of such amendment established by a decision of the Supreme Court of the United States. The railroads contend, on the other hand, that if Federal incorporation were effected, these same bankers would purchase railroad securities thereafter issued without questioning the legality of the machinery provided by the Federal Government.

These arguments of the railroads are, in my opinion, by no means persuasive. It would be a comparatively simple matter to take to the Supreme Court of the United States a test case raising the question as to whether the Federal Congress may, by direct amendment of the interstate commerce act, provide for exclusive or any other regulation of the issue of railroad securities. Statutes involving important changes in matters affecting property interests as well as human rights are constantly passed by the Federal Congress, and in due course the Supreme Court of the United States passes thereon, adjudicating all questions of doubt. The most signal weakness in this position of the railroads is their assumption that no litigation would follow the adoption by the Federal Government of the railroad plan of compulsory incorporation of all the railroads. If this plan is adopted, I predict that there will follow thereon the greatest flood of railroad litigation which the United States has ever known.

The only reason urged by the railroads in favor of accomplishing their purpose indirectly instead of directly is the desire of these bankers to have the indirect method adopted rather than the direct method. This reason, in my opinion, is entirely unsatisfactory from the public point of view.

GENERAL CONCLUSIONS.

Finally, I desire to suggest a few general conclusions on the subject of Federal incorporation of the railroads.

1. It can not be said, as a general proposition, that Federal incorporation of the railroads is necessarily inherently good or bad. For instance, a plan of Federal incorporation of the railroads under which the amount of outstanding securities would be reduced to a reasonable amount, the financial structures of the railroads improved, and their ability to secure the necessary additional funds enhanced, without at the same time taking away from the States their powers over essentially local matters, would be regarded as a good plan by many public-spirited citizens who regard the present railroad plan as essentially bad. Hence it is necessary in passing judgment on a plan of Federal incorporation of the railroads to consider the details of the particular plan presented and then to determine whether that plan, with its details, is or is not desirable.

2. The plan of Federal incorporation now presented by the railroads is in my opinion, distinctly against the public interest. It is calculated to break down the entire machinery of public regulation without in any degree improving the unsound financial structures from which many of the railroads are suffering. Furthermore, it has inherent in it grave dangers to future rates and to the future price to be paid by the Federal Government for the properties of the railroads, as hereinbefore pointed out.

3. The entire purpose of the railroad plan would seem to be to escape regulation by the States and to perpetuate the existing railroad securities. Unless these purposes are commendable, the plan certainly should not be adopted.

4. When the framework of a Federal incorporation act has once been provided, even though necessary qualifications and limitations are at first contained therein, it will be a simple matter for a subsequent Congress to strike out the qualifications and limitations so that the railroad purpose will be completely accomplished.

5. No convincing reason has been shown why such legislation as may now be desirable should not be enacted directly by amendment of the interstate commerce act or other direct legislation instead of by the indirect, devious method proposed by the railroads.

Boston, February 8, 1917.

Hon. W. C. ADAMSON,
Chairman, Washington, D. C.

DEAR SIR: There is an opportunity for the Government to improve the service offered by the railroads of this country and at the same time give a stability of value to railroad securities that I am confident the present administration would carry out if the importance of the advantages to be gained could be clearly shown. To accomplish this I take the liberty of addressing you on this subject.

Whether or not the Adamson bill proves to be unconstitutional it is bound to prove a burden for all railroads of this country. There is bound to be an increase of salaries and railroad employees, no matter which way the question is decided. Certain of our railroads, such as the New York Central and Pennsylvania, have been making large profits handling export business brought about by the war. Railroads like those mentioned can afford for the time being to meet the additional demand, but such is not the case with the average roads. What I am anxious to have the Government do in connection with the freight cars is that they should take the position practically the same as the Pullman Co. now occupies in the sleeping-car business; that is, the Government will control all the freight cars of this country. The amount of money saved to the railroad, if such an arrangement were made effective, would run into hundreds of millions, and the advantages offered to the public and shipper would be enormous.

Roughly speaking, there are about 2,500,000 freight cars, worth about \$3,000,000,000. These cars, according to a statement recently made by President L. F. Loree, of the Delaware & Hudson, are employed for transportation only a little over 2 hours out of every 24. If the management of these cars were in Government hands, say under the control of the Interstate Commerce Commission, with bureaus located in our principal cities, the efficiency of the cars would be doubled. It is plainly evident that if the Boston & Maine at Bangor, Me., has a Pennsylvania car on its track, and at the same time there is a Boston & Maine car on the Pennsylvania system, there could be an immediate offset if the plan proposed were in force, instead of empty cars being returned, as is the present way of handling business. As a result of present conditions 43 per cent of the freight cars of this country are handled as empty mileage. Furthermore, the Government control would mean the standardization of freight cars. At the present time there are 18,500 different parts in a freight car, and if they were of one standard make the delay caused by repairs, now a very serious item, would be cut in half. Furthermore, the average freight car has a capacity of 40 tons, but the average loading of same is only about 12 tons. If these cars were held under one ownership this loading could be largely increased. Cars could be readily moved to a point where the density of profit would require them at different times of the year, just as the Pullman cars are shifted south in the winter and back north for the summer months.

If this plan were put into effect it would increase the earning power of the freight cars 33½ per cent, which would equal the addition of 800,000 freight cars to the transportation service in the United States.

What I propose is that a corporation be formed and placed under the control of the Interstate Commerce Commission, this corporation to control all the freight equipment in the United States, charge a revenue for every car, and pay rental to the different roads for the use of the car. This concern, being under the jurisdiction of the United States Government, could borrow money for new car equipment at much lower rates than it is possible for even the New York Central and Pennsylvania to do at the present time.

This will naturally raise the question, Why is it that the railroads do not do this themselves if it has so many advantages? The answer is that the rivalry among railroads is so great that the desire on the part of the strong roads to maintain the advantage over the smaller roads, by having a larger supply of cars to offer the shippers, is so strong that they are not favorable to any changes, although the advantages to them would be enormous.

Very truly, yours,

F. H. PRINCE.

The CHAIRMAN. A friend of mine has compiled the following statement, which I desire to insert in the record :

The traffic of the Pere Marquette Railroad during the past three years has necessitated the average employment of 21,000 freight cars daily (see Exhibit 1) on its lines. This means a daily charge of 45 cents per car (see Exhibit 11) or \$10,500 per day or \$3,832,000 per year, and one-third of this equipment is required to carry on the L. C. L. business, averaging but 5 tons to the car.

It is conservatively estimated that this traffic is actually carried at a loss of over \$10 per car (see Exhibit 3). Taking the number of cars of this class of traffic handled in 1913 it will show an actual loss to the road of about \$1,740,000.

An increase in rates will not affect materially the earnings on this class of freight, as it is plainly evident it is impossible to carry without loss 5 tons of freight in a 40-ton car without being compensated for the cost of the car as it is to carry five passengers in a coach and ask for a revenue that will compensate for the service rendered.

This less-than-carload merchandise business must be carried, the shippers' demands make it impossible to load more than 5 tons to the car, and this service is the expensive traffic of the road. It means a loading cost of 40 cents per ton for manual labor; the furnishing of expensive terminals requiring continual improvements and expansion; it means an unloading cost of 40 cents per ton; a switching charge of \$3 per day; and the continual delay to freight trains for unloading and setting off cars.

The slow movement of freight on the Pere Marquette is largely due to the merchandise freight handled. This general merchandise traffic averages about 7 miles per hour on account of unloading delays.

This L. C. L. merchandise of 5 tons loaded into one car is often divided up among as many as 250 shippers, and averages between 60 and 70 to the car, so that this additional tariff will average from 7 cents to 10 cents per consignee, and in many instances as low as 2 cents to 4 cents.

It is clearly evident it is neither right nor just that the owners of the property or the shippers of carload freight should be obliged to bear the burden that is forced upon them through the carrying of this class of traffic at this enormous loss. With the revenue asked for there would still be a loss incurred amounting to over \$4 per car on each car of L. C. L. business handled. A similar situation would arise if the road gave free passes to one-third of its passengers and expected the property and the remaining two-thirds of the passengers to bear the total cost of operation.

EXHIBIT 1.

Number of freight cars on Pere Marquette line as reported to American Railway Association.

1913:	Number.	1914:	Number
July 22-----	23, 198	January 7-----	23, 543
August 22-----	23, 889	January 22-----	24, 327
September 10-----	26, 039	February 7-----	24, 827
September 22-----	25, 818	February 21-----	24, 268
October 8-----	26, 455	March 9-----	23, 624
October 22-----	25, 481		
December 8-----	23, 497		
December 22-----	22, 910		

Daily average, 24,457.

I have called the average number of cars on the line 21,000 per day, allowing 3,457 to be considered bad-order cars, which is 2,000 more than should be on the road under ordinary conditions.

No report has been made to the American Railway Association since March 9, 1914.

OCTOBER 22, 1914.

INTERSTATE AND FOREIGN TRANSPORTATION.
EXHIBIT 2.

1097

Basis for cost of cars owned by the Pere Marquette Co. on line per day.

On a new freight car costing \$1,000, the expense borne by the company would be as follows:

Cost for—	Per annum.	Per day.
Interest at 5½ per cent.....	\$55.00	\$0.151
Depreciation at 6 per cent.....	60.00	.164
Repairs.....	75.00	.206
Insurance.....	2.52	.007
Taxes.....	9.00	.025
	201.52	.552

OCTOBER 23, 1914.

EXHIBIT 3.

Basis for \$10 loss—Pere Marquette.

Loading cost, 35 cents per ton, average of 5 tons per car.....	\$1.75
Average cost to unload general merchandise in passing train is 75 cents per ton, or per car.....	3.75

(It costs about \$4 per hour to delay a local merchandise freight train because of the higher rate of wages paid to this crew than to other freight train crews, as well as additional man to train.)

Cost of switching.....	3.00
Average per diem of 5 days, at 45 cents.....	2.25
Average cost.....	10.75
Average earnings on merchandise freight, per car.....	15.00
Balance to pay for average haul of 156 miles.....	4.25
It costs over \$16 to haul a car of freight 156 miles.....	16.00

Leaving a loss per car to road of..... 11.75

Without taking into consideration interest and taxes on freight houses or the maintenance of same, and not considering cost of claims, which averages about 64 cents per car.

OCTOBER 23, 1914.

PERE MARQUETTE RAILROAD CO.,
Detroit, Mich., January 15, 1917.

Mr. W. J. MULLIN,
General Traffic Manager, D. & H. Co., Albany, N. Y.

DEAR SIR: Yours of January 9, your file 5505, cost of handling L. C. L. traffic.

It seems extremely difficult to draw comparisons between any two railroads respecting their merchandise traffic, because of the difference in conditions and character of traffic and the difference in the statistical data from which the deductions are drawn.

On the Pere Marquette we keep all less-than-carload traffic under the head of merchandise. We also keep in the office of our superintendent of transportation a record of all revenue cars loaded on the line and received from connections, showing the various principal commodities and merchandise cars separately.

Taking the fiscal year ending June 30, 1916, we show—

	Loaded on line.	Received from con- nections.	Total.
Revenue loads.....	404,471	236,152	640,623
Merchandise cars.....	149,280	23,456	172,736

Tons of merchandise	988,387
Per cent of total tons.....	7.65
Tons 1 mile (merchandise).....	145,515.452
Per cent of total tons 1 mile.....	6.23
Revenue on merchandise.....	\$2,711,887.15
Per cent of total revenue.....	17.96
Average haul (miles).....	147.23
Rate per ton per mile (cents).....	1.86
Rate per ton per mile all freight (cents).....	.64
Average car earnings:	
All revenue loads (640,623 cars).....per car.....	\$23.56
Carloads (467,887 cars).....do.....	\$26.47
Merchandise (172,736 cars).....do.....	\$15.70
Merchandise earned 18.7 cents per 100 pounds.	
Merchandise averaged to load 5.7 tons per car.	

Twenty principal stations loaded in one year 118,751 cars of merchandise with average loading of 6.3 tons.

Chicago loaded 7,012 cars, with average load of 7.93 tons.

Detroit loaded 14,080 cars, with average load of 7.48 tons.

Taking the 118,751 loaded at the principal stations and the 23,456 cars received from connections, we have 142,207 cars accounted for out of a total of 172,736. This leaves only 30,529 loads to have originated at all other stations. There is probably a slight duplication of cars where through loads from connections pass through a junction like Detroit and are partly unloaded, but these are not numerous.

What seems to me a rather strange fact is that of all the merchandise we handle I do not recall one regular car that passes over our road without being worked somewhere.

You have many such cars coming on at Mechanicsville and off at Binghamton, and probably separate your carloads of through merchandise from the other merchandise traffic. We get a lot of long-haul merchandise from Niagara Frontier to Ludington, Grand Rapids, etc., which is good paying traffic, and our Chicago to Michigan merchandise pays well (176 cars in first nine days of November averaged to pay us \$35.71 per car) but our trouble lies largely in the fact that our jobbing towns are so near together in Michigan that the average haul is low. We have wholesale distributing houses at Detroit, Toledo, Chicago, Lansing, Grand Rapids, Benton Harbor, Muskegon, Port Huron, Bad Axe, Saginaw, Bay City, Manistee, Traverse City, and Petoskey. I once checked up the L. C. L. business from these points for three given days, separating the tonnage into 25, 50, 75, 100, 125 etc., mile zones, and in some cases as much as 50 per cent moved less than 100 miles.

We have tried holding over cars for straight station loads and then have through trains set them out. This caused no great inconvenience to patrons but did bother about setting of cars at crowded freight houses and, in a way, worked a hardship in the freight house. There is also the feature of moving empties into the country stations for produce out. For about eight months in normal years we need cars at interior points and, except on paper, it does not cost any more to move two light loads than one heavy and an empty car. This, like the "tariff," is a local issue.

I have for a long time felt that we could not get much united action on this until all roads kept their accounts so as to know how much less-carload traffic they handled. Until they do that they will simply be groping in the dark.

Unless these items are separated in our accounts, we will be in as bad shape as a country merchant who does not know which commodities are paying profit or which departments in his store are losing money, and a study of cost of handling less-carload traffic will be a waste of time if we do not know the specific gross income derived from it.

We show that it costs 98 cents a ton to handle freight at our Detroit station. It costs us \$1 a ton at one Chicago station, and about this at our main Chicago

station where we do the work and pay the rent, etc. Assuming that the expense at interior points averages one-half of this, it means about 7½ cents a hundred out of our 13.7 cents for terminals alone, and I venture the opinion that where some shipments are rehandled several times we get nothing out of it after paying for labor.

I shall be glad to hear from you if you can get any additional ideas or suggestions on this subject.

Yours, truly,

GEORGE C. CONN.

THE ATCHISON, TOPEKA & SANTA FE RAILWAY SYSTEM,
FREIGHT TRAFFIC DEPARTMENT,
Chicago, Ill., January 2, 1917.

COST OF HANDLING LESS-CARLOAD FREIGHT.

Mr. GEO. C. CONN,

F. T. M., Pere Marquette R. R. Co., Detroit, Mich.

DEAR SIR: Referring to your letter of December 16, file 3340, inclosing copy of Mr. Glenn Warner's report relative to the transportation of less-carload freight, I invite your attention to comments of Mr. G. W. Oliver, our statistician, in his letter of December 28, copy attached. I will be glad if you will ask Mr. Warner to send Mr. Oliver under personal cover a copy of his study.

We have not made an exhaustive investigation of less-carload traffic on the Santa Fe, but since the decision of the Interstate Commerce Commission in the Missouri River-Nebraska rate cases we are giving the subject of terminal cost more thought, particularly in connection with State rate cases. I may say that it is the consensus of opinion among our people that we do not earn much, if anything, above cost of handling short-haul less-carload shipments, particularly where the rates are divided with one or more connecting carriers. I think the situation is more pronounced east of the Mississippi River than west thereof; note our average haul Kansas City, Mo., to Kansas points (practically intrastate) is 178 miles, average revenue per ton \$8.73 as compared with your total average haul of 157 miles and revenue of \$2.64 per ton. The measure of rates, carload as well as less-carload, west of the Missouri River is, of course, necessarily higher than east thereof, as illustrated by these figures, but that does not indicate that the rates in Michigan are compensatory. Our average haul all L. C. L. traffic is 331 miles, approximately two and one-quarter times that of the Pere Marquette, but our revenue per ton is more than three and one-half times as great (\$9.68 and \$2.64 per ton, respectively). Revenue from less-carload freight Santa Fe System lines fiscal year ending June 30, 1916, was 18.41 per cent of total freight revenue. It constitutes a much larger proportion on most of the eastern roads. Much of it, in my opinion, is a burden on other traffic, owing principally to terminal costs which are increasing and in most of our large cities increasing all out of proportion to increase in revenue from less-carload traffic. As property values rise in Dallas, Tex., for example, necessary enlargement of in and out freight house facilities cost much more than heretofore. I am firmly of the opinion that less-carload rates for short hauls might be substantially increased even to the extent of 25 per cent without being detrimental to any one.

If the Nebraska case referred to has not come to your attention, believe you will find the expression of the Interstate Commerce Commission on this particular point very interesting.

I thank you for a copy of Mr. Warner's study and will be glad to furnish you with any data which we may hereafter compile in relation to this interesting subject.

Yours, truly,

F. B. HOUGHTON.

THE ATCHISON, TOPEKA & SANTA FE RAILWAY SYSTEM,
Chicago, December 28, 1916.

Mr. F. B. HOUGHTON,

Freight Traffic Manager, Chicago, Ill.

DEAR SIR: Replying to your letter of December 22, file S-644670, and returning inclosures in regard to the analysis made of less-than-carload freight traffic on the Pere Marquette. The conclusions arrived at by Mr. Warner in this report appear to be conservative and I believe that they could be substantiated without

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

MONDAY, MAY 7, 1917.

UNITED STATES SENATE,
JOINT COMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint committee met at 10 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

The VICE CHAIRMAN. The committee will come to order. Mr. Thom, will you present the witness?

Mr. THOM. Mr. Chairman, I have asked Mr. Trumbull, who is chairman of our committee, to present the witness.

The VICE CHAIRMAN. The committee was called in extraordinary session this morning at the suggestion of some gentlemen who suggested that there was an English witness who desired to leave the country in a short while, and we might lose the benefit of his testimony unless he was heard at this time.

Mr. TRUMBULL. I thank you very much, Mr. Chairman. We appreciate the special session that you are having, and it is a great pleasure to me to introduce Mr. W. M. Acworth, of London, who is a distinguished writer on railway economics. He commenced coming to America in 1890, and has been here a dozen times, and I think there is no man in our acquaintance who is better informed about governmental relations with railways of the different countries of the world than he.

He has served on different commissions in England; he was on the Royal Commission on Railway Accidents, the Royal Commission on Irish Railways; he served on the Departmental Committee on Light Railways, the Departmental Committee on Railway Accounts; he was a delegate of the British Government to the International Railway Congress at Washington in 1905, a delegate of the British Government to the International Railway Congress at Berne in 1910, and but for a little unpleasantness with Germany might have been a delegate to the International Congress in Prussia in 1915. He gave evidence here before the Elkins committee in 1905, and he was before the Hadley Commission on Issuance of Railway Securities in 1909. He has recently been in this country and in Canada because of his having been appointed on the Royal Commission of Canada to make a report upon the railway situation of that country. The commission to report on the Canadian railways consists of three members, Mr. A. H. Smith, president of the New York Central (chairman); Mr. Acworth, of London; and Sir Henry Drayton, chairman of the Canadian Railway Commission.

I have here an extract from "Certified copy of a report of the Committee of the Privy Council, approved by the deputy of his royal highness the Governor General on the 13th of July, 1916." This was in Canada [reading]:

The Committee of the Privy Council have had before them a report, dated 12th June, 1916, from the right honorable the prime minister, submitting that it became necessary at the recent session of Parliament to make provision for assistance by loan to the Grand Trunk Pacific Railway Co. and to the Canadian Northern Railway Co. in order that such companies might be enabled to meet current obligations and to provide for payment of interest on outstanding securities.

Having regard to the conditions and necessities of railway development in Canada, the prime minister is of opinion that the situation should be considered in a comprehensive way and that a thorough inquiry should be made by a board of the highest ability and experience.

As I said before, we are very much obliged to you for having this special session to hear Mr. Acworth, which is now or not at all, probably, because he leaves in a few days for his home in London, and expects to go after that to Rhodesia, in South Africa, to make a report on the railways there.

Mr. SIMS. Mr. Acworth can remain with us for examination and cross-examination until this examination is fully completed, I suppose?

Mr. TRUMBULL. Yes, sir; he will be at the disposition of your committee and subject to your pleasure. We understand that Congress begins its session at 12 o'clock to-day.

The VICE CHAIRMAN. The House meets at 11 o'clock, and it will be well to have Mr. Acworth begin his remarks as soon as possible.

Mr. TRUMBULL. And then we will determine later what further information you want.

Mr. SIMS. Of course, a witness of this importance ought not to be just skimmed over.

The VICE CHAIRMAN. Our further meetings will be subject to the action of the committee. You would not like to have a night meeting, would you?

Mr. TRUMBULL. Yes, sir; we would like that very much, if that would not be oppressive to you.

The VICE CHAIRMAN. We will let these gentlemen determine among themselves whether we will meet to-night or not.

(The committee, by subsequent action, determined to meet after recess to-day at 8 o'clock to-night.)

STATEMENT OF W. M. ACWORTH, ESQ., LONDON, ENGLAND.

Mr. ACWORTH. Mr. Chairman, may I say in the first place how much I appreciate the courtesy of the committee in this time of great stress in finding any time to listen to my testimony? I heard what the gentlemen of the committee said to Mr. Trumbull, and I will, of course, put myself absolutely at your disposition in the matter.

I have here—and I think Mr. Thom handed it around to the committee—a paper which, as the committee will see, is sixty-odd pages long, and I do not propose to inflict on the committee the reading of it, but rather to skeltonize it as I go along, and if any member of the committee wishes to ask me a question or have me go more fully

into it, of course I will be glad to do it, quite apart from any question which may be asked afterwards.

The VICE CHAIRMAN. Suppose you hand it to the reporter, and it will be printed in full in the record.

Mr. ACWORTH. I shall be very glad to do what the committee wishes in that respect.

(The paper referred to appears at the conclusion of Mr. Acworth's statement.)

Senator CUMMINS. Is Mr. Acworth familiar with the scope of the resolution under which we are now acting?

Mr. ACWORTH. Yes, sir.

Senator CUMMINS. And you propose to devote yourself to one or the other phases of that resolution?

Mr. ACWORTH. I naturally do not propose to tell the citizens of the United States how they should manage their own affairs. That is clearly not my business. All I propose to do is to put before you a sketch of the history, as I see it, of State ownership going backward and forward, the subject of State ownership in other countries. May I say, Mr. Chairman, that I have been studying this subject for 30 years, and if my mind has naturally got a bias the committee must allow for that. I have done my best to make this, as far as I know, an impartial statement of the case. Perhaps I may say, without giving the gentlemen's names, because I do not wish to put any responsibility on anybody but myself, I did have the paper gone over by two gentlemen of distinguished position on this subject, one in England and one in America, to see if they could catch me in any errors. One of them made no criticisms and the other said that he thought I had understated the case with reference to Switzerland and pointed out some figures which I subsequently embodied.

Mr. SIMS. Is there any objection to the witness giving the names of those gentlemen?

Mr. ACWORTH. I will give them, certainly, if you wish it.

The VICE CHAIRMAN. The witness, as a witness, is supposed to be talking for himself.

Mr. ACWORTH. My point is that I do not want to put the responsibility onto anybody else for my work, but I have not the slightest objection myself.

Mr. SIMS. You have no objection to giving the names of those who concurred with you in the matter?

Mr. ACWORTH. I would not say concurred with me; it was to this extent, as far as they saw the evidence was accurate.

Mr. HAMILTON. As far as I am concerned, I do not see that there is any special importance attaching to that. Mr. Acworth is stating what conclusions they reached, connected with his own testimony.

Mr. ACWORTH. I would not want to say conclusions. They might not make these conclusions, while they may accept the facts as accurately stated.

The VICE CHAIRMAN. It may become necessary for the committee to know their names, but I do not think it is important now.

Mr. SIMS. If there is no objection, I do not see why he should not give the names.

Senator ROBINSON. I desire to suggest that Mr. Acworth be permitted to make his statement and that we reserve that question until he has concluded such statement as he desires to make.

The VICE CHAIRMAN. The point of order is sustained. That is the order of the committee.

Mr. SIMS. The gentleman mentioned the fact that one of the parties was English and one American and that they have gone over this paper, and I see no objection to his giving their names.

The VICE CHAIRMAN. He only did that for the purpose of inviting criticism. They did not contribute to it at all.

Mr. SIMS. I suppose it is not confidential; if it was, he would not have mentioned the fact.

The VICE CHAIRMAN. He is entitled to the credit.

Mr. ACWORTH. And the discredit, sir.

Mr. Trumbull has mentioned the fact that only in the last two or three days this, which is our official report to the Government of Canada, has been published, and clearly I was not in a position to discuss Canada anywhere else. Consequently, you will not find Canada mentioned in this paper, except, I think, there is one mention in a footnote, but I have not gone into any history in Canada for that reason. My mouth is now open, if any member of the committee wishes to ask me a question. If so, I am perfectly willing to answer.

Now, may I turn to the paper itself? I began by pointing out that railway enterprise began simultaneously in England and in America. The natural instinct of the Anglo-Saxon people was to leave things to be done by private enterprise, if they could be done by private enterprise, and accordingly the railways began as a private enterprise.

I think at the outset there is this point: The railways were a new kind of thing because they combined two things; they combined the building and maintaining of a railroad, which had always, in every country, been regarded as a State function, with the operation of traffic on that road. In no country that I know of had it ever been the custom for the Government to carry traffic on the road. The public authority owned the road, the private people carried the traffic, whether freight or passengers. In railway matters you could not have independent carriers running around on the railways for obvious practical reasons.

Therefore, this point was put up at the beginning, "Shall the idea of the State owning the railroad or the idea of the private person operating the railroad prevail?" Well, it is quite clear all through railway history that the question of whether the State shall operate the railways or not has never been decided on the abstract question. It has always been a question put to the individual government. Under the circumstances as they exist to-day, what are we to do about it? This report of ours in Canada came up not on the question abstractly, should the State or private persons run the railroad, but the railroads having got into such and such position, and it being perfectly obvious that things could not go on as they are now, what is the way out of it? I think that has always been the way the question has come up to the people who have practically to settle the policy, and at the very beginning of railway history that question came up in Belgium. The committee will remember that Belgium

was separated from Holland in 1830, which was exactly the date that railway enterprise began.

I believe your first train on the Baltimore & Ohio ran in 1830. Certainly our first well-known railway, the Liverpool & Manchester, opened in that same year. Belgium broke loose from Holland, and the route which crossed Belgium from Cologne to Ostend and Antwerp was a very important highway of traffic. It became obvious that they had to have a railroad there. It was also obvious that if private enterprise was to build the railroad, if private capital was to find the money, there was not the available capital in Belgium; there was available capital in Holland, and the Holland capitalists could own the main thoroughfare through Belgium. The Belgian Government, newly independent, said that was impossible, and the Belgian Parliament agreed at the outset. In this earliest instance of State ownership it was decided that the Belgian Government itself should build and own and operate this highroad across Belgium. I think the lesson of that is that it is really always a question of practical politics at the moment, dealing with circumstances as they are at the moment, and not a theoretical question.

Then I go on to speak of the statistics—of what railroads are owned publicly and what railroads are owned privately. It is a common statement that most countries own their own railroads, and if you count countries by the heads, it is perfectly true. Bulgaria owns all its railroads, and so does the United States, and they are each one country, and the railroads of Bulgaria are about 1,200 miles long and are about as important as the Maine Central. If you were to set up the Maine Central as a balance to the rest of the railroads of the United States, it would be rather absurd. But it is by that process that the people arrive at that statement that most countries of the world own their own railroads. The fact is that almost exactly half the mileage of Europe is State owned. The figures are as follows: Two hundred and sixteen thousand is the total, of which 116,000 is owned by the different governments and the rest owned privately. If you take the whole world together it is 400,000 miles of railroad, and less than one-third are in the hands of the States. It really comes broadly to this, that leaving out the United States, which is a good deal more than one-third of the total mileage of the world—leaving out the United States the world goes half-and-half.

If you take it, not on mileage but on capital, on equipment, and on work done, it is broadly true to say that two-thirds of the mileage of the world has been built by private enterprise; two-thirds of the work is done by private enterprise; and two-thirds of the capital has been provided by private enterprise. But as I say, in Europe at least, most countries do own either the whole or some part of their railways.

Then I go on to speak of the changes in ownership. Nearly every country has swung backward and forward. As I said, Belgium began with State ownership. At one time it allowed the State railroads to remain unextended and the new mileage was all built by private enterprise. Then, after the war of 1870, when Prussian ideas began to spread over the continent, Belgium came to the conclusion that competition between private and State owned railways was not desirable, largely, I think, because the private railways, being more

agile, got the better of the State railways. Belgium went in for the policy of absolute State ownership. Austria, to take an instance, or Italy, have swung backward and forward. Sometimes they have sold railways to private companies, or leased them, and sometimes they have taken them back again, etc.

Prussia of course is the most interesting case. People often speak of German railways. In fact, except in Alsace-Lorraine, where the railways do belong to the German Empire, there are no German railways, properly so-called. There are Prussian railways and Bavarian railways and Saxon railways, etc., but they belong to the individual State and not to the Empire. When Bismarck was in the full swing of his power after 1870, he was very anxious to make all the railways German, largely—the Prussians always have a military reason—largely for military reasons and partly because he saw in this one important method of bringing together and unifying the Empire. But Germany was not prepared for it, and almost as soon as Bismarck proposed in the Parliament of the Empire to put together all the railways of the different States, Bavaria and Saxony, which were the two biggest States after Prussia, replied by purchasing themselves all the private railways in their own borders and then they could oppose the solid block of Bavarian railways and Saxony railways and say, “We won’t hand our railways over to the Empire.” So Bismarck had to give up that and had to content himself with nationalizing all the railways of Prussia.

Up to that time the exposition had been, broadly, that the railroads in the wealthy manufacturing parts had belonged to private companies which were ready at the start to find capital where there was a good chance of return; but the poorer agricultural districts had been left; private capitalists had not cared to touch them; and their railways had been built by the State. But Bismarck found this double system, and when he left he had bought out the private railways; and there was, as there is now, a complete block of State railways in Prussia with no private railways of any importance. There are one or two lines of small importance still left, and there are a large number of what they call light railways, merely agricultural feeders to the main line, that are built and operated by companies generally with the assistance of the provincial government, that are not in the State system; but, broadly speaking, the whole Prussian railways are absolutely one undivided State system with about 26,000 miles to-day.

Now, perhaps, I may deal with the question why governments go into the railroad business. I do not know whether any members of the committee know the book on railroad transportation by President Hadley of Yale, which came out about 30 years ago. That has always been a textbook for people who have studied this subject ever since. President Hadley wrote in 1886 as follows:

The motives which have led governments to extend the sphere of their business activity have been three:

1. To increase their own political influence.
2. To make up for the lack of private enterprise.
3. To avoid the abuses incident to private management.

Well, there has been a good deal of railway history made in the last 30 years, and I suggest that a fair historical account of the reasons may now be put something like this—I still agree that there

are three reasons. The first is the political reason. The political reason may be either external or internal. The external reasons are to obtain control of an instrument of war to be used either for aggression or for defense, or to prevent the control of this instrument by capitalists subjects of another possibly hostile power; or, again, to be able to use the railway tariffs as an auxiliary in support of the policy embodied in the customs tariffs of the country.

Those are all reasons external to the State. The main internal reasons are either to unify the nation—as I have just explained in Bismarck's case—or to centralize authority or to obtain new sources of revenue independent of the taxes voted by Parliament.

The second reason why governments go into the business is to make up for the lack of private enterprise.

The third reason is with the idea of procuring for their citizens better conditions (lower rates, greater facilities, more impartial treatment, etc.) than private enterprise has given or is expected to give or is accustomed to give in the future.

Well, of course, that, sir, is a long story. One might write that in several volumes. If I may, I shall just try to give the committee very shortly the story of how the different important nations approached the problem, what was their reason, and what was their solution.

Prussia is, in this matter, the most important. It is the biggest railway administration in public hands in the world, and it is usually accepted as the most efficient. Now, I have given reasons later on in this paper for saying that there is a good deal of evidence that, compared with fairly comparable railroads elsewhere, the Prussian railroads are not very startling examples of efficiency. I think there is good evidence that private railroads in France, which can be compared, do their work better for the public.

Then I make another point, and I think that is a point that the whole history of countries with a democratic government proves to be of very great importance. Let us assume that the Prussian railways are entirely efficient. As I have said, I think there is evidence that they are not very efficient, but assume that they are entirely efficient. The Prussian railways are run by an absolute despotic authority. Parliament has no more control over the Prussian railways than it has over the Prussian Army. The railways are run by an officer who is responsible directly to the King, and, in fact, to nobody else.

Now, assuming the efficiency of the Prussian railways under that management, does it afford any reasonable evidence that the efficiency of State railways will be equally great when they are managed under a democratic system such as exists in, for example, the colonies of the British Empire—as they would be in England or in the United States, if one imagines the United States nationalizing its railways, or, which is the most startling instance, perhaps, of recent years, in France. The French have in the last eight years nationalize one of their important railroads, one out of the six great systems, and, according to their own confession, they have made a most appalling mess of it, and admittedly the reason has been that it is managed under a democratic organization that is not suited for the work.

Let me deal with the history of annexation in Prussia. I must not attempt to read it at any great length. It is clear that in Prussia there was a very strong case for nationalization. The circumstances were exceptional. Germany was a very loose-ended country. There was no central point of focus of the traffic of the whole country, like you have in Paris or in London or in similar places. The railways were short and were in the hands of small independent companies, quarreling and squabbling to a very considerable extent, and the result was—the description that they gave—I think I had better give the words of the Prussian State paper dealing with the question of State ownership. They described the abuses of private management in this way:

The existence of numerous concerns of doubtful solvency and restricted capacity of service, abuse by the concessionaries of their privileged position, opposition to desirable reforms, complicated and arbitrary variations of their methods of organization, chaos of tariffs, quarrels, and waste resulting from the fierce competition of numerous separate administrations.

Now, there is the case as made by the official Prussian representatives for nationalization, and I have applied to it experience to see how far those charges made—it does not matter now whether they were then true or not for Prussia—how far those charges are things that belong to private ownership as such.

Now, the first charge is that there were “numerous concerns of doubtful solvency and restricted capacity of service.” There never has been in France any concern—no railway has ever been in doubtful solvency and restricted capacity of service. I would not say there had never been anything of the kind in England, but practically there are no railroads to-day to which you could apply this, except railways of quite trifling importance.

The second charge is “abuse by the concessionaires of their privileged position.”

Well, I suppose that means that they tried to get the best net return out of their undertaking, and the curious answer to that is that there is no country in the world where tariffs have been maintained with the same rigidity as Prussia. Prussia, after paying the interest on its railroad debt, makes a profit of an average, I think, about \$50,000,000 or \$60,000,000 a year, which it pays over for the general purposes of the Government of the country; and the Prussian Government has held onto that revenue with the utmost tenacity, but they have obtained the revenue by maintaining the rates unreduced over a long period of years, during which practically every other country in the world has reduced its rates.

So that the charge that the concessionaires abused their privileged positions is, in other words, exactly the charge that one might make against the Prussian Government itself.

Mr. ESCH. You are referring now to freight rates?

Mr. ACWORTH. Yes, sir; it is certainly true that in Prussia passenger rates have been reduced somewhat, but not more, I think, than in all other countries—more than in France, but not, I should say, than the United States or the United Kingdom. They have reduced their passenger rates, but they have kept up their freight rates, which bring in that three-fourths of their total revenue.

The third charge is “opposition to desirable reforms.” Well, I have dealt with this point later on in this paper more in detail.

Practically every important improvement in railway service that anybody can think of has come from private railways and not from public railways.

I asked a friend to tell me of any remarkable improvement—anything in the nature of new methods or invention—the introduction of vacuum brakes, the introduction of dining cars and sleeping cars, the development of fast express trains, etc. I asked, “Can you suggest anything that has come from Germany?” After a good deal of time my friend said to me: “They are really responsible for the introduction of the superheater.”

The VICE CHAIRMAN. I did not quite understand your statement there as to where all these reforms came from; I did not hear you.

Mr. ACWORTH. I am sorry, sir. I say that practically all improvements have come from the United States or the United Kingdom; but without claiming them for ourselves, my point was that they have not come from State railways; they have not come from Prussia.

The CHAIRMAN. I heard all that belonged to that, but I did not quite understand your language.

Mr. ACWORTH. Then the fourth point: It was charged that private railways naturally had complicated and arbitrary variations in their methods of organization.

I think, as I have said, that there was a good deal of truth in that in Prussia. There is no necessary connection between that and private ownership. If you take France, if you take England, if you take the United States, the regulations for working of trains are uniform. Tariffs in France are as simple as in any other country. They are certainly very much more simple than tariffs in Germany. There is no more difficulty in sending a consignment of freight from one end of France to the other than in sending freight from one end of Germany to another. You know the condition of affairs in the United States. We had a startling instance in England in the beginning of the war—the day the war was declared—with the signing of an order by the Privy Council, all the railways were put together as a single unity, and there has not been a suggestion but what they have worked together in perfect harmony just as much as though they had been one unified State body.

The mobilization in France, with its separate railways, was carried out with exactly the same efficiency as in Germany; and there has never been any difficulty, that I know of, in any country, where railroads are well organized, in producing all the uniformity of organization, etc., that is necessary for the public service. The same thing is true in what the Germans call “chaos of tariffs.” There is no chaos of tariffs. The French tariffs are probably as simple as those of any country in the world. There are tariffs for traffic passing from one railroad to the other, without any difficulty.

Then, the last question is quarrels and waste resulting from the fierce competition of numerous separate administrations. That, of course, raises the very large question: Is competition desirable or not? The French have said, from the outset, “We think competition is undesirable,” and the French have districted their railways. As I dare say the committee know, the French system is that everything radiates from Paris, there are, so to speak, five spokes of a

wheel; each section of the wheel is assigned to one company, and within that territory there is no competition, and never has been.

We have in England eliminated competition in the last few years almost entirely. Of course, the United States has deliberately, through Congress, adopted a different policy. Congress has said that the railroads shall not combine; that competitive railroads shall not be put together. That has been the deliberate judgment of the American people as to the right thing to do; but if the American people think proper to change their attitude, and to say that "competition is wasteful; we will abolish it," there is no difficulty in doing in the United States what has been done in France, and dividing the country into systems, each occupying its own area, excluding competition within that area.

That was the case made in Germany. Now, sirs, I go on to give, very shortly, the story in Switzerland. I will make it as short as I can. Once more, it is not a question of abstract belief in which is the right or wrong policy. The Swiss Government found that, in fact, their railroads were very largely owned by German capitalists, and they disliked the idea of the Germans controlling the arteries of the traffic of the country; and they, accordingly, came to the conclusion that they would nationalize their railways.

MR. SIMS. When did they nationalize?

MR. ACWORTH. The three principal roads were transferred to the State in 1901, a fourth in 1903, and the last, the Gotthard Railway, in 1909; so that they have had something like 14 or 15 years' experience with State ownership.

As you know, sirs, in Switzerland, there is a referendum on every important measure. The first time it was proposed, the proposal was defeated by a two to one majority. It was taken up again after a few years, and the second time it was passed by a two to one majority.

I think this is one striking thing, and it is almost always found when the State takes over the railways. For the four years following 1903 the cost of staff increased year by year, as compared with the previous year, by the following percentages: 10.16, 7.08, 9.99, and 9.27. In the 11 years from 1900 to 1911, the number of staff increased 46 per cent; the wages increased 92 per cent. In 1912 there was a further increase of less than 1 per cent in the staff, and an increase of more than 10 per cent in wages; so that you have a 25 per cent increase in road mileage, an increase of 100 per cent in passenger traffic, and an increase of 67 per cent in freight traffic. That fairly justified the increase in the number of the staff, but the increase in wages, which was 100 per cent in the 11 years, was very large and it upset altogether all the calculations that the Government had put forward when they took over the railways.

The operating ratio in 1903 was 65.53 per cent, and five years later it had gone up to 71 or just over 71 per cent; and the result was that whereas they had calculated that they would meet all the expenses and have a considerable sum over for a sinking fund they found that, so far from having got any contributions toward the sinking fund, they were two and a half millions—not a large sum, but it is not a large railway—they were two and a half millions short of meeting the actual charges for operation and the interest on the debt.

Switzerland, I think it ought to be said, is really quite a successful instance of State management. They have not been extravagant: they have, broadly speaking, made both ends meet. When they found themselves going down hill in 1910 they took fright, and they said they could not afford to go on in the way they had been going. They reduced the service; they to some extent increased rates and fares, and they ceased to fill up vacancies of the staff when they retired, and in that way gradually reduced somewhat the deficit in their accounts. They have not produced any very satisfactory result from the public point of view: The passenger fare, in the course of the 11 years from 1900 to 1911, went down 13.5 per cent, but the freight rates were a little worse than they were at the beginning. They charge rates of which nobody here has any conception. The average rate is about 3 cents per ton per mile, which is four times the American rate; but it was a little below 3 cents in 1900 and in 1911 it was a little above 3 cents.

The financial result is this: The estimate put forward, and on which the people voted, was that within 60 years the profits would be sufficient to extinguish the debt. The debt, at the time of the acquisition, was \$205,000,000. After a quarter of the period had expired, so far from reducing the debt, it had risen to \$270,000,000.

Mr. ADAMSON. Since we met, I have learned that the Senate does not meet until 12 o'clock. While I have to go to the House, Senator Robinson has consented to occupy the chair, and we will go on a while longer—possibly an hour.

(Senator Robinson at this point took the chair.)

Senator ROBINSON. You may proceed, Mr. Acworth.

Mr. ACWORTH. Then, sir, I dealt with the case of Italy. Italy is so complicated a story that I hesitate to take the time of the committee in describing it, because the Italian history goes back to the time when Italy was composed of six or eight different States. There were the Austrians occupying the Provinces of Lombardy and Venetia; there was the King of Sardinia, who has now become the King of all Italy in the north; there was the Grand Duchy of Tuscany, with the Papal States in the middle; and the Kingdom of Naples in the south, not to mention several smaller ones; so that the story is very complicated, if you go back to the earlier history, and I think I must not trouble the committee with it.

However, in some places there was State ownership, and in some places there was private ownership, and it changed back and forth. I think I will take it up at this point: In 1881, when the States were all consolidated into the Kingdom of Italy, they appointed a commission, which sat for several years, and produced evidence in seven large quarto volumes, that went into the whole story, the whole history of railroads in the different countries of the world, and finally recommended that State ownership was not desirable, and that it was desirable to lease the railroads, most of which were in the Government's hands at the time, to private companies. And they accordingly constituted two companies—there was a third company for Sicily, but I need not trouble you about that—they constituted two companies, one of which was to operate on the west coast, and the other on the east coast. They met at Milan, in the center of the north, and they had arrangements by which they met again at

Florence, and again at Rome, and again at Naples; and, therefore, they counted on getting competition at all of the important points: and, under those conditions, the railroads were leased by the Government of these two companies for a period of 63 years with a break at the end of 21 years. Unfortunately, both the Government and the companies calculated on events that did not happen; they assumed that there would be a steady growth of traffic; that there would be a steady increase of net income, and that this would be available for improvements and betterments; but the traffic did not grow, and there were not much net profits, and the question was: Who was to do the renewals? I am, of course, cutting the story very short, but it was largely this question of who was to do the renewals and improvements that were necessary?

The railroads said, "We have got a 21-year lease; you can not expect us to find the cash, when we are liable to be expropriated at the end of the term." The Government said, "You have got a lease; you can not expect us to find the money"—especially, as the Government had great difficulty in finding money for any purpose—"You can not expect us to find money for the railroads which you are running and from which you will get the profits." And there were constant disputes between the Government and the railroads on this subject and others. The railroad employees were restive: they said they were overworked and badly paid; and, at comparatively short intervals, they either struck or threatened to strike; and they caused all kinds of difficulties. They were constantly putting pressure on Parliament to interfere in their behalf; and the result was that at the termination of the 21-year lease the Government had to consider what they would do; and they were considering it for some time, and, finally, almost at a day's notice, they resolved to take over the railroads. Yes, here is the date—they resolved on April 22, 1905, to take over the railroads as from the 1st of the following July; so that they took them over with two months, practically, to prepare for the great change. Undoubtedly, the Government has improved the railroads very considerably.

Mr. Sims. That was 1905, or 1906?

Mr. ACWORTH. 1905; the 1st of July, 1905, sir, was the official date at which they took them over. But the cost to the country has been very large. The number of men employed per kilometer of road increased from 9.3 to 10.9—that is, an increase of 23 per cent—but the wages increased 57 per cent. The total wages cost increased 57 per cent as the combined result of more men employed and a rate of wages very largely increased. They have got a very large increase of traffic, but in spite of it the cost of operation has increased very largely. The year they took over from the companies the operating ratio was 73.4 per cent. For the last three years for which figures are available—that is, 1911 to 1913—it had risen to an average of 84.4 per cent; that is, from 73.4 to 84.4 per cent. The operating costs have steadily gone up, and the result to the Treasury has been this: They have never gotten much out of their railways, but when the Government took it over the capital was, in round figures, \$1,000,000,000, on which the Government got a return of 1 per cent. The capital has now risen to \$1,375,000,000. The capital, you will observe, increased 37 per cent. The interest, at the early date, was

at the rate of 1 per cent; the interest in the later years has come down to two-fifths of 1 per cent, which is a very serious burden on the not overrich Italian treasury.

Mr. SIMS. You mean that the interest on the capital is only 1 per cent?

Mr. ACWORTH. The interest on the capital was 1 per cent.

Mr. THOM. The return, you mean?

Mr. ACWORTH. The return on the capital; yes.

Mr. SIMS. You said "interest." Therefore I was confused.

Mr. ACWORTH. Yes, sir; I meant "return." I presume they pay 5 per cent for their money, or thereabouts; but the return on the capital earned by the railroads when the Government took them over was 1 per cent and for the last three years it has averaged two-fifths of 1 per cent.

Mr. SIMS. The net income from operation has increased from 1 per cent to 2 and a fraction?

Mr. ACWORTH. No, sir. What you call the "operating income" was sufficient when the Government took it over, to pay 1 per cent on the capital. It is now only sufficient to pay two-fifths of 1 per cent.

Mr. SIMS. I thought you said $2\frac{1}{2}$?

Mr. ACWORTH. No; two-fifths of 1 per cent. Now, this is a very striking thing. I happened, quite accidentally, to hear it in the city of London, that just before the war the Italian Government was negotiating with private concessionaires not to construct further railways itself, but in two places in Italy to employ a private contractor, to give him a very handsome bonus to construct a railroad, operate it himself, or form a company to operate it, and hand over to him some portion of what had been the State railway. I can not say how far that went, but it was new to me. As I understood the situation from my friend who told me, who was personally concerned in the transaction, the moral was that the Government had come to the conclusion that they could not afford the luxury of operating themselves, and thought they could make better terms by employing a private company to do it.

Mr. SIMS. For that particular line?

Mr. ACWORTH. Oh, yes; no important part of the whole State system; I do not suppose that would be possible, for a moment.

Now following out what I have tried to say, that there is always some main reason for the Government taking over the railways, apart from theoretical considerations, it is quite clear that the real reason for the State resuming possession in Italy was that things had got into a knot. Efforts to disentangle the knot failed; the companies would not accept the Government's terms and the Government would not improve the railways for the benefit of the lessee companies, and they found it impossible to disentangle the knot, and consequently they came to the conclusion that the best thing to do was to cut the knot.

Mr. SIMS. You mean that private ownership, under the conditions that existed in Italy, had proved a failure and something had to be done?

Mr. ACWORTH. I do not know that I should have put it that way, sir. I should have rather put it this way: That it had been found

impossible to make satisfactory terms between the private owners and the Government for continued operation.

You will observe that there was a 63-year lease, with power to break it at the end of 21 years. It was quite evident that they had got to rearrange their terms, and the lessor and lessee could not agree on terms for the next 21 years, and accordingly the lessor said, "All right; you get out of the house and I will occupy it myself."

Mr. SIMS. As I understood your description of the conditions in Italy, they had become such that it was necessary for something to be done that had not been done theretofore with reference to the transportation system of that country?

Mr. ACWORTH. Yes, sir. Unquestionably improvements were urgently needed. The question was whether terms could be arranged with the private owners, under which the private owners would be willing to make them.

Mr. SIMS. I said, under the conditions then prevailing in Italy.

Mr. ACWORTH. Yes. I only wanted to be sure that we were both looking at it from the same point of view.

Then, we come next to Australia. Now, all the Australian colonies are in the same situation; they all own their own railways. As you know, there are five separate States in Australia, and New Zealand in addition. All those six colonies own their own railways. There has been talk, of late years, of putting them all together under the Commonwealth Government, but nothing has been done along that line. They all own their own railways, and they all began to own them from the same point of view—that railways had to be made, and that private capital could not be found to make them. The real development of Australia began with the discovery of gold, in the early fifties, when railways became imperative; and it was hardly likely that the small amount of capital that was available in Australia would be put into possibly a 5 per cent investment, in the height of the gold fever; and accordingly the money was borrowed in England by the State governments, and they built their own railways.

I have attempted, later on, to make a somewhat careful comparison between conditions in Australia and conditions in Texas, which seem to me to be the most fairly comparable part of the United States; but, perhaps, I might tell you here a little piece of personal experience.

Some years ago a friend of mine went from America to the chief commissioner (that is, manager) of one of the Australian State systems. He sent back to me a return, showing that he had improved the conditions very much since he went there. There was no question about the improvement; but the return was not in a form that I wanted, and I wrote to him, and I said, "Surely you, with your American experience, must be accustomed to putting those things in terms of ton-miles? There are no ton-mileage figures in this. Do you not keep them?" And some time afterwards my friend replied, "Yes, I keep them; I do not publish them." I said, "Why do you not publish them?" He said, "Well, if I did, they would show a charge per mile so high that people in my State would naturally compare them with corresponding figures in America and other countries, and there would be such a demand for decreased

rates that it would be quite impossible to withstand it, and it would drive the railroads into bankruptcy." That was his own account of it.

Mr. SIMS. It would drive them into bankruptcy, provided the decreased rates were adopted which he thought would be demanded?

Mr. ACWORTH. Yes. There are two colonies that do publish their rates; those are New South Wales and South Australia. As you no doubt know, sir, the average rate in the United States is just under three-quarters of a cent—

Mr. SIMS. Per ton-mile?

Mr. ACWORTH. Yes; per ton-mile. In Canada it is—or was the last year—exactly three-quarters of a cent. The two Australian colonies that give figures show charges of 2.20 and 2.12 cents per ton-miles, roughly, three times.

Now, I am not going to say to you that I think conditions are entirely comparable, but I think any railway man would say that a three-to-one difference can not be accounted for, can not be justified. The rates in Australia were such that the public, if my friend had drawn their attention to it, would have got up and said, "Look here; this is not justifiable, and you have got to reduce them." As I say, if I have time later, I want to come back to a comparison between one particular State, where figures are more or less available, and Texas.

But I should like now to read this, as an evidence, not from anybody who is prejudiced. The Austrians have gone backward and forward. In early days the State built the railways; then it sold them; nowadays they have bought back nearly all of them; they are nearly all in public hands. There was one of their private railways—one of the oldest Austrian railways, the Kaiser Ferdinand Nordbahn, which serves very important coal mines in Bohemia, which was always very rich. For five years before 1906 it averaged a 12 per cent dividend. In 1906 the Government took it over, and in 1910 the President of the Austrian Chamber of Deputies described the result as follows:

We have always been in favor of the State taking over the railways, but if we had been able to foresee the results of the management I assure you we would have hesitated a little longer. We are still in favor of the principle, but it does seem to us that our Government has performed a remarkable feat when it has succeeded in creating a deficit on the Northern Railway. The Government have enlisted an army of new employees; they have gone too far in the reduction of hours of labor; instead of commercial management they have appointed lawyers to posts that require business men or experts; they have established an entirely unpracticable bureaucracy. At the present moment we are face to face with a deficit of \$25,000,000. There would be no deficit at all if the return from our railways were that which it ought to be. I repeat that absolute imbecility has characterized the taking over of our railways. We must introduce business ideas into the Government service.

I think that figure of \$25,000,000 is obviously not a deficit of the Northern Railway alone but is a deficit of the whole railways.

Then, sir, just one word about Holland: Twenty years ago there were three systems in Holland—one that was built by the State itself and two others that were built by companies. The State, though it built, never operated, and there were three companies operating. In 1890 the Dutch Government copied the Italian system; they bought up the railways and rearranged them on the Italian system of making

each of the two companies reach the big points—Amsterdam and Rotterdam and The Hague and Utrecht, and so on—so that they could compete at all the important points.

And that has been the system in Holland ever since. In 1908 there was a commission brought forward in Parliament in favor of nationalization, and it was defeated. A parliamentary commission was subsequently established to consider the question, and that also reported against nationalization. So you have Holland at present in between Germany on the one hand and Belgium on the other, in both of which the States entirely own the railways; and Holland stands out not only for the principle of private ownership but for the principle of competition.

Now, sirs, I come to France: I said France had five systems. To be accurate, it has six, five of them radiating from Paris and the sixth down in the southwest, between Bordeaux and the Pyrenees, which reaches Paris over another line of railway from Bordeaux. That was the system laid out by France as early as 1842, and, as I said, avoiding competition. The Dutch and the Italian systems deliberately arranged that the systems should meet at the big competing points; the French Government deliberately arranged that they should meet at the noncompeting points—that the segments of the circle should meet at points where there was very little traffic, so as to prevent, as far as possible, competition.

The French Government from the beginning has set its face against competition. No rate can be altered in France or put in effect without the consent of the Government, and the French Government deliberately approves of arrangements by which in cases where there are two possible routes the companies agree by which route the traffic is to go, and they decide that it shall go the way they want by putting in a higher rate on the road they do not want it to go over; and this is done with the entire approval of the Government, in order to prevent competition. So you have six non-competing companies, pooling their traffic in cases where it is impossible to avoid competition, as, for instance, where you get outside the country, where passengers are coming from Switzerland to Paris, and they can use their choice of either one of two routes. pools are made with the full approval and supervision of the Government. And that system has gone on from the very beginning of French history.

In the early eighties a number of small local lines grew up about the least profitable part, from a traffic point of view, of the whole of France, the district lying along the Bay of Biscay, north of Bordeaux. A number of little separate lines were built there, and then they were consolidated into one system, managed by the State. That was the beginning of State ownership by France. But it was quite unimportant; it did not compete and did not have much effect on the general situation. It was a very bad financial bargain for the State; they only earned about 1 per cent, I think, on their money. That probably was unavoidable, owing to the fact that the district was very poor. But later there came a question of the Western of France. The Western of France serves the district from Paris to Dieppe and along the coast southward to the Loire. It serves practically Normandy and Brittany, a comparatively poor district. There

used to be very valuable traffic to Havre and Rouen, but a good deal of that was lost, owing to the fact that the Seine was canalized; and boats, I think, of a thousand tons go up to Paris and a good deal heavier boats as far up as Rouen.

So the Western of France Railway was in low water financially. As I dare say the committee know, the Government guarantees a dividend on all the railroads in France. It guarantees what sounds like enormous dividends—7 per cent is the lowest and 13 per cent is the highest. It is, however, not as serious as it sounds, because only 10 per cent of the French railway capital is in the form of shares. But the Western was guaranteed 7 per cent on its capital and did not earn it, and the Government had to make up the difference, and the Western of France became a sort of battle ground between the people who believed in private ownership and the people who believed in State ownership. Naturally the workmen, the employees on the railroad, were desirous that it be taken over by the Government. I think they always are, at least in Europe. The Socialists naturally regarded it as an article of their creed that they should vote for it, and for many years there was a discussion as to whether the Western of France should not be taken over. It was taken over in 1909, but the history of the transfer is very interesting.

Naturally it required a majority in both houses to pass the bill. In the first house the bill was passed in spite of the opposition of almost, if not quite, every representative of the district that was particularly affected. The French Government always refers questions of this kind to the chambers of commerce, which are incorporated bodies in France, and requires their opinion. Practically every chamber of commerce of any town of the smallest importance in France was opposed to the nationalization, but it got through the chamber in December, 1906, and was hung up in the Senate. The Senate, it was well known, had a majority against it. Finally M. Clemenceau, who was prime minister and a rather powerful person, gave it to be understood that unless the bill passed he would resign office, and in the circumstances as they then were not a few of the Senators, though they disliked passing this bill, disliked the resignation of M. Clemenceau even more, and the bill was passed by a majority, I think, of 4, after 18 months' waiting, in June, 1908, and the transfer took place in the beginning of 1909. Now, the figures of the result have been very common knowledge among railway people in Europe in the years afterwards, and they have been canvassed again and again.

I have tried to cut it down as short as I can. In the five years before the transfer the gross receipts rose in round figures from \$37,000,000 to \$42,000,000. In the five subsequent years, 1909–1913, the gross receipts rose—the war has naturally upset the figures altogether—the gross receipts rose from \$43,300,000 to \$48,700,000, a little more rapid rate of increase than before.

In the five years before the transfer the operating expense rose from \$20,800,000 to \$28,400,000, and almost the whole of that increase—at least a very large part of that increase in operating expense—was in the last two years.

Once the chamber had voted the transfer it was quite obvious that the company was in the position of people who were going to be

sent about their business, and the discipline on the line went to pieces and the expenses grew very rapidly. For the last year of the company's operation the operating expenses were \$28,400,000. The first year after the transfer the operating expenses were \$30,304,000; the next year they were \$34,900,000; the year after they were \$34,450,000, and in 1912 they reached \$41,800,000. In 1913 they fell back to \$41,470,000. To earn a net revenue, increased by 31 per cent, the operating expenses increased by 100 per cent. The net revenue was never below \$13,760,000 in the worst year of company rule. It fell to \$5,552,000 after the Government had been in possession four years. The operating ratio had risen under the company from 56.4 to 67.8. For the next five years it was as follows: 72.7, 79.9, 87, 89.4, and 85.2.

It is fair to say there that the operating ratio of all the companies has gone up. Of course, you know this has happened in other countries besides France. I will show you how much it had gone up in others. For the years 1905 and 1906 the operating ratio of the five great companies that still remain was 50.3; for the two years 1912 and 1913 it had risen to 58.4. That is an increase of 8.1 but the rise on the State railway is from 56.4 to 89.4, a rise of 33 points in the same case and 33 points in the other.

Mr. SIMS. That means operating expenses?

Mr. ACWORTH. Yes; the ratio of operating expenses to total receipts. That is to say, it costs the other five companies, when their expenses were highest, \$58.40 to earn \$100. It cost the State \$89.40 to earn \$100. The companies had 41.6 per cent of the total receipts left to pay their charges, and the State had 10.6 per cent.

The main argument used, at least a main argument used for the transfer, was that as the company could not and did not earn its full dividend and had to come on the State year after year to make up the balance; they earned 3 or 4 per cent or something of that kind and the State guaranteed them 7, so the State had to find the difference, and the advocates of State ownership claimed that it was not to be expected that the companies would operate economically because they never could earn their 7 per cent and therefore it did not matter how much deficit they left on the Government. That is to say, if a company earns more than its guaranteed dividend, it gets some part of the surplus; they divide with the Government beyond the guaranteed amount. So, clearly, if the company can earn 8 or 9 per cent, it is to its interest to operate economically so that it may get something more than 7 per cent, while if it can only earn 4 or 5 per cent it does not matter which it is, because any difference between the 4 or 5 per cent and the 7 per cent the Government has to make up each year.

Mr. SIMS. Was it considered by the Government in making the guarantee the dividend they ought to earn?

Mr. ACWORTH. It goes back so far in history; you see those guarantees back to the fifties. When it was first put in—it is really this: The original companies started naturally to pick the best bits there were. The Northern Co., for example, made its start for Calais and the Brussels frontier. The Paris & Lyons Co. built the great artery from Paris to Lyons and Marseilles and the Mediterranean. Each company built to start with a trunk line that obviously must be very profitable. Then the Government said to them, "Now, we

want extensions spread over the country," and the companies said, "Well, that will water our dividend." And thereupon the Government said, "That is fair; you are earning either 10 per cent a year or 7, whatever it is, and that seems fair. We will undertake that your dividends will be maintained." In this way I take it the 7 per cent in the case of the Western was accepted.

Mr. SIMS. That it should not be below 7 per cent?

Mr. ACWORTH. Yes. "We will undertake to say your revenues shall not suffer because you are making these extensions."

Mr. SIMS. Undertaking to get the extensions when the revenues would not warrant the construction?

Mr. ACWORTH. Exactly.

Mr. SIMS. The Government to divide on any amount which might be made over and above?

Mr. ACWORTH. That is it, broadly. The company, if I remember right, takes the first 1 or 2 per cent beyond the guaranteed amount wholly, and then begins to divide—something like that. But, roughly speaking, there has not been very much extra profit. The companies, as a rule—the Northern used to get something more; it used to get 15 and 16 per cent, and it was only guaranteed 13 per cent—most of them, roughly speaking, earn about enough to pay their guaranteed dividends. But you will remember, sirs, because the people often misunderstand the position, that this guaranteed dividend only applies to 10 per cent of the total capital.

Mr. SIMS. In other words, it is a very small capital, or volume of capital, it does apply to?

Mr. ACWORTH. That is so, sir.

Mr. SIMS. The object of the Government being to try to develop every portion of the country that demanded railway facilities in order to be developed?

Mr. ACWORTH. Yes, sir; practically all the new lines are built out of the issue of bonds, and the bonds are in effect, though not in form, guaranteed by the Government. The Government makes an arrangement under which it is quite certain that the company will be able to pay the interest on the bonds and the sinking fund that is always attached to those securities.

Mr. SIMS. Then the Government absolutely regulates the charges of the railway companies as to rates and fares?

Mr. ACWORTH. Yes; and of course this system has the advantage, on the one side, of protecting the public, and, on the other side, the Government has an interest in not reducing the charges too low, because it would have to find the balance. It is a very complicated arrangement that has grown up in the course of many years, and that works in France, but could not be established in any other country to-day, it is quite clear.

Mr. SIMS. Because the same reasons do not exist, perhaps, in other countries for adopting such a system?

Mr. ACWORTH. The French system is obviously incapable of transportation. The underlying idea is another question—practically the partnership between the State and the railways—but the real point, I think, is that the Government has been behind the railroads and has protected the railroad capital from the beginning.

When I broke off the story I was dealing with the argument used by the advocates of nationalization, that, as the company would not

work to earn a dividend, therefore the Government had better take the railway, seeing that the Government's interest was to make the best of it. The fact has been this:

During the last 10 years of company management the State had to pay an average of \$2,894,280 a year to meet its liability under the guaranty to make up the deficiency in net operating income. That is the amount the Government had to make up to complete the 7 per cent dividend. When the Government took over the railway it secured the old shareholders; it did not pay them out in cash; it secured to them their old revenue as an annuity. During the first three years after the transfer the sums it had to find under the same head were, in the first year, \$6,753,320; the next year, \$8,875,792; and the next year, \$14,934,484. For the year 1913 the figure was \$14,715,237. That was the last year before the war, and that compares with the average of \$2,900,000 in the last 10 years of company management. That is what it cost the public in hard cash, but it cost them far more than that. The service was so demoralized that the newspapers were absolutely filled with the stories of how the service was being mismanaged. They had accidents all over the system that frightened the public.

The Western of France always ran the slowest expresses of all the companies, and they increased the time allowed for all their expresses. The thing got so bad that employers in Paris insisted that their staff should live on the Western of France Railway because they never arrived at their offices in time.

Here is a good instance. The compensation for accidents had been, under the old régime, about \$400,000 or \$500,000 a year in the last days of the company. In 1911 the figure had risen to \$2,045,291. The minister of public works himself publicly criticized the State administration as a "frightful fraud." He speaks of "the deplorable situation of the State system, the insecurity and irregularity of its workings."

Now, there is an account given in a conference we had in London on this subject in 1911 by M. Leroy-Beaulieu, who himself was a deputy, and he gave a long account of the working of this system. He puts it down to various reasons. He said:

In the first place, it is the abuse of formalism and red tape, with all the delays which follow and which are directly in conflict with commercial needs. In the second place, it is the lack of stability. The director and all the chiefs of the service change at the will of the ministers, whilst in the private companies the higher personnel is maintained a long time, fulfilling the same functions.

It is next the political influence which enters into the choice and advancement of the personnel. It is, lastly, the lack of discipline, which also results from the political influence at work. From the electoral point of view the lower staff, being much more numerous, will always have much more power than the superior staff. It is always on the side of the former that many deputies will be systematically ranged. Above all, it is impossible to be at once controller and controlled. If one of the great French companies under private management renders poor service, the public opinion is not slow to move the public power, and as this has the means to bring pressure indirectly but in many ways upon the companies, they are led to reform. On the contrary, when complaints are made against the State itself, the administration, irresponsible, does not listen. Rather it seems indignant that particular individuals or even large associations should dare to find that all is not perfect. The minister of public works in the chamber said:

"I have not seen without a certain astonishment the chambers of commerce criticize the actions of the State in its (their) reports upon the railways."

The same minister has dismissed an employee from his office who was at the head of a section of a passenger line which emitted protestations against the delays on the western State service in the Paris suburbs.

M. Leroy-Beaulieu finishes his story this way:

From all points of view the experience of State railways in France is unfavorable, as was foreseen by all those who had reflected upon the bad results given by the other industrial undertakings of the State, such as telephones, matches, and many others. The State, above all an elective administration, can not be a good commercial manager. It works expensively and is powerless before its employees. The experience which we have recently gained has had at least one result. It has provoked a very lively movement not only against the repurchase of the railways but against all extension of State industry. This result seems to me fortunate. I hope this opinion will be maintained and that not only we but our neighbors may profit by the lesson of these facts.

I happened to be in the chair at the conference at which M. Leroy-Beaulieu read his paper, and he told me personally that he thought the effect had been so great in France that any agitation to nationalize the rest of the railroads was killed for a generation to come. That was his account of it in 1911.

M. Leroy-Beaulieu gives instances of how red tape has accounted to some extent for the enormous increase in expenses. He says:

In the central office, when the railways were handed over, there was 1,526 employees. Within three years the number had increased to 2,587.

He says further:

This is partly due to political pressure and partly to excessive red tape. For example, in the Caen Division the preparation of the pay sheets, which under the company took 9 persons 3 days (27 days), under the State administration took 12 persons 6 days (72 days).

He says further:

According to official documents there are not less than 96 persons receiving a salary of more than 10,000 francs (\$1,929.52) in the State system as against 33 on the system of a neighboring company of much the same mileage but with much higher receipts.

Here is a quotation from a report of the budget committee. They say:

The statements addressed to the budget commission by the administration were manifestly inaccurate. * * * We wrote for further statements, more particularly the numbers of the personnel. * * * The minister replied (three years after the railway had been taken over) that the enumeration of employees had not yet been made. * * * This example suffices to show the trust that may be placed in the other parts of the budget estimate.

That is not the opinion of M. Leroy-Beaulieu, who is a hostile critic, but it is a report of a committee of the chamber that approved of the plan, based on a draft that was drawn up by a deputy who was recognized to be one of the advocates of State ownership.

I think, for the sake of giving the committee something a little lighter, I must read a story here. It is a story of how red tape strangled the line. This was read in the Chamber of Deputies. It is a letter from a station master on the line. It is as follows [reading]:

In the time of the Western Co. we station masters had orders to use the rolling stock as quickly as possible and to send to a given station all that we did not ourselves require. Under the State all is changed. Every station master is forbidden to load any wagon without the orders of the distribution bureau of the district.

Mr. SIMS. "Wagon" there means what we call a car, does it not?

Mr. ACWORTH. Yes, sir.

This bureau is, as is well known, a new creation specially designed for the purpose of finding situations for so many more bureaucrats. Recently, having received two wagons loaded with horses, accompanied by an order to send these wagons to Caen after they were unloaded, I thought to do well by loading in these two wagons 200 sacks of grain, which had been waiting in the sheds for several days to go to Caen. But, alas, I did not know the bureau of distribution. The next day I saw my two wagons return, and I received at the same time an order to unload them. I was reprov'd into the bargain for excess of zeal. I had to obey the order. That evening I sent the wagons empty to Caen. Next day I received two others, also empty, in which to load the grain.

Now, sirs, that seems to me to be the most relevant part of the evidence available in foreign countries on the matter. That practically gives the story of how and why the principal European countries and also Australia adopted State ownership. If you come to apply that to England or the United States, it is evident that there is not here a political reason corresponding to the German necessity for unity. There is no reason for unifying the United States or the United Kingdom.

There is clearly no military necessity, which was a point on which very great stress was laid in Germany. Clearly, there is no need to nationalize railways in the United Kingdom or in the United States for lack of private enterprise. England was the first country in the world that practically completed its railway system. I suppose 20 years ago we already had within 20 per cent or 15 per cent of all the railways we have now, and if you were to bring in a railway man from outside and show him our railway system to-day he would be much more likely to say that we have too many railways than that we have too few. So there has been no question with us of lack of private enterprise, and while I will not presume to say anything about the United States, I suppose it would not be suggested that in the United States private enterprise fell short. For example, as I show later, I think Texas might fairly be compared with Australian conditions, and, speaking roughly, Texas has 4 miles for 1 in New South Wales. Private enterprise has given Texas 4 miles where the State has given New South Wales 1 mile of railway. And probably, after the United States, the country where most has been done to develop the railways in advance of settlement, has been Argentina. That also has been wholly private enterprise.

Mr. SIMS. Do you know how many railroads are now in the hands of receivers here in this country?

Mr. ACWORTH. Yes, sir.

Mr. SIMS. How many miles are in the hands of receivers?

Mr. ACWORTH. Yes; I think about 40,000.

Mr. SIMS. More than in the whole Empire of Germany—more mileage?

Mr. ACWORTH. Yes. About the same or a little more.

Mr. SIMS. Nearly twice as much.

Mr. ACWORTH. But even a railway in the hands of a receiver serves the public—not very comfortably for the capitalists, but for the public.

Mr. SIMS. You just said that private enterprise is sufficient for all these things. I just wanted you to know how these things are going here.

Mr. ACWORTH. I expect our railway friends would tell another story. I imagine they would say that it was a question of rates; that if they were allowed to put up their rates, they would get out of the hands of the receivers; but I must not, of course, go into that.

Then, sir, I do lay stress on this point, that whatever may be said in favor of State ownership it is clear that it does not promote development. The State hesitates very much more in moving in advance of the population than private enterprise does. Belgium, for example, is notoriously much behind—it was before the war—in railway facilities. The Government had promised things year after year, but the whole railway system wanted a great deal of new capital put into it, which the Government would not furnish.

Mr. THOM. Did you say that Belgium was behind railway facilities or that the facilities were behind?

Mr. ACWORTH. The Belgian Government had for years refused to spend the money that was obviously required to be spent to keep the Belgian system up to date. There was need both that the railroad should be improved and also that new lines should be made, and year after year they put it off. That would be admitted, I think, by anybody who knows the Belgian conditions.

Now, the Prussian Government—and this is a very curious instance—the enormous iron traffic of which we hear so much in the papers of the district around Metz—that enormous iron traffic is very largely carried first by rail quite a short distance to the river and then put onto water; and the Prussian Government has steadily refused to build the railways to keep that traffic on the rails from origin to destination; and so it is taken a short distance and then put onto water and carried by water and then put back again onto rails to reach its destination. The Prussian Government has steadily refused to build the necessary railways. I believe there are more complaints than usual in America to-day on account of car shortages, but the country of the world, where we see in the railway papers that they have car shortages year after year, is Prussia. It is a matter of regular experience with them that when it comes to the autumn and there is a big movement of domestic coal the railways simply say that they can not furnish cars to move the traffic; they are asked why they do not have more cars, and they reply frankly that it does not pay to build a car if you only want it for the three rush months of the year and have to keep it lying idle on a siding for the remaining nine months of the year; they say you must suit your traffic to our cars.

Mr. SIMS. In other words, they give a business reason for it?

Mr. ACWORTH. Yes.

Mr. SIMS. Which reason applies here to our privately owned roads?

Mr. ACWORTH. Yes; quite so.

Senator ROBINSON. May Mr. Acworth not finish his statement? We are all very much interested in the statement he is making, and we adopted a rule that we would not interrupt him, and I suggest that we conform to that rule and let him finish and then take him under examination as you may care.

Mr. ACWORTH. Then, in India, the English Government either owns and operates directly the railways or it is the owner and has leased them to private companies. It keeps a very close control

on the whole railway situation, and it will not allow private capitalists to come in and build new railways except under very stringent conditions. Broadly speaking, you may build a tributary to an existing line, but you may not build a line that might possibly divert certain traffic from Government railways. And the Government control in India has resulted in this: That though there is undoubtedly an immense amount of traffic wanting development, and though the existing lines and existing rolling stock are very much overtaxed, very little new money gets into the Indian railways. The Government says—and says quite truly—“We can not afford to spend more than a few million sterling in the average year on railway development,” but they will not let private capital in.

Now, Rhodesia has a population of 32,000 white men, and there private enterprise has already supplied 2,000 miles of railway lines for those 32,000 white men. In the whole Union of British South Africa, with a population of a million and a quarter whites, and after 50 years of development, they have only got 8,000 miles of railway. There they are State lines; but in Rhodesia, with a population of 32,000 whites, they have already obtained from private companies 2,000 miles of line. And the colonists complain that they have not got enough.

I think that it is evident that in the nature of things it is much more difficult to get sufficient railway development from a government than from a private company. The government has a large number of competing demands on its purse. The government can only afford to raise a certain amount of new capital or to provide a certain amount of new money each year, and there are innumerable competitors for that money; where, in the case of a private company, if it sees a profit, it has nothing else to do but to deal with railways, and it will go out into the open market and endeavor to get the money.

Then, it seems to me that a great many of the arguments they have applied in other countries—the argument of military necessity, the argument for political unity, the argument that you can not get the money elsewhere, and that, therefore, the State must do it—all those arguments have no application to countries such as the United Kingdom or the United States. It is clear that if there is a case for State or National ownership here, it must be made on the ground that the public will be better served.

Senator ROBINSON. Mr. Acworth, if it would suit your convenience. I think the committee would like to suspend now, and resume the hearing at 8 o'clock this evening at this chamber.

Mr. ACWORTH. If you please, sir.

Senator ROBINSON. Very well; the committee will stand adjourned now until 8 o'clock this evening.

(Whereupon, at 11.52 a. m., the committee adjourned until 8 o'clock p. m., to meet at the same place.)

AFTER RECESS.

The committee reassembled at the conclusion of the recess at 5 o'clock p. m., Hon. William C. Adamson (vice chairman) presiding.

The VICE CHAIRMAN. The committee will come to order. Mr. Acworth, are you ready to proceed?

Mr. ACWORTH. Yes, sir.

STATEMENT OF W. M. ACWORTH—Resumed.

Mr. ACWORTH. Mr. Chairman and gentlemen, may I just say, before I go on where I left off, that I do not think I made myself as clear as I ought to have done this morning. I was speaking about the different States in Germany and pointing out that there were no German railroads, but there were Prussian railroads and Saxon railroads, etc., but I ought to have carried it further and said that, though, from the point of view of ownership, they are entirely separate—the Prussian profits go to Prussia; there are no profits in the other States; they just about pay their way—though that is the case as to ownership—as far as operation and control are concerned they work entirely as one system. There is an imperial railway office, whose business it is to secure uniformity of tariffs and uniformity of railway regulations, and everything of that kind, and there is nothing corresponding to the diversity, whether it be the amount or rate that the railways are allowed to charge or whether it be in the regulation as to the running of the trains, or anything of that kind, that exists in this country. In all such matters there is absolute uniformity throughout the German Empire.

I was asked a question about the French railways, and I said that the French method was so elaborate that I do not think it could be transplanted into this country. I was not attempting to suggest that the essential idea of systems occupying exclusively a certain region of country without competition could not be transplanted. Of course, if it were the view of the committee that that would be a desirable thing in America, there is no possible reason why it should not be recommended—why the French system should not be recommended. What I did mean was that the elaborate system of guaranty of revenues, the complicated relationship between the State and the railways is so essentially French, and so essentially an historical growth of 70 years, that I do not think it could be transplanted.

I think I have not made that as clear as I ought to have done, so I hope you will forgive me for that explanation.

Now, I got this morning as far as page 27 in this statement, and we had just got to where I was raising this point that there no doubt is a temporary position in the United States where private enterprise, that has always been, one may say, in advance of development for the greater part of history, has almost stopped. One knows that there are hardly any new railways being made.

I wanted to lay stress on it because I found I had said a certain thing. I wrote this paper more than six months ago and I suggested that the difficulty of arrest of development in the United States had been simply a question of money; that the money could not be got because it did not pay, and I suggested that if the railroads had sufficient income there was plenty of enterprise and plenty of capital available, if the capitalist thought it was a good thing to put his money into, and I found I had written this sentence:

To compare it [nationalization] in importance with the alternative of allowing the existing companies to raise their rates by an average of a mill per ton, which would make all the difference between poverty and affluence, would be almost farcical.

And this afternoon I went to the other end of Pennsylvania Avenue and heard a case before the Interstate Commerce Commission, and it just shows how the situation in railway matters changes. On the evidence as it was available in England six or eight months ago, one would have said if the railways got an extra mill per ton per mile they would be exceedingly well off. The situation has changed so to-day that the evidence is that with that increase they would just about hold their own. So the increase that I then thought was something that would make them rich is something that, under the extraordinary circumstances developing here to-day would make them, perhaps, not much poorer than they are at present.

Well, I thought six or eight months ago that the position in the United States, the sudden arrest of development through private enterprise, was something that eventually would pass off; it would be settled in some way or other; and therefore I ventured to say that the argument for State ownership, either in England or the United States, must rest on the question whether on the whole private ownership or public ownership would give the best service, taking that in its widest sense.

There was a distinguished English authority, Sir George Gibb, who put forth the idea—I happen to know that he has changed his views since—that private ownership was unquestionably the best in the earlier stages of the development. Private capital, he said, takes risks and has more initiative, generally, than you would expect from Government organizations. But after you have passed that stage he thought it was arguable which would do best. He thought there were considerable advantages on the Government's side in dealing with an existing completed system.

I tried to consider it on that basis, and the first thing that occurred to me was the question of capital. Now, there is one point there that is very clear, and that is if the State puts this money in, builds a railroad that is unprofitable, the State's responsibility is pledged; the State for all time has to make up out of taxation the difference between the net income of the railway and the money required for interest on the bonds with which it has been built. The private railroad, on the other hand, takes its chance. If private capitalists build a railroad and it turns out a failure, or does not pay, or does not pay for a long time, the capitalist loses; the public does not lose. The public as a whole goes scatheless, the particular capitalists have made a bad investment, and that is the end of it; and that, certainly in England, and, I imagine, in America also, is quite an important consideration. Bad bargains are left in the hands of the people who made them and do not invoke the responsibility of the State.

There is no question that in England, where we have had the same process that you have here of large companies absorbing small companies—there is no question, I think, that as a rule the capital of the small company, which is generally an unprofitable company because it has only second or third class districts to develop—the capital of the small company is nearly always written down before it is assumed by the big company, and that is done at the expense of private enterprise, and not at the expense of the public. I know, within the last few years, of a company being taken over in England, and some, at least, of its bonds were paid off at the rate of 1 per cent of

their face value—not a large amount of capital, but a large reduction in capital. Evidently the same thing must have happened here in, I imagine, a very considerable percentage of cases. About 33 to 40 per cent of the total share capital of your railroads pay no dividends. No doubt a considerable proportion of that share capital represents what were formerly bonds, which could not get their interest paid as bonds, and which in a reorganization were written down to the lower standard of shares, and even then they do not get their interest.

So, I think that is one point that should be borne in mind in discussing the question of private versus public enterprise from the viewpoint of capital. Now, it is clear that public enterprise has the advantage that it can raise capital cheaper. That is one of the common arguments in favor of state ownership. I do not think you can really judge here—you may be able to judge in a year or two when you have a great national debt—but at the present moment your national debt is so very small and so much of it is in the form of bonds that have a special value for banking purposes that you really can not compare the interest on your public debt with the interest on first-class railway bonds. In England we have been able to do it always, and I think it is safe to say that the difference between the rate of interest on first-class railway bonds and the rate of interest on Government securities is certainly not more than one-half of 1 per cent. So that admittedly there is an advantage on the public's side in the cost of raising the necessary capital for railway enterprise, but I believe one-half of 1 per cent represents the measure of that advantage. Against that you have to set the fact that private enterprise—I think it will be almost admitted here; it certainly would be admitted as a business proposition in England—that private capitalists can make \$100 go farther than the Government will.

Certainly in the railway world that belief is borne out by the evidence.

I put down one figure: The capital cost of the American railways—of the average mile of American railways—is \$66,500. Now, in New South Wales and Victoria, with railways built by public enterprise, the capital is, in the one case, \$77,000, and, in the other, \$65,000—nearly \$66,000—practically the same as the United States. No doubt there are very few, if any railroads in the Australian colonies that are as cheaply built as some of your line. They were mainly built by English engineers or engineers with English training, and we have a reputation for building very permanently. I imagine that you would find in the United States many railroads that were built pretty cheaply, and I doubt if you would find many in the Australian colonies that were built equally lightly—I mean inexpensive in method of construction. But it almost seems to go without saying that the average railroad in the United States is a more elaborate article than the average railroad in places where there is very much less traffic. Certainly there must be a very much larger amount of equipment in America. I mean to say, if you take a line like the Pennsylvania, the New York Central, or the Baltimore & Ohio, and lines of that kind, and the trunk lines all across the continent—they are built up to standard—that there can be no comparison with in Australia; and yet, the two principal colo-

nies in Australia—and they are the only ones that can be fairly compared, because they are the only full-gauge railroads—the principal colonies have a capital cost, the one as high as the United States and the other about 16 per cent higher.

Certainly I think any engineer would admit that the United States had got an extraordinarily large amount of value for their money in the railroads, taking into consideration the fact that they are only capitalized at \$66,000 a mile. So that I suggest that the evidence would seem to be that, though the railroads under public management can get their money cheaper, on the other hand, they do not make it go as far, and you can set off one against the other. But the real question is not one of cost, to begin with; it is a question of whether the public gets better service, on the whole, under the one system or the other. Now, I have pointed out how impossible it is to judge merely from rates. For example, you pay 2 cents a mile or $2\frac{1}{4}$ or $2\frac{1}{2}$ cents in the United States to carry a passenger. In India they carry a man 5 miles for a penny. Now, admittedly, the Indian traffic, at that rate, is exceedingly profitable. It pays the railroads handsomely to carry passengers 5 miles for 2 cents, and yet the Interstate Commerce Commission says that your passenger rates are not high enough, because they are not profitable. Of course the Indian conditions are so absolutely different that it is absurd to attempt to compare them. For instance, the Bengali goes to the railway station; he knows nothing about a time table, and he simply squats down until the next train comes along, which is very likely to be six or eight hours hence, and he cooks his food on the platform and patiently waits for the train to come along; and when he gets on to the train he is perfectly contented to be packed in like a sardine, and he does not expect anything except that; and the average train carries something over 500 passengers. So in a great many ways the conditions are not at all comparable. But if you take the countries where you really can make a comparison you can get figures something like this: In the United States the freight rate is a little less than three-quarters of a cent a ton-mile. You get 1.37 cents in Germany, and you get 1.3 cents in France—not very far from double the American rate. Now, in western Europe that is practically as low as anything except Belgium, and Belgium is 1.13 cents. So from the point of view of freight rates there is no comparison between the price at which freight is carried in the United States and the prices at which it is carried abroad.

The nearest approach to a fair comparison with the United States is, clearly, in Prussia. Prussia has had exceptional advantages. The Prussian population has increased very greatly since 1840, which you may say was the time when the railways were all practically in the hands of the Government. The population has increased 60 per cent, and the town population, which is really the population which produces most of the traffic, has increased more than that. The output of coal—I am dealing with the Prussian railways, and practically all the coal and iron is in Prussia—the output of coal has increased from under 60,000,000 tons to over 250,000,000 tons, and the output of steel has increased from under 1,000,000 tons to over 17,000,000 tons; so that they have had very great advantages. Now, there was a paper read in London in 1911

by Prof. Schumacher, of Bonn, with the quite deliberate intention of showing how well the Prussian railways had done, and he gives this as an instance of what they have done:

In the case of goods sent in bulk, the freight for long distances is as low as 0.8 pfennigs per ton-kilometer.

That is, roughly, 0.35 cent per ton-mile, which is very far from being a startlingly low rate in America, seeing that the average rate for coal last year on the Chesapeake & Ohio Railroad was only 0.304 cent, while for all traffic—high class as well as bulk freight, short distance as well as long distance—it was only 0.38 cent per ton per mile. Then, Prof. Schumacher says another thing: "The receipts amounted in 1880 and 1909 to 4.14 and 3.54 pfennigs per ton-kilometer, respectively," which means 1.65 and 1.41 cents per ton-mile. That is a reduction in 29 years of 15 per cent. I could not find the corresponding American figure for 1880. I could not find it for all the United States until the year 1882, but that does very well for a comparison with 1880. I find that the United States started in 1882 with a rate of 1.23 cents as against a Prussian rate of 1.65, and in 1909 the Prussian rate had gone down to 1.41 and the American rate had gone down to 0.763. So that the American rate started at the beginning of the period 25 per cent below the Prussian rate; and it fell, in the course of 29 years, not 15 per cent but nearly 40 per cent.

I remember, sir, the first time I ever came to America, which is now getting on to 30 years ago; and I remember seeing, what you can still see in England—little four-wheeled coal cars carrying about 8 tons—and England has not a chance to modernize, because England can not in very many places introduce the big American cars and the big American engines. In order to do that they would have to rebuild all our railways; but Prussia can do it as easily as the United States could do it. They run over flat country with very few bridges and no tunnels and no high station platforms; and the Prussians, as far as one can see, might well have copied the American principles and have gone to bigger and bigger cars and bigger and bigger engines and bigger and bigger trains. That is really the reason why the American rates have dropped, as I have shown, 40 per cent, while the Prussians have been obliged to keep them up, because they have remained under their old methods of doing their work with the same type of equipment that you see all over the Continent of Europe.

Now, there is another point: It is quite true, Prof. Schumacher points out, that between 1890 and 1909 the rates did fall 15 per cent, but the fact is that for the last years of that period they really did not fall at all—they remained practically stationary. Writing, I think, in 1912, Monsieur Colson, the great French authority, says: "The Germans no longer make any serious freight-rate reductions. Within the last 10 years the average rate per ton-kilometer has oscillated between 1.37 and 1.34." There is really no reduction worth talking about, and what reduction there has been has been due not to the fact that the rates for coal, or the rates for cotton cloth, or the rates for any special commodity have been decreased, but rather to the fact that the proportion of coal, taking the lowest rate, as compared with the proportion of merchandise traffic, taking the

higher rates, has increased. There is no question of this, that the Prussian railway rates have been maintained more stationary than on almost any other railway, I should imagine, in the world; certainly more than on all the important private railroads.

France, for instance, in the same 10 years during which the Prussian rates remained practically stationary, reduced their freight rates 11 per cent. It should be added, in fairness, that the Prussian passenger fares have on the average rate gone down 9 per cent in the 10 years; whereas the French passenger fares have only gone down 3 per cent. But on the freight rates which, of course, are immensely more important to the development of the country than the passenger rates, there has been a quite considerable reduction in France, and you may say, no reduction worth talking of in Germany for a good many years. France and Prussia are quite comparable countries. But France from a railway point of view has the worst of it in almost every respect. For example, if you take the different points that make a railway operation cheap or dear, France is, by no means, a flat country; large parts of France are very hilly, and quite a considerable proportion is mountainous. Whereas Prussia is almost as flat as any country—as flat as the Mississippi Valley. Coal in France is comparatively dear, and in Germany very much cheaper; and so is steel.

There is a much greater amount of traffic on every mile of railway in Germany than there is in France. Those are all very distinct advantages in Germany, in a comparison with France. But France has one advantage which should be set off. In France the haul is somewhat longer—and the longer the haul the cheaper you can afford to make the rates, other things being equal. But broadly speaking, from the point of view of operating cost, there can be no question that France is a more expensive country to operate in than Germany. Of course operating ratio proves nothing unless you know what the rates are. The average French passenger rates are higher than those in Prussia, that there is a difference of 12 per cent. But the German rates are lower, because the Germans have what they call a "fourth class." As you know, in Europe everywhere there are three classes, but in Germany there are four classes, and the fourth class consists of a vehicle in which there are sometimes a certain number of seats and sometimes none. You are not guaranteed a seat and, if the carriage is at all full you do not get it and you either stand or sit on your bundle that you have brought in with you. Now, France gives no accommodation as bad as that, and therefore the German passenger rate—about 30 per cent of the total of German travel travels in that fourth class—is naturally lower. The French rate is slightly lower, however, both for general freight and also for coal, so that given the great physical advantages in operation which I have mentioned you would expect to find that the Germans are able to operate at a lower ratio than the French. But the facts are the other way.

I will read it in the terms of M. Colson:

From the combined effect of all these causes if the operating ratio in France were 10 or 15 per cent higher than in Germany it would not imply inferior operating ability. But, in fact, the difference is in the opposite direction. If our companies worked as expensively as the German State railways they would spend from twenty to forty million dollars more than they do per annum.

And then he gives the operating ratio. In the year 1900 France operated at 54 per cent and Prussia at 62. In 1910 France had gone up to 60 and Prussia had gone up to 67. And then, after that—it is rather interesting, this point—in 1911 France was 62½ and Prussia was 65. In 1912 France was 63 and Prussia was 66, and in 1913 the figures were the same—France 63 and Prussia 66. You will observe that the difference has decreased; it began 8 points difference, but it dropped to 3 points, and the main reason why it dropped to 3 points is that in the last three years they have included in the French figures the French State railways; and, as I told the committee this morning, when the French States took over the Western of France Railway the ratio of operation went up from 67.8 per cent to 89 per cent, and that upset the French average, so the reason why the French operating efficiency does not appear as much superior to that of the Prussian railways in recent years as in former years is that the French State has come in and spoiled the average of the private companies.

Of course, it is a very difficult thing to make a comparison between one country and another; it is, obviously, not on all fours all the way through, because there are many differences between one country and another, and such comparisons ought not to be pressed too far. But it seems to me it is fair to take New South Wales, which is the largest settled area—although not really the largest area—and the oldest and most populous of the Australian States, and compare it with the State of Texas. Now, I have taken those two and compared them. The whole population of Australia is only 5,000,000 inhabitants, and though it is as big as the United States, of course, it would be absurd to make a comparison on the mere question of the number of square miles, but New South Wales compares fairly well with Texas. New South Wales has 310,000 square miles, and Texas has 262,000. I have taken the population in both cases from the census of 1910, and Texas has a population of 3,900,000, while New South Wales has 1,650,000. New South Wales is not increasing as rapidly.

In 10 years it only increased 21 per cent, whereas, in the same period, the population of Texas increased 28 per cent. There is a very great difference in the fact that nearly half the population of New South Wales—621,000 out of 1,650,000—live in the capital city alone. Texas has four or five good big towns, but the biggest town in 1910 had not reached 100,000 people. But it is fair to believe that one reason why the Texas population spreads and why the population of New South Wales is concentrated in a small area around the capital is because the Texas rates make it possible to send traffic a much longer distance. The New South Wales Government have furnished for the population of New South Wales 4,000 miles of railway, while the private companies have furnished for Texas 15,000 miles. That gives a ratio of a mile of line for 259 inhabitants in Texas, and a mile of line for 412 inhabitants in New South Wales. If you take a comparison of the rates, the average rate in Texas per ton-mile was just under 1 cent. In 1915 it was 0.995. The average rate for freight in New South Wales was 2.2 cents—a good deal more than double.

On the other hand, it should be recognized that the passenger fare is a great deal lower in New South Wales. It is 1.15 cents per

railways. It does seem that that is rather a significant fact, because nobody can question that the German people have taught the world a great deal. German manufacturers, German merchants, German bankers have really taught the world a great deal, and nobody can doubt that. But as far as I know the German railway official has taught the world nothing. As I stated this morning, the only thing that anybody could suggest to me that was really worth mentioning was the locomotive superheater, and as far as I can make out the inventor of that was not a German but an Austrian, though he was named Schmidt.

We have no experience of State ownership of railways in England. We have a good deal of experience in State ownership of telegraph and telephones. And I think our evidence tends in the same direction in that connection. However, I am not going to trouble you with that at length, because it is rather a side subject. But I would just like to give these instances very briefly.

Fifty years ago the English Government acquired the telegraphs. Three official estimates of the cost of acquisition were put forward. The first was for \$11,679,600, the second was for \$29,199,000, and the third was for \$32,848,875. According to the official figures, the capital account was finally closed with a total expenditure of \$52,887,289. On the basis of the \$29,199,000 capital cost, the post office estimated to obtain an annual net revenue of \$987,900. The fact has been that, on the average of the last 10 years, there has been a loss of more than \$1,866,500 per annum.

That is our record of the telegraphs. They give quite good service, I admit. I do not think anybody will doubt that we get very good service in England, but that is their financial record. They started with an estimate of \$11,000,000; they arrived at an expenditure of \$52,000,000; they estimated their profit as \$1,000,000 per annum, and end with a loss of \$4,500,000 per annum.

The telegraphs were acquired under two act of Parliament in the years 1868 and 1869, which gave the Government a monopoly of the telegraph business. I do not remember the exact form in which it was expressed. This was many years before the telephone was invented.

When the telephone came into existence it was introduced by a private company and gradually began to take hold. The Government did nothing for some time. They then came to the conclusion that it was a dangerous rival to the post office monopoly. They took a case and fought it through every court up to the House of Lords, which is our supreme court of appeal, and in the House of Lords it was decided that the words of the act passed before the telephones were invented did give the Government a monopoly of the telephone business also. Thereupon the Government put on a tax; they left the telephone company in business, but they took from it 10 per cent of its gross receipts, which they added to the profits of the post office, and in various other ways that I will not detain the committee by specifying, they handicapped very much the development of the telephone company. It developed under considerable difficulties, but it did manage to get along fairly, and it did pay a dividend that I think average about 6 per cent until its concession expired in 1911 and the Government took it over. They have already succeeded in reducing

a company with a dividend of 6 per cent per annum to an annual deficit.

Of course, 1911 was only a short time before the war. It is difficult now to secure any statistics. But it is admitted that a system that was working at a profit is now showing an annual loss. Then, I have dealt also with the question of what has happened to electric enterprises in England. The electrical developments in England have been very largely in the hands of municipal corporations, and the municipal corporations already owned their gas works, and they began by fighting electric development on the ground it would injure their gas trade. When it was impossible to stop electricity, they undertook to do it themselves and thereby keep out private enterprises. They obtained acts of Parliament authorizing them to give service in the district, and, having obtained the act of Parliament—of course I am generalizing; I am not attempting to say that every corporation did this, but it was the very common policy—having obtained the act of Parliament authorizing them to supply their district, they did nothing. They had obtained a monopoly of the district and they would not let anybody else in. And that has been the policy almost up to the present day; in fact, it still is the policy.

Big enterprises supplying electricity on a large scale and distributing it from the center, where power could be generated in wholesale quantities cheaply, naturally come in the neighborhood of the large towns, and the large towns, almost without exception, have said, "No; we will not admit this company competition inside the area which has been given to us to serve by Parliament," and the result is the consumer of electricity in England at the present moment is immensely handicapped, because he can not get it in such quantities or at anything like the price he can get it, for instance in Germany or in the United States.

The VICE CHAIRMAN. Did you make clear to the committee, or did you intend to emphasize, the relation between the time of the present war and the time in which the Government sustained those losses on the telegraph and telephone companies and what effect the war had on them?

Mr. ACWORTH. I may say, sir, that I have not got here what year that 10 years went down to, but I think I can safely say that if it includes one year of war that is sure to be all of it; it is an average of 10 years, and it can not include, I feel certain, more than one year of war.

It is impossible that 1916 could have been included, and I very much doubt that 1915 could have been included. Practically all our statistics have disappeared. In fact, there have been no clerks to compile them. Probably the last year of the 10 years was 1914. I can not say for certain. The telephones they took over in 1911, and certainly before the war they had already succeeded in producing a deficit.

I have given other instances. I am afraid all the evidence is that in England, at any rate, public undertakings do not show the same anxiety to develop new traffic or new customers, or whatever it is, as the private enterprises do, and certainly they do show opposition to modern innovations. The municipality wants to protect its gas undertakings against electricity; the State wishes to protect its own

telegraphs against its rival's telephones. That is distinctly the evidence of English experience.

Now, if I might give an instance of that, of the general proposition that the Government official, instead of endeavoring to adapt himself to the public requirements tends to make the public fit what he thinks is desirable.

I think once more Prussia really gives a very good instance. In Prussia, of course, it is exceedingly profitable to the railroad to get all its traffic in carloads if it can, but it is not always convenient to the public to send it in carloads. The Prussian Government practically says to the public, "You shall send in carload quantities; we will fine you so heavily if you do not that we will practically force you." The rate for any ordinary merchandise article is—I will leave out figures; I will merely put it this way—articles that in 10-ton lots pay \$4 per ton, if sent in lots of one or two tons are charged at the rate of \$9 per ton. So you pay two and one-quarter times more if you do not conform to the Prussian official's idea of what suits him and send your things in carload lots.

Now, what happens to the public is this: The difference of rate is so enormous that there has sprung up in Prussia a class of people called *Spediteurs* or forwarders—something like your express company, but not altogether—the forwarder receives from the public the stuff in small quantities, he collects it together until he has a carload, and then he forwards it at the carload rate, and he gives the customer some portion of the difference between the sum that the customer would have to pay if he sent it at the small-package rate and the carload rate. But it works out in this curious way: It is, of course, only in large places that you can make up sufficient parcels to make up a carload, and what happens is this: If you lived at a station 10 miles on the New York side of Washington and you handed your parcel, say, five hundredweight of stuff, to the *Spediteur*, he would send it in to Washington as a parcel, and at Washington he would make up a carload, and suppose you want it delivered at a station in New Jersey a dozen miles this side of New York, he would send it to Jersey City; he would there unload his carload, and he would send your parcel back again the dozen miles once more at the local rate. It is not a system, clearly, that is very convenient to the public, but it is very convenient to the railways.

Here is another instance. In England any ordinary trader has only to say to the company, "I wish to be allowed to open a ledger account." If he is a respectable person there is no question of guaranties or anything of that kind, merely he gets permission to do so. Thereupon all his traffic for a month is entered, and at the end of the month an account is rendered him and he is expected to pay it within the next month, so that he practically gets a six weeks' credit. If he does not pay at the end of the month's grace he is written to, and he can put it off a week or two longer without very much difficulty beyond that.

Here is the Prussian regulation:

In Prussia a shipper can open a monthly account, provided his average freight payments amount to not less than \$75 a month, and provided he deposits with the railway administration cash or securities equal in value to one and one-half times his average monthly account. If in the course of the month his shipments reach the value of the securities deposited, he must either increase his deposit or pay prompt cash for the rest of the month.

It may be said that is because Prussia is Prussia and England is England; but precisely the Prussian regulations are the regulations that the English Government makes when it is dealing with the telephone customer. We pay a measured rate for calls and we have to make a deposit in advance. When I get notice that my deposit is nearly exhausted I must pay up another pound, or £2, or whatever it is, and at the end of that time when the deposit is getting exhausted I must pay up again. I must always keep a balance, and I have known cases where a perfectly respectable householder a few shillings in arrears finds his telephone shut off because he has neglected to send a check. You get exactly the same treatment from the State authority in England on telephones that the State authority gives the public on the railways in Germany.

Now, sir, I suggest that the evidence is very definite. I am sure on this point the evidence runs one way—that the State official is nominally the servant of the public—and you might be entitled to expect on that account that he will treat the Government better than the private person who has to serve his shareholders. I am quite sure the evidence is the other way—that the customer is better treated by the private railroad; is given more liberal terms in many ways than the customer of the State railroad.

Now, you come to the question of the management of the railway itself. The railway management is essentially a commercial business. You want all the commercial qualities of planning ahead and being ready to take up any new technical improvement, and desire to cut down expenses at any point, and things of that kind. And he has to keep his work going. It is quite clear that you do not get as prompt service from public officials. I do not know what it is in this country, but it is a matter of regular knowledge in England that if one writes to a Government department it takes a very long time to get an answer; it takes a week to get an acknowledgment and two or three weeks, often, to get any real answer. If you write to a railroad company you get an acknowledgment by return of post and an answer in two or three days. There is no question as between public service, where you can compare them in England, and private service. There is no question about the commercial alacrity of one as compared to the other.

Then, I think, sirs, we come back—I can not help believing that the evidence is strong in favor of the better service of private enterprises than of public railways; but, coming back, the question is, after all: Are there such abuses in private ownership that State ownership may be the lesser of the two evils? There are one or two points to be dealt with under this head. The first is the great power of private corporations.

There is a famous saying in England that was current for a generation; I think it has mostly died out nowadays, that if the State down not own the railroads, the railroads will own the State. I do not think it ever had much foundation in fact, but nowadays the power of the railroads to stand against the State can not be argued. The railroads have less power in Parliament than a vast number of interests that are certainly very much less important to the public. I used to read in railroad books in this country a great many years ago about the railway barons. I think you have not hereditary rank

in America, and, as far as I know, the railway barons have not left any successors nowadays.

Then there is another thing. Prussia put forward the point that the whole system was honeycombed with rebates. I do not know whether it was true in Prussia; I never saw the evidence for it, but it is quite possible it existed. But it has no connection with private railways as such. I never heard of the suggestion that there had been such a thing as a rebate on the French railways. In England railways began in days before "undue preference" had been ever heard of, and I imagine in the very early days railways gave concessions to their wholesale customers, as the carrier by cart and stage coach had been accustomed to do before, and nobody thought anything about it. But it early was recognized as an abuse, and in 1854 we enacted what is known as the traffic act of 1854, equivalent to your own interstate commerce act of 1887; your interstate commerce act almost reenacted our words, "That no one shall give undue preference or advantage to any person, or any description of traffic." That was enacted in England in 1854, and since then there has been really no suggestion in England that rebates had existed.

I would not say that cases have not been found where the rates at one station were out of proportion to the rates at another station, but anything of the nature of private favoritism is dead, and nobody doubts that it is dead. As long ago as 1882 there was a very searching inquiry into railway conditions in England by a House of Commons committee, and they reported that nobody had given evidence of anything of the kind. Of course your rebates went down very much later in history than ours, but I do not suppose anybody believes they exist to-day in the United States. So I think that point goes.

Then, there had been smaller ways of giving favors. It used to be said in England that a railroad that wanted to encourage an important customer was not too particular in investigating his claims for loss and damage, but 20 years ago we stopped that because we made a joint committee of all the railways concerned to investigate each claim, and that very small leakage has gone altogether, so I think really the points that have been very often made in the literature of the subject, that the railroads exercise undue political power, and that the railroads give unfair advantages to certain customers, certainly have no application to the United Kingdom; certainly have no application to France. The committee know much better than I how far they are applicable to the United States.

Now, if you accept the position that the State is not likely to build cheaper—it will get money a little cheaper, but will spend more of it—if it does not operate cheaper, the argument that it can afford to serve the public better goes. And history entirely justifies this theoretical conclusion. The only State railways in the world that are worth mentioning as seriously profitable are the State railways of Prussia. As I say, that comes from the fact that Prussia bought at the best possible time, in the very serious depression that succeeded the boom after the war of 1870. After the war there was a tremendous boom, followed by great reaction that lasted a number of years, and Prussia bought at exactly that time, and since then has come the wonderful development of Prussian industries, and

so Prussia has been in an exceptionally favorable position, and Prussia does earn 7 per cent on the whole capital.

The railways of South Africa more than pay their way. The railways of western Australia, I believe, do a little more than pay their way, too. I do not think any other country can be pointed to where State railways pay their way. The smaller States of Germany, the rest of the States of Australasia, pay some years and come to the taxpayer for a deficit in other years. Italy, as I mentioned this morning, earns two-fifths of 1 per cent on its railroad capital; Switzerland just about makes both ends meet; Belgium just about makes both ends meet, and so on. It is quite certain nobody could argue for State railways on the ground that wherever they have been put down they are a profitable proposition. The case is very much the other way; that almost in every case where there are State-owned railways they are a burden to the taxpayer.

Of course it is fair to say what may be the natural answer to that, that it is just because they were not likely to pay that the State has been obliged to build them. That may be a perfectly fair argument; in any particular case that may be a perfectly sufficient answer.

The VICE CHAIRMAN. We understand you to say in case of pressure that the cost price is scaled, and they are acquired at a lower price than the cost, which is the reason they succeed in making them profitable?

Mr. ACWORTH. Lower than the original cost of construction?

The VICE CHAIRMAN. Yes.

Mr. ACWORTH. I do not think I could answer that. I never saw it work out as a complete scheme. Bismarck's plan had relation to a certain railway. There were a great many independent private railways. There was a certain railway, the shares stood at a certain price in the market—we will say they stood at 80—and he made an offer of 90 for all the stock, and he got it. Another company stood at 120, and he made an offer of 130, and he got them. It would be almost impossible to compare the total cost to the Government of the total original cost.

The VICE CHAIRMAN. I just wanted to understand—whether the committee did or not—whether you thought that one elemental advantage of the pressure was that they did not construct them but bought them cheaper than they could have been constructed?

Mr. ACWORTH. I do not think any evidence in my possession would entitle me to answer that yes. It may have been so, but I do not know it. The point was, however, that they bought at the bottom of the trough; they bought cheaper a thing that was going to develop to an extent, but nobody then appreciated; I think that is really the answer. I can not say yes or no to the other question.

Well, there is another claim made—I am afraid I am detaining the committee longer than I thought of doing—there is another claim that State management is more equitable. There is no doubt that State management has in some cases built lines in poor districts that private enterprise would not have ventured in. That must be admitted. But the evidence is also that the reason they go in poor districts is not necessarily a public reason. For example, the present management of the Victorian Railways in Australia

insist upon publishing year after year in their annual accounts, as a warning to the legislators in the future, a list of seven branches with an aggregate length of 46 miles that cost about \$2,000,000, at various dates between 1898 and 1904, which were kept open for a good many years during which they failed to earn the operating expenses, and which have subsequently been abandoned and the rails pulled up.

So it is quite true on the one hand that public enterprise does go to districts that perhaps ought to have a railway where private enterprise would not venture, but on the other hand public enterprise goes to a district where neither public nor any other enterprise ought to go on their merits.

Now, may I venture to speak of what is really the most important problem in a democratic State, such as the United States or the United Kingdom?

I said at the outset that Prussia is accepted as the best example of State ownership. I take it that must be admitted. I ventured to say that I do not think the Prussian administration has anything very much to boast of, and I think the comparison that I suggested—not on my own authority, but on the authority of Mr. Colson, one of the greatest authorities in the world on the subject—the comparison that I made between France and Prussia, until it is answered is pretty good evidence that Prussian railways are not efficient as compared with the private railroads in France. But if the Prussian railways were fully as efficient as the most enthusiastic Prussian claims they are I submit that it is no evidence that railways operated by a State constituted as the United States or the United Kingdom, where Parliament controls the management, would be successful.

In Prussia the Prussian King is as much the head of the railways as he is the head of the army, and the Parliament has no more power to interfere in railway management than in the management of the army. That is one thing. A railway managed by a minister who is liable to be cross-questioned in Parliament why he has not given better rates to such and such particular town, why he has not built a railway to such and such particular district, why he does not do this, that, and the other for the benefit of the particular section of the country, is a very different proposition. And this is what happens in every State, as far as I know, with a democratic constitution.

It is commonly said if they can manage the post office why not the railways? I submit that the two are not at all analogous. The post office is a very simple business. You pay 2 cents and you put your letter in the post, and whether it is going to the next village or whether it is going to San Francisco it is 2 cents, and nobody ever discusses the rate.

I think if the post-office rate varied according to zones, and if the post-office rate were not 2 cents, but \$2, or a sum that was worth talking about, you would hear a great deal more about the inequalities of the postal authority, and you would be requested to modify the zones and reduce the rates within the zones, etc.

I do not think the post office is really an analogy. It is very difficult to give evidence about how far the railway management is interfered with by political influence in different countries. It is quite

obvious; I could take any quantity of newspaper stories, but they are not evidence, and I would not like to give the committee anything that I see in newspapers as evidence. But occasionally one comes across evidence that is something better than newspaper talk.

Take, for instance, South Africa. South Africa has investigated conditions a great deal, and these quotations are not from newspapers but from official reports. In 1907 there was a commission on the Cape railways, and they reported unanimously that they were "impressed with the necessity of removing as far as possible the management of the railways from the influence of party politics." Then, that same year, Sir Thomas Price, who had been general manager of the Cape railways and became general manager of the whole of the railways of the South African Union, was asked to report, and here are quotations from his official report:

The drawbacks in the management of the railways in the Cape that call for removal arise from the extent to which and the manner in which the authority of Parliament is exercised. They are twofold in their character, viz:

(1) The practice of public authorities, influential persons, and others bent on securing concessions or other advantages which the general manager has either refused in the conscientious exercise of his functions, or is not likely to grant, making representation to the commissioner (as the ministerial head of the Government), supplemented by such pressure, political influence, or other means as are considered perfectly legitimate in their way and are best calculated to attain the end applicants have in view.

Then he goes on—this is still a quotation:

(Many members of Parliament act similarly in the interests of the districts, constituents, or railway employees in whom they happen to be interested. It is by no means unknown for the requests in both classes of cases to coincide somewhat with a critical division in Parliament—present or in prospect—or otherwise something has occurred which is regarded as irritating to the public or embarrassing to the Government, and the desire to minimize the effect by some conciliatory act is not unnatural.)

I do not regard it as open to doubt that the colony as a whole has suffered in consequence, the inland portions of the colony particularly so; and that the need for a remedy is pressing if the railroads are to be conducted as a business concern for the benefit of the colony.

MEANS OF SECURING FREEDOM FROM POLITICAL INFLUENCES.

The necessity for the railways and their administration being removed from such an atmosphere and treated as a most valuable means of benefiting the colony as a whole, while not neglecting the interests of a district (but not subordinating the welfare of the whole colony thereto) is pressing. That there should be an authority to refer to in case of real necessity, where the decision or action of the general manager is not regarded as being in the public interest, is also clear. But it is equally manifest that the commissioner or the Government of the day, with political or party consideration always in view, is not the proper court of reference.

And he ends up—

A material change is imperatively necessary in this respect, if only to insure solvency of the colony.

That was in 1907. In May, 1915, there was a further memorandum by the board of railway commissioners presented in the South African Parliament, in which they say:

Any minister, however, able and strong his character may be, under the system of party government, insensibly susceptible to party considerations and is in constant difficulties in giving impartial decisions. * * * It is perhaps natural that men who have been accustomed to the methods in vogue when the railways were of limited extent should desire still to cling to the old

system of control, but the consequences of doing so can not but be unsatisfactory. * * * As the railways and their working were regarded as part and parcel of the system of party government, with the obvious advantage to the party in power, the reluctance of any government to make a change is what might naturally be expected. Apart from the magnitude of the railways and the number of the railway servants employed, forces have of late years come into prominence that make it increasingly urgent that the railways and harbors should be regarded and administered in the interests of the whole Union and not as an adjunct of the party that is in power.

Now, all of that is official testimony, and I know no other colony which has published things quite as frankly as to the position of affairs.

The VICE CHAIRMAN. Mr. Acworth, a few moments ago you discussed the lack of analogy between railroad ownership by the Government and control and management of the Post Office Department. In this country, perhaps you are aware, it has been officially proposed, as well as generally discussed, to assimilate or coordinate the telegraph and telephone companies with the Post Office Department. Would you care to give the committee the benefit of your ideas as to the feasibility of that, or its desirability—that is, the part of the Post Office Department which conveys news and communications?

Mr. ACWORTH. Well, I do not know whether I ought to hold up England as a melancholy example, which thought it was going to pay \$11,000,000 and had to pay \$50,000,000; which thought they were going to make an annual profit of \$11,000,000, and made an annual loss of \$4,500,000.

The VICE CHAIRMAN. Suppose it was not intended that the Post Office Department should have a profit, but that it was intended for the service of the people. Then would you care to discuss the assimilation of the post office and telegraph and telephone companies with the post-office facilities?

Mr. ACWORTH. Well, our telegraph lines have been in the hands of the public since I was a boy and not old enough to send telegrams. As I say, I think our telegraph service is very good. It is a bad failure financially, but I think its service is very good. I can certainly answer this, that our telephone service was never very good, but it is a great deal worse since the Government took it over. I think that has been, as far as I know, the universal opinion. It is not more cheap. It certainly has got worse, but it is fair to say it was only taken over in 1911, and the Government has been telling us ever since that they have very nearly gone through the reconstruction period and that we are going to live happily ever afterwards.

Then, sir, I think the experience of Australia is very interesting. I may cut it short because practically every colony almost has had the same experience. In every colony, all the time, there have been Government railways; in every colony they were originally treated like any other branch of the Government and were put in charge of a minister, responsible to Parliament. In every colony, except West Australia, which was too young then to have a policy, the people found the result so unsatisfactory that they put the thing into the hands of a commission; they appointed three commissioners who were to manage the railways apart from Parliament, practically independent of the parliamentary control, except so far as construction of new lines, or something of that kind, was concerned, and who were to keep the railways out of politics.

Some commissioners succeeded better than others. But they only held office for five years, and when the five years were coming to an end things tended to drift back into the old rut. Several of the colonies have gone through the experience, first having political management, and finding that that was too unsatisfactory and too expensive, then coming to a commission then finding the commission system not satisfactory for one reason and another and going back to a parliamentary minister. Finding that unsatisfactory and going back to a commission, and so on. Victoria, when I left England, was looking about in its fifth change of policy. It had two periods of ministerial administration, two periods of commission administration, and I was told was now looking out, as a fifth change, for another commissioner. They have felt the great disadvantage of the constant interference that I think the evidence shows is almost unavoidable under a parliamentary system in a democratic country—they have felt that disadvantage, and they have not been able so far to find any method that freed them from it.

Now, Mr. Chairman, I would like to call attention to another matter. It is not only the difficulty between the railroads and the public making demands for special advantages to special districts, but it is also a very great difficulty sometimes between the railroads in public hands and the employees who can bring considerable parliamentary pressure.

In Victoria, in the year 1903, there was a great railway strike. The men demanded extravagant terms. They set the whole public opinion against themselves. They all went out and the citizens of Melbourne rallied to the Government and anybody available kept the railroads open and the men were beaten. Public opinion was so very strong against them that they were entirely beaten. Thereupon the Victoria Parliament passed an act disfranchising every railway servant in his own constituency and constituted a special railway constituency. The railway men were permitted to vote for two members of the lower house and one member of the assembly as their own special representatives, and they had no votes in their own locality.

That lasted for three years and then Parliament repealed that and passed an act, which is still in force in Victoria, the effect of which is this, that if anybody "employed in the public service, either in the railway service, the police service, or the State rivers and water-supply department, shall, either directly or indirectly take any part whatsoever in or in relation to election of members to the legislative council or the legislative assembly, or directly or indirectly in any way take part in the political affairs of the State of Victoria otherwise than by recording a vote at a Parliamentary election," he shall be dismissed, etc.; and "no person or class of persons so employed shall, directly or indirectly, use or attempt to use any influence in respect to any matter affecting the remuneration or position in the public service of either himself or any other person," and the penalty for that is that "such person may be fined in a sum not exceeding £10, and may be reduced in class, subdivision, grade or status, and salary, or he may be dismissed or his services may be dispensed with, provided that such person shall not be dismissed or have his services dispensed with for any contravention of this section without the consent of the governor in council"—that is, the cabinet.

The VICE CHAIRMAN. Now you have given the committee the penalties for strikes——

Mr. ACWORTH. No, sir; not for strikes.

The VICE CHAIRMAN. Some few minutes ago you mentioned strikes. I want to know, if you know and can tell the committee, if there is any other tribunal to decide controversies between the carriers and their men?

Mr. ACWORTH. Anything of the nature of the Interstate Commerce Commission?

The VICE CHAIRMAN. No, sir; any tribunal.

Mr. ACWORTH. I beg your pardon—between the carriers and their men?

The VICE CHAIRMAN. Yes; so as to avoid the necessity for strikes.

Mr. ACWORTH. I could not attempt to give you evidence that would be of any value. I know, of course, that in all the Australian colonies there are all kinds of arbitration boards in the different trades. My recollection is that the common railway plan is that there is an internal arbitration, I think, an officer and a fellow workman of the man complaining, with, I rather think, an independent chairman, but I would not like to commit myself to that. I really do not remember very distinctly. I have a distinct recollection of there being internal tribunals. But these penalties I have been speaking of are not for a strike. In the first place, they are penalties on the railway servant attempting to take any part in politics except by recording his vote in the ballot, and, secondly, on anybody who attempts to use political influence in any way to procure promotion or advantage to anyone in the service.

The VICE CHAIRMAN. But some few moments ago you mentioned that the political rights were taken away.

Mr. ACWORTH. Yes, sir; at that time the railway employees were deprived of their ordinary vote, and instead of it they were given a special railway constituency in which they had a vote. But that was repealed in 1906, and this prohibition against political interference was substituted.

Then I have gone at some length into the story in Belgium. Belgium is rather interesting for this reason: The same political party has been in authority for 32 consecutive years, and it is claimed by the other side that the reason they have succeeded in keeping the power so long is that they have the patronage of the railroads. Certainly their employees have about 6 per cent of the total vote of the country and the ministry certainly have done their best to keep the votes of the employees on their side, and they certainly have remained in power 32 years. Those facts are all clear.

I think I may just give you one story because it is an instance and it is not denied. On the occasion of the election in June, 1912, as the result of orders direct from the cabinet of the minister himself, increases of wages were granted and paid to a large number of men on the very day before the vote was taken, and these increases were made to date back to the previous 1st of January. The minister was accused in Parliament of having ordered these increases by telegraph; he replied that the accusation was not true. He was quite accurate in his statement. The order had been given by telephone.

Now perhaps I may just give this: The committee will remember that there was a good deal said about the Chicago & Alton Railway a few years back. They went back on the books. They extracted from the books instances of expenditures made for capital purpose—that had been charged to revenue. They set them up again in the books and issued capital against them. In 1897, the Belgium ministry went back on the 63 previous budgets, extracted a host of small additions to works and equipment which had been charged to revenue under the category of renewals, making together a total of over \$2,122,472, and charged them back against capital. They went back 63 years in order to produce a result.

Mr. SIMS. And they could not skin the Alton affair even by going back that far.

Mr. ACWORTH. I remember the story of the Alton as a thing that was called a scandal at the time, and I was rather amused when I found that the Belgian Government had gone back not 6 years but 63 years.

The VICE CHAIRMAN. Well, Belgium was a small country and very young at that time.

Mr. ACWORTH. No, sir; it went back 63 years, so it was a pretty old country when it started to go back.

The VICE CHAIRMAN. But the items which were picked up in going back, occurred when the country was young?

Mr. ACWORTH. Oh, yes; of course I do not think it is questioned in either case that when they were younger they might fairly have been charged as revenue; but they had been charged as revenue, and they brought it back. That is the story of both cases.

There is just this about Belgium. It has not, as far as I know, got into the public papers, but it has been mentioned in various directions, and I have reason to know that it is true. Before the war there was a commission sitting on the Belgian railways. That commission had determined to recommend that the construction of new lines should, in future, be intrusted to a contractor and not left in the hands of the railway administration. Further, I do not want to put it too high, but it is as high as this: They were seriously considering the grant of a lease of the State railways to an operating company, and certain very influential persons were in favor of the proposition. Now, Belgium has had its own State railways for more than 70 years; and after 70 years' experience they were seriously considering—and I have been told that they were likely to decide, but I would not care to put it as high as that; but they were certainly seriously considering—the proposition of leasing them to a private company.

I quoted President Hadley at the beginning. That is what Prof. Hadley said 35 years ago; and I submit that the evidence to-day, after 35 years' more experience, confirms that statement of President Hadley in all points—that “the State is more likely to tax industry than to foster it”; that “State management is more costly than private management”; and that “the political danger would be very great”; that “politics would tend to corrupt the railway management, and the railway management would tend to corrupt politics.”

I think the essence of the story is this: In a democratic State, at any rate, you are up against the difficulty that it seems natural that

the Parliament, as the representative of the people, should manage the railways if they belong to the people. If Parliament does manage them, it is almost impossible to prevent private interest obtaining an unfair share of attention. One member may desire, perfectly naturally and properly, to obtain certain things for his constituents. It is nobody's interest to prevent those constituents getting it, but if they get more than a fair share the net result is that the remainder of the public get less than a fair share; and that, it seems to me, is really the evidence from democratic government everywhere—that it is impossible to procure, under any system of State management in a democratic State that has yet existed, an authority that is left to consider impartially, undisturbed by political influences, the interests of the whole public as distinguished from the particular or local interest of certain places or certain trades. I think that is really the sum of the evidence.

If it were possible to establish a system under which the railways were managed for the people, but were not managed by the people in the direct ordinary parliamentary sense, you might get the benefits of State ownership without the advantages. But it seems to me that all the evidence is that in a democratic State the interference with the impartiality of management be in the interest of the whole community, the intrusion of unjustifiable demands on behalf of certain favored individuals or favored localities or favored trade interests has never been prevented.

I must apologize to the committee for having taken so long.

Mr. ADAMSON. Gentlemen, the witness has worked diligently for four hours to-day. Is it the pleasure of the committee to begin the cross-examination now or to postpone that?

Senator ROBINSON. I suggest that be postponed until another occasion, Mr. Chairman.

(Informal discussion with respect to adjournment and the order and manner of examination.)

Mr. ADAMSON. Gentlemen, we will stand adjourned until 8 o'clock to-morrow night.

(Whereupon, at 9.45 o'clock p. m., the joint committee adjourned until to-morrow, Tuesday, May 8, 1917, at 8 o'clock p. m.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

TUESDAY, MAY 8, 1917.

UNITED STATES SENATE,
JOINT COMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint committee met at 8 o'clock p. m., Hon. William C. Adamson (vice chairman) presiding.

The VICE CHAIRMAN. Gentlemen, the committee will come to order. Mr. Hamilton, will you proceed with the witness?

Mr. HAMILTON. I have here, Mr. Acworth, a little book called "The case against railway nationalization," written by Mr. E. A. Pratt, an Englishman. I presume you are familiar with it?

Mr. ACWORTH. I know Mr. Pratt, and I know his books in a general way, sir.

Mr. HAMILTON. He says:

In every instance where the State has built or assisted to build the railways, or has acquired the companies owning railways with a view to their nationalization, such action has been taken as the result of political, financial, or economic conditions which were more or less peculiar to the country concerned and which had no parallel in past or present conditions in the United Kingdom, and offer no recent example that we ourselves should follow.

Now, assuming that that is true as to the United Kingdom, is it true as to the United States, and what would you consider as the chief difficulties in the operation of Government railroads in the United States?

Mr. ACWORTH. That is a very large question.

Mr. HAMILTON. Perhaps I did not realize how large it was, Mr. Acworth.

Mr. ACWORTH. I happened to come to America the same time as Mr. Bryan, I think in 1909, and almost the day I landed he put out a speech, which of course you remember very well, in which he suggested that the National Government should own the trunk lines and the States should own the branch lines. He did not attempt a definition, which I think would have taken him some time in working out, but he seemed to think that was a feasible scheme.

Now, I assume that could not stand criticism; that it is quite obvious that a trunk line with the branches all disconnected is an impossible thing. The tendency of railroads all over the world is consolidation.

The VICE CHAIRMAN. Mr. Bryan had been globe-trotting for a few years and had grown very popular in his absence, and he did that to keep from being elected President the next year. He would have succeeded if he had not acted that way.

Mr. HAMILTON. He succeeded. I must say to you that he recanted that before this committee.

Mr. ACWORTH. Yes; I was only trying to lead up to the point that I assumed that if you did nationalize railways on this continent they would wholly be handed over to the National Government. Well, one knows that of all the Governments in the world, not excluding England, the United States Government has done least in taking charge of public utilities. Our Government has done, of course, very much less than the ordinary continental Government, but our Government has had a certain amount of training. We have, for instance, as was mentioned last night, the telegraph and the telephone, and our municipalities have run gas enterprises and water enterprises and electricity enterprises, and so on, on a considerable scale, and street railways; such public utilities are very generally in public hands. We have had a great deal of experience; you have had practically none; and to begin to learn the job, which I venture to suggest what I have said to the committee yesterday shows is the very difficult job of running railroads, to begin to gain your experience of public authorities managing national enterprises, by taking over an undertaking of 250,000 miles with nearly 2,000,000 employees is a big thing with which to start. That is the first thing that would strike me.

Mr. HAMILTON. Yes; it is fair to assume, too, that the political phases of the management of the road would be as marked here as in any other country, I take it, under our system of government, would they not?

Mr. ACWORTH. Well, sir, a member of the committee last night asked me about telegraphs and telephones, and as the result of that I got the last report of the Postmaster General of the United States and read it this afternoon, and I observed there that he is having what our Postmaster Generals have had for some time, very considerable difficulty with the political influence of his employees. How you would get on with, I suppose, at least a million and a half voters, all employed by the Government, put on you at one fell swoop I do not know. I would not like to be the minister of railroads who was responsible.

Mr. HAMILTON. Some of the difficulties that have manifested themselves prominently in Australia, for illustration, we might anticipate here, I assume?

Mr. ACWORTH. You might. If I might say, sir, Mr. Trumbull mentioned, in introducing me to the committee, that I had just come from Canada. There we had the problem. The Canadian Government has, in the first place, itself constructed and is now operating about three thousand and odd miles of line.

I do not want to say anything unnecessary about Canada, but I do not think the wildest advocate of state ownership has ever produced the Canadian operation or the Canadian experience of construction as an argument for state ownership in any other country.

But the position is this: In Canada they not only have got this of their own, but they have also subsidized—supported to a very large extent—two great systems, the Canadian Northern, of about 10,000 miles, and the Grand Trunk Pacific, which has about 3,500 miles. They have made themselves responsible—partly by directly undertaking to bear the interest, partly by guaranteeing bonds—they have made themselves responsible for three-fourths of the total

bonded indebtedness of the Canadian Northern. They have made themselves responsible for two-thirds of the total bonds of the Grand Trunk Pacific. Now, those two companies are unable to meet their obligations. They had gone ahead too fast, and the question was, what could be done?

There were three of us. One of my colleagues agreed with me and the other did not; but the majority of us agreed that it was impossible, the Government having put its fingers in and having, as so often happens, had the hand and then the whole arm dragged into the machinery, so had gone on advancing and advancing money, we felt there was no way out of it, that you had to recognize the fact that had happened and that it was necessary that the state should take control of these two big private companies.

Of course, I can not say whether the Canadian Government will accept our recommendations or not, but in our recommendations we have done everything in our power to keep political influence out.

If I might, perhaps, say what we have recommended, because my American friends say it is possible you can get that through in Canada, but certainly you could not in the United States. We have recommended that Parliament appoint a board of five trustees; that they manage the railways; that they hold office for life, subject to reappointment after periods of seven years. But our idea is that they would be reappointed as a matter of course, and the people who appoint are not a political authority, but themselves; they recommend to the Government. The five men having been appointed at the outset, if one of them goes out of office by the effluxion of time, the remaining four recommend to the Government either that this gentleman be reappointed or that a new person be appointed in his place, and if the Government accepts our recommendation and puts this into the act of Parliament the Government can do nothing but either accept the nomination or refuse it. If the Government refuses it, it goes back to the trustees, and the trustees nominate another person, and the Government can only accept him or refuse him. Under our scheme the Government would have as little control over the direct management of the railroads as it is possible to plan.

We have deliberately made these trustees self-perpetuating and a permanent body because we felt that the political management had done much harm to Canada in the past and was likely to do much harm to Canada in the future. I can not, of course, say what will be done with our report. It was only published two or three days ago, and I have only seen one or two Canadian newspaper criticisms. But I was told by people who were likely to be good representatives of Canadian opinion that the people were so shocked at what had happened under political management in Canada that they were likely to accept this very drastic proposal for telling Parliament it should not manage a business of that importance to the country rather than risk further parliamentary management as it had been in the past.

Mr. HAMILTON. In that connection will you sketch briefly some of the difficulties which have resulted in Canada?

Mr. ACWORTH. You mean the kind of things that have happened?

Mr. HAMILTON. Yes; just briefly. I do not want to take too much of your time.

Mr. ACWORTH. Let me give you this: The last instance of Canadian building—the Canadian Government built the National Conti-

mental Railway. It never ought to have been built. There clearly was no need for it, and there is no traffic for it.

Mr. HAMILTON. That, on a large scale, is an illustration of political management, is it not?

Mr. ACWORTH. They started to build it on an estimate, I think, of \$35,000 a mile—something like that. The estimate was made in a manner that I do not hesitate to say you or I would never accept from an architect if we were going to build a thousand-dollar bungalow. The man who made the estimate went and looked at the line and said, "There are so many miles, and I think it ought to cost so much, and he multiplied the miles by the dollars, and they started off and built 2,000 miles on that estimate, and the estimate was something like \$30,000 a mile and the fact was \$90,000 some odd a mile.

I will give you one other thing. I am not betraying any confidence, because it was in all the newspapers when I was in Canada. There is an old line, the Intercolonial. It has a very fair traffic; it earns about \$11,000 a mile per annum; it certainly has low rates. But the low rates are certainly not sufficient to account for the fact that over a series of 30 years it has cost to operate more than its gross receipts, and that is not the whole story, because in the course of those 30 years the capital per mile was put up from, I think it was, \$37,000 to \$57,000 a mile, and it was not a railway with any great growing traffic which needed large new capital expenditure. The increase of the capital cost per mile was mainly, I have no hesitation in saying, due to the fact that year after year they charged to capital renewals that ought to have been charged into the current expenses. Now, that is the railway.

In the last few years there is a new minister, who has insisted that the railway should be managed as a railroad. The Montreal Gazette, I remember, said some years ago it was not a railway but an opera bouffe, and he insisted it should be managed properly, and things have very much improved. Last year, with the additional traffic owing to war, they actually earned a dividend of 2 per cent after paying for their renewals honestly. Such a thing never had occurred, and they are quite surprised in that district.

Where I was in Canada there appeared a letter in the newspapers from a gentleman who was a member of Parliament from one of the districts served by the railroad, and he wrote that he was resigning his seat in Parliament—but he was rather a prominent supporter of the Government—and he publicly gave as his reason for resigning that the minister of railroads and the general manager had thought fit to appoint the person whom they thought qualified to be district superintendent rather than the person that he recommended. He said that openly. That was how he considered the railroads ought to be managed; that he should name the district superintendent, because he was the member for that district.

Mr. HAMILTON. When I have consumed 30 minutes, Mr. Chairman, I want to stop, and wish you would call my attention to it.

The VICE CHAIRMAN. We can not prevent you stopping, if you wish, Mr. Hamilton, but the Chair is not going to stop you. I hope you will not embarrass yourself about time. This is a very interesting examination.

Mr. HAMILTON. Referring now to the Prussian State railway as the most successful example of Government ownership, will you

briefly state the causes which have contributed to this alleged success of the Prussian railways? First, the flat country, I presume, and the haul, I take it, and the easy movement of freight, have contributed to its success?

Mr. ACWORTH. I think you may put it this way, sir: You start with a low capitalization, owing to the fact that the railways were bought under very favorable circumstances and that it could not have been expensive to build them in a dead flat country. That is number one. For the same reason you have cheap operation, you can run large trains with light power, and so forth.

Mr. HAMILTON. Therefore your earning power is greater?

Mr. ACWORTH. Your earning power is great; your operating costs are low. You have rates that were fixed when the traffic was very much smaller in volume that have been maintained practically un-reduced, and therefore that leaves a very large margin of profit. You have a Government that is able to insist on its own point of view. I instanced, for example, yesterday, that they make penal rates. Every railway man knows that dealing with what you call less than carload freight is immensely more expensive than dealing with carload freight. The railway men have long believed in England that the rates charged for less than carload freight are too low; they do not pay. One of the presidents of one of your big railways told me recently, "If I could get rid of every scrap of less than carload freight I carry and give it to my neighbors, I would be a rich man." The Prussian has practically penalized less than carload freight out of existence.

I will give you another instance. A carload is supposed to be 10 tons. If you have 11 tons you may fill your carload and pay the carload rate, and on the odd 1 ton you have got to pay the very much higher less-than-carload rate. That is a sample of how they protect themselves. They protect themselves almost absolutely against loss and damage. If any consignment that you send is packed otherwise than in a safe, almost, they give you notice, "insufficiently packed, and therefore carried at consignor's risk." If the traffic is delayed on American or French or English railroads, you are required to pay damages if you have not delivered in a reasonable time. On the Prussian railway they very carefully protect themselves. As you know, in every continental country there is a fixed period, the legal time for delivery. The regular time for delivery in France begins from the start the consignor says "Please carry my goods." It begins in Germany from the time when the Prussian railways say, "We have got a car and we are now ready to carry your goods." Well, on that basis it is almost difficult to find an opportunity for not getting the goods on time, and so on. In every way the Prussian State railways protect their revenues. Of course, Prussia, or rather Germany, had great difficulty before the war in raising by taxes the very large revenue they required, and they have clung with extraordinary care to the surplus revenue that they get from their railways. The Prussian State, as distinguished from the Empire, does not spend very much money; and they get about \$50,000,000 to \$60,000,000 per annum net revenue from the railway after covering all the expenses and interest on the railway capital. They get that toward the general purposes of the Government and they have held on to that.

Mr. HAMILTON. Then there is another element I have read, and that is the very large international or transit business, going across Prussia, going through Germany. I do not know how much there is to that.

Mr. ACWORTH. I do not think it would be a large element in the situation, sir. It may be considerable, but these international hauls are generally done at very low competitive rates, because the route through Germany is competitive with the route through Switzerland, or it has to compete with the water-borne traffic. I have no doubt it amounts to considerable gross money, but I do not think very much net.

Mr. HAMILTON. I have read that did enter into the profitableness of the business.

Mr. ACWORTH. I should not have thought it was a large factor.

Mr. HAMILTON. Then, too, there is the administrative skill, I suppose, the autocratic management of the system?

Mr. ACWORTH. At least it is safe to say money is not wasted owing to the political influence of the employees. [Laughter.]

Mr. HAMILTON. Exactly. Now, as to financial results, I have read that there is quite a marked difference between the Prussian railroads, and I think there is one large extension, the Prussia-Hesse?

Mr. ACWORTH. Not exactly an extension. It was really Prussia that nationalized its own railroads. Hesse also had State railways, and 15 or 20 years ago the State of Hesse made a bargain and put its railroads together with Prussia, and, therefore, strictly speaking, now what we commonly call the Prussian railways are the Prussia-Hesse railways.

Mr. HAMILTON. And the other States declined to join?

Mr. ACWORTH. Yes.

Mr. HAMILTON. Fearing they would lose their commercial individuality?

Mr. ACWORTH. Yes; and also their seminational individuality.

Mr. HAMILTON. And they have not succeeded financially anywhere nearly as well as the Prussian road?

Mr. ACWORTH. Oh, no. Saxony, I think, and Baden—Saxony comes out about even; that is to say, its net money is enough to cover its debt. Baden, I think, is a little worse off. Bavaria, one year with another, I think is a little below paying its debt. Wurtemberg, which is the other important one, loses. Wurtemberg is largely not a manufacturing State, and it is not unnatural its railways are less profitable. But you may certainly take it that outside of Prussia the State railways are not a profitable investment.

Mr. HAMILTON. Here is a statement that caught my attention. It is an article contributed by Hermann Schumacher in the Royal Economic Society Congress in London, January, 1912.

Mr. ACWORTH. That is the paper from which I quoted, sir, where he praised the Prussian system.

M. HAMILTON. Now, in that he says: "To-day"—that, is, speaking of these States outside of Prussia—"they are face to face" (and that was said in 1912) "with the unpleasant alternative of either joining the great Prussian railway system and partly abandoning their independence or of continuing to pay for their independence by working at a loss."

Is that practically the condition, or was it that at the time of the war?

Mr. ACWORTH. Of course, Prof. Schumacher is no doubt much more familiar with the details than I am. In that case I have put it too high. The small States come out worse on their railways than I said.

Mr. HAMILTON. I did not mean to controvert his statement, but I had in mind the inquiry as to whether conditions as he described them in 1912 had continued, barring the abnormal conditions which have prevailed since the war began.

Mr. ACWORTH. I should have said I do not know that I should have used quite as strong words as Prof. Schumacher, but no doubt he is right and I am not right. He must be more familiar with the subject than I am. He implies that, taking them altogether, they make a considerable deficit, and his point is that it would pay them to come into the Prussian organization. Well, of course, we have discovered since 1912 more clearly than we did before that the Prussians consider it a greater privilege to be a Prussian than other people do, and Prof. Schumacher thinks pecuniary gain is worth purchasing at the price of the surrender of their independence. They do not. Of course, it is clear that there would be more profit to be made if they did throw themselves in, because some of them crisscross—not Bavaria, Wurtemberg, and Baden, which are all down in the south more or less together, but some of the States—for instance, Saxony and Mecklenburg, and so on—do crisscross with the Prussian railways, and unquestionably it would be economical to take them in.

Mr. HAMILTON. Mr. Chairman, I do not think I will ask any more questions now.

The VICE CHAIRMAN. If you think you have finished there is nobody at the other end of the table, and we shall pass to Mr. Esch.

Mr. ESCH. Mr. Acworth has covered the subject very fully, indeed, heretofore, and there are just a few matters I want to inquire of him about. I do not feel I ought to take the time of the committee by going beyond what seems to me to be important.

The VICE CHAIRMAN. I assume that this witness knows a great deal more besides Government ownership. If any of you gentlemen feel inquisitive on any other subject, the Chair would suggest that you inquire of him. Mr. Esch, you may proceed.

Mr. ESCH. I understood you to say that you had recently been a member of a board to investigate the Canadian lines?

Mr. ACWORTH. Yes, sir.

Mr. ESCH. And that that board had just made its report?

Mr. ACWORTH. Yes, sir.

Mr. ESCH. Does that report deal in any measure with reference to the ownership of the Government lines in Canada?

Mr. ACWORTH. Yes, sir.

Mr. ESCH. Would that information be of service to us in the consideration of this question.

Mr. ACWORTH. Yes. I think I ought to have said it when I was speaking about it. We have recommended that these three thousand odd miles at present being operated directly by the State under the control of a minister, a member of the cabinet, should be taken away

from that management and handed over to the trustees, whom our report describes as a nonpolitical, self-perpetuating body, as independent as it is possible to make them.

Mr. Esch. Then, in arriving at that conclusion you probably in your report give the reasons for coming to that conclusion?

Mr. Acworth. Yes, sir.

Mr. Esch. Therefore, those reasons may be of value to us in determining our position in reference to Government ownership.

Mr. Acworth. We did give, for example, what I mentioned just now. We did call attention to the inexplicable expenditure in connection with the operation of the intercolonial system, which is the one that they have had 40 years' experience of.

Mr. Esch. Will this be an elaborate report?

Mr. Acworth [exhibiting pamphlet].

Mr. Esch. I wonder, Mr. Chairman, if that might be included in the record.

Mr. Acworth. I hope it will be sent, as a matter of course, to your library.

Mr. Esch. Might it not be printed as a part of these hearings?

Mr. Acworth. I do not think you would desire to include the complete work; but this contains the report of the two commissioners who agreed, the report of Mr. Smith, the president of the New York Central, who disagreed with us, and two long appendices.

The VICE CHAIRMAN. How many pages does the book contain?

Mr. Esch. This commission will not be able to travel in Europe to make personal investigation of Government ownership.

Mr. Acworth. I hope you will before long.

Mr. Esch. So we shall have to get the best information we can.

Mr. Acworth. It is just about 100 pages of the report proper, of which I regret to say that my colleague and I occupied 83 pages and Mr. Smith only occupied less than 20 pages.

The VICE CHAIRMAN. Inasmuch as travel in Europe at the present time might be a little inconvenient, perhaps we had better avail ourselves of documentary evidence.

Mr. Acworth. May I say that I trust you will postpone the decision in favor of State ownership until you have the opportunity to travel? [Laughter.]

Mr. Adamson. As far as I am concerned, I will have no difficulty in granting your request.

Mr. Esch. Does this report cover the Prince Edward Island Railway?

Mr. Acworth. It just mentions it.

Mr. Esch. That is a Government line.

Mr. Acworth. I am afraid my knowledge of the Prince Edward Island Railway is only from statistics, which show that it is operated at an annual loss of a quarter of a million dollars and that it is about 270 miles long; but I have never seen it.

Mr. Esch. I think we ought to have that report printed as part of our hearings, Mr. Chairman.

Mr. Adamson. If there is no objection, the Chair will so order.

Mr. Hamilton. Suppose we ask Mr. Acworth to leave a copy of the report with us, and then we can consider whether we can not economize space?

Mr. ESCH. That might enable us to eliminate part of it.

Mr. HAMILTON. Yes; there might be part we will not need.

Mr. ADAMSON. You have no objection to our editing it and selecting such parts as we may wish to conscript?

Mr. ACWORTH. Certainly not. It is a public document. It is addressed to Canada, but it has great interest to England because the bulk of the money is found in London, and for the last two or three years a good deal of short-term money has been borrowed by the Canadian Railways in New York.

Mr. ADAMSON. Will you oblige the committee with that book?

Mr. ACWORTH. Certainly, sir.

Mr. ESCH. In view of the importance of your testimony of last night with reference to the Prussian or German lines, I would like to make some further inquiries. As I understood it, you said that the Prussian system was managed distinct and apart from the Empire's systems?

Mr. ACWORTH. That is to say, the railways that belong to the Empire are the railways that were French until 1870—that were in the territory of Alsace-Lorraine, ceded by France to the Empire. The Germans took them over, and as, of course, they were conquered by the German Empire, and not by any special State, they have remained the property of the State. For all practical purposes, they are administered by Prussia.

Mr. HAMILTON. There are about 1,300 miles of line, are there not? Am I mistaken as to the length of it?

Mr. ACWORTH. I am afraid I have not the figure in my head, sir. I should have thought it was more than that; but they are very important, because of the coal mines and the iron mines in the Saarbrück district.

Mr. ESCH. Then they also have control of the lines in Hesse?

Mr. ACWORTH. Hesse had its own separate system and Prussia had its own separate system. I should think it was about 1900, speaking from memory, that the people of Hesse came to the conclusion that it was not good business to keep their small system separate, and they amalgamated, and it is now the Prussian-Hesse system.

Mr. ESCH. Has not Prussia some interest in the lines in Saxe-Weimer and Saxe-Meiningen?

Mr. ACWORTH. I think those little States—they are too small to amount to anything of importance—are included in the Prussian railway system.

Mr. ESCH. Does not the imperial control extend over the States, to a certain degree?

Mr. ACWORTH. There was set up under the German constitution an imperial railway office, and it was expected to be of very great importance; and if you look at the paper constitution of it, it looks to have important functions. I gather from discussing it with people who know its actual working that as a matter of practical politics it has not really very much power; that it nominally controls tariffs, it nominally controls regulations as to signaling and as to interchange of traffic and everything of that kind; but, practically, I understand it sits there and compiles statistics, and does not do very much more; but if it were necessary to unify the regulations

and the tariffs of the German States, it would have power to do it. It would have a theoretical power, certainly, whether it would have a practical power or not. As it works out in practice Prussia dominates the situation.

Mr. ESCH. Is that done through the nation council? Is that what they call that body?

Mr. ACWORTH. Oh, no, sir; the national council is quite different. The imperial railway office has an official director, etc., and is an official bureau. Prussia has—and other smaller States have in some cases, too—a national council, which consists of representatives from the ministry of agriculture, and the ministry of war, and the ministry of commerce, and the ministry of lands and mines, and the ministry of railways, and chambers of commerce, and chambers of mines, and chambers of agriculture, and probably representatives of the municipality of Berlin and some other big municipalities—something like 100 members in all—and it meets and discusses—it has no powers whatever—any questions of alterations in the general regulations. Take a question that is always up here, of demurrage; let us say that it is proposed to alter the rules about demurrage or it is proposed to alter the size of the minimum carload—questions of that kind, which are proposed either by the railways or by the traders, and a question of that kind is put on the docket of the council and is discussed. The council has no authority whatever to give any orders. It is merely a consultative body, but its opinions have very great weight. I have urged for years in England that we should adopt the same thing. I read not very long ago an article by Mr. Meyer, of the Interstate Commerce Commission, urging that it be introduced here. We have recommended that it be introduced in Canada. I believe it is an admirable system.

Mr. ESCH. It brings to the attention of the administrative body the wishes of the people themselves?

Mr. ACWORTH. Yes; and it does another thing, which is almost as important. It makes the railway people and the shippers know each other, it gives the customer who does not understand railway operation an opportunity of learning that what he thinks is a simple thing to be done is not easy for the railway companies to do. I think it has good influence both ways. It helps the railway companies; it makes them do things they might otherwise object to doing, but it also makes the shippers understand why they can not get all they want. I believe it is most valuable.

Mr. ESCH. How does that differ from the committee on railway management? They have another organization or body—a committee on railway management. Now, that may have only reference to the relations of Germany to outside States.

Mr. ACWORTH. It is a little difficult, of course—the technical terms—but I presume, sir, what you are referring to is the Union of German Railway Administration, a body of the nature of your railway association here, which is purely of railway men, technical men who discuss technical questions, who lay down the dimensions of a coupler, that it must be of a certain weight and have a certain size of jaw, and that it must pull back with a rod of a certain length, and things of that kind; purely a technical body.

Mr. ESCH. Does not that body have a tendency, then, to bring about uniformity and standards throughout the Empire?

Mr. ACWORTH. Oh, yes; they have done most admirably, and not only have they established the German standard in Germany but it extends into Austria, into Luxemburg, and, I think, into Holland and Belgium and into Switzerland. It extends far beyond the German Empire, and not only has it been very useful from a practical point of view, but I have no doubt that it has been one of the things that has helped Germany to extend her trade outside of her frontiers.

Mr. ESCH. So you think both those organizations tend toward higher efficiency?

Mr. ACWORTH. Yes; I think they are both admirable and very useful.

Mr. ESCH. Now, with reference to the matter of Prussian rates, is it not a fact that the bulk freight in Germany goes by river or canal?

Mr. ACWORTH. It is curious, when you come to look at the figures. One always speaks of it as "rivers and canals," but the fact is—I think I should not be wrong if I said that more than half of the whole is on the Rhine—a good deal more than half of the whole is actually on the Rhine, and perhaps a quarter of the rest of it is on the Elbe, and the canals are quite a small proportion of the whole; when you put them together they are very much smaller than the railway traffic, but they bear a very much bigger proportion to the railway traffic than in the United States or in the United Kingdom.

Mr. ESCH. It is one-quarter, I understand——

Mr. ACWORTH. In Germany?

Mr. ESCH. Yes.

Mr. ACWORTH. I would not like to give the figure offhand.

Mr. ESCH. That was the figure given by Dr. Johnson in his work on "Railway Transportation," just published.

Mr. ACWORTH. If I had known that you were likely to ask me that, I would have looked it up.

Mr. ESCH. The point I am getting at is that, assuming that Dr. Johnson is right in his statement that one-quarter of the freight in the German Empire goes by water, that would mean that the high-priced freight—what we call in this country "class freight"—would go by rail?

Mr. ACWORTH. That is true.

Mr. ESCH. And that would have a tendency of raising the average per ton-mile cost in Germany as compared with the United States or any other country?

Mr. ACWORTH. Yes; somewhat, but not very much, if you remember that it is all in carload lots and that the consignor has to load and unload it. It does not cost much more to haul a carload of cotton cloth than it does to haul a carload of coal. Of course, coal gives better loading, but the large part of the expense of merchandise traffic is the handling. Now, they get rid of that because it is all carload stuff, and the consignor and consignee deal with it. But may I just say this about the water traffic, because this is a condition of things that is peculiar to Germany: Largely, it is always understood, from the personal interference of the Kaiser himself, the water traffic is encouraged, and what happens is this: Traffic arises, we will say, 30 miles from the Rhine. Supposing it is traffic rising in the east of Prussia, somewhere near the Elbe; it is carried by rail to the Elbe—this happens on grain to a large extent—and it goes down the Elbe,

and comes right around the North Sea, and comes up the Rhine, and then, if it is wanted 50 miles inland, it is again put on a train and taken to its destination. So you will observe, if you take the case of a ton of grain, under those conditions it would appear in the statistics as 2 tons of grain carried by rail and 1 ton of grain carried by water, and yet it is the same ton. So, as I say, the statistics are curious.

Mr. ESCH. But it is true, as you say, that the German Government encourages its water traffic?

Mr. ACWORTH. Yes.

Mr. ESCH. And does not permit the railroads to fix such a rate as would destroy the river traffic?

Mr. ACWORTH. Yes; that is to say, it does not itself make any such a rate.

Mr. ESCH. In France they do the same thing, do they not, to protect their water traffic?

Mr. ACWORTH. In France they protect the water traffic by not allowing a railway rate to be reduced to more than 20 per cent above the water rate. There is a sort of standard difference between the rates of 20 per cent higher for rail.

Mr. ESCH. That being the case, and the railroads only carrying the higher class freight—

Mr. ACWORTH. No, sir; with respect, that is not the case. I mean to say that if you will look at the traffic you will find, as in every country, that the very large proportion of the total rail traffic is coal and iron.

Mr. ESCH. And that goes by water very largely?

Mr. ACWORTH. Very largely; but also by rail very largely. I mean to say that if you take an analysis of the total tonnage of the Prussian railways, and say it is 500,000,000 tons a year, or something of that kind, you will find that 200,000,000 tons to start with is coal and another 100,000,000 is iron and sand and bricks and things of that kind. It would be quite wrong to think that the Prussian rate, of which I gave the average yesterday at roughly double the American rate—I say it would be quite wrong to think that that is mainly on high-class traffic. I think you will find it is on traffic distributed in very much the same proportions as it is distributed here.

Mr. ESCH. But in the German system they do not have express companies and express packages hauled by distinct companies, but that goes as freight, does it not?

Mr. ACWORTH. They have a system by which it is all done by the railway itself. They have a system of what they call "express goods," for which the rate is double the rate on the highest class traffic by ordinary freight; and they also have what they call "courier freight," which is still better, and that is charged four times the first-class freight rate.

Mr. ESCH. But that goes in to raise the average?

Mr. ACWORTH. No, sir.

Mr. ESCH. It does not?

Mr. ACWORTH. No, sir; the rates I have given are the rates not including express goods. These are the rates for ordinary freight.

Mr. ESCH. Germany, to encourage her foreign commerce, has what she calls "exceptional tariff," has she not?

Mr. ACWORTH. Oh, yes.

Mr. Esch. Will you explain the operation of the exceptional tariffs as administered by the German railway system?

Mr. Acworth. I am afraid, sir, that that is beyond me. They have a very complicated tariff. They have, first of all, a rate for small consignments—and a “small consignment” means anything under 5 tons—small consignments of goods not specially mentioned. Secondly, they have a rate—that is the rate which I mentioned yesterday, and called it 9. Secondly, they have a rate for goods “not specially classified,” carried in 5-ton lots, and that rate would be about 6. Thirdly, they have a rate for goods not specially classified, carried in 10-ton lots, and that would be the rate that I called 4. Then, next, they have another three sets of rates for goods “specially classified,” lower than the first set, that go either in small consignments, or in 5-ton lots or in 10-ton lots. Then, beyond that, they have three which they call “exceptional classes.” The exceptional class No. 1, we will say, would be grain; exceptional class No. 2 would be, say, pig iron; and exceptional class No. 3 would be coal and sand and manure. So that they have a great many classes.

Mr. Esch. Yes; but those are hauled at a very low rate?

Mr. Acworth. It works out in this way, as I quoted from Prof. Schumacher, down to a rate about as low as 0.35 of a cent—I gave the figure yesterday. That he gives as an exceptionally low rate for bulk freight. He says, “In the case of goods sent in bulk, the freight for long distances is as low as 0.35 of a cent per ton-mile.”

Mr. Esch. Why are such exceptionally low rates given to exports and imports? Do you think it is due to the agrarian movement generally?

Mr. Acworth. They never give a low rate to imports. On the contrary.

Mr. Esch. Exports?

Mr. Acworth. Exports; yes. They have done that as a deliberate attempt to capture the foreign markets. They have kept that very quiet, but there are two well-known tariffs—one the “Levant tariff,” and the other the “East African tariff,” and it is always understood that a manufacturer, in Saxony for instance, wanting to ship goods, in competition with other countries, to Asia Minor, is given such a rate—or it may be no rate at all—from his factory to Hamburg as enables him to compete with the same goods coming from Liverpool or from New York; but the Prussian Government keeps that very quiet. However, it is quite understood that it deliberately makes a rate that renders it possible for the German trader to compete without being handicapped by his geographical situation.

Mr. Esch. That would result in a species of discrimination, would it not?

Mr. Acworth. A startling discrimination, one would say; but it is, of course, part of the whole Prussian system of protection.

Mr. Esch. Yes. You spoke last night of the small capacity of their wagon or freight wagons. Is not that due, in part, to their agreement with adjoining nations that they shall have not more than 3,100 pounds, I think, for axle load? Do they not have some agreement of that kind?

Mr. Acworth. I should, myself, have thought it was due more to the fact that a State undertaking is never ready to spend money on improvements, and that they did not want to build bridges that

would carry the heavier loads. Of course the proportion of traffic that goes to foreign countries is very small; the great haul of traffic must always be, for example, coal from the mines of the iron works. and things of that kind, and I do not know of any reason why they should not use 50-ton, 70-ton, or 90-ton cars, as they do in America. except that they would have to modernize their roads.

Mr. ESCH. You gave us one reason why they did not, and why the freight traffic in Germany was not at its highest point of efficiency—the fact that the Government sought a revenue out of its roads.

Mr. ACWORTH. Well, sir, I do not want to say anything unkind about Governments, but it does seem to me that all Government enterprises seek a revenue not by launching out boldly and getting a fine return but by “cheeseparing” and cutting down the expenses. They try to raise their profit by cutting down the expenses and not by improving their gross receipts. It seems to me that applies to Government enterprises everywhere, certainly in Europe.

Mr. ESCH. And that would be one argument against Government ownership, in your opinion?

Mr. ACWORTH. To me it is a very strong argument. All history tends that way.

Mr. ESCH. You say they turn into the treasury \$50,000,000 to \$60,000,000 a year?

Mr. ACWORTH. Yes; and it has gone as high as a hundred million; it varies from year to year.

Mr. ESCH. But I think the German States do not tax their railroads?

Mr. ACWORTH. They pay some taxes.

Mr. ESCH. It is comparatively nominal?

Mr. ACWORTH. Yes.

Mr. ESCH. So when you talk about putting so much into the treasury, we ought to remember, at the same time, that they are not being taxed by the Government?

Mr. ACWORTH. Yes, sir; that is perfectly true. I put it in there. but I forgot to mention it last night. Of course it is a very important point.

Mr. HAMILTON. Is it true that the Prussian railroads are not taxed?

Mr. ACWORTH. Yes; they pay some nominal charges.

Mr. HAMILTON. The Belgian roads are not taxed, but I had the idea that the Prussian roads were taxed.

Mr. ACWORTH. My recollection is that they have to pay something like one-half of 1 per cent of their gross revenue; something very small.

Mr. ESCH. If the 25,000 miles of State roads had to pay a tax like other property there would not be much money to put into the treasury, would there?

Mr. ACWORTH. Well, I could not say. One would have to know what the rate of the tax would be before it would take that up.

Mr. ESCH. But we have got to bear that in mind?

Mr. ACWORTH. Oh, yes. Unquestionably, if they had taxation on the American scale, of so many dollars a mile—say, \$250 a mile or something of that kind——

Mr. ESCH. The taxes on the railroads of the United States last year were, I think, about \$150,000,000, and it is a very considerable

item, and one against which the railroads are making much complaint, because of the rapid rate of increase in their taxation in the last 10 years.

Mr. HAMILTON. Just a question has occurred to me in this connection, and, with Mr. Esch's permission, I will submit it to you.

Mr. ESCH. Yes; go ahead, sir.

Mr. HAMILTON. As I understand, it has been the custom in Prussia—I do not know whether it is still the custom—for municipalities to construct the railroad stations, and not require the railroads to construct those stations, so that a considerable expense was, for a long time at least, saved to the railroads in that respect. Is that true?

Mr. ACWORTH. I do not think they construct, sir. Of course, the State and the municipalities work exceedingly closely together. Here is what has happened in one or two instances. I dare say that the members of the committee know the great station at Frankfort. Now, they moved the Frankfort station. The town, of course, had grown a great deal, and they moved the station from a very valuable site and sold that site, and they built an enormously larger and more elaborate station on a considerably cheaper site; and I have no question that there was a bargain in the whole undertaking between the Government and the State and the city; but the Government certainly built the station. How much the town contributed and in what form I could not say.

Mr. HAMILTON. I understood that the Government ran the railway, but that for a long time at least the municipality constructed the stations, and that there was a sort of rivalry among them, as to the beauty and the character of the stations and things of that sort.

Mr. ACWORTH. That is not within my knowledge, sir.

Mr. ESCH. My half hour is exhausted, but I want to ask you one question. What, in your opinion, would be the virtue of this plan: That the Government would guarantee interest and dividends on a fair valuation, plus a reasonable surplus, dividing with the Government what should be earned beyond that amount?

Mr. ACWORTH. Are you putting that as a generality?

Mr. ESCH. A hypothetical question.

Mr. ACWORTH. As a general scheme?

Mr. ESCH. Yes.

Mr. ACWORTH. A scheme that might be applicable to a whole country's railways?

Mr. ESCH. Yes.

Mr. ACWORTH. Guaranteed, we will say, 5 per cent and dividing beyond 5 per cent?

Mr. ESCH. Yes.

Mr. ACWORTH. Well, from the point of view of a shareholder, assuming that he agrees with the valuer as to what the fair valuation is—which, perhaps, is a somewhat large assumption——

Mr. ESCH. Of course, we are trying to make a fair valuation here.

Mr. ACWORTH. Yes. Assuming that the shareholder accepts the valuation as fair, that he is offered a guaranteed per cent and a percentage of the division of the rates, it seems to me that the shareholder in the ordinary railroad has reason to think he is quite well treated; but it occurs to one whether a shareholder in the Lackawanna Railroad would be grateful for that treatment.

Mr. Esch. He might think he could do better?

Mr. Acworth. Yes; that he could do better for himself.

Mr. Esch. That suggestion was not broached in the course of the hearings thus far, and I thought I would get your views on it. My time is exhausted.

Mr. Acworth. I was only answering from a financial point of view.

Mr. Esch. Well, what would you say to it as a governmental policy?

Mr. Acworth. It is quite clear that the Government is not going to take all that responsibility without taking some control in return. You must assume that.

Mr. Esch. That is assumed.

Mr. Acworth. Of course, if you ask me my opinion——

Mr. Esch. Yes.

Mr. Acworth. My opinion would be that it would depend on the form in which the Government took the control. If the Government took the control in a form which led the railways to get into politics. I should say it would be a disaster to the country. If the Government took the control in the form of—what shall I say—of a financial board of experts or something of that kind, who were entirely independent of politics and who did not have to seek election or anything of that kind, it might be a good scheme.

Mr. Esch. Let us assume control such as we have in the Interstate Commerce Commission now.

Mr. Acworth. Well, I like our Canadian scheme. where they reelect each other, much better than yours, sir, I will say frankly: but we have not got ours yet.

Mr. Esch. My time is exhausted, Mr. Chairman.

The VICE CHAIRMAN. Have you imposed a self-limitation on yourself, Mr. Esch?

Mr. Esch. Yes, sir.

The VICE CHAIRMAN. Senator Robinson, you may examine the witness now. Before Senator Robinson proceeds, however, I will have to go away, and must ask to be excused; and I want to ask if, after Senator Robinson and Judge Sims have concluded their examination, we can not reconvene in the morning at half past 10, and permit those Senators who are not present to-night to examine Mr. Acworth?

Mr. Acworth. I am at your service.

The VICE CHAIRMAN. What do you say, gentlemen?

Senator Robinson. I am agreeable.

The VICE CHAIRMAN. Will you proceed now, Senator?

Senator Robinson. Yes.

The VICE CHAIRMAN. You and Judge Sims try to get through to-night, and then we will meet in the morning at 10.30.

Senator Robinson. Then you had better make it 10 o'clock. if you want to accomplish anything in the morning, because the Senate meets at 11.

The VICE CHAIRMAN. Then when you and Judge Sims have concluded, just announce that we will adjourn until 10 o'clock tomorrow.

Senator Robinson. I was not fortunate enough to hear the examination by Congressman Hamilton, and I only heard a part of the examination by Congressman Esch. I do not wish to duplicate any-

thing that has been asked you. but in your direct examination you stated that, before publishing your views, as expressed in the printed document to which you have referred throughout your testimony, Mr. Acworth, you first submitted your statements concerning the American railways to two eminent American experts on the subject?

Mr. ACWORTH. No, sir. I submitted the whole thing to two experts, one of whom was an American and the other one was an Englishman, and I said, "Have I got any figures wrong?" What I really said was this: "Have I strained a point? Have I fairly represented the figures, or are there figures that ought to have been put in, which would qualify my case?" That is the way I put it to them.

Senator ROBINSON. Have you stated who they were?

Mr. ACWORTH. I did not give their names.

Senator ROBINSON. I would be glad to have you do that.

Mr. ACWORTH. I suppose they can not have any objection. One was Prof. Cunningham, of Harvard, and the other was Mr. Stephenson, who is lecturer on railway economics in the University of London.

Senator ROBINSON. You referred to what you yourself designated as your "bias" on this subject. Do you oppose government ownership or government operation of railroads, or both?

Mr. ACWORTH. Well, they almost have gone together. I do not see any objection to government ownership and a lease, if that is the best system under the circumstances, but I would put it as a strong conviction that private enterprise is best, if we can keep it.

Senator ROBINSON. When you say "private enterprise" do you mean that it is better for the railroads to be owned by individuals or corporations and operated by them, or better for them to be owned by the public and operated by individuals?

Mr. ACWORTH. No, sir. I mean, quite clearly, that, in my belief, for a great many years the English railways, which never had a shilling of government money and never had any government help in the world—in the early days certainly led the world, and when people wanted to know how to run a railway they came to England to learn; and the railway literature of 40 and 50 years ago is full of French and German and American books by people who came to England and learned from the private railways of England how to do things. Nowadays, if people want to learn how to run a railway—the French and the Germans and the English—they come to the American railroads and learn from them; and the American railroads, aside from fractional assistance for the Union Pacific, and so on, in the early days, are entirely the result of private enterprise; and I think those two go a very long way to prove the case.

Senator ROBINSON. Have you made a special study of American railroads with a view to determining the best means of providing necessary and adequate transportation facilities in this country?

Mr. ACWORTH. I have a very definite idea myself, sir, that you can have all the transportation facilities in six months, if you can give them rates on which they can raise the capital.

Senator ROBINSON. Do you think the difficulties that now exist with reference to transportation in the United States are due to inadequate rates?

Mr. ACWORTH. It seems to me it is quite clear what has happened. You had a long series of falling prices, and you had railroads very

rapidly making great economies by bigger cars and bigger engines and bigger train loads, and all the rest of it, and you also had strong competition, and the result of all those things was that the railroads, by economizing in their methods, could afford to carry very cheaply. They tried to carry too cheaply in order to cut each other's throats. Now, then, just at the stage when they have got to the lowest rate, you introduce regulation, and the regulation says, "We will keep the rates down to the low figure, substantially; we will keep the rates down to that figure in the face of a market that has gone up 100 or 120 per cent for everything they use and for the wages they have to pay. Looking at it as an outsider, it seems to me that the thing must break down; it can not do anything else.

Senator ROBINSON. I do not know whether I understand you correctly or not. If I do understand you correctly, you are expressing the opinion that railroad rates in the United States are at present and have been during the past few years too low?

Mr. ACWORTH. Very much too low.

Senator ROBINSON. Are conditions here so analogous to those in continental Europe as to enable you to form a conclusion concerning the partial failure of State-owned railroad systems in Europe and what would occur in the United States if we had Government ownership here?

Mr. ACWORTH. Well, sir, before you came in I almost answered that question in this form: I suggested you had less experience of Government carrying on of commercial enterprises than any important government in the world. There is a great deal of evidence that the governments do not succeed, even with experience, over well, and it seems to me that for the United States to begin with an experiment the size of the railroads, to start with them at the going off, is a dangerous thing to do. I ought not to criticize your methods, but, at the same time, the way it would strike an outsider——

Senator ROBINSON. I hope you will feel entirely free, Mr. Acworth, to express any conviction you have on the subject. I have been very much interested and enlightened by your discussion of it, and I do not know that anything that I can ask you will illuminate the subject, except perhaps in my own mind.

Mr. ACWORTH. Well, sir, a member of the committee asked me yesterday about the telephones, and the result was, as I have said, I read the report of the Postmaster General of the United States. The Postmaster General says that he is greatly inconvenienced by the political pressure of his subordinates. He also says that he wants a system altered, under which all the higher appointments are filled from one political party. Well, now, your Post Office gets on in spite of it; but if, instead of—I do not know what you have, perhaps a couple of hundred thousand people in the employment of the Post Office—if you put 2,000,000 people in that position I do not know what the minister of railways would say. I presume he would put it in much more strong language than your Postmaster General does.

Senator ROBINSON. Do you know about the approximate number in railway service in England now, Mr. Acworth?

Mr. ACWORTH. They cut off 20 per cent, I suppose, in war. The number used to be called about 550,000 or 600,000, but that included shopmen.

Senator ROBINSON. They are all Government employees, are they?

Mr. ACWORTH. Oh, no; you mean at the present moment? Do you mean since the war?

Senator ROBINSON. I really did not have in mind the distinction as to before the war began and since the war began, but has the system been changed since the war began?

Mr. ACWORTH. The system has been changed to this extent—that the Government has made itself responsible to maintain the dividends of the shareholders. It no more interferes with the actual management of the railways—it has power to do anything—in fact, it no more manages the railways than you and I do.

Senator ROBINSON. The Government owns the railroads?

Mr. ACWORTH. No, sir.

Senator ROBINSON. Who owns them?

Mr. ACWORTH. The ownership is left exactly as before and can be handed back by the Government at six weeks' notice.

Senator ROBINSON. But who owns them—a private corporation?

Mr. ACWORTH. They have always been privately owned; there never has been a yard of public ownership in England.

Senator ROBINSON. And the ownership is private, and the management is in private hands?

Mr. ACWORTH. Yes.

Senator ROBINSON. How do you justify the Government in guaranteeing income on the investments?

Mr. ACWORTH. You see, it is this way: The Government has taken control over the railways; it can take the whole traffic off of one railroad and put it on another; it can order the railroad to carry troops and nothing but troops, and does not pay for them, and so on.

Senator ROBINSON. And fixes the rates?

Mr. ACWORTH. The rates, speaking of war conditions, nothing is paid for Government traffic, whether troops or stores. All other rates remain unaltered, but the Government makes itself responsible that the shareholders shall receive the same income as before. It might be they would earn a great deal more if they were allowed to earn it, but they are not. It may be they would earn a great deal less, and the Government has simply said that the income, as it was the year before the war, shall continue during the war.

Senator ROBINSON. That is because the Government is receiving benefits from the transportation companies in the carriage of its troops, munitions, etc. Before the war began did the Government guarantee income?

Mr. ACWORTH. The English railways have never received a penny, either in capital or in income, from the Government. They are even more absolutely private enterprises than yours.

Senator ROBINSON. The Government, before the war, then, never guaranteed an income?

Mr. ACWORTH. Never interfered in any way, except to regulate.

Senator ROBINSON. You have referred to the alleged necessity for Government ownership of railways, and among the number of grounds usually alleged is the construction of lines to meet the requirements of communities where private capital has not been found available?

Mr. ACWORTH. Yes, sir.

Senator ROBINSON. And I believe, if I understood you correctly, you said that no such condition exists in the United States. Did you

know that during the last two years there has been practically no railroad construction in the United States?

Mr. ACWORTH. Yes, sir; I knew and I know the reason, as I said.

Senator ROBINSON. What is it?

Mr. ACWORTH. That you can not earn a profit on a railroad when you make it under the rates you are allowed to charge.

Senator ROBINSON. But did you know during the last year the net income of the railroads was over \$600,000,000—greater than ever before in the history of the country?

Mr. SIMS. A billion dollars.

Senator ROBINSON. Six hundred million.

Mr. SIMS. A billion net income last year.

Senator ROBINSON. Well, the figures I have the last fiscal year show over \$601,000,000.

Mr. ACWORTH. I know that one-third of the share capital had no dividend at all.

Senator ROBINSON. Last year?

Mr. ACWORTH. Last year, I think 33 per cent, and that the return on those that did earn a dividend averaged, I think, 5 and a fraction. and I can not conceive that any wise man would put his money into a railroad with two-thirds of a chance of earning $5\frac{1}{2}$ per cent as an average and one-third of a chance of earning nothing at all.

Senator ROBINSON. Now, I think if you will pardon me for making a suggestion, I do not care to attempt to argue it with you, but I think you are entirely mistaken as to the income during the last fiscal year.

Mr. ACWORTH. Well, no doubt some of the gentlemen here could confirm my statement, the railroad gentlemen here.

Senator ROBINSON. The income of the railways was greater than ever before in the history of the railroad industry.

Mr. ACWORTH. Yes; undoubtedly.

Senator ROBINSON. How do you account, then, for the discontinuance of railroad building on the theory that the income is insufficient if during the period when railroad construction has ceased the income has been greater than ever before?

Mr. ACWORTH. The gross income was very much greater.

Senator ROBINSON. I am speaking now of the net income. The net income for the last fiscal year was over \$601,000,000, and approximately \$1,000,000,000 gross.

Mr. ACWORTH. Yes. Well, it seems to me so clear with the trend of things. Let me put it this way, sir: If in a year, which you describe as the year of the biggest traffic they ever had, only two-thirds of the railroads got any dividends at all, and they only got an average of 5 per cent and some odd, what man would be foolish enough to put his money into railroad shares when he has to face an average year?

Senator ROBINSON. I think your figures are incorrect as to the average dividend, but I will not attempt to argue that with you. Your conviction is that the discontinuance of railroad construction in the United States is due to the inadequacy of returns on the investment in railroad properties?

Mr. ACWORTH. Is due to the prospect—partly to the past and much more to the outlook of the future.

Senator ROBINSON. Do you know that the railroads throughout the United States have now more business than they can do?

Mr. ACWORTH. Yes, sir.

Senator ROBINSON. That there has been for a year or two years a congestion in traffic on the railroads and that they are absolutely unable to take care of the traffic?

Mr. ACWORTH. Yes.

Senator ROBINSON. Does that indicate to you that the outlook for the railroads in the United States is bad?

Mr. ACWORTH. Yes, sir; very much so.

Senator ROBINSON. Why?

Mr. ACWORTH. Because everybody who knows the railroad business knows that the moment that you get congestion the loss is appalling. It costs you, once you tangle up your traffic in a knot, it costs you an appalling amount of money to untie the knot again.

Senator ROBINSON. But what is the entanglement due to?

Mr. ACWORTH. It is due to the fact that capitalists have not thought the prospect good enough to spend the money necessary to make the increase of facilities that is required in your country, if your country is not to have a collapse of its trade. I have been watching it for years and that is my firm conviction.

Senator ROBINSON. You have been watching it in the United States? That is what I was interested to know, whether you had been studying it.

Mr. ACWORTH. Yes; I have been here half a dozen times in the last dozen years, anyhow.

Senator ROBINSON. Of course conditions in continental countries are so different from those in the United States that a study of conditions there would not of necessity lead to any conclusion?

Mr. ACWORTH. No, sir; I should think I have spent nearly two years on this side of the water in the course of my various visits, and I think I have been in nearly every State in the Union.

Senator ROBINSON. You do recognize the fact that there is a necessity for revival in railroad construction in the United States in order to meet the requirements of railroad construction and increase in facilities?

Mr. ACWORTH. I think you are face to face with the most terrible crisis in commercial matters.

Senator ROBINSON. Have you worked out any conclusion as to the best means of solving that question, Mr. Acworth?

Mr. ACWORTH. Yes, sir. I can only say, tell the Interstate Commerce Commission to let the rates go up 20 per cent and as soon as there are men and supplies and car shops, and so on, available your difficulties will vanish.

Senator ROBINSON. Do you think that an increase in rates will solve the transportation problem in the United States?

Mr. ACWORTH. It is not the only thing of course. If you ask me the other thing, I do not think you can expect the railroads to do their work efficiently and economically as long as they are subject to so many contrary jurisdictions as at present.

Senator ROBINSON. I was coming to that in a few minutes.

Mr. ACWORTH. I felt I could not leave it merely as a commercial point.

Senator ROBINSON. You have no such thing as double regulation in continental Europe, have you, or even in the United Kingdom?

Mr. ACWORTH. Yes, sir; there is Government regulation.

Senator ROBINSON. I say, double regulation.

Mr. ACWORTH. No, sir; I beg your pardon.

Senator ROBINSON. You have Government regulation, of course, in all those countries.

Mr. ACWORTH. I beg your pardon, I did not catch it.

Senator ROBINSON. You understand here we have a system of State regulation on intrastate rates, and Federal regulation as to rates in interstate commerce?

Mr. ACWORTH. Yes; and not merely rates but also methods of working and things of that kind. No, sir; I know nothing of the kind in the world. I can not think of any country where it could exist.

Senator ROBINSON. Is it your opinion that the service on the railroads would be improved if we had a simple, single standard of regulation, in so far as that can be consummated, rather than the present double standard?

Mr. ACWORTH. It seems to me that it must be so. I put it this way: Suppose two States, each are perfectly wise, but decide differently—you would be better to substitute for them a central government that was not as intelligent. [Laughter.]

Senator ROBINSON. Very good. Now, you have said that in your opinion the main trouble, if I understood you correctly, with the difficulties which the American people are now experiencing in obtaining necessary transportation facilities grows out of the fact that the rates are too low and the returns on capital invested are inadequate?

Mr. ACWORTH. Yes, sir. I would put it more as prospect than as fact. I mean the facts are bad, but the prospects are much worse, and people always invest not on the past but on the future.

Senator ROBINSON. Capitalists regard investments in railroad properties as of uncertain value, and therefore are not in haste to make them?

Mr. ACWORTH. Yes, sir. One does not need to talk to people; one only has to look at quotations to learn that.

Senator ROBINSON. But the railroads have contended in hearings before this committee that they have experienced something of a breakdown in their financial credit. Are you prepared to say whether that is a bona fide contention or not or one designed to secure an increase in rates? Have you studied that particular phase of it?

Mr. ACWORTH. I have heard the charge made; I have heard the suggestion made, but it seems to me that if it were true it would be necessary to go further and to assume that the whole of the figures that are produced are manufactured. I read, for example, within the last two or three days a statement by the president of the Pennsylvania Railroad. He had paid 6 per cent dividend for a good many years past. He said: "I had a certain margin last year. I can see so many expenses," which he itemized, extra coal, extra wages, etc., "in this current year that I know must come onto me that I do not see that I have enough margin to pay my 6 per cent dividend." And he gives his figures, and he shows he is so many millions short of

paying his 6 per cent dividend. That is the Pennsylvania Railroad. If the Pennsylvania Railroad makes a statement like that, what can you expect of the average railroad?

Senator ROBINSON. Have you had any trouble with what we call car shortage in England?

Mr. ACWORTH. We have got a great car shortage at present.

Senator ROBINSON. But that is due to the war?

Mr. ACWORTH. Yes, sir. No; I do not think as a rule it ever gets to the height that it has got in America, and that it constantly gets in Germany. I do not think so. We have always been—capital has been very easily raised in England, and we have always been pretty lavish of capital. Our facilities are larger than are really needed, or at least have tended to be so, and the same with equipment.

Senator ROBINSON. How often has that trouble manifested itself in Germany? Does it occur frequently?

Mr. ACWORTH. That is a regular part of the autumn program.

Senator ROBINSON. What is it due to?

Mr. ACWORTH. It is due to the fact that in the autumn people begin to get in coal to supply their houses for the winter, and the Prussian Government says—and of course from an economical point of view they are quite right—they say, "It does not pay us to keep cars that can be used for only two or three months in the winter and are not wanted for the rest of the year. If you do what a prudent housekeeper would do and get in your coal in May there would be no difficulty."

Senator ROBINSON. Do you think car-shortage conditions in the United States are analogous to those that you have described in Prussia? Do you not know that for two or three years the United States has been almost continuously in a condition of car shortage; that it has not been confined to any particular season, but that it has extended over a period of two or three years?

Mr. ACWORTH. I have not got the statistics of the United States with me, but my recollection is very distinct that three years ago they had at least 200,000 cars standing empty month after month.

Mr. ESCH. If you will pardon me, I think, Senator, the shortage began in March, 1916.

Mr. ACWORTH. I mean to say that since 1907 there has generally been a surplus. While I was not here, I constantly read United States reports and statistics and newspapers and so on, and since 1907 there have certainly occurred car shortages. I dare say you know the statements published month by month, and one said there was a shortage and another said a surplus, but there is no question but that since the panic of 1907 that it has nearly always been a surplus of cars and not always a shortage.

Senator ROBINSON. In the United States?

Mr. ACWORTH. Oh, certainly. I would undertake, sir, to say if you look at the diagram you will see that.

Mr. ESCH. There was no shortage in 1908, none in 1909, a little or a brief space in 1910, and a little in 1912; that begins the first year, March, 1916.

Senator ROBINSON. I know from personal knowledge that the car-shortage condition in the South—that section of the Union I come from—has prevailed for two or three years. I do not care to go into

the matter in great detail at this time, but I know that complaint has existed there for approximately three years, and I am wondering why the railroads have not anticipated—I am told that now it would require \$2,500,000,000 surplus, or approximately that, to provide the additional cars necessary to meet the requirements of the commerce of the country, and I am wondering why the railroad managements of the United States have not anticipated at least a part of this requirement.

Mr. ACWORTH. But they have been telling you so for a long while, sir. They have said, "Give us the money and we will buy the cars."

May I suggest—you have spoken of the South—may I point out how that exactly confirms what I have said? Southern railways never paid dividends; if southern railways paid dividends, they could buy cars. The shortage has not been severe where the railroads have good, fair dividends and reasonable financial strength and can raise capital. It is where you can not raise the capital that you go short for equipment.

Senator ROBINSON. You do not mean that as a universal statement; you mean that as a general statement, do you not?

Mr. ACWORTH. I mean to say broadly speaking.

Senator ROBINSON. So you think that the solution of the car-shortage problem is an increase of rates?

Mr. ACWORTH. Not at the instant moment. I mean the shops are chockablock and you can not get them, but the thing will work itself out if the railroads can afford to buy them, and they can not afford to buy them unless they have got credit to raise the money. That is the whole story, as I see it.

Senator ROBINSON. It has been suggested that I ask you this question: Will you describe in detail your experience and study of American railways and American commercial conditions? More in detail, and what study you have made of American railway conditions and American commercial conditions?

Mr. ACWORTH. Well, sir, I first came here in the year 1890. There was a sort of crisis in the relations between the railways and the shippers in England, and I wanted to make out why our rates were so much higher, why our freighters were complaining about the rates, and I knew the country where rates were the lowest was the United States, and I came over here to study the question. That was in the year 1890. Since then I have been here, I think, somewhere about a dozen times on separate visits, and I have traveled all over the country and talked to all kinds of people, members of interstate and State commissions and professors of economics, and railway men and railway financiers, and so on, and I have read, I should be sorry to say, how many American railway books, and so on. I have endeavored to keep myself in touch with the situation. But I ought to say, sir, that I did not come here to talk about American railways at all. I mean I should not like to be supposed to desire to volunteer any information. I came here to give an account of foreign conditions.

Senator ROBINSON. I understood that your principal purpose was to discuss conditions in the railways of Continental Europe and you have done that to very great profit to the committee, and my questions concerning American railways were for the purpose of determining in my own mind the value of your conclusions as to the

remedy best to be prescribed. I think the transportation system in the United States is a breakdown and that something must be done for us, at least, are anxious to find the remedy in the interest of the public, of relief. That your experience and acquaintance with the subject would be of great profit to us.

Mr. ACWORTH. I am much obliged, sir.

Senator ROBINSON. I think I have gentlemen of the committee, as much time as I wish.

Mr. SIMS. Senator, it is entirely with you.

Senator ROBINSON. I want to ask Mr. Sims a few questions, then I will yield to Mr. Sims.

Mr. SIMS. Use all the time you wish, Senator.

Senator ROBINSON. Your investigation has led to the conclusion that a double standard of regulation exists, one of efficiency and one of inefficiency?

Mr. ACWORTH. Well, sir, may I put it to you that it has existed from historical reasons, and that no body would introduce it to-day as an efficient system?

Before you came in something was said about the desirability of having State branches and National branches. One of the committee said that Mr. Bryan had agreed not to discuss it. Now, in effect that is what we have got in the same train, you are breaking the rule. You have got two passengers in the same train. One is moving between two points inside the State and he shall pay 2 cents, and you have got another moving outside the State and sitting along the same line paying 2½ cents, because the Interstate Commerce Commission is in charge of it.

Of course it is for you to consider the weight of the situation that exists, but an outsider can not say there is anything to be said for it.

Senator ROBINSON. Do you think, Mr. Acworth, that the territorial extent of the United States makes it impossible for a central authority to have and exercise some jurisdiction of regulation? You understand what I mean, the necessity of a central tribunal understanding all the complications of interstate commerce.

Mr. ACWORTH. Oh, yes, sir; it is quite clear; so is the necessity of interstate jurisdictions. It is quite clear you would have two things, either your Interstate Commerce Commission would have to circulate, or it would have to have branches wherever whatever arrangement you think proper, local or national, assumes, would be one form of organization.

In Great Britain, which is a mighty small country compared to the United States, our railway commission consists of three persons—two laymen and a judge—a judge of the high court. In England it is a judge of the English high court, in Scotland it is a judge of the Scottish high court, in Ireland it is a judge of the Irish high court. The place to which ever capital the commission sits is the judge of that country. That is how we deal with it.

Senator ROBINSON. Well, sir. I thank you for your statement. I will yield now to Mr. Sims, who will conclude the examination.

Mr. SIMS. Mr. Acworth, your testimony, taken in connection with the statements of the railway executives, seems to leave a very gloomy outlook for this country. I am not asking for comment just now. I want to premise my questions with that statement: You have read Mr. Thom's testimony before the committee, have you not?

Mr. ACWORTH. No, sir; I think I saw a short abstract of it.

Mr. SIMS. You ought to see it all. It is worth your while to read it.

Mr. ACWORTH. Judge Lovett sent me his, and I have read that.

Mr. SIMS. Then you have got perhaps not so thorough a statement as that of Mr. Thom, but naturally along the same lines. They say, or at least Judge Thom does emphatically, who represents the entire railway executives as their attorney, and, of course, speak by authority of all of them, that unless legislation along the lines which they propose is adopted in this country, unless we give them the legislation they ask, or other legislation that will have the same effect, that Government ownership is inevitable. They do not say it is desirable. They are not working for it, certainly, but they say it is inevitable. So if present conditions make a change inevitable we have a gloomy outlook, unless we know we can get relief in some way. On the other hand, you have shown that all Governments that have tried public ownership have made a failure of it, and that the principle of public ownership is a failure within itself. Now, we are confronted with the difficulty, perhaps, of not being able to get the legislation the railway executives and Judge Thom think we have to have, and if we do not get it we shall have Government ownership, and it, to your judgment, seems to have been a failure whenever tried. So it looks as if we are confronted with a failure without any reference to what we may do or what we do not do. We start in with inevitable failure whichever way we go. I believe you started out by saying, in substance, that railroad building or building of roads was regarded in all countries as a Government function?

Mr. ACWORTH. I was using "road" in our English sense where it means a public highway. What I was thinking was that when railways came into existence it was supposed that they were merely public roads with a rail instead of a flat surface.

Mr. SIMS. You mean to say that the building of highways is a means of transportation?

Mr. ACWORTH. A means of communication.

Mr. SIMS. And is a Government function?

Mr. ACWORTH. It always has been so recognized.

Mr. SIMS. Then what has already been recognized I suppose should be considered as settled?

Mr. ACWORTH. No, sir; for this reason, I think, I venture to put this as the point. Transportation was never recognized as a Government function. You put together two things—a road and a carriage on it. The one is a Government function and the other is not.

Mr. SIMS. Let me ask you this question: Without the road you never would have the carriage or the vehicle?

Mr. ACWORTH. No, sir.

Mr. SIMS. Then it of paramount importance that we have the road over which the carriage can go?

Mr. ACWORTH. Yes, sir.

Mr. SIMS. So, after all, it is absolutely a fundamental proposition that the providing of an essential part of the means of transportation is a Government function, is it not?

Mr. ACWORTH. No, sir; I do not think so.

Mr. SIMS. You could not run your wagons without a wagon road?

Mr. ACWORTH. No; and your road would be no good unless you had a wagon.

Mr. SIMS. But the road is the primary necessity, is it not? You have got to have it first?

Mr. ACWORTH. It depends on which takes the longest to build.

Mr. SIMS. Oh, I think you ought to be frank about the matter. You are here volunteering your information, which I admit is very great, but I think you should concede frankly those things which are inevitable facts.

Mr. ACWORTH. It is only an academic point, in any event.

Mr. SIMS. It being a Government function to provide the primary means of transportation or communication, then the Government is undoubtedly under obligation to do whatever may be necessary to accomplish transportation. I am starting out with that idea, that it is primarily a Government function. Now, how many Governments in Europe have not adopted ownership?

Mr. ACWORTH. I can not tell you the exact number.

Mr. SIMS. England is one that has not?

Mr. ACWORTH. England, Spain——

Mr. SIMS. I mean large governments.

Mr. ACWORTH. Greece, Turkey; Holland as far as operation is concerned.

Mr. SIMS. You mean that none of those has any State-owned railways?

Mr. ACWORTH. Yes. State-operated railways. France has about one-eighth of its whole mileage.

Mr. SIMS. Does not France contemplate owning them all?

Mr. ACWORTH. No; emphatically not.

Mr. SIMS. Germany has it completely?

Mr. ACWORTH. Yes; practically.

Mr. SIMS. And Russia?

Mr. ACWORTH. A large proportion, but before the war Russia was going in for the policy of subsidizing private railways.

Mr. SIMS. I do not mean they own all the railways, but practically all?

Mr. ACWORTH. Yes; most of them.

Mr. SIMS. And Japan has it?

Mr. ACWORTH. Yes.

Mr. SIMS. And India has it?

Mr. ACWORTH. Yes; mainly operated by private companies.

Mr. SIMS. I mean Government ownership or Government responsibility, and Government aid.

Mr. ACWORTH. Oh, yes; I will answer straight out that I do not think that there is any country in the world, except the United Kingdom, where the Government has not put money into railway enterprises.

Mr. SIMS. And it has done it in this country?

Mr. ACWORTH. Yes; in the old days.

Mr. SIMS. All the railways were built—I do not mean every mile of railway, but there was nearly always a contribution from the counties, the cities, and the States, and sometimes from the Federal Government?

Mr. ACWORTH. Yes; in the very early days.

Mr. SIMS. And in nearly every instance they have lost their money, which was a contribution in that way to the building up of the railroads of the country?

Mr. ACWORTH. It may be so.

Mr. SIMS. Tennessee to-day owes about \$6,000,000 as a result of guaranteeing railroad bonds before the Civil War. The railroads have not paid it, and we have had to pay it, or, rather, to assume it. Now, we are in this situation here, with 48 States with sovereign powers, to some extent, to regulate railroads or to interfere with them in such a way as to be a burden on the railroad companies. Now, what might be entirely practicable and feasible in England along the line of private railroads would not apply in this country with the same assurance that it would in England. We are confronted here with a condition in which the railroad companies themselves say that they can not get sufficient private capital on account of all this overregulation, and that that is the reason they are not building railroads, and we know that they need to duplicate or to increase the trackage they already have and the need of a great many other additional facilities. It is frankly admitted, I believe, among the best authorities that for the next 10 or 12 or maybe 15 years they ought to spend a billion dollars a year on construction; I do not mean in building new lines, but also in additions to those already constructed.

Mr. ACWORTH. Yes; I quite understand.

Mr. SIMS. And that the market for railroad securities, under all this regulation and under State charters, can not be secured without legislation which would be contrary to the very principles of our Constitution, and they frankly state that Government ownership has got to come, unquestionably, because we can not cease transportation: we must have communication.

Mr. ACWORTH. Of course, that is on the line of what happened, especially in Italy. The Italian Government would not face the question of what to do, and the result was that they took a header into interstate ownership, and I do not think they are very well satisfied with the result. Of course, it may happen in any country. If people will not face a problem, the problem will come to them sooner or later, and they will have to face it.

Mr. SIMS. As a matter of course—and what I am saying about Government ownership is not based upon the idea that I am seeking to bring it about or that I desire it—if we can have as good transportation and as much of it and as cheaply, and as thorough development of the country in the building of additional lines as we need, by private ownership, and serve the people as well at as low a charge. I certainly do not want to go into Government ownership just as a mere matter of experiment. It seems that in every case you have referred to they went into Government ownership because of something more than a mere theoretical desire to experiment with it: and that is the same situation that confronts us here. If we go to Government ownership it will not be voluntary, but because, under our

conditions here, the railroads are not prosperous and can not expect to be in the future. Now, I believe you attributed the comparative success of Government ownership in Germany to the fact that they have a flat country over which to operate. Was it not just as flat when the roads were owned privately as now?

Mr. ACWORTH. Oh, I did not use the argument for that purpose at all.

Mr. SIMS. The question was asked you by Mr. Hamilton about the country being flat?

Mr. ACWORTH. Yes.

Mr. SIMS. And it was suggested that that was one reason why Government ownership had succeeded there?

Mr. ACWORTH. That is why they show large profits.

Mr. SIMS. Why would not the same conditions operate to make the privately owned railway show large profits?

Mr. ACWORTH. If the conditions had been the same when the private owners had a chance, but they were not—they had not a unified system, they had not the enormous traffic. The conditions when the private owners were operating them were so entirely different that you can not make any comparison between them.

Mr. SIMS. But it was not due to the topography of the country and to the fact that France was hilly and mountainous?

Mr. ACWORTH. No. Prussia had then, as they have now, the advantage of a flat country—whoever owns the railways. But the other conditions 40 years ago made it impossible for the private railroads to produce as good results as the public railroads do produce to-day.

Mr. SIMS. Well, as a means of avoiding the dangers which you and nearly every other railroad man whom I have heard speak on the subject have suggested—the trouble growing out of political conditions in this country, making Government ownership impracticable, in your opinion, and also making it impossible to operate the roads we have and to improve them and build others that we need, without doing it only by an ever-increasing freight rate, what would you think of the idea of having only one corporation in the United States, chartered by the Government of the United States, so that it would be a Federal corporation, and to have that one railroad company acquire every mile of railroad in the United States that is not a mere plant facility—I mean every road that does any real commerce—and to have the Government guarantee the principal and 4 per cent on the bonds—not exceeding 4 per cent, I mean—and authorize the issuance of stock and let the private individual take his choice between bonds and stock, the stock paying not exceeding 6 per cent, and then all the earnings of the corporation above these amounts to be used for railroad purposes, pure and simple, the Government having a lien upon every mile of the railroad acquired to indemnify itself against possible loss by reason of this guaranty, and the Government, through the Interstate Commerce Commission or other regulating body, passing on the question of freight rates, on the question of the issuance of bonds, and let the Government have directors in this railroad company similar to the members of the Federal Reserve Board, their salaries to be paid out of the earnings of the company, and all the surplus to remain in the treasury of the company for the

purpose of taking care of weak roads or weak portions of a road—it would all be one road then—or to tide over lean years, when the rate charged for passengers and freight was not sufficient.

That would get away from the political influence and what we call in this country “pork-barrel” legislation, because of a Senator or a Member of the House wanting to have a railroad for his own district to help him along politically. We would in this way have Government control of the best kind; we would have all the incentive of private enterprise, and still we would be getting away from the wasteful competition and duplication of services, which have been brought about by private enterprise. But I am not a railroad man—are you a practical railroad man?

Mr. ACWORTH. No, sir.

Mr. SIMS. You have never been engaged in the operation of railroads?

Mr. ACWORTH. I am a director of various railroads. I am a lawyer, practically speaking.

Mr. SIMS. You have a personal interest in railroads?

Mr. ACWORTH. I have a very intimate personal interest in all kinds of railroads. I have spent a large part of my life in dealing with railway law, as a lawyer.

Mr. SIMS. I did not know whether you had simply given this matter academic thought and study, or whether you had practical actual operating experience with railroads.

Mr. ACWORTH. No, sir. I have not been an operating railroad man, but I have been as close to it as anybody could be without actually being an active operating man.

Mr. SIMS. What I have in mind is that you, not having been identified with the administration of any particular railroad company, can look at it in a broad, unbiased way.

Mr. ACWORTH. I do not think my directorships are likely to bias my judgment.

Mr. SIMS. No. You know, when we go to examine a railroad man and have him tell us about his own company and his own system, we can only get it from his biased point of view, but in your case, I thought it would be an entirely unbiased opinion.

Mr. ACWORTH. I hope so.

Mr. SIMS. Now, then, my suggestion would get away from the fears of political interference and of building railroads where they were not needed and still would give absolute Government supervision; the States would have no power to interfere in an important way, but the property would still be taxable by the different States. Now, in order to keep away from Government ownership, which you think is very undesirable in any country—I suppose these countries you have been talking about will all go back to private ownership; they will find that it is a failure and go back to private ownership—

Mr. ACWORTH. Belgium is showing signs, after 70 years.

Mr. SIMS. Well, Belgium is not much larger than Rhode Island; and I suppose Germany will go back to private ownership?

Mr. ACWORTH. I can not say, I am sure.

Mr. SIMS. I can not work it out, because I am not a railroad man; but I thought perhaps you were, but it turns out that you are not. But, along that line, we have the Government guaranty, which gives

a market, and that settles the question of credit, and then we have not this political trouble that you spoke of, and we will have the very highest order of talent, both in the owners and the operators. Now, why can we not work out this problem along that line and forever reduce rates instead of forever increasing them? I said not over 6 per cent for dividends; but I would modify that by saying that we might give the stockholders an increase of dividends upon a reduction of rates by adopting a sliding scale or something of that sort; then we will have the speculative interest of the individual as well as other advantages growing out of it. Why can not something of that sort be worked out and thus avoid the inevitable ruin that has been pictured by you and by the railroad executives, because I honestly do not think that we can pass the bills they are asking for, and I do not think that this country is now ready to go to Government ownership?

Mr. ACWORTH. I think, sir, that the fundamental point is this: I do not care what your machinery is; in the long run you will never buy more than three-quarters of a cent's worth of work for three-quarters of a cent. That is the real essence of the American situation. What you are asking the railroads to do is to work at a price that they can not work at; and whoever manages the railroads—assuming that this management would be 5 per cent more economical, if you like—the rate, then, might be 5 per cent lower than it is under the existing conditions; but if you had archangels to manage the American railways, and only allowed them an average income of 7.38, they could not do the work and raise the capital necessary to increase the plant. That is my first answer; and the other point——

Mr. SIMS. If the Government was guaranteeing the bonds and the interest?

Mr. ACWORTH. It does not matter who guarantees it. Of course, if you say that the Government is prepared to allow the ordinary shipper to pay less than the service is worth and to make up the difference out of taxation, you can cut your rates to anything you like; but if you keep your rates down to 7.38, what is going to happen is that the Government is going to have to make up the difference out of taxation if the Government undertakes the job. I see no way out of that.

Mr. SIMS. I am speaking of a private corporation.

Mr. ACWORTH. It does not matter. If the Government guarantees, there is a gap between the guaranteed interest and the net income, and that gap has got to be filled by the Government, and it has got to impose taxation to meet that guaranty. You can not get away from that. My fundamental proposition is that you are asking for more than three-quarters of a cent's worth of work to be done for three-quarters of a cent.

Mr. SIMS. Of course, you can make a statement and assume that that is the fact.

Mr. ACWORTH. Of course, I am not suggesting that my opinion is worth anything.

Mr. SIMS. I do not mean that your opinion is not worth anything but you said "if you do so-and-so."

Mr. ACWORTH. I am asked to express my opinion, and I say, whatever your machinery is in America, the fundamental difficulty is that

the shipper is not paying enough for the work that is being done for him. It can not be done at the price.

Mr. SIMS. Would not the consolidation into one road, thus doing away with a vast amount of unnecessary expenses and doing away with this conflicting regulation by the different States, and all that sort of thing, would not that of itself work for large economies?

Mr. ACWORTH. It will work an economy that is very large—in millions of dollars—but that is very small, compared to the enormous billions of dollars in the annual budget of the railways of the United States.

Mr. SIMS. Last year, Mr. Acworth, if I recollect correctly, the gross receipts of the railroads of the United States were over \$4,000,000,000.

Mr. ACWORTH. Yes.

Mr. SIMS. Now, then, Mr. Lovett, I think, gave us the total value of the railroads of this country as about \$17,000,000,000. Speaking in round numbers, that is about as I recall it. Now, the people pay the gross earnings. The people of this country, or the patrons of the American railroads, in 1916 paid one-quarter of the entire reproduction value, or the actual value of the railroads; one-quarter for one year's service. Therefore, in four years the gross receipts would pay for the railroads absolutely.

Mr. ACWORTH. Yes; if you can get rid of your expenses.

Mr. SIMS. Furthermore, Mr. Lovett showed—and it is certainly true—that the expenses of the American railroads are increasing all the time, by reason of the increased cost of terminals and the increased demands for additional terminals, and for all other kinds of facilities and for labor.

Mr. ACWORTH. Yes, sir.

Mr. SIMS. Now, all the unnecessary duplications of service are very unnecessary and wasteful, which would all be eliminated. Evidently it is a great deal of expense to the railroads to carry on this present campaign, which seems to be necessary in order to save their rights as they see it. There is a vast expense attached to State railroad commissions, and all that sort of thing; and then we talk about the railroads not being in politics! I would like to know how any railroad or any interest in this country can keep out of politics, the rights of which are determined by legislation. How can they keep out of politics? They are governed by law—by city ordinances, county laws, State laws, and National laws; and so why are they not at perfect liberty to be in politics, in the sense of showing their needs to the legislative bodies? Now, all such expense might be saved if all roads were owned by one single corporation. We know that the great systems, like the Pennsylvania, the New York Central, and the Union Pacific, by consolidating many small lines into one great system, have been a great benefit to the section they served, as well as to their stockholders and bondholders and the country at large.

Mr. ACWORTH. Yes; but if you will send to the Interstate Commerce statisticians and tell them to make you a figure of all the expenses of the kind that you are suggesting—the cost of appearing before legislative committees, the cost of running commissions, things of that kind—and put them together, they are a big figure from the point of view of your expenditures and mine; when we think in hundreds of dollars, they are, indeed, a very big figure; but,

put alongside the billions of dollars that the railroads are spending every year, they are a flea bite.

Mr. SIMS. Well, the railroads, like the Government, have not a dollar of their own; they only pay out what they receive.

Mr. ACWORTH. Yes; but an engine does not burn any less coal when it is on a consolidated railroad than when it is on an independent line, and a man does not do any more work, and those are the things that really cost money.

Mr. SIMS. Do you believe, then, in competition between railways?

Mr. ACWORTH. I am a back number in that respect; yes, sir.

Mr. SIMS. England has not gotten away from that?

Mr. ACWORTH. Yes; England has, to a considerable extent; but I am getting old, and I am out of date, and I still do believe in competition to some extent.

Mr. SIMS. I mean competition in railway service.

Mr. ACWORTH. Yes.

Mr. SIMS. If you have absolute, reasonable, and just regulation, what good does competition do, except at a competing point, where the railroads render a service below what they ought to charge for it?

Mr. ACWORTH. If you can get another world, where there is no competition, and train your men in that world, and then bring them into this world, you will get an ideal system; but if you have railroad service with no competition, the men who have been trained under a noncompetitive system will get slack without it. I believe that will be your trouble.

Mr. SIMS. There will still be competition with other means of transportation—with the ocean, the lakes, the rivers, and the trolleys.

Mr. ACWORTH. Oh, no doubt; but at present the president of a railroad goes to his superintendent and he says, "Why do you not do as well on this division as the other fellow in that division?" And then the directors say to the president practically the same thing, "Why do you not accomplish on our line what the other fellow is accomplishing on his line?" And they are always making comparisons. I do not think you can do without it.

Mr. SIMS. You are still standing by your old theory of competition, which you have stood by for so long, like some of our Democrats, called "mossbacks."

Mr. ACWORTH. I am getting old, as I say.

Mr. SIMS. Now, here is an instance: Three hundred million dollars, or something like that, has been spent for two splendid passenger railway terminals in New York City, and yet the entire revenues of the two systems are charged with the expense of those terminals; and still they do not charge the passenger 1 cent more for these terminals—it is an absolutely free service, as far as the passenger is concerned—and I will go on the railroad that has that kind of a terminal every time, and so we all will, as a matter of convenience—and a very great convenience, too. But the existence of these terminals is due to competition, so Mr. Lovett says, and he is a director of the New York Central. So competition there brought about a capital increase of \$300,000,000, which is a burden upon all the commerce of those roads for all time to come.

Mr. ACWORTH. I do not agree with Judge Lovett, sir, frankly.

Mr. SIMS. You have read his testimony?

Mr. ACWORTH. Yes.

Mr. SIMS. I am taking his statement as to the facts.

Mr. ACWORTH. I am speaking of what you have quoted. The Grand Central Terminal does not bring in a penny of revenue to the railroad, but it is highly desirable, and it is a great convenience.

Mr. SIMS. And it is paid for by the public.

Mr. ACWORTH. Yes; and the shareholders. Those terminals are paid for by the shareholders being content to take a little less dividend, and I do not see why the public should grumble at all.

Mr. SIMS. They do not get any less.

Mr. ACWORTH. Well, they do not get any more. I have been a shareholder in the Pennsylvania for years, and I know.

Mr. SIMS. But the shareholders own the railroad.

Mr. ACWORTH. But they do not get any more dividends.

Mr. SIMS. That makes no difference.

Mr. ACWORTH. Oh, yes; it does to the shareholder.

Mr. SIMS. No; it does not make a particle of difference. I may own a farm and live on it, and may never get a dollar out of it; but if I am putting my earnings back into it, I am simply depositing my earnings in the farm.

Mr. ACWORTH. I would agree with you if I had any chance of selling my shares in the Pennsylvania as a going concern instead of having to sell to a new shareholder.

Mr. SIMS. Do you not think you could sell your stock in the Pennsylvania Railroad now at a good price?

Mr. ACWORTH. Yes; but for a great deal less than I paid for it.

Mr. SIMS. The public is not to blame for a man making a bad investment.

Mr. ACWORTH. I bought into the best railroad you have in America.

Mr. SIMS. And that shows that one of the greatest experts on railroads in the world did not know how to judge of the value of railroad shares.

Mr. ACWORTH. I did not know how long it would take the American railroads to convince the American public of the fact that you can not, in the long run, buy a thing for less than it costs. If we had known that the American people would not understand that rates must go up as costs go up, we Europeans would not have put our money in it. That is clear.

Mr. SIMS. Suppose you put the rates up now, and then, after a while, everything costs more, are you going to put them up again?

Mr. ACWORTH. If the cost goes up, yes; just like the bootmaker, and everybody else.

Mr. SIMS. Every dollar you take in in rates, you take it from some other man who owned it before, and so the thing is just balanced: the railroads have more, and the public has less, but the country has just what it had before.

Mr. ACWORTH. The country, as a whole, but the shareholder has not.

Mr. SIMS. But the shareholders have not yet reached the point where they are very much afraid of their shares. If you had much stock in the Pennsylvania and the future was as gloomy as you seem to think it is, you would be thinking about selling it?

Mr. ACWORTH. You know that our Government has taken possession of all our American stocks to finance the war.

Mr. SIMS. They have worked selective conscription on your property?

Mr. ACWORTH. Yes.

Mr. SIMS. Which, of course, is just temporary.

Mr. ACWORTH. "Selection" I think it is called.

Mr. SIMS. "Selective" is the term they use here. But what we have here is a practical situation. If you have read Mr. Thom's testimony, and also Mr. Lovett's, you have got an idea of what it is.

Mr. ACWORTH. Oh, I know the situation quite well.

Mr. SIMS. I do not believe it is possible to get the legislation that is asked for.

Mr. ACWORTH. Then I am sorry for the American public. The American public will suffer.

Mr. SIMS. Yes; and the American railroads will suffer, too.

Mr. ACWORTH. The people of the United States are going to have their traffic facilities absolutely blocked, because you may introduce bills, but you are not going to get the Government into the possession of the railroads and get the new machinery started next week or the week after that. There will be a gap of some years, and before that time has lapsed you will have that machinery broken down.

Mr. SIMS. As Senator Robinson has said, here are two years in which railroad construction has been almost nil—only about 1,000 miles each year—and this country will not stand for that.

Mr. ACWORTH. It is not a question of adding 1,000 miles in some backward State?

Mr. SIMS. No; it is not a question of a backward State. The tracks themselves need doubling.

Mr. ACWORTH. You want immensely more equipment in larger terminals, and all that kind of thing.

Mr. SIMS. Well, is not a double track construction? That is new construction, is it not?

Mr. ACWORTH. Yes; but that would not come into the 1,000 miles of new railroad.

Mr. SIMS. This country is too new for us to assume that railroad construction is complete.

Mr. ACWORTH. Oh, yes.

Mr. SIMS. But suppose we are going to build another line, and we want to build the road so as to do the business of the country, but not upon a confiscation freight rate. Now, something must be done. We have come to a stream and there are two bridges, and you say that if you can not cross on one you will not cross at all. Now, looking to the public interest, I want to do whatever will serve the public best.

Mr. ACWORTH. The point I want understood, sir, is that I do not care what machinery you use in operating the railroads; that, comparatively, is a secondary issue; but whatever machinery you use, it is inevitable that the charge you make for doing the work of the railroads has got to go up, for the same reason that the charge for a loaf of bread or a pair of shoes or anything else has gone up.

Mr. SIMS. You were speaking of this ton-mile rate. You do not insist, of course, that there is any comparison between the Belgian ton-mile rate and that of the United States.

Mr. ACWORTH. What I would say is this: The conditions in Belgium or in Germany or in France are such that you ought not to expect to get as low a ton-mile rate there as here.

Mr. SIMS. And so the comparison with these little countries—they do not have the conditions that we have here, with multiple regulations and multiple sovereignty. The railroads are now asking for a 15 per cent increase, and if you noticed Judge Lovett's testimony, he told us what they did in Pennsylvania in the case of a former increase. They turned around and nullified it in part.

Mr. ACWORTH. Yes.

Mr. SIMS. How many States will nullify this increase if it is allowed?

Mr. ACWORTH. That depends on whether you will let them.

Mr. SIMS. How can we help it?

Mr. ACWORTH. I have studied the decisions of your Supreme Court enough to know that they have said that you have great powers under your Constitution over the States in the matter of commerce.

Mr. SIMS. True; but I take it that the Pennsylvania Railroad would not have yielded to that in Pennsylvania if they had thought they could prevent it. But the question is, How can you or anybody else show us how to solve the existing difficulties with which we are confronted?

Mr. ACWORTH. Well, sir, when you put to me one country with 260,000 miles of railroad I can only say that we hesitated long in putting 20,000 miles under one administration in Canada, which is the biggest thing ever put together in the world, except in Prussia, which has 26,000 miles, and yours would be ten times as big.

Mr. SIMS. Before the Supreme Court held that the purchase of the Southern Pacific by the Union Pacific was a violation of the Sherman law, Mr. Harriman had under his control 28,000 miles of railway.

Mr. ACWORTH. Yes.

Mr. SIMS. And it was generally believed that the service on all those roads was better.

Mr. ACWORTH. Yes.

Mr. SIMS. And that was more than the whole Empire of Germany has under its control.

Mr. ACWORTH. Yes.

Mr. SIMS. It seems to me that in this country that consolidation would result in great economies and the doing away with wasteful methods and duplication of construction and service.

Mr. ACWORTH. You can put them together, but you must break them up again.

Mr. SIMS. I do not mean under one manager, but in one corporation.

Mr. ACWORTH. But the corporation must have one head.

Mr. SIMS. Well, the Government of the United States has one head, but it has a great many other things that resemble heads that are subordinate.

Mr. ACWORTH. Yes; it has 48 State governments.

Mr. SIMS. And a single corporation can have just as many separate subheads as may be necessary, because railroad men would operate it who are now operating the railroads, and they would have all the skill that would be necessary, and would not be fighting with each other. Here we have two railroads running along within sight of each other from here to Baltimore and from Baltimore to Philadelphia, with double bridges, double tracks, and double tunnels, and double expense all the way through. Of course, we can not do away

with those, but we can prevent that kind of thing in the future, but not if we are to continue cutthroat competition between systems.

Mr. ACWORTH. Competition is a big question, sir. Cutthroat competition, of course, we all disapprove of.

Mr. SIMS. Yes; provided we are to pass on the "cutthroat" feature of it.

Mr. ACWORTH. Reasonable competition in facilities, I believe, tends to be in the public interest, but I admit that I am in an increasing minority.

Mr. SIMS. To-day the Government of the United States is taking the taxes of the people and improving rivers and harbors and, it is often alleged, for the purpose of affecting freight rates on existing railroads—to make those railroads less able to serve the public—and sometimes it operates to make a man who secures it very popular when he has a little river in his district that has no merit to urge; but he comes here and says: "I want to regulate the railroads through this river," and it is done through taxation.

Mr. ACWORTH. Do you ever get a report afterwards as to the effect of this "regulation"?

Mr. SIMS. Now, I admit that we are in a situation where something has got to be done. The railway executives say that if something is not done to give them relief, Government ownership is inevitable. Now, if I have got to cross the river, I want to know what kind of a boat I am going across in. We need the facts as to those countries which have had government ownership, but here we are in a situation where it is a matter of choice, and not a matter of theory, but rather a matter of necessity.

Mr. ACWORTH. May I suggest that there is really. If I may say so, there is not any need for a heroic remedy at all.

Mr. SIMS. Is not the proposition of a 20 per cent increase in freight rates a heroic remedy as to the industries of the country which will have it to pay?

Mr. ACWORTH. Not when the 20 per cent increase on the product is only enough. Do not people take into consideration that if cost of production goes up the charges will be made? What is there in a freight rate that is different from anything else?

Mr. SIMS. Upon the absolute theory of private ownership with competition to regulate private ownership, then you are right about it.

Mr. ACWORTH. Never mind who owns the thing. Supposing the State owns the railroad, is that any possible reason why the State should carry your business, your bread, or your beef, or any of your commodities, whatever they are, for less than it costs? The State ought to charge a fair rate.

Mr. SIMS. There are State reasons which never appeal to the private owner. We have put in \$400,000,000 building the Panama Canal, in connection with which the transportation facilities may be at least in part considered, as it was also a national defense measure; but it never was considered that we would pay back the money out of the operating charges, and no private company ever would build it as an investment; and no doubt in my mind there are railway improvements needed that no private companies will ever build, because they will not pay as a private investment.

Mr. ACWORTH. But it will pay, if you will allow the railroad, whoever owns it, to say to the man who wants his stuff carried,

"I will carry your stuff for you on condition you will pay me what the service is worth," and that ought to be said to the freighter, whether the carrier is a public corporation, whether it is the Nation or a private individual; there is no difference in the principle. There is no justification for asking the State to carry the traffic of the ordinary shipper for less than a reasonable price for carrying it, and the reasonable price means the cost of doing the work and the fair interest, the fair earnings on the capital that is applied to enable you to do the work.

Mr. SIMS. Profit on the investment?

Mr. ACWORTH. Yes; return on the investment.

Mr. SIMS. Does it not stand to reason that you can do a better public service without burdening the public with a profit than you can to burden them with a profit, as far as the financial end of it is concerned?

Mr. ACWORTH. Yes, sir; I think that comes back under this point. How much cheaper will the private corporation do the service? If the private corporation saves 2 per cent of the cost by greater efficiency and takes 1 per cent for dividends and the other 1 per cent goes to the public in rate reduction, the public are better off than if the less efficient State corporation does it at the 2 per cent higher price and there is not any money to divide.

Mr. SIMS. If rates would never increase, and yet the railroads would have all the money they need, I do not suppose there would be any clamor at all about this thing. But you come here with the prime demand for an increase in freight rates of 20 per cent as the solution of present railroad problems.

Mr. ACWORTH. I do not demand it. I say the facts demand it. The butcher does not demand the increase in the price of meat.

Mr. SIMS. You mean the situation demands it?

Mr. ACWORTH. The butcher adjusts his prices to the cost of production. Why should not the railroad? There is no difference.

Mr. SIMS. But there is less cost without profit than with profit in doing the same service.

Mr. ACWORTH. But the profit that is turned over is mighty small.

Mr. SIMS. That is all true, but the net profit of railroads in the United States, as shown by the report of the Interstate Commerce Commission in 1916, was over \$1,000,000,000.

Mr. ACWORTH. That was not a profit.

Mr. SIMS. It is net income.

Mr. ACWORTH. That was not a profit.

Mr. SIMS. They reported it as net income.

Mr. ACWORTH. \$900,000,000 and some odd out of that for doing the work.

Mr. SIMS. Is that after paying interest?

Mr. ACWORTH. Well, it is the net profit of the railroad company.

Senator ROBINSON. It was \$601,000,000 and some odd.

Mr. SIMS. The Interstate Commerce Commission gives it as \$1,000,000,000 and some odd according to the report as they kept the accounts.

Mr. THOM. Judge Sims, the way the Interstate Commerce Commission states it as being \$1,000,000,000 and two hundred odd million was before interest was paid, and after interest is paid Senator Robinson is right—the figure was about \$601,000,000.

Mr. SIMS. There is that much profit to the railroads after all operating costs, maintenance, and expenses were paid. If the Government owned the railroads they would not pay any profit.

Mr. ACWORTH. I beg pardon. With greatest respect, you are not correct. If the Government owned it they would have to provide the capital that the shareholders are now providing, and on that capital the Government would have to pay interest at 4 per cent, say.

Mr. SIMS. The Government would have to pay it providing the business did not pay it. When I speak about profit I have reference to dividends; I do not have reference to interest on bonds.

Mr. ACWORTH. But please remember this. The dividends represent the money put into the property. True, if you made it a bond you would have got the money a little cheaper; you would not have to pay 5 per cent on it; you only would have to pay 4 per cent, but the dividends represent money put into the property and the Government would have to put in the money which the stockholders now put in. They could have got it cheaper, but only a little cheaper.

Mr. SIMS. I am not talking about the matter as it originally existed. I am talking about the situation which now confronts us.

Mr. ACWORTH. Suppose you buy the property, the Government has got to issue bonds and pay interest on bonds.

Mr. SIMS. But the Government will issue bonds against the property and the property earns interest, therefore it does not become a tax upon other taxable property at all.

Mr. ACWORTH. But it has got to earn the interest.

Mr. SIMS. It earns it now?

Mr. ACWORTH. Yes, sir.

Mr. SIMS. Under all the adverse circumstances it has to confront, and some of the properties pay a good dividend?

Mr. ACWORTH. Yes; and some pay none.

Mr. SIMS. If the strong roads would take care of the weak ones, it would equalize matters, and we might get along very well, but how would you do it under private ownership?

Mr. ACWORTH. There is not enough to go around, sir. That is the difficulty.

Mr. SIMS. I do not know whether there is or not.

Senator ROBINSON. Mr. Sims, have you about concluded?

Mr. SIMS. I may not be able to conclude in two days, but I am ready to quit at any time the committee desires.

I have some notes here, but I have not tried to follow them. I just wanted to get Mr. Acworth's views on the situation, a situation which has got to be met somehow or other.

Mr. THOM. I should like to say, if you will permit me, in reference to what transpired here the last year, that if you associated the year 1916 with the preceding years, the three or four or five years before, you will find that the returns on the book values are very much less than 5 per cent, and for that series of years are less than the previous series of the same number, even with the greater earnings of last year.

Senator ROBINSON. If there is no objection, we will now take a recess. We may be able to conclude in the morning.

(Thereupon, at 10.30 o'clock p. m., the committee adjourned until 10 o'clock a. m., Wednesday, May 9, 1917.)

INTERSTATE AND FOREIGN TRANSPORTATION—GOVERNMENT CONTROL AND REGULATION.

WEDNESDAY, MAY 9, 1917.

UNITED STATES SENATE,
JOINT COMMITTEE ON INTERSTATE COMMERCE,
Washington, D. C.

The joint committee met at 10 o'clock a. m., Hon. William C. Adamson (vice chairman) presiding.

The VICE CHAIRMAN. The committee will come to order. The Chair understands that Senator Cummins desires to ask Mr. Acworth some questions. Senator, you may proceed.

STATEMENT OF W. M. ACWORTH—Resumed.

Senator CUMMINS. Mr. Chairman, I was not able to be in attendance upon the session last night and I do not know exactly what the line of cross-examination was. There are only two or three questions that I would like to ask. It is a little difficult for me to propound questions upon this subject, because I am somewhat in sympathy with the views of the witness, and I do not want what I ask to be considered as an attempt to overturn what he has said.

I observe, Mr. Acworth, in comparing the rates that are charged for service in Prussia and Germany and the rates charged in the United States, that you found the German rates were nearly twice as great as the American rates?

Mr. ACWORTH. Yes, sir.

Senator CUMMINS. Did you in that comparison take into account the average length of haul in the United States as compared with the length of haul in Prussia or Germany?

Mr. ACWORTH. I do not think I put it in so many words. I did say last night—and I think it is obvious that it is so—perfectly impartial railway experts, looking at the figures, would say you naturally would expect higher rates in Germany than in the United States. For one reason, Germany out of those rates succeeds in making a very handsome profit. Out of the American rates there is not enough money to spare. That is to say, the American rates should be higher under American conditions and the Prussian rates could be lowered under Prussian conditions, and imagining the American rates put up somewhat and imagining the Prussian rates brought down somewhat, there is still a gap. You have mentioned the haul. That undoubtedly accounts for a good deal—

Senator CUMMINS. I am not thinking of the financial phase of it, or the financial outcome. I am only thinking of a proper comparison. Our average rate is substantially three-fourths of a cent per

ton per mile. The average Prussian rate is about 1 cent and three-tenths per mile—I am not giving the exact figures.

Mr. ACWORTH. Yes, sir; you are almost accurate.

Senator CUMMINS. I have stated about the fact?

Mr. ACWORTH. Yes, sir.

Senator CUMMINS. Now here the railway rate, looked at logically, is made up of a charge for terminal service and a charge for transportation or haul.

Mr. ACWORTH. Yes, sir.

Senator CUMMINS. And the rate per ton per mile will decrease therefore as the length of the haul increases.

Mr. ACWORTH. Yes, sir.

Senator CUMMINS. Now, do you remember what the average haul in Germany or in Prussia is?

Mr. ESCH. It is 62 miles.

Mr. ACWORTH. I was going to say 70.

Mr. ESCH. Sixty-two miles, and in the United States 254.

Mr. ACWORTH. That is assuming the United States to be treated as a single system. The average haul, treating the systems separately, if I remember right, is 150.

Senator CUMMINS. I think that is an error. I think the haul in the United States—the haul of 254 miles, probably—is on the single road.

Mr. ESCH. These are statistics given by Dr. Johnson.

Senator CUMMINS. I do not recall precisely, but I think the haul in the United States is five or six times as long as the haul in Prussia.

Mr. ACWORTH. I would not contradict you, but unquestionably it is very much longer.

Senator CUMMINS. I am taking the haul as it actually occurs, and not confined to an initial road or any particular road, and a just comparison necessarily must take into account the difference between the haul in this country and the haul abroad?

Mr. ACWORTH. Unquestionably.

Senator CUMMINS. My only point was that in the comparison of three-fourths of a cent in our country and a cent and three-tenths in Prussia; that factor was not taken into account.

Mr. ACWORTH. Of course, all international comparisons have to take account of a vast number of things. The way I would like to put it is this: That factor of length of haul unquestionably is very favorable to the United States; on the other hand, another factor is that the average wages paid for during the work are double in the United States. That tells, of course, the other way. I do not think it could be translated into statistical figures, but the point I would make is this: If you bring an impartial railway man from the planet of Mars, who has no views on State ownership pro or con, and you show him the Prussian result of 1.30, show him the American result of three-fourths of a cent, he would say, making all allowances on one side or another, there is a big balance to be explained by efficiency. That is how I would put it. How big the balance is is a matter of dispute, but I feel certain any impartial person would say there is a big balance, and the only explanation is efficiency.

Senator CUMMINS. It is easy for us to believe that American roads are more efficient than Prussia.

Mr. ACWORTH. I must say I do not think it is difficult.

Senator CUMMINS. It is quite gratifying to our pride, I am sure. But I do not desire to discuss that point. I simply wanted to emphasize the one thing.

Mr. THOM. Senator, may I give you the exact figures of the average haul on individual railroads in the United States in the Interstate Commerce Commission's report? I have it before me. It is 162.37 on individual roads.

Senator CUMMINS. I am familiar with that report, but that is not a fair statement of it, and I do not think the Interstate Commerce Commission meant to deceive the public at all; I am sure they did not. That means simply the haul upon a single railroad.

Mr. ACWORTH. Yes, sir; that is right.

Senator CUMMINS. And not the haul actually occurring in transportation.

Mr. ACWORTH. I think it was gotten wrong on the stenographer's notes. One figure—260—was mentioned.

Senator CUMMINS. I thought it was a little more than that. But this same report states the average haul.

Mr. ACWORTH. Treating it as a system.

Senator CUMMINS. Looked at from a broader standpoint, namely, considering all railroads as a single road.

Mr. ACWORTH. Of course, Prussia has the advantage of having been able to concentrate on a single system, and of course the deliberate policy of the Government here has been to prevent concentration. That makes a very considerable difference in the length of haul.

Senator CUMMINS. The matter about which I really wish to ask you, however, is more fundamental. It may be it is not entirely pertinent as cross-examination, but, nevertheless, I want your view upon it. You said, in reviewing State ownership historically—and I think you said very truly—that the assumption of transportation by the State has nearly always been brought about by some condition that does not relate to either efficiency in management or the hope of reducing the rate. Some other considerations are those which seem to make it necessary for the State to assume that function. I understood you correctly, did I not?

Mr. ACWORTH. I would rather put it in this way—that abstract questions of whether on the whole, regarded as a historical proposition, the State would be more efficient, or would have a better service, had not been the governing consideration, but rather the special circumstances that existed at the time. The point was raised here, for instance, Mr. Sims raised it——

Senator CUMMINS. Let me give the special circumstances which seem to me to confront the people of this country. Our railroads are competitive, and it is impossible to destroy competition without readjusting the ownership of the railroad, as I look at it. All the railroads of this country must carry freight at substantially the same rate. Let us assume that there were a large proportion of those roads which can carry freight or do carry on their business at certain rates with abundant profit. A smaller proportion of the railroads, being compelled to do that business at the same rates, find themselves in hopeless insolvency—I am assuming that the same efficiency as found in the management of all the roads—How are we

to meet that problem? How are we to give to the smaller railroads or the weaker railroads rates that will be compensatory and adequate for a reward upon the capital invested or the value of the property without giving to the stronger railroads rates that will enable them to earn more than they ought to earn?

Mr. ACWORTH. Well, sir, the question is very difficult to answer, because I expect my idea of what "more than they ought to earn" may not be the same as yours.

The VICE CHAIRMAN. Well, admitting the Senator's premises.

Mr. ACWORTH. I will admit the fact, if you will put it at 20 per cent as the point beyond which they ought not reasonably to be allowed to go.

The VICE CHAIRMAN. Let it be 20 per cent.

Mr. ACWORTH. If you will accept 20 per cent dividends as a figure beyond which they ought not to be allowed to go—

The VICE CHAIRMAN. The Senator did not ask you whether the profits were sufficient. His point was how can you increase one without increasing the other when a mere division of freight rates would drive the business from one to the other and rob them entirely of the business.

Mr. ACWORTH. There could be no question of this, it is not possible to have two different scales of rates for competing companies alongside. We must start with that. Therefore, if you are to deal with that proposition that the two railroads must be kept alongside, the one earning less than a reasonable amount, and the other possibly arriving at a stage when it would earn more than a reasonable amount, clearly you have got either to reduce the higher or put up the lower, or in some shape balance it between the two.

The VICE CHAIRMAN. Now, tell the Senator how.

Senator CUMMINS. I think possibly we do not look at it from possibly the same standpoint. Let us assume that the railroads which carry in the United States 80 per cent of the business are able upon certain rates—I will not say the existing rates, but certain rates—to maintain their properties, accumulate funds for replacement and betterment, provide for all the exigencies of the lean years, and still pay 7, 8, and 9 per cent upon the value of the property. The railroads which carry 20 per cent of the business, being compelled to do their work at the same rate, find that they accumulate nothing for the compensation of capital. Now, let us just assume further still that it is the purpose of the American people not to permit the capital invested in these public properties to earn more than 7, 8, or 9 per cent, with allowance for the contingencies that I have mentioned, how are we to meet that problem?

Mr. ACWORTH. Well, if you ask me—if it is not criticism of the policy which the United States has—and I feel that that is something that a stranger ought not to make—if you will forgive me for making it, in answer to the question I should say this, that there are two possible policies. There is a policy of trusting to private enterprise. That means a man takes his risk, and he also takes his chances of great profits. If you are going to leave the 20 per cent, or whatever the figures are at the bottom—30 to 40 really, that are not earning dividends—if you are going to leave them at the bottom, without earning dividends, the only way to get the capitalists to go into the business is to leave the people at the top to earn something a great

deal more than 8 or 9 because otherwise the average is not good enough to tempt capitalists.

That is not the policy you have adopted. There is another policy; of course it is difficult to introduce it afterwards but it might have been a perfectly reasonable policy at the beginning. On the one hand you say, "We shall not allow you to go past 6 or 7 per cent" but give support to the people at the bottom; say to them at any rate their dividend shall not be worse than 3, provided they put up a railroad that the public have agreed they want.

I can understand either of those policies but I can not conceive as a possible policy in the long run that you limit at the top and give no guaranty at the bottom. Of course Congress can do what it likes to the railroads that are already there; they can not get out. They have put their money in that as a permanent property. But if you want—as you do want—to have building go on every year and have new money put in you can not get it on the basis of saying nobody shall get anything to speak of on the average, and a large number shall get something below the average. It can not be worked; it is not business.

Senator CUMMINS. I do not think that is the only alternative, though. The Government could make up out of its Treasury the deficit or loss to the weaker railroads.

Mr. ACWORTH. Yes, sir; that was my idea; that is what I meant. Let me put it again. I mean that the necessary complement of a policy which says you shall not go past 7 or 8 or 9 is a policy which says you shall not fall under 2 or 3 or 4. Where the money is coming from, whether from raised rates or direct contribution from taxpayers is a separate question.

Senator CUMMINS. Of course, Government ownership is another way.

Mr. ACWORTH. Yes, sir. Then again you would have the case where you had taken over the railways not because you thought the Government would manage them better, but because there had come a financial knot that it seemed very difficult to untie.

Senator CUMMINS. We assume for any given time the revenue for a large proportion of the railroads is sufficient and the revenue of a smaller proportion is insufficient. Then we must either make up the sum necessary for the smaller railroads or we must take them all over.

Mr. ACWORTH. Yes; but it is a dangerous thing to answer as broad a question as that without a little more reflection. However, it looks so.

Senator CUMMINS. It occurs to me that that is the real problem in our regulations. There is another alternative, is there not? We could readjust the ownership of the railways, so that in any given system the surplus revenue of the strong railroads would be sufficient to make up the deficit of the weaker railroads.

Mr. ACWORTH. I believe that is a very practical policy, but, of course, it is a policy that could only be worked out in 20 years. It could not be done by hard and fast orders to do it instantly. You could not say to the Pennsylvania Railroad to-morrow: "You have got to take over the Erie and spread the dividends over the two capitalizations." You can not do that; but if you encourage governmental supervision in a single head and a policy of consolidation,

I have no doubt that you would work it out in the course of time. That is what is happening in England, and has been for a good many years.

Senator CUMMINS. The length of time would depend on a good many circumstances. We have power, I assume, to do it, probably, under our form of government.

Mr. ACWORTH. To order one company to take over another?

Senator CUMMINS. I assume we have under the power of eminent domain the authority to dispose of ownership as we might see fit.

Mr. ACWORTH. Clearly you could take possession of, we will say, the Erie Railroad, but the further stage of getting the Pennsylvania Railroad to take it would depend on whether the Pennsylvania Railroad Co. thought the terms were good enough.

Senator CUMMINS. No; I do not mean to have it inferred that we would compel the Pennsylvania to buy that property; but if a company were organized under a Federal incorporation law, we could give it the authority to condemn and take over any group of railways that we might think the public interests required should be consolidated into one ownership.

Mr. ACWORTH. That is to say you would take one strong and important company and build up on it in its district?

Senator CUMMINS. Yes.

Mr. ACWORTH. Of course, that, I think, is merely in the line of historical development. As you know probably, our Government has for the period of the war time control of our railways. I think it is quite clear that they will never go back to private ownership exactly in the shape they left them in. There is no question, I think, that with us there will be very much of what you have suggested, the building up on the basis of a certain number of strong companies in different districts, practically absorbing all these lines within that district.

The VICE CHAIRMAN. That is the best argument I have ever heard for Federal embargo. I have always believed the law ought to compel one rich person and one poor person to marry so as to maintain an equal distribution of the wealth of the country.

Senator CUMMINS. I am not giving my adhesion to this plan irrevocably. I simply intended to indicate that I see an insoluble problem in the regulation of railways, as we are attempting to regulate them.

That is all I care to ask, and I am very much obliged to you, Mr. Acworth.

The VICE CHAIRMAN. Senator Townsend, will you proceed?

Senator TOWNSEND. As I said to begin with, I feel rather guilty about asking questions without having heard the witness, because I would like to have heard him. Senator Cummins has covered a point that I had thought of asking you if he had not already covered it. I suppose that you agree that centralized management of many concerns is likely to be more efficient than to have those concerns managed separately?

Mr. ACWORTH. Yes, sir; up to a point. I take it there is really a point where the advantages of centralization are overbalanced by the disadvantages of getting too big for proper supervision. It is a point to be ascertained by trial and error in the individual case, but I am sure that it exists as a principle.

Senator TOWNSEND. I think it does. I listened the other evening when you were mentioning some of the disadvantages of Government ownership. Of course, one of the arguments that is made, as you undoubtedly know, for Government ownership is that it centralizes control. You have shown how, under the Government, that is not necessarily efficient, or rather, experience showing it to be the reverse. The point that Senator Cummins has brought out has been the one that has disturbed me not a little, and I have felt that its solution was hindered by the very laws which we have already established in this country which prevent combinations. Under the law systems have been disorganized, disintegrated, because it was felt that they were inimical to the public welfare, in the form of monopolies; but have you, at any time in your testimony suggested any remedy for this condition of which the railroads complain, namely, that they are not able to get money enough to operate their roads successfully?

Mr. ACWORTH. As I see it, sir, assuming present conditions broadly to continue, there are two things necessary. The one is to enable them to make their money go as far as possible by avoiding waste effort; for example, the point that was raised yesterday of State regulation; clearly, regulation by 48 States, as well as by the Federal Government, results in a great deal of waste motion and consequent expense. Looking at it purely, I mean, from the cost point of view, the Government can establish a uniform control and thereby decrease expenses; but, when all is said and done, to decrease expenses, as I see it, is not sufficient. You have also got to increase rates, and the only way to do that is to accept the fact that world prices have gone up for everything, from railway service to boots and shoes, and that the railways must be allowed to put up their prices. It seems to me, regarding the proposition of railways as existing, in whosoever's hands they are, you want to reduce expenses by avoiding waste motion, but you want to increase rates, because, broadly speaking, they are selling railroad transportation at an uncommercial price.

Senator TOWNSEND. Would you still hold that opinion or would you apply that opinion to all railroads regardless of the efficiency of their management?

Mr. ACWORTH. Yes, sir; I certainly would. I would say this: That the Pennsylvania is as good a proof of the necessity of higher rates as the most bankrupt railroad in the States. I should say that if conditions continue what they are. Take the Pennsylvania, which, by the good fortune of its original shareholders, got the first call on the finest traffic region in the world, which for 70 years—I have never seen any evidence to the contrary—has always been well managed, has always been efficiently and honestly managed. And they are to-day able to earn something under 6 per cent on their property investment. Now, if with all the cards in your favor you can only get 6 per cent, why should anybody put his money into a less likely looking venture? If the Pennsylvania can only get 6 per cent, or less than 6 per cent, anybody who puts his money into an inferior railroad must know that he will get less than 6 per cent, and he will not do it. Therefore it is to the public interest that the Pennsylvania should be earning 10 or 12 per cent to encourage money to come in.

Senator TOWNSEND. I do not care to go into an argument of that question. I am willing to concede that the Pennsylvania Railroad is well managed, but the question as to whether it is getting insufficient revenue to maintain that management is a mooted question now; that is a question that is in dispute, and I do not care to go into that, but I will take the case of a road where it is equally admitted to be inefficiently and improperly managed. Under those circumstances you think that they should have more money to meet the extravagance of that kind of management?

Mr. ACWORTH. Well, I think, sir, the broad answer is what I already gave, that if you are going to limit at one end the maximum you must put in at the other end a minimum; but, clearly, efficient regulation by a central body can, in a pretty short time, put an end—it can not make everybody equally intelligent or equally virtuous—but it can put an end to evident and flagrant mismanagement. The public authorities, in the first place, could interfere, and if the thing comes out so that nobody can deny it, you can pretty well rely on the shareholders to interfere. It is a slow process, but it works.

Senator TOWNSEND. Yes; exceedingly slow.

Mr. ACWORTH. Yes; it is slow.

Senator TOWNSEND. And it has been somewhat discouraging, although I recognize that the railroads have been handicapped, to a certain degree, by legislation. Now, I was interested in your statement a moment ago, that at the close of the war in your country, in Great Britain, a readjustment of ownership would occur, if the properties go back to private ownership.

Mr. ACWORTH. It looks very much like it.

Senator TOWNSEND. How are they going to do that?

Mr. ACWORTH. Of course, this is all hypothetical?

Senator TOWNSEND. Yes; I realize that.

Mr. ACWORTH. And I have been out of England for six months, and things have developed since I have been there; but it seems to me that it is evident that what will happen is this: The Government, nominally, can hand back the railways on six weeks' notice. As a matter of practice, it is clear that they can not do it; it is clear that there are too many new problems that have arisen that would have to be solved, and the Government can only hand back slowly, and, as I see it, they would probably hand back under certain terms—they will arrange that they hand back to one of the great systems the great bulk of its lines, and suggest that it cut off its own excrescences into other people's territory, and hand them over to somebody else, and, on the other hand, that certain small companies in its district be not handed back to their former shareholders, but that they make a bargain with the big company, and be handed over to it. The Government would, as it were, take the position of a new manager who came into a great concern, with many branches, and who came to the conclusion that it was desirable to shut down such and such a plant, and transfer the operations to another works that could do it more economically, and one thing and another of that kind.

Senator TOWNSEND. How could the Government enforce that kind of an arrangement?

Mr. ACWORTH. Well, governments have great persuasive power, and with us, of course, the Government can do anything. There is nothing in the nature of constitutional limitations with us; the Gov-

ernment can enact to-morrow that your coat be transferred to your neighbor, and there is no appeal, so there is no legal difficulty, but it would, I have no doubt, be adjusted by give and take.

Senator TOWNSEND. How could you compel my neighbor to take the coat. In other words, how could you compel a railroad to take another railroad, the operation of which was not profitable?

Mr. ACWORTH. Of course I am talking law and not practical politics.

Senator TOWNSEND. Yes.

Mr. ACWORTH. As a matter of law, supposing the Government says to the Northwestern Railway, "You should take in the North Staffordshire," which is a small line lying inside of it, and they say, "We will not." The Government could in that case enact that from a certain date the Northwestern itself should be taken over; there would be no difficulty about that. If they like, they can take the property of the Northwestern Railway and hand it over to the North Staffordshire or hand both over to a newly incorporated company. There is no limit to that, but our Government has worked in entire harmony with the companies.

The VICE CHAIRMAN. A condition of that sort is calculated to produce harmony?

Mr. ACWORTH. I beg your pardon.

The VICE CHAIRMAN. The power of the Government to do that is calculated to produce harmony, I should think.

Mr. ACWORTH. That is no doubt so.

Senator TOWNSEND. Well, by analogy, would that be, in your judgment, the proper way for the United States to proceed—to take charge of the railroads and then apportion them out into systems?

Mr. ACWORTH. Well, sir, if you ask me personally, I should not like your Government to take the railways, for fear they should stick to its fingers, and I should suggest that you must come to rearranging. There are two theories: The one is to adopt the French system and put all the railroads in a given district into one. Some friends of mine who have thought a great deal about the matter believe that that is what you are coming to. It seems to me that the objection to that is—all the railroads between New York and Chicago, for instance, are an obvious district. Now, I can not imagine myself that you would put together two railroads like the Pennsylvania and the New York Central; it seems to me that they should remain separate; but the alternative scheme is—and I say I think it is what we are coming to in England—that you would build upon the New York Central, on the one hand, as one of the great old lines, by bringing in a good many lines that are now independent. Similarly you would build up on the Pennsylvania, let us say, the Norfolk & Western and the Chesapeake & Ohio and the Western Maryland and railroads of that kind that naturally would seem to belong to that traffic basin, so to speak. But that, one way or another, consolidation is coming, I have no doubt.

Senator TOWNSEND. I think I have no further questions to ask.

The VICE CHAIRMAN. I suppose the New York Central might colonize New England, and take it under its wing, and redeem the New Haven & Hartford?

Mr. ACWORTH. Of course, sir, you raise a very good instance of the local feeling. You all know New England much better than I

do, but I should have thought that New England and a sort of feeling of being a distinct entity, and that New England would exceedingly resent being handed over to a non-New England company.

The VICE CHAIRMAN. My enforced absence last night denied me the pleasure of hearing a part of the cross-examination; and I hope I will not trench on anything that has already been gone over. You will pardon me if I do; I shall not be prolix at all. Of course, your reputation is that you are a great lawyer in England, but what has been the nature of your practice?

Mr. ACWORTH. I should be sorry to say that I was a great lawyer, sir, but my practice has been wholly in matters that concern railways and other public utilities.

The VICE CHAIRMAN. Have you represented the railroad corporations?

Mr. ACWORTH. Yes; and very often their opponents.

The VICE CHAIRMAN. Did you ever sue any railroads?

Mr. ACWORTH. I beg pardon?

The VICE CHAIRMAN. You never sued any railroads?

Mr. ACWORTH. No; I have never had anything to do with damage questions, or anything of that kind. I have frequently opposed the railroads, and have also appeared for them in the Railway Commission, on questions of rates and things of that kind; but my main practice has been before parliamentary committees. I do not know whether you know, sir, but our custom is that if a railroad wants to issue new capital, or to make a new branch, or anything of that kind—

The VICE CHAIRMAN. My only idea was to develop whether you had appeared chiefly as representing the railroads, or against them.

Mr. ACWORTH. On whichever side saw fit to hire me.

The VICE CHAIRMAN. You are a director in a good many railroads, are you not?

Mr. ACWORTH. No. I am a director of the London Underground Company, which owns or controls most of the transport facilities in London—street railways and electric railways and omnibuses—a great many things.

The VICE CHAIRMAN. Are you financially or professionally interested in any American railroads?

Mr. ACWORTH. I think I have got a few thousand dollars left, sir, but they are mostly sold, as all our American securities are since the beginning of the war. I had, a dozen years ago, most of my money in American railways, but it is mostly out now.

The VICE CHAIRMAN. From your interesting statement, if I understand you correctly, I would gather two or three lessons. One is that whatever degree of superior efficiency may exist in the Prussian system is due to two facts; that is, uniform or central control and high rates. Is that a proper inference from the results in that country?

Mr. ACWORTH. Which country are you now speaking of?

The VICE CHAIRMAN. Prussia—Germany.

Mr. ACWORTH. Prussia?

The VICE CHAIRMAN. Yes; and the further lesson that I gather is that those same things could be obtained without Government control—both uniform control and higher rates could be attained without Government control?

Mr. ACWORTH. Oh, yes, sir; clearly. There is no necessary connection with Government control in either of those things.

The VICE CHAIRMAN. It is only a question of having men with sense enough to manage them and authority to do it?

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. I do not care to go over all your testimony about Government ownership, but I do want to ask you two or three further questions, and that is the reason I asked you in regard to your experience and observation of these operations.

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. In your testimony you have talked largely about small countries, comparatively. Of course, Australia and South Africa and Canada are larger.

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. But the proportion of business is not so dense?

Mr. ACWORTH. Yes; of course, every country is very small compared to the United States.

The VICE CHAIRMAN. In this country we not only have the vast extent, but we have a large and dense business.

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. With oceans on two sides and bays and inlets and rivers on every hand.

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. So that we can hardly hope to get more than a few hundred miles away from what is called water competition. Now, I want to call your attention to what I conceive to be the two great difficulties in regulating these railroads. This country is committed to regulation, and the carriers now say they are submitting to regulation, and they are exercising the rights of American citizens to participate in making the regulations. The difficulty is to stop the people from complaining about their rates not being the same—that is one great difficulty—and the other is to know how to settle disputes between the carriers and their employees. Now, to go 3,000 miles, with people at each end of the route demanding to buy at the same price that exists at the other end of the line, that seems to be an impossible and preposterous proposition; and yet that is just about the actual condition in this country?

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. And if they can go from Boston to California, and then from California back to Boston at a low rate, every intermediate point complains that it is discriminated against. Now, I want to know if you in your experience have fallen upon any system or any suggestion of a system whereby rates could be made or charges could be made so as to silence those complaints?

Mr. ACWORTH. No, sir. I do not believe that you can make such rates—you can not do it—as will look reasonable to the man in the street, who has never had it explained to him. I think what you have got to do is to approach it from the other end, and to do what a well-known public man said in England—you have got to educate your masters.

The VICE CHAIRMAN. I want you to get the reasoning into this record, so that the folks who do not understand it may read it.

Mr. ACWORTH. Let us take the conspicuous instance that, after 20 years of discussion and litigation, has practically been decided by the Interstate Commerce Commission that it is reasonable to charge more for a carload of freight when shipped from Chicago to Denver than from New York to San Francisco. Now, I think if you will give me an average intelligent man, and let me sit down with him for an hour, I shall be able to make him understand that.

The VICE CHAIRMAN. You mean that you can make him understand what we are holding now?

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. But I want to know if there is any practice in any country or any practice that can be fallen upon of adjusting those rates in such a manner as will eliminate the necessity for apologizing for or explaining the present system?

Mr. ACWORTH. Frankly, no; because that means that you will have to go to equal mileage rates, or something of that kind, and equal mileage rates, to anybody who understands the system, are a flagrant injustice.

The VICE CHAIRMAN. What do you say about having a service charge for all stations alike, and then charging a mileage rate on top of that?

Mr. ACWORTH. It will not work. Railroads are a commercial business and you can not get away from commercial considerations, which come in in all kinds of ways.

The VICE CHAIRMAN. If you charge the same terminal fees for handling for a station 6 miles away as you would for one a thousand miles away, the people at the station 6 miles away would complain that the combined charges would be too high, would they not?

Mr. ACWORTH. Yes. The Prussians frankly grade their terminals. They always make a terminal charge in addition to the mileage rate, and they make a less terminal charge if the traffic is going 20 miles than if it is going 200 miles.

The VICE CHAIRMAN. Although the terminal service is precisely the same?

Mr. ACWORTH. Yes; precisely the same; but it is done because otherwise the rate would be too high for the traffic.

The VICE CHAIRMAN. Is there any country where there is a practice of charging a terminal fee or a terminal rate so as to add then for each successive station only a small increment of the rate? Is there any existing system anywhere now where that is practiced?

Mr. ACWORTH. Well, the Prussian system is this: There is a charge put down, a fee for receiving the freight.

The VICE CHAIRMAN. Is not that uniform?

Mr. ACWORTH. A trifling fee; it is a cent or two.

The VICE CHAIRMAN. I say, is not that uniform?

Mr. ACWORTH. Yes. Then there is another charge for weighing it, and there is another charge for issuing a receipt for it—a penny or two—and this is all put into the bill. Then there is a charge for terminals, and then there is, in the case of most classes of traffic, a charge of so much per mile; and if it goes 1 mile it is a five-hundredth part of what it is if it goes 500 miles.

The VICE CHAIRMAN. They charge for each mile in proportion to the distance?

Mr. ACWORTH. Yes. Let me elaborate that, because it might be very misleading. That is so on most classes of traffic, but it is not so on the classes of traffic under which most of the actual tonnage is hauled. Supposing you are sending coal. If there is not an exceptional rate—as there very often is—if there is not what you call a commodity rate—supposing coal is going on the ordinary coal tariff, it goes on what we call in England a sliding scale. The first 10 miles are so much per mile, and the next 20 miles are so much per mile, and the next 30 miles are so much per mile, and so on.

The VICE CHAIRMAN. That is a descending scale?

Mr. ACWORTH. Yes; a sliding scale, decreasing per mile as the mileage increases, and the Prussians use both systems—flat mileage rates and increasing mileage rates—alongside.

The VICE CHAIRMAN. You do not think it would be practical in a country like the United States—I will say “in the United States,” because I suppose there is no other like it—to say at the receiving terminus that the charge shall be uniform and at the delivering terminus it shall be uniform, but that there shall be a descending scale of rate per mile, so that in the case of 100 stations the increase at each station might be infinitesimal?

Mr. ACWORTH. I frankly say that it would be a revolution, by the side of which abolishing Congress and the President would be a trifle. It would upset the whole daily life of the country. It has all grown up on a system that has worked itself out in 70 years, and I have seen in my experience——

The VICE CHAIRMAN. You have known revolutions, even political, to be beneficial to mankind?

Mr. ACWORTH. But that would be shutting up one big manufacturing town and opening it elsewhere. Nobody, until they go into it, can appreciate what that would mean.

The VICE CHAIRMAN. For the United States to take over 260,000 miles of railroad would be revolutionary, would it not?

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. And for them to compel a rich railroad to acquire a poor one would be revolutionary, too, would it not?

Mr. ACWORTH. I think you can encourage without compelling.

The VICE CHAIRMAN. The question with me is not whether it would be revolutionary, but I am trying to find out if you, as a world-wide expert, can give us any real valuable opinion as to whether such a thing as that could be possible and worked out efficiently?

Mr. ACWORTH. Frankly, I do not believe you can. You can put it on paper—I could put the scheme on paper—but when you came up to the fact and took it to Pittsburgh and took it to Youngstown and to Chicago, you would probably find yourselves torn in pieces.

The VICE CHAIRMAN. Is it your deliberate opinion that the system which we have, as it is being worked out, is the best possible if we will go on and improve it?

Mr. ACWORTH. Yes, sir; absolutely. If you ask a French expert or a German expert or an English expert what are the best railways in the world, I suppose they will each say their own country first, but they will always say the United States second.

The VICE CHAIRMAN. I am not asking you which is the best.

Mr. ACWORTH. Nobody has any doubt that they are the best railroads in the world, on the whole.

The VICE CHAIRMAN. As a witness who has been all over the world and studied railroads all over the world, I am asking you as a practical proposition.

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. I am not asking you what is the best railroad or which country has the best railroads, but the best system of regulating the railroads.

Mr. ACWORTH. The proof of the pudding is in the eating. The result is that you have got the best railroads in the world. But I can see no need for revolution; I do not see any necessity, either, for purchase or for entire reconstruction of the railroads or anything else. I think the thing can work itself out quite satisfactorily under consistent regulation, accepting at the outset that whoever runs the railroads—the Government or anybody else—they must either charge higher rates or get the money from the taxpayers.

The VICE CHAIRMAN. I will not stop to quarrel with you about the question of rates or what the facts are at present with regard to them, but suppose now that we come to the hypothetical situation suggested by Col. Cummins. If you authorize—do not compel, but authorize—a company to take over another company, or authorize a new corporation to take over both, or any number of them, from your experience, and as a judge of human nature and corporate practice, would they be likely to assimilate the poor ones with the rich ones? Would they not go on in the same old practice, both as corporations and as men, to acquire the strong ones which are attractive to one another to combine?

Mr. ACWORTH. No. Certainly within my lifetime the process has been going on in England of the big railroads absorbing the small railroads, which are nearly always poor. That has been going on as long as I can remember.

The VICE CHAIRMAN. But they hold out prospects, though?

Mr. ACWORTH. Sir?

The VICE CHAIRMAN. A road may be rich in prospects, if not in immediate carriage?

Mr. ACWORTH. A big railroad can afford to pay a better price for a poor property than it is worth to the owners of it. They can fit it in, and they can save a certain amount of money by better organization; they can raise new money that is required to put the property into good condition on very much cheaper terms than the poor corporation can do, and, for various reasons, they can afford to offer terms that are attractive to the owners.

The VICE CHAIRMAN. Railroad men are very often mistaken, you know, about whether a railroad is necessary or appropriate in a particular place.

Mr. ACWORTH. Yes.

The VICE CHAIRMAN. Sometimes they take the notion that the country is sufficiently occupied with railroads, and that the propagation ought to stop, and that there should not be any more railroads, and that they should be allowed to make all the money. For instance, about the time I was born railroad investors said it would not do to build a railroad where Atlanta, Ga., now is; that there was no come out in that country at all, and the proposition was, if it

was to be built at all, to run it down to Decatur or Stone Mountain, or somewhere else, and yet they have built up the strongest point in the South. And I remember a man who was the president of the Central of Georgia Railway, who was the smartest man who has ever been president of the railroad—the others all being dead or removed—and he said it would not do to build a railroad to Carrollton, and that they had built a bridge across the Chattahoochee River 50 years too soon, but I told him that they did not build it 50 years too soon, but rather 100 years too late, and if it had been built sooner it would now be blossoming like New York.

Mr. ACWORTH. Well, sir, I found an English newspaper article of the year 1842, wherein it was pointed out that England was very much oversupplied with railroads. I think they then had about 500 miles.

Mr. SIMS. He was an expert, likely?

Mr. ACWORTH. I do not know, sir; he did not put his name to it.

The VICE CHAIRMAN. I should like to ask you on another branch of the case. In any of the countries you have mentioned, and in all of your experience, has there been any legal tribunal especially existing to adjust disputes between carriers and their employees?

Mr. ACWORTH. A member of the committee asked me about Australia, and I am sorry to say I do not know as well as I ought. My recollection is that in Australia the State railroads are required to have an arbitration inside the company; that the men appoint a representative, and the employer appoints a representative, and they put in an arbitrator. I think it is something of that kind. In Canada, as I dare say you know, there is an arrangement under which before a strike may legally take place a board of inquirers come into a dispute. I expect you know the Le Mieux act.

The VICE CHAIRMAN. I know a great many resort to advisory boards and boards for investigation and report, but it occurs to me that before you can honestly say there shall not be a strike that there ought to be some legal, final, and decisive method of settling these disputes between the people, so a strike would not be desirable or necessary.

Mr. ACWORTH. We have an arrangement in England which I think you have not had. We have had various strikes and threats of strikes. We now have what since 1911 we call conciliation boards. Each railroad has a certain number of conciliation boards; one deals with the enginemen and firemen, and another perhaps deals with the track hands, and another deals with station workers, and so on, different classes. And there is a board, we will say, of six or eight members, four of them representing the men, four of them representing the company, and they meet together, and any question in reference to employment can be raised before them. They have not any powers to order anything.

The VICE CHAIRMAN. In our system of regulation, where a commission has the last word, barring an appeal to the courts as to rates and practices, where it is now acknowledged or at least held by the Supreme Court, I suppose it will be acknowledged by at least one side, if not by both, that Congress, in its regulatory powers, may do all things, directly or indirectly connected with the operation of these railroads, in interstate commerce, I mean; of course, it is in interstate

commerce. Now, what do you think, under that, of the practicability and advisability of establishing by law a tribunal, whether independent, coordinate, or the same tribunal, that shall finally pass upon all questions of the salaries, practices of the employees of that carrier, and matters in dispute with the carrier?

Mr. ACWORTH. It seems to me that an expert body constantly keeping in touch with the situation and knowing the drift of sentiment and knowing the wages in comparison with other trades, and everything of that kind, is most valuable. The point where you always come up against a difficulty is if you give that body compulsory powers it is quite easy to compel the company, but, so far as our experience goes, it is not possible to compel the men.

The VICE CHAIRMAN. You can decide that question. If they do not like it, they can retire.

Mr. ACWORTH. Yes; but I mean to say you give an award against the men, and the men thereupon go out as a body and the railroads are tied up. You can not tolerate that.

The VICE CHAIRMAN. I am not talking about continuing the present intolerable conditions of a strike that will paralyze public business. I premised my question to you by stating the case. It is a quasi public business; the Supreme Court has enunciated that it is a quasi public business. We will regulate rates and practices of the railroads between them and their customers. The Supreme Court has clearly established now that you can regulate the practices between them and their men. Why is it not possible to stop all of this foolishness by saying this is a quasi public business, society can not be interfered with, public business can not be obstructed, we will fix a determining official board here to say whether an engineer or a fireman or a president or a general manager or a superintendent is getting more money than he is worth out of this road. What is the reason that would not be consistent with our system?

Mr. ACWORTH. I think the real answer is this: Supposing the Supreme Court says there are 100,000 enginemen—or whatever the number—or 50,000, and they are not to get any more money, and they have claimed more money, and they thereupon all go out—the Supreme Court, I have no doubt, can legally, if I may express an opinion on American law—I presume it is clear that the Supreme Court can put them in jail for disobedience to an order of the court: but, as a matter of practical politics, I do not think you can put 50,000 men in jail.

The VICE CHAIRMAN. It is not necessary to say that they will go to that extremity. They are merely to finally determine the case between this railroad company and its employees. It settles that status, and if they do not like it they can resign.

Mr. ACWORTH. They will all resign in a body; that is your difficulty.

The VICE CHAIRMAN. That is a business the officials of the railroads have helped to build up, and while they have preached combination—as you have alluded to yourself, they have taught the men to combine. But getting to the court, it deals with individuals and not bodies of men.

Mr. ACWORTH. May I give you an instance which happened in England? If, under war conditions, where it is much easier for the State to play the despot—

The VICE CHAIRMAN. We do not have any despots in this country; we are all equal and all vote for whom we like.

Mr. ACWORTH. Let me say then, for the State to give preemptory orders. We had the workmen in the coal mines in South Wales, on whom the English fleet absolutely depended for its coal. They went out; they struck. They were in a very bad temper. There was great friction between the masters and the men in that district. They went out. The Government announced that they were doing, as they certainly were, an illegal thing, in leaving their business, and the Government threatened that, if they did not go back by a certain day, legal proceedings would be taken and they would be liable to fine and imprisonment. The Government had to withdraw that notice before there was a ghost of a chance of getting the men back. The Government knew it could not put a couple of hundred thousand men in jail. The men simply said, "If you threaten us with jail we will not do any work. Now take back your threat and we will talk about it." do not see any way you can get rid of that difficulty.

The VICE CHAIRMAN. You do not think it is practical to establish a tribunal that could settle those disputes?

Mr. ACWORTH. It is quite practicable to establish a tribunal——

The VICE CHAIRMAN. Then what good would it do?

Mr. ACWORTH. I think it would be of a very great good, provided, say, you do not try to go too far and too fast. I am sure you cannot give a tribunal power to compel a whole class, in practice; you can put it into your law, but it will not work.

The VICE CHAIRMAN. I do not think the law would undertake to deal with the whole crowd in practice; I think it would undertake to deal with the individuals.

Mr. ACWORTH. But if all the individuals held together and all went out together. May I say just one thing, which is rather germane to this subject?

The VICE CHAIRMAN. There is not any doubt that the Supreme Court holds that we can prevent strikes altogether, but we do not want to do that until we provide some way to make them unnecessary and undesirable.

Mr. ACWORTH. It is easy to provide the tribunal. It is easy to give the powers, and difficult to execute the powers.

May I tell you this, because it is quite new, as far as I know? As I mentioned yesterday in our report on Canada, which has just come out, we are recommending a system of 20,000 miles be put together under the charge of trustees, who are really public authorities, and we have recommended that one of the five trustees shall be appointed on the special ground that he is in touch with the railway employees and is a person specially possessing the confidence of railway employees. Now, as far as I know, that is a new recommendation. Whether the Government will accept it, I do not know, but it bears on the point of how to deal with the question.

The VICE CHAIRMAN. I want to recur to the point Senator Cummins talked to you about. There is a line from New York to New Orleans, let us suppose. It may be continuous or it may be combined, made up by different roads adding their lengths to one another. But you can deal with each road which may be a part of any line, or you may say each one from New York to New Orleans is a continuous road. One of those roads has either natural or temporary advantages

over the other, and it is prosperous. I am assuming a case; I have not any in mind that fit this assumption. Its competitor is not prosperous. Its management may be just as honest, but, no matter what its misfortunes may result from, it is not doing well. If we increase the rates for both, the business immediately leaves—well, if you increase both the one which does not need the revenue gets unnecessary profit, while the other may get what it needs, but if you increase it alone, without increasing its competitor, then the business leaves it and goes to its competitor, and it is in worse condition than it was before.

Now, if the figures which Senator Cummins stated were true, and I am not stopping now to discuss whether they are or not, there are two views about it that 75 or 80 per cent of the business is done by roads which are prosperous and do not need any help and only 20 or 25 per cent is done by roads which are weak and do need help, although they may be more numerous than the other bunch of roads. Is it right to permit the roads doing 75 per cent of the business to exact from the public hundreds of millions of dollars that the roads do not need in order to enable the roads that are not doing well to pick up some revenue or ought we not to find some other means temporarily to tide them over?

Mr. ACWORTH. Yes, sir. I would be very much inclined to agree if it were a case of 80 per cent.

The VICE CHAIRMAN. That is the assumed case, and plenty of men say that is true.

Mr. ACWORTH. Well, if it were true, it might be cheaper and not unreasonable to help the 20 per cent.

The VICE CHAIRMAN. Probably if you had associated with myself and Senator Cummins as much as you have with your railroad conferees, you might be more doubtful yourself about the position, but there are plenty of men who think those figures are approximately correct; that there are at least two-thirds of the roads that are prosperous. Now, you have heard of business men who really were in financially bad condition—if they had let it be known what their condition was they would be bankrupt—but they kept a stiff upper lip and tided over the troubles and got rich, or simply realized on their assets and remained rich. I will suggest to you that these railroads, by long campaign, by a year or two of calamity talk about the wretchedness of their condition, have scared capital and have put themselves in worse condition than they ever would be, but, be that as it may, we are simply assuming the figures. Now, it is a practical question if some of the roads, leaving out all proportionate figures, if some of the roads are doing well and others are not, is it necessary to permit some of them to tax the people unnecessarily in order to help the others or should we not find some other way to do it?

Mr. ACWORTH. It seems to me it all depends on the balance.

The VICE CHAIRMAN. Then go on the assumption that I make. Come back to the assumption that Senator Cummins and I advanced. Say three-fourths of the business of the country is done by roads that are prosperous.

Mr. ACWORTH. Prosperity meaning so good a dividend that they are able to attract as much new capital as they require?

The VICE CHAIRMAN. I am not talking about how big the dividends may be.

Mr. ACWORTH. I want to understand what we mean by prosperous.

The VICE CHAIRMAN. That is not necessary. You and I might differ about what that is. But if we conclude that two-thirds of them do not need the help right now and that the other one-third does, assume for the minute that you are wrong and I am right, assume a case without reference to the opinion of either of us, because there are more folks who believe in my assumption than do in your idea, now assuming that, is it right to tax the public, to permit these roads to tax the public, to increase their wealth that they do not need when we might find some other way to tide over those who are about to break?

Mr. ACWORTH. Well, sir, it is really very difficult for an Englishman to answer, because to talk of taxing the public for a railway rate——

The VICE CHAIRMAN. That is what the railroads are permitted to do.

Mr. ACWORTH. I mean it does not seem to me that it is anything like taxation. The railroads have got a commodity to sell, and they ought to be allowed to sell it at a price that leaves them a fair profit.

The VICE CHAIRMAN. Strike out the word "tax" and say "exact"—the power to exact.

Mr. ACWORTH. The power to charge?

The VICE CHAIRMAN. The power to take money, let us say, which they do not need.

Mr. ACWORTH. Let us say "charge."

The VICE CHAIRMAN. I do not care what your word is. Are you going to authorize them to take hundreds of millions of dollars they do not need in order to help a few that do need some assistance?

Mr. ACWORTH. It seems to me, if I may put it in the old economic form, that you ought to allow everybody to charge such a rate as is high enough to keep in business the last man that the public requires. If you remember when we used to read in the old political economy textbooks about rent, they said rent was the difference between the amount that it was necessary to give to the man who cultivated the worst field of wheat that was required to supply the public with wheat and the value of product of the best field.

The VICE CHAIRMAN. Your idea is that it is proper and necessary to preserve the relations of all; that if one is rich or the other is poor, whatever is done in the way of legislation you would keep things that way?

Mr. ACWORTH. I would put it this way: That it can not be right to prevent the poorest railroad that the public require—if a man builds a railroad that the public does not want he must take the risk—but if the public wants the railroad it can not be right to refuse the man who supplied it a decent commercial return on the article he is selling to the public. Now, if somebody else can sell more articles, or can produce them more cheaply, and so can make a larger profit; that is his luck, and he gets the balance.

The VICE CHAIRMAN. That would be true of two merchants if the Government did not undertake to regulate, but there is more in this than you seem to talk about. The idea in this thing is that the people need these railroads, especially during this time of war they have got to use them. Now, we also believe that the poorest people in this country have a right to some transportation as well as the

richest, and that a new country that has been developed and built up has the right to some facilities to build it up just as these others were done in the days of their infancy. Now, we have got to have the use of these railroads in this war. There is not any doubt about that.

Mr. ACWORTH. Yes, sir.

The VICE CHAIRMAN. The Government may be obliged to call on the weakest one, yet having undertaken to regulate these railroads the Government will hardly be willing to permit the bulk of them that are prosperous in this time of public stress to increase their charges, because some of the little, weaker ones that we need to use are in need of money. Now, in order to preserve their efficiency and continue their use and operation, at least during the time of public necessity, had we not just as well lend those little roads some money to help them to carry on the war as to lend it to our allies to fight Germany, and let them pay it back in transportation?

Mr. ACWORTH. You are asking me—I am not supposing that I shall influence the policy of the United States.

The VICE CHAIRMAN. Yes; but you are a witness, and a witness may come from St. Augustine or Patagonia, or anywhere else: it makes no difference if what he says is valuable.

Mr. ACWORTH. I will answer you frankly. I have been watching the United States railways for over a quarter of a century. I have read the newspapers; I have read a great many articles and books of professors of political economy and judgments of the courts, and I am absolutely out of sympathy with them. I do not understand this theory of having a right to regulate, meaning a right to prevent a man who has put his money into a commercial enterprise from earning a commercial return. I am frankly out of sympathy with the whole idea.

The VICE CHAIRMAN. We have heard that speech now for 20 years, ever since I have sat on the committee, that they can come in and defy the right of the Government to reach them because it is their private monopoly, utterly regardless of the fact that they are public servants, doing an interstate commerce that the Constitution says Congress shall regulate, and every solitary effort to regulate them has been fought with bulldog tenacity to the last extremity of the law. I have no doubt if all that money had been properly spent instead of fighting in the courts and before committees of Congress the railroads would have been prosperous to-day.

Mr. ACWORTH. Well, sir, all the money spent on fighting the Government would not go far in building a railroad.

The VICE CHAIRMAN. I do not think they bought any Congressmen, but they spent lots of money fixing up their cases, and they fought mighty, mighty hard, and they have made your speech time and time again. Now, if they would come in as good citizens and say, "We are Americans and subject to law, just as you are: we want to help regulate and have a right to have a voice in it," that would be another matter, but to come up boldly and say, "You have no right to regulate us because this is private property," this is a public business, and the Constitution says we shall regulate it.

Mr. ACWORTH. Do not mistake me. I was not going to argue against regulation. I believe that Government regulation is absolutely essential.

The VICE CHAIRMAN. Yet you said this was private property and you could not understand the authority of the Government to regulate that private business.

Mr. ACWORTH. No, sir; forgive me. I did not make myself clear. I can not understand that regulation is the same thing as limiting or cutting down profits. They seem to me to be two separate things.

The VICE CHAIRMAN. The law tells every man what he shall and what he shall not do. Some are in the right and some in the wrong.

Mr. ACWORTH. The law says, for example, a saloonkeeper shall only open at certain hours, etc. It does not attempt to regulate whether he shall make 20 or 40 per cent dividends out of his business.

The VICE CHAIRMAN. The proper authority could do it.

Mr. ACWORTH. It has not done it.

The VICE CHAIRMAN. Congress would not do it except in the parts of the country subject to its regulations.

Mr. ACWORTH. There are a great many businesses. You tell a factory it shall only run during certain hours.

The VICE CHAIRMAN. They regulate banking; they regulate usury; yet the railroads are the only people who come in and say, "You limit what we shall charge, yet put a minimum on what we shall do."

Mr. ACWORTH. Is not banking a fair instance? You regulate banking with great care, with much more detail than we do. Have you ever attempted to impose a limit on bank dividends?

The VICE CHAIRMAN. We govern the interests. No matter about the details. The point you made was that it was private capital and private business the Government is regulating.

Mr. ACWORTH. No, sir; forgive me. I really did not say so. What I said was——

The VICE CHAIRMAN. If the Government takes all regulation off of Judge Sims, here, and leaves him to follow his natural inclination, he could go out and get rich in 15 minutes.

Mr. SIMS. I wish I were unregulated, then.

Mr. ACWORTH. I said it should not be regarded as a necessary part of regulation to interfere with the commercial result of the operations. It seems to me banking is a perfectly fair parallel. You regulate banking; you insist on certain reserves being kept; you insist on the books being opened to the public examiner, etc.; but whether the bank shall have 10 or 50 per cent and how much of its profits it pays out in dividends and how much it puts to reserve, the bank settles for itself.

The VICE CHAIRMAN. I do not think there is any law about the railroads as to what dividend they shall declare.

Mr. ACWORTH. No, sir; but have you ever suggested that because such and such a bank is paying 20 per cent. therefore the Government ought to require it to lend money cheaper to its customers?

The VICE CHAIRMAN. And we never have about the railroads.

Mr. ACWORTH. Yes, sir. What you have done to the railroads is practically this: It is as if you had said to a bank, "You are paying 20 per cent; the market rate for a borrower is 5 per cent; you are rich and you can afford it, and you shall lend to your customers at $4\frac{1}{2}$ per cent."

The VICE CHAIRMAN. We have said to the railroads only——

Mr. ACWORTH. You have reduced the rates.

The VICE CHAIRMAN. That is an argument the railroads make and none of us believe.

Mr. ACWORTH. You asked me. I believe it.

The VICE CHAIRMAN. You have a good many times taken refuge under the fact that you did not live here and did not know all these things.

Mr. ACWORTH. Lookers-on see most of the game, sir.

The VICE CHAIRMAN. You do not think it would be practicable for the Government during the war, when it is making loans, to lend to a railroad that needs money in order that the Government may use it during the war, and let the railroad pay it back in service, or any other way it can?

Mr. ACWORTH. I do not think it will have any money to pay back with.

The VICE CHAIRMAN. If the Government wanted to haul cannon and troops to send over to France to help whip Germany, it could do that much, could it not? I have in mind some of these weak railroads which run through a far better country than some of the strong ones; if they had just a little chance and would quit their crying calamity they would get to being profitable.

Mr. ACWORTH. Well, the investing public does not agree with you.

The VICE CHAIRMAN. No, sir; some of these investors have got the idea in their heads that we have got railroads enough; that we do not want to build any more; and they have stated before this committee that none would be built in the future except what the existing railroads would build.

Mr. ACWORTH. I think that is true.

The VICE CHAIRMAN. I do not. I think legislation is going to try to turn the other way so that some more will be built by somebody. I know of a thousand or two thousand miles which ought to be built, yet these existing railroads surround that country and say, "No, you do not need any railroads there."

Mr. ACWORTH. You know what we have done in England about the war question. Our Government, from the day the war broke out, assumed the whole responsibility for the railroads, and did it this way: They said, "We will guarantee to each company the same net income that it was earning in the last complete year before the war." and therefore whether the railroad makes a profit or makes a loss, as compared with 1913, makes no difference to the company, the Government takes the profit, if there is any, or pays the difference, if there is any.

The VICE CHAIRMAN. We have got a statute in the books, one as old as that, which authorizes the President in time of war to seize all the railroads and operate them during the war; but we have met with two contentions in trying to make that practical. The carriers themselves want to make various provisions about how they shall be paid and when they shall be paid, and all that, while the men running the roads want certain provisions to look after their interests, and all that, you know, and in the midst of the confusion I thought of this proposition that I want to ask you about: Instead of seizing the roads under our constitutional power, why is it not more practical and more satisfactory to everybody to authorize the President just to order the officials of a railroad, without seizing

the road by the Government, to render what practical service he wants, in preference to other service, and pay for it.

Mr. ACWORTH. Of course, I could not attempt to judge. I take it the war service in the United States either will be a very small percentage compared to what it is in a country like England, where we have got practically everybody——

The VICE CHAIRMAN. That would not justify taking over the roads, would it?

Mr. ACWORTH. You mean here?

The VICE CHAIRMAN. Yes.

Mr. ACWORTH. I mean to say it is not obviously so urgent to deal with it. You can deal with it on a basis of paying. I do not think that is going to be your difficulty. Your difficulty, it seems to me, is going to be this: You are going to divert traffic from one road to another in order to get it through as quickly as possible. You may deprive one railroad of the traffic that they normally would have had, and you may put it on another railroad. You may take it out of Peter's pocket and put it into Paul's, and Peter will grumble, and justly. That, I think, is going to be your difficulty—adjusting the fair payment between one railroad company and another—if you, from the outside, deliberately upset the previous course of traffic.

The VICE CHAIRMAN. We already have a provision in our act to regulate commerce to authorize the President in time of war to order the railroads to do military service in preference to the service of other people. That is a bare statement of it without going into all the details or making provision for adjusting the thing, and it did occur to me that it was far preferable to merely authorize the President to command a particular service and pay for it than to commandeer the entire system of railroads, especially in view of your opinion that the service required will not be so great in this country as it will be in England and France.

Mr. ACWORTH. But the difficulty is not to pay for the service but to compensate the man for the service you have not given him a chance for rendering and earning the money for.

The VICE CHAIRMAN. They have not complained about that.

Mr. ACWORTH. It is going to be the man who has lost on the traffic, and therefore his revenue, who has the best ground to complain, as I see it.

The VICE CHAIRMAN. Yet if we were to take over the railroads without specifically providing for all of those details, the next generation would never be done paying for depriving them of all this service.

Mr. ACWORTH. Our system works as simply and easily as possible. There was never an argument between the Government and the railroads. Wherever the balance is one way or the other, the Government just pays it over. There is an audit going on all the time.

The VICE CHAIRMAN. You have got all the details fixed?

Mr. ACWORTH. They do not fix them at all.

The VICE CHAIRMAN. They do not have to?

Mr. ACWORTH. You fix nothing. You merely say that a given company had in 1913 a revenue of a million dollars. Now, in 1915 it has got to have a net revenue of a million dollars. Supposing it

receives over the counter for doing service \$8,000,000 and it spends \$7,000,000 in doing the service, it has got its million.

The VICE CHAIRMAN. Then you do not allow for any speculative profits that the railroad might claim it could have made under other conditions?

Mr. ACWORTH. Certainly not. You draw a line; you say there is your figures, now there is what you are going to receive. If the balance, after paying working expenses, gives you just that, nobody pays anything.

The VICE CHAIRMAN. Sir, on behalf of the committee I want to assure you that we have enjoyed sincere pleasure in your visit and in hearing your luminous statement on the subject.

Mr. ACWORTH. May I end, as I began, by saying that I am very grateful to the committee for their great courtesy in holding a special session in order to accommodate me?

Mr. SIMS. Let me ask you a question. Do the German railways make a charge for carrying the mails and keep a separate item, or are the mails carried just like your English troops are now carried, without charge?

Mr. ACWORTH. The mails in Germany are carried under the same arrangement that existed with private companies before the State took them over, which is, broadly, that the post office is entitled to a certain amount of accommodation on every train free.

Mr. SIMS. What I want to know is this: Does the Government, as a government, put part of the general revenues into the railway funds for carrying the mails?

Mr. ACWORTH. Broadly, not. I do not think it does pay anything.

Mr. SIMS. You spoke about earning \$50,000,000 or \$60,000,000 on the average. That means also in addition to the \$50,000,000 or \$60,000,000 free service for carrying the mails?

Mr. ACWORTH. In addition to that the railways render a large amount of free service to the post office.

Mr. SIMS. In this country it would probably increase the receipts to the Government out of railway operation. Do you know what that amount is?

Mr. ACWORTH. I do not think any figures have ever been taken out. The same thing happens in France. The French railways carry the mails free.

Mr. THOM. Mr. Chairman, may I make a suggestion. Mr. Acworth has testified from a paper which I hold in my hand, entitled "Historical Sketch of Government Ownership of Railroads in Foreign Countries," by W. M. Acworth. I would like with the permission of the committee, to insert it in the record.

The CHAIRMAN. How many pages are there in that?

Mr. ESCH. There are 60, I should say.

The VICE CHAIRMAN. Does that contain the same matter that you have gone over in your statement?

Mr. ACWORTH. My statement in chief was picking out the salient points of this paper.

The VICE CHAIRMAN. Is that the same matter that Mr. Thom holds in his hand?

Mr. ACWORTH. Yes, sir.

The VICE CHAIRMAN. The reporter will insert the pamphlet in the record.

(The pamphlet referred to by the vice chairman will be found printed in full on p. 1215.)

Mr. ACWORTH. Mr. Chairman, a question was asked me yesterday about our Canadian report—I have forgotten just which member of the committee asked it.

The VICE CHAIRMAN. Do you think we had better print all of that or just certain divisions of it?

Mr. ACWORTH. That is entirely with the committee, Mr. Chairman.

The VICE CHAIRMAN. We do not know much about it.

Mr. ACWORTH. I do not want to make any suggestions. It is a volume of 200 pages, of which about 100 is appendix.

The VICE CHAIRMAN. Is it capable of such subdivision as that we can print the more valuable part and exclude the other?

Mr. ACWORTH. I think if you were to print any part of it—if it interests the committee to have anything printed—you should print the part that deals with the principles, and not necessarily print the statistics as to the length of the Canadian railroads, etc.

The VICE CHAIRMAN. Will you hand that part of it to the reporter?

(The pamphlet referred to by the vice chairman will be found printed in full on p. 1263.)

The VICE CHAIRMAN. The committee will now adjourn subject to the call of the chairman.

(Accordingly, at 11.45 p. m., the joint committee adjourned subject to call of the chairman.)

APPENDIX A

HISTORICAL SKETCH OF GOVERNMENT OWNERSHIP OF RAILROADS IN FOREIGN COUNTRIES

By W. M. ACWORTH

HISTORICAL SKETCH OF GOVERNMENT OWNERSHIP OF RAILROADS IN FOREIGN COUNTRIES.

INTRODUCTORY.

On the 24th of May, 1830, the first few miles of the Baltimore & Ohio Railroad were opened for traffic. Four months later—on September 15—came the opening of the whole 30 miles of the Liverpool & Manchester—a yet more conspicuously dramatic event, for not only did this line connect two of the greatest cities in the world, but a cabinet minister was killed by one of the first trains run. And so at the outset the United States and England, the two countries where capital was most abundant and most venturesome, accepted, half unconsciously, no doubt, the principle to which they have since adhered, and, relying on that spirit of individual enterprise which centuries of history had called forth and fostered, intrusted the development of their railways to the unaided energy of private citizens organized into voluntary corporations.

“The English and American maxim is,” says Mr. A. T. Hadley, president of Yale, in his well-known book, *Railroad Transportation, its History and its Laws*, “that whatever can be done without Government should be thus done. The continental principle is that whatever can be done by Government should be.” How far operating a railroad was a thing that could be done by Government must have been a difficult question to solve in the early days. For, though construction and maintenance of roads and canals had long been recognized as a Government function, no Government had ever monopolized the carriage of traffic on these highways; and at a very early stage in railway history it became clear that the owner of the road must in this case have also the exclusive right of carriage along it.

But abstract considerations are apt to go to the wall when practical questions press for instant solution. On October 4, 1830, Belgium, which had in 1815 been made by the Treaty of Vienna part of the Kingdom of Holland, declared its independence. And if independence, economic as well as political, was to be secured, if Belgium was to hold its own against Holland, if Antwerp was to be able to compete with Rotterdam, it was urgent that the great traffic route from the Rhine and the German frontier through Liege and Brussels to the Scheldt and the North Sea should be under Belgian control. A railway must be built. If built by private capital, the capital would almost certainly be Dutch. Accordingly, as early as 1834, the Belgian Parliament resolved that the railway should be built and worked by the Government. And by 1840 upward of 200 miles, the main trunk lines of the Belgian State system as it exists

to-day, were already in operation. And so to-day we have behind us three-quarters of a century of history during which the characteristics, good and bad, of State and private railways can be compared and contrasted.

COMPARATIVE STATISTICS.

“Most countries own their own railways.” This statement, true but misleading, is often made. Bulgaria owns its railways, 1,204 miles in all. The United States has more than 200 times the Bulgarian mileage, all owned by private corporations. Bulgaria counts as a country; the United States counts as one also. According to the latest figures in the *Archiv für Eisenbahnwesen*, the official organ of the Prussian State railway administration, there were in Europe at the end of 1913, 216,396 miles, of which 116,111 (rather more than half) were State railways. There were in the whole world nearly 700,000 miles of railway, of which less than one-third were State railways.¹

The capital invested in railways, according to the same authority, amounted to 208,000,000,000 marks, or \$49,547,680,000. It is not possible to work out the respective proportions of State and private capital. Suffice it to say that whereas 33 of the nations enumerated own their railways in whole or in part, the United States and Great Britain, where the railways are all in private hands, account between them for more than half of the world's total railway capital. The *Archiv* gives no figures of traffic—of work, that is—done for the public. But Mr. Slason Thompson, in his *Railway Statistics for United States of America for the year 1915* (p. 41), states that the 25 principal countries of the world have 187,530 locomotives, of which 89,668 (almost half) are in the United States and the United Kingdom, while out of 5,816,441 freight cars these two countries have 3,123,660² (a good deal more than half). On the whole, having regard to the enormously greater capacity of an engine or a freight car in the United States than elsewhere, it is probably safe to make the broad statement that two-thirds of the railway mileage of the world has been built, two-thirds of the railway capital of the world has been provided, and two-thirds of the current railway work of the world is done by private enterprise, and only the remaining third by national undertakings.

It has, however, already been pointed out that if the nations of the world were polled, great and small, and assigning to each nation one vote, as at The Hague convention, a considerable majority would be found to have decided in favor of entire or partial State ownership. The United States and the United Kingdom are the only nations of the first rank who own no railways. Spain, Turkey, and Greece, among the less important European countries, are in the same position. Every other European nation and most of the extra European countries own some, at least, of their railways, though several of them, and those not the least important—British India, for instance, and Holland—have handed over the working of the national railways, partly in the case of India, wholly in the case of Holland, to private

¹ The exact figures are 690,138 and 225,914 miles, respectively.

² These figures take no account of the freight cars in the United Kingdom, estimated at 500,000 as a minimum, which are in the service of the railways but the property not of the railway companies but of private individuals.

companies. Mexico is set down in the Archiv as owning its **railways**; but, in fact, the Mexican Government is not the owner but **only the** majority shareholder, a shareholder who, as long as Mexico was an organized community, was content to vote the election of a **board of** directors put forward by the private minority holders of the **railway** stock.

CHANGES OF OWNERSHIP AND THE CAUSES.

Another point should be noted. There is no country which has throughout its history kept its whole railway system in its own hands. In Belgium in 1860 the State lines were less than half of the whole mileage. In 1870 the State proportion had fallen to little more than one-quarter. Prussia at the same date was still a country of mixed ownership, as the Scandinavian countries are still. But after the war with France in 1870 Belgium began to buy up the private companies, and Bismarck inaugurated a new policy in Germany. He attempted to acquire the private lines for the new German Empire. Foiled in this attempt by the local particularism of the separate States, he carried through in Prussia a thoroughgoing policy of nationalization; and his policy was followed by the other German States within their own jurisdiction. To-day private ownership in Germany is almost extinct, and the railways in each separate State of the Empire are the property of that State. Germany's example was contagious. In recent years the Russian Government has bought out a good many companies. Austria has carried the same process even further. Belgium has acquired all the private lines of serious importance. In 1898 Switzerland nationalized its railways. Italy did the same in 1906; Japan in 1907. Last, but not least, in 1908 the French Government took over the Western Railway, one of the six great systems among which France had been distinguished since the beginning of its railway history. Even though, on the other hand, within the same period Brazil and several of the Central American States sold to private companies—mainly as an available asset to satisfy clamorous creditors—railways which they had owned, it is evident that the idea of nationalization has been in the ascendant in recent years. How far does history help us to explain the fact?

President Hadley wrote in 1886:

The motives which have led governments to extend the sphere of their business activity have been three:

1. To increase their own political influence.
2. To make up for the lack of private enterprise.
3. To avoid the abuses incident to private management.

Thirty years have elapsed since that was written, and in the light of subsequent experience perhaps the case may now be stated as follows:

Governments go into the railway business for three reasons:

1. For political reasons. These reasons may be either external or internal. External reasons are to obtain control of an instrument of war that can be used either for aggression or for defense, or to prevent the control of this instrument by capitalistic subjects of another possibly hostile power; or, again, to be able to use the railway tariffs as an auxiliary in support of the policy embodied in the customs tar-

iffs of the country. The main internal reasons are either to unify the nation or to centralize authority or to obtain new sources of revenue independent of the taxes voted by Parliament.

2. To make up for the lack of private enterprise.

3. With the idea of procuring for their citizens better conditions—lower rates, greater facilities, more impartial treatment, etc.—than private enterprise has given or is expected to give.

It would require a volume to tell in full the events which led up to nationalization even in any one country, to enumerate the various reasons, and to estimate the comparative value to be assigned to each. But the outline of the story can be briefly told.

NATIONALIZATION IN PRUSSIA.

Prussia, the leading instance of State ownership, as being at once the largest and usually regarded as the best example of an efficient national railway system, must be dealt with first. At a later stage in this paper we shall have to consider two questions of first-rate importance:

1. Are the Prussian railways really efficient when judged by the standard of comparable private undertakings; and

2. Assuming for the sake of argument that the Prussian railways are efficient, is their efficiency under an autocratic government any ground for expecting that national railways would be equally efficient under the democratic form of government that exists in the United States and the United Kingdom?

For the moment we are only concerned with the history of the nationalization policy inaugurated by Bismarck.

When railways first came into existence Germany was only a "geographical expression." Each State—there were some two score of them—was practically an independent sovereignty. At the outset several of the most important States of the second rank—Bavaria, Wirtemberg, Baden, and Saxony—followed the example of Belgium.

The Grand Duchy of Mecklenburg offers a curious example of vacillation. At first its railways were in private hands; then they became the personal property of the grand duke; then, in 1878, just at the time when Prussia was nationalizing its railways, they passed back into private hands; and finally, in 1890, they were acquired by the State. Speaking broadly, one may say that in the richer and more commercially developed parts of Germany the railways were in private ownership; in the more backward agricultural districts they were in the hands of the various State governments. This is well exemplified by the history of the Kingdom of Prussia.¹ At an early date private railways were constructed in Westphalia, along the Rhine, and connecting the Rhine and Hamburg with Berlin. But private enterprise hesitated to build railways over the poor country from Berlin eastward, and the State had to undertake the task. So that almost from the beginning Prussia had experience of State railways. Then, after the war with Austria, in 1866, Prussia annexed Hanover, Hesse-Cassel, and other smaller States, and so

¹ The King of Prussia is, under the constitution of 1870, also German Emperor. But Prussia still remains a separate State. It is much as though the governor of the State of New York was always also President of the United States. But New York is a population, less than one-tenth of the United States. Prussia is three-fifths of Germany.

entered into possession of a considerable additional mileage of State railways.

Then came the war with France in 1870, resulting in the unification of Germany under the leadership of Prussia. And Bismarck, in order to cement together the newly formed Empire, attempted to acquire all the railways of Germany for the Empire as one single unit. But the feeling for State rights, especially in the south, was too strong even for Bismarck. The Kingdoms of Bavaria and Saxony replied to the Prussian proposal by promptly taking into their own hands such private lines as existed in their territories. Foiled in this attempt, Bismarck determined at least to nationalize all the Prussian railways. Probably he had a stronger case for his action than has ever existed at any time in any other country. The private systems were comparatively small and of very different financial strength. The shape of Germany, the fact that traffic passed in all directions over its frontiers, the fact that it possessed no dominating central city such as Paris or Vienna or London—all these causes had resulted in a condition of what might be called railway anarchy. There was no uniformity of tariffs, scarcely even of operating regulations and conditions. While traffic from abroad was attracted to roundabout routes by reduced rates often accompanied, it was alleged, by secret rebates, the local rates were high, and the exchange of traffic between two neighboring systems was actually discouraged.

In the session of 1879 the ministry submitted to the Prussian Parliament an elaborate memorandum in support of the policy of nationalizing the railways remaining in private hands.¹ It marshaled with great skill, and applied to the special case of Prussia, all the familiar arguments in favor of railways nationalization. It began by emphasizing the importance of railways for military purposes—it is interesting to observe that the "military" note is struck hard at the outset—and for the development of trade. It went on to declare that various abuses were inseparable from private management. These abuses it described as (1) the existence of numerous concerns of doubtful solvency and restricted capacity of service, (2) abuse by the concessionaires of their privileged position, (3) opposition to desirable reforms, (4) complicated and arbitrary variations in their methods of organization, (5) chaos of tariffs, (6) quarrels and waste resulting from the fierce competition of numerous separate administrations.

Perhaps it is desirable at this stage to bring the allegation that all these abuses are inseparable from private management to the test of nearly 40 years of subsequent history and to deal with them seriatim as follows: (1) There are no concerns of doubtful solvency and restricted capacity among the private railway companies of France, and none of more than trifling importance in England. (2) Appears to mean that a company strives to gain an adequate net revenue before it will reduce its rates, which is true. But as the Prussian memorandum lays down in the strongest terms the obligation of a State system to do the same thing, and as the Prussian Government has for many years offered an unyielding opposition to any reduction of rates, while it has extracted from passengers and ship-

¹ Begründung des Gesetzentwurfes betreffend den Erwerb mehrerer Privateisenbahnen für den Staat. Abgeordneten Hauses Verhandlungen Session 1878-1880, Actenstück, No. 5.

pers a net revenue, which, after paying interest in full of the railways' debt, yields in normal times a sum of some \$50,000,000 toward the general expenses of Government, the abuse, if it be an abuse, does not seem to be confined to private railways. (3) In answer to this charge it is sufficient to say that it is the private railways of England, France, and the United States which have led the world in improvements, while it would be difficult to mention a single reform for which the world is indebted to the State railways of Prussia. (4) As has been said, had this charge been confined to the private railways of Prussia, there was a considerable foundation for it. But it applies neither to France, England, nor the United States. In all these countries the private companies have worked out among themselves uniform codes of rules in reference to operation, construction of equipment, interchange of traffic, and everything else required to avoid interruption of through service. (5) As for chaos of tariffs, the French tariffs are simpler and more logical than those of Prussia, and for all ordinary traffic they are uniform throughout the whole of France. Perhaps the most scientific tariff in the world is that which for very many years has ruled in the trunk-line territory of the United States with its simple and easily intelligible New York-Chicago basis. (6) As for "quarrels and waste," quarreling is only a bad name for competition. Competition may or may not be a good thing. But it is not inseparable from private ownership. The French companies have, with negligible exceptions, never competed with one another, while the English have in large measure ceased to do so. Competition would probably have much more largely diminished in the United States also had not the deliberate policy of Congress been to keep it alive. So far as competition implies waste—that is, the expenditure of money that in the absence of competition would not have been spent—one can not have omelettes without breaking eggs. Prussia has abolished competition. Her railway accounts give us no reason to think she has thereby abolished waste. But with this point it will be necessary to deal hereafter.

To return to the memorandum. The Prussian ministry go on to say that as early as 1873 a special commission had reported that a universal State system should be regarded as the ultimate aim to be sought. They then go on to set down the advantages of a single unified management. These they summarize as follows:

Avoidance of the construction of competing lines.

A reduction of the numbers of officers and staff and of the amount of correspondence.

Unification of tariffs and train schedules.

Simplification of dealing with damage claims.

Provision of interchange stations.

Better use of equipment.

Avoidance of duplications of service and of roundabout routing of traffic resulting in higher operating costs and consequently higher rates.

It is the duty of the State, says the memorandum, to secure to the public rates which shall be low, steady, and uniform. It is also important to the State that the railway tariffs should correspond with the fiscal policy of the country and not be allowed to neutralize the customs tariff. Assuming, then, the memorandum goes on to say:

that the railways of the country must be in a single hand, this object may be attained in four different ways: (1) A single private company may both own and operate, (2) a private company may operate the lines which the State owns, (3) the State may operate all the private-owned companies, (4) or, lastly, the State may both own and operate the whole system. And it is for this last solution that the memorandum declares. Confidence is expressed that the zeal of the staff will suffice to render unnecessary the stimulus of competition. The State, it is said, having no shareholders greedy for their annual dividend, can afford to take longer views than a company. But it must continue to charge rates sufficient to cover expenses, interest, and sinking fund and the "current expenses of the State." Whether this meant what it said, or whether it only meant the liabilities of the State in its capacity as railway owner, it is impossible to decide.

This much, however, is certain. The act as it passed the Prussian Parliament, contrary to what had generally been understood during its progress, contained no express provision that railway revenues should be used only for railway purposes. And ever since the railways have been, to use the favorite phrase of domestic critics, "the milch cow of the treasury."

On the whole, it is absolutely clear that, though there were considerable abuses of private ownership in Prussia, and though the desire for unification of management both from the commercial and the operating point of view was not without weight, the main reason for Bismarck's action was of a political nature. It is in harmony with all Prussian history that the importance of military considerations and the necessity of making public control paramount in the life of the country should weigh above all other considerations with a Prussian statesman; and after the war with France and the creation of the German Empire these considerations might be expected to have even greater weight than at any other time.

SWITZERLAND.

Were it not that the scale is so disproportionate as to make a comparison almost laughable, for the railroads of the United States earn as much money in two days as the Swiss railway system in a twelve-month, Swiss history would be a stronger argument than most that are put forward for the nationalization of American railroads. Switzerland has owned and operated its railways for more than 15 years. Switzerland is a democracy. And Switzerland, though the results fell very far short of the expectations entertained at the time of purchase, managed its railways, on the whole, with fair, if by no means with brilliant success, until the breaking out of the European war upset the entire life of the country.

Switzerland is a union of three nationalities—German, French, and Italian. But the German population is a good deal more than two-thirds of the whole; and naturally, therefore, German political and social theories have great influence. As early as 1891 the Swiss Legislature passed a law authorizing the purchase of one of the principal railways, the Swiss Central. But this law was defeated on a referendum by a majority of more than two to one. The movement, however, in favor of nationalization continued. In 1897 an

act for the purchase of all railways except lines of purely local interest passed the two chambers, with majorities of 98 to 29 and 25 to 17, respectively; and this time on a referendum there was a two-to-one majority in favor. The memorandum prefixed to the bill repeated the arguments in favor of State ownership in words that might almost have been copied from the Prussian memorandum which has already been dealt with. There was, however, one additional argument which apparently had as much weight as all the others put together. Swiss railway shares, it was stated, had of late years ceased to be held as permanent investments, and had passed in large measure into the hands of speculators who were not Swiss citizens, but foreigners. And this dangerous state of affairs could not be allowed to continue. It had, in fact, been found that in three out of five companies the majority of the registered shareholders—and under a law of 1895 “registered” shareholders alone were entitled to vote—were foreigners.

It is not necessary to go into the history of the purchase. Three of the principal roads were transferred to the State in 1901, a fourth in 1903, and the last, the Gotthard, in 1909. The purchase price which was fixed in every case by agreement, exceeded by about 11 per cent the estimate of the cost originally put forward by the Government. Warned by Prussian history, the act laid down categorically that the railway budget was to be absolutely and completely independent of the ordinary budget of the State. Any surpluses obtained were to be devoted solely to railway purposes, either to be used as capital or to be devoted to reduction of rates and improvement of service.

In the early days of nationalization there was a very serious increase in expenses, due partly to a more generous service, but mainly to increased wages and reduced hours for the staff. For the four years following on 1903 the cost of staff increased year by year as compared with the previous year by the following percentages: 10.16, 7.08, 9.99, 9.27. Between 1900 and 1911 the number of the staff increased 46 per cent, while wages increased 92 per cent. In 1912 a further increase of less than 1 per cent in number of staff corresponded with an increase of no less than 10.2 per cent in wages. The increase in the number of the staff was, no doubt, justified by a 25 per cent increase in road mileage, and an increase of 100 per cent in passenger traffic and of 67 per cent in freight traffic. But the rise of over 100 per cent in the wages bill upset the equilibrium entirely. The operating ratio went up from 65.53 per cent in 1903 to 71.03 in 1908. In three years, after meeting operating expenses and the charges of the debt, there was an accumulated deficit of over \$2,500,000.

The management took fright. They cut down renewals, reduced services, increased rates and fares, stopped automatic increases in staff wages, and by refraining from filling up vacancies gradually reduced the number employed. The public and the employees submitted, not without natural reluctance, and the financial equilibrium was restored. After placing to sinking fund an average of about a million dollars per annum the railways just cover interest on their debt at the rate of $3\frac{1}{2}$ per cent. But the rosy views of the authors of State purchase have been far from materializing. They promised reductions of rates and fares, and with the great increase in traffic

density ought, one can not but think, to have been able to obtain them. The average fare was indeed reduced by $13\frac{1}{2}$ per cent between 1900 and 1911. But freight rates were rather worse than stationary. The ton-mile rate was slightly under 3 cents a mile in 1900; in 1911, it was slightly over. The authors of the purchase further estimated that the profits to be realized would suffice to extinguish the railway debt within 60 years. In fact, the sum paid for the acquisition of the railways was \$205,493,880. And the debt at the date of the last account, with one-quarter of the period expired, so far from being reduced had risen to \$270,132.80.

ITALY.

The history of Italian railways is much too complicated to be even sketched in outline here. An admirable summary coming down to 1884 will be found in Hadley's "Railroad Transportation." Italy has experimented with every conceivable form of railway policy. It has tried State ownership and operation, private ownership and operation, State ownership with private operation, and now for the last 10 years it has reverted to both ownership and operation by the State. The country has been hampered in its railway development by various causes—geographically by its shape and by the mountainous divisions between east and west; politically by the fact that not until 1870 did the whole of Italy become a united kingdom; and financially by the fact that the economic development is backward, the people very poor, and at least till quite lately subject to a crushing burden of taxation.

As the Kingdom of Italy gradually grew together out of its component States it was necessary to make railways to cement its unity. Further, the State was compelled to take over the liability for railways which other people had constructed. The Austrians, for example, had built railways in Lombardy and Venetia, but when they were expelled from those Provinces in 1859 and 1866, respectively, the State had to buy out the Austrian company or else leave two of the richest Provinces still subject to the domination of the hated foreigner.

Between 1866 and 1885 the bulk of the railways of the country were in the hands of the State. In the latter year, as the result of an inquiry by a commission which sat from 1878 to 1881, studied the history of the railway world in exhaustive detail and embodied its report in seven quarto volumes, the Italian railway system was handed over to two great operating companies on a 60 years' lease, terminable at the end of 20 or 40 years—the Mediterraneo and Adriatico, respectively. The essential idea was, as indeed the names of the companies imply, that one system should operate along the western coast and the other along the eastern. Each company was, either by its own lines or by means of trackage rights, to have access to the great centers—Milan, Florence, Rome, Naples—and in this way it was hoped that competition would secure adequate services and reasonable rates.

The leasing system was not a success, mainly because both the lessors and lessees took too sanguine a view of the prospects of the future. Almost at the outset it became evident that additions and improvements, especially additional rolling stock, were urgently

needed; and there were no additional net receipts to pay the interest on the capital required. Why should the Government find this money for railways not in their hands; and, on the other hand, why should the companies take the risk on so short a tenure? There was another very serious factor. The railway staff, who had great political influence, and who assert, probably not without reason, that they were overworked and underpaid, were clamoring, and in some cases even striking, for better conditions of service. And last, but not least, the rolling stock was grossly inadequate, and what there was almost falling to pieces. In the result Parliament, with a sudden resolve to cut a knot which it could not untie, on April 22, 1905, determined to take over the railways as from the following 1st of July.

Undoubtedly, as agencies of public service, the Italian railways have been considerably improved in the last 10 years. The number of locomotives increased in eight years from 3,580 to 5,322, and the number of freight cars from 69,000 to 105,000. And the improvement is even greater than these figures would indicate, for old stock has been scrapped and replaced by new and efficient equipment, lines have been improved and doubled on a considerable scale, and the services undoubtedly much improved. But the financial results are very serious, especially for a country so poor as Italy. The demands of the staff, which the railway administration has found itself powerless to resist, have, in eight years, 1906 to 1913, implied an additional expenditure of \$18,330,440. In the same period the number of staff increased from 121,000 to 149,000, equal to 23 per cent. Per kilometer of road worked there were 9.3 men at the earlier dates and 10.9 at the later. But while numbers increased 23 per cent, cost increased 57 per cent; in other words, the average wage per employee increased 27 per cent.

The gross receipts rose in the eight years from \$78,724,416 to \$120,595,000, or well over 50 per cent, while the length of line operated remained practically unchanged. Per train-mile the increase was from \$1.41 to \$1.63 or about 16 per cent. With much greater density of traffic and a considerable increase in earnings per train-mile, one would naturally have expected a substantial improvement in the operating ratio, once road and rolling stock had been brought into good order. But the opposite has been the case. In the first year of nationalization the operating ratio was 73.4; in no subsequent year has it fallen below 79.5 per cent; and for the three years 1911-1913 it averaged 84.4 per cent. Each year shows a substantial advance in operating costs over the year preceding it. The figure in the first year of the period was \$57,885,600; in the last it is \$102,264,560, an increase of over 78 per cent.

The final result is that, whereas in the financial year 1906-7 the railways paid over to the treasury \$9,796,366 as a return on a capital of \$1,091,404,045, which is roughly 1 per cent, in the last year they only returned \$5,402,656 on a capital that meanwhile had risen to \$1,374,975,952, which is roughly two-fifths of 1 per cent. An attempt was made in 1909 to raise the rates, but the ministry failed to carry their proposals and went out of office.

How far the Italian Government is satisfied with the existing situation may be judged from a significant fact which has not hitherto received the publicity which it merits. In at least two cases

just before the war concessions had been granted to a private enterprise which was to take over a portion of the existing State railway, to build an extension with the help of substantial State subsidies, and then work on its own account both sections as one undertaking.

AUSTRALIA.

The most conspicuous instance of railways being constructed by the State because private enterprise refused to undertake the task is to be found in the Australasian colonies of Great Britain. The Australasian population is of pure British stock, and when the necessity of railway building became manifest, as true Britishers they naturally expected private enterprise to undertake the task. But local capital was scant and England was far away. Moreover, Australasia was in the throes of the gold fever resulting from the discovery of the rich fields of Ballarat and Bendigo. And such local capital as was available was not likely to be put into railway enterprise to earn a possible 5 per cent when the gold fields offered prospects of a fortune in a few months. And accordingly as the need of railroads was imperative, the governments of the separate colonies borrowed money on their own credit and set to work to construct their own State railway systems. Once embarked on such ownership they have never gone back from it. Certain local lines have from time to time been built by private capital, but they have never been important. On the one hand neither local nor English capital has been overanxious to go into the business, and on the other the State railways have been jealous of interference by private companies. Speaking broadly, the seven separate States which make up Australasia have among them over 20,000 miles of railway owned and worked by the respective governments. And it must be frankly said that public opinion is entirely in favor of this system. No proposal to divest the States of their ownership would be listened to for a moment. And, having regard to the well-known fact that State socialism has been carried further in Australia than in any other part of the world, this is not surprising.

Whether the Australian public are really competent to judge how far they have got a good bargain may be illustrated by the following anecdote: Some years ago a distinguished railway man went from America to assume the post of chief commissioner—in other words, president—of one of the most important Australian State systems. After he had been in charge for a year or two he sent to a railway friend at home statistics showing the improvements and economies effected under his management. The friend, in acknowledging the receipt, pointed out that the figures furnished did not include the ton-miles of traffic, and therefore neither receipts nor cost could be worked out on a ton-mileage basis, and asked whether it was possible that a railway man accustomed to American methods failed to keep statistical records in this form. The answer was, in effect, as follows: "I have the ton-mileage figures. I dare not publish them. If I did publish them they would show a ton-mile rate so excessive, as compared with other countries similarly situated, where the traffic is mainly in agricultural products carried long distances, that public opinion would enforce a sweeping reduction in rates and bankrupt

the undertaking." It may be added, as proving that the chief commissioner in question had good reason for desiring to avoid a comparison, that two—New South Wales and South Australia—out of the seven Australasian State railway systems do publish ton-mileage statistics. They show ton-mile earnings of 2.20 cents and 2.12 cents, respectively. The corresponding figure for the private railways of Canada is 0.75 cent, and for the private railways of the United States 0.738 cent.

RUSSIA, AUSTRIA, AND INDIA.

Russia, Austria, and India may be grouped together as three countries where a mixed system of State and private ownership prevails. They are all alike in the fact that political, and especially military, reasons compelled the State to make railways which private enterprise was not prepared to undertake. They are alike, too, in the fact that the tendency has swayed back and forth as between State and private ownership. Austria at one time sold to private companies a number of railways that had been built by the State. Nowadays, having bought most of them back again, it owns 80 per cent of the total. One incident of the transfer deserves to be related. The Kaiser Ferdinand Nordbahn was an old and very rich company. Its dividend for the previous five years had averaged over 12 per cent. It was taken over in 1906. In 1910 the president of the Austrian Chamber of Deputies described the result as follows:

"We have always been in favor of the State taking over the railways, but if we had been able to foresee the results of the management I assure you we would have hesitated a little longer. We are still in favor of the principle, but it does seem to us that our Government has performed a remarkable feat when it has succeeded in creating a deficit on the Northern Railway. The Government have enlisted an army of new employees; they have gone much too far in the reduction of hours of labor; instead of commercial management they have appointed lawyers to posts that require business men or experts; they have established an entirely unpracticable bureaucracy. At the present moment we are face to face with a deficit of \$25,000,000. There would be no deficit at all if the return from our railways were that which it ought to be. I repeat that absolute imbecility has characterized the taking over of our railways. We must introduce business ideas into the Government service."

Russia, too, has not only built State railways but taken over private railways. Of late years, however, the tendency seems to be in the direction of private enterprise, subsidized and closely controlled by the Government, which at the present time owns and works two-thirds of the whole mileage. In India several of the most important lines were built by private enterprise, with State guaranties of dividend for a short term. At the end of the term, when these railways passed into the hands of the State, they were leased back to the old companies as operating contractors. At the moment of writing an exhaustive investigation is proceeding, which seems likely to result in the adoption of a definite policy for the whole country. British merchants in India are apparently strongly in favor of retaining the private companies. Indian native opinion appears, so far as it is

vocal, to be in favor of State ownership, the reason being that it is thought that Indian ideas would have more influence on the policy of a Government department on the spot than on that of a board of directors sitting in London. This last argument raises a point, the importance of which we have already seen in the cases of Belgium and Switzerland. Evidently the argument against private ownership is stronger where the capital is foreign than where it is found within the country itself.

A point of importance should here be noted. It is true that the Austrian Government, 40 years ago divested itself of its railway property. The Italian Government divested itself of the operation though not of the ownership as lately as 1885. More recently, Brazil—as also other less important States in South America, Guatemala and Nicaragua—have handed over some or all of their railways to private companies. But, speaking broadly, it is safe to say—subject, however, to the possibility of an exception in the case of Belgium to be referred to later—that nowadays, a decision of a nation to acquire its railways is irrevocable. This may be taken as proving—it has often asserted that it does prove—that no nation having experienced the benefit of State ownership ever desires to go back on its decision. But the argument cuts also the other way. If the decision be irrevocable, and modern railway history seems to indicate that it is, it is also well to be quite satisfied that it is the right decision before making it.

HOLLAND.

One country, small but not unimportant, has not hitherto been mentioned. In Holland, though some of the most important lines were built by the State, the operation has always been wholly in private hands. For many years there were in Holland three principal companies, the State Railway Co., the Holland Co., and the Dutch Rhenish Co. In 1890 the Dutch Government made a new departure. It bought up all the lines which it did not own and it then apportioned the whole system anew between two companies representing, respectively, the old State Railway and the Holland companies, in such a manner that each company had access to every important town in competition with the other. This system, which presumably was patterned on the Italian system of 1885, has been in existence ever since. In 1908 a motion in Parliament in favor of nationalization was brought forward and defeated. A parliamentary commission to investigate the question was subsequently appointed and reported unfavorably. The public seem to be satisfied with things as they are, the passenger service appears to travelers exceedingly good, but the financial result to the State is not over satisfactory. That, however, is perhaps unavoidable. Holland is intersected everywhere by rivers and canals, which have to be kept open for drainage purposes, and they carry the bulk of the heavy traffic of the country and of the German through traffic. The railways therefore have to depend for a livelihood in the main on passenger and high-class freight. What bulk freight they get, they can only get at exceedingly low rates.

One further point may be here noted. A suggestion has from time to time been put forward in various countries where the system of

private ownership prevails that the Government should purchase one or more of the private undertakings and should run it, partly as a pattern to be followed and partly as a regulating force to control the rates charged on the private railways alongside. Some such idea seems to be implied in the recent papers published in the United States by Mr. W. W. Cook. The idea has never been carried into practical effect. It is hardly likely to be seriously taken up nowadays in any country, and under the circumstances criticism is evidently superfluous.

FRANCE.

The railway history of France stands by itself. Nowhere is the passion for logic and the love of symmetry which distinguish the French genius better exemplified than in the history of the French railway system. The ground plan of the policy which, broadly speaking, France has followed ever since, was laid down in a law passed as long ago as 1842. There were important developments after the world crisis in 1857, and again in 1878. And on January 1, 1909, the Government by taking over one of the six great systems, the Western, upset the symmetry of the original plan. But with this exception through the whole history the original plan has stood firm. The whole country was divided up among six great companies, five of which radiate from Paris, and the sixth, the Midi, serves the extreme south and southwest. The development of the railway network has been systematic from the outset; trunk lines first, then important branches, then the less important ones, and finally in recent years a considerable development of light secondary lines. Throughout, the State has guided, subsidized, and controlled. Each company has a monopoly of its own district. So far as possible the points where the great systems meet are arranged not as in Holland, or formerly in Italy, at the great towns, but precisely at the points of least importance from a traffic standpoint. Where traffic is unavoidably competitive, as, for instance, from Paris to central Switzerland, which can be reached either by the Eastern or by the Paris & Lyons Railway, arrangements are deliberately made to prevent competition. The Government controls all rates and fares charged and all services given, and the Government approves not merely of pools but of agreements by which shippers attempting to consign traffic by the route by which railway companies have agreed the traffic shall not flow are deliberately penalized by higher rates. At a later stage of this paper more must be said of the work which the French railways have done, and reasons will be given to show that the French private companies have served their public at least as well as the Prussian State railways have served theirs. But it belongs here to deal with the history and the results of the nationalization of the Western Railway eight years ago.

For more than 30 years the French Government have owned and worked a system of lines in the central west of France. This system was not inconsiderable in mileage (1,844 miles), but its district was purely agricultural and its traffic scant. It only reached Paris over the lines of the private companies, and even when it served important towns such as Nantes and Bordeaux, it only served them by inferior

routes. The financial results were very unsatisfactory—the operating ratio over a series of years ranged between 72 and 83 per cent—but in some respects, as, for instance, admitting third-class passengers on all express trains, it gave to the public advantages which the private companies did not give.

Among the great companies much the weakest financially was the western. A large portion of its mileage was in Brittany, one of the poorest districts of the country. It did serve the town of Rouen and the very important port of Havre, but the canalization of the Seine diverted from the railway a large proportion of the valuable merchandise traffic between Havre and Paris. The French Government guarantees the dividend on the shares of all the French railway companies, and year after year the French Government had to find a considerable portion of the dividend to the western shareholders.¹

Further, large new capital expenditure was needed, especially to cope with the enormous passenger traffic of the company in the suburbs of Paris. How heavy that traffic is anybody who remembers the St. Lazare station in Paris will know. The necessary capital could not be raised without Government approval; and Government approval, owing to strong parliamentary opposition, could not be obtained. Meanwhile the service was going from bad to worse, and the equipment was on its last legs. Something had to be done. Once more the knot that could not be untied was cut. And as from January 1, 1909, the Government exercised its rights under the concession, and took over the railway, continuing to pay the guaranteed dividend to the shareholders in the form of an annuity running till the termination of the concession.

The political history of the transfer is distinctly interesting. The employees on the railway itself were unanimously in its favor. And, as subsequent experience proves, with good reason. And the whole strength of the Socialist Party and of socialist sentiment was thrown on the same side. A majority was secured for the bill in both houses, though a large majority of the representatives of the districts served by the railway voted against it. The bill passed the Chamber in December, 1906. But it was hung up in the Senate for 18 months till June, 1908, and finally only passed by a majority of 3 votes, after M. Clemenceau, who was prime minister at the time, had given it to be understood that unless the bill was passed he would resign. And much as the majority of the Senate disliked nationalization, at the moment they disliked the resignation of M. Clemenceau even more. It may further be added that according to the French custom the opinion of all the chambers of commerce in the country, which are statutory bodies, was invited on the measure, and that not one single town of more than third-rate importance reported in its favor.

¹ It should be noted that only 10 per cent of the total French railway capital is in the form of shares; 90 per cent is in the form of bonds which practically, though not formally, are guaranteed by the French Government. The dividend on the shares, therefore, though large in percentage—it ranges from 7 per cent on the Western and the Eastern, and 10 or 11 per cent on three of the other companies, to 13 per cent on the Northern—is not very large in total amount. Broadly speaking, the companies other than the Western more or less earn their dividends in normal times without State help.

EXPERIENCE OF STATE OPERATION IN FRANCE.

Here in broad outline is the story of the result of the transfer.¹ In the five years, 1904-1908, before the transfer the gross receipts rose steadily from \$37,084,000 to \$42,145,000. In the five subsequent years, 1909-1913 (the war upset entirely the figures for 1914), the gross receipts rose from \$42,333,000 to \$48,701,000, a slightly greater rate of increase. In the five years before the transfer the operating expenses rose from \$20,796,000 to \$28,388,000, this last figure being unduly inflated by the fact that from the date the chamber voted the acquisition of the railway the staff became entirely demoralized. The first year after the acquisition the operating expenses were \$30,304,000. The next year they were \$34,921,000, and the year after \$39,454,000. In 1912 they had reached \$41,800,000, and for 1913 they fell back to \$41,478,000. In other words, to earn a net revenue increased by 31 per cent the operating expenses increased by 100 per cent. The net revenue was never below \$12,757,000 in the worst year of company rule. It fell to \$5,352,000 after the Government had been in possession four years. The operating ratio, which had risen from 56.4 to 67.8 under the company, was for the next five years as follows: 72.7, 79.9, 87, 89.4, and 85.2. It is fair here to make a qualification. The operating ratio had gone up on all the French railways between the two periods. It averaged 50.3 for the other five great companies for the years 1905 and 1906, and 58.4 for the two years 1912 and 1913. But a rise from 50.3 to 58.4 is one thing; a rise from 56.4 to 89.4 is quite another.

A main argument used in Parliament in favor of transfer from the company to the State was that the company never did, and never could, earn its guaranteed dividend in full, still less the extra dividend which it would be entitled to if earned; that the company was accordingly a mere caretaker and not interested in financial results, and did not operate, and could not be expected to operate with economy. The State, on the other hand, would have a direct interest in operating economically. That was the argument. Here are the facts: During the last 10 years of company management the State had to pay an average of \$2,894,280 a year to meet its liability under the guaranty to make up the deficiency in net operating income. During the first 3 years after the transfer the sums it had to find under the same head were \$6,753,320, \$8,875,792, and \$14,934,434, respectively. For the year 1913 the figure was \$14,752,237.

Nor do these deplorable financial results tell the whole story. The service to the public was absolutely demoralized. There were several very serious and numerous smaller accidents, and the staff and the public got so frightened that the express trains on the main line, already the slowest in France, were decelerated down to a timing

¹ The figures given above are from official sources. The story is mainly taken from an article by Pierre-Leroy-Beaulieu, himself a Deputy, in "The State in relation to railways." (P. S. King & Co., London, 1912.) See also Colson in "Revue Politique et Parlementaire" for November, 1910; December, 1911; May, 1913; and May, 1914. The railway newspapers all over the world were full of the story in 1909 and subsequent years.

M. Colson, an engineer by training, was formerly head of the railway department of the ministry of public works, and is now president of the section of the council of State (a body partly executive and partly judicial), which deals with all questions concerning transport by rail or road or water. His book, *Transports et Tarifs*, is a recognized classic on its subject.

that had been abandoned as inadequate in 1896. In addition, a number of trains were suppressed altogether. Punctuality went to the winds. Commuters on the system in the suburbs of Paris were compelled by their employers to live elsewhere because of the unpunctuality of their arrival at their work. As for the service in general, one figure will suffice. Compensation for accidents, loss, and damage averaged some \$400,000 or \$500,000 a year in the last days of the company. In 1911 the figure was \$2,045,291. The minister of public works himself publicly criticized the State administration as "a frightful fraud." And the Senate passed unanimously a resolution beginning: "The deplorable situation of the State system, the insecurity and irregularity of its workings"—

M. Leroy-Beaulieu gives the reasons for the "deplorable situation" as follows:

In the first place, it is the abuse of formalism and red tape, with all the delays which follow and which are directly in conflict with commercial needs. In the second place, it is the lack of stability. The director and all the chiefs of the service change at the will of the ministers, whilst in the private companies the higher personnel is maintained a long time, fulfilling the same functions. It is next the political influence which enters into the choice and advancement of the personnel. It is, lastly, the lack of discipline which also results from the political influence at work. From the electoral point of view, the lower staff, being much more numerous, will always have much more power than the superior staff. It is always on the side of the former that many deputies will be systematically ranged. Above all, it is impossible to be at once controller and controlled. If one of the great French companies under private management renders poor service, the public opinion is not slow to move the public power, and as this has the means to bring pressure indirectly but in many ways upon the companies, they are led to reform. On the contrary, when complaints are made against the State itself, the administration, irresponsible, does not listen. Rather, it seems indignant that particular individuals or even large associations should dare to find that all is not perfect. "I have not seen without a certain astonishment," said the minister of public works in the chamber, "the chambers of commerce criticize the actions of the State in its (their) reports upon the railways." The same minister has dismissed an employee from his office who was at the head of a section of a passenger line which emitted protestation against the delays on the western State service in the Paris suburbs. When the minister was reproached in the Senate, he declared himself ready to do the same again. One may see how dangerous to the liberty of citizens the extension of the industrial régime of the State would be, where the number of functionaries would be indefinitely multiplied and where they would no longer have the right to complain.

From all points of view the experience of State railways in France is unfavorable, as was foreseen by all those who had reflected upon the bad results given by the other industrial undertakings of the State, such as the telephones, matches, and many others. The State, above all an elective administration, can not be a good commercial manager. It works expensively, and is powerless before its employees. The experience which we have recently gained has had at least one result. It has provoked a very lively movement, not only against the repurchase of the railways, but against all extension of State industry. This result seems to me fortunate. I hope this opinion will be maintained, and that not only we, but our neighbors, may profit by the lesson of these facts.

Mr. Leroy-Beaulieu gives examples of what has happened under the various heads. "As for formalism and red tape," on the eve of the handing over of the railway to the State there were 1,526 employees in the central office. Within three years the number had increased to 2,587. "The single service of the accountant general was increased by 70 persons directly after the repurchase." And this was due partly to political pressure and partly to excessive red tape. For example, in the Caen division the preparation of the pay

sheets, which under the company took 9 persons 3 days=27 days under the State administration took 12 persons 6 days=72 days. "According to official documents, there are not less than 96 persons receiving a salary of more than \$1,929.52 in the State system" as against 33 on the system of a neighboring company of much the same mileage, but with much higher receipts. In the five years from 1908 to 1912¹ the total expenditure increased \$10,573,770. of which \$8,412,707 were for salaries and wages. In 1908, out of every \$19.30 of receipts, the company paid \$7.24 in salaries and wages. In 1912 this figure was \$9.70. The comparative figure for the five great companies is only \$5.70. In 1910, per \$192,952 of receipts, the State railways employed 235 persons, the private companies 174.

Again, as the result of the great strike of October, 1910, the Chamber of Deputies voted a large all-round increase in the wages of the staff. Naturally, the staff thought there were shorter cuts to increases of wages than hard work. As a sample of want of ordinary business management on the financial side, the budget commission of the chamber reported that it could not draw up a proper estimate for 1912 from lack of the necessary accounts. "The statements addressed to the budget commission by the administration were manifestly inaccurate. * * * The great part of the statements of receipts and expenditure were found to lack any sufficient justification. Thus, as regards the expenditure upon personnel, the tables accompanying the statement only stated the numbers of workmen and staff and the amount of their salaries in round figures. * * * We wrote for further statements, more particularly the numbers of the personnel. * * * The minister replied (three years after the railway had been taken over) that the enumeration of employees had not yet been made. * * * This example suffices to show the trust that may be placed in the other parts of the budget estimate." This is not the opinion of an outside and unfavorable critic. It is the report of a committee of the chamber of the same political complexion as its predecessor, which voted for the purchase, based upon a draft drawn up by a deputy well known as an advocate of State ownership.

One story given by M. Leroy-Beaulieu is so striking as a sample of the highest quality of red tape that it deserves to be given at length. It is from a letter of a station master read in the Chamber of Deputies:

In the time of the Western Co. we station masters had orders to use the rolling stock as quickly as possible and to send to a given station all that we did not ourselves require. Under the State all is changed. Every station master is forbidden to load any wagon without the orders of the distribution bureau of the district. This bureau is, as is well known, a new creation, specially designed for the purpose of finding situations for so many more bureaucrats. Recently, having received two wagons loaded with horses, accompanied by an order to send these wagons to Caen after they were unloaded. I thought to do well by loading in these two wagons 200 sacks of grain, which had been waiting in the sheds for several days to go to Caen. But, alas, I did not know the bureau of distribution. The next day I saw my two wagons return, and I received at the same time an order to unload them. I was reproved into the bargain for excess of zeal. I had to obey the order. The evening I sent the wagons empty to Caen. Next day I received two others, also empty, in which to load the grain.

¹ 1912 figures are budget estimates only.

THE LESSONS OF FOREIGN EXPERIENCE. -

Such is an outline history of the introduction of State ownership in the less important half of the railway world. What lessons has it to teach for the more important half—the United States and the United Kingdom? Evidently in these two countries it will not be suggested that State ownership is necessary for political and military reasons. The consciousness of political unity needs here no artificial stimulus. The experience of England since the present war began has sufficiently demonstrated that a number of independent and often competing private companies can be welded together at a moment's notice into a homogeneous system and operated from the moment when war is declared, with absolute success as an organic whole, under public control, on public account, for the public service.

Nor will it be suggested that in these two countries private enterprise has fallen short of meeting the public requirements. On the contrary, that England is adequately provided is admitted on all hands. And if, as is doubtless the case, the United States still need, and will continue to need, fresh railways built, past experience, which shows that in no other countries have railways been pushed so boldly in advance of population as in the States, gives every reason to suppose that private enterprise will be able and willing to provide them. And it may be added that the country which comes next in this respect to the United States—far in advance of the English colonies of Australasia, with their exclusively State systems, and of Russia or India, with their immixture of State ownership—is Argentina, also a country wholly developed, till quite recently, by private companies.

Railway history conclusively refutes the idea that State ownership promotes railway development. If we consider countries where the railways are already making a reasonable return on the capital, what do we find? Belgium has notoriously failed to keep its railways abreast of its rapidly growing trade. The Prussian Government has consistently for a generation past forced the enormous coal and iron traffic of Lorraine, Luxemburg, and Westphalia on to the railways by refusing to build the new lines necessary to cope with the traffic by land. American shippers sometimes complain of a shortage of equipment. But these complaints in times of worst congestion are not more bitter than those which go up regularly every autumn from the coal operators of the Ruhr Revier, the most important coal field in Prussia. In Australia the managements of the Government railways have boldly defended themselves in times of bad congestion by claiming that the railways can not afford to keep sufficient equipment to cope with maximum demand. In the great Empire of India, with a teeming population of 315,000,000 spread over an area nearly two-thirds that of the United States, a population which though very poor is also very industrious, there are only some 36,000 miles of railway. That more railways and improvements of existing railways are urgently needed is admitted on all hands. Nor is it denied that they would pay their way. But the Government refuses to allow private capital a free hand. A private company may build branches as feeders of the existing trunk

lines on strictly regulated terms. But that is all. And yet the Government itself can only find a few million pounds per annum for a work in which scores of millions could be profitably employed. The Dominion of South Africa, with a white population of a million and a quarter, has a State railway system of some 8,000 miles. In the much newer territory of Rhodesia, alongside, company enterprise has already provided 2,000 miles of railway for the service of a white population of 32,000.

The reason is obvious. A railway company exists for a single end. If an extension offers reasonable prospect of financial success, and if capital can be raised on reasonable terms, a company will always build it. Even if success is problematical, ambition and the desire to forestall a possible intruder will usually turn the scale in favor of a forward policy. But a finance minister is in quite a different position. Calls upon him for money come in from a dozen different directions. The army, the navy, education, irrigation schemes, social betterment, and 50 things more, all press their rival claims. The money is limited. New taxes do not conduce to popularity. The budget has to be made to balance, and the railways go short like all the other claimants.

The experience of the last few years in the United States has it must be admitted, shown that, under present conditions, private capital is not being found in sufficient quantity for extensions and improvements which are urgently necessary. And it has been argued therefore that the State will be compelled to come to the rescue by taking over the private undertakings bodily. But this is scarcely practical politics. To suppose that serious statesmen would, for this reason only, decide on a step so serious as railway nationalization, is to suppose the impossible. Taking over a quarter of a million miles of railway, with \$16,000,000,000 net capital and over 1,800,000 employees, may be a good thing or a bad thing; but it is undoubtedly a step the seriousness of which can hardly be exaggerated. To compare it in importance with the alternative of allowing the existing companies to raise their rates by an average of a mill per ton-mile, which would make all the difference between poverty and affluence, would be almost farcical.

The argument for State ownership in the United States or the United Kingdom can therefore be based only on the claim that the substitution of Government for private ownership of the existing lines would, on the whole, secure better public service. A distinguished English authority, Sir George Gibb, has, in fact, put the question precisely on these lines. He has contended that, in Anglo-Saxon countries at least, it was entirely right that the construction and development of the railway system should be left to private enterprise. Private enterprise is, he thinks, bolder; companies are more flexible, more ready to take risks, and to try experiments in new methods than any State organization could be. Moreover—and the importance of the point will not be lost on anyone who remembers that the bulk of the American railways have at one time or other passed through a receiver's hands, and that some 4 per cent of their share capital receives no dividend—if a company improvidently or unwisely invests its capital in a nonpaying proposition, while private individuals lose their money, the public is uninjured. Capital borrowed on credit of the State is a permanent . . .

on the country as a whole, whether or no it earns any net revenue to pay the interest. On the other hand, once the system is created and substantially finished, Sir George Gibb, in the paper referred to, considered it an open question whether state or private ownership and management should be preferred.

COST OF RAISING CAPITAL.

It is this question, therefore, that we have now to consider. It is commonly claimed, as one of the advantages on the side of the State, that it can raise capital more cheaply than any private company. And the claim is not without substance. But the advantage is not great. The market value of United States bonds can not be compared with that of first-class railway mortgage bonds, because of the fictitious value attached to the former for bankers' purposes. But in England over a series of years—though here, too, consols have to some extent had an artificial value—the interest on first-class railway debentures has averaged, perhaps, half of 1 per cent above the interest obtainable on Government obligations. At the moment of writing, while the English Government is borrowing on short-term bonds at the rate of 6 per cent, first-class railway debentures are still selling on the basis of less than 5 per cent yield. And it is only the first-charge securities of railway companies which can fairly be compared with the Government stocks, for the income return on junior securities, more especially common stock, includes a more or less considerable allowance for insurance against risk. Averaging the return on all capital invested in a successful private company, it would undoubtedly be considerably higher than the return paid to the purchasers of an equal amount of Government railway stock. But the Government stock would unquestionably include a considerable amount of capital spent on railways not producing any, or only an inadequate, income, which capital, as has already been said, would have been in the case of a private company either written down in market valuation or, it may be, written off entirely.

ECONOMY IN USE OF CAPITAL.

Further, though a saving of perhaps half of 1 per cent in interest is not unimportant when the capital is reckoned in billions of dollars, it may be more than compensated for by a greater proportional increase in the capital itself. Is this likely to be the case? It is certainly the common belief of ninety-nine business men out of a hundred, both in America and in England, that the Government gets less value for its money than a private trader. So far as it is possible to compare one country as a whole with another, it certainly looks as if this belief were justified in railway experience. The railroads of the United States were capitalized in 1915 (deducting intercorporate ownership) at \$66,447 per mile. The state railroads of New South Wales and Victoria were capitalized at \$77,253 and \$65,774 per mile, respectively.¹ It must be admitted

¹ The cost per mile of the railways in the other Australasian colonies, and also in the Cape of Good Hope, is much lower than in New South Wales and Victoria. But they are, with one partial exception, narrow-gauge lines, and can not be compared with the American railroads. The cost of the Canadian private roads is very much the same as the American average. The cost of the National Transcontinental railway recently constructed by the Canadian Government was estimated to be \$39,083. It has actually cost \$9,000.

that the Australian roads, whose construction engineers had been brought up to regard England standards as universally applicable, are more substantially and expensively built than many of the western roads of the United States. On the other hand, the American figure includes the trunk-line railroads of the East, with a standard of construction and a mass of equipment to which the Australian roads can offer no analogy. On the whole, it is safe to say two things. If an experienced railway man came to America for the first time and made an exhaustive examination of the United States railroads, he would marvel when told that so magnificent a machine had been built up at a capital cost of only \$66,447 per mile. If an English or an American business man, fortified by the expert's opinion, were asked whether he thought his own Government could have carried out the work as cheaply, it is equally certain what his answer would be.

Summing up, then, the subject of capital cost, it would appear that whereas on the one hand the State can obtain its capital somewhat cheaper, on the other hand private enterprise makes each dollar of capital go further. And the advantage and the disadvantage may fairly be set off, the one against the other.

QUALITY AND COST OF SERVICE.

The vital question, however, is not concerned with construction and capital cost, but with the day-to-day working of the actual existing system. Will the public on the whole get better services or lower rates, or possibly both these advantages? On this question there is a mass of accumulated information that may help to an answer. But the difficulty of making a fair comparison between one country and another is exceedingly great. National customs differ widely. To give one striking instance: The average American railway charges its passengers 2 cents a mile, and admittedly makes no profit. The East Indian Railway charges 4 mills and makes a handsome profit, because the Bengali ryot is content to travel under conditions of speed and accommodation and convenient frequency of service which imply reductions in operating costs more than counterbalancing the fivefold reduction of charge. And even the 4 mills rate is a much larger tax on the income of the ryot than the 2-cent rate is upon that of the American laborer, etc. What shall be said? Would it be reasonable to say that, all things considered, the passenger fares in America are really lower than those in Bengal, in spite of the fact that in Bengal a man can travel 5 miles at the price of 1 mile in the States? Must it not be acknowledged that, where conditions are so absolutely different, one can not really compare but can only contrast?

If comparisons are to be of value they must be made where conditions are, if not similar—that we shall never find—at least as similar as may be. This much seems clear. Given two countries in which the standard of living and the purchasing power of money are substantially the same, and where the quality of railway service is substantially the same also, the country in which the rates charged are the lower is the country best served by its railways. If a country, where the purchasing power of money is low, obtains the same quality of service at a substantially lower rate than is charged in countries where the purchasing power of money is high, where, in other words,

ordinary commodities are cheap, then surely that country has an exceptionally efficient railway service. Tried by this test, how does the United States stand?

It is a matter of common knowledge that the freight rates of the United States are out and away lower than those of any country with which comparison can reasonably be made. The figures of the average receipts per ton-mile for Germany and France are nearly double those for America, 1.37 and 1.30 per ton-mile, respectively, as against 0.738 cent.¹ And all the other countries of western Europe, except Belgium, are higher than France. The Belgian rate is 1.13 cents. As we get toward the east, rates fall. In Russia the average is 0.94, in Japan 0.87, and finally in India it gets down to 0.74 cent, which is practically the same as the American figure.

The reason why oriental rates are low is obvious. Roughly, half the cost of railway operation is direct labor cost. And in Japan a railway employee earns a dime, and in India a nickel, where in America he earns a dollar. Why, then, are not the rates still lower? Because it needs many orientals to do the work of one American, with his efficient methods and his labor-saving appliances. To give one instance, railway embankments in India were till quite recently, and probably are still, constructed by gangs of coolies running to and fro with small baskets of earth upon their heads.

But let us leave India aside. Once more it is a contrast and not a comparison. Confining ourselves to Europe, we may say broadly that it costs as much to move a ton 1 mile in Europe as to move it 2 miles in America. And when all allowances have been made for circumstances tending to make European business more expensive to handle—short hauls, more diversified loads, higher cost of coal, etc.—the 100 per cent difference in rate is so great that it seems impossible to doubt that a large part of it must be due to the greater efficiency of the American railway.

PRUSSIA COMPARED WITH UNITED STATES.

The European country where the traffic conditions most nearly approach those of America is undoubtedly Prussia. In the years since 1880, by which time the railways had mostly been taken over by the State, the Prussian population has increased some 60 per cent and the urban population in a still higher ratio. The output of German, mainly Prussian, coal has grown from under 60,000,000 to over 250,000,000 tons, and of steel from under 1,000,000 to over 17,000,000 tons. And Prussia is, by universal consent, the country where State management is at its best.

Let us take the claim of a panegyrist of the Prussian system and see how it compares with American achievement. In a paper read at the Royal Economic Society Congress in London, in 1911,² Prof. Schumacher, of Bonn, gave two instances of the accomplishments

¹ English figures are often given in international comparisons, but they are pure guesses. And how far the guesses are wide of the actual facts no man can say, for English railways, with one exception, do not publish, or even compile, ton-mile and passenger-mile statistics. One company, the North Eastern, does compile these figures, and used to publish them, but has ceased to do so in recent years. Even if the recent North Eastern figures were available, it would be quite impossible to say how far they are typical of the English railways as a whole. The present writer's guess is that they are not typical, because, for one reason, the preponderating traffic, which is in coal, is carried for unusually short distances and therefore at unusually high rates.

² The State in Relation to Railways, London, P. S. King, 1912.

of the Prussian railways: "In the case of goods sent in bulk, the freight for long distances is as low as 0.8 pfennig per ton-kilometer." This is, roughly, 0.35 cent per ton-mile, which is very far from being a startlingly low rate in America, seeing that the average rate for coal last year on the Chesapeake & Ohio Railroad was only 0.304 cent, while for all traffic—high class as well as bulk freight, short distance as well as long distance—it was only 0.38 cent per ton per mile.

Prof. Schumacher says, further, that "the receipts amounted in 1880 and 1909 to 4.14 and 3.54 pfennigs per ton-kilometer, respectively (1.65 and 1.41 cents per ton-mile). They have therefore been reduced by about 15 per cent." The corresponding receipts per ton-mile for the American railways were, in 1882—the first year for which adequate figures are available—1.236 cents; in 1909, 0.763 cent. In other words, the American ton-mile rate started at the beginning of the period 25 per cent below the Prussian rate, and it fell in the course of the 29 years not 15 per cent, but nearly 40 per cent. At the end of the period the American rate was not much more than half the Prussian rate—0.763 cent compared with 1.41. There are many elements, doubtless, responsible for so striking a difference. But, when all have been taken into account, a railway expert is bound to come to the conclusion that the main element is relative operating efficiency. To discuss this subject here at length is impossible. But one point may be taken—the incomparable cheapness of American carriage is primarily due to the employment of the largest possible units of carload and trainload. Less than 30 years ago 8-ton coal cars could still be seen in Jersey City. Since then the size of the car has been increased to 30 tons, 50 tons, and now 70 tons and 90 tons. Prussia, not being hampered like England with high platforms and innumerable tunnels limiting the loading gauge, might well have followed the American example. But she has clung to the old four-wheeled cars, with an average capacity of less than 15 tons, with the result that, while the average American freight train has reached 500 tons, the Prussian load is 246 tons, or less than half the American.¹ And, to redress the balance, the American freight rate per ton-mile is half the Prussian, spite of the fact that Prussian railways pay practically no taxes and that American wages are double those in Prussia.

It may be added that the progressive reduction of rates, of which Prof. Schumacher speaks, had in fact ceased long before 1909. M. Colson writes: "The Germans no longer make any serious freight-rate reductions. Within the last 10 years the average rate per ton-kilometer has oscillated between 4.41 centimes and 4.36 centimes per ton-kilometer (1.37 cents and 1.34 cents per ton-mile), according to the composition of the traffic. During the same period the average rate in France has fallen from 4.71 centimes in 1901–2 to 4.19 in 1911 (1.45 to 1.3 cents per ton-mile), a reduction of 11 per cent." On the other hand, he adds that "between 1905 and 1911 the average passenger fare fell in Germany from 3.22 to 2.94 centimes per kilometer (0.99 to 0.902 cent per mile, nearly 9 per cent), while in France it

¹ When the American rate was 1.236 cents per ton-mile the trainload was only 129 tons. It is mainly the increase of the trainload to 500 tons and the consequent increase of the train-mile revenue to \$3.74, spite of a 40 per cent drop in the average ton-mile rate, which has made the modern American rate of 0.738 cent possible.

only fell from 3.69 to 3.50 centimes" (1.13 to 1.08 cents per mile, just 5 per cent).¹ It may be added further that even the 15 per cent reduction, of which Prof. Schumacher speaks with pride, is largely due not to reduction in individual rates but to the increased proportion of the whole traffic, which consists of coal, iron ore, and other raw materials taking the lowest rates.

PRUSSIA COMPARED WITH FRANCE.

But it is perhaps scarcely fair to compare Prussian railways with those of America. After the battle of Salamis Themistocles received by the vote of the Greek generals the first prize for valor, for, though each general considered that he himself was entitled to the first place, they all agreed that Themistocles was entitled to the second. Similarly, though the railway men of other countries might each claim the first place in efficiency for themselves, there can be little doubt that they would all agree in giving their second vote to the United States. The railway service in America has attracted perhaps the best brains of the country. In Germany military, naval, and diplomatic careers, and even professorships in the universities, offer higher inducements to their brightest men.

German railways, however, may be fairly compared with those of France, where Government service has a similar prestige. M. Colson has on numerous occasions compared the efficiency of operation of the two countries. The comparison which he makes is in outline as follows:²

Prussia occupies a position naturally more advantageous than France from the point of view of economical operation. The country is almost wholly flat, while most of France is hilly and a considerable part mountainous. Coal is immensely cheaper, and also steel. The traffic density is much higher, the number of units of traffic (ton-kilometers and passenger-kilometers) carried being more than double in Prussia, though the length of line is only 29,000 as against 25,000 miles. On the other hand, it is to be admitted that the French length of haul is somewhat greater. The charges made for carriage are substantially identical in the two countries. There is a difference of about 3 per cent in the average ton-mile rate in favor of Prussia. But this difference is very much more than explained by the much larger proportion in Russia of coal, iron ore, and other bulk freight carried at the lowest rates. Taken separately, the average rate per kilometer for coal in 1905 was 3.10 centimes (0.96 cent per ton-mile) in France and 3.16 centimes (0.98 cent per ton-mile) in Prussia. For all other freight it was 5.07 (1.57 cents per ton-mile) in Prussia against 5 centimes (1.55 cents per ton-mile) in France. But when the two came to be added together, the total result was 4.30 centimes (1.34 cents per ton-mile) in Prussia and 4.52 (1.40 cents per ton-mile) in France. In the case of passenger traffic, M. Colson admits that the average rate is 12 per cent higher in France. But he points out that 30 per cent of the Prussian passengers are carried in fourth-class carriages, in which to a very large extent there are no seats, a class of accom-

¹ *Revue Politique et Parlementaire*, May, 1913.

² See Colson's articles in the "*Revue Politique et Parlementaire*" for May, 1902; May, 1904; May, 1906; May, 1907; November, 1910; December, 1911; May, 1913; and May, 1914. See also "*Cours d'Economie Politique*," Livre VI, 1907. The outline in the text is mainly taken from *Cours d'Economie Politique*."

modation to which France offers no parallel. Further, a much larger proportion of the freight traffic in Prussia is in straight carloads, loaded and unloaded by the shipper, services which are usually included in the French rate. Wages in France are at least as high, if not higher, than in Prussia; and, in addition to the wages, the French railways incur charges amounting to quite a high percentage of the total wage bill for pensions, superannuations, and other benevolent purposes. Again, the French railways are subject to serious responsibilities from which the Prussian State railways are free. In both countries there is a legal limit of time fixed within which traffic must be delivered at destination, and if this limit is exceeded the freighter is entitled to damages. But in France the period begins to run from the time the freight is brought to the railroad; in Prussia, only from the time when the railroad gives notice that a freight car is ready to receive it. The French railways are required to pay full compensation for loss, damage, or delay.

In Prussia liability is legally limited to a fixed and usually quite small sum, normally a certain proportion of the freight charge paid.¹

Another fact which should tend to produce a lower operating ratio in Prussia than in France is that a larger proportion of the French traffic is passengers, and passenger traffic under French and German conditions is unquestionably less profitable than freight traffic. "From the combined effect of all these causes," writes M. Colson. "if the operating ratio in France were 10 or 15 per cent higher than in Germany, it would not imply inferior operating ability. But, in fact, the difference is in the opposite direction. If our companies worked as expensively as the German State railways, they would spend from twenty to forty million dollars more than they do per annum." The operating ratios, as given by M. Colson, for different dates are as follows:

	1900	1910	1911	1912	1913
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
France.....	54	60	62.5	63	63
Prussia.....	62	67	65	66	66

The difference has lessened in recent years. But the explanation is that since 1909 the Western Railway of France has been handed over to the State, and the operating ratio of this system has gone up to such an extent (it was 87 per cent in 1911, according to the official figures used by Mr. Colson—though M. Le Roy Beaulieu² makes it to have really been as high as 90 per cent—and 89 per cent in 1913, as compared with an average of 60 per cent for the five years before the purchase) as seriously to affect the French average. Thus, while the operating ratio for all the French railways in 1911 was 62.5 per cent as given above, for the private lines only it was 58.5 per cent. So it appears that the divergence of 7 or 8 per cent in the operating ration between the French companies and the Prussian State railways

¹ A full account of the stern restrictions with which the liability of the German State Railways is fenced round will be found in "German v. British Railways," by Edwin A. Pratt (P. S. King & Co., London, 1907). Mr. Pratt quotes a statement made to him by a large German trader that, sooner than send in claims which they would have no chance of getting paid, "they had better save the postage stamp."

² The State in Relation to Railways, p. 55.

remains substantially the same over a series of years. And the fact that the expenditure on the Western of France has, since that system was taken over by the State, increased out of all proportion either to its own previous expenditure or to the expenditure still found sufficient on the remaining private railways clearly affords no argument for the economical management of the Prussian State.

NEW SOUTH WALES COMPARED WITH TEXAS.

Let us attempt another comparison. To compare Australia as a whole with the United States as a whole, though the two areas are very nearly the same, would be unreasonable. Australia, with only 5,000,000 inhabitants, has nothing comparable with the enormous traffic of the North Atlantic States. But a comparison between New South Wales, the oldest Australian Colony, and Texas seems to be fair and is not without interest.

New South Wales, with 310,000 square miles, is not dissimilar in area from Texas, with an area of 262,000 square miles. But Texas had a population at the census of 1910 of 3,900,000, while the population of New South Wales was only 1,650,000. The New South Wales population is not only smaller but is increasing less rapidly. In the 10 years 1901–1911 it only increased from 1,359,000 to 1,648,000, or 21 per cent. In the same period the population of Texas increased from 3,049,000 to 3,897,000, or nearly 28 per cent. But while Texas, with double the population, had at the census of 1910 no town of over 100,000 people, no less than 621,000 of the inhabitants of New South Wales lived in Sydney and its suburbs. It is safe to say that a chief cause—if not the chief cause—of the smaller population of New South Wales, and its concentration in and around the capital, as compared with the larger and better distributed population of Texas, is the difference in the railway development and service of the two countries.

Texas has over 15,000 miles of railway, against 4,000 in New South Wales, giving a mile of line for every 259 inhabitants of Texas, as against a mile of line for every 412 inhabitants in New South Wales. Certainly the New South Wales Government does not seem to show to great advantage as compared with private companies, so far as enterprise in opening up new country is concerned.

Now let us see whether the railways that have been constructed in New South Wales serve the public better than the railways of Texas. The average rate in Texas per ton-mile in 1915 was 0.995 cents, and the average rate in New South Wales for the same year, inclusive of terminals, which the official statistics leave out in their ton-mile calculations, was 2.20 cents, or more than double. It is true that the average fare per passenger mile in New South Wales, where it is pulled down by the enormous commuters' traffic of Sydney, was only 1.15 cents, as against 2.42 cents in Texas, or less than half. But no one will suppose that low rates for passengers are as important to the prosperity of a country as low rates for goods. And, besides, whereas the average passenger journey in Texas was 53 miles, and in New South Wales only 14 miles, the average distance a ton of freight was hauled was 135 miles in Texas, as against 79 in New South Wales.

Comparing the work done for the public in the two States, we find that in Texas 7,360,000,000 tons were hauled 1 mile; in New South Wales only 917,000,000. Passengers hauled 1 mile were, on the other hand, 1,231,000,000 in New South Wales, against 1,007,000,000 in Texas. Putting the two together we have 8,367,000,000 traffic units (1 ton or 1 passenger carried 1 mile) in the year in Texas, against 2,148,000,000 in New South Wales. In other words, the private railways of Texas performed for the Texan public nearly four times as much work as the New South Wales State railways performed for the public of that State.

The traffic density is very much alike in the two cases: Five hundred and fifteen thousand traffic units per mile of line per annum in Texas, 530,000 in New South Wales. The Texan railways have a considerable advantage in better gradients and longer hauls, and for both these reasons lower rates in Texas might naturally be expected. But the difference is far too great to be explained on these grounds. Per unit of traffic carried, the public were charged in Texas 1.17 cents, in New South Wales 1.60 cents—nearly half as much again.

As the result of their high rates the New South Wales railways earned \$9,140 per mile of road per annum. As the result of their low rates the Texan railways earned only \$6,592. But, thanks to superior efficiency of management, the Texan railways spent much less to carry each unit of traffic. Per unit the Texan railways spent 0.935 cents; the New South Wales railways spent 1.115 cents. In other words, had the Texan railways operated as expensively as the New South Wales railways they would have had practically no net revenue at all.

One point more. The Texan railways have had to raise their capital as best they could, and could do very well with more of it. Were they in a position to raise new capital on favorable terms, they could doubtless improve their operating efficiency still further. The New South Wales railways can raise, and always have been able to raise, on the government credit all the money they need at the lowest rate of interest. Will anyone deny that, even handicapped as they are, the private railways of Texas are giving to the people of Texas a more ample, a more efficient, and a cheaper service than the Government of New South Wales gives to its citizens?

PRIVATE RAILWAYS LEAD IN INVENTIONS AND IMPROVEMENTS.

To turn from specific comparison to more general considerations: The fact has already been mentioned that, while the American companies have boldly revolutionized their machinery and methods of carriage, the Prussian State has clung to old machinery and old methods. The huge engines and freight cars used in America to-day could never have run on the rails or crossed the bridges as they existed in 1880. So the American companies have laid ever heavier and heavier rails and have rebuilt their bridges, often more than once. The Prussian State is content to put forward as a sufficient reason for adhering to the old methods the fact that track and bridges are not strong enough to carry the heavier equipment.

This example is typical. In all the history of railway development it has been the private companies that have led the way; the State systems that have brought up the rear. It would be difficult

to point to a single important invention or improvement the introduction of which the world owes to a State railway.¹ England shares with America the credit of having invented the locomotive. England first rolled steel rails, but America was not long behind. England first introduced the block system of signaling, while to America is mainly due the later development of automatic appliances. There are two types of power brakes on the world's railways. The Westinghouse brake was invented in America, the vacuum brake in England. The automatic coupler is wholly American. So are the sleeping car and the dining car. Shunting by gravity, which accounts for a saving of millions of dollars a year, was invented in England, but has been mainly developed in America. Brunel, on the Great Western of England, first taught the world what express trains meant. And 40 years later the English companies in the historic "Race to Edinburgh" in 1888 gave a new interpretation of the term. America promptly replied with the "Empire State Express," and bettered the instruction with the "Atlantic City Flyers." The French companies, too, took up the challenge, and put on trains from Paris to Calais, and to the Belgian, German, and Spanish frontiers that could hold their own with anything that England and America had to show. And meanwhile the international expresses of Prussia and Belgium jogged contentedly behind. It is true that in these two countries the track was not fit for high speeds. Nor was it at the outset in France or America. But it was possible to make it so—at least where it was in the hands of a private company. Take the latest problem of all, the electrification of main lines with dense traffic. Electric working is constantly pushing out from New York and Philadelphia, from London and Liverpool and Manchester. And meanwhile the Prussian Government has carried out some interesting and exhaustive experiments on a special track at Zossen.

Railroading is a progressive science. New ideas lead to new inventions, imply new plant, new methods. And this means the spending of much new capital to be recouped by larger economies later on. The State official mistrusts ideas, pours cold water on new inventions, grudges new expenditure. No one questions the ability of the German people. German manufacturers, German merchants, German bankers have taught the business world a good deal in recent years. German railway men have written many books, some of them valuable: but in practical operation they have taught the railway world nothing. Why? Is it because they are State officials?

ENGLISH GOVERNMENT MANAGEMENT OF TELEGRAPHS AND TELEPHONES.

Certainly English experience of undertakings in the hands of public authorities would lead us to suppose so. English experience confirms the conclusion of the Italian commission of 1881 that "the State is more likely to tax industry than to foster it." Fifty years ago the English Government acquired the telegraphs. Three official estimates of the cost of acquisition were put forward. The first was for \$11,679,600; the second was for \$29,199,000; and the third was

¹ Possibly the Schmitt locomotive superheater might be claimed by the German railways as an important improvement of which the credit is theirs.

for \$32,848,875. According to the official figures the capital account was finally closed with a total expenditure of \$52,887,289. On the basis of the \$29,199,000 capital cost, the post office estimated to obtain an annual net revenue of \$987,900. The fact had been that, on the average of the last 10 years, there has been a loss of more than \$4,866,500 per annum.

The act authorizing the Government to acquire the undertakings of the telegraph companies was passed in 1868. In the following year a further act was passed giving the post office the monopoly of the business. When telephones were invented the post office did nothing to encourage their development. It merely looked on while private companies undertook the work. As soon as it became evident that the thing was serious, the post office took fright and started out to defend its monopoly. After long litigation the supreme court of appeal decided that a statute passed many years before telephones were born, giving the Government the monopoly of telegraphs, extended to all forms of electric communication. And thereupon the post office proceeded to handicap its rival by imposing a license fee of 10 per cent on all telephone gross receipts. Not content with this, it took all the trunk lines into its own hands, leaving the company only the local exchanges. It reserved certain areas for itself, characteristically giving in these areas, except in quite populous places, telephone service only from 8 a. m. to 8 p. m. on week days; whereas all the company's offices were open continuously. And last, not least, it only granted short-term licenses, so that the company had difficulty in raising necessary new capital. Spite of all these difficulties, the company managed to pay a fair dividend till finally in 1911 the licenses expired and the post office took over the whole business. It has already succeeded in converting a surplus into a substantial deficit. And one is keeping well within the facts to say that so far the service to the public has not improved.

The English post office has made yet another, though less important, effort in the direction of "taxing industry rather than fostering it." It had been urged for many years to establish a special delivery service for letters, and had steadily refused, alleging that there was no substantial public demand. Some 25 years ago, an enterprising company started in London a district messenger service. It was found to meet a real need, and seemed to be likely to establish itself successfully. Thereupon the post office, which has a statutory monopoly of the carriage of letters, promptly took action. It began by hampering its more nimble rival with a heavy license duty, and it went on to establish a service of its own, which, though less convenient and flexible, was considerably cheaper. Naturally the company was hard hit, and it has only maintained its existence by undertaking other work, such as that of a theatrical ticket agency. The net result is that London has two inferior services instead of one good one. Whether the post office makes a profit or a loss the published accounts do not show.

MUNICIPAL ELECTRICITY IN ENGLAND.

England is admittedly behind her two great commercial rivals, the United States and Germany, in the application of electricity to commercial purposes. And this we owe to the fact that the muni-

cipal authorities have faithfully followed the lead of the post office. Gas lighting was introduced all over the country by private companies; but the gas undertakings in most of the important cities have long ago passed into the hands of the municipalities. And as a rule, as private enterprise had piloted them safely through their early stages of development, they have been the source of considerable profits to the city exchequer. About 30 years ago, when electric lighting first became commercially possible, Parliament, by an act passed in 1882, and an amending act passed in 1888, laid down a general code regulating the subject. Broadly to this effect: Either a company or a local authority may apply to the competent department of the government, the board of trade, for an order—or, in American phrase, charter. If both a company and a local authority apply for an order relating to the same area, it is the application of the local authority only that is granted, unless under exceptional circumstances. If an order is granted to a company, it expires after 42 years. The original period was only 21 years; but it was found that on this condition no company could raise capital.

If an order is granted to a local authority, it is in perpetuity. The order gives to the grantees, unless and until a new order admits a competitor, which in practice never now happens, a monopoly of supply within the scheduled area. The board of trade has wide discretion to revoke the order where the grantees have not substantially carried out the works projected or where they fail to furnish a satisfactory supply. The upshot of these conditions has been this. At the outset a large number of local authorities applied for orders, apparently merely with the object of keeping out private enterprise, for they took no steps whatever after they had obtained their orders to put them into effect. After considerable delay the bulk of these blocking orders were revoked, but private enterprise had meanwhile been effectively warned off. When at length it became evident that public electric supplies must come, in some areas companies were grudgingly admitted; in other areas the local authority undertook the work itself; whichever happened it was a very frequent complaint that the local authority was more concerned for the protection of the existing revenue from its gas undertaking than for the development of the new force, which science was ready to put at the disposal of the public.

A later phase of the situation came into view when the suitability of electricity, not merely for lighting, but for power purposes, became manifest. A municipality could not legally supply beyond its own restricted area. And industrial districts in their development pay no attention to city boundaries. Numerous companies, influentially supported, brought forward schemes of wholesale generation with modern plants for large districts. A good many orders were granted. Only one of the schemes has been even a moderate success. And a chief reason has undoubtedly been that the municipal authorities of the important cities geographically included in the various districts fought successfully to deprive the power companies of the right to supply within their cities, alleging that it was not in the public interest that private companies should, for selfish ends, compete with undertakings carried on at the public expense and for the public benefit. And so England is still mainly given over to small separate undertakings, which can not in the

nature of things give a cheap supply, and which in many cases are unable to give a supply on such a scale as would be necessary if a large manufacturer desired to substitute electricity for steam as the motive power in his factory.

PUBLIC OFFICIALS AND COMMERCIAL MANAGERS.

Other instances might be cited from English experience. But the above are sufficient to show that in England at least the official is not eager to foster industry; that he will fight to maintain the acquired situation of his public undertaking, however much it may be in the interest of the public itself that the situation should be modified. It might have been expected, *a priori*, that public officials, having only the public interest to serve, and having no shareholders to whom increase or decrease of profits means increase or decrease of dividends, would be more ready to take reasonable risks, more complaisant, less meticulous to protect their undertakings to the utmost, than the managers of commercial companies. But experience shows that the reverse is the case. The careful Prussian regulations limiting, and in practice usually excluding altogether, the liability of the railway administration for delay, loss or damage of freight, have already been mentioned. It may be added that the Prussian railways have an elaborate system of "delivery insurance" under which, by making an extra payment, the shipper, if the ample legal limit of time for transportation is exceeded, can recover some extra compensation from the railway. It is difficult to imagine what would be the attitude of a shipper in England or the United States, if he was asked to insure at his own expense the fulfillment by the railway company of its common law duty to him to deliver his freight within a reasonable time.

In every country where railways are highly developed, rates for freight consigned in full carloads are lower than for freight consigned in retail quantities. And the practice is abundantly justified, commercially on the ground that the wholesale price is always less than the retail, and technically on the ground of the saving of operating cost to the railroad. England, where the public still persists in regarding to railway truck as only a slightly modified carrier's cart, makes the least reduction, averaging perhaps 15 to 20 per cent. France makes more. America, which usually concedes the reduction of two classes in the classification, makes still more. But Prussia goes much further than any other country. Freight, not classified as entitled to exceptional rates, and therefore carried at the rates of the normal tariff, is charged in the ratio of 9 to 4, according to whether it takes the 10-ton or the package-freight rate. And, as a result of this method of charging, 95 per cent of the Prussian traffic is in carload lots. The system is highly convenient and profitable to the railroad, for it evidently leads to the more economical occupation both of the road and the freight cars. Whether it is equally in the public interest is more than questionable.

Assume that a freighter at a way station 20 miles west of Berlin wishes to send 2 tons of merchandise to a similar station 10 miles short of Frankfort. He has two courses open to him. Either he can send it direct—if he does, he will be charged 4.5 cents per ton per mile—or he can hand it over to a "spediteur" or forwarding agent.

In that case the "spediteur" will take it back to Berlin at the less-than-carload rate, send it thence to Frankfort as part of a 10-ton consignment, and thence reconsign it back to its destination as package freight. The consignor will gain something in money—the smallest proportion, namely, of the difference between the package freight rate and the sum of the three rates paid by the "spediteur" which the "spediteur" thinks will induce the consignor to continue to deal with him in future. But he will hardly gain in promptitude of delivery. Can it be doubted that in this instance it is railroad interest rather than public convenience which is primarily regarded?¹

Here is a comparison on all fours of English and Prussian methods: In England any respectable shipper—and, indeed, any private individual—can open what is known as a "ledger account" with the railway company. He then obtains practically two months' credit for the carriage of his shipments. The account for each month is rendered by the company to the shipper at the end of the month, and then the shipper has another month in which to pay. Oftentimes the month is exceeded. If the shipper disputes any item, on whatever ground seems to him sufficient, he strikes it out and only pays the balance. And the railway submits as of course to the charge remaining in suspense till the matter is settled. In Prussia a shipper can open a monthly account, provided his average freight payments amount to not less than \$75 a month, and provided he deposits with the railway administration cash or securities equal in value to one and one-half times his average monthly account. If in the course of the month his shipments reach the value of the securities deposited, he must either increase his deposit or pay prompt cash for the rest of the month. That this difference of method is not due to the fact that the railways are in the one case in England and in the other Prussia, but rather to the fact that in the one case they are in the hands of private companies and in the other in those of State officials may be concluded from the attitude of the State in England in the case of those commercial undertakings which it does manage. In England the maintenance of a deposit covering prospective telephone calls—or, rather, two deposits, one for local and one for long-distance calls—is as rigidly insisted on as is the corresponding deposit by the Prussian State railways; and a householder who neglects to replenish his deposit when exhausted, even though it may be only a few shillings overdrawn, finds his telephone service cut off without more ado.

As for liability for loss and damage, the regulations are sufficiently frank and drastic. "The postmaster general is not liable for any loss or damage which may be caused by the failure of any telephonic communication, whether such failure is or is not due to the act or default of any officer of the post office." And the regulations in respect of the telegraph service are to the same effect. Can such regulations be justified in the public interest? Can it be right that the public in its corporate capacity should refuse justice to its own individual members? Can these regulations be explained, except on the theory that they are imposed by the State official for his own convenience, and submitted to by the public, because, while individuals

¹ It should be further noted that these "spediteur" charges, which are not inconsiderable in the aggregate, should be added to the railway freight rates if we wish to estimate the total rates paid by the Prussian shipper as compared with his competitors in other countries.

can invoke the aid of the State against a powerful private corporation, they have no means—unless in the last resort and in cases of supreme importance—of redress against the action of the State itself?

CIVIL-SERVICE RULES AND PROMOTION BY MERIT.

To turn to a different point. Railway management, on its main sides of policy, operation and traffic, is essentially a commercial business, requiring commercial training and commercial aptitude. The railway man, if he is to serve his customers and his shareholders properly, must look ahead, plan boldly for the future, and not fear to take risks. His mind must be alert to recognize and use every new technical improvement, that so he may give the best possible service at the minimum possible expense. He must be quick to observe the course of trade, the changes of demand, the potentialities of new markets and new sources of supply, and to adjust his tariffs accordingly. Above all, he must keep abreast of his work, however arduous, even though it means working all day and half the night, and double tides on Sunday. If he fails—at least in the employ of a private company—he goes; and a better man takes his place.

Can we expect these qualities from a State official? Let the Italian commission answer. It is true they wrote 35 years ago, but human nature has not greatly altered in the interval. "On a State railway system the personnel would be chosen according to civil-service rules. Seniority would count more than merit or special qualifications. * * * There would be bureaucratic dilatoriness, incompatible with railway service. This applies specially to the executive officers, who need to have, in the highest degree, industrial energy, initiative in planning improvements, commercial intelligence essential in controlling the various classes of expenditure; who have to encourage traffic, improve service, maintain discipline, and so forth. The chief officers and their staff must have a personal interest to stimulate them, and a high sense of responsibility to encourage them to perform their duty. And for men like these, the State would substitute officials with no personal interest in the operating results. Further, the Government employee is, as a rule, worse paid and subject to less severe discipline than men in private employment, and, consequently, he does less work.

When the operation of the Upper Italian Railways was temporarily taken over by the State only a short time elapsed before the discipline, energy, and promptitude of the staff, which had been excellent, broke down and the service became abominably bad. The general rule is that Government employees do less work, consequently more men have to be employed, and the wages bill accordingly goes up.

That on this last point the commissioners were true prophets the Italian experience since 1909, which has been recorded already, sufficiently shows. As for "industrial energy," "initiative in improvements," and "commercial intelligence" let the Prussian history of unchanged methods and cast-iron tariffs testify. But there is a more important point than these. There is general agreement, both in America and England, that to avoid the worse evil of political patronage appointments in the public service must be made by civil-service methods. This means appointment by an examination.

mainly literary, at an early age, a life tenure except in cases of gross incompetence, and promotion mainly by seniority. Will any human being claim that American railroads would have achieved their magnificent record of technical progress, of rate steadily reduced in face of a steady rise not only of railroad wages, but of prices of almost all other necessities of life, if the management of the railroads had been in the hands of men originally selected by an examination 40 years before who had since risen to the top not as the result of conspicuous competence, but by sheer seniority? And would the men who are now at the head of the railways have stopped in the Government service had they entered it as young men if they had only had the prospects of promotion and compensation which Government service affords?

POSSIBLE ABUSES OF PRIVATE OWNERSHIP.

At this stage it may be fairly said "Granted that State railway systems, like all other human institutions, are far from perfect, what about the abuse of private ownership?" And the point is a fair one. It might well be that the abuses of private ownership are so great that State ownership implies at least the lesser of two evils. How do the facts stand?

In the old days in England there was a saying of an official of the board of trade—afterwards well known as a director of one of the great English railways and president of the Grand Trunk Railroad of Canada, Sir Henry Tyler—which became famous: "If the State does not control the railways, the railways will control the State."

And thirty or forty years ago, when the railway directors were strongly entrenched in a House of Commons elected on a very restricted suffrage, the phase perhaps represented something more than a mere rhetorical exaggeration. In reference to England, as it is to-day, the idea is only laughable. The railways are absolutely powerless to resist public opinion. Five and twenty years ago the House of Commons threw into the waste-paper basket the original schedules of maximum rates—on the faith of which private capitalists had embarked \$5,000,000,000 in constructing railways. After an inquiry lasting over 10 years, they formally enacted new schedules of maximum rates which the companies "might lawfully charge and make." The companies were so ill-advised as to take Parliament at its word. And they proceeded in many instances to "charge and make" accordingly new rates which implied considerable advances on the scale then in force. Shippers rose in revolt and refused to pay. In the very next session Parliament deprived the companies of the power which it had given, and enacted that thenceforward no railway company should increase any rate to which one single shipper objected, unless the company could prove affirmatively in a court of justice that the increase of rate was justified by increased cost of doing the business. Similarly in America. There was a time—it will hardly be denied by anyone to-day—when the great railroads had inordinate powers, and those powers were concentrated in the hands of a single man. Not only might he abuse them for private interest, but in any case the powers were despotic. And democracies will not tolerate despotisms, even if benevolent. But the president-despot—benevolent or otherwise—has long been dead. And his day returns

not. Serious critics, both in England and America, have questioned whether private capital will continue to invest in railways, if the State continues to interfere so drastically both with operation and with rates. But no one is heard seriously to assert that Parliament and Congress lack the power to make their will effective, whatever the railroads may say or do.

A main argument put forward in favor of the nationalization of railways in Prussia was that the tariff system of the private companies was honeycombed with rebates, and that rebates were inevitable under private ownership. If this latter statement were true, it would be sufficient justification for sweeping away private ownership, without more. But it is not true. If after 70 years of private ownership in France no suggestion has ever been heard that rebates are there given, it is fairly safe to say that they have not been given. In England there were undoubtedly special favors given to certain freighters in the very early days, not probably from corrupt motives but merely as a matter of commercial custom. To big customers and keen bargainers rate concessions always had been given by the carriers, whether by road or by canal, and at the outset there seemed no reason why railroads should not follow the example. But as long ago as 1854, in words that were practically copied in the original United States act to regulate commerce 33 years later, the English Parliament enacted that rates should under the same circumstances be the same to all, and that if circumstances were different the difference in rate should be proportionate to the difference in circumstances. And thereupon rebates disappeared from English railway history. "It is remarkable"—the words are those of a House of Commons committee reporting in 1882 after an exhaustive investigation—"that no witnesses have appeared to complain of preferences given to individuals by railway companies as acts of private favor or partiality such as were more or less frequent in the years before the act of 1854." One still sees from time to time fines inflicted upon American railroad companies for offenses of this nature. But in almost every case the transgression had occurred some years before the infliction of the fine. It is safe to say that nobody in America to-day believes either that secret rebates exist to an appreciable extent or that the railroad officials desire to revive the practice of giving them.

Somewhat analogous to direct rebates are concessions given to traders and other persons whom it is desired to influence by liberal payment of claims for loss and damage of freight, by underclassification, free transportation, etc. In France, with a noncompetitive system, such practices have apparently never existed. In England they have never cut much figure, and as long ago as 1902 the establishment of a joint claims committee by the companies themselves put an end to such abuses in this respect as did exist. Free passes in England have never been an abuse, of which the best proof is that they still remain unregulated by law, and a manager can any day privately give a free pass to whom he pleases. That free transportation and the payment of bogus claims were serious abuses on the American railroads not so many years ago is undeniable. No one doubts that they are practically eradicated to-day. And, after all, the abuse of free transportation is not confined to private railroads.

Not very many years ago the Melbourne Age, the leading paper in the Australian State of Victoria, published a list, occupying 11½ closely printed columns, of free passes granted by the State railways to the relations and friends and dependents of members of Parliament.

STATE RAILWAYS NOT USUALLY PROFITABLE.

Our history has then reached this stage. In the two countries where the railways are still wholly in private ownership, the United States and the United Kingdom, nationalization can not be justified on the ground of lack of private enterprise. Nor is it necessary to avoid abuses, for those abuses can be either prevented or cured by adequate State regulation and supervision. Further, it does not appear that the State is likely to build railways cheaper. Still less, that it will surpass private companies in efficiency of management and will therefore have available more net revenue to be applied either to improvement of service or reduction of rates in the country as a whole.

With the exception of the South African Dominion—whose railways are not, however, important, and which owe their moderate success to the fact that the great mining community of Johannesburg, importing almost everything it consumes and accustomed to pay gold miners' prices, is many hundreds of miles from the sea—Prussia is the only country where the State system shows a substantial profit after payment of operating expenses and interest on capital. And this fortunate position Prussia owes to two things—it bought the railways at a most opportune moment, just before the great industrial and commercial development that has made modern Germany, and the Government has been powerful enough to maintain the scale of rates, as we have seen, practically unaltered over a long series of years. Belgium roughly makes both ends meet. Switzerland the same. The smaller German States and the Australasian Colonies, speaking broadly, over a series of years, have to make up some part of their interest charges out of general taxation. Austria, Italy, and France, on its State railways, as we have seen, produce deplorable financial results.

IS STATE MANAGEMENT MORE EQUITABLE?

It is, however, claimed that the State would apportion its favor with a more equal hand; would level the backward parts of the country up to the standard of the better developed; and adjust rates and fares more equitably. These were promises made by the Prussian Government when they took over the railways. And so far as the first half of the promise, the extension of the railroads into poor districts, is concerned, unquestionably it has been fulfilled. But the reason is to be found not in the beneficence of the State so much as in the fact that the only power in Prussia that counts, beside the throne, is that of the agrarian party, the junkers. Partly owing to their hereditary influence over the executive Government, and partly to the fact that the agricultural districts are enormously overrepresented in the Prussian parliament, they have succeeded in getting a good share of the surplus revenues from the manufacturing districts devoted to developing their own estates. On the other hand, as has

already been mentioned, when it comes to tariffs, no country has gone as far as Prussia in giving advantage to the big shipper over the small man.

In Australia, undoubtedly, railroads have been built in backward districts which private enterprise would never have touched. But if a railroad, after being open for traffic for ten or a dozen years, still hardly does more than pay its operating expenses, it is safe to say that it is not an undertaking which would have been entered upon at all by a prudent management had it been free to spend its capital where it would do most good to the public as a whole. In other words, the reason why such a line was built was political pressure. And that such lines are common enough all over Australia is sufficiently well known. Indeed, the report of the Victorian State railways for 1907 gives a list of seven branches, with an aggregate length of 46 miles, constructed at a cost of \$1,883,336, which were closed for traffic at various dates between 1898 and 1904 and abandoned altogether because gross receipts failed even to cover operating expenses.

The claim that the State will adjust rates and fares more equitably is more difficult to deal with. The famous Prussian finance minister, Von Miquel, asserted categorically that the only possible policy for a State system was to adopt a rigid tariff uniform over the whole country. And that is, in fact, the Prussian system of to-day. For 500 miles the rate is 10 times that for 50 miles. Whether this is equitable is another question. It certainly does not cost the railway 10 times as much to do the business. Nor does it seem to be treating the shipper in accordance with the canon of taxation which says that the end to be aimed at is equality of sacrifice by the taxpayer. But, be that as it may, while such a policy is possible for Prussia, with only a small seaboard, and where the Government owns not only the railways but the canals, it is unthinkable in England or in America. Imagine an English Government charging from London to Edinburgh 10 times as much as for the first 40 miles out of London. The only result would be to drive the whole of the traffic to the coasting steamers. As for America, the thing is still more possible. To quote an extreme case: The fact that after years of deliberation the Interstate Commerce Commission has finally decided that it is reasonable to charge more for a carload of freight from Chicago to Denver than from New York to San Francisco is sufficient, without more, to show that American railways, even under public ownership, would need to maintain tariffs in broad outline such as those existing to-day. Certain modifications might, and no doubt would, take place gradually, but the essence of the thing would needs remain unchanged. Tariffs, that is, would continue to be dictated not by a priori theories but by economic necessities. And such tariffs, one might say further, would continue to be denounced as unjust and unreasonable—as the intermountain rates have been for a generation by the citizens of Colorado—by those whom they appeared to prejudice, and who would naturally lay the blame on the railroad managers, whom they see and not on nature and geography, which keep in the background.

NATIONAL RAILWAYS IN A DEMOCRATIC STATE.

We come now to a more important point, a point which may probably be said to be of more importance than all the others put together

Prussia is undoubtedly the most successful instance of State railway management. Reasons have been given already for thinking that the Prussian success, achieved under uniquely favorable circumstances, is not so much to boast of after all. But let it be admitted for the sake of argument that the success is as brilliant as it appears to the imagination of the most enthusiastic German professor. The point can not be too much insisted on that the success of the Prussian autocracy is no argument for similar success in the hands of English or American democracies.

A great American, who has passed over the majority within the last 12 months, Mr. Charles Francis Adams, put the matter nearly 40 years ago in words that have so often been quoted that they have become classic:

In applying results drawn from the experience of one country to problems which present themselves in another, the difference of social and political habit and education should ever be borne in mind. Because in the countries of continental Europe the State can and does hold close relations, amounting even to ownership, with the railroads, it does not follow that the same course could be successfully pursued in England or in America. The former nations are by political habit administrative, the latter are parliamentary; in other words, France and Germany are essentially executive in their governmental systems, while England and America are legislative. Now, the executive may design, construct, or operate a railroad; the legislative never can. A country, therefore, with a weak or unstable executive, or a crude and imperfect civil service, should accept with caution results achieved under a government of bureaus.¹

A railroad is a great business concern. And as every business man knows, a business concern, if it is to prosper, must have a single directing mind at the head. Under an autocratic system the head is the minister of railways, ultimately responsible to the monarch, and to him alone. He may consult his customers, passengers, and shippers, listen to their grievances, and welcome their suggestions—the Prussian Government has an admirably organized system of district and national councils for this very object. But he alone decides. The King of Prussia is as really the head of the railroads as he is the head of the army. Between a railway chief in this position and a minister in a democratic country, changing every few years as his party goes in or out of power, liable at any moment to be outvoted if he refuses a concession that a substantial section of members of the legislature combine to demand, no comparison is possible. “The executive may design, construct, or operate a railroad.” And this is what happens in Prussia. “The legislative never can,” and in democratic countries it is the legislative branch of the government which not only decides policy but dictates always in main outline, often down to the detail of a particular appointment or a special rate, how the policy shall be carried out.

It may be objected that in every country, whatever be the form of government, the State runs the post office; and in almost every country the telegraphs, if not the telephones also. If it can manage these, why not also railroads? The answer is that between these two classes of business there is no analogy. The post office is a purely executive business, with no commercial side to it. Uniform rates, 2 cents or a penny, or whatever the figure may be, equal for all

¹ “Railroads: Their Origin and Problems.” Edition of 1888, p. 115.

distances, are accepted as a matter of course. The amount is so small that nobody objects. If the charge for a letter were not 2 cents but a dollar, people would fast enough be found to protest that it was unreasonable to charge the same from Wall Street to Central Park as from Boston to San Francisco. A business such as this can be managed well enough by a civil-service organization. It is essentially a matter of routine and operating efficiency. There may be—in fact, there usually is—political interference in reference to appointments and promotions. And the staff, no doubt, avail themselves of their votes to improve their wages and working conditions. But this, though a pretty serious matter, is not so vitally important as the difficulties on the side of commercial management.

Whether a new railroad shall be built is not a matter where precedents and fixed rules can decide. It can only be decided by a man able to bring to bear on the question a trained mind and ripe judgment, after taking into account all the factors of probable traffic, probable cost, and whether the limited amount of capital available would not be better employed elsewhere, perhaps in something like double tracking or the construction of a new classification yard, which does not appear directly to benefit any single member of the public. It is hard enough for the best man, left free to exercise his unbiased judgment, to decide such questions rightly. Can it be expected that they will be decided rightly by a minister responsible to a democratic legislature, each member of which, naturally and rightly, makes the best case he can for his own constituents, while he is quite ignorant, even if not careless, of the interests, not only of his neighbor's constituency, but of the public at large? The answer is written large in railway history.

POLITICS IN SOUTH AFRICAN RAILWAYS.

It may be said without fear of contradiction that in no democratic community, where the railways are run by the public authorities, is railway capital spent on construction, developments, and improvements, or railway operation conducted, with a single eye to the best interests of the whole community. To produce public evidence of this statement is not easy. It is not fair to quote unsupported assertions in newspapers or elsewhere, as though they were proof. The men who know the facts from the inside are not in a position to publish them. But of recent years, South Africa has spoken out with considerable freedom on the subject in official documents. And South Africa may well serve as a sample. In March, 1907, a commission on the cape railways reported unanimously that it "was impressed with the necessity of removing as far as possible the management of the railways from the influence of party politics." Here is in more detail an account of the reasons which led them to that conclusion. The quotation is from "A Memorandum Relative to Railway Organization, Prepared at the Request of the Railway Commissioners of the Cape Government Railways," by Sir Thomas R. Price, formerly general manager of those railways, and now general manager of the Central South

African (i. e., Transvaal & Orange River) Railways, dated Johannesburg, February 22, 1907:

POLITICAL INFLUENCES—DISTURBING EFFECT OF.

The drawbacks in the management of the railways in the cape that call for removal arise from the extent to which and the manner in which the authority of Parliament is exercised. They are twofold in their character, viz:

(1) The practice of public authorities, influential persons, and others bent on securing concessions or other advantages which the general manager has either refused in the conscientious exercise of his functions or is not likely to grant, making representation to the commissioner (as the ministerial head of the Government), supplemented by such pressure, political influence, or other means as are considered perfectly legitimate in their way and are best calculated to attain the end applicants have in view.

(Many members of Parliament act similarly in the interests of the districts, constituents, or railway employees in whom they happen to be interested. It is by no means unknown for the requests in both classes of cases to coincide somewhat with a critical division in Parliament—present or in prospect—or otherwise something has occurred which is regarded as irritating to the public or embarrassing to the Government, and the desire to minimize the effect by some conciliatory act is not unnatural.)

(2) The extent to which the fictitious and often transitory importance which a community or district manages to acquire obscures (under the guise of the colony's welfare) the consideration of the railway and general interests of the colony as a whole.

(During the earlier period of my railway service in the Cape Colony few things impressed me more, coming as I did from a railway conducted on strictly business lines, than the extent to which the conduct of railway affairs was influenced by certain conditions. Nor was this impression lessened afterwards, when, in the course of a conversation on the matter, Sir Charles Elliott mentioned to me that he had more than once told a late railway commissioner, "The Government is powerful, but [mentioning the town and authority] is more powerful still.")

I do not regard it as open to doubt that the colony as a whole has suffered severely in consequence, the inland portions of the colony particularly so; and that the need for a remedy is pressing if the railroads are to be conducted as a business concern for the benefit of the colony.

MEANS OF SECURING FREEDOM FROM POLITICAL INFLUENCES.

The necessity for the railways and their administration being removed from such an atmosphere and treated as a most valuable means of benefiting the colony as a whole, whilst not neglecting the interests of a district (but not subordinating the welfare of the whole colony thereto), is pressing. That there should be an authority to refer to in case of real necessity, where the decision or action of the general manager is not regarded as being in the public interest, is also clear. But it is equally manifest that the commissioner or the government of the day, with political or party consideration always in view, is not the proper court of reference.

POLITICAL INFLUENCES AS AFFECTING CONSTRUCTION OF NEW LINES.

There can be little doubt that in the Cape Colony political considerations have influenced the adoption of new lines and their construction—many, if not most of them, of an unprofitable character—without sufficient inquiry or information, often with scanty particulars and possibly contrary to the advice of the officer afterwards intrusted with the construction and working of the line.

PROPOSALS FOR NEW LINES—PROCEDURE RECOMMENDED.

A material change is imperatively necessary in this respect, if only to insure solvency of the colony.

Neither the commission's report nor Sir Thomas Price's memorandum can have sufficed to change matters, for in May, 1915, there was

a further "Memorandum on the control and management of railways and harbors" presented to the South African Parliament by the board of railway commissioners. Here are some extracts from it:

Any minister, however able and strong his character may be, is under the system of party government, insensibly susceptible to party considerations, and is in constant difficulties in giving impartial decisions. * * * It is perhaps natural that men who have been accustomed to the methods in vogue when the railways were of limited extent should still desire to cling to the old system of control, but the consequences of doing so can not but be unsatisfactory. * * * As the railways and their working were regarded as part and parcel of the system of party government, with the obvious advantage to the party in power, the reluctance of any government to make a change is what might naturally be expected. Apart from the magnitude of the railways and the number of the railway servants employed, forces have of late years come into prominence that make it increasingly urgent that the railways and harbors should be regarded and administered in the interests of the whole Union and not as an adjunct of the party that is in power.

POLITICS IN AUSTRALIA.

Official documents have not let us behind the scenes in Australasia in the same way as has been the case in South Africa. But the public history is sufficiently striking. Down to the year 1884 the railways in all the different colonies were managed, like any other department of the Government, by a minister directly responsible to Parliament. This system was not a success, either from the financial or any other point of view. In 1884 Victoria led the way to the adoption of a new system. A buffer was inserted between the politicians and the railways in the shape of a nonpolitical commission. The commission was composed of three men holding office for a fixed term of five years, and, like judges, irremovable, except on a vote of both houses of Parliament. The members were all professional railway men, and the chief commissioner had the right, in case of disagreement, to overrule his colleagues. A well-known English railway man was appointed to fill the post of chief commissioner. The commission had not power to undertake the construction of new lines without the consent of the ministry, but the entire responsibility for the maintenance and working of the existing lines was handed over to them.

The example of Victoria was followed by South Australia in 1887, by New South Wales in 1888, and by Queensland and New Zealand shortly after. In each case the first chief commissioner was an English railway man. In Victoria the new system was not over-successful. Political pressure still continued. The financial position got worse. Budget estimates of expenditure were largely exceeded. And, as has already been mentioned, free transportation was given on a wholesale scale to the dependents of members of Parliament. After much mutual recrimination the commission was abolished and the railways handed back to direct political control. Evidently a commission which, though composed of individuals personally clean-handed, is not strong enough to crush attempts at jobbery in its neighborhood may be even worse for the public interest than a minister who uses his patronage for political ends, for the minister can at least be watched and exposed in Parliament by political opponents, while a commission can take shelter under the cloak of its statutory irresponsibility.

The experience of New South Wales was different. The chief commissioner appointed in 1888 was not merely a brilliantly able administrator, but a man of iron will. He insisted on managing the railroads committed to his care solely in the public interest. And within four years he had succeeded in simultaneously advancing wages, reducing rates, and increasing net earnings by 56 per cent, thus restoring the finances to a satisfactory position. The result was curious. The commission was persecuted by a "large number of people whose influence was at an end under a changed state of affairs." Two commissions of inquiry were appointed to investigate the alleged misdeeds of the commissioners. They found an unhesitating verdict for the defendants on every count of the long indictment. An address of confidence was signed by thousands of electors all over the colony and presented to the commissioners at an enthusiastic meeting of 5,000 citizens of Sydney. The commissioners were reappointed for a second term of five years, but early in his second term the chief commissioner died suddenly. Within a few years things had gone so far wrong that a royal commission was appointed to investigate. As a result of their report two out of the three commissioners were called upon to retire.

It is not possible here to go through the varying histories of all the colonies. One important phase of the history must not, however, be passed over. In Victoria in 1903 there was a fierce railway strike, which by the threat of a drastic bill introduced in Parliament, with the support of an almost unanimous public opinion, was promptly put down. Thereupon an act was passed depriving all railway servants of their local vote, placing them on a separate and distinct register, and giving them power to elect as their special representatives one member to the council and two to the assembly. In 1906 this act was repealed and superseded by "An act to abolish separate representation in Parliament of public officers and railway officers." Section 4 (1) and (2) of this act, which is still in force, is as follows:

(1) In order that all officers may be enabled to render loyal and efficient service to the State, it is hereby enacted that no person or class of persons employed in any capacity, whether permanently or temporarily, in the public service, including the railway service, the police force, the State rivers and water-supply department, and the lunacy department, shall either directly or indirectly take any part whatsoever in or in relation to election of members to the legislative council or the legislative assembly, or directly or indirectly in any way take part in the political affairs of the State of Victoria, otherwise than by recording a vote at a parliamentary election; and no person or class of persons so employed shall directly or indirectly use or attempt to use any influence in respect to any matter affecting the remuneration or position in the public service of either himself or any other person.

(2) If any person so employed is guilty of any contravention of this section, then on proof thereof to the satisfaction of the public service commissioner, the commissioners of railways, the chief commissioner of police, or the State commissioners and water-supply commissioners, or the inspector general of the insane (as the case may be) such person may by the said authority be fined any sum not exceeding £10 and may be reduced in class, subdivision, grade or status, and salary, or he may be dismissed or his services may be dispensed with, provided that such person shall not be dismissed or have his services dispensed with for any contravention of this section without the consent of the governor in council.

Victoria had in 1903 again reverted to the commissioner system. It imported an expert—this time from America—and a striking improvement, both in operating and financial results, at once became

evident. Since then there has been a relapse, and it is understood that at present Victoria is once more considering the importation of a new expert. In fact, in almost every colony, the management has gone through various phases. Sometimes there have been commissions of three, at other times single commissioners. At one time a commission has had full power; at another time it has been more or less subordinated to a minister. Or, again, the commission has been abolished altogether, and the railways have been worked by a general manager whose position is definitely that of a ministerial subordinate.

Another point may be noted. For 30 years most of the Australian States have imported their chief official, whether entitled commissioner or general manager, from England. They have not had the pick of the English railway service. For neither in authority nor in compensation is the position in Australia comparable to that of a general manager of one of the great English railways. And yet the practice continued. What shall be said of an organization which can not train its own young men to become chief executives? That the men are there, there can be no doubt. No one would suggest that the average Australian is inferior to the average Englishman. Is not the reason that, in a commercial concern, promotion by merit not only brings the best men to the top, but stimulates every man to do his best, while Government service usually only gets work done at the rate of what is known in England as the "Government stroke."

POLITICS IN BELGIUM.

The history of Belgium affords a singular contrast to that of Australia. There has been no attempt to interpose a buffer authority between Parliament and the railways. The political minister is frankly the head of the railway system. And what is more remarkable the same political party—called Catholics by themselves and Clericals by their opponents—have been in power for 32 consecutive years, and up to the time of the war they showed no signs of losing their hold on the management of affairs. It is claimed by the Liberal and Labor opponents of the present ministry that this long tenure of office is in large measure due to the patronage and influence which their possession of the railways give them. Certain it is that about 6 per cent of the total votes polled—in Belgium voting is compulsory—are those of the railway staff. Certain it is, too, that the State administration does not err on the side of employing too small a staff. Per kilometer of line open it employs 19.1 persons while the Northern Railway Co. of France on its lines in Belgium, where the traffic is certainly not below the average of the State system, only finds it necessary to employ 12.91. It is certain also that while the goods rates, which are only directly paid by a few persons, have been maintained unreduced—it is fair to remember that even now they are the lowest in western Europe—passenger fares, which appeal to the general public, have been brought down to a point which experts say results in an actual loss. The long-distance workmen's weekly tickets have often been referred to with admiration. In the case of the longest distance, the rate charged comes down to as low as 6 miles for 1 cent. Prof. Mahaim¹ regards these

¹ "Railways and the State," London, 1912.

workmen's tickets as "a boon which has rendered the population mobile and solves the problem of unemployment." The opponents of the ministry tell another story and assert that these tickets are issued in order to prevent workmen leaving the country districts, where they remain under the influence of their priests, and coming to live near their work in the towns, where they might be subject to other political influences. They assert that it is not in the interests of the workmen that they should be encouraged to live so far from their work that in extreme cases they have to leave home at 3.30 or 4 o'clock in the morning and only get back at 11 o'clock at night. And this view has very recently received support from one who can not be regarded as a political opponent. Writing in the *Independence Belge* for September 20, 1916, Father Rutten, a very well-known and influential priest and a strong supporter of the Government, says:

Better and cheaper connection with the suburbs will alone induce workmen to desert the crowded centers; but matters must not be pushed to the other extreme of further multiplying the workmen's fares. I have seen at too close quarters the demoralizing of the Flemish worker who has to spend every day four or five or even six hours on the railway, in crowded carriages in an atmosphere that in winter is not fit to breathe. Living in the country is all very well, but the benefits are greatly reduced by the necessity of these long journeys and by the hours spent in the saloons alongside the stations.

It may be added that, whatever the reason be, the ministry have been so strongly opposed to bringing workmen to reside in the big towns that not only have they done little or nothing to develop suburban traffic in the immediate neighborhood of Brussels, but they have steadily refused the request of the railway officials that workmen's cottages might be built near the big stations, so that men might be at hand at all times of the day and night for urgent requirements of snowstorms, accidents, and the like.

In the matter of train service, it will hardly be denied that the Belgian State railways are inferior to all their neighbors; every passenger entering Belgium from France is conscious of a marked slowing down of the train. Indeed, the international service between Ostend and the German frontier was so poor that the Prussian Government is understood to have threatened to divert the English mail via Holland and Flushing unless it was improved.

Antwerp and Brussels, the two principal towns in the country, with a population of over a million between them, are only 27½ miles apart. Until quite recently the best train took practically an hour over the journey. The slowness of the trains is partly to be explained by the fact that expenses have been rising fast in recent years, and the State administration has economized in road maintenance. And M. Mahaim gives figures, of which he apparently does not fully appreciate the significance, showing that while between 1901 and 1908 total operating expenses rose 25 per cent, road-maintenance expenditure only rose 1.7 per cent. And every railway man knows what this means. Nor can it be denied that the Belgian Government has been behind the times in necessary new capital outlay. To give one striking instance: A direct underground connection between the northern and southern stations at Brussels has been recognized as necessary for a quarter of a century. The work was only commenced just before the war, up to which time the only

access to the northern station was over a single track known to the Brussels newspapers, owing to the frequency of accidents on it, as "the death trap."

In Belgium the railway budget and the State budget are inextricably entangled. Promises have been frequently made that the two budgets should be separated, as in Switzerland and Italy, but hitherto the promises have not been carried out. Official figures do, indeed, give the total amount of the railway debt. But there are no separate railway loans; the whole money has in fact been raised on the general credit of the State. The railway accounts show a figure of some \$3,859,040 per annum charged as "sinking fund." But in fact no sinking-fund payment is really made, and the figure is a mere book entry.

When the Chicago & Alton Railway under Mr. Harriman's management went back into the old books, extracted items of what were really capital expenditures but which had been paid out of revenue, and then proceeded to capitalize the result, Americans denounced it as a financial scandal. But the example had been set by the State administration of Belgium some years before. In 1897 the ministry went back on the 63 previous budgets, extracted a host of small additions to works and equipment which had been charged to revenue under the category of renewals, making together a total of over \$2,122,472, and charged them back against capital.¹

Efforts have been made from time to time not only to separate the railway budget from the general budget but to withdraw the actual management of the railways from the political minister. In 1905, for example, when M. Liebeart was minister of public works, the general management was, in the interests of discipline, handed over to an expert railway man. The reform immediately produced excellent results. But the deputies complained that their recommendations had ceased to be received with sufficient attention, and one of the first acts of M. Helleputte, who succeeded M. Liebeart as minister in 1907, was to resume all authority into his own hands. How that authority is exercised can be judged by one or two instances. According to the regulations, for every place vacant that is not open to competition a candidate must be entered on one of five categories. The first three categories are composed of sons of officials possessing various qualifications. The fourth category is composed of persons recommended to the minister's private secretary by senators, deputies, or priests. The fifth category comprises everybody else. The categories are taken in order. In practice the first three categories provide very few candidates, and, broadly, no one is ever appointed except from the fourth category, "recommended candidates." The railway officials have tried to mend matters by filling as many posts as possible by competition. The ministry fights against this encroachment on its influence. For instance, open competition for the posts of road foreman and running-shed foreman has been put a stop to. Promotion is nominally by seniority, except in cases of exceptional merit. In practice there is good reason to believe that the exceptional merit is mainly of a political kind. The superior officers are forbidden to mix themselves with politics, which, in practice, means that they are forbidden publicly to express opinions other than those of the Government.

¹ See the official "Compte Rendu" for 1912, p. A89.

Similarly the formation of associations among the rank and file of the staff is closely supervised.¹ It is claimed that, while Catholic workmen are free to associate as they please, associations of an opposite tendency live under a constant threat of dissolution.

Here is a quite recent story. On the occasion of the elections in June, 1912, as the result of orders direct from the cabinet of the minister himself, increases of wages were granted and paid to a large number of men on the very day before the vote was taken, and these increases were made to date back to the previous 1st January. The minister was accused in Parliament of having ordered these increases by telegraph; he replied that the accusation was not true. He was quite accurate in his statement. The order had been given by telephone.

As is well known, the Catholic Party is mainly composed of the Flemish portion of the population, while the Liberals and Socialists are mainly French and Walloon. Two somewhat amusing instances of the encouragement of Flemish aspirations may be given. The public notices in the stations at Brussels used to be in two languages—the French above the Flemish. Not long ago they were all taken down and stuck up again with the Flemish above the French. The Traveler's Guide used to be published in two editions. Of the French edition 80,000 copies were sold; of the Flemish 3,000. And it is alleged that, in order to get even the 3,000 sold, the French edition was allowed to go out of print before the demand was exhausted. To please the "Flamingants" the French edition has been abolished, and a single edition has been put out in both languages, naturally larger, more complicated, and less convenient.

Let us turn from the question of interference with the management of an undertaking belonging to the public at large in the interests of a single political party and note a result of State management of a quite different kind. Alongside of the Belgian State railway system proper there is a secondary system of light railways, under a management organized as a company, of which, however, the State and the various local authorities are practically the only shareholders. In this secondary system the State has only about 50 per cent interest, whereas it has a 100 per cent interest in the State railways proper. The minister of public works has control of the tariffs of the light railways, and exercises that control to prevent the light railways from reducing their tariffs—though it may be to the interest both of the light railways and their customers to do so—whenever it is feared that competition injuriously affecting the State railway revenues might result.

One word more as to Belgium. The same political party has, as has been said, retained control of the railways in Belgium for 32 years. But shortly before the war a commission was appointed to inquire into the whole subject. No report has been officially published. But it is a matter of public knowledge that the commission had determined to recommend that the construction of new lines should in future be intrusted to a contractor and not left in the hands of the railway administration; that they were seriously considering the grant of a lease of the State railways to an operating company; and that certain very influential persons were in favor of the adoption of this policy.

¹ See the regulations put out in March, 1910, which are to be found in the report of M. de Bue on the Railway Budget of 1911 in the "Documents Parlementaires."

CONCLUSION.

President Hadley has summed up the conclusions of the Italian railway commission, based on the railway experience of the world as it existed 35 years ago, as follows:

(1) Most of the pleas for State management are based upon the idea that the State would perform many services much cheaper than they are performed by private companies. This is a mistake. The tendency is decidedly the other way. * * * The State is much more likely to attempt to tax industry than to foster it.

(2) State management is more costly than private management. * * *

(3) The political dangers would be very great. Politics would corrupt the railroad management, and the railroad management would corrupt politics. * * *

In the foregoing pages an attempt—hampered by the condition that the most important facts of contemporary history are not always those that can be most readily published—has been made, subject to strict limitations of space, to bring the history up to date. And the conclusions of the Italian commission still seem to stand firm.

The essential lesson of the history may be said to be this: It is impossible to obtain satisfactory results on Government railways in a democratic State unless the management is cut loose from direct political control. Neither Australia nor any other country with a democratic constitution—perhaps an exception ought to be made of Switzerland—has succeeded in maintaining a permanent severance. The Australian Parliaments have loosened their hold for a few years, but only for a few years. In France, in Belgium, in Italy parliamentary interference has never been abandoned for a moment. Without imputing a double dose of original sin to politicians, it is easy to see why this happens. The railways belong to the people. Parliament is the authorized representative of the people. It seems therefore to the ordinary citizen only right and natural that Parliament should control the management of the people's railways. And yet facts are stubborn things; and the facts show that parliamentary interference has meant running the railways, not for the benefit of the people at large, but to satisfy local and sectional or even personal interests. They show further that, under parliamentary management, it is easier to get money for big schemes of new construction than for inconspicuous day-to-day betterments and improvements which probably would produce much greater public benefit. Some day, perhaps, having learned wisdom by experience, a parliament and a people may recognize that management for the people is not necessarily management by the people; that there are other branches of government, besides the judicial branch, unsuited for popular interference, and may establish a permanent State railway organization, with its own board of directors, with its own separate budget, and entirely independent of parliamentary control, but controlled like any private company by a judicially minded commission, required also like a private company to earn a dividend for its stockholders, the people. And then a main objection to Government railways in a democratic State will have lost its force. But hitherto no parliament and no people have recognized this fact, even though it stands out abundantly clear on the pages of railway history.

APPENDIX B

REPORT OF THE ROYAL COMMISSION TO INQUIRE INTO RAILWAYS AND TRANSPORTATION IN CANADA

COMMISSION.

[P. C. 1680.]

CERTIFIED COPY OF A REPORT OF THE COMMITTEE OF THE PRIVY COUNCIL, APPROVED BY THE DEPUTY OF HIS ROYAL HIGHNESS THE GOVERNOR GENERAL ON JULY 13, 1916.

The committee of the privy council have had before them a report, dated June 12, 1916, from the right honorable the prime minister, submitting that it became necessary at the recent session of Parliament to make provision for assistance by loan to the Grand Trunk Pacific Railway Co. and to the Canadian Northern Railway Co., in order that such companies might be enabled to meet current obligations and to provide for payment of interest on outstanding securities.

Having regard to the conditions and necessities of railway development in Canada, the prime minister is of opinion that the situation should be considered in a comprehensive way and that a thorough inquiry should be made by a board of the highest ability and experience.

The prime minister further submits that the inquiry should have reference to the following matters:

1. The general problem of transportation in Canada.
2. The status of each of the three transcontinental railway systems—that is to say, the Canadian Pacific Railway system, the Grand Trunk Railway system (including the Grand Trunk Pacific Railway and the Grand Trunk Railway and their several branches) and the Canadian Northern Railway system, having special reference to the following considerations:

(a) The territories served by each system and the service which it is capable of performing in the general scheme of transportation.

(b) Physical conditions, equipment, and capacity for handling business.

(c) Methods of operation.

(d) Branch lines, feeders, and connections in Canada.

(e) Connections in the United States.

(f) Steamship connections on both oceans.

(g) Capitalization, fixed charges, and net earnings, having regard to (1) present conditions, and (2) probable future development with increase of population.

3. The reorganization of any of the said railway systems, or the acquisition thereof by the State, and in the latter case the most effective system of operation, whether in connection with the Intercolonial Railway or otherwise.

4. Generally speaking, all matters which the members of the board may consider pertinent or relevant to the general scope of the inquiry.

The prime minister therefore recommends as follows:

That Alfred Holland Smith, of the city of New York; in the United States of America; Sir Henry Lumley Drayton, of the city of Ottawa; and Sir George Paish, of London, England; be the members of the said board, of whom the said Alfred Holland Smith shall be chairman.

That the board be constituted under part 1 of the inquiries act and that it shall have all powers and authorities which could be conferred under the authority of that act, as amended by chapter 28, of the statutes of 1912, entitled "An act to amend the inquiries act."

That the provincial governments be respectfully requested to afford to the board any necessary information and cooperation in the inquiry.

That all the departments of the government shall afford to the board and to all persons acting under its authority and by its direction all such assistance and cooperation in the inquiry as the board may desire.

That the board of railway commissioners for Canada, the commission of conservation, and all other bodies of a like character under the jurisdiction of the Parliament of Canada, shall cooperate with and assist the board in the proposed inquiry.

That the board shall report its findings and conclusions with the least possible delay.

That a commission for the purposes aforesaid shall issue to the members of the board above designated.

The committee concur in the foregoing and submit the same for approval.

RODOLPHE BOUDREAU,
Clerk of the Privy Council.

[P. C. 2567.]

CERTIFIED COPY OF A REPORT OF THE COMMITTEE OF THE PRIVY COUNCIL, APPROVED BY HIS EXCELLENCY THE ADMINISTRATOR ON OCTOBER 21, 1916.

The committee of the privy council have had before them a report, dated October 19, 1916, from the right honorable the prime minister, submitting that Sir George Paish has resigned his position as a member of the board, appointed by order in council of July 13, 1916, to inquire into and report upon the general problem of transportation in Canada, etc.

The prime minister further recommends that William Mitchell Acworth, Esq., gentleman, of London, England, be appointed a member of the said board of inquiry in place of Sir George Paish, resigned.

The committee concur in the foregoing recommendation and submit the same for approval.

RODOLPHE BOUDREAU,
Clerk of the Privy Council.

To His Excellency the Governor in Council:

The report of the royal commission appointed to consider the general problem of transportation in Canada.

May it please your excellency, we, the commissioners appointed by order in council dated July 13, 1916, to inquire and report on the railways of Canada, have the honor to present our report to your excellency.

The subject matter of the reference to us is as follows:

1. The general problem of transportation in Canada.
2. The status of each of the three transcontinental railway systems—that is to say, the Canadian Pacific Railway system, the Grand Trunk Railway system (including the Grand Trunk Pacific Railway and the Grand Trunk Railway and their several branches), and the Canadian Northern Railway system, having special reference to the following considerations:

(a) The territories served by each system and the service which it is capable of performing in the general scheme of transportation.

(b) Physical conditions, equipment, and capacity for handling business.

(c) Methods of operation.

(d) Branch lines, feeders, and connections in Canada.

(e) Connections in the United States.

(f) Steamship connections on both oceans.

(g) Capitalization, fixed charges, and net earnings, having regard to (1) present conditions, and (2) probable future development with increase of population.

3. The reorganization of any of the said railway systems, or the acquisition thereof by the State; and, in the latter case, the most effective system of operation, whether in connection with the Inter-colonial Railway or otherwise.

4. Generally speaking, all matters which the members of the board may consider pertinent or relevant to the general scope of the inquiry.

Sir George Paish, one of the original commissioners, was, owing to ill health, unable to serve on the commission, and on October 31, 1916, his formal resignation was received and Mr. William Mitchell Acworth was appointed in his place. Mr. Acworth landed in America early in December and joined in our work.

In September and October two of the commissioners, the chairman, Mr. Alfred H. Smith, and Sir Henry Drayton, spent some weeks inspecting the railways, traveling upwards of 10,000 miles, visiting all important points from Halifax to Vancouver and Prince Rupert and taking the opportunity of meeting and conferring with many representative citizens. We desire to express our appreciation of the manner in which the officers of the various companies facilitated our journey and assisted us to obtain a knowledge of local conditions.

We have had a physical examination made, in such detail as circumstances have permitted, of the railways of the Canadian Northern and the Grand Trunk Pacific, by a corps of engineers under the supervision of Prof. Swain, of Harvard University and the Massachusetts Institute of Technology. His report is given in Appendix A.

In addition to the information which we have obtained from our own inquiries and inspections and those of our staff, we have received voluminous reports and statistics from the different companies in reply to our inquiries on specific points. Two of our number have

held formal hearings in Toronto into the affairs of the Canadian Northern Railway Co., and in Montreal into the affairs of the Grand Trunk and Grand Trunk Pacific companies.

Since Mr. Acworth's arrival we have frequently met in Ottawa and in New York for discussion of the remaining matters referred to us. We have taken the situation as it is, and find ourselves in agreement as to the necessity for constructive aid to bring the railways through the present crisis. We differ, however, as to the extent and method of Government help desirable and as to the increase and character of Government liability and interest now and for the future. It has therefore been found necessary to submit a report of the two concurring commissioners, with a brief statement of the minority recommendation. They will be found herewith.

Respectfully submitted.

A. H. SMITH.
H. L. DRAYTON.
W. M. ACWORTH.

REPORT OF SIR HENRY L. DRAYTON AND MR. W. M. ACWORTH.

INTRODUCTORY.

This commission is instructed by the Government to report on the "general problem of transportation in Canada, with the least possible delay." Under these conditions it has been clearly impossible for us to set on foot and await the result of exhaustive inquiries, and to elaborate in full detail a scheme based thereon. We believe that we shall best carry out the purpose which the Government has in mind in appointing us, if, after setting out the general situation as we see it, and the general conclusions at which we have arrived, we sketch in broad outline the scheme of readjustment which we recommend for adoption, and then indicate the manner in which, if and when our recommendations are approved by the Government and Parliament, those recommendations should be brought into practical operation.

PART I. CANADIAN RAILWAYS.

MILEAGE, CAPITAL, AND STATE AID.

On June 30, 1916, the operating mileage of railways in Canada was officially reported to be as follows:

In operation, miles of first main track (less duplications through trackage rights).....	Miles. 37,434
Under construction, according to official reports and estimates.....	3,150
	<hr/> 40,584

This mileage, which we take in round figures as 40,000 miles, is very great as compared to the population of Canada, assumed to be something like 7,500,000 at the present time. It far exceeds that of the United Kingdom or France, with populations, respectively, of 46,000,000 and 40,000,000. It is roughly equal to that of the German Empire, with 67,000,000 inhabitants, and of India, with more than 300,000,000 people. It is only slightly behind Russia, with a

very rapidly growing population of 170,000,000. Putting Canada alongside countries more nearly comparable, we find that Australia with an area roughly corresponding to that of Canada, has 18,290 miles of line for 5,000,000 inhabitants. Argentina has 20,290 miles for the same population. To take yet another comparison, Canada has nearly one-sixth of the railway mileage of the United States; it has less than one-fourteenth of the population. Evidently, judged by the standards of other countries, the railway mileage of Canada bears a very high ratio to the population.

We may put the same thing in another way. The growth of the mileage has far outstripped the growth of the population. In 1901, with a population of 5,371,315, Canada had 18,140 miles of railway in operation; roughly, a mile of railway for every 300 inhabitants. In 1911, the population had increased 34 per cent, to 7,206,643, while the mileage had increased by 40 per cent to 25,400 miles; a mile of railway to every 284 inhabitants. Since 1911 the population has, it is understood, not much increased, but the railway mileage, open and under construction, has grown to 40,584 miles. In other words, Canada has, to-day, taking the present population as 7,500,000, only 185 inhabitants to support each mile of railway. Taking the four western Provinces by themselves, there are only two-thirds of this number for each mile of railway. The United States has 400 inhabitants per mile of line; the United Kingdom, 2,000; Russia, 4,000. Even Australia has 274 inhabitants for each mile of railway; Argentina, 238. And Canada has, what none of these other countries have to a comparable degree, a magnificent internal system of natural waterways, which must always, so far as can now be foreseen, carry a very large proportion of the total traffic. Of course, if mileage be taken in relation not to population, but to area, Canada, so far from being at the top, comes far down in the scale. But area means potentialities, not actualities. Population alone can supply traffic. That the railway mileage already built will be insufficient for the Canada of the future we doubt not. The question which concerns to-day is the relation of existing mileage to the circumstances of the present and the proximate future.

These facts are fundamental, and must be steadily borne in mind in any consideration of the future of Canadian railways.

APPORTIONMENT OF MILEAGE.

Of the mileage owned and in operation on June 30, 1916, (1) there were in the hands of the Dominion Government:

	Miles.
Intercolonial.....	1, 514
Prince Edward Island.....	275
Transcontinental.....	1, 810
	<hr/>
	3, 599

(2) The mileage (excluding trackage rights) of the four large private operating systems was:

	Miles.
Canadian Pacific.....	12, 900
Canadian Northern.....	9, 648
Grand Trunk.....	3, 556
Grand Trunk Pacific (excluding Branch Lines Co.).....	1, 964
	<hr/>
	28, 068

(3) There were operated—

By other companies and provincial governments

Total.....

Included in the mileage of "other
mileage operated or controlled by United States

Great Northern.....
 Michigan Central.....
 New York Central.....
 Boston and Maine (including Maine Central)....
 Pere Marquette.....

Total.....

This is more than counterbalanced by
age in the United States, as follows:

Canadian Pacific.....
 Grand Trunk.....
 Canadian Northern.....
 Total.....

REVENUE, GROSS AND NET

For the year ending June 30, 1916, the
ways reporting to the department of
include, in addition to Canadian mileage
but not the controlled, mileage of Canadian
States, were \$261,888,654, or practically
road operated otherwise than under traffic

For the principal systems, which together
per cent of the total earnings, the gross
operated during the year were as follows:

Road.

Canadian Pacific.....
 Canadian Northern.....
 Grand Trunk.....
 Grand Pacific (excluding Branch Lines Co.).....
 Transcontinental.....
 Intercolonial.....

¹ This list is not exhaustive and only gives important companies.

² These lines are essential parts of the parent systems, but are not operated by them.

The net operating revenues and the average per mile operated during the year were as follows:

Road.	Net operating revenue.	Per mile of average mileage operated during year.
Canadian Pacific.....	\$46,416,743	\$3,572
Canadian Northern.....	10,232,088	1,054
Grand Trunk.....	10,373,027	2,909
Grand Trunk Pacific (excluding Branch Lines Co.).....	1,060,346	539
Transcontinental.....	429,455	214
Intercolonial.....	2,363,478	1,522

In addition to the revenues from rail transportation and services incidental thereto, the Canadian Pacific reported revenues from boat lines, commercial telegraphs, hotels, and news departments of \$22,834,095 gross and \$6,034,340 net.

INVESTMENT IN ROAD AND EQUIPMENT.

At the close of the year ended June 30, 1916, the investment in road and equipment as carried on the books of the companies or the Government was as follows:

Road.	Book value of road and equipment.	Miles owned.	Per mile.
Canadian Pacific.....	\$530,788,978	7,779	\$68,233
Canadian Northern.....	494,762,489	9,002	54,961
Grand Trunk.....	424,169,310	3,331	127,340
Grand Trunk Pacific (excluding Branch Lines Co.).....	192,312,218	1,962	98,018
Transcontinental.....	159,881,894	1,810	88,332
Intercolonial.....	116,234,204	1,514	76,773
	1,918,149,093	25,398	75,524

The book value of road and equipment is not to be regarded as accurately representing the actual cost of the property. "Cost of road and equipment," as set up on the books of a company, frequently represents not the actual cash outlay but the par value of the bonds and shares which have been issued to obtain cash or property. "Cost of road and equipment" may therefore include the par value of securities issued to obtain money for interest during construction, discounts on securities sold, and other items not strictly construction cost. And it may include sums to offset the par value of securities which have been issued for other than a cash consideration. For example, the Grand Trunk Pacific has \$25,000,000 and the Canadian Northern has \$100,000,000 of ordinary stock outstanding, neither of which issues represents more than a nominal sum of actual cash paid in. On the other hand, the Canadian Pacific Railway accounts shows that this company has received premiums of \$45,000,000 upon the \$260,000,000 of ordinary stock sold. These premiums are invested in the general assets of the company in the same manner as the proceeds of the stock itself.

If the sums mentioned for the Grand Trunk Pacific and Canadian Northern be deducted from the book account "Cost of road and equipment," the statement becomes:

	Cost of road and equipment.	Miles owned.	Average per mile.
Canadian Northern.....	\$394,169,130	9,002	\$43.786
Grand Trunk Pacific.....	167,312,218	1,962	85,276

RETURN ON CAPITAL.

The net operating revenues have already been stated. Taking in taxes, rents, and similar items, which relate to operation, the relation of the net operating income to cost of road and equipment comes out as follows:

Road.	Net operating revenue.	Net rents, hire of equipment, taxes, etc.	Total.	Per cent on property investment.
Canadian Pacific Railway.....	\$46,416,743	¹ \$2,109,477	\$44,307,266	8.34
Canadian Northern.....	10,232,088	¹ 1,241,465	8,990,623	2.28
Grand Trunk.....	10,373,027	¹ 469,926	9,903,101	2.33
Grand Trunk Pacific (excluding branch lines)...	1,060,346	² 1,153,283	2,213,629	1.15
Transcontinental.....	429,455	¹ 1,371,070	¹ 948,615	(³)
Intercolonial.....	2,363,478	167,214	2,196,264	1.88

¹ Debit.

² Credit; estimated.

³ Deficit.

With the exception of the first-named railroad, the return is so low as to afford further support for the view which we have suggested, that the country has built more railroads than can be justified on commercial grounds.

GOVERNMENT AID IN GENERAL.

The geographical location and climate of Canada are such that easy communication with the settled districts had to be established before any large permanent population could find means of support in the newer country. Without railways the rich grain-growing Provinces of the West would have remained a hunting and trapping district, or at best a grazing section, because it would have been impossible to get out the grain which constitutes the chief product of those Provinces. The people have been liberal in promoting railway building in advance of their profitable operation on a commercial basis. Great grants of land have been given to the two principal systems in the West. But without these railways the land would have been practically valueless. Cash aid has also been voted liberally. The total for this purpose up to June 30, 1916, is reported as \$116,000,000 by the Dominion Government, about \$30,000,000 by the Provinces, and \$12,000,000 by municipalities. The Governments, both national and provincial, have frequently entered directly upon construction projects when private capital could not be found: as for instance the Dominion Government in the case of the Hudson Bay Railway, and the Ontario Government in the case of the Temiskaming & Northern Ontario. They have also extended large

assistance to private companies by direct loans, by purchase of their securities, and by guaranties. These have grown to large sums. By far the largest part, though not all, of the aid of this kind is to be found in the principal systems. We give the detail as follows:

GOVERNMENT AID TO CANADIAN NORTHERN.

According to the reports of the Statistical Bureau of the Department of Railways and Canals, the roads composing the Canadian Northern System had received assistance up to June 30, 1916, as follows:

(1) Subsidies:	
Paid by Dominion Government.....	\$31,286,720
Paid by Provinces.....	6,821,724
Paid by municipalities.....	765,704
	<hr/>
	38,874,148

The total amount reported by the Canadian Northern Co., as received upon the foregoing account, is \$33,917,175. The difference is explained by the fact that the Government reports comprise aid granted to companies now included in the Canadian Northern System prior to their inclusion.

(2) Land grants.

Location.	Received.	Of which sold.
	<i>Acres.</i>	<i>Acres.</i>
Nova Scotia.....	150,000	150,000
Quebec.....	402,880
Ontario.....	2,000,000
Manitoba, Saskatchewan, Alberta.....	4,002,848	3,159,720
	<hr/>	<hr/>
	6,555,708	3,309,720

Amount realized from land sales, \$16,603,295.

The company appraises its unsold lands at \$19,885,485, present value.

(3) *Guarantees*.—As at June 30, 1916, the company had outstanding securities bearing the guarantee of the Dominion or Provincial Governments as follows:

Guaranteed by—	
Dominion of Canada.....per value..	\$104,613,247
Province of Alberta.....do....	18,950,361
Province of Saskatchewan.....do....	14,762,546
Province of Manitoba.....do....	25,501,865
Province of Ontario.....do....	7,859,997
Province of British Columbia.....do....	39,953,124
	<hr/>
	211,641,140

The foregoing represents the bonds reported by the company as guaranteed and outstanding. Provincial reports indicate that additional guarantees have been made, especially by Alberta and Saskatchewan. These presumably are related to mileage on which the guarantees have not yet been earned. Some of these projects are apparently in abeyance, and may perhaps be abandoned.

(4) *Loans*.—The Canadian Northern has had direct loans from the Dominion Government:

July, 1914, secured by mortgage.....	\$858, 166
October, 1914, secured by deposit of \$12,500,000 of 4 per cent Government guaranteed debentures, included in above mortgage.....	10, 000, 000
June, 1916, secured by mortgage.....	15, 000, 000
	<hr/> 25, 858, 166

Summary:

Subsidies.....	38, 874, 148
Land grants (sold, \$16,603,295; realized on mortgage \$17,776,514)....	34, 379, 809
Cash loans (interest not being paid).....	25, 858, 166
Securities guaranteed.....	\$211, 641, 140
Less Government guaranteed debentures held as collateral.....	12, 500, 000
	<hr/> 199, 141, 140

Total public assistance, direct and indirect..... 298, 253, 263

The company has not realized par value for all the securities guaranteed; \$60,292,700 par value are pledged as collateral security for loans, of which \$10,000,000 have been, as stated above, lent by the Government; the balance has been lent by private investors.

GOVERNMENT AID TO CANADIAN PACIFIC.

Some time prior to 1880, the Dominion Government undertook the construction of a road that was designed to be a link in a trans-continental line. In that year the Canadian Pacific Railway Company was organized for the purpose of completing the line. The assistance given to the company by the Government comprises the following:

(1) *Railroad handed over*.—The cost of road and surveys made by the Government, and turned over to the company free of cost, was \$37,785,320.

(2) *Cash aid*:

By Dominion Government to Canadian Pacific Railway Co.....	\$30, 289, 343
By Dominion Government to subsidiary companies.....	13, 129, 873
By Provincial Governments to Canadian Pacific Railway Co.....	412, 873
By Provincial Governments to subsidiary companies.....	12, 016, 257
By municipalities to Canadian Pacific Railway Co.....	464, 761
By municipalities to subsidiary companies ¹	4, 632, 422
By Dominion Government (by purchase back of land previously granted)	10, 189, 521
	<hr/> 71, 135, 055
Deduct loans since repaid.....	4, 229, 574

Total cash aid..... 66, 905, 481

(3) *Land grants*:

	Acres.
By Dominion (excluding land repurchased).....	21, 634, 190
By British Columbia.....	6, 388, 993
	<hr/> 28, 023, 183
Land sales to June 30, 1916.....	16, 541, 055
	<hr/> 11, 482, 128

Proceeds of lands and town sites to June 30, 1916, \$123,810,124.

The company's report for June 30, 1916, shows net proceeds from land sales as \$68,255,803. The difference, it is understood, represents expenditure by the company for development projects, irrigation, hotels, etc., and, in some cases, dividends.

The unsold lands of the company are carried in its accounts at \$119,250,000.

Summary:

Completed road and surveys, cost Government.....	\$37, 785, 320
Cash subsidies.....	66, 905, 481
Lands sold.....	123, 810, 124

Total public assistance, direct and indirect.....¹ 228, 500, 925

Further, indirectly, the Canadian Pacific has had Government aid the value of which can not be determined, such as right to take public land free for railway purposes; various loans (since repaid); certain exemptions from taxes; admission of original construction material free of duty; and other concessions.

GOVERNMENT AID TO GRAND TRUNK.

According to Government reports, the roads now comprised in the Grand Trunk Railway Co.'s undertaking have received aid as follows:

(1) Subsidies:	
Dominion Government.....	\$3, 423, 699
Provinces.....	4, 077, 233
Municipalities.....	5, 502, 128
	<hr/>
	13, 003, 060
(2) Loan:	
The Dominion Government made to the Grand Trunk Railway Co. many years ago a loan (interest on which has never been asked for or paid), amounting to.....	15, 142, 633
	<hr/>
Total.....	28, 145, 693

GOVERNMENT AID TO GRAND TRUNK PACIFIC.

(1) Subsidies:	
Provincial.....	\$376, 320
Municipal.....	350, 000
	<hr/>
Total.....	726, 320
(2) Other cash aid:	
Under the "implementing clause" the Dominion Government has paid to the Grand Trunk Pacific.....	6, 263, 716
It has also lent upon or bought securities as follows—	
May, 1909, 4 per cent Prairie Section bonds bought at par.... ²	10, 000, 000
August, 1913, 4 per cent debentures due in 1923, bought at par..... ²	15, 000, 000
Loan of 1914, secured by pledge of \$7,500,000 of 4 per cent bonds.....	6, 000, 000
1913-14, 3 per cent first mortgage bonds (bought from company).....	33, 048, 000
	<hr/>
Direct investment of Dominion Government.....	70, 311, 716

Loans to the amount of \$8,000,000 were authorized by Parliament in 1916. Advances under this authority are not here included, but are referred to subsequently.

¹ It must be noted that this sum is not net to the company, as it represents the gross receipts, while the company has expended large sums of money in irrigating a portion of the lands sold. As pointed out, however, the company values its unsold lands at \$119,250,000.

² These securities are guaranteed by the Grand Trunk Railway Co. of Canada.

(3) *Guarantees.*—The Dominion Government has also guaranteed outstanding bonds of the Grand Trunk Pacific in addition to those actually held by the Government:

First mortgage, 3 per cent bonds.....	\$34, 992, 000
4 per cent sterling bonds of 1962.....	8, 440, 848
	<hr/> 43, 432, 848
Summary:	
Subsidies and other cash aid.....	6, 990, 036
Dominion Government investment in securities.....	64, 048, 000
Dominion Government guarantees.....	43, 432, 848
	<hr/>
Total.....	114, 470, 884
The Grand Trunk Pacific Branch Lines Co. has also Provincial guar- antees on bonds outstanding to the amount of.....	13, 469, 004

TOTAL PUBLIC INVESTMENT.

We tabulate the above figures for all the companies together and add to them the capital of the Government railway as shown in the Government account.

	Subsidies.	Proceeds of lands sold.	Loans out- standing or investment.	Guaranties outstanding.	Total.
Canadian Northern.....	\$38, 874, 148	\$34, 379, 809	\$25, 858, 166	\$199, 141, 140	\$398, 253, 263
Canadian Pacific.....	¹ 104, 690, 801	123, 810, 124	228, 500, 925
Grand Trunk Railway.....	13, 003, 060	15, 142, 633	28, 145, 693
Grand Trunk Pacific.....	726, 320	70, 311, 716	43, 432, 848	114, 470, 884

Total.....	157, 294, 329	158, 190, 933	396, 924, 483	256, 042, 992	968, 451, 737

¹ Includes railroad turned over to company.

Not counting the loss of interest for many years upon the invest-
ment in roads operated by the Government, it appears that for the
eight systems, in which the public is most interested, the people of
Canada, through their Governments have provided, or guaranteed
the payment of, sums totaling \$968,451,737. This works out at over
\$30,000 per mile of road. But even this is not all. In addition, they
have granted great areas of land as yet unsold and unpledged. They
have undertaken the construction of other lines whose cost will be
an important addition to this large outlay. Further, in the case of
some of the companies included above, to which they have given or
lent large sums of money to meet pressing needs, unlike private
lenders, who would naturally have demanded a security charged in
front of all previous investment, they have voluntarily accepted a
charge ranking after the bulk of the private capital already put into
the undertaking.

PROPORTION OF PUBLIC INVESTMENT.

We pause at this point in the history to interpose some remarks on
a subject to which we shall have to revert more at length hereafter.
The above figures show that the Grand Trunk Pacific system, in-

cluding its "branch lines" has obtained from the public authorities in cash or in guarantees of bonds, \$127,939,892, out of \$197,129,391¹ which is given as the total cost of the property; and the Canadian Northern has similarly obtained \$298,253,263 out of \$370,302,451, which is the maximum possible cash cost of the property as far as we have been able to ascertain it. On the other hand, the history shows that the Grand Trunk Railway proper has received much less assistance than either of the other two great companies with which it is in competition. The Grand Trunk began as long ago as 1851, before the Dominion of Canada came into existence, and before the modern policies of subsidies and guarantee had been introduced. In the main it has had to rely throughout its history on its own resources, and it has had for many years to compete with heavily subsidized rivals. While it was the pioneer in giving to Canada railway service, its shareholders have never had but very moderate dividends. We have felt this should be borne in mind when dealing with the question of the Grand Trunk Pacific, and it has had some influence on the recommendations which we make later on this subject.

HISTORICAL DEVELOPMENT.

The railway history of Canada has gone through three distinct phases. In the first period the Grand Trunk came into existence almost entirely as the result of the investment of private capital. It is comparable in this respect with the private railway companies of England and the United States.

In the second period the Canadian Pacific was brought into existence and carried through its early difficulties by direct Government support and large financial assistance from public funds. As a result of this support and assistance, coupled with the rapid growth of Canadian population and wealth, and its own wise and prudent management, the Canadian Pacific has "made good." It has raised, without further Government help, hundreds of millions of new capital. Its common stock, which carries control of the property, represents an average of \$112.50 of actual cash put into the property for every \$100 of nominal face value. The shareholders have for years received handsome dividends; they have, out of operating surplus, invested \$100,000,000 in subsidiary undertakings; they have realized \$68,000,000 net from land sales, and they still possess land conservatively valued at \$119,000,000. Against no part of this total value has any capital been issued. To-day the Canadian Pacific stands as one of the wealthiest and financially strongest railway companies in the world; fully able to raise, on its own credit and on the most favorable terms, all the new capital which will be required to meet the demands for new development that the future will bring.

The Canadian Northern and Grand Trunk Pacific belong to the third period. Though the outward form of these two undertakings is that of a private company, substantially they both rest on the responsibility of the Governments, National and Provincial. Their common stocks, which carry with them control of the respective properties, represent no practical cash investment, and both companies have failed to "make good." They are kept going at present only through large advances of public money.

¹As reported to Parliament, Feb. 29, 1916. This figure includes \$26,938,139 interest during construction.

We think the success of the Canadian Pacific Railway, as contrasted with the fact that the Grand Trunk Pacific and Canadian Northern have had to come back to the Government for help far beyond that originally contemplated, points a distinct moral. There was given to the Canadian Pacific at the outset direct aid with a generous hand, and the aid was continued up to the point when the company could stand alone. The country knew what it was paying. Had it known how splendid a property it was building up it would no doubt have stipulated for some share in the reversion. But even as it is, the people of Canada, in our view, have had good value for their money. In the early days of the Canadian Northern no direct aid was given other than a comparatively small grant of land, at the time almost valueless. Since then the company has received \$38,874,000 in subsidies; but this is very small in proportion to the direct aid given to the Canadian Pacific. Great sums of money were indeed guaranteed by the Dominion and the Provinces, but up to 1914 the company apparently met its obligations from its own resources. To the Grand Trunk Pacific direct aid was indeed given to a considerable extent, but the financial scheme mainly relied on guaranties, first by the Governments, and secondly by the Grand Trunk Co. We do not think the Governments, either of the Dominion or of the Provinces, fully realized how serious was the liability which they were assuming. We do not think the companies realized how serious the position would be if recourse had to be had to the guaranties. While we are not prepared to say that in no circumstances should guaranties be given, we do feel that a policy of guaranties on a large scale is a dangerous policy. It is evident that guaranties have been given in the past without adequate appreciation of the fact that they might fall due, and that if they did, the burden would be grave. We recommend that in future no guaranties be given without being taken up into the books of the guarantor as a continuing liability and without some financial provision being made against the possibility of their falling due.

GROWTH OF CANADIAN RAILWAYS.

Till within the last decade, Canada was (omitting the Intercolonial Railway and other smaller undertakings of only local interest) served by two main systems. They were:

(1) The Canadian Pacific, stretching right across the continent, and having access to all important points both in the east and in the west, with control also of a considerable mileage in the United States, and in a very prosperous financial position.

(2) The Grand Trunk, whose original charter dates from 1851, with a strong hold on eastern Canada, and also with important United States connections. The Grand Trunk had always met its obligations, though over a series of years the return to its shareholders had been but small. Westward the Grand Trunk only extended, in Canada, as far as Lake Huron.

(3) But even 10 years ago, the Canadian Northern, which had started as a local line in Manitoba in 1896, was beginning to build up in the prairie provinces a system which, in 1906, comprised more than 2,400 miles, and which now contains over 5,000 miles in

these provinces. The Canadian Northern had grown rapidly with the growth of the western country, but had always earned sufficient net revenue to take care of its obligations.

The Canadian Pacific had, it will be seen, the advantage of gathering its own traffic for itself and of keeping it in its own hand throughout. The other two companies were in a different position. The Canadian Northern had to depend for westbound rail traffic on what the companies in the east, one of which was a rival, handed to it. On the traffic which it collected in the west, it lost the long haul to the east. It was not unnatural that the company should reach out to the east. For the same reason it was equally natural that the Grand Trunk Co. should reach out to the west. And public sentiment, which felt that the growth of the country justified and required more than one transcontinental line, undoubtedly sympathized with the companies' ambitions.

The natural solution of the question undoubtedly was that the Canadian Northern and the Grand Trunk should join forces and construct a line from North Bay, or its neighborhood, to Port Arthur. Negotiations for the amalgamation of the two companies were, we understand, actually set on foot in 1903. Unfortunately they came to nothing; and each company set out independently to construct into the territory of the other. And a very large measure of Government help was given to them both, with the result—hardly, we think, with the deliberately contemplated object—of obtaining not merely two but three transcontinental routes. An uninformed and unreasonably optimistic public opinion undoubtedly supported this action at the time. We can not, however, but feel that those responsible for the policy of the Grand Trunk and Canadian Northern Companies should have been wiser than the public.

PART II. THE GRAND TRUNK SYSTEM.

The Grand Trunk scheme, first put forward in 1903 under two acts of Parliament, both dated October 24, 1903, was for a main line right across the continent from Moncton to Prince Rupert. The portion of the line east of Winnipeg was to be built by the Government and leased to the Grand Trunk Pacific Co. for 50 years certain, with a possibility of renewal. The portion west of Winnipeg was to be built by the Grand Trunk Pacific Co., with large Government assistance. The Grand Trunk Pacific was to build any necessary branches of the system both east and west, and was to operate the whole. The Grand Trunk was to hold, and in fact always has held, the entire share capital of the Grand Trunk Pacific, and the Grand Trunk has had full control of the undertaking throughout.

In fairness to the Grand Trunk it should be observed that the responsibility for the construction of the line from Moncton to Winnipeg, now known as the National Transcontinental, does not primarily rest on them. The proposal of the company, as originally formulated and submitted to the Government, was for a line from the Pacific through Winnipeg as far as North Bay. Government action was responsible for the line being carried eastward all the way to Quebec, and the further prolongation from Quebec to Moncton was added during the passage of the bill through Parliament.

But though the Grand Trunk did not originate the National Transcontinental, it accepted full liability for it. The agreement between the Grand Trunk Pacific and the Dominion Government provided as follows: "In order to insure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to and approved of by the company before the commencement of the work, and the said work shall be done according to the said specifications, and shall be subject to the joint supervision, inspection, and acceptance of the chief engineer of the company."

Upon this provision the Grand Trunk Pacific Co., in an official publication, "The Grand Trunk Pacific; Canada's National Transcontinental Railway; 10th edition, January, 1912," comments as follows:

Since the rental payable by the company to the Government for the use of the Eastern Division is a percentage on the cost of construction, it will be observed that it is a matter of great importance to the company that this item "cost of construction" shall be determined on the most economical basis consistent with a well-built railway, in which respect the foregoing provision contained in the agreement fully protects the company.

The company, then, appreciated that "cost of construction" was to it a matter of great importance, and considered that it was fully protected by the terms of the agreement. But as, in spite of the right of the company to approve specifications and the right of the company's chief engineer to supervise and inspect the work, the cost of construction of the National Transcontinental, which had been estimated at \$61,415,000, was permitted to reach \$159,881,197, the company objected to carrying out their bargain. And the Government, by accepting the company's refusal and commencing to work the line themselves, have in effect released the company unconditionally. The National Transcontinental is now a part of the Government Railways. We make at this stage only two comments on what is past history: The one that the people of Canada have been generous to the shareholders of the Grand Trunk Pacific; the other that the Grand Trunk Pacific shareholders, in other words, the Grand Trunk Co., have not shown such prudence and business foresight as would naturally encourage the Government to have confidence in their future management.

The refusal of the Grand Trunk Pacific to take over the operations of the line from Winnipeg to Moncton, with the result that the eastern half of the intended through route is being operated by the Government, has implied the temporary failure of the complete scheme as approved by Parliament. The line west of Winnipeg is at present being operated under the control of the Grand Trunk, the nearest point of whose rails is at North Bay, a thousand miles away. It would clearly be impossible for the Government to permit this as a permanent policy.

GRAND TRUNK PACIFIC FINANCE.

The original scheme for financing what was then known as the Western Division of the Grand Trunk Pacific—that is, the entire line as now left after the Government has assumed the responsibility for the Eastern Division—was as follows: The line was divided into two

sections, the Prairie section (914 miles) from Winnipeg via Edmonton to Wolf Creek, Alberta; and the Mountain section (832 miles) from Wolf Creek to Prince Rupert. On the Prairie section the Government guaranteed 50-year first mortgage 3 per cent bonds of the Grand Trunk Pacific, to the amount of \$13,000 per mile. On the Mountain section it guaranteed similar bonds to the extent of 75 per cent of the total cost, whatever that might thereafter be ascertained to be. The balance of the cost of both sections was to be found by the issue of 4 per cent mortgage bonds of the Grand Trunk Pacific guaranteed by the Grand Trunk Co. These latter were, in effect, second-mortgage bonds, though not so called. The Lake Superior Branch was built by the company from the proceeds of its own bonds, with the help of subsidies both from the Dominion Government and from the Province of Ontario.

First-mortgage bonds were issued to the amount of \$68,040,000, and owing to subsequent arrangements with the Government, which it is not necessary here to describe, the company obtained their full par value in cash. There were also issued \$20,169,000 of second-mortgage bonds, \$7,583,000 Lake Superior Branch bonds, which together produced \$25,734,915.81 in cash. The \$93,774,915.81 proved entirely inadequate to complete the system. By an act of 1906, as amended in 1913, the Grand Trunk Pacific was empowered to create 4 per cent perpetual debentures to the amount of \$50,000,000 for the purchase of rolling stock and the acquisition of branch lines. These debentures are guaranteed by the Grand Trunk Co. and various amounts have been issued from time to time. On January 1, 1917, \$34,879,252.86 of them had been sold to the public, and had produced \$31,411,985.96 in cash. In May, 1909, the Government lent to the Grand Trunk Pacific Co. \$10,000,000 at 4 per cent, charged by way of further mortgage upon the Prairie Division, and also guaranteed by the Grand Trunk Co. In June, 1913, the Government lent to the Grand Trunk Pacific Co. a further sum of \$15,000,000, charged upon an equal amount of 4 per cent Prairie debentures, guaranteed by the Grand Trunk Co., and issued to the government. In June, 1914, the Government guaranteed a further issue of not exceeding \$16,000,000 per cent Grand Trunk Pacific bonds. Part of these were sold, another portion was issued and pledged to the Government as security for a cash loan of \$6,000,000. The company has also raised \$9,095,512.05 by the issue of \$9,720,000 notes guaranteed by the Grand Trunk and further secured by the deposit of \$14,580,000 of debenture stock. In all, the Grand Trunk Pacific Co. had, up to the end of February, 1916, issued securities to the amount of \$179,782,000.86, and obtained therefor \$172,009,663.62 cash. Since that date the company has obtained from the Government further advances of \$4,397,741.43, and the Government auditor has passed for payment another advance of \$940,585.

The Grand Trunk Pacific Branch Lines Co. has outstanding bonds for \$9,879,408 guaranteed by the Province of Saskatchewan, and \$3,589,596 guaranteed by the Province of Alberta; a total of \$13,469,004. For these bonds, \$12,688,544 in cash has been received.

The three railway companies composing the Grand Trunk Pacific railway system) that is, the Grand Trunk Pacific, the Grand Trunk Pacific Branch Lines Co., and the Grand Trunk Pacific Saskatchewan railway Co.) represent construction expenditure, according to the

report to the Government in February, 1916, to the long time during which the roads were under construction, no less than \$26,938,139 of this amount. Since January 1, 1916, the line is officially in operation for traffic throughout 16 months earlier than it was in operation at a much earlier period.

The interest charges on the funded obligations of these companies are approximately \$1,899,052 and are further debts of the Grand Trunk Pacific Railway to the Grand Trunk for advances amounting to \$1,305,741 and for interest thereon; 6 per cent on which liabilities, brings the total interest charges of the Grand Trunk to \$444.20 a year. As a partial offset, the Grand Trunk under an obligation to pay, without recourse, on the completion of the Government-guaranteed bonds of the Mountain section, amounting to \$1,899,052. Further, the system has a certain amount of net income for the year ending December, 1916, the Grand Trunk net income of \$1,899,052. This figure, however, is reduced by the rent of the Lake Superior branch leased to the Grand Trunk, and \$1,305,741, hire of equipment, and a net loss of \$922,398 on the branch lines. On the whole, losses on operation, the system had a net loss of \$826,653.

GRAND TRUNK FOR GRAND TRUNK

The Grand Trunk Railway Co. stands as follows in regard to its outstanding debentures and bonds issued by the Grand Trunk Pacific Railway Co.:

4 per cent Series A, Prairie Division.....	
4 per cent Series B, Mountain Division.....	
4 per cent Lake Superior Division.....	
4 per cent perpetual debentures.....	
5 per cent secured notes (secured by pledges of 4 per cent debentures).....	
Canadian Government loan of 1913.....	
Canadian Government loan of 1909.....	

Total guaranties.....

In addition, the Grand Trunk Railway Co. has received, on February 29, 1916, advanced to the several companies the following sums:

Grand Trunk Pacific Railway Co.....	
Grand Trunk Pacific Branch Lines Co.....	
Grand Trunk Pacific Saskatchewan Railway Co.....	
Grand Trunk Pacific Development Co. (Ltd.).....	

Total advances.....

Total commitment of Grand Trunk Railway Co..

In respect of these advances they hold the amount of \$24,334,016.55.

We estimate the present annual liability in connection with the Grand Trunk Pacific system at over \$5,000,000 per annum, and after January 1, 1917, to over \$7,000,000.

GRAND TRUNK CO.'S PROPOSAL.

The Grand Trunk Co. have, in the letter of their president, addressed to the prime minister and dated December 10, 1915, officially acknowledged that they can not fulfill their obligations in reference to the Grand Trunk Pacific. The Grand Trunk Co. have already obtained a tacit release from their contract in reference to the trans-continental half of the original Grand Trunk Pacific undertaking. They have now, by their chairman's letter, put it on record that they are "at the end of their tether." They say that it is "quite impossible for them to meet the extra liabilities arising from the Grand Trunk Pacific Co." They propose to retire altogether from the concern; that in return for their handing over to Government the \$25,000,000 common stock of the Grand Trunk Pacific Railway, which is in their possession, but for which they only paid a nominal amount of actual cash, the Government shall not only relieve them of all liability for the interest on the securities of the Grand Trunk Pacific and subsidiary companies, and for any deficiencies of operating expenses of the Grand Trunk Pacific System, but shall "repay the Grand Trunk Railway Co. any money advanced to the Grand Trunk Pacific or its Branch Lines & Development Co. and other subsidiary companies."

We can not think that this is a reasonable proposition, or one that we could advise the Government to accept. What would be thought if one partner in a business were to say to the other: "We entered jointly on an enterprise which we thought would be profitable. It has turned out the reverse. I propose that you settle with the creditors, pay out to me the whole of the capital I put in, and let me retire. Provided I go free, I am content that you make what you can of the business." We think the Grand Trunk Co. can not thus escape the consequence of its own action. We quite agree that the Grand Trunk Co. can not meet its Grand Trunk Pacific liabilities. But if the Government is to relieve the Grand Trunk Co. of liabilities which it voluntarily incurred, but which it now finds it impossible to meet, it is for the Government, not for the company, to fix the terms.

THE GRAND TRUNK CASE.

Having regard to the great importance of this question, not only to the Grand and Grand Trunk Pacific Cos., but also to the people of Canada before deciding what to report in reference to the present position, and what to recommend for the future, we gave to the management of these companies full opportunity to state their case. We invited them to put forward every ground on which they based their application that the Grand Trunk Co. should be relieved by the Government of their obligations in respect to the Grand Trunk Pacific, and have repaid to them by the Government their advances to the Grand Trunk Pacific Co. and its subsidiaries, which otherwise would be uncollectible. And we also investigated the physical and financial position of the companies.

In a letter addressed to Mr. Chamberlin, president of both companies, dated November 30, 1916, we wrote as follows:

Before looking into the Grand Trunk Pacific history from a parliamentary standpoint, I would like to have the company's own statement so as to make sure that no injustice will be done it.

Will you please write, or have Mr. Biggar write, giving the history of the project and the underlying motives and objects to be served, as the company understood them, and say to what, if to any extent, the company was prevented or hindered in carrying out its program. If Mr. Biggar has a series of draft acts showing changes from time to time made before the adoption of the final act that probably would be helpful.

To this letter Mr. W. H. Biggar, K. C., general solicitor for both systems, in a letter received by us on December 12, replied as follows:

INCEPTION OF THE NATIONAL TRANSCONTINENTAL.

The construction by the Grand Trunk interests of a line into the western Provinces appears to have been first suggested by Mr. Hays to the late Sir Charles Rivers Wilson, then president of the Grand Trunk, early in 1902. The correspondence between these two officials clearly shows that the chief purpose was the construction of a line to connect the Ontario lines of the Grand Trunk with the western Provinces. The general outline of the scheme having received the approval of the directors of the Grand Trunk in London, Mr. Hays, on October 23, 1902, submitted it to Sir Wilfrid Laurier, then Prime Minister. On November 3, 1902, probably at the suggestion of Sir Wilfrid Laurier, a memorial was addressed to him signed by the late Mr. Hays and the late Mr. Wainwright. The following extracts from that memorial show what was contemplated:

"Your petitioners desire to memorialize your Government in regard to the construction of a first-class line of railway from the northern terminus of the Grand Trunk Railway at or near North Bay, Ontario, through to the Pacific coast, for the reasons and upon the conditions herein set forth:

"First. That it is considered very desirable and in the public interest that there should be, without any unnecessary delay, a second transcontinental railway reaching from the Atlantic Ocean to the Pacific Ocean, in order that additional facilities may be provided for the large and growing business of the Northwest, which might otherwise find its outlet through American channels.

"Second. That your petitioners propose, as soon as authorized by your Government, to undertake the construction of such a line from North Bay, Ontario, or some other point north thereof, to be defined, to the Pacific coast, the terminus to be at or near Port Simpson; with all necessary branches along the route, to be designated.

"Third. That your petitioners therefore ask that their application for authority to construct such a line of railway to be called the Grand Trunk Pacific shall be granted.

"Eighth. That in order to provide for connection with the Atlantic seaboard all the year round and through an all-British territory route, your petitioners will be prepared to enter into an arrangement with the Government for an interchange of traffic or other satisfactory agreement with the Intercolonial Railway at Montreal or such other proposal as the Government may submit.

"Ninth. That your petitioners would have the advantage of all the eastern connections, in Ontario and Quebec, of the Grand Trunk Railway, and by this means (on the completion of the transcontinental line) there would be established and opened up a complete system from ocean to ocean."

Shortly after this memorial was presented, Mr. Hays instructed that notice of an application to Parliament for an act to incorporate "The Grand Trunk Pacific Railway Co." be prepared and published. I inclose a copy of the notice marked "A." In accordance with an apparent understanding between Sir Wilfrid Laurier and Mr. Hays that notice was, before publication, submitted to and approved by the then minister of justice, now chief justice of the supreme court of Canada. Subsequently the bill, a copy of which marked "B" is also inclosed, was prepared and forwarded to the clerk of the house. In the early months of 1903, conferences were from time to time held between Mr. Hays and Mr. Wainwright on behalf of the company and Sir Wilfrid Laurier and members of his cabinet, as a result of which Mr. Hays was asked to have the bill amended to provide for the construction of a line from North Bay to Quebec. Not only do I personally know this to be the fact, but it is corroborated by a letter written to Sir Charles Rivers Wilson by Mr. Hays on March 16, 1905 in which he stated that "at the request of the Government we have amended our Grand Trunk Pacific charter taking powers to build a line from Quebec to North Bay." I inclose a copy marked "C" of the notice published in accordance with the undertaking. When the bill first came up for discussion before the railway committee of the House of Commons, such strong opposition developed that practically a

progress was made at that meeting nor, in fact, at several subsequent meetings of the committee. While the bill was thus under consideration, several members from the Maritime Provinces insisted that the eastern terminus of the line should not be Quebec but a point in the Maritime Provinces. So strongly was this view pressed that in the end the Government acquiesced and directed that the bill be further amended to include the construction of a line from Quebec to Moncton. I attach, marked "D," a copy of clause 13 of the bill reprinted by direction of the committee to give effect to this. Moncton was decided upon as a compromise, regard being had to the fact that both Halifax and St. John could be reached from there by the Intercolonial. As you will see, this clause as reprinted authorized the construction of branch lines to Fort William or Port Arthur and to North Bay. During all this time negotiations were still being carried on between the Government and the representatives of the company regarding the extent of and the terms upon which the Government should aid in the construction of the line. These resulted in the agreement of July 29, 1903, a copy of which forms the schedule to chapter 71 of the statutes of 1903. The facts herein stated, and the inclosures, show how the scheme as first outlined by Mr. Hays came to be so materially changed. That his original intention was not carried out was, to my personal knowledge, not due to a change of view on his part but because he came to the conclusion that the Government aid essential to the construction of any Grand Trunk Pacific line could only be secured upon the terms set forth in the agreement of July 29, 1903.

It is not necessary to reprint the exhibits referred to in Mr. Biggar's letter. They fully establish his statement that the original advertisement, the draft bill, and the notice of intention to apply for the act, were all merely for the construction of a line from a point at or near North Bay, in the Province of Ontario, and thence westerly. But Mr. Biggar's own letter shows also that the Grand Trunk Co., however reluctantly, did accept, as the only consideration on which they could get authority and assistance to construct and operate the Grand Trunk Pacific line from Winnipeg westward, the obligation to operate also the line from Winnipeg eastward. But this point is not of importance, as the company has, in effect, been released from the obligation that it assumed.

Mr. Biggar, however, confined himself to the Transcontinental section of the original scheme; and his letter contained no reply to our request for a more general statement as to the whole project, its motives and objects, and the manner in which the company might have suffered hindrance in carrying out its program. We accordingly addressed a further communication to Mr. Chamberlin.

In a letter to us dated January 30, 1917, he wrote as follows:

LETTER FROM THE PRESIDENT OF THE GRAND TRUNK.

In reply to the first question asked in your letter "as to the effect on the Grand Trunk proper of the loss of the \$25,000,000 investment," it is perhaps necessary to repeat to some extent what has already been said from time to time on the subject.

The advance to the Branch Line Co.—every dollar of it—represents money paid by the Grand Trunk in order to complete the lines, the bond issues having been found insufficient for the purpose, together with interest accruing. These branch lines were intended to be, and have been, important feeders to the parent company, the present financial position of which would have been much worse than it is had they not been constructed.

The Grand Trunk Railway Co. having furnished the money necessary to complete these lines would naturally look upon the confiscation of its investment as a crime. The money was put into it in good faith, in the belief that the Grand Trunk Pacific was largely a national undertaking. That the railway has turned out so far not to be a success is no fault of theirs, but can be attributed directly to the action of the Government in subsidizing competing lines and in many ways enormously adding to the cost of construction. There is not a shadow of doubt that had the course subsequently followed by the Government been known when application for the Grand Trunk Pacific charter was made, that road would never have been built.

These are the facts as understood by the Grand Trunk directors and shareholders.

The repudiation of this legitimate indebtedness in any arrangement made with the Government would not only injure the Grand Trunk Co.'s credit, but might induce a spirit of hostile criticism on the part of investors in Grand Trunk securities in London and New York that might easily react upon the credit of the country.

The foregoing remarks apply also to the advances to the Saskatchewan Railway.

The Grand Trunk Pacific Development Co. was organized with a view to obtaining for the Grand Trunk Pacific Railway terminals and town sites, in order to induce settlers to take up land on the line of the railway. The whole of the common stock was owned by the Grand Trunk Pacific Railway Co. The enterprise was an endeavor to do at our own expense exactly what in the case of the Canadian Pacific and Canadian Northern Cos. had been provided by the Government by giving land subsidies. The money advanced by the Grand Trunk Railway Co. would have been repaid had it not been for the collapse of land values in the West, owing to the culmination of the boom in real estate. The assets of the company are owned by the Grand Trunk Pacific Railway Co., and the operations of the Development Co. accrue entirely to its benefit.

To the second question asked as to the effect on the Grand Trunk proper should the operation of the Grand Trunk Pacific be left as it is and the former not be relieved from its guarantees, there can be only one answer; it would mean a receivership for the Grand Trunk Co., carrying with it the destruction of its credit for some time to come and the impairment of the credit of the whole Dominion.

I can hardly add anything to lend additional force to the remarks already made in order to indicate the justice of our claim. If we have been guilty of too much optimism in the inception of the scheme, does not the same criticism apply to the Government which subsidized a railway system to compete with us, its success being dependent entirely upon a large influx of settlers in the West? While this expectation has not yet been fulfilled, it is not unreasonable to hope that it has only been deferred, and that eventually the Grand Trunk Pacific Railway system will prove an excellent national asset.

Mr. Chamberlin's letter in effect charges bad faith, unless the demands made by his company are acceded to by the country. "Confiscation," "crime," "repudiation of legitimate indebtedness," are grave words to be used by the president of a great company in an official communication referring to the action of the Government. The matter could not rest there. A serious situation was created, and one which in our view could not rest on mere affirmation or unsupported opinion.

If the company has been taken advantage of, or in any way deluded or defrauded by the Government, the fair name of Canada requires immediate redress. On the other hand, the country ought not to be called upon to accept, on the ground of good faith, a large loss and responsibility, unless this ground is well established. We accordingly arranged to hold a viva voce examination.

HEARING OF GRAND TRUNK OFFICIALS AT MONTREAL.

On this occasion, Mr. Chamberlin was given every opportunity to disclose all the grounds on which, as a matter of fairness, the Grand Trunk ought to be relieved of its obligations. No such case has been made out. Still less a case of "repudiation of legitimate obligations."

We have reprinted in full in Appendix B to this report, Mr. Chamberlin's evidence. In reference to the National Transcontinental two new points were raised: (1) That the statutory obligation to route ocean traffic from and to the West via Canadian ports rather than via Portland is injurious to the Grand Trunk, and (2) that the delay in the completion of the western portion of the Transcontinental and the absence of a connection via North Bay caused the Grand Trunk to lose valuable traffic which they might have had in the years of heavy business before 1914. The answer as to (1) is

that the company accepted the obligation when it took its act, and that they have never so far asked to be relieved of it. In respect of (2) there is no ground for holding that the Government undertook any obligation to the company which it failed to carry out. There was indeed a provision in the National Transcontinental act of 1904 that the Government should so construct the railway that the section between Winnipeg and Quebec and that between Quebec and Moncton should be completed as nearly as practicable at the same time. But this was a statutory public obligation and confers no contractual right on the Grand Trunk Pacific Co. It may well be that in this and in other respects the Grand Trunk failed to procure the insertion in its agreement with the Government of stipulations which prudence would have recommended.

GRAND TRUNK PACIFIC CASE.

In respect to the Grand Trunk Pacific proper, Mr. Chamberlin rested his case on the following main grounds: (1) That the Government had, in effect, gone into partnership with the Grand Trunk Pacific and that subsequently it had by subsidies and guaranties enabled a rival (the Canadian Northern) to come into existence; and that this action of the Government was, in view of its position as partner with the Grand Trunk Pacific, tantamount to bad faith; (2) That the simultaneous construction of the Canadian Northern in the same territory greatly enhanced the difficulty of obtaining labor, doubled its price, and also prolonged the period of construction; (3) That a new duty on steel rails was imposed after the Grand Trunk Pacific act was passed, and that this added \$5,000,000 to the cost of construction. Mr. Chamberlin reiterated his strong belief that his predecessors would never have gone into the scheme had they known that they would be exposed to Canadian Northern competition.

As to (1) we can not for a moment accept Mr. Chamberlin's contention. The Government was and is a government, not a mere private partner; and it retained and retains all the attributes of a government, including the power to charter new railways. We can not suppose that the management of the Grand Trunk were ignorant of this fact when they took the act constituting the Grand Trunk Pacific Co. Seeing, moreover, that the Canadian Pacific Railway Co. had obtained special statutory protection against certain competition, we can hardly believe that their attention was not directed to the matter. Whether they applied for a similar protection and failed to obtain it, or whether they determined that it was useless to apply, we know not. But the point is not important. It is clear that the Government was entirely entitled to do what it did. (2) This no doubt was a fact, which was disadvantageous to the Grand Trunk Pacific; but the company took this risk, as it took other business risks, when it promoted its enterprise. (3) In this case also it is clear from the correspondence between the company and the then prime minister, exchanged in the autumn of 1905, that the Government in no way broke faith with the company. The bill for the act imposing the duty was introduced three months before the agreement between the Government and the company was signed. The company must therefore have been aware of the Government's intention, and it must be held to have taken its agreement, containing no provision

for exemption, with full knowledge of this intention. According to the correspondence, the prime minister believed in 1905 that the question of a duty on rails had been more than once discussed at the time of the inception of the scheme; Mr. Hays, for the Grand Trunk Pacific, believed it had never been discussed at all.

THE COMMISSION'S CONCLUSIONS.

Our inquiry has fully satisfied us that the Grand Trunk management was content at the time with the arrangement made; that it deliberately took its business chances, and proceeded with the undertaking. On the evidence there is nothing whatever to justify any charge of lack of fairness or good faith on the part of the Government in its dealings with the company. We have no hesitation in saying that, neither legally nor morally, have the promoters or shareholders of the Grand Trunk Pacific Co. any basis for a claim that the country shall make good the Grand Trunk's mistaken investment in the Grand Trunk Pacific. Any aid given to them must be looked upon not as a matter of obligation but as spontaneous bounty.

The question is really so left by the Grand Trunk officials themselves. The record reads (page 176) as follows:

Sir HENRY DRAYTON. Doesn't it really come down to this, that the statements in your letter mean that in your view, in order to protect the finances of the Grand Trunk, and as a corollary to protect the finances of the country, the Government ought to relieve the Grand Trunk in regard to its investment; isn't that the whole thing?

Mr. CHAMBERLIN. That is the whole thing.

Sir HENRY DRAYTON. There is nothing else to it?

Mr. CHAMBERLIN. Nothing else.

THE PARENT GRAND TRUNK CO.

We turn to the position of the parent Grand Trunk Co. The proposal of its chairman is that, after they have been permitted to wash their hands of their Grand Trunk Pacific venture, they shall revert to their old position of a local road in Eastern Canada. We can not think that this is in the interest of the country. We can not accept the chairman's view that on these terms the company would be "able to fulfill the ever-increasing demands of the public bodies." We do not think that "the credit of the Grand Trunk Co.," weakened as it must be by its Grand Trunk Pacific failure, could be "so maintained as to render possible the raising of fresh capital as required." The financial management of the company is not such as to inspire confidence. A few weeks after the chairman's letter acknowledging that the company could not meet their Grand Trunk Pacific liabilities—with short term notes, issued to make advances to Grand Trunk Pacific companies, which those companies evidently can not meet at maturity, outstanding to the amount of \$25,000,000—the Grand Trunk Co. paid away \$2,500,000 in dividends. And the accounts for the same year, 1915, contain under the head of "Capital expenditure" this entry:

Discount and commission:	£	s.	d.
On sale of 3-year 5 per cent notes.	22,438	5	-
On sale of 5-year 5½ per cent notes.	104,371	11	-
	<hr/>		
	126,809	16	11

(Say \$608,604.)

GRAND TRUNK MAINTENANCE EXPENDITURE.

Further, the Grand Trunk Railway has not been, and is not being, adequately maintained. No depreciation fund has been created for equipment. Mr. Chamberlain's view, as shown by his evidence, is that 5 per cent on the cost of the equipment ought to be annually charged under this head. He says:

Take engines and cars, they are either worn out or out of date in 20 years.

This item, according to his evidence, would have required an annual sum of \$2,750,000. He also states:

If we had \$25,000,000 now, it would put us in fine shape.

The vice president, in charge of operations, Mr. Kelley, has direct responsibility for the plant. On Mr. Chamberlain's evidence being put to him, he agreed with it. He has since submitted to us a full report on the question of deferred expenditure. "Deferred expenditure" means, in plain English, expenditure which has not been made, but which, in the view of those charged with the duty of maintaining the plant, ought to have been made.

We give below Mr. Kelley's summary in tabular form, but we do not think it necessary to reproduce all the supporting tables:

Grand Trunk Railway System—Summary of deferred expenditures.

Rebuilding and reinforcing freight car equipment.....	\$8, 943, 971. 14
Equipping freight and passenger cars with safety appliances:	
Original estimate.....	\$850, 722. 50
Already expended.....	392, 220. 89
Balance to be expended.....	458, 501. 61
Equipping engines with safety appliances:	
Original estimate.....	17, 828. 00
Already expended.....	553. 68
Balance to be expended.....	17, 274. 32
Deferred renewals in maintenance of way department:	
In Canada.....	6, 182, 672. 00
In United States.....	5, 578, 926. 00
Total.....	11, 761, 598. 00
Total.....	21, 181, 345. 07

MONTREAL, March 5, 1917.

On the single item of "rails," the "cash expenditure required to restore normal conditions" is reported as \$5,312,142. The cost of restoring ballast to normal conditions is reported as \$2,434,000.

With reference to the deferred renewals in Canada, amounting to over \$6,000,000, it appears that they have accumulated during 11 years, 1906–1916. During this period, in spite of the requirements of the property and the claims of public safety, \$36,000,000 were paid out in dividends.

GRAND TRUNK CAPITAL EXPENDITURE REQUIRED.

The \$21,000,000 dealt with above represent the money which the responsible officers of the company estimate to be required to put the existing plant into good normal condition. This is a revenue liability. But the existing plant is quite inadequate for existing

traffic and requires large additions, for which new capital must be raised. The estimates of necessary capital expenditure submitted to us are as follows:

Requirements for rolling stock, shops, and machinery.....	\$26, 150. 000
Requirements for automatic block signals (main line in Canada only)...	3, 533. 000
Requirements for installing rock-ballast crushing plant.....	467. 500
Total.....	30, 150. 500

Putting together revenue and capital expenditure, we find that the Grand Trunk Railway, in the opinion of its own officers, requires over \$51,000,000 spent upon it to put it in a position to meet the requirements of its to-day's business. We see no reason to expect that under existing conditions this necessary money will be provided.

EFFECT ON CANADIAN BUSINESS.

The effect on the country's business of deficient railway facilities is very serious. It is best shown in a period of stress, whether this stress is due to traffic congestion or is the result of bad weather conditions. February last gives a good example. The traffic was very heavy; embargoes were the rule and not the exception; weather conditions were worse than usual, even in winter. The Grand Trunk had handled over the lines in its Ontario district in February, 1916, 318,532 cars. Last February it handled only 195,120. In its eastern district in February, 1916, the company handled 210,914 cars, and in February of this year only 109,567 cars. This failure has occurred at a period when the demands on the country for food supplies, munitions of war, and other articles used by the allied armies are extremely heavy. The situation is one which calls loudly and insistently for an immediate remedy.

In fairness to the Grand Trunk, it should be pointed out that congestion inevitably causes a falling off in the volume of traffic handled. Cars which are insistently required for the necessities of life, such as coal, perishable foods, live stock—and under present circumstances munitions—have at all hazards to be got forward. This necessitates greatly increased yard work and switching. Preferential treatment of any one class of traffic always retards the general movement, and so adds further to congestion.

The Canadian Pacific is a well-organized line. Its movements also fell off in eastern Canada. Its two districts probably most nearly comparable to the Grand Trunk's eastern and Ontario lines are its Ontario and Quebec districts. In February, 1916, the Canadian Pacific handled in its Ontario district 92,255 cars, and in 1917 only 80,414 cars. In its Quebec district it handled in February, 1916, 130,045 cars, and in February, 1917, only 96,464 cars. The resultant percentage decreases are for the Grand Trunk in its Ontario division, 39.37 per cent, and for the Canadian Pacific Railway in its Ontario district, 15.58 per cent. For the Grand Trunk in its eastern division, and for the Canadian Pacific in its Quebec district, the percentage decreases are 48.5 per cent and 25.82 per cent, respectively.

At a later page of this report we refer in another connection to the fact that the Intercolonial has no terminals of its own at Montreal, but uses those of the Grand Trunk. The congestion of February was more a terminal congestion than a rail congestion, and the Inter-

colonial business out of Montreal was directly affected by the congestion of the Grand Trunk terminals. The intercolonial movement in the first division out of Montreal in February, 1916, amounted to 25,446 cars, and for the same month in 1917, to 15,628 cars, a percentage decrease of 38.58 per cent. The Intercolonial system, however, as a whole, had a movement in February, 1917, of 51,311 cars, as compared with 66,510 cars in February, 1916, a percentage decrease of only 22.85 per cent; while the Grand Trunk, for its entire system, handled in February, 1916, 652,358 cars, and in the same period in 1917, 402,133 cars, a percentage decrease of 38.35 per cent.

COMMISSIONERS' RECOMMENDATION.

The Grand Trunk Co.'s board of directors is 3,000 miles away. We can not think that the state of affairs which our investigation has disclosed could have arisen had the board been on the spot. We are forced to the conclusion that the control of an important Canadian company should be in Canada. But this can not be secured as long as the Grand Trunk Railway is owned by shareholders in England. We have come to the conclusion, therefore, that the control, not only of the Grand Trunk Pacific Co., but also of the Grand Trunk Co. of Canada, should be surrendered into the hands of the people of Canada. We recommend that the chairman of the Grand Trunk Co. be informed that it is only on this condition that the Government is prepared to relieve his company of the obligations which it has incurred in respect to the Grand Trunk Pacific. We recur later on in this report to these two companies in order to set out our recommendations as to their ownership and management in the future and as to the terms to be offered to the Grand Trunk shareholders.

PART III. THE CANADIAN NORTHERN SYSTEM.

The system now known as the Canadian Northern began with the acquisition by Messrs. Mackenzie and Mann, in the year 1896, of a charter which had been granted in 1889 by the Province of Manitoba to the Lake Manitoba Railway & Canal Co. The charter was for a line 123 miles in length from Gladstone on the Canadian Pacific to Winnipegosis. Construction was promptly begun and the line was opened in January, 1897. In the same year (1897) Messrs. Mackenzie and Mann began to construct a line from Winnipeg to Port Arthur, known as the Manitoba & Southeastern. Shortly after they constructed also the Winnipeg & Great Northern.

These three companies among them received land grants of 4,000,000 acres, and their bonds were largely guaranteed by the Province of Manitoba.

In 1899 the Lake Manitoba Railway & Canal Co. and the Winnipeg & Great Northern Co. were amalgamated as the Canadian Northern Railway Co.

Thereafter, by leases, by absorptions, and by new construction, the Canadian Northern system grew fast in both directions, eastward and westward. As a system it never has had, nor has it to-day, any corporate existence. It was held together by stock ownership. The whole of the common stock of the Canadian Northern Railway Co. itself was held by Messrs. Mackenzie and Mann. In the case of the

affiliated companies the stock was held sometimes by the parent company, sometimes by Messrs. Mackenzie and Mann in their own names.

Throughout the history of the Canadian Northern construction the company has depended on public aid, direct or indirect. The development in the 20 years since 1896 has gone through four distinct stages, though chronologically the stages overlap to a considerable extent. In the first stage the company relied on provincial guarantees. As it grew larger and more ambitious it invoked and obtained aid from the Dominion. This was the second stage. In the third stage the company, having become better known, raised large amounts by the issue of perpetual debenture stock, and later of convertible income debenture stock, on its own credit. At no period, as far as we have been able to ascertain, has any actual cash been obtained from the sale of the common stock, either of the parent company or of the constituent or subsidiary companies. With the exception of a French issue of \$4,000,000 in December, 1911, practically all the Canadian Northern money obtained by public subscription has been raised in London.

CANADIAN NORTHERN POSITION IN 1914.

In the fourth and last stage, in 1914, with heavy interest payments to be made and large construction contracts still open, the company found its own resources insufficient. It reported that it required \$100,000,000 to complete and equip its system; that it could raise on its own account \$58,000,000; and it appealed to the Government to find the balance.

The Government thereupon guaranteed an issue of \$45,000,000 of 4 per cent first mortgage debenture stock. Of this issue \$14,600,000 was sold in London at 91½ in July, 1914, and \$2,433,333 at 91 in February, 1915. There have been handed back to the Dominion Government \$12,500,000 as security for a cash loan of \$10,000,000. The remainder (except \$133,333 unissued) has been pledged as security for loans in New York. The total proceeds in cash from those sales and pledges were \$26,759,265. This sum having proved insufficient, in May, 1916, the Canadian Northern obtained from the Government a further loan of \$15,000,000 at the rate of 6 per cent, repayable on demand, to be used for construction or to meet interest obligations. In addition, the Government undertook, in September, 1915, to lend to the company the money necessary to pay interest either to the Government itself or to the public on the \$45,000,000 debentures. And to date \$1,756,000 have been advanced for this purpose.

It will be observed that the first appeal to the Government was some months before the war. No doubt the stringency of the money markets of the world at the time made it more difficult than it otherwise would have been for the company to sell its securities. But that was not all. There was a further cause intrinsic to the company itself. It had gone ahead too fast and had undertaken various expensive schemes which could not possibly carry themselves from the outset. The Canadian Northern Pacific, the Canadian Northern Ontario, and the Montreal Terminal especially implied very serious commitments. And the Prairie system, which was self-supporting

nd yielded a profit, was not sufficiently developed to carry this weight.

The war, which at the outset paralyzed the business of the country and which has practically closed the markets of the world to the issue of permanent securities other than Government loans for an indefinite time to come, further aggravated the situation. The company, when it applied to the Government early in 1914, reckoned on selling its \$45,000,000 guaranteed debentures for \$42,000,000. In fact, it has only obtained from them \$36,759,265 in cash. It reckoned that these securities which it had to sell would bring in \$58,000,000, but many of them it has not been able to sell. At present the company is living from hand to mouth and is nominally borrowing from the Government to pay interest on the Government's own loans.

CANADIAN NORTHERN ANNUAL REPORT FOR 1916.

The report to shareholders for the year ending June 30, 1916, appears to show that after paying working expenses and fixed charges the company has a deficit of only \$248,127. But this report does not disclose the fact that more than \$5,400,000 were paid for interest and charged to capital as part of the construction cost of a system which was all but completed.

According to an estimate submitted to us by the company the fixed charges for the year ending June 30, 1917, will be \$16,539,638. Of this the Dominion and British Columbia Governments have undertaken to pay \$4,514,507 under certain agreements. This leaves the company to find out of net revenue about \$2,500,000 more than it had available this year. An income of \$2,500,000 net implies an increase of at least \$9,000,000 gross. The company itself does not venture to expect a greater increase of gross than \$7,000,000.

The above agreements to pay interest are only for two and three years, respectively. In the year ending June 30, 1920, the Government contributions will have fallen to \$627,000, and the following year they will have ceased entirely. The company's estimate for the year ending June 30, 1921, is that they will then have fixed charges amounting to \$18,300,000.¹ And this burden they will have to bear unaided. To carry it they would need (assuming working expenses at the very moderate ratio of 70 per cent) a gross revenue of \$61,000,000. We can not think it safe to assume that any such result will actually be attained.

CANADIAN NORTHERN ESTIMATE IN 1914.

Without desiring to cast any reflection on the Canadian Northern Co., we think that those responsible for its management have taken, and still continue to take, an unjustifiably sanguine view of its possibilities. In 1914, when the company was applying to the Dominion Parliament for the guarantee of \$45,000,000 debentures to complete the undertaking it submitted an estimate for the three years 1916 to 1918 to Mr. Hanna, vice president of the company, on what was described as "the very conservative basis of the percentage increase

¹ This includes the interest, amounting to \$2,500,000, on the new capital estimated by the company as necessary to be spent in the five years. This estimate we regard as quite inadequate. If so, the fixed charges will be correspondingly increased.

for the past five years." The company adds that part of the mileage has been disconnected from short-haul business, operation as a unit will result in a much greater per mile average."

We reproduce this estimate below:

Gross earnings.....	
Operating expenses.....	
Net earnings.....	
Fixed charges, including interest on securities at present applied.....	
Surplus.....	
Less interest on 5 per cent income debenture stock.....	

This estimate showed a margin, after deducting interest on the 5 per cent income debenture stock, of 1.5 per cent.
The estimate was—

Gross earnings.....	
Net earnings.....	

The facts have been—

Gross earnings.....	
Net earnings.....	

And there has been a bumper harvest since the war has increased rather than diminished. It has been that for the year ending June 30, 1914, interest of \$1,250,000 upon the \$25,000,000 of bonds, and after charging against capital interest (less \$878,166 paid by the Government for "lines under construction," the cost of the money required to meet its obligations.

We appreciate that circumstances unforeseen in the spring of 1914 have been made. The money was not immediately available in the amount estimated as necessary was more onerous. Prices have gone up. The expected immigrants have not sold its ocean steamers. The system was in a condition that was in the minds of the estimates were made.

But making all possible allowance for the estimates of 1914, upon which we have a very serious responsibility.

CANADIAN NORTHERN ESTIMATE IN 1917.

In January last the company submitted to us an estimate for the five years, 1917-21. This was as follows:

	Year ending June 30, 1917.	Year ending June 30, 1918.	Year ending June 30, 1919.	Year ending June 30, 1920.	Year ending June 30, 1921.
Gross earnings.....	\$42,590,000	\$48,185,000	\$55,410,000	\$62,300,000	\$68,460,000
Operating expenses.....	31,090,000	24,790,000	29,895,000	44,200,000	47,920,000
	11,500,000	13,395,000	15,515,000	18,100,000	20,540,000

The estimate submitted to Parliament by the company for the year to June 30, 1917, was:

Gross.....	\$61,000,000
Operating expenses.....	17,700,000

The revised estimate now submitted to us by the company is:

Gross.....	\$42,590,000
Operating expenses.....	11,500,000

The estimate submitted to Parliament by the company for the year to June 30, 1918, was:

Gross.....	\$67,000,000
Operating expenses.....	20,100,000

The revised estimate now submitted to us by the company is:

Gross.....	\$48,185,000
Operating expenses.....	13,395,000

We think the new estimate made for us, even though more conservative than the old, is still too sanguine. We see no reason to think that the traffic will increase at any such rate as that indicated. To assume a growth each year of about 11 per cent over the previous year, and simultaneously an operating ratio falling steadily from 62 per cent to 70 per cent is only once more to invite disillusionment.

COMPARISON WITH CANADIAN PACIFIC.

We think the following statement of the facts of the last 11 years of Canadian Pacific history is instructive. The table shows for each year gross and net earnings per mile, and also the percentage of operating ratio.

	Gross earnings.	Net earnings.	Operating ratio.
1905.....	\$7,026	\$2,617	62.7
1906.....	7,890	2,785	64.9
1907.....	7,573	2,812	69.4
1908.....	7,726	2,324	69.9
1909.....	9,425	3,358	64.4
1910.....	10,072	3,548	64.8
1911.....	11,458	3,614	64.9
1912.....	12,263	4,068	66.8
1913.....	10,577	3,587	67.3
1914.....	7,998	2,714	66.0
1915.....	10,024	3,810	67.0

Gross earnings include receipts from steamships, telegraphs, and other sources not properly attributable to railway mileage.

It will be seen that the gross earnings of the Canadian Pacific Railway by no means show a steady growth. There can be no doubt that the drop of the last three years reflects, in part at least, the effect of the new competition of the Canadian Northern and the Grand Trunk Pacific. And the Canadian Northern growth must equally be conditioned by the competition of the Canadian Pacific and the Grand Trunk. It will be seen further from the table that there is by no means a steady growth of net earnings. Nor can we, in face of the constant increase of the operating ratio through a long series of years all over the American continent, in view of the great rise in the cost of materials, especially coal and steel rails, and the insistent demands for increases of wages, think it safe to assume that the operating ratio of the Canadian Northern will show a consistently steady decline in each succeeding year.

PROSPECTIVE REQUIREMENTS OF CANADIAN NORTHERN.

The Canadian Northern estimate submitted to us further calculated that, in the course of the next five years, the company will need to spend \$12,500,000 of new capital for additions and betterments, and \$25,000,000 for new equipment. We consider these estimates entirely inadequate, and especially so in relation to the estimate of 90 per cent increase in gross receipts. The company has acknowledged that its equipment is inadequate to take care of its existing business. That equipment stands in the company's books at \$59,000,000. If the business were to increase 90 per cent, it would seem to need not \$25,000,000, but over \$50,000,000 spent on new equipment to handle it. Again we refer to Canadian Pacific Railway figures. That company has seven freight cars per mile of line. The Canadian Northern has three. We think it will need five; and this implies an addition of 20,000 cars to the existing stock. This alone would imply, even if prices dropped to those current a year ago, an additional expenditure of something like \$30,000,000. And the same thing is true in respect of locomotives. Nor can the estimate of \$12,500,000 for additions and betterments, spread over a system of 10,000 miles during five years, be sustained, more especially in the case of a system that is only just emerging from the construction stage. It works out at \$250 per mile per annum. It is impossible that the needs of a rapidly growing property can be adequately provided for at any such figure.

We think that \$40,000,000 for equipment and perhaps \$30,000,000 for additions and betterments would be a moderate estimate of the system's needs in the next five years, assuming that the Canadian Northern remains separate and independent.

We sum up the Canadian Northern situation as follows: The company is not at present able, and will not for some years to come be able, to meet its fixed charges. It will, we doubt not, increase its net earnings as the years go by. But the increased net earnings will be fully absorbed for some years to come by the interest on new capital, which must be put in if the system is to render efficient service. The company has not now, and as far as we can see will not have in the near future, such credit as to enable it to raise the necessary capital. As we have already shown, the public investment, direct and indirect, in the Canadian Northern system amounts to \$298,000,000. We do not recommend further public investment in the system as at present constituted.

VALUE OF CANADIAN NORTHERN UNDERTAKING.

1. *Cash investment.*—The property investment of the Canadian Northern Railway system is stated in the balance sheet of June 30, 1916, at \$494,112,489.34. This figure admittedly has been written up to include \$100,000,000 of capital stock. And this stock, as we have already said, was issued without any cash consideration. We have endeavored to ascertain the actual cost of the system. From the company's official reports and special statements supplied to us we have ascertained that the maximum cash investment that can have been made in the property is \$383,302,451.33.

The following tables, which have been accepted by the company as accurate, show:

- (i) The source of money or credit.
- (ii) The disposition of money or debit items.
- (iii) A list of bonds of constituent companies assumed.

(i) *Source of money or credit.*

Cash realized from securities sold and from collateral loans (pp. 205-207, record).....	\$302,713,872.69
Dominion Government loans of 1914 and 1916.....	15,878,166.67
Subsidies, not including subsidies of prior organizations (q. 4).....	28,000,222.50
Land sales (q. 4).....	16,603,295.62
Sales of acquired bonds and stock (q. 8).....	618,606.45
From equipment trust securities (q. 4).....	\$37,233,871.13
Par value equipment trusts issued..	\$39,836,458.20
Now outstanding.....	16,862,500.00

Paid from proceeds of other securities (p. 94). 22,973,958.20

Net amount from equipment trusts.....	14,259,912.93
Due on construction.....	16,666,957.26
Audited vouchers and accounts.....	11,161,443.88
Wages and salaries.....	1,832,708.23
Matured interest coupons unpaid.....	2,166,597.75
Accrued interest not yet payable.....	2,412,673.30
Accrued taxes.....	250,000.00
Insurance fund account.....	616,847.53
Railway surplus.....	2,776,711.03
Bonds assumed in the acquisition of constituent companies.....	20,215,746.03
	<hr/>
	436,173,761.87

(ii) *Disposition of money or debit items.*

Cash in hand and at bank.....	\$25,414,408.50
Materials and supplies.....	3,368,924.82
Due from companies and individuals.....	7,276,429.01

Deferred land payments.....	7,140,996.59
Insurance paid in advance.....	682,906.11
Unadjusted debit items.....	246,545.00
Securities (dock, lands, and stock-yard companies).....	1,123,393.55
Linking funds.....	248,750.66
Terminal properties and miscellaneous investments.....	5,922,945.63

52,871,310.54

Total available for road and equipment..... \$363,086,705.30
 Bonds assumed in part payment of lines purchased
 (see list in Table 3, following)..... 20,215,746.03

383,302,451.33

436,173,761.87

(iii) Bonds shown as outstanding, but for which no proceeds are reported as received—
payment assumed by Canadian Northern Railway as part of purchase.

Qu' A. L. L. & S. Ry. & S. B. Co., 4 per cent first-mortgage debenture stock.....	\$5,051,462.90	
Less in treasury.....	31,781.80	
		\$5,019,681.10
Central Ontario Railway, 5 per cent first-mortgage bonds.....		956,300.00
Bay of Quinte Railway, 5 per cent first-mortgage bonds.....		830,000.00
Great Northern Railway of Canada, 4 per cent first-mortgage bonds..		3,505,750.00
Quebec & Lake St. John Railway, 4 per cent mortgage debenture stock.....		4,359,014.93
*Duluth, Rainy Lake & Western Railway, 5 per cent first-mortgage bonds.....		2,000,000.00
Halifax & Southwestern, 3½ per cent first-mortgage bonds.....		4,447,000.00
*Minnesota & Manitoba Railway, 4 per cent first-mortgage bonds..		349,000.00
Niagara St. C. & T. Railway, 5 per cent first-mortgage bonds.....		1,098,000.00
		22,564,746.03
*Less bonds on leased lines not included in funded debt:		
Duluth, Rainy Lake & Winnipeg Railway.....	\$2,000,000.00	
Minnesota & Manitoba Railway.....	349,000.00	
		2,349,000.00
		20,215,746.03

From this total maximum of \$383,302,451 we deduct the following items, which the company has included in cost of road and equipment, but which do not represent investment in property:

1. Advances to controlled companies to pay indebtedness for interest subsequent to construction and operating deficits which were capitalized when the system was put together, not less than.....	\$10,000,000
2. Interest during 1916 overcharged to construction, not less than.....	3,000,000
	13,000,000
Leaving for investment in road and equipment and in securities of constituent and subsidiary companies.....	370,302,451

We find, then, \$370,000,000 to be the maximum possible cost of the Canadian Northern system as at present existing. In other words, as indeed is frankly admitted by Canadian Northern witnesses, the Canadian Northern shares represent no cash investment.

2. *Physical basis.*—But money cost is not all. We decided also to ascertain the approximate value, on the basis of reproduction cost, of the property as it exists to-day. And we rely on Prof. Swain's valuation for this purpose. This valuation is, in his opinion, a liberal estimate of the fair cost of reproducing new, at prewar prices of labor and material, the system at present existing. It includes property belonging to the system at its estimated cost, if it had to be acquired or constructed to-day. And therefore it not only gives the company credit for lands which it in fact owns, even though it obtained them as a grant; but it also credits the company with the increment of land values since the date of the original acquisition. And these two items are quite large.

Prof. Swain's method of arriving at his results are fully explained in his report, which is printed as an appendix hereto. He makes the total cost of reproduction new, \$397,441,567. From this he deducts for depreciation \$40,031,889, making the cost of reproduction of the property in its present condition \$357,409,678. This, however, does not include equipment. The equipment was inspected by Mr. Buchanan and, on the basis of his report as to quantities and condi-

tion, a valuation has been made by Mr. W. H. Chadbourn, C. E., chief engineer of our valuation staff. He finds the cost of reproduction new at prewar prices to be \$56,590,418, and the depreciation to be \$11,250,433, making the present value \$45,339,985. Putting the two valuations together, we have \$402,749,653 as the fair cost of reproducing the entire physical Canadian Northern system in its present condition. Now the outstanding liabilities (bonds, debentures, notes, and bank and other loans) of the company exceed \$400,000,000.

Reckoning on this basis, it appears that the liabilities are practically equal to the reproduction cost of the physical property. But the physical property does not all belong to the Canadian Northern shareholders. There are minority holdings in several of the subsidiary undertakings. And the Canadian Northern interest in these undertakings only corresponds to its percentage proportion of their respective share capitals. This implies a reduction of more than \$10,000,000 in the estimate of the assets belonging to the Canadian Northern shareholders.

We find then that, on the physical basis, the value of the property of the Canadian Northern shareholders is distinctly less than the amount of the liabilities against it. On this basis the equity of the shareholders must be regarded as nonexistent.

3. *Going concern.*—A third basis of estimate is the value of the property for sale as a going concern. A purchaser would not consider either original cost or reproduction cost as of much importance. The price he would pay would be based on earning power, present and potential. On this basis he would consider how far the Canadian Northern is at present short of covering its fixed charges, how long it will take to reach equilibrium, how much new capital will have to be spent, how soon a dividend may be expected and at what rate. Calculating on this basis, in the light of the figures set out above it is evident that no purchaser would offer for the property a sum amounting to the total of its liabilities.

CONCLUSION AS TO CANADIAN NORTHERN.

We conclude, therefore, that the shareholders of the company have no equity either on the ground of cash put in, or on the ground of physical reproduction cost, or on the ground of the salable value of their property as a going concern. If, then, the people of Canada have already found, or assumed responsibility for, the bulk of the capital; if they must needs find what further capital is required; and if they must make up for some years to come considerable deficits in net earnings, it seems logically to follow that the people of Canada should assume control of the property. We return later to the Canadian Northern Co. in order to set out our recommendations as to its ownership and management in the future and as to the terms to be offered to the existing shareholder.

PART IV. POSSIBLE METHODS OF PUBLIC CONTROL.

We recommend that the control of the three companies, Grand Trunk, Grand Trunk Pacific, and the Canadian Northern be assumed by the people of Canada. We have therefore now to consider how this control should be exercised.

GOVERNMENT OPERATION DISCUSSED AND REJECTED.

We are instructed to consider the acquisition of the Canadian railways by the State, and the possibility of their operation in connection with the Intercolonial. We do not recommend this course. In our judgment it is not in the interests of Canada that the operation of its railways should be in the hands of the Government. We know no country in the world, where a democratic State owns and operates its railways, in which politics have not injuriously affected the management of the railways and the railways have not had an injurious influence on politics. We do not think Government ownership of the Canadian railways would tend to reduction of rates, but rather in the contrary direction. For the carriage of one ton of freight one mile the Canadian shipper pays at present on the average three-fourths of 1 cent. On the railways of New South Wales, the oldest and most important Australian State, where the railways have been in Government hands from the outset, the shipper pays well over 2 cents. But we see no cause to enlarge here on such general considerations. There are several reasons peculiar to Canadian conditions why State ownership and operation should be avoided.

THE CANADIAN PACIFIC POSITION.

We think that if the State took over and undertook to operate the Grand Trunk, the Grand Trunk Pacific, and the Canadian Northern, it would be morally bound to offer to purchase the Canadian Pacific also. This company is in a strong financial position; it has assets of great present and even greater potential value, largely exceeding its liabilities; its \$260,000,000 of common stock stand at a high premium, and have been very much higher; it pays a steady dividend of 10 per cent; its purchase would be a costly matter; and it does not ask to be purchased or to be helped in any other way. The company is admittedly progressive and gives a good public service. Moreover, it has a large investment in ocean steamships, irrigation, land and coal development schemes, and other enterprises quite unsuited for Government management. But the Canadian Pacific Railway is exposed throughout its whole territory to the competition of either one or both of the other systems. So long as that competition is in the hands of other organizations, also having to earn the interest on their bonds and striving to earn a dividend on their stocks, the Canadian Pacific Railway has no cause for complaint. But competition with railways operated by the Government stands on an entirely different footing. It would be at any time possible for the Government deliberately to adopt a policy of lowering rates, in some part or throughout the territory involved, below a commercial basis, and making up the deficiency out of general taxation. It might be argued that such a policy was justifiable on the ground that the general prosperity and development of the country would be thereby promoted. But while conceivably it might be proper to tax the public to develop the country, though in fact it would not be the whole public, but only certain portions of it that would benefit, it could not possibly be fair to impose a special tax upon the Canadian Pacific Railway shareholders for the purpose. And yet it is evident that this would in fact happen. The

Canadian Pacific Railway would be absolutely forced to follow any rate reduction made by the Government railways, on pain of losing the business entirely.

FURTHER REASONS AGAINST GOVERNMENT OPERATION.

Another strong argument against Government operation is to be found in the fact that the three great Canadian companies amongst them either own, lease, or control no less than 7,000 miles of railway situated in the United States. And some, at least, of these lines are necessary economic complements of the Canadian systems. It is clearly impossible that the Dominion Government should be subjected not only to the regulating authority of the Interstate Commerce Commission and the several State railway commissions of the United States, but also to the police regulations of all the States which these lines enter. Technically, no doubt, the difficulty could be got over by vesting the legal ownership in Government officials under their own names as trustees for the Government. But the practical fact would remain. It would in effect be the Canadian Government which would be ordered by the United States Interstate and State commissions to alter its rates, and Canadian Government officials who would be required by the United States law courts to explain their actions and justify their conduct. We can not think that such a situation would conduce to international harmony.

A yet more important consideration remains. Canada is at war and Canadian resources are deeply pledged for war purposes. If the Government takes over the railways, not only does it assume the direct responsibility for the whole existing debt, but all the new money that has to be raised (and as will be shown in a later portion of this report, the amount of this new money must necessarily be considerable within the next few years) will become a direct obligation of the Canadian Government. It is a matter of common knowledge that railway bonds and Government loans appeal to different classes. And we are persuaded that it is desirable that Canada should retain both strings to her bow.

For all these reasons our recommendation is that the idea of Government ownership and operation be not entertained.

RECEIVERSHIP DISCUSSED AND REJECTED.

Starting then from this position, we have to consider what alternative course is to be adopted. It is clear that neither the Canadian Northern nor the Grand Trunk can at the present moment meet its liabilities. In the United States when a company is in this position it is placed in the hands of a receiver. And at this moment upward of 40,000 miles of line are in that situation. Under a receivership the holders of the junior securities have to submit to compound their claim, and the fixed charges are reduced to an amount that the net revenue from operation suffices to meet. Ought this drastic course to be adopted here? We think not. We think the security holders of the companies have to some extent a moral claim on the Government. Their schemes of extension have been matters of public knowledge for many years. So far from discouraging them, the Governments, both of the Dominion and the Provinces, have by

subsidy and by guarantee, by loans and cash advances, encouraged them to go on.

But there is more than this. The bonds and debentures of the Grand Trunk Pacific and Canadian Northern have been placed in the main through London with non-Canadian holders. And these holders in subscribing have unquestionably been influenced by the fact that the companies were backed by the Canadian Government. Technically, of course, the Government has no responsibility beyond that of meeting its own guarantees. But if the two companies went into the hands of receivers, we can not doubt that investors outside Canada would believe, however erroneously, that the Dominion Government had treated them badly, and that the result would be serious injury to the credit of the Canadian Government, and indeed of all Canadian enterprises. And this result is one that, putting it on pecuniary grounds alone, the Canadian people should in their own interest spend a good deal of money to avoid. We therefore consider that Canada should assume the responsibility of seeing that the interest on these securities is met.

This responsibility is in our opinion unavoidable. But we recognize that it is serious. It will involve considerable financial aid for some years. How many we will not estimate, as it depends in the main on the rate at which Canada develops. And that rate no one can venture to foretell. We ought to point out, however, that the rate at which the Canadian Pacific progressed, when it was the only transcontinental line, can not reasonably be taken as a standard of the probable rate of progress of two new transcontinental systems, competing, not only with each other, but with the rich and firmly established Canadian Pacific itself.

TRANSFER TO A NEW BODY RECOMMENDED.

We have recommended, then, that the control of the three companies, Canadian Northern, Grand Trunk, and Grand Trunk Pacific, pass into other hands; that the rights of the creditors of all three companies be preserved intact; but that the railways of the three companies be not handed over to, or operated by, the Government. It is necessary, therefore, to find some new body or bodies to whom they can be transferred. We think the question whether there should be one body or more is answered by the facts that we have already cited. The Canadian Northern is weak in the east. The Grand Trunk, with the inadequate Prairie branches of the Grand Trunk Pacific, would be almost powerless to compete in the west with the Canadian Northern and the Canadian Pacific. The natural tendency of the Grand Trunk and Canadian Northern organizations, if left separate, would be for each to invade the territory of the other. Remaining separate, the Canadian Northern system would need to spend many millions of dollars to obtain an adequate hold on the east in competition with the Canadian Pacific and Grand Trunk. Remaining separate, the Grand Trunk and Grand Trunk Pacific system would need to spend many millions of dollars on new branches in the west, in order to hold its own with the Canadian Pacific and the Canadian Northern. And this money would be needed at once, for till it was spent neither organization would possess a complete system. Canada can not afford all these new railways.

and does not need three competitive systems. We recommend therefore that the three undertakings, the Canadian Northern, the Grand Trunk, and the Grand Trunk Pacific be united in one system. To whom then should its management be intrusted?

**SUGGESTED TRANSFER OF ALL THE RAILWAYS TO CANADIAN PACIFIC
DISCUSSED.**

One possible solution which has been submitted to us we will deal with at the outset. For, though we are unable to recommend its adoption, it has very influential support. This suggestion takes two forms. The one is that the Canadian Pacific Co. should, by lease or purchase, obtain control of the other roads and operate the whole Canadian railway system as partner with the Government, on terms to be arranged. The other is that the Government should itself acquire all the roads, including the Canadian Pacific Railway, and employ the organization of that company as a basis on which to build up the organization of the greater system. The first alternative is especially supported from the financial side. And, indeed, were financial considerations controlling in this matter, we do not deny that a very strong case could be made for it. The second alternative commends itself more especially to those who feel that the Government is already involved so deeply in railway enterprise that it can not call a halt, and must go the whole length. We are not prepared to agree with either party. We do not think that a railway monopoly is desirable, either in the hands of a company, or in the hands of the State. We are convinced that the people of Canada who have spent or guaranteed—whether wisely or not, is not now the question—hundreds of millions of dollars, largely with the object of breaking a private monopoly, would never consent to the reestablishment of a still greater monopoly, even if the Government were a partner in the concern. We do not think that there is any necessity for the State to go further than it has already gone in the direction of Government operation. We recognize that the Government occupies in respect to the Canadian Northern and Grand Trunk Pacific roads, very much the position of a mortgagee whose mortgagor is in default. But we do not think that the Government, as a Government, need enter into possession. We think a scheme may be worked out whereby Canada will have two great systems, both with substantially similar management, operating alongside in healthy rivalry from ocean to ocean.

**SUGGESTED TRANSFER OF THE WHOLE OR A PORTION OF CANADIAN
NORTHERN TO CANADIAN PACIFIC DISCUSSED.**

Another suggestion has been made which we will deal with here. In our judgment it has even less to recommend it. It is suggested that the lines of the Canadian Northern should be handed over to the Canadian Pacific Railway, on terms to be arranged. We can see no possible advantage to the country in this proposal. It would hand over the lines with the best prospect of development to the Canadian Pacific Railway. It would reestablish what would be a practical monopoly in the Prairie Provinces. It would leave the

country to carry the burden, for an indefinite time to come, of the Grand Trunk Pacific, which in its present isolated position has little hope of prosperous development. And it would lead before long to an inevitable result. For the sake both of giving the Grand Trunk Pacific system a fair chance to develop, and in order to break down once more the reestablished monopoly of the Canadian Pacific Railway, pressure would be put on the Government to obtain a wholesale extension of the Grand Trunk Pacific branch lines, for which there is no commercial justification. Capital would be wasted, operating expenses would be duplicated, and the ultimate solvency of the publicly owned lines would be indefinitely postponed.

For the suggestion which has also been made, that the Canadian Pacific Railway be invited to take over the western portion of the Canadian Northern only, there is in our judgment still less, if that be possible, to be said than for the suggestion that the Canadian Pacific Railway take over the whole. It has all the disadvantages of the former proposal. And it has this further disadvantage: The eastern lines of the Canadian Northern have not any very hopeful outlook, even under present conditions. If they cease to be the complement of the Canadian Northern prairie lines, they have no justification for existence whatever. And yet it is proposed to leave the country to carry the burden of them.

POSSIBILITY OF FORMING A COMMERCIAL COMPANY DISCUSSED.

Assuming, then that the Canadian Northern, Grand Trunk, and Grand Trunk Pacific must be united into one system and that this system must remain entirely separate from the Canadian Pacific Railway, we have considered the possibility of forming a new company on a commercial basis, to which the operation of these three undertakings might be transferred. We have come to the conclusion that this course is not feasible under the circumstances as they at present exist.

The Mexican precedent.—We have considered what is commonly known as the Mexican scheme. Under this scheme, which was originated by Señor Limantour, the very able finance minister of the Diaz Government, the Government, in return for the guarantee of certain bonds and the payment of a nominal amount of cash, acquired possession of a sufficient amount of deferred ordinary stock of the principal railway companies, on which no dividend was likely to be earned in the immediate future, to give them control of the election of the boards of directors, and therefore indirectly control of the policy of the companies. Similar partnerships between the public authorities and private companies have in recent years become common in the great German cities for the establishment and operation of gas, electric, and street railway undertakings. The Mexican scheme is understood to have worked very successfully so long as Mexico remained an organized community. We do not think it applicable to Canada, where the conditions are entirely different. In Mexico the bulk of the money had been raised by the companies on their own responsibility; there was no question of defaulting on fixed charges; the systems were practically complete; and no large amounts of new capital were required. In Canada the bulk of the money has been raised on the responsibility of the Government; the companies can not meet their fixed

charges; the systems are far from complete; and much new capital will have to be provided, which can not be raised by the companies on their own credit. We can not, therefore, recommend that the Mexican precedent be followed.

The New York subway precedent.—There is a precedent in the New York subways for a scheme under which the railway is constructed and owned by the public authority, and its operation is entrusted to a company, which finds capital to an amount representing the value of the equipment and takes a lease for a period of years upon terms that the company receives a return of 5 or 6 per cent as a first charge on the profits, while profits beyond that figure are divided in agreed proportions between the company and the public authority. The New York partnership scheme, however, has reference to an undertaking with every prospect of making a substantial return on the capital involved from the outset. There is no such prospect here. We have to contemplate a condition of affairs in which for a good many years to come the operation will not yield a commercial return on the capital already invested. A promise of the whole return, therefore, would not tempt the outside capitalist; still less would the offer of a portion of it. To induce outside capital to come in and share the risk, it would be necessary for the Government to guarantee a return upon it of not less than $4\frac{1}{2}$ per cent or 5 per cent forthwith and to offer a prospect of partnership in the valuable reversion later on. And seeing that, with the guarantee of the Government of Canada behind it, all the money requisite could be borrowed at 5 per cent without any reversion, the offer of a reversion would be, in effect, to deprive the people of Canada of a portion of the return when they have earned the right to receive the whole.

Further, we have no reason to think that such an offer, even if made, would attract the necessary capital. The speculative investor likes to see his profit in the near future. In this case he would have to wait a good many years before he could expect any return on his money beyond his fixed $4\frac{1}{2}$ or 5 per cent. Under present market conditions an investor prepared to take some risk can do much better for himself than this.

CANADIAN RAILWAYS SHOULD BE UNDER CANADIAN CONTROL.

There is yet another reason why we do not think that, even if it were possible, any attempt should be made to form a new company, either on the Mexican or on the New York subway model. Such a company could not be Canadian. The capital would have to be found elsewhere, and the control would follow the capital. We think Canadian railways should be under Canadian management.

PART V. THE DOMINION RAILWAY CO.

GOVERNMENT OPERATION NOT RECOMMENDED.

Having then arrived at the conclusion that the transfer of the three undertakings to a commercial company is not feasible, we recommend that they be handed over to a board of trustees to control and manage on behalf of, and on account of, the people of Canada. The trustees

should be organized as a company with a nominal capital. But in effect they would be a public authority.

Before going further we desire to make a fundamental point clear. We express the conclusion to which we have come both in negative and positive forms. We recommend:

(1) That the Government do not acquire or undertake to operate any further railways; but

(2) That these three railways, Canadian Northern, Grand Trunk, and Grand Trunk Pacific, be transferred by act of Parliament to an independent board of trustees (incorporated as a company), constituted as we shall hereafter describe.

These recommendations, from our point of view, hang together and must be regarded as inseparable. We do not recommend the transfer of the three companies at all, unless our recommendations as to the method to be followed are also substantially accepted. That the Government should itself take over the railways, and they should then be operated under the control of a parliamentary minister of railways, is a policy which in our judgment would not be in the best interest of Canada.

Our personal belief is strong that, in normal circumstances, railway enterprise is a matter best left in private hands, subject to proper regulation by the Government. Were we asked to advise in the case of the railways of the United Kingdom or the United States, which have been constructed by private companies, with money found by private investors, we should give effect to this belief. We go further and consider that, in the case of the Canadian Pacific Railway, as to which the Government does instruct us to advise, the fact that it received large help from public sources in its early days, is not any reason why the existing status of the company should now be disturbed. This company has carried out its bargain. It has repaid to the Government large advances made in earlier years. We believe that Canada has had good value for what it has given. We think that it is in the interest of the country that this company should be rich and prosperous, for such companies can be expected not only to give the best service, but to be best able to provide in time to meet new developments as they arise. We have had no hesitation, therefore, in coming to the conclusion that the status of the Canadian Pacific Railway should be left undisturbed.

But in the case of the Canadian Northern, the Grand Trunk, and the Grand Trunk Pacific the circumstances are not normal. These companies have broken down. We see no way to organize new companies to take their place. Their only possible successor is in our view a public authority. We are confronted with a condition and not a theory.

RECOMMENDATION OF INDEPENDENT BOARD OF TRUSTEES.

Our formal recommendations are:

1. That a board of trustees be constituted by act of Parliament and incorporated as "The Dominion Railway Co."

2. That the ownership of the Canadian Northern, Grand Trunk, and Grand Trunk Pacific Railways be vested in this company.

3. That the Government assume responsibility to the company for the interest on the existing securities of these undertakings.

4. That the Intercolonial (including the Prince Edward Island) and National Transcontinental Railways be also handed over by the government to the company.

5. That the whole of these railways, the Canadian Northern, the Grand Trunk, the Grand Trunk Pacific, the Intercolonial, and the National Transcontinental, be operated by the company as one united system.

CONSTITUTION OF BOARD AND TENURE OF OFFICE.

We now proceed to set out these recommendations in more detail.

The trustees should be five in number. The first trustees should be named in the act of Parliament constituting the board.

The tenure of office should be the same as that of judges of the Supreme Court, with the exceptions hereafter noted. Three trustees, one of whom should be the chairman, should, if possible, be men of railway experience. They should be required to give their whole time to their duties, and salaries should be fixed adequate to command the services of the best men. Of the two remaining trustees, we think it would be desirable that one should be selected on the ground of business and financial experience, and the other as specially possessing the confidence of railway employees. They should not be expected to give their whole time. Their maximum salary might be laid down in the act, to be adjusted later when the requirements of the position became evident. Every trustee on appointment should be required to divest himself of all interest in Canadian railway bonds or stock, and should further satisfy the appointing authority that he has no other interest that conflicts with his duties as trustee.

All appointments other than those of the original trustees should be for a fixed period of seven years, except that in the case of a casual vacancy, owing to death or disability or resignation, the appointee should hold office only for the remainder of the term for which the trustee whom he replaces was appointed.

Every trustee should be eligible for renomination and reappointment.

Vacancies should be filled, in the case of a railway member, by appointment by the Governor General in council, on the nomination of a majority of the remaining trustees; and in the case of other members, by appointment from a list of three names, similarly nominated. Should the Government refuse to approve a nomination, it should devolve upon the trustees to submit a new name.

The original trustees should vacate their positions according to the following scheme: The three railway trustees should retire after three, five, and seven years, respectively; the order of retirement amongst the three being determined at the date of the trustees' assumption of office. The two remaining trustees should retire after four and six years, respectively; their relative position between themselves being similarly determined.

Every trustee should retire on attaining the age of 70 years.

BOARD TO BE NONPOLITICAL.

We desire to call attention to the extreme importance that the board should not assume, or even be suspected of assuming, a political complexion. In the United States an attempt has been made to

guard against this danger by statutory provision that not more than four out of the seven members of the Interstate Commerce Commission shall belong to the same political party. We do not recommend that this precedent be followed, as we think politics have nothing to do with the matter; and any such restriction might hamper the Government in their choice of best men. But should it be desirable in the public interest to select trustees of recognized political affiliations, we think it most important that the spirit of the United States legislation should be borne in mind, both by the Government in making the original selections, and by the trustees themselves in recommending names to fill any subsequent vacancies.

BOARD TO BE PERMANENT AND SELF-PERPETUATING—AUSTRALIAN EXPERIENCE.

We recommend that, subject to the power of the Government to refuse to confirm a nomination, the board of trustees should be a permanent self-perpetuating body, and we attach very great importance to this point. The four older States of Australia, New South Wales, Victoria, South Australia, and Queensland have had a long experience of public ownership. In each State the history has been very similar. Originally, the railways were managed under the direct control of a minister of railways, responsible to Parliament. In each State the system was found unsatisfactory. In each State commissions were appointed, with functions substantially similar to those which we are recommending to be conferred upon the board of trustees. In each State the result was improvement. But the Australian commissioners were only appointed for five-year terms. And the lack of permanence in the commissioner's tenure of office prevented a permanent success. The first years of the commission's term were usually the most successful, for then the commissioners had the freest hand to manage their undertaking on commercial lines. Some of the States have gone through a checkered history. The commission has been abolished, and the management has been transferred back to a political minister. Once more the result has been unsatisfactory, and a new commission has been appointed, only in turn to fail of success. The main cause, as we read the story, has been the lack of permanence of the commission and the short tenure of office of the individual commissioners. We therefore think it essential that the board of trustees shall be permanent, nonpolitical, and, subject to Government approval of each new nomination, self-perpetuating.

RAILWAYS NOT A PROPER SUBJECT FOR DIRECT PARLIAMENTARY CONTROL.

We have given expression to a strong view that the operation of the railways of the country by a department of the executive government directly responsible to Parliament would be against the interest of Canada. Lest it should appear that this view implies a reflection on the honesty and ability of ministers and members of Parliament, we desire to explain why we entertain it. Our reason is, not that Government by a cabinet responsible to a popularly elected Parliament is a bad government for the ordinary purposes of government, but

that it is not a form of government suitable for the management of a railway undertaking.

In primitive times all government was concentrated in a single hand. The king or chief was at once the lawgiver, the administrator, and the judge. The king as lawgiver prescribed duties and established rights; as judge he decided on the interpretation of those rights and duties between the nation, represented by himself, and the individual; and finally as executive authority he enforced his own judicial decisions with respect to the rights which he had himself established as legislator. Centuries ago the progressive nations of western Europe had outgrown this primitive idea. They had learned to differentiate functions to the extent of making the judge entirely independent both of the legislature and of the executive government. Even under the absolute despotism of Frederick the Great of Prussia a judge could decide a quarrel between a king and an humble subject in favor of the subject. To say nowadays that the administration of justice is not a matter to be left to a minister responsible to Parliament would be to say a thing so obvious as to seem a preposterous truism.

GROWTH OF EXTRA PARLIAMENTARY FUNCTIONS OF THE STATE.

But the process has gone further. We are learning that there are other matters which it is well to withdraw from the political arena. It has become a commonplace in England within the last generation to say that foreign policy has been "withdrawn from the sphere of party politics." The same thing had in great measure happened before the war in the case of naval administration; it was more and more becoming the rule in the case of army administration also. In other words, in respect of these three vitally important spheres of national activity, though the form of direct parliamentary control was retained, it had come to be recognized that the affairs were very complicated, that the reasons for action might be good without being such as could publicly be avowed, and that therefore they were best left to experts, carefully selected and then given a mainly free hand. Since the war public opinion on this question has ripened fast. England and France are countries just as democratically governed as Canada. And in England and France the fact that prompt and decisive executive action is inconsistent with detailed parliamentary control is being more and more recognized, not only by the public but by Parliament itself. Numerous boards of experts, with an almost entirely free hand, have been set up in England to take charge of different branches of public activity. It can not be supposed that the lesson learned in war will be wholly unlearned when peace returns. It is hardly likely that countries whose constitutions are based on the English model will go as far as the United States, where the executive and the legislature are almost entirely independent of each other, where the House of Representatives has no direct control of the executive government at all, and where even the Senate can only confirm or refuse to confirm certain appointments, but has no power to secure either the nomination or the dismissal of a single official. But there can be no doubt things are moving in that direction. It is because we think that the management of a railway undertaking, like the control of shipping or of enemy trade, or the work of the

imperial munitions board, is a matter that in the public interest is best left to experts, that we desire to avoid direct parliamentary control.

In this connection it seems desirable to point out that the Prussian railways, certainly the most successful state-operated railways in the world, are not subject to parliamentary control. The Prussian Parliament has not much control over any department of the Government, but over the railways, owing to the fact that, so far from requiring votes of money, they yearly contribute a considerable net revenue for general state purposes, it has even less control than over other departments. The only check on the action of the minister of railways is that afforded by the railways councils, to which we refer hereafter, and whose powers are merely advisory and in no way compulsory. In Canada we are recommending not only that similar railway councils should be established but that the trustees should also be subject to the orders of the railway commission, a body to which Prussia furnishes no analogy.

PRIVATE INTERESTS AND PUBLIC INTEREST.

The railway touches the life of the country at innumerable points. It can almost make one city and unmake another. It vitally affects the question whether an industry in one place is more or less profitable than in another. Every city wants to become a railway center, to have railway works located within its limits. And the local member invariably wants it too. Every citizen wants the railway station placed where it best suits his own personal convenience, and wants that every express train shall stop at it. He naturally strives to secure these benefits for himself, and his local member naturally desires to help him in their attainment. The individual citizen, the local member, can not be expected to see the railway situation as a whole: to appreciate, for instance, that an express which stops at every man's local station ceases to be an express at all. Even if he does appreciate it—human nature being what it is—he will probably be quite content if, by bringing political pressure to bear, he can gain an advantage in which his neighbor at the next station does not participate. It is too much to expect of the average merchant, the average manufacturer, that if he finds that by pressure he can obtain for himself an exceptionally low rate, he will refrain from asking for it, because it gives him an unjustifiable advantage over a rival, or because he knows that the balance of net revenue must be made up by unreasonably higher rates paid by other people's traffic.

It is only when the management is protected from the pressure of special interests that a railway can be managed in the interest of the public as a whole; that it can be expected that improvements and alterations will be made, even though they injuriously affect certain individuals, because they are justified by greater benefits to the people at large. To take one example. We are satisfied that there are many cases where in the interest of economy, duplicate services should be abolished, and duplicate stations closed. Any such change must injure somebody. Supposing that it results in a saving of \$1,000 a year to the taxpayer, while the injury can be measured

by a loss of \$25 a head to three or four people, clearly the change ought to be made. But if the three or four men can get their grievances voiced in Parliament, while the taxpayer is an abstract entity with no one to speak for him, probably the change will never be made. There is no need to multiply instances. We believe that the history of railways all over the world, where the management is directly under a minister responsible to a democratic parliament, confirms our position that under such a system the public suffer because special interests obtain concessions at the expense of the community as a whole. It is for this reason that we have emphasized our recommendation that the management of the railways be entrusted to a body independent of politics.

CONTROL OF DOMINION RAILWAY BY RAILWAY COMMISSION.

At the same time we recognize that the nonpolitical body, which we propose to establish, will neither be infallible nor impeccable. We therefore propose to give to the board of railway commissioners the same full judicial authority over all its actions and refusals to act which the board at present has over the private railway companies. With a board of management appointed on the sole ground of competence, controlled by a commission with power of impartial review, we believe the rights of every citizen to receive fair and equal treatment—and no citizen ought to desire to receive more—will be amply protected. And at the same time the dangers of political influence will be avoided.

RELATION BETWEEN TRUSTEES AND THEIR EMPLOYEES.

It has been a common experience in all democratic countries that, where undertakings are in the hands of public authorities, either national or local, the employees are tempted to use political methods to improve their personal position. We think it important that the trustees should be protected against pressure of this kind, which would be entirely without justification, if our proposal, that one of the trustees shall be specially charged to watch over the interest of the employees, is adopted. To obviate the evil, it has often been proposed that employees of the Government shall be deprived of their national vote and employees of a municipality be deprived of their municipal vote. We can not accept this idea. A state servant does not cease to be a citizen, and he has as good a right to exercise his vote as his neighbor, provided he does not use it to obtain for himself an unfair advantage at his neighbors' expense. In this matter the Australian experience is of interest. In the State of Victoria there was in 1903 a fierce strike on the state railways. The men by their conduct alienated all public sympathy and were badly beaten. The Victorian Parliament thereupon passed an act, not indeed disfranchising the railway employees altogether, but depriving them of their votes in their own local constituency; placing them on a separate register, and giving them power to elect, as their special representatives, one member to the council and two to the assembly. In 1906 this act was repealed and superseded by "An act to abolish separate representation in Parliament of public officers and

railway officers." Section 4 of this act, which is still in force, is as follows:

(1) In order that all officers may be enabled to render loyal and efficient service to the State, it is hereby enacted that no person or class of persons employed in any capacity (whether permanently or temporarily) in the public service (including the railway service, the police force, the State rivers and water supply department, and the lunacy department) shall either directly or indirectly take any part whatsoever in or in relation to election of members to the legislative council or the legislative assembly, or directly or indirectly in any way take part in the political affairs of the State of Victoria, otherwise than by recording a vote at a parliamentary election; and no person or class of persons so employed shall directly or indirectly use or attempt to use any influence in respect to any matter affecting the remuneration or position in the public service of either himself or any other person.

(2) If any person so employed is guilty of any contravention of this section, then on proof thereof to the satisfaction of the public service commissioner, the commissioner of railways, the chief commissioner of police, or the State commissioners and water supply commissioners, or the inspector general of the insane (as the case may be) such person may by the said authority be fined any sum not exceeding £10 and may be reduced in class, subdivision, grade, or status, and salary, or he may be dismissed or his services may be dispensed with, provided that such person shall not be dismissed or have his services dispensed with for any contravention of this section without the consent of the governor in council.

We should hope that the employees on the trustees' railways will be content to make any necessary representations as to remuneration or conditions of service through the member of the board specially charged to watch over their interests, and will not attempt to exercise political influence. But should this hope ever be disappointed, we feel confident that public opinion would fully support any Government which introduced and passed a law based on the Victorian precedent.

INCORPORATION OF THE DOMINION RAILWAY CO.

The board of trustees should be incorporated, either directly by act of Parliament, or by royal charter under the authority of the act, as the Dominion Railway Co., with a nominal capital. We assume a capital of \$50,000, divided into 500 shares of \$100 each. Each trustee would hold 100 shares. These shares would be entered in the register as held in the joint names of each particular trustee and the minister of finance for the time being. The trustee, being named first, would be entitled to the vote; but he could not transfer his shares without the signature of the finance minister. The charter would provide that no share could be transferred except to a duly appointed trustee, and that the shares were held in trust for the Dominion.

TRANSFER OF STOCKS TO TRUSTEES.

In order to give the board of trustees control of the railways mentioned, the following stocks should be transferred to them:

1. *Canadian Northern*.—The \$40,000,000 common stock vested in the Canadian Government should be assigned by the Government to the trustees, and also (subject to what we report below as to compensation for existing equities) the \$60,000,000 still remaining in the hands of private persons.

2. *Grand Trunk Pacific*.—The whole of the common stock should be transferred without payment, except that the actual cash paid for the shares other than those held by the Grand Trunk Co. should be refunded.

Grand Trunk Co.—The whole of the stock, guaranteed, first and second, and third preference, and ordinary, should be transferred. We shall deal later with the question of the claims of the existing holders.

TRANSFER OF RAILWAYS TO TRUSTEES.

Intercolonial and National Transcontinental.—We recommend that these railways be handed over by the Government to the trustees. There would be no securities to be transferred, and no money to be paid. The authority of Parliament for the transfer would suffice. We will give at a later stage our reasons for this recommendation.

CANADIAN NORTHERN SHAREHOLDERS.

We return to the question what, having regard to all the circumstances of a very difficult case, is fair as between the Government and the Canadian Northern shareholders. One point must be dealt with at the outset. Assertions and insinuations have been widely made that public money received by the firm of Mackenzie & Mann have been appropriated by Sir William Mackenzie and Sir Donald Mann to their own use. And these gentlemen are understood to be the holders of the bulk of the Canadian Northern stock. If this charge were true, it is evident that they would have no equitable claims.

CHARGES OF MISAPPROPRIATION UNFOUNDED.

We are satisfied that the charge is unfounded. During our inquiry in Toronto on February 26 and 27, we inquired fully into the matter, and examined on oath Mr. Hanna, vice president, and Mr. A. J. Mitchell, comptroller of the Canadian Northern system. Both these gentlemen are intimately acquainted with its complicated finances. They gave their evidence fairly and frankly, and in our judgment with an honest desire to make full disclosure on every point on which we sought information. They called our attention to the report of the Government auditors made to the Solicitor General of Canada on April 22, 1914, which is printed in the sessional papers of that year (S. 269b, i, j, l, m). The relevant passage is as follows:

We would particularly draw attention to statement No. 2, being a declaration from the comptroller of the contractors, Messrs. Mackenzie, Mann & Co. (Ltd.) that the contractors have made no profit on their work for the Canadian Northern Railway, other than certain fully paid common stock, which is set out in a statement in our previous report. This declaration is borne out to our satisfaction, from our investigation of the books of said contractors, and also those of the company.

The viva voce evidence which we reproduce amplifies and entirely confirms the report of the Government auditors.

MITCHELL. In addition to that, Sir Henry, in connection with construction there are no contractor's commissions on any of the actual construction. The work is turned in to the railway company at cost. For instance, there is actual construction representing something like \$204,000,000, in which there is no percentage whatever to the contractors. It was turned in at actual cost.

HENRY DRAYTON. How would that be done? What machinery would apply to that work? How did you do it?

MITCHELL. The work was done by the contractors, Messrs. Mackenzie, Mann & Co. (Ltd.), and it was billed to the company at actual expenditure. The vouchers were all turned in.

HENRY DRAYTON. Was there no allowance for the force work account?

Mr. MITCHELL. Actual expenditure only, as far as Mackenzie, Mann & Co. (Ltd.) were concerned. They were reimbursed for what they had paid out on pay rolls.

Sir HENRY DRAYTON. Generally those pay rolls and that sort of thing cover the usual and proper charges. You were doing it, in effect, under "force" work?

Mr. MITCHELL. Yes, sir; but instead of getting a 10 per cent commission they got the stock of the Canadian Northern Railway. That was the payment the contractors received instead of a cash consideration.

Sir HENRY DRAYTON. The contractors themselves, some of them at any rate, would be acting as superintendents in charge of the work, carrying it on, besides which there would be all the overhead expenses?

Mr. MITCHELL. Yes.

Sir HENRY DRAYTON. Those expenditures would be included?

Mr. MITCHELL. For instance, the Canadian Pacific Railway, we will say, lets a contract to Foley & Co. to do certain work. They in turn let the work to some one else, who in turn will probably let it to station men. Foley & Co. would get their commission. On a large contract they would perhaps work on a 5 per cent or an 8 per cent basis. In place of that 5 per cent or 8 per cent basis, which the Canadian Pacific Railway would pay to Foley & Co. in cash, the Canadian Northern paid Mackenzie, Mann & Co. (Ltd.) in stock.

Sir HENRY DRAYTON. You say there was no allowance at all for superintendence and that sort of thing in these accounts, which is generally covered by the 5 per cent or 8 per cent?

Mr. MITCHELL. Not any for the main contractors; there was nothing allowed for them.

Sir HENRY DRAYTON. Sir Donald Mann gave a great deal of his own time. Do you mean to say he was not paid for that?

Mr. MITCHELL. That was all gone into by the Government in 1914, Sir Henry.

Sir HENRY DRAYTON. We have it in connection with that large item of \$200,000,000 or that sum is near enough. Your idea is that all that large item (it is a large sum, of course), so far as the \$200,000,000 for the construction of the road is concerned, as a matter of fact no profits were obtained by the main contractors, Messrs. Mackenzie & Mann Co. (Ltd.) and that the only profits taken out were the profits of the sub-contractors?

Mr. MITCHELL. That is it.

Sir HENRY DRAYTON. Who were the subcontractors?

Mr. MITCHELL. There were many of them; I guess all the big contractors in Canada and the United States.

Sir HENRY DRAYTON. Your own affiliated interests, were they subcontractors?

Mr. MITCHELL. No, sir; not as far as I know.

Commissioner ACWORTH. You say this was all gone into by the Government. I am a stranger to it, of course. Was it a preliminary inquiry?

Mr. MITCHELL. Yes, sir.

Sir HENRY DRAYTON. In connection with loans in 1914.

Commissioner ACWORTH. But was this question of the contractors gone into?

Mr. MITCHELL. The Government appointed three auditors, who came to Toronto and went through the books of the Canadian Northern from the beginning. These auditors made a full report to the Government, which is covered by the contents of the Government bluebook.

* * * * *

Sir HENRY DRAYTON. To complete the evidence in connection with the construction of lines, there is one question I should ask you. The Canadian Northern itself is a constructing company, practically, is it not?

Mr. HANNA. Yes. We are doing all our construction work.

Sir HENRY DRAYTON. Most of the construction is being done through Messrs. Mackenzie, Mann & Co. (Ltd.) on the basis Mr. Mitchell spoke of?

Mr. HANNA. Yes.

Sir HENRY DRAYTON. Most of the activities of the officers would be concerned outside of purely operating branches, with construction work.

Mr. HANNA. We had other officers, whose main duties were to attend to construction only.

Sir HENRY DRAYTON. I suppose Sir Donald Mann, the vice president, was in charge of construction?

Mr. HANNA. He charged himself with that work.

Sir HENRY DRAYTON. Sir William Mackenzie himself did a great deal of it?

Mr. HANNA. He did, and did the financing.

Sir HENRY DRAYTON. While they may not have taken profits as contractors, did the company properly remunerate them for their services?

Mr. HANNA. Not to the extent of one dollar.

Sir HENRY DRAYTON. So that they worked without salary?

Mr. HANNA. Absolutely so.

Sir HENRY DRAYTON. That is a case of being too modest, because it is not business.

Mr. HANNA. That has been the experience of those two gentlemen. Neither one of them was ever on a Canadian Northern voucher list to the extent of a dollar.

Sir HENRY DRAYTON. Nor of any of their subsidiaries?

Mr. HANNA. Not one.

Sir HENRY DRAYTON. So that while they were working on construction work, either the company nor anybody else paid them any profits at all?

Mr. HANNA. That is right.

The result of our inquiries leads us to the conviction that both Mr. William Mackenzie and Sir Donald Mann had a firm belief in the ultimate success of their undertaking, and in their own ability to carry it to a successful conclusion.

It was therefore obviously in their interest, as owners of all the common stock, that the road should be as well located and as economically constructed as possible. And they did their utmost to attain this end. The success of their endeavors may be judged from the fact that Canadian Northern construction from Tollerton (20 miles west of Edmonton) to Vancouver cost \$88,629 per mile, while the construction of the Grand Trunk Pacific from Wolf Creek (on the opposite side of the Athabaska River from Tollerton) to Prince Rupert cost \$112,000 per mile. It is true that the Canadian Northern had the benefit of the "tote" roads built by the Grand Trunk Pacific between Pembina River and Resplendent, as the Grand Trunk Pacific was first in the field; but as against that it had to face higher costs of labor and material. We believe that, speaking generally, one consideration may be set off against the other. Again, the cost of construction of the Canadian Northern from Port Arthur to Montreal can be compared fairly to the cost of the construction of the National Transcontinental from Winnipeg to Quebec. The cost of the Canadian Northern was \$52,602 per mile, including in this amount interest at 5 per cent during the construction period, but excluding the Montreal passenger terminal. The cost of the National Transcontinental was \$93,735 per mile, including interest at 3 per cent down to December 31, 1914, but excluding the cost of the Quebec bridge.

CANADIAN NORTHERN SUCCESSES AND FAILURES.

The mistakes that have been made by the proprietors of the Canadian Northern lie in unnecessary duplication of lines and in reaching out into territories offering but a poor traffic return, rather than in errors or extravagances in actual construction.

Our conclusion of the whole matter is that the moneys required for Canadian Northern construction have been raised with considerable financial skill at very moderate rates of interest, that the construction has been economical, but that the completion of the system as a separate system would involve a very large capital expenditure for branch lines and terminals in eastern territory, and a large duplication of existing facilities; that it is impossible for the company, aided, to complete its venture; and that it is absolutely vital to the interest of the country that further duplication should cease.

Under these circumstances, have the Canadian Northern shareholders any claim to compensation? Not, we think, as of right.

But Governments in the past have not taken a stand on strictly legal grounds in their dealings with other companies. There are grounds on which similar action could be justified in this case. The company has done much to develop the prairie Provinces. Its lines there are well located, economically constructed, and valuable for public service. Of the later constructed lines also we can say that they have been well located from the engineering, if not from the traffic standpoint, and economically constructed. And if in recent years the Canadian Northern shareholders were carried away by a wave of unreasoning optimism, at least it may be said for them that almost the whole population of Canada shared their expectations. We think that, on the whole, the equity of the case would be met if the Canadian Northern shareholders were permitted to retain a moderate portion of the \$60,000,000 of shares which they now hold.

ARBITRATION RECOMMENDED.

But under the scheme we propose the trustees will operate the Canadian Northern lines as part of a combined system. It will be impossible, therefore, for the Canadian Northern Co., as such, ever to earn a dividend on its separate stock. We suggest that, if it is decided to permit the present shareholders to retain a portion of their holding, the act of Parliament constituting the board of trustees shall contain a provision for arbitration between the trustees and the Canadian Northern Co. and establishing an arbitration board to act forthwith. The trustees should appoint one arbitrator and the Canadian Northern shareholders the other, and the two arbitrators should agree on the appointment of an umpire; failing agreement, an umpire should be appointed by the chief justice of the exchequer court; and the decision of the board should be final.

The arbitrators should be empowered to decide two questions:

(1) What proportion of the Canadian Northern common stock may fairly remain the property of the present holders?

(2) What proportion of the earnings of the Dominion Railway Co. may fairly be regarded as attributable to the Canadian Northern lines?

To illustrate our meaning, we will assume that the arbitrators decide that 5 per cent of the Canadian Northern shares shall remain the property of the existing holders, and further decide that one-half of the total earnings of the Dominion Railway Co. will be fairly attributable to the Canadian Northern lines. Then their decision will mean that, out of any dividend declared in future by the Dominion Railway Co. $2\frac{1}{2}$ per cent (one-half of 5 per cent) will be payable to the existing Canadian Northern shareholders or their transferees. We think the arbitrators should fix this resulting percentage once for all. It should be made a condition of the settlement that the minority shareholders of the Canadian Northern should by deed irrevocable appoint the trustees as their proxy to vote their shares. Care will of course be taken to provide that the arbitration board shall have regard only to the Canadian Northern lines, as they exist at the date of the passing of the act, and that any subsequent increase of revenue due to the expenditure of additional public money shall be excluded from consideration.

THE GRAND TRUNK SHAREHOLDERS.

position of the Grand Trunk Co. is entirely different from that of the Canadian Northern Co. The Grand Trunk Co. has five different classes of shareholders; the Canadian Northern has only common. The Grand Trunk shares represent—to what extent it is impossible and quite useless to ascertain, for the company is 10 years old—actual cash paid; the Canadian Northern shares represent no cash, only a possible reversion. The Grand Trunk has paid dividends on some classes of stock; the Canadian Northern common stock has never even had the prospect of a dividend. The Canadian Northern has been economically overcapitalized and is moderately capitalized. The same can not be said of the Grand Trunk or Grand Trunk Pacific. The Canadian Northern has a capital of \$54,981 per mile; the Grand Trunk \$100,000; the Grand Trunk Pacific of \$98,018. Evidently the two companies can not be treated alike. Evidently also the rights of the different classes of Grand Trunk shareholders differ widely as between the two companies. We have come to the conclusion that it is impossible to determine these respective rights; that any compensation to the shareholders for the surrender of their shares must be paid not to them but to the company as a whole; and that the responsibility of preparing the scheme of equitable apportionment between the different classes of shareholders, of securing the assents and the legal authority necessary to carry the scheme into force, must rest with the company. In dealing with the matter on this basis, we have to consider how the compensation to the company is to be arrived at. The report of the company for the year ending December 31, 1915, contains a statement of the share capital as follows:

Statement of stocks and share capital created showing the proportion issued Dec. 31, 1915.

Description.	Amount created or sanctioned.		Amount issued.		Amount unissued.
	£	s. d.	£	s. d.	£
First guaranteed stock.....	12,500,000	0 0	12,500,000	0 0
Preference stock, 5 per cent.....	3,420,000	0 0	3,420,000	0 0
Preference stock, 5 per cent.....	2,580,000	0 0	2,580,000	0 0
Preference stock, 4 per cent.....	7,168,055	4 6	7,168,055	4 6
Preference stocks.....	25,618,055	4 6	25,618,055	4 6
Ordinary stock.....	24,797,761	2 7	23,955,436	17 3	842,324
Total.....	50,415,816	7 1	49,573,492	1 9	842,324

Total issued may be taken in round figures as \$240,000,000. It is seen that roughly one-half is preference and one-half ordinary stock. The London Stock Exchange valuation of this nominal capital is at the present time something like \$70,000,000—ranging from about 56 for the 4 per cent guaranteed stock which for 10 years has received its dividends in full (except when it went one-half per cent short), down to about 10 for the ordinary stock, which has never received a dividend. The following table shows the dividend history of the last 10 years.

Grand Trunk Railway of Canada—Dividends paid.

Year.	Guaranteed.		5 per cent first preference.		5 per cent second preference.		4 per cent third preference.		Total.
	P. ct.		P. ct.		P. ct.		P. ct.		
1906.....	4	\$1,520,404.60	5	\$831,428.64	5	\$615,244.16	3	\$1,046,036.84	\$4,013,114.24
1907.....	4	1,638,952.95	5	831,428.64	5	615,244.16	3	1,064,036.84	4,131,662.59
1908.....	4	1,861,121.49	5	831,428.64	2½	307,622.08			3,000,172.21
1909.....	4	1,915,522.07	5	831,428.64	5	615,244.16			3,362,194.87
1910.....	4	1,960,171.50	5	831,428.64	5	615,244.16		174,339.47	3,581,183.77
1911.....	4	2,080,161.11	5	831,428.64	5	615,244.16	1½	523,018.42	4,049,852.33
1912.....	4	2,351,148.07	5	831,428.64	5	615,244.16	2½	871,697.36	4,669,518.23
1913.....	4	2,417,871.06	5	831,428.64	5	615,244.16	2½	871,697.36	4,736,241.22
1914.....	3½	2,129,166.67							2,129,166.67
1915.....	4	2,433,333.33							2,433,333.33
Total.....		20,307,852.85		6,651,429.12		4,614,331.20		4,532,826.29	36,106,439.46
10-year average.....		2,030,785.28		655,142.91		461,433.12		453,282.63	3,610,643.94

It will be seen that the average amount paid in dividends has been \$3,600,000 per annum. So the stock exchange valuation practically capitalizes the dividends on 5 per cent basis. And this, in a rapidly developing country, might be reasonable if the dividends had been earned and could be maintained. But in view of the statement of the company's own officers that \$21,000,000 which ought to have been spent out of revenue for maintenance has not been so spent, it can not be contended that the dividends have been earned. In view of the further fact that the company has to face immediate liabilities of over \$5,000,000 per annum in connection with the Grand Trunk Pacific and of the statement of its own officers that a capital expenditure of \$30,000,000 is immediately required on its own lines to put the company in proper condition to do its existing business, it can still less be contended that the dividends are maintainable. It can not therefore be expected that the trustees should acquire the stock from the shareholders on the basis of past dividends. Even if the Government were to relieve them entirely, as suggested by their president, of their unfortunate Grand Trunk Pacific venture—and as we have already said, we can not think that this request can be reasonably justified—it is evident that the Grand Trunk Co. is not, and will not be for some time to come, in a position entitling it to pay out any money at all in dividends. We regard this entire share capital of the company as being intrinsically of but small value at the present time. On the basis of present value of maintainable income the fair compensation would be very small.

TERMS OF PURCHASE RECOMMENDED.

But we do not think that this is the only basis on which the people of Canada should proceed. We think this is a case for generosity rather than strict justice. Canada is under obligations to the Grand Trunk shareholders, who, in the early days, with but small Government assistance, and in competition with the railways of the United States with their vastly greater resources, built up the first Canadian railway system. In later times the company has had further to meet the competition of heavily subsidized Canadian rivals. And it can not be said that at any stage of its history the shareholders have obtained excessive profits on their enterprise. On the whole we

recommend that, on condition of the surrender by the Grand Trunk Co. of their entire share capital, guaranteed, preferred, and ordinary, the trustees grant a certain annuity, charged as a working expense on the whole undertaking of the Dominion Railway Co., for the first even years, increasing at the termination of that period by something like 40 or 50 per cent. We have left the figures blank as there will be questions of cash in hand, value of stores, etc., which must make the precise figure subject to negotiation. But our meaning is that the first figure should be a moderate but substantial percentage of \$3,600,000 (the average dividend payment for the last 10 years).

REAL VALUE OF GRAND TRUNK PROPERTY.

We appreciate that shareholders outside Canada, who can hardly be expected to be fully conversant with the management of their property, will not only fail to see any generosity in this proposal, when it is first made to them, but will believe they are being treated with less than justice. We think it therefore well to set out here in summary form the result of what has been set out at length in previous pages of this report.

1. The revenue of the Grand Trunk applied to dividend has been, on the average of the last 10 years, \$3,600,000.

2. To catch up arrears of maintenance, \$21,000,000 must be spent immediately. This sum is nearly equal to six years' dividend payments.

3. To prevent arrears again accumulating, future maintenance charges must be much heavier than in the past; not less than \$2,500,000, according to the president's judgment, on equipment alone.

4. To put the property in proper condition to deal with existing business, \$30,000,000 of new capital needs to be spent at once. Even supposing the company could raise this capital, and only had to pay 5 per cent for it, it would cost an additional \$1,500,000 per annum.

And this is on the Grand Trunk lines alone, independently of the company's liabilities in respect of the Grand Trunk Pacific. These further liabilities, amounting to over \$5,000,000 a year at the present time, and increasing in the near future to over \$7,000,000, need not be again detailed. The chairman of the Grand Trunk in his letter to the prime minister of Canada, dated December 10, 1915, has stated: "Under present circumstances it is quite impossible for the Grand Trunk Railway Co. to meet the extra liabilities arising from the Grand Trunk Pacific Railway." And in his evidence at our inquiry in Montreal on February 24, 1917, the president of the Grand Trunk stated, not only that it was an impossibility for his company to carry out their contract, but that it always had been impossible. And yet there is no question of the company's legal liability on the contract. And it is the Grand Trunk Co. that is primarily responsible for the initiation of the Grand Trunk Pacific enterprise.

INTERCOLONIAL AND NATIONAL TRANSCONTINENTAL.

We have recommended that the Intercolonial and National Transcontinental Railways be handed over to the trustees. And this recommendation we make for various reasons. We are opposed, as we have already said, in principle, to Government operation, and this principle applies to these railways just as much as to the Canadian Northern, Grand Trunk, and Grand Trunk Pacific. But, apart from general principles, there are many strong arguments for the transfer in the special circumstances of the case.

TRANSFER OF NATIONAL TRANSCONTINENTAL RECOMMENDED.

Dealing first with the National Transcontinental, it is evident the line can not be left as it is. Its very name implies that it was built as a national highway from ocean to ocean. It can not be left to terminate in a dead end at Winnipeg. Its prospects of becoming a paying concern, and making to the people of Canada an adequate financial return for the \$160,000,000 they have invested in it, are not very good in any case, but its prospects are hopeless if it terminates at Winnipeg. Winnipeg is primarily a collecting and distributing, rather than a producing, center. What it does produce goes mainly westward. The Canadian Pacific Railway can collect and distribute in the west; it can collect and distribute in the east; it has its own ocean ports and cross-Atlantic connections; and the whole of its traffic between east and west it will carry over its own road, between Winnipeg, on the one hand, and Toronto, Montreal, and the ocean ports on the other. Exactly the same thing must happen in the case of the Dominion Railway Co., once the Canadian Northern, Grand Trunk, and Grand Trunk Pacific Cos. are combined into one system. If the National Transcontinental Government Railway is left out of this system it will starve.

TRANSFER OF INTERCOLONIAL RECOMMENDED.

IN THE LOCAL INTEREST.

We recommend the transfer of the Intercolonial on three practical grounds: The interest of the Maritime Provinces, the interest of the Canadian taxpayer, and the interest of the railway undertaking itself.

Speaking generally, the growth of the Maritime Provinces in the last 20 years has been slower than that of the rest of Canada. And yet raw materials are readily accessible, and wages are certainly as low as elsewhere. Now a large and important part of these Provinces is served only by the Intercolonial; the Intercolonial is merely a local line, terminating at Montreal, and with no direct connection with the markets of Ontario and the west; and the Maritime Provinces have suffered from this isolation.

The recent congestion on the Intercolonial has clearly demonstrated the inadequacy of its facilities to cope with its business. Either it must construct its own terminals at Montreal, which would cost not less than \$10,000,000 to \$15,000,000, and would be a further instance of unnecessary and wasteful duplication of facilities at the public expense, or it must have access as of right to the Grand

Trunk terminals, where at present it comes in only subject to the primary regard of the Grand Trunk for its own business. That it is in the interest of the inhabitants of the Maritime Provinces to be served, not by what is after all only a glorified branch, but by a great through system opening up to them all the markets of the country on an equality with Montreal, Toronto, and the other manufacturing centers, admits of no doubt. And it is in the interest of Canada, also, for if one member of the body gains all the members gain.

The absorption of the Intercolonial in the Dominion Railway Co. would further afford the opportunity for redressing a hardship from which the Maritime Provinces at present suffer. The Intercolonial pays no local taxes, and this exemption should cease. It never, in our opinion, had any justification. A municipality, whose streets are subject to the burden of Intercolonial railway crossings, has precisely the same claim to treat the railway as a ratepayer and assess it for local taxes, as if the crossings belonged to the Canadian Pacific Railway. Exemption of public institutions used for purely public purposes, may perhaps be justified; but in the case of a railway, local taxes are as much a part of operating expenses as transportation or maintenance charges; and they ought to be paid, whoever may be in control of the railway operation.

We are aware that there is a widespread impression in the Maritime Provinces that the Dominion Government is implicitly pledged to give them low rates. Lest there should be any fear that these alleged rights might be interfered with, we think the act of Parliament should provide that no general increase of the local rates at present in force on the Intercolonial shall be made by the trustees without the previous assent of the railway commission.

IN THE GENERAL INTEREST.

Secondly, we recommend the transfer of the Intercolonial in the interest of the Canadian taxpayers. The capital cost of this railway, according to the returns of the Department of Railways and Canals for 1916, is \$106,312,705.25. To pay interest on this investment the railway ought to earn a net revenue of, say, \$5,000,000. It has, indeed, recently been ingeniously argued that it ought to have earned interest at a commercial rate from its first inception, and that all the interest that it has not earned during its whole existence ought to be capitalized and compounded to ascertain the real cost of the railway to the people of Canada.

We can not accept this somewhat fantastic argument. If this theory were accepted, it is manifest that a similar course ought to be followed in the case of ordinary railway companies. Interest which, of course, has never been paid, ought to be calculated in the same way, on all the cash subsidies which private lines have received and on the value of all the land grants which they have obtained, and all this ought to be carried into an imaginary account on which imaginary earnings ought to be obtained. Further, the capital account of every railway company ought to be recast in the same way, so as to carry forward into the account the money that ought to have been paid for dividends on the share capital, in years when either no dividends or only insufficient dividends were in fact paid.

Whatever question there may be as to the propriety of endeavoring to earn interest on capital, it will hardly be questioned that the line ought to be so managed as to at least earn operating expenses, including therein a proper allowance for taxes. And even ignoring the early history of the undertaking, and considering merely the years from 1889-1916, during which the greatest advance has taken place in Canada, and the traffic of Canadian railways has shown the greatest increase, the Intercolonial has paid no taxes and still not earned operating expenses. During this period the total operating deficits reported amounted to \$11,188,885.50. The total operating surpluses amounted to \$1,651,239.73. In addition, however, there was, in the years 1912-1916, an amount of \$3,046,406.86, charged to working expenses and devoted to renewals, which under the accounting methods in force before that date would have been credited to surplus. Adding together these two latter figures, and deducting them from the deficit, we find that in the 28 years from 1889-1916 there was an accumulated deficit on operation of \$6,491,232.91.

And this is not all. Down to the year 1908 no charges were made against revenue for necessary renewals and replacements. Now, when the plant is added to and improved, it may be right to charge to capital the excess cost of the addition. But charging to capital the cost of mere renewals and replacements can not be justified. From 1908 to 1911 there was charged to operating expenses, under the head of renewals of rolling stock, rails, and ties, the sum of \$510,000 per annum. But this was quite an inadequate allowance, as is shown by the fact that since then, in addition to the annual \$510,000, the further sum of \$3,046,406.86, already mentioned, has already been charged to renewals.

The result of charging such items as renewals to capital account is clearly shown by the growth of the cost of the railway per mile of line. In the case of a new line, with constant extension of territory and the necessity for new terminals and increase of equipment, such a figure may not prove much. But in the case of an old-established property like the Intercolonial, it certainly, in part, indicates operating losses and improper capital inflation. The return of mileage for the year 1899 shows 1,315 miles, with a cost per mile of \$37,957.36. For 1911, the mileage is shown to be 1,455, and the cost per mile is returned as \$57,419.87. In 13 years, therefore, the capital cost of the system per mile had been increased on the system's books no less than 51.27 per cent. During the same 13 years surpluses of \$1,594,954.64 and deficits of \$3,915,193.39 were reported. It is obvious that the surpluses were illusory and the deficits much greater than returned.

Since 1911 the cost per mile has further increased, but this is largely due to expenditure in connection with the new Halifax terminals, legitimately charged to capital. And since 1912 that the proper practice of charging renewals to working expenses has been adopted.

IN THE INTEREST OF GOOD MANAGEMENT.

Lastly, we recommend the transfer of the Intercolonial in the interest of the undertaking itself. We have no doubt that it will be better operated as part of a great system than it ever can be as an independent property. It is not to be expected that able and

ambitious men will do as good work on a mere local railway, with scant opportunities of advancement or distinction, as when they have the chances of promotion which a great system affords. If their prospects are bounded by the horizon of the Intercolonial, they will either grow slack or carry their services elsewhere. We have already referred to the economy which can be effected by the establishment of joint terminals in Montreal. And the same thing is true in the matter of equipment. A nation-wide system can average its provision of rolling stock, and meet temporary shortages in one place from temporary surpluses in another. A small concern can only provide rolling stock to meet maximum requirements on condition of having a surplus standing idle for the greater part of the year.

MINOR RECOMMENDATIONS.

We think the trustees should not be required to accept the responsibility for various undertakings connected with the railway lines transferred to them, such as, for example, the Grand Trunk Pacific Dry Dock at Prince Rupert and the proposed harbor improvements at Halifax. We would leave the trustees to settle by agreement with the Government the list of property not to be transferred to them.

In the case of some of the constituent companies¹ of the Canadian Northern, of which the Canadian Northern Quebec is the most important, the parent company, though in every case it has a controlling interest, does not own all the shares. We think the trustees should at an early date, by agreement, or by legal procedure, take steps to acquire the outstanding shares. This is desirable, not only to avoid possible conflict of interest hereafter, but also to avoid any necessity for keeping separate accounts.

We find that the title to certain property which is used for railway purposes has not yet been vested in the Canadian Northern. It was among the conditions on which the Government loan of \$45,000,000 was granted in 1914, that this should be done. We pointed the omission out to Mr. MacLeod, the company's general manager, who stated that it was merely an oversight, and that the intention was that all titles should be got in.

In cases where the title has not been got in, it is, we understand in the hands of affiliated interests. We say "we understand" because in the limited time at our disposal we have not attempted

¹ The list is as follows:

Railway.	Total share capital.	Held by or on behalf of Canadian Northern.	Held outside of Canadian Northern.	Percentage.
Canadian Northern Quebec Railway Co.....	\$9,550,000	{ \$2,000,000 5,144,600	\$2,405,400	a 74.7
Quebec & Lake St. John Railway Co.....	4,524,000	4,002,800	521,200	88.46
Duluth, Winnipeg & Pacific Railway Co.....	6,000,000	3,060,000	2,940,000	51

^a The Canadian Northern Railway Company owns \$2,000,000 stock of the Canadian Northern Quebec directly; it also owns 71.9 per cent of the stock of the Northern Consolidated Holding Company (Ltd.), which owns \$5,144,600 stock of the Canadian Northern Quebec.

There are also outstanding small amounts of from 500 to 3,000 shares in other companies. But these are presumably only directors' qualifications.

to have search made of all the different titles involved. It is clear, however, that all lands on which there are Canadian Northern rails, whether main or siding tracks, or switches leading to its elevators, or team tracks, ought to be vested in the company, and not left in the hands of any affiliated interest or constituent or a subsidiary company, even although the Canadian Northern Co. may have a stock control of the company.

We think that the act should vest in the Canadian Northern Railway Co. all lands which have actually been put to the purpose of the railway system, subject to all equities (other than those of any of the affiliated companies, or of Messrs. Mackenzie & Mann (Ltd.), or of those gentlemen in their personal capacities) outstanding at the date of the publication of this report.

We think that the act should also refer to the Exchequer court for arbitration the question of all other outstanding equities, if any. It is of course manifest that, to the extent to which outstanding claims may be found to exist, reductions would have to be made in the valuations which we have placed upon the assets of the Canadian Northern Railway Co.

The trustees will also have to consider at an early date the position of the holders of the Canadian Northern 5 per cent convertible income debentures. These debentures to the amount of \$25,000,000 were placed in London, in the years 1911 and 1912, some of them at a considerable premium, and the company obtained more than \$24,000,000 in cash for them. The trust deed under which they were issued charges them upon the assets of the company subject to existing charges, but entitles the holders to receive interest only from income earned. Since June, 1915, no interest has been paid. The Dominion Government in 1914 recognized that in respect of capital these income debentures rank in front of the Government's own loans. But the income on them is not being earned. Nor is it likely to be earned, at any rate in full, in the proximate future. The fact, however, that they are a charge upon the assets, or rather upon certain assets, and upon the income, if earned, of the Canadian Northern or some portions thereof, might cause complications in the operations and accounts of the unified system. And we think that on its own merits their case is entitled to sympathetic consideration. We think that the trustees should negotiate a settlement with the holders, on the basis of substituting for their right to 5 per cent in the indefinite future a right to receive either a lower rate of interest, say perhaps 3 per cent, from the date of vesting the Canadian Northern in the trustees; or in the alternative, say, 1 per cent at once, 3 per cent after a certain date, and 5 per cent from and after a date still further postponed.

LEGAL POSITION OF TRUSTEES.

The trustees would hold the Intercolonial and Transcontinental lines as legal owners of the physical property, and they would hold the Canadian Northern, Grand Trunk, and Grand Trunk Pacific through their ownership of the capital stock. The existence of these three companies, and also of their various subordinate companies, would nominally continue unchanged, and there could consequently be no question of the disturbance of the rights of the bond and debenture holders.

OPERATION OF DOMINION RAILWAY CO.

So soon as the railways above specified have been transferred to the trustees we recommend that they should proceed to operate them under their own control. Some time must necessarily elapse before all the transfers are made; but we see no reason why the trustees should not take charge of each railway as soon as the arrangements for its transfer are completed. The ultimate purpose, to be kept in mind from the beginning should be that all the railways should be operated as one system. For purposes of day to day management there should, we think, be established an operating committee, as members of which the trustees should have power to add to themselves not more than four officers having the rank of vice presidents. Sitting in this committee these officers should have votes equally with the trustees; but all matters of policy and finance should be reserved for the trustees alone. We would leave it to the future discretion of the trustees whether they would operate the railways as a single system from one center, or whether they would constitute two, or it may be more, grand divisions.¹

FINANCE OF DOMINION RAILWAY CO.

Under the scheme which we recommend the trustees will enter into possession of a complete and self-contained system of 20,000 miles. The present fixed charges amount to about \$34,000,000 per annum, or \$1,700 per mile. If we allow another \$6,000,000 for annuity to Grand Trunk shareholders, for composition with Canadian Northern Income Debenture holders and for interest on new capital required immediately, there will be at the outset fixed charges of roughly \$40,000,000, or \$2,000 per mile. In respect of the 3,777 miles of this system which are comprised in the present Government railways there will not be a single dollar of bonded indebtedness, and this fact will be of considerable help to the trustees in their necessary financing. We assume that, in addition to the purchase of equipment by means of equipment trusts, it will be necessary to raise a good many million dollars for improvements and betterments, some of which, such as a new Grand Trunk yard at Niagara Falls, are very urgently needed at the present moment. We suggest that a general and refunding mortgage be created, charged first upon the Intercolonial and Transcontinental lines, and secondly, upon all the remaining lines of the system, subject to the existing mortgages. The amount of the mortgage should be unlimited. The rate of interest on each issue should be determined at the time the issue is made. We do not think that an express guarantee of the Government would be required, for the Intercolonial, which has no bonded indebtedness, is now earning a substantial net income, and when it becomes part of a great system we can not doubt that this net income will increase. In any case the guarantee should be unnecessary in a comparatively short time; for a system of 20,000 miles in a rapidly developing country should

¹ We understand that the Canadian Pacific Railway had at one time independent operating and traffic vice presidents for the lines east and west, respectively, but that of recent years this has been changed, and that now the whole system is controlled from one center and that the Canadian Pacific Railway board are satisfied that the change has been an improvement.

be able, before many years are out, to carry unaided bonded indebtedness, which would not, we estimate, need much to exceed \$2,000 per mile.

OPERATION TO BE ON A COMMERCIAL BASIS.

We have recommended that the Intercolonial and the Transcontinental lines should be handed over free of cost for the reasons which we have given above; but we think it should always be borne in mind, both by the trustees and by the public, that the real capital of the new system includes the cost of these lines. In other words, the trustees are responsible for a return, not merely on the capital of the companies' railways acquired, but also on the capital invested in the Government railways, for though the Government railways have no separate capital account, properly so called, their construction has cost the people of Canada \$276,000,000, and the people of Canada are paying interest on this amount every year out of the general taxation of the country.

We would go further and lay it down in terms in the act of Parliament creating the board of trustees that it was the duty of the trustees to operate their system as a commercial concern and to make no general reduction in rates, unless ordered so to do by the railway commission, until interest at a reasonable rate was earned on the whole capital value of the undertaking, and this for two reasons. We believe that the obligation to work the system as a commercial concern in competition with a well-established and well-equipped rival will be a stimulus to efficient and economical management, and further we think that reductions in favor of certain classes of business and certain commodities which bring the railway rates below a reasonably remunerative basis are wrong in principle. Their effect is to conceal the fact that a bounty is being given to certain persons and certain places at the expense of the community at large. If bounties are to be given, as to which it is not for us to express an opinion, we think they should be openly voted by Parliament and not given under the disguise of a railway rate reduced to an unremunerative basis.

WIDE POWERS TO BE GIVEN TO TRUSTEES.

We consider that, subject to the jurisdiction of the railway commission, the trustees should have the widest powers in the management of their undertaking. They will have to decide how best they can secure both efficiency and economy by combining what have been hitherto competing systems. They must decide what new connections can be made to provide shorter routes; which lines shall be operated as main lines and which only as branches; in what cases two single lines can be used as one double line; where new extensions can be profitably built; how new capital can best be provided; whether any of the existing lines shall be, at least temporarily, abandoned; but they should always keep in mind that the intention is not to establish local monopolies but to maintain reasonable competition between their system and that of the Canadian Pacific Railway. They must have discretion to say how far net profits are imperatively required for railway purposes and how far they may be safely taken to pay a dividend on the share capital. In a word, we would entrust

to the trustees all the responsibilities and powers which in an ordinary company are divided between the directors and the shareholders. We believe that the desire to render the best possible account of their stewardship to the people of Canada will be a sufficient motive to induce them to manage the railways efficiently and economically.

FINANCIAL RESPONSIBILITY OF GOVERNMENT.

We have recommended that the Government should assume responsibility toward the trustees, but not directly toward the present holders, for the interest of all the securities charged on the new combined system. We can not attempt to forecast with any accuracy what that liability will be, but the following table which we have compiled shows the results for the year ending June 30, 1916, of the operation of the various undertakings which we propose should be put together.

PROSPECTS OF DOMINION RAILWAY.

From this table it will be seen that there was a nominal surplus of income over expenses and fixed charges of \$2,365,000. But the above figure took no account of interest which had to be provided for on the Canadian Northern, Grand Trunk Pacific, and Grand Trunk Pacific branch lines, amounting together to \$12,650,000; nor for a loss of some \$250,000 on the operation of the Prince Edward Island Railway. The total of these items is \$12,900,000. Deducting the surplus, it would appear that, if these railways had been in the hands of the trustees for the year ending June 30, 1916, and if all the capital charges had been met out of income, the trustees would have had to call upon the Government for about \$10,500,000 to make up the deficiency.

We assume that the results for the year ending June 30, 1917, will not be greatly different. Gross receipts may rise, but operating expenses are rising fast, more especially owing to the high price of coal, the severe weather, and the congestion of traffic. When the trustees assume office, they will have to face, in addition to the present interest charges, the cost of settlement with the convertible income debenture holders of the Canadian Northern, of the annuity payable to the Grand Trunk shareholders, and the interest on the capital necessary to complete the system and to make urgently needed betterments and additions. Further, for the reasons we have already given, we do not consider that the Grand Trunk dividend is a real net surplus. It ought to go back into the maintenance of the property. On the other hand, the economies resulting from the amalgamation of the Canadian Northern, Grand Trunk, and Grand Trunk Pacific systems ought to be very large, as soon as time is allowed for the elimination of wasteful duplications. We do not venture to predict; but we should hope that the economies will at least balance the additional charges for new capital.

If, then, we take as a starting point a deficiency of roughly \$12,500,000 a year; if we assume that this will not seriously increase for the next year or two, but will not, on the other hand, diminish; then, in order to reach a position of solvency, the Dominion railways would need to earn an additional gross income of some \$50,000,000, and to retain one-quarter of that amount as net. The present gross income is well over \$100,000,000; and it is not unreasonably sanguine to hope that it may increase 50 per cent in the course of six or seven years if Canada continues to progress at a normal rate. But that depends, not on the railway management, but on the incalculable future.

We do not make any detailed estimates either of probable earnings or of probable reductions in operating costs to be obtained by the trustees' system. We have, however, every confidence in the country, its resources and possibilities.

The Canadian Pacific has been and is a great success. Combined under a common management, with one evenly balanced transcontinental system in the place of two disjointed ones, with adequate branches both in the west and in the east, we are confident that in the not far distant future the success of the Canadian Pacific ought, at least to a very large extent, to be repeated. The Dominion Railway at an early date should have an operating revenue as large as

that of the Canadian Pacific. With proper economic and politically undisturbed management, the attainment of a satisfactory financial result is only a question of time.

SPECIMEN ECONOMIES RESULTING FROM COMBINATION.

We will not risk embarrassing the future management by enumerating possible economies in detail. But it is clear that very considerable savings can be made by the amalgamation of duplicate outside and local agencies; by joint stations and joint service at many points; by coupling up the prairie branches so as to afford the shortest outlet market to centers and the like. Great economy can also be secured in operation of the through traffic. East of Winnipeg this will require a small amount of new capital expenditure. We understand that the land between Cavell Station on the Transcontinental and Longue Lac Stations on the Canadian Northern lends itself to cheap and easy railway construction. The distance is 35 miles. By the construction of this short link, a great saving of operating mileage can be made, and the best portions of both systems utilized. By the combinations of the Transcontinental from Winnipeg to Cavell, the new link from Cavell to Longue Lac, and the Canadian Northern forward from that point, a route superior from every point of view to the existing routes can be formed for Toronto business. The Winnipeg-Toronto mileage by this route would be only 1,197 miles. This is shorter than any of the three existing routes, which are as follows: Canadian Pacific, 1,232; Transcontinental and Grand Trunk, 1,256; Canadian Northern, 1,309. The combined route will also greatly improve the handling of traffic from Port Arthur to all points on the Transcontinental east of Cavell. This traffic at present is hauled back to Superior Junction, 188 miles to the northwest, before it starts on its eastward journey. And at present much of the coal used on the line follows this roundabout route. For grain sent east from the Port Arthur elevators to Quebec and beyond, the combined route will also offer better facilities than either line could afford separately. Similar economies can be secured west of Winnipeg, without any expenditure beyond that necessary for coupling up closely adjoining tracks. The Winnipeg-Vancouver route can be shortened 40 miles. We need not multiply instances or attempt to translate the resulting economies into dollars. It is sufficient to say that the mere running expenses of a through freight train are not less than 80 cents a mile. Fifty miles means \$40. Multiply this by 365, and there is a saving of nearly \$15,000 per annum on each train, sufficient to pay the interest on \$500,000 Grand Trunk Pacific 3 per cent Dominion guaranteed bonds. And this is only the mere running cost, and takes no account of other transportation expenses or of the reduction of maintenance expenses due to ceasing to maintain superfluous tracks.

PART VI. THE DOMINION AND THE PROVINCES—PUBLICITY—GENERAL.

RAILWAY COMMISSION CONTROL.

We have referred more than once in this report to the board of railway commissioners for Canada, and have recommended that the system of the trustees should be subject to their jurisdiction. W

attach great importance to this recommendation. Hitherto this board has had jurisdiction only over the railways that are in the hands of companies. It has had no jurisdiction over Government lines. We think that this distinction can not be justified, and that the commission should have jurisdiction over all railways other than those operating solely under provincial charters. The public may from time to time have just cause of complaint against the management of any railway. It is not right that anyone, even a Government official or a public trustee, should be judge in his own cause. Moreover, unless the final decision in matters of rate policy and the like is in the hands of a single authority, there may be in Canada two conflicting policies at the same time. There is yet another reason on which we would lay stress. Railway policy is sealed book to the ordinary citizen. Why tariffs should be fixed as they are, why the train service should not be arranged so as better to suit his individual requirements, why cars can not always be available for everybody everywhere, he can not understand. The normal attitude of the public toward the railway management, whether in the hands of a company or a Government, is one of mistrust, if not of active hostility. It is a good thing for both the railway itself and for its patrons to bring the management out into the open; to have the reasons why such and such conditions exist, why certain concessions demanded can not reasonably be granted, frankly explained in public. If there is nothing else gained, it is a great thing to have brought the complainant and the railway officer face to face. Even when they fail to agree, they are likely to understand each other better in the future.

COMMISSION TO REPORT ON CHARTERS.

In a second respect also we recommend that the jurisdiction of the railway commission should be enlarged. Charters for new railways are granted by the Dominion Parliament in great numbers. In the years from 1900 to 1908, 116 charters were granted for 37,862 miles of line. Only 453 miles were actually built. In the two following years there were granted, according to a statement made in the Senate by the Hon. Mr. Davis, on April 6, 1910, respectively, 68 charters for about 68,000 miles, and 75 charters for about 75,000 miles. We think that no charter should be granted till the proposals made have been investigated by the commission and the commission have reported whether or not, in their opinion, the construction of the proposed line would be for the public advantage. The opinion of the commission will not necessarily bind the action of Parliament. But Parliament, before deciding, should have the benefit of the advice of an expert and impartial authority.

AND NO SUBSIDIES AND GUARANTIES.

We think also that no subsidy or guaranty should be granted except after a similar report from the commission; and that no subsidy or guaranty should be voted in any session unless it has been provided for in the financial budget of the year, and unless a substantial deposit of cash or securities has been made by the promoters to prove the bona fides of their application.

OVERLAPPING OF DOMINION AND PROVINCIAL CONTROL.

Cases have occurred in the past and may again occur in the future, in which railways are chartered by Provincial Governments, competing with railways under Dominion charters, and so withdrawing from the latter some portion of the traffic required to secure the solvency of their line. This is not in the public interest. It can not be for the general advantage of Canada that a provincial charter should be granted, and in most cases also provincial financial assistance given, with the result in the first place of withdrawing traffic from a road with a Dominion charter, and so forcing that road to fall back upon the guaranty which has to be met out of the general taxation of the country; and secondly, of placing upon the Province a burden of guaranty which the Province subsequently finds itself unable to bear, and which ultimately it has to throw back upon the Dominion itself. The Dominion Government, when the Canadian Northern applied for the large loan of \$45,000,000 in 1914, was confronted with the possibility, if not probability, that some of the Provinces would default on their guaranties as the result of the entirely disproportionate liabilities which they had assumed.

It would perhaps be difficult for the Dominion and provincial authorities to agree upon such an amendment of the British North America act as would for all time prevent the recurrence of such a situation as occurred in 1914, as a result of the Provinces deeply pledging their credit not for an intraprovincial but for an extra provincial undertaking, clearly outside their proper ambit. The Dominion Government ought, however, to use the existing powers of the act. The policy should be laid down that, so soon as any provincial legislature incorporates a railway, it becomes the duty of the railway commission forthwith to investigate the necessity in the public interest of its construction; and further, in cases where financial aid by guaranty or otherwise is given by the Province, to ascertain what provision has been made for meeting the liabilities which may thereafter accrue. The commissioners should with all speed report their findings and the evidence on which they are based to the governor general in council. And in any case in which it is found that the railway is not required in the public interest, or that guaranties have not been accompanied by proper financial provisions, the governor in council should exercise his undoubted prerogative and disallow the provincial act. It is necessary for the sake of the credit of the Provinces as a whole to make sure that no Province with a population of less than 400,000 shall again take the responsibility for a guarantee of \$40,000,000 in respect of a single undertaking.

We think also that a single company should not be under duplicate control. Take for instance the Canadian Northern main line. If it is not for the public advantage of Canada as a whole, it has no justification for existence. Yet the portion of the line in British Columbia was constructed under a British Columbia charter; and a small section of the line in Saskatchewan under a Saskatchewan charter. It can not be reasonable in principle that one portion of the through route should be regarded as of general advantage, while another portion of the same route, feeding it and being fed by it, is regarded as of only local interest. And from the point of view of

practical administration it is highly inconvenient. We recommend that, in respect of all future charters, the Dominion Government come to an understanding with the provincial governments that a railway company shall be either wholly national or entirely local. In other words, neither provincial charter nor provincial aid should be given to companies or subsidiaries of companies already possessing a Dominion charter; and on the other hand Dominion aid should only be given to companies with a Dominion charter.

We further recommend that there be conferred on the commission power to prescribe minimum as well as maximum rates, so that reckless and unfair competition may be prevented. A railway that gives to any members of the public a service below cost is unfairly discriminating against the rest.

AUDIT AND PUBLICATION OF ACCOUNTS.

We think it is of great importance that adequate accounts and statistics should be kept and published. We consider that the board of trustees should keep and furnish to the railway commissioners, and publish for general information, exactly the same accounts and statistics as the other railway companies are required to furnish. Further, we think the accounts of the board of trustees should be continuously audited by a firm of public accountants, appointed by the finance minister. This firm should be selected from those with special experience of railway work. And they should not only conduct a financial audit in the strict sense, but should be instructed to advise the trustees from time to time what improvement in accounting methods can be introduced, and what special investigations of cost can be undertaken with good hopes of economies resulting. It is within our knowledge that modern methods of cost accounting are at the present time being applied to railways on this continent with considerable success. And we feel that in taking over the management of so large an undertaking, with a mileage exceeding that of any railway system in the world except that of the Prussian State, the trustees should have the benefit of the best and the most up-to-date advice obtainable. The auditors should make a full report to Parliament once a year on the financial status of the Dominion Railway.

The railway commission should in each year submit to Parliament the accounts received both from the Dominion Railway and from the other railway companies, and should accompany them by a report of their own. This report should set out in as simple and concise a manner as possible the financial relations between the Dominion Railway and the Government, so that every citizen may have a clear idea once a year what total amount of taxation he is called upon to pay for railway purposes. The report would naturally divide the total charges into subsidies, guaranties, and other suitable heads. And those charges should be taken up into the general budget of the finance minister as a separate and distinct entry. Any subsidies or guaranties given by the Government to railways other than those comprised in the Dominion Railway system should be included by the finance minister in the same statement. It must be for the Government and the people of the country to decide how much money they will find out of the general taxation for their railways.

But, in order that they may decide rightly, it is essential that they should have full information, and that it should be brought before them in an easily intelligible form.

At present, railways operating solely under provincial charters are under no obligation to make returns to the Dominion ministry of railways. Consequently there is no complete record of the entire railway activities of the country. We think that the Dominion Government should come to an understanding with the provincial governments that returns should be made to the latter by their local companies in the same form as is required in the case of Dominion companies, and that copies of these returns should be filed also with the Dominion Government.

RAILWAY COUNCILS.

There is another matter that we desire to bring to the attention of the Government and the trustees. In several countries in Europe, more especially in Prussia, there has been developed with great success an organization of railway councils. These councils are both national and regional. The national council in Prussia is composed of: (1) Official representatives of the Government departments specially concerned with railways questions, the ministries of communications, commerce, agriculture, etc.; (2) of representatives of chambers of commerce, of agriculture, of mines, and other persons competent to speak for large sections of railway customers. The regional councils are of a similar constitution, but on a smaller scale as benefits their local limitations. These councils meet twice a year or oftener, and discuss a prepared agenda with the chiefs of the railway service. They are competent to deal with questions of rates and fares, facilities, extensions, improvements, and all other matters affecting the public interest. They have no executive powers whatever. They can only criticize, dissuade, or recommend. But the universal testimony of competent observers is that the system is a success; that the influence of the councils is considerable, and the result harmony and absence of friction between the railway administration and the public.

We do not think that the time is ripe for the formal organization of a similar system in Canada. But we think the central idea is valuable. And we suggest that the trustees, when they get into harness, should consider the propriety of calling a conference of representatives of merchants, manufacturers, agriculturists, mine-owners, etc., and discussing with them all such questions as involve the interests of the public as well as the railway. And we think the Canadian Pacific Railway should be invited to join the conference. If the experiment proves a success, it will no doubt be repeated. And we should hope it would ultimately result in a permanent organization.

RAILWAYS IN EXCESS OF EXISTING REQUIREMENTS.

We feel that we ought to draw attention to another important point. There are now three trunk lines in existence running from Winnipeg through the comparatively empty country north of Lake Superior. There is very little local traffic, and not much prospect for

its early development. The through traffic will be shared, in what proportion the future must decide, between the three routes. But we may assume that the Canadian Pacific Railway will be able to retain on its own through route all the traffic which it itself originates. And the two new routes will only get the balance to carry. It can not, we think, be expected that this balance will be sufficient for a good many years to come to make these two lines self-supporting. It seems to have been generally assumed that they would afford an important outlet for the grain of the prairie Provinces. Evidence that we have had before us seems to show that only quite a small fraction of the grain exported from these Provinces has hitherto followed the rail even as far as Montreal. The proportion that goes through all the way by rail to the Atlantic seaboard must be even smaller. And there seems no reason to suppose that this proportion will vary to an important extent. For a difference of something like 10 cents per 100 pounds between the charges for rail carriage and water carriage, respectively—and this we understand to correspond to the normal state of affairs—will always enable the water routes to retain their hold on the traffic. It follows, therefore, that an increase of 100,000,000 bushels of wheat exported from the prairies might only mean an increase of 2,000,000 bushels; that is, 2,000 carloads, or 50 trainloads, of railway traffic. This conclusion is borne out by statistics of the Canadian Pacific Railway, from which we find that in the year 1911, out of a total revenue on the Lake Superior Division (the line between Fort William and Sudbury), amounting in round figures to \$12,000,000, less than \$900,000 were earned from the carriage of grain and flour, including grain and flour for local consumption as well as for export, while \$6,100,000 were earned from other freight, and \$5,000,000 from passengers, mail, and express.

To show how much traffic is required to fill a railway up to its capacity and to enable it to pay interest on its cost of construction, we have made the following calculation. The minister of finance stated in Parliament on May 15, 1916, that in the 11 months ending February 2, 1916, which included the record harvest of 1915, Canada exported 180,000,000 bushels. This is equal to 5,400,000 tons of grain. We will assume that the whole of this grain went from Winnipeg to Fort William-Port Arthur. There were three roads to carry it. This gives 1,800,000 tons available for each road. Assuming the trains to run with an average net load of 1,200 tons—and in fact they usually carry much more—each road would need to run 1,500 trains, or for the 11 months an average of only $4\frac{1}{2}$ trains per diem. Evidently, even under the quite exceptional conditions of the harvest of 1915—and how exceptional this was is sufficiently shown by the fact that in the corresponding 11 months of the preceding year the export was only 90,000,000 bushels, or just half—the three railways would not be worked to anything like their maximum capacity. Let us see what the net earnings would have been. We take the average rate for the carriage of grain at 4.2 mills per ton per mile, and we will assume an operating ratio of only 66 per cent. Then the net earnings would have been 1.4 mills per ton per mile. And, as 1,800,000 tons went over each road, the net earnings would have been $1.4 \text{ mills} \times 1,800,000 = \$2,520$ per mile of road. These net earnings would pay interest at 5 per cent on a cost of road amounting to

\$52,400 per mile. Now, the average cost of a mile of road in Canada is over \$70,000. In other words, if we assume that the roads between Winnipeg and Port Arthur were built at an average cost, even the exceptional volume of grain traffic of the year 1915 would not alone have sufficed to pay interest at 5 per cent on the construction cost, though the whole grain traffic of the prairies was concentrated on them.

HIGHWAY IMPROVEMENT.

We think the Government would do well to give serious consideration to the question of the cost of bringing grain from the farm to the railway station. The desire of the farmer to reduce the cost of marketing his grain to the lowest possible point is natural. We do not believe that any serious reduction of rail rates can be expected, and no one can say what ocean rates will be in the future, but we think that the wagon cost is capable of considerable reduction. We find that an average rate per 100 pounds from Battleford, taking this as a typical point, to Liverpool may be put at not more than 50 cents by the all-rail route to Montreal. By water from Port Arthur, which route carries the vast proportion of the traffic, the through rate would not be more than 40 cents per 100 pounds on the average. On the other hand, typical examples of the cost of wagon haulage have been brought to our notice. We find instances of a cost of 33 cents per 100 pounds for a distance of 12 miles and of 54 cents per 100 pounds for 35 miles. And we are informed that in some cases grain has to be hauled as much as 50 miles to a station. In other words, in cases such as these the cost of delivery at the station is as much as or even more than the total through rate from the station to Liverpool. What method should be adopted to cheapen local haulage is a matter for detailed consideration in each individual case. But either by road improvement, coupled possibly with an organized system of mechanical traction or by the construction of short spur lines of the lightest and cheapest possible type, we are persuaded that a good deal might be done at a very moderate expense. And we therefore commend the matter to the serious consideration of both the Dominion and the Provincial Governments.

THE HUDSON BAY RAILWAY.

We understand that construction work on the Hudson Bay line has been suspended. We think that the work should not in any case be recommenced till more urgent needs have been met and money is more easily procurable. And if work on the line is begun again, we think it should be done in the most economical manner possible, and only up to the standard of a local line, bearing in mind that it can not be expected for many years to come to be self-supporting. Considering the small advantage in rail mileage from the grain-growing areas, which the Hudson Bay possesses over the existing routes to Port Arthur, and that from many districts it possesses no advantage at all; considering further the short and uncertain period of navigation in the bay, and that grain consigned to Port Nelson will consequently always be liable to be detained there for nine months till navigation is again opened; considering that higher ocean freight may be expected to absorb, if not more than absorb, any possible

saving in rail rates, we can not believe that this route will ever secure any serious share in the export trade. Still less can we think that it will handle an import business. Unless considerable mineral wealth should be discovered in the territory which this line will open up, it must, we fear, continue to be almost indefinitely a burden upon the people of Canada. And everything that can be done should be done to make this burden as small as possible.

STEAMSHIP CONNECTIONS.

The question of steamship connections on both oceans is referred to us. We have not reported on it. To deal adequately with a question of such vast range was impossible in the time and with the means at our disposal. Further, the complete revolution that the war has caused in the shipping trade of the world would, we feel, make any conclusions or recommendations based on a study of either war or prewar conditions valueless for guidance after the war. The question of steamship connections naturally involves the question of ports. This question also we have refrained from touching. For port facilities depend on available steamship connections quite as much as steamship connections on the facilities available at the ports.

TENDENCY OF RAILWAY RATES TO RISE.

Before concluding our report we desire to make one observation of a general nature. The average ton-mile rate in Canada in the last financial year was 0.751 cent; in the United States the figure was 0.7320 cent, which is practically the same. In the United States it is coming to be generally understood that this rate is too low to give the railway companies an adequate return on their existing capital and that consequently new capital can not be attracted to railway investment in sufficient amount to provide for necessary new expenditure. And this fact was to some extent recognized in October, 1914, by the Interstate Commerce Commission in their approval of a flat increase of 5 per cent (with certain exceptions) on all tariffs in the portion of the United States adjacent to eastern Canada. And if an average rate of 0.732 cent is inadequate in the United States, where traffic is far more dense, and where climatic conditions are less rigorous, much more is an average rate of 0.751 cent inadequate in Canada. It is true that with the present rates the Canadian Pacific Railway pays a dividend of 7 per cent from railway operation. But as we have already pointed out, that company has some \$200,000,000 invested in the property on which no interest has to be paid. Were this sum represented by ordinary stock, the dividend from railway operation would be not 7 per cent but 4 per cent. And the Canadian Pacific has the cream of the Canadian business.

NECESSITY FOR IMMEDIATE ACTION

It is to be anticipated that difficulties, more or less great, will need to be overcome before a final settlement can be reached with the Grand Trunk and Canadian Northern Railway Companies. We realize that, if the matter were dealt with in the ordinary manner, it might be a matter of months, if not years, before a final settlement was reached.

The pressing public interest demands that the matter be not so treated.

We think instructions should be given by the Government forthwith, without waiting for further action on this report, to the Canadian Northern and Grand Trunk Pacific companies to discontinue all expenditure on works in hand, unless and until express permission is received for their continuance.

We will enumerate certain other matters that will not brook delay. In the West the Canadian Northern is not giving, and is not able to give, adequate service to the grain-growers in some important districts which are dependent on its lines. The situation in the Goose Lake district is highly unsatisfactory. The branch is in bad shape and is not fit to do the business offering. There is absolutely no room for doubt as to the lack of freight cars and the resulting inconveniences, and even in many cases distress. In the East the position of the Grand Trunk is most unsatisfactory. Beyond question the system immediately requires at least 200 more locomotives and at least 10,000 freight cars. If coal famines are to be avoided, and the proper winter movement kept up, the line from Burlington Junction to Fort Erie urgently requires double tracking. Other improvements are imperative. The question of electrification ought to be taken into consideration forthwith.

If things go on as at present, the traffic conditions of this year will in all probability return in an aggravated form next winter. The old equipment will be a little older, the roadbed will be in a little worse condition. And the situation in eastern Canada has been so bad this winter, that there has been much difficulty, specially at Grand Trunk points, in maintaining a supply of grain and flour from the West. It is imperative that strong and efficient action be immediately taken.

Recognizing the probability of delays, caused by the efforts of the companies to secure better terms from the Government, we think that, in order to protect the business interests of the country, the Government should immediately put itself in a position to obtain orders appointing receivers for the Grand Trunk and Grand Trunk Pacific systems. We recommend that, at the present sitting of the House, an act be passed constituting the board of trustees, so that in case receiverships are necessary, the trustees may, on the application of the Government, under its existing rights as a creditor, be appointed receivers. They would then be in a position to take, through the courts, the necessary steps to vest the properties in the Dominion Railway Co. so as to constitute the new system that we have recommended. Should the companies show themselves ready and anxious to come to a prompt agreement, actual application to the courts would of course not be made.

We feel that the appointment of receivers is not in the interest of the country's credit. It certainly is not in the interest of the companies, as the evidence of this report shows that the property of the Grand Trunk Co., if it were put into a receiver's hands, would leave little or nothing for the shareholder. The result of court proceedings would probably be to divest the shareholders of all interest, and to place the Government in the position to take, to the fullest extent, the advantages of their legal position as holders of defaulting securities. But, though we hope receiverships will not be necessary, we

think the Government must face the possibility of being compelled to take the course we have indicated.

In the case of the Canadian Northern Railway Co. no proceedings in court are requisite. Under the provisions of section 24 of the Canadian Northern railway guarantee act, 1914 (4-5 Geo. V, chap. 20), the Governor General in council has power, when authorized by Parliament, to declare by order, if default is made by the company in payment of interest on the \$45,000,000 guaranteed securities (the interest on which is at present being found by the Government) that the equity of redemption of the company is absolutely barred and foreclosed; and thereupon the whole property becomes vested in His Majesty in right of the Dominion of Canada.

If receiverships become necessary, the advantage of appointing the trustees as receivers is obvious. The trustees, with the Government behind them, and with the approval of the court, would be in a position to operate the roads as a combined system, to purchase much needed rolling stock and to make essential improvements in a way that no ordinary court receiver could do. Receiverships in the ordinary sense would only result in greater traffic congestion than ever and in losses not only to the shareholders but to the country at large.

PART VII. SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS.

We summarize our conclusions and recommendations as follows:

1. The mileage of Canadian railways is very great in proportion to the population of the country. It has increased out of proportion to the increase of population.

2. Canada's natural waterways make railways less absolutely necessary than in other countries.

3. The net return is so low as to prove that more railways have been built than can be justified on commercial grounds under present conditions.

4. The public investment in railways is very large. The total amount of public capital involved in direct construction of Government lines, and cash aid, land grants, and guaranties to private companies, is \$968,451,000, not counting the value of lands still unsold.

5. Public aid to the principal companies, including subsidies, land grants, and guaranties, amounts to over \$680,000,000. In the case of the Grand Trunk Pacific it amounts to nearly two-thirds of the total investment; in the case of the Canadian Northern to over three-quarters.

6. There have been three phases of company development: (1) Unaided enterprise, (2) assistance by subsidies and land grants, (3) assistance by guaranties. A guaranty policy is dangerous and its wisdom questionable.

7. The development of Canada justified two transcontinental lines. It did not justify three. The Grand Trunk and Canadian Northern should have been amalgamated.

8. The Grand Trunk Pacific system has cost nearly \$200,000,000. The interest charges amount to over \$8,800,000 per annum. The net income last year was \$826,653. The liability of the Grand Trunk Co. for interest amounts to over \$5,000,000 per annum at present, and will rise to over \$7,000,000 in 1923.

9. We can not recommend that the G tionally released from their liability. National Transcontinental line rests na but that for the Grand Trunk Pacific pro Grand Trunk. The Government has vo of Grand Trunk of all responsibility for the Na t respect to the Grand Trunk Pacific proj entitled, morally as well as legally, to cal to fulfill its contract.

10. The Grand Trunk Co. proper has n capital. Its lines have not been adequat \$21,000,000, which ought to have been s years, has not been spent. New capital e 000 is immediately required. The count company's inability to give adequate servic way ought to be managed in Canada, and

11. We recommend that the control Pacific and of the Grand Trunk be assum on terms hereafter set out.

12. The Canadian Northern has been f of guaranteed securities. Till 1914 it m resources. Since that date the Governm obligations on behalf of the company. the company would be able in the near fu ment of these obligations.

13. The company's estimate of its fut too low, and its estimates of probable gr and still are unduly sanguine.

14. We estimate that as a separate un fully \$70,000,000 of new capital within th

15. We do not recommend that further Canadian Northern as at present constit

16. The Canadian Northern common s vestment, and has no present value, eith of reproduction of the property or on the

17. We recommend that the public ta Northern Co. on terms hereafter set out.

18. On the assumption that the people the Grand Trunk, Grand Trunk Pacific, consider possible methods of managemen

19. We do not consider that operation sponsible to Parliament would be in the not secure better service or lower rates.

20. If the Government operated these bound in fairness to the Canadian Pacific their railway also. The Canadian Paci should not be interfered with.

21. Special objections to direct Govern tion are:

(1) That Canadian railways operate m subject to the foreign jurisdiction of the U

(2) That the Canadian Government res purposes.

22. We therefore reject the idea of direct Government ownership and operation.

23. We do not recommend that the Grand Trunk, Grand Trunk Pacific, and Canadian Northern companies be allowed to go into the hands of a receiver.

24. We recommend that the control of these three companies be transferred to a new body.

25. We have discussed and rejected the following suggestions:

Transfer of all three railways to the Canadian Pacific.

Transfer of the Canadian Northern or a portion of it to the Canadian Pacific.

26. There is no possibility of forming a new commercial company to take over the three railways. Neither the Mexican precedent, under which the Government becomes a majority shareholder, nor the New York subway precedent, under which the public authority shares the profits with the private shareholder, is applicable to this case.

27. Having come to the conclusion that direct ownership and operation by the Government is to be avoided, and that ownership and operation by a commercial company is not possible, we recommend that a new public authority, a board of trustees, be incorporated by act of Parliament as the "Dominion Railway Co.," and that the Canadian Northern, Grand Trunk, and Grand Trunk Pacific be transferred to this body.

28. We recommend that the Government assume responsibility to the Dominion Railway Co. for the interest on the existing securities of the transferred companies.

29. We recommend that the Intercolonial and National Transcontinental be also transferred to the Dominion Railway Co. for reasons which we give hereafter.

30. We recommend that the whole of the Dominion railways be operated by the trustees as one united system, on a commercial basis, under their own politically undisturbed management, on account of and for the benefit of the people of Canada.

31. We recommend that there be five trustees, three railway members, one member selected on the ground of business and financial experience, and one as specially possessing the confidence of railway employees; that the original trustees be named in the act constituting the board; and that their tenure of office be substantially the same as that of judges of the Supreme Court.

32. We recommend that the original trustees retire after 3, 4, 5, 6, and 7 years, respectively, according to a prescribed scheme; that they be eligible for reappointment; and that all appointments subsequent to the original statutory appointments be by the Governor General in council on the nomination of the trustees themselves.

33. We lay stress on the importance of the board being nonpolitical, permanent, and self-perpetuating, and in this connection point to the experience of the Australian State railways.

34. We give reasons for concluding that railways are not a proper subject for direct parliamentary control. We point to a general tendency in modern democracies to withdraw certain subjects from this control. And we show that under parliamentary control the general interest of the whole community tends to be subordinated to the particular local and individual interests.

35. We recommend that the authority of the railway commission be extended to include the Dominion Railway Co.'s system.

36. We give the reasons for our recommendation that one of the trustees shall be appointed on the ground of his possessing the confidence of the railway employees.

37. We recommend the transfer to the trustees of the common stocks of the Canadian Northern, Grand Trunk, and Grand Trunk Pacific, subject to certain conditions and reservations made hereafter.

38. We recommend the transfer to the trustees of the Intercolonial and National Transcontinental Railways for reasons which we give hereafter.

39. We deal with the question of the compensation to Canadian Northern shareholders. We find the charge that Messrs. Mackenzie and Mann have misappropriated public moneys unfounded. We find that the Canadian Northern shareholders possess a system of which the lines are well located and economically constructed, and that they have raised the necessary money with considerable financial skill and at moderate rates of interest, but that they erred in unwisely duplicating lines and reaching out into unremunerative territory.

40. We recommend that the question be considered whether Canadian Northern shareholders shall be permitted to retain a moderate proportion of the \$60,000,000 shares which they now hold; that the precise proportion, if any, and the relation of that proportion to their share of any future profits of the Dominion Railway Co. be fixed by arbitration.

41. We recommend that the entire share capital of the Grand Trunk, guaranteed, preference, and ordinary, be surrendered to the trustees in exchange for an annuity based on a moderate but substantial proportion of \$3,600,000, the average sum paid as dividend in the last 10 years; and that this annuity should increase by 40 or 50 per cent after the first seven years.

42. We recommend that the precise figures be fixed by agreement and that it be left to the directors of the Grand Trunk Co. (1) to apportion the annuity among the five classes of Grand Trunk shareholders, and (2) to procure such assents of their shareholders as are legally required to complete the transfer.

43. We give reasons for considering that this recommendation is generous to the Grand Trunk shareholders, and why the shareholders in their own interest will do well to accept it.

44. We recommend the transfer to the trustees of the National Transcontinental, in order that it may take the place it was built to take as part of a great interocean highway, and because its financial position would be hopeless if it terminated in a dead end at Winnipeg.

45. We recommend the transfer of the Intercolonial: (1) In the interest of the maritime provinces to whom the Intercolonial at present can only give a local service, with no adequate terminals beyond Montreal; (2) in the interest of the taxpayer, who has a right to demand efficient and economical expenditure of his money; (3) in the interest of the railway staff, who will secure the wider opportunities of a great system.

46. We recommend that in future the Intercolonial be required to pay local taxes on the same basis as the other railways, and that the inhabitants on the line receive statutory protection against increase of local railway rates.

47. We make recommendations as to (1) nonrailway property of the transferred undertakings, (2) getting in minority holdings of shares and outstanding titles to land, (3) arrangement with the holders of Canadian Northern 5 per cent convertible income debentures.

48. We deal with the legal position of the trustees; and point out that the Canadian Northern, Grand Trunk, and Grand Trunk Pacific companies will continue to exist; and that consequently the rights of their security holders will remain undisturbed.

49. We recommend that the trustees take over each railway as soon as the transfer can be effected, with the purpose of ultimately operating them all as a single unified system.

50. We deal with the finances of the Dominion Railway Co. and point out that the Intercolonial, with no bonded indebtedness, has a considerable net revenue, and offers security on which new capital can be raised. We recommend the creation of a general and refunding mortgage of unlimited amount, to be issued as required.

51. We recommend that the act of Parliament provide that the operation of the company shall be on a commercial basis, and that the trustees make no general reduction in rates until the property earns a reasonable net return.

52. We recommend that there be given to the trustees the widest powers in the management of their property.

53. We have endeavored to estimate the annual liability of the Government to meet interest unearned during the first few years of the new scheme, and we put it at about \$12,500,000 per annum. We think this amount should diminish steadily but not slowly; and that with proper economic and politically undisturbed management the attainment of a satisfactory financial result is only a question of time.

54. We give specimens of the large economies which should result from combined operation.

55. We recommend the enlargement of the functions of the railway commission; that it have jurisdiction over all Dominion railways; and report to Parliament on all proposed grants of charters, subsidies, and guaranties.

56. We deal with the conflict of Dominion and provincial jurisdictions. We recommend that, to prevent this in future, the governor in council should in certain cases disallow provincial acts, and that no railway company should operate under both Dominion and provincial acts.

57. We recommend that there be a continuous public audit of the Dominion railway accounts, and that full and comprehensive reports be made annually to Parliament.

58. We recommend the establishment of railway councils to bring together the railway management and representatives of public interests.

59. We point out that the existing railways are in excess of public requirements and show how much traffic is required to make a railway profitable.

60. We show that the cost of hauling grain to the station is sometimes as great as that of carriage from the station to Liverpool, and recommend that the question of highway improvement and motor haulage be taken into consideration.

61. We recommend that future expenditures on the Hudson Bay Railway be reduced to the lowest possible amount.

62. We point out that railway rates are much more likely to rise than to fall in the immediate future.

63. And finally we lay stress on the necessity for immediate action lest Canada should suffer from railway congestion even worse than that of the past winter.

Respectfully submitted.

H. L. DRAYTON.
W. M. ACWORTH.

REPORT OF MR. A. H. SMITH.

The commission was asked to report upon the general problem of transportation in Canada. Several subdivisions of the subject quite naturally suggested themselves, and were made a part of the problem to which the commission was requested to give attention. Practically all of the subdivisions have received consideration, but the general problem is essentially a question of what to do with the railroads of Canada. To a constructive solution of this important problem the commission has given its attention.

THE GENERAL PROBLEM OF TRANSPORTATION IN CANADA.

For a proper understanding of the problem, a knowledge is necessary of the history of railway development in Canada, especially as affected by the public policy, which has found expression in governmental acts.

Canada early recognized that its growth depended upon the construction of railways. The large productive areas of the country could be served only in a limited way by its splendid system of waterways.

Even before the eastern Provinces became united into the Dominion of Canada, the Grand Trunk had become an important railway line, serving the people both of Canada and the United States. The Intercolonial, as is well known, was constructed out of public funds, and largely for the purpose of bringing more closely together, commercially and politically, two more or less separated sections of the Dominion. Long in advance of its justification upon a commercial basis, an all-Canadian transcontinental line was projected by the government and completed with extensive public aid by a private company as the Canadian Pacific.

Because of the great distances which separate parts of Canada's producing territories from the consumer's markets, development of the country's resources depended upon railway building, while cheap transportation was necessary to enable the people to compete with other producers. The people of Canada, therefore, gave such aid as was necessary to procure for themselves railway lines that would bring the country's resources into use and keep themselves in touch with the outer world.

Cheap transportation depends upon careful investment and efficient management. In the usual case, these are most likely to be found where private initiative and proper incentive to effort are employed. So far, Canada, for the most part, has pursued the policy of leaving

to private enterprise the management of its transportation machinery. The Intercolonial, which has been under governmental control since its beginning, is an exception. But this line, I am informed, usually pays nothing to the Government as a return upon money invested in the property. On the contrary, it has frequently called upon the government for aid in meeting expenses of operation. The investment in this line is large, some authorities placing it as high as \$348,000,000, including loss of interest. Evidently its rates are too low or its expenses too high, but the use of this line, at the rates enforced, is regarded in some quarters as a right of the people in the maritime Provinces. If the Canadian people have ever made an agreement, or adopted a policy which may be construed as creating that right, the contention may be correct. It is, at any rate, within the power of government to grant such a privilege. The fact is referred to merely to point out in connection with what I shall say later that a railroad may be built either as a commercial enterprise and for ordinary commercial purposes, or as a public undertaking and for other purposes, which are within the proper scope of government. The two should not be confused. But it should be kept in mind that when government builds and operates a railway which does not pay its way, including proper maintenance and interest upon investment, taxation is relied upon to support transportation upon that line. The burden is shifted from the user to the general public, but the processes by which this is done are often so complex as to obscure the facts, and actual costs are not ascertainable.

The Canadian Pacific affords a later example of the internal development policy of the Government. That road had its beginning in a transcontinental project that was proposed to be carried out directly by the Government. At an early date, and it seems to me wisely, that purpose was altered—it was decided to have the road completed by a private company. But the undertaking was large, the population sparse, the prospect of profit remote, so that the Government not only turned over to the company the uncompleted road, upon which it had expended a large sum, but it also extended to the company generous aid in the shape of land grants, cash subsidies, guaranties, and loans. It is true that value was given to the land grants largely through the building of the road and the opening of the territory to settlement. The important point here is that the Canadian Pacific owes its later and continued success not only to the skill and enterprise of its builders and managers but to the fact that, through liberal direct aid, it was able to begin business with a small charge against its earnings on account of borrowed capital. Thus favorably started, the company was able to devote its energies and surplus income to the development of the road and the country.

A new transportation problem arose with the settlement of the prairie Provinces, where the land is devoted chiefly to raising grain and live stock. Owing to the long hauls that intervene between the producer and consuming markets, freight charges absorbed a considerable part of the proceeds. The Great Lakes afforded the least expensive route to the east and tidewater. But these Lakes are open only part of the year, and navigation closes before the season's crops can be moved from the Lake ports. With the filling up of the country and consequent increase in production came a general demand for additional means of transportation. While land speculation probably had no little influence, the farmer felt the effect of

inadequate facilities, and any project that promised relief appears to have found approval among citizens who were able, through their legislatures, to bring public aid to the development of these enterprises. Railroads, therefore, were not only actively in demand, but railroad builders were popular and had little or no difficulty in obtaining public support for proposed new lines.

The Canadian Pacific stood as an example of success, to be repeated by newer railways. Unfortunately, too little attention appears to have been given to the underlying facts which actually made that road what it was. Experienced men apparently believed that a second Canadian Pacific might be had if they could but lay a trans-continental road, build great hotels, passenger terminals, and operate ocean steamers. These things were only the outward evidence and not the cause of the Canadian Pacific's prosperity. It may even be that they contributed little to the strength of that company's financial condition if due account be taken of all the costs, investment as well as operating, involved in carrying on such enterprises.

In May, 1903, a royal commission of transportation, of which Sir William Van Horne was chairman, was appointed "to consider questions affecting transportation of Canadian products to the markets of the world through and by Canadian ports, with a view of placing the Canadian producer in a position to compete, and compete successfully, through all Canadian ports with the producers and exporters of other countries." The report of this commission is interesting. It clearly reflects the effect of the outlook which great opportunities and a land boom had upon the minds of the people. All kinds of transportation projects were recommended. For instance, the Grand Trunk Pacific was to be extended to Moncton; the Intercolonial was to be extended to Georgian Bay, etc. New canals were to be built, and old ones widened and deepened. This commission also recommended a bounty for Canadian-built ships, toll-exempt canals, additional waterways to be opened at public expense, and the acquisition of water terminal lands out of public funds. In other words, it was clearly the intent that transportation should be stimulated by subsidies from the public treasury.

It would now seem that there could not have been in sight enough traffic to justify the extensive development here recommended. However, many of the things proposed in this report have been done, and other ambitious schemes not here mentioned have since been brought out. The point in mind is that without making a specific declaration of the fact, as far as I know, Canada's policy for years appears to have been to promote the public welfare by means of building or aiding in the building of transportation lines throughout the Dominion.

It is unfortunate that Canada did not have a policy of regulation in this period which could have prevented needless duplication of lines and facilities. Competing lines have been built where effective regulation could have saved a large part of the investment, while completely satisfying every reasonable and proper need for service. Instead of coordination and conservation under Government supervision, railways were permitted to duplicate plant in fields not yet productive enough to support the one; the Government, on the other hand, was, in one way or another, aiding both projects, if it had not indeed itself promoted either or both projects. Very naturally, it

has not and could not have obtained the benefit which should have followed a correct program of government aid. The policy of government aid makes the need for regulation of railway building more necessary even than where private capital is depended upon, for in the latter case the proposal must at least have a promise of commercial success before capital can be induced to come in and give it support. To the absence of such regulation must be charged responsibility for no small part of the railway problem of to-day.

We may well inquire here as to the effect of this policy upon the three principal systems. The Grand Trunk Railway Co., feeling no doubt that its own traffic field had been invaded by the government-aided Canadian Pacific, desired in turn to enter the promising western territory. Accordingly, it proposed to build a line from North Bay to the Pacific coast. Public aid was required and granted in a way to insure the building of the road. If any serious thought was given to coordinating existing or proposed roads, and to utilizing them for the public good, it did not find public expression in any constructive way. The Grand Trunk Railway Co. evidently felt confident in the success of its plans, for it pledged its own credit in aid of the extension, and entered into contracts which it now finds quite beyond its ability to carry out.

Canadian Northern interests, directed by Mackenzie, Mann & Co., who since an early date had been operating local lines in Manitoba, seized the opportunity afforded them for expansion and rapidly extended their rails throughout the Prairie region. The records show that the Canadian Northern had a large mileage on the prairies before the projection of the Grand Trunk Pacific, so that when the extension plans of the Grand Trunk became a part of the national policy, as they did become, the Canadian Northern was added to the number of those who wanted to own a transcontinental system and one as fully complete and self-contained as was that of the Canadian Pacific. Hence we find two new companies, both built largely upon public credit, striving for first place in a field which, as for transcontinental transportation, or even as for connecting eastern and western Canada, was already occupied. Besides having the Great Lakes waterway, there could have been barely enough business to support one additional line, and that only by the exercise of economy in operation and prudence in investment.

The Canadian Pacific, enjoying splendid credit, with adequate powers and resources, and keenly alive to the possibilities of losing business to competitors challenging its supremacy everywhere, then entered the contest by undertaking to build new lines in an effort to protect its sources of revenues.

The stimulation felt throughout the country by the influx of settlers and by the importation of so much new capital not only created a boom, but it quite naturally affected prices for labor and materials, sending these soaring; the increased prices in turn contributed largely to the higher costs, which are now reflected in the construction accounts of the new roads.

This brings us fairly to a recognition of the fact that while the policy of public aid to railways had originally been founded on the urgent need for transportation to open up a new country, to develop its resources, and to unify Canada commercially and politically, it was carried far beyond the limits warranted by the original exigency.

It appears to me that the responsibility is as much the Government's as the private companies'. Without enabling legislation and the extension of government credit from which all received their essential support, the companies could not have expanded and overbuilt.

This policy, in so far as it aimed at the development of Canada, appeals to me as sound, and fully justified in its inception, but it needed to be supplemented by some form of supervision that would have insured to the people the benefits of that policy without the losses that have followed the effort to assist development indiscriminately.

The situation must be faced as it exists. It is not possible to undo what has been done; the money which has been spent can not be recalled. The immediate and obvious thing to do is to adopt a constructive and discriminating program, first, for correcting the conditions which necessitate continuing loss and waste, even where that would require the abandonment of useless property, and, second, for controlling new construction. The scrap heap is frequently the most economical disposition available for inefficient plant and machinery.

STATUS AND USEFULNESS OF THE THREE TRANSCONTINENTAL RAILWAY SYSTEMS—THE CANADIAN PACIFIC RAILWAY SYSTEM, THE GRAND TRUNK RAILWAY SYSTEM (INCLUDING THE GRAND TRUNK RAILWAY, THE GRAND TRUNK PACIFIC RAILWAY AND THEIR SEVERAL BRANCHES), THE CANADIAN NORTHERN RAILWAY SYSTEM.

The Canadian Pacific Railway is essentially self-contained and self-sustaining. I agree with my colleagues as to its financially strong position. It has world-wide commercial strength. As a result of the aid and privileges extended by Government, together with the prudence and progressiveness of its management, which has extended its field of activity over nearly all Canada, and through its steamship lines and commercial organizations throughout a large part of the world, it is a success.

The Canadian Pacific is well built, well maintained, and has adequate terminals and equipment. It is efficiently operated. It is somewhat at a disadvantage in crossing the mountains, and elsewhere it has gradients that, compared with more recently built lines, do not make for as good trainload and operating efficiency. It is assumed that the Canadian Pacific will make improvements as the need for them arises, for it is fully able to do so.

Accorded reasonable treatment that company will continue, I am sure, to give good service, and I believe the best interests of Canada will be served by continuing the present status of the Canadian Pacific. The introduction of Government railway competition, which might have no regard for investment or cost of operation, would be unfair and, in the end, would react disastrously upon the Canadian people. The regulating power affords to the people of Canada adequate protection in the matter of rates and services, and such power should likewise protect the company.

The Grand Trunk System.—The fortunes of the Grand Trunk Railway Co. are bound up with the Grand Trunk Pacific. It stands as guarantor for large sums of money invested in the railway and has advanced millions from its own resources in an effort to develop the

western line and its subsidiary properties. The Grand Trunk Pacific Development Co. has absorbed many millions of Grand Trunk capital without definite prospect of return, and to the Grand Trunk Pacific Branch Lines Co. large construction advances have been made. Not only is the Grand Trunk committed for many millions, but the Government has directly invested large sums of money in this property and guarantees other large sums, the total of which exceeds \$127,000,000.

The Grand Trunk Pacific was located on a scale that would do credit to any single-track line. There is not enough business to justify such an outlay, and the prospect for business which will warrant the cost seems quite remote. For long distances sections of this line parallel one or more other lines.

That part of the Grand Trunk Pacific lying between the Rocky Mountains and the Pacific coast is in a country which appears to have abundant natural resources. In time these may be developed to the advantage of this road.

The port of Prince Rupert is suited for a large ocean traffic, which is nonexistent. The development of Alaskan trade seems to present the most immediate possibility for this port and railway.

The road west of Winnipeg has some disadvantages on account of expensive trestles and instability of embankments. It has good grades, but inadequate terminals at important places. It has sufficient equipment but lacks feeders.

From the Rocky Mountains to Winnipeg the presence of a parallel road raises a question as to whether the Grand Trunk Pacific line is not the best adapted by location and physical condition to handle the trunk-line traffic. If it is not the best, then the disposition of this part of the road, with its branches, naturally depends upon its usefulness as a road serving local interests.

From Winnipeg east to North Bay and Port Arthur the Trans-continental and Grand Trunk Pacific Railroads together can give efficient service as a connecting link between the railways of eastern and western Canada. This road also affords a good line for traffic moving via the Great Lakes. In fact, it is probably the best route of any for hauling bulk commodities at low costs.

Officers of the Grand Trunk Railway Co. claim that the Government is morally bound to relieve the company of the Grand Trunk Pacific, because the Government is responsible for the failure of the project, having permitted a rival company to enter the field. The rival line, however, has been constructed at a lower cost per mile, and manages to get enough traffic to pay its operating expenses and a large part of its fixed charges, which can not be said of the Grand Trunk's system west of North Bay. I feel that I am not called upon to discuss the merits of the Grand Trunk's claim against the Government. I have no doubt the Government has observed at least the letter of its contract.

Standing alone, with efficient operating conditions imposed, there is no reason, within my knowledge, why the Grand Trunk Railway proper should not become a profitable operation. It occupies a good territory, reaching some of the best traffic centers in the United States and Canada, and has American connections that ought to contribute to its welfare. The company needs terminal improvements in cities and modern equipment, especially locomotives. The need for equipment is pressing and should be met.

The Canadian Northern System.—The lines of the Canadian Northern, particularly in the prairie provinces, appear to be advantageously located in view of traffic conditions. Inspection of the property brings out the fact that this road was built with proper regard for economy and the creation of a permanent public-service utility.

In some instances, the system has extended its lines where it should have obtained a traffic interchange agreement or the joint use of facilities instead, at least until the traffic had grown enough to justify further expansion. A public policy intended to develop and serve the country as a whole, at the lowest cost, would have enforced arrangements which would have obviated the needless duplication of facilities.

The line from Yellowhead Pass to Vancouver, in part at least, may be unnecessary, but it is there by the joint action of Government and the company. The character and capacity of this line through the Fraser River Canyon, where it is alongside the Canadian Pacific for about 200 miles, would suggest that no more money should be spent for double-tracking or revising grades on either of the railroads for years to come. From Yellowhead Pass to Edmonton, the proximity of the Grand Trunk Pacific places two lines where one affords abundant capacity.

The invasion of the east by the Canadian Northern now appears to have been unwise, but condemnation thereof must be tempered with a knowledge of the conditions which forced this extension. There was a public demand for railroads. All Canada was enthusiastic over the prospects of a rapid growth in wealth and population. Railroads were on a competitive basis, and the public stood ready to back any new railroad enterprise, since that meant a rival carrier, and, incidentally, a new business in construction. There was no regulation which enforced cooperation among rival lines. The Canadian Northern, seeking to expand and become a profit earner, quite naturally desired to get all the traffic it could, and to hold all it got for as long a haul as possible. As a result, it undertook to do what appeared to be necessary under the conditions then existing—that is, to extend its line to both oceans.

An inspection of this company's property shows that generally it is of a type of construction well suited to its needs, and that the builders have installed it at a cost which, by comparison, seems small. Nowhere was there evidence of waste in the construction work itself. It is true that the company had some construction under way, or planned, that appeared wasteful because unnecessary, but this is due, I understand, to the unregulated competitive system, or to bargains with public authorities.

The building of expensive terminals in cities already supplied with adequate facilities affords an example of duplication for which the public must eventually pay. However, in the absence of restraint and regulation by consistent public authority, it is difficult to determine how the company could have avoided this.

The precarious financial situation of the Canadian Northern is due, in part, to its uncompleted condition, and to the fact that needed capital can not be obtained on its own resources, especially during the period when capital is so greatly in demand by powerful governments. This system is not at present able to earn all of its fixed

charges. As important parts of the system have but recently emerged from the construction period, it would be truly remarkable if it were able to do so. It does earn a very large proportion of such charges, and probably could earn all of them but for the burden of eastern extensions and duplications that have been placed upon it. Practically all commercial enterprises, and particularly railroads, must go through a development period.

The Canadian Northern is short of equipment. With the return to normal conditions, and provided with the capital necessary for equipment and for additional local facilities, this road can, in my judgment, work its way out in a reasonable time.

REORGANIZATION.

We are asked to make suggestions in regard to "the reorganization of any of the said railway systems or the acquisition thereof by the State; and in the latter case, the most effective system of operation, whether in conjunction with the Intercolonial Railway or otherwise."

The first practical question is, therefore, the need of reorganization of any of these three transcontinental systems; the second is whether they should be acquired by the State; and the third is whether the status of the Intercolonial can be changed; and, if so, can the road be advantageously grouped with either of the three systems.

In such suggestions as I shall make, I am influenced by consideration of the public policy as evidenced by past governmental acts. I further assume that the existence of these roads through the direct aid and sanction of government is conclusive evidence of the fact that the people really desire them. That they were built in advance of their need for ordinary commercial uses—a fact which is emphasized by the present abnormal economic situation—does not appear to me a sufficient reason for condemning the policy of national development, or the wisdom and integrity of those who have built the roads under that policy. Neither do I think that there exists any condition to warrant taking up a new untried public policy, which may lead to greater difficulties than those which are now faced.

The history and standing of the Canadian Pacific Railway, and its public service as a carrier to-day, is sufficient assurance that it does not need reorganization. The scope of its business, extending to other lands by steamships and commercial connections, and the control of many thousands miles of railroads in the United States, would afford sufficient reasons, if none other existed, for dismissing the idea of its acquisition by the State.

So much of the Intercolonial as is serviceable to the Canadian Pacific appears to be now used by it, either as a local connection or through trackage rights. Moreover, the two have existed separately for many years as competitors and no new reason appears why the relations of the Intercolonial and Canadian Pacific should be changed for the future, unless the people of Canada are satisfied that better results would be obtained for the territory served by the Intercolonial if it were in the hands of the Canadian Pacific.

The Grand Trunk Railway Co. has stated that it is beyond its power to assume and carry the obligations which would be imposed upon it if it should try to become such a transcontinental system as

the plans of 1903 contemplated. The company has not attempted to bring about the organization of a system approximating that of the Canadian Pacific or even the Canadian Northern, nor can it do so.

In view of the parent company's inability to carry out its original plans, and to discharge its obligation, the question is, What disposition is to be made of the various roads which were intended to be, but did not become, parts of one operating system?

My colleagues have recommended that the stockholders of the Grand Trunk Railway Co. be paid an annuity which is to be a "moderate but substantial portion of \$3,600,000, the average dividend payment for the last 10 years." This recommendation is in spite of the facts noted in the report that there are arrears in maintenance which require the expenditure of twenty-one millions of dollars, and that the company has charged to capital items which should properly have been charged against income, these facts indicating that there have been some dividends paid which have not been earned. Considering this situation and also the obligation of the company in the west, I am not impressed with the justice of paying an annuity to the stockholders in exchange for a surrender of this property. I also would be liberal to them, but I would allow them to keep their property and give them a chance to work out their own salvation. To that end I would recommend that a settlement be effected between the Government and the Grand Trunk Railway Co. The railway can not carry out its part of the contracts, and it should be relieved of further embarrassment. On the other hand, the stockholders of the Grand Trunk Railway should be required to curtail or forego their dividends for the present and the entire earnings be applied to the rehabilitation of the road through a term of years. The Government thus gives up a present claim which the debtor can not pay anyway: in turn, it will enjoy improved and extended service which may be worth far more to the welfare of the people. I should also give the Government some claim upon the future earnings of the Grand Trunk, so that it may share in any future prosperity which this action makes possible.

Reorganization of the Grand Trunk is desirable only in so far as it shall be required to put itself in shape to discharge efficiently its functions as a carrier. Whether it shall retain all of the subsidiaries which it has accumulated through the past 50 years depends in large measure on what they can contribute to the main property. Careful study of each of the subsidiaries will lead to definite conclusions from the standpoint of the Grand Trunk and its future welfare.

What the Grand Trunk needs most of all is to be relieved upon equitable terms of the embarrassment that it has incurred through the failure of the transcontinental scheme. The acquisition by the State of the Grand Trunk Railway proper presents much of the embarrassment that would obtain in the effort to acquire the Canadian Pacific, for here also, in addition to the question of equity involved, there is the problem of some 2,000 miles of railroad owned in the United States, and the fact that the Grand Trunk's principal seaport is in the United States.

The investigation of the Canadian Northern by the commission has disclosed evidence of skill in construction and efficiency in management, considering the means and equipment available. The company even now earns a large part of its fixed charges, although important parts of the system have been in operation for but a year. I think

there is ample justification for confidence that the affairs of the company will improve with the return of normal conditions. I see no reason for a change of management or a reorganization, excepting as hereinafter suggested.

It may be well here to consider the relation of the Intercolonial to the other roads and the possibility of operating it in conjunction with any of them. We have shown its relation to the Canadian Pacific. The main line of the Intercolonial is about 1,000 miles, from Montreal to Halifax. It has occupied the territory for 50 years and has become adapted to it. There are apparently no operating economies available by combining it with another system that are not available to it alone. Assuming proper regulation, there appears to be no traffic interchange that could be better assured by merger. I am informed that the maritime Provinces consider the use of the Intercolonial as a right to which they are entitled. Moreover, the Government has built the Transcontinental, a part of which was in compliance with plans of the Grand Trunk, while the rest of it is so placed that it ought to continue to be operated in conjunction with the Intercolonial. The present status of the Intercolonial and the eastern part of the Transcontinental should be continued as a Government operation. The results of such operation should, however, be reported to the people of Canada in exactly the same form as is required from other railroads. And these roads should be subject to the same reasonable regulation as is exercised over all other railroads.

Mention might be made here of the railroad that the Government is building from the Saskatchewan River to Hudson Bay. The object in the construction of this road has been stated to be that of obtaining a shorter haul from the western Provinces to Europe. The bulk of the traffic to follow this route must necessarily be diverted from the roads extending from Winnipeg to the east, so that the project seems to be an instance of competitive construction which can not be justified in this case, even on the ground that it opens up new territory.

There are numerous local railway projects, within provincial limits, which at the moment seem to have little effect upon this general railroad problem. Disposition of these may well await developments as to their necessity and utility when they assume operation. There is little that can be said just now as to their probable relation to the existing means of transportation.

The Great Lakes and the St. Lawrence River furnish a natural route from the western country to the east and to the Atlantic Ocean for a part of the year. Numerous steamship lines between Port Arthur and Georgian Bay or the lower lakes and St. Lawrence River ports afford adequate transportation under normal conditions, though somewhat affected by customs requirements and other factors. In view of the heavy movement of grain in the last three months of navigation, regulations governing shipping should be as favorable as practicable, for the hauling of grain over the long distances to the eastern seaboard by an all-rail route involves a problem in car supply and cost which renders such a haul unprofitable for rail lines.

The success of the Canadian Pacific steamship lines has led to the suggestion by some that the other railroads ought also to establish steamship lines. I do not believe that this success was primarily due to the railroad ownership of the ships. Temporarily the war seems

to have put a stop to plans for railroad-owned steamships. If at the close of the war it is to be tried again it would seem advisable first to ascertain whether other ships can not be induced to schedule sailings before railroads incur the responsibility of making additional investment in ships. There are ships running in regular postal routes with subventions. Perhaps the Government might well require, in connection with its subventions, that ships give equal service to the railroads without discrimination among them, thus removing another cause for the employment of duplicate facilities.

In visiting the various ports I was impressed with the facilities installed and being installed. At Halifax, particularly, important works were actively under way, necessitated, I believe, by the overseas traffic for war purposes. It is likely that the future development of steamship terminals in connection with railroads will be difficult to fix until normal conditions resume. Meanwhile the Atlantic seaports are so much involved in the emergencies of war as to place them beyond the scope of this inquiry. In any event such works of harbor improvement and development as are the result of war measures will be there at the close of the war as a foundation for what the future may hold.

I am unable to join my colleagues in their recommendations. They propose that practically all of the railways in Canada, except the Canadian Pacific and the American lines, shall be turned over to a corporation to be managed by a board of trustees appointed by the Government. They insist that this board is to be permanent and self-perpetuating. I do not know by what means one Parliament can bind its successors to a given policy, especially in so simple a matter as changing the organization of a Government board. My friends seek to avoid Government ownership and operation—in fact, condemn it as inadvisable—but propose a plan which contains so many elements of danger in the direction which is sought to be avoided that I am unable to join them.

Their plan would add about a billion dollars to the direct debt of Canada. The interest on this is about forty millions, adding very largely to Government expenses. Judging from the experience Canada has had with its Government railways, it is fair to assume that this would remain a permanent burden. Operated by private companies, this interest would ultimately be borne by the companies without recourse to the Government funds and at the same cost of service to railway patrons as would obtain under Government operation.

Their plan also leaves out some of the railways. This is unfair to the investors whose property is to be subjected to Government competition. It also discriminates in the method by which the respective properties are to be acquired. I can not approve the proposed centralization of control. There are problems local to separate regions which often require prompt action and cooperation between the railroads and the people served. There is a need everywhere for that prompt and efficient service which can come only from a knowledge of local conditions and responsibility for meeting them. I can not believe that centralization, remote responsibility and control, will insure good service to the people of Canada.

The recommendation creates a Dominion Railways Co., owned by the Dominion Government, to take over those roads. There are

about 7,000 miles in the United States controlled by Canadian companies. The Canadian railways depend for no inconsiderable portion of their revenue on United States traffic. A fundamental defect of the plan, therefore, is in placing the Government in the railroad business, not only in Canada, but also in operating railroads in the United States subject to both Federal and State regulation.

Through private railway management Canada has obtained about 1 mile of railroad for each \$30,000 of Government aid or guarantees, which is but a fraction of the cost of Government railroad undertakings. In some instances a large proportion of the aid was in land, the value of which was produced by the building of the railroad and the settlement thereby made possible. Compared with the total outlay involved in producing railroads by the Government for itself, as, for instance, the case of the Intercolonial or the Transcontinental, from three to six times that amount have been used to realize equal results. This shows distinctly the value of enlisting and retaining private enterprise.

THE OBVIOUS REMEDY.

Let us review the salient facts concerning each company:

The Canadian Pacific is amply able to take care of itself. It can and does provide competition with the other railroads. In order to be most serviceable to Canada, it should be continued, subject only to such equitable regulation as is accorded to all lines.

The Grand Trunk succeeded in the east and failed in the west. The Canadian Northern succeeded in the west and was jeopardized by its eastern expansion.

There is extensive duplication of lines in the west; the unsuccessful Grand Trunk Pacific lines are found among the successful Canadian Northern lines. Public policy demands the unification of these lines, for great economies could be thereby accomplished.

There is extensive duplication in the east—the new Canadian Northern lines among the older lines of the Grand Trunk proper. Great economies in proposed investment and operating expenses await the joint working of these properties.

There is wasteful duplication in the connecting region between North Bay and Winnipeg, where the Canadian Northern line parallels the Government line. Economy awaits the joint working of these lines.

Consideration of all phases of the problem leads me to recommend the following remedies for the existing situation:

Let the Canadian Pacific alone; let the Grand Trunk operate the eastern lines now held by that company and the Canadian Northern; let the Canadian Northern operate the western lines now held by that company and the Grand Trunk Pacific system; let the Government operate the connections or procure their operation by private companies; all of which should be done under arrangements that are equitable and yet look to the not distant day when the country will have survived the war and resumed its prosperous growth.

There may be several ways by which this can be brought about, but the one that has appealed to me is that which seems to be the least disturbing of values and credit and involves no untried schemes

or protracted disputes. Therefore I beg to gestions:

1. Amend the regulating policy so that may have jurisdiction over all railroads in and minimum rates, the issuance of security railways, or the extension of lines, and other the scope of governmental supervision.

2. Create a board of trustees, consisting of three public officials and three private citizens, to act for matters hereinafter proposed.

3. Relieve the Grand Trunk Railway Co. of the Transcontinental and require the company to make good its claims upon the Transcontinental; require the company to appoint trustees of the Grand Trunk Pacific railway and to pay to them an amount amounting to the net annual fixed charges under lease the Canadian Northern properties and Parry Sound and pay as a rental the value of the properties. The time of the lease should be for a term of years. The Grand Trunk's investments other than real estate should be disposed of by the company as it may see fit with its best interests.

4. Require the Canadian Northern Railway to operate to the field west of Winnipeg. The Canadian Northern of Winnipeg by leasing for 21 years to trustees at a rental of the net annual fixed charges upon those properties; except after the end of the war they shall have promised the Grand Trunk Pacific for a term of years for construction and that they shall not be allowed to make the extraneous investments of the Grand Trunk.

5. Lease the lines between North Bay and Sudbury (Canadian Pacific's) for a term of 21 years to the Canadian Northern or the Grand Trunk (or in the absence of either any other qualified company), requiring the company to provide the necessary capital for new equipment and to operate the lines on the best terms that can be made to give the best service needed at lowest cost and to be regarded as best. Either the Government or the company to construct a connecting line of about 30 miles near Lake Huron to protect the better working of the two lines.

6. The Government and companies should terminate, after 10 years, any of the leases.

The foregoing recommendations are made for Canada a maximum of efficiency. The continuance of Government aid, to at least, will be necessary under any plan. The Government seeks to reduce this to the lowest possible point by putting it upon those parts of the existing lines which are weak and which, in the nature of things, cannot be improved in years. These connecting links, "bridges," exist, it seems to me, as a result of the policy that has been discussed at some length. The Government

to take them over and maintain them as necessary parts of the public investment in the country's development. They are not of sufficient importance to bring about those dangers inherent in Government operation of this kind on a large scale, and holding them will not endanger private enterprise. It may be necessary in working out this plan to grant some additional and temporary aid to the Canadian Northern, and it will be necessary to effect some compromise with the Grand Trunk Railway Co. which will enable this company to continue. Aid should be extended upon the recommendation of the board of trustees, who should be charged with the duty of investigating the need of and approving the aid to be rendered by the Government; they should also see that the Government receives for that aid such security as will give it a reversion in case of default.

The recommendations here submitted are to be considered as a general outline of what appears to be a fair solution of the transportation problem. Enabling legislation will be required in any case, and I realize that there are many technical and legal questions which will require careful attention at expert hands. If the general plan is adopted, my thought is that the board of trustees which I have suggested be charged with the duty of acting for the Government in all matters requiring new contracts, and shall protect the interest of the Government in every way while leasing, operating, or financing the property under their care to the best advantage, due consideration being given to the rights of the other parties at interest.

If for any reason it should prove inexpedient to carry out the foregoing suggestions and if the Government should find it wise or necessary to possess itself of and to hold any considerable part of the railway properties, I should recommend as an alternative plan the formation of a private company to take over other operations of those properties either as a whole or in groups. Even where a road does not earn its fixed charges the Government could profit in the long run by making the terms of an operating lease sufficiently attractive to induce private enterprise to undertake its management. The terms of the contracts would naturally depend upon the extent of the property and the prospect of earnings, but they could be so drawn as to prove attractive to private capital and at the same time relieve the Government of the expense and embarrassment of Government operation. Such contracts might be based upon a profit-sharing plan on a fair basis, which would leave the company a hope of reward commensurate with its efforts and give the public also a share in the prosperity which they must help to create.

I should like to add one other thought. The railways of Canada are in desperate need of equipment. Whatever decision is made with reference to the railways, the transportation problem is now acute in so far as equipment is concerned. I would therefore recommend that the Government undertake at once to provide an ample supply of freight cars and locomotives against immediate and imperative needs. These cars and engines may be had, if desired, under trust agreements. It will be a simple matter to turn these cars and engines over to the operating companies under lease or contract of purchase which may be exercised when conditions are more nearly normal.

Concluding, I would be loath to suggest recourse to any radical changes in the domestic policy of the Dominion of Canada in this time of war and stress. Remedial measures are often more efficacious than revolutionary ones and more equitable. I have been impressed by the seriousness of your transportation problem and in sincerity express my belief that the problem can be successfully and satisfactorily remedied by just and mutual recognition of difficulties and full and free cooperation between the Government and the railroads. Fair and broad treatment of the question will, I am convinced, bring capital and personal genius commensurate with the exigencies of the present situation and capable of developing a happy solution. I believe that the best results hitherto have been obtained by the efficiency and economy of private initiative, energy, and capital. It is no longer assumed that the self-interest of the railroad investor and operator is antagonistic to the interest of the public; rather, we have all learned, governments and corporations alike, that the two are inseparately linked and must stand or fall together. Upon these fundamental truths I base my firm conviction that the brightest outlook for the future of your great Dominion can be assured through the extension of private railroad enterprises. The hope of honor and the reward of public approval must be open to human kind to get the best results from human endeavor.

Facing the urgency of the need, considering the part which the Government has taken and the responsibility which it shares, and keenly alive to the magnitude and the importance of the tasks now placed upon the railroads and the greater tasks which they will face, I see no safe alternative but the Government shall continue, with discrimination and resort to all available safeguards and under a policy of proper regulation and cooperation of effort, to aid the necessitous railroads of the Dominion until such time, which I hope and believe will not be far distant, when these will become self-supporting and the problem will be solved.

Respectfully submitted.

A. H. SMITH.
